International CEO

(Communication, Economics, Organization)

Social Sciences Congress

Presentation

We are delighted to introduce **Acacia University, Sekolah Tinggi Manajemen IPMI (IPMI - International Business School), Mohanlal Sukhadia University, Samarkand Branch of Tashkent University of Economics, International Vision University, Alfred Nobel University, International Gorazde University, Nişantaşı University, University of Prizren, Cyprus West University, Insec, NCM Publishing, CEO Tekmer, Universitas Bhayangkara, Knowledge Laboratory and Ostim Technical University** served as the vehicle of dissemination for a showpiece of articles at the **International CEO (Communication, Economics, Organization) Social Sciences Congress (CEO SSC 2023, Arizona, USA)** that was held online on June 16-18, 2023. CEO Congress aims to provide a platform for discussing the issues, challenges, opportunities and findings of **Communication, Economics, Organization and Social Science** research. The organizing committee with feedback from the division chairs and the members of the **scientific committee** foresaw an opportunity and research gap in the conference theme, that pitches for pressing issues in the business world.

Presentations are in Turkish & English & Indonesian. With the participation and contributions of academics from **31 countries: Albania, Argentina, Azerbaijan, Bangladesh, Belarus, Bosnia and Herzegovina, Canada, Cuba, Ethiopia, Hungary, India, Indonesia, Iran, Ireland, Kosovo, Kyrgyzstan, New Zeland, Pakistan, Palestine, Philippines, Poland, Portugal, Romania, Russia, Spain, Thailand, TRNC, Türkiye, Ukraine, USA, Uzbekistan**. It is a great privilege for us to present the Proceedings Book of **CEO SSC 2023** to the authors and delegates of the conference.

Several manuscripts from prestigious institutions could not be accepted due to the reviewing outcomes and our capacity constraints. Participation from **141 different institutions or universities**. The 3 days long conference gathered close to **464 national and international attendees** to enliven a constellation of contributions. **89** papers of the **274** papers approved to present at the congress are outside of Türkiye. **68% of the papers presented at the congress are from outside Türkiye**. 6 awards were issued to distinguished papers, and a total of **274 oral presentations**.

On the day of completion of this journey, we are delighted with a **high level of satisfaction and aspiration**. It is important to offer our sincere thanks and gratitude to a range of organizations and individuals, without whom this year's conference would not take place. This conference would have not materialized without the efforts of the contributing **authors for sharing the fruit of their research and the reviewers for scrutinizing**, despite their busy schedules. We also thank **our members and colleagues who accepted the duty to participate in the Scientific Committee** and for their valuable help in the screening, selecting, and recommending best contributions.

All presentations made during the congress were published on the social media accounts of the CEO Congress.

Uluslararası CEO (İletişim, Ekonomi, Organizasyon) Sosyal Bilimler Kongresi

Sunuş

16-18 Haziran 2023 tarihlerinde "6. Uluslararası CEO İletişim, Ekonomi ve Organizasyon Sosyal Bilimler Kongresi" Acacia University ev sahipliğinde Amerika'nın Arizona eyaletinde, IPMI Uluslararası İşletme Okulu, Mohanlal Sukhadia University, Samarkand Branch of Tashkent University of Economics, International Vision University, Alfred Nobel University, International Gorazde University, Nişantaşı Üniversitesi, University of Prizren, Cyprus West University, Insec, NCM Publishing, CEO Tekmer, Universitas Bhayangkara, Knowledge Laboratory ve Ostim Teknik Üniversitesi iş birliği ile **online ve fiziki katılımlar** ile gerçekleşmiştir.

Kongremizde *Arnavutluk, Arjantin, Azerbaycan, Bangladeş, Beyaz Rusya, Bosna Hersek, Kanada, Küba, Etiyopya, Macaristan, Hindistan, Endonezya, İran, İrlanda, Kosova, Kırgızistan, Yeni Zelanda, Pakistan, Filistin, Filipinler, Polonya, Portekiz, Romanya, Rusya, İspanya, Tayland, KKTC, Türkiye, Ukrayna, ABD, Özbekistan* gibi 31 ülkeden ve 141 kurum/üniversiteden **464 akademisyen** tarafından hazırlanan **274 bildiri** sunulmuştur.

Kongremize **343** bildiri özeti gönderilmiş, editör ve hakem süreçlerinden sonra bunlardan 308 tanesi sözlü sunuma kabul edilmiş, ancak **44 oturumda 274 bildirinin sunumu** gerçekleşmiştir. Sunulan bildirilerin tam metinleri, **978-625-99157-0-8** ISBN'li bu e kitapta yayımlanmaktadır. Belirtilen tarihe kadar **kongre sitesine yüklenen tam metin bildirimler** ise, **yazarın tercihinine, editör ve hakemlerin değerlendirmelerine göre** tam metin bildiri kitabında **bildiri** olarak, edit kitapta **kitap bölümü** olarak veya web sitesinde belirtilen dergilerde **makale** olarak yayımlanma fırsatına sahiptir. Yazarlar, tercihleri ile ilgili çalışmasının tam metnini **ceocongress.info@gmail.com** adresine mutlaka göndermelidir.

Kongrede sunulan 274 bildirininin 185'i yurt dışındandır. Yayımlanan **bildirilerin %68'i Türkiye dışındandır. Önceki Uluslararası CEO Kongre'lerde olduğu gibi 6. Uluslararası CEO Kongre'de de hem bildiri özet kitabında hem de tam metin kitabında yabancı oranı %50'den fazladır.**

Okumakta olduğunuz tam metin kitabında **yayımlanan tam metinlerin ise %60'ı Türkiye dışındandır** (99 yabancı, 65 Türkiye'den).

Onaylı ve yayımlanan **274 bildiriden üçü Türkiye'den ve üçü yurt dışından olmak üzere altısına en iyi bildiri ödülü duyurulmuştur.**

Kongre esnasında gerçekleşen tüm sunumlar kongrenin sosyal medya hesaplarında yayımlanmıştır. Tekrar yararlanmak istendiği durumlarda CEO Congress sosyal medya hesaplarından izlenebilir.

Kongrenin bilim insanlarına, kamu ve özel sektör ile STK'ların yönetiminin etkinliğine katkı bulunmasını temenni eder, bildirileriyle katkıda bulunan akademisyenler ile düzenleme kurulu, danışma kurulu, bilim ve hakem kurulundaki meslektaşlarımıza ziyadesiyle teşekkür ederiz.

A Special Thanks To...

Below is a list of individuals who have supported **CEO Congress 2023** by donating some of their time. It is these people who make our work possible and have been a great help. We would like to say a special THANK YOU for all those listed below.

Prof. Dr. **Himmet KARADAL**, **Türkiye**

Gender and Power: A Focused Group Discussion

Dr. Rey TY

reyty1@gmail.com

Payap University – Thailand

Orcid: 0000-0002-9258-0318

ABSTRACT

Notwithstanding the advancement made in gender equality, women still face challenges in society, principally in terms of power dynamics. Women frequently face discrimination. The purpose of this paper is to explore the factors that contribute to women's empowerment and how these factors can be reinforced to advance gender equality. This article responds to the following research questions: 1) What are the factors that contribute to women's empowerment? 2) How do power dynamics impact women's empowerment? 3) What strategies can be executed to promote women's empowerment? This study examines prior research on gender and power dynamics, including the challenges faced by women and the impact of gender discrimination and harassment. This paper uses a qualitative research design, specifically a focused group discussion. The data collected were analyzed utilizing thematic analysis with a view to categorize common themes and patterns. The findings of this work provide insights into the factors that contribute to women's empowerment with a view to promote gender equality. This article contributes to the prevailing literature on gender and power dynamics, offering practical recommendations for promoting women's empowerment. The findings of this research is germane to employers, decision makers, and women's advocacy groups.

Keywords: Gender, Power, Women's Empowerment

1. CHAPTER 1 – INTRODUCTION

1.1 Statement of the Problem

Despite progress in gender equality, women still face countless challenges. These challenges include oppression and power dynamics in relation to men as well as in the larger social context. The social contexts include, among others, the household, academic institutions, places of worship, and the workplace. There is clearly a relationship between gender and power.

1.2 Research Questions

Based on the foregoing problem statement, this article responded to the following queries:

1.2.1 What are sources of power?

1.2.2 What are the factors that contribute to empowerment?

1.2.3 What strategies can be implemented to promote empowerment?

1.3. Purpose of the Study

In response to the research questions stated above, the purpose of this article was to expound on the sources of power, identify the factors that promote empowerment, and lay down strategies against oppression and for empowerment.

2. CHAPTER 2 – LITERATURE REVIEW

Note that social norms about gender roles are changing rapidly in societies in many parts of the world, while there are others that resist change. This article dealt with concepts and themes explored in previous research on gender, power dynamics, and factors that contribute to oppression and empowerment. They include studies in anthropology, law, political science, and public medicine. These pieces of prior literature dealt with the following in alphabetical order: education, equality, gender, hegemony, human agency, oppression, patriarchy, power, power dynamics, privilege, social justice, structural constraints. These concepts were woven to form a storyline regarding the use of human agency to veer away from the structural constraints of oppression to empowerment. Political economy ties everything together: interweaving the economy, politics, and culture (Polanyi, 2001). See Figure 1 below.

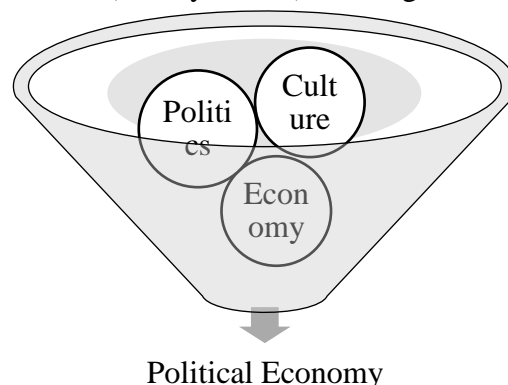

Figure 1: Political Economy as the Overarching Framework

6th International CEO Communication, Economics, Organization & Social Sciences Congress

For this paper, sex refers to the biological differences in chromosomes, while gender relates to the expected social roles of women and men in different points in time in each society. Structures and agency are twins. Structural constraints impede the equality of the status between women and men. They include class status, culture, gender roles, hegemony, patriarchy, privilege, and power dynamics. Human agency can be utilized to advance the equality of the status between women and men, as a result of which, gender empowerment, gender justice, and social justice are promoted (World Bank, 2014).

By gender is mean the social construction of the expected comportment, roles, characteristics, and actions that are considered proper for women and men in a given time or historical context and space or social context (Jewkes et al., 2015). For example, women are expected to be caring and emotive, whereas men are projected to be breadwinners who are fearless and without feeling. Patriarchy refers to institutions and unequal system of relations in society wherein male persons hold primary economic, political, ideological, cultural, social, moral authority, privilege, dominance, control, and power over women (Guy-Evans, 2023). To illustrate, women are paid less than men for equal work and men overwhelmingly hold more leadership positions than women. In short, it is a systemic gender oppression marked by the practice and culture that promotes comprehensive material and e male dominance (API.gov, 2023; Guy-Evans, 2023). In general, culture means the attitudes, behaviors, beliefs, customs, expected roles, traditions, values, and material objects related to one group or one society in different points in time.

Though societies in the world are changing, men in general still have the hegemonic position of privilege and power. Hegemony is defined as the dominance of one group, in this case, men, over another, in this case, women, through long-held practice and traditional culture of patriarchy. By privilege is meant the entitlements and advantageous positions that men possess on the basis of their sex and expected gender roles in society. Power means the capacity to impact on, stimulate, or regulate the conduct of others, ranging from encouragement to the use of brute power. Be power dynamics we mean the ways wherein power is distributed and exercised between the sexes and the expected gender roles in society.

Under patriarchy, women experience oppression in the economic, political, cultural, normative, and discursive realms. As a result, these systemic restraints and structures hinder the full development of women. They are systematically oppressed, sidelined, subjugated, and deprived, and underprivileged. Therefore, patriarchy and the resultant gender inequality need to be addressed so that social justice can be attained (Fal-Dutra Santos, 2019).

In general, the power dynamics in society is such that the oppression of women is linked directly to the privilege and power of men. In addition, the class, color, and other social statuses of women likely affect the status of women. Social status refers to the rank that a person holds in relation to others in society, with the corresponding responsibilities and rights. (APA, 2023). Class status refers to the economic position one holds in terms of type of profession and level of income, for instance, landlords, peasants, workers, or capitalists. Other statuses that a person can have include, minority or majority, color, rural or urban, and the like. Thus, women with complex intersectional identities can experience multiple oppression (Crenshaw, 1991, 1996, 2023).

Gender-transformative actions are needed to advance gender justice (Meyers, 2002). By gender justice is meant the equality and equity of women and men in all fields of human endeavor, where women and men jointly take part on equal terms in envisioning, formulating, and implementing policies, processes, and decision making which affect society. The purpose of gender justice is to address both the institutionalized and systemic causes of the marginalization of women with a view to usher in a society in which discrimination is eliminated and all have equal access to economic prospects, material resources, and rule-making power. By overcoming constraints in the social system and social structures, privileges are transformed into rights (ECLA, 2020). Education, training, mentorship, consciousness raising, and networking not only of and among women but equally importantly of men and among the sexes are necessary to promote gender equality (Karam, 2023). Clearly, gender, justice, and empowerment are directly related (Fielding-Miller et al., 2020). For an integrated summary of the literature above, see Figure 2 below.

3. CHAPTER 3 – METHODOLOGY

This paper used a qualitative research design. The research philosophy for this paper was based on the material conditions about which participants engaged in an interpretivist exercise. The research paradigm was social constructivist, as the people involved in this exercise took part in developing their ideas, based upon their lived experiences. For this reason, the research approach was dialectical, according to which the objective social reality and experiences of the people who were involved in the exercise shared their subjective reflections and ideas on the structural constraints on gender roles as well as on the capacity of human agency for social transformation of gender roles. The research collaborators were from diverse cultural, national, professional, and religious backgrounds.

The research site was a village in the countryside in northern Thailand. The population of this research included the residents of northern Thailand. The qualitative sampling was non-random purposive, and convenience sampling, based on those who volunteered to join and participate in this event. The research data collection methods included plenary workshop, focused group

discussions (FGD), and share-pair dialogue, which were the sources of data that served as inputs for this article. The time horizon was limited to a one-day whole-day activity.

The unit of analysis of this research comprised the data gathered from individuals about their viewpoints regarding gender roles in the family, community, and their professions in the society at large. The levels of analysis included 1) micro-level: the individual participants, 2) meso-level: their relationship with the community and their professions, and 3) macro-level: the society at large.

Data analysis was based on data coding, data organization, categorization, and thematic analysis. As a co-producer of knowledge, the author of this article interpreted the data from the activities from his own perspective. Data interpretation led to the development of a storyline. Member checking and triangulation of different materials were the sources of the credibility and confirmability of the findings. Note, however, that significant as the findings were, this research did not make claims regarding the transferability of the implications of the study to other contexts, as the sources of data are from a limited number of people with a limited diversity of backgrounds. The website of the retreat center, personal notes, photographed documentation of the event notes, debriefing, and publicly published reflections were used for triangulation of data. Consistency of the findings was based upon the documented process and saturation of the data. As for ethics, all participants to the event were unnamed in order to ensure their anonymity and to protect their privacy. See Figure 3 below.

4. CHAPTER 4 – FINDINGS

4.1 What Are the Sources of Power?

To respond to this query, basic information about the focused group discussion was documented here. The event from which the data for this article was culled was the workshop on anti-oppression. It took place in a retreat center in a remote village in northern Thailand. The activities took place for one whole day on Tuesday, February 7, 2023. The activities included plenary workshop discussions, focused group discussion, and rotating share-pair with different partners throughout the day. All in all, there were eight international participants, one Thai facilitator, and local staff members: one who served as the driver of the van that shuttled everyone roundtrip from the university to the site of the event as well as the in-house kitchen staff members who prepared the meals for the whole day at the venue in the village. See Table 1 below:

Table-1: Participants in the Gender and Power Focused Group Discussion

Number of Participants	Countries of Origin	Biological Sex
1	India	F
2	Myanmar	M x 2
1	Philippines	F
1	Philippines	M
1	Thailand	F
1	Thailand	M
1	U.S.A.	F
1	U.S.A.	M
1	Vietnam	F
Total: 10	Total: 6 Countries	F = 5; M = 5

The program was integrative, as it seeks to situate the individual in the larger social context for the purpose of bringing about social transformation. The members of this group were composed of women and men who were of diverse national, cultural, and religious heritage and origins. The facilitator of this gathering was a Buddhist feminist activist. For this round of activities, her was grounded in the core values of feminism and social activism. These principles are enacted through mutual respect, diversity, consultation, community building. power sharing, structural violence as the root cause of social problems, unlearning internalized patriarchy, experiential learning, simplicity, as well as the linkage between personal practice and social change.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

The sharing of ideas during the plenary workshop revealed that there are several steps in anti-oppression as well as for empowerment. The first step is self-awareness. The second step is diverse and inclusive groups working together. The third step is social transformation. The group engaged in an exercise in power analysis. Power analysis was conducted among individuals, including examining the positionality of marginalized groups. Participants noted that power plays a dual role, as it can be both a source of discord as well as the basis of transformation. During the whole-day event, participants identified the sources of power that I we, individuals, groups, institutions, states, and corporations possess.

Personal power is based upon one's position in three realms. The first is one's position in the family and clan. The second is one's position in the community, which includes residence, religion, and volunteer work. The third is one's position in one's profession, livelihood, associations, and organizations. Each person had very different positionality in the family, community, and society at large. For instance, one participant had zero power in the family, high level of power in the community for volunteer service, and almost zero power in the place of work. Another person had the opposite levels of power in these three spheres of human endeavor.

From the lively sharing of ideas in the plenum, the sources of oppression and power were identified. They are two sides of the same coin. Access to them or having the socially preferred attributes increases one's power. Denied access to them or not having the socially preferred attributes increases one's oppression. These sources include in alphabetical order the following: abilities, age, class, color, culture, education, ethnicity, experiences, gender, information access, institutions, intelligence, knowledge, networks, positions, race, relationships, sex, skills, and weapons possession. Organized differently, sources of power include access to decision-making positions, access to opportunities, access to resources, economic independence, educational attainment, knowledge base, networks, and social influence.

4.2 What Are the Factors that Contribute to Empowerment?

Power and oppression go together, but in opposite directions. The power relates to the underlying elements, conditions, and influences. Power can be either restraining or liberating. Accepting structural constraints or using human agency to overcome them affect our choices, decisions, freedom, health, liberty, life, opportunities, plans, rights, security, status, and wealth. The participants agreed that they do not have to accept structural constraints. Rather, they have the human agency for social change. With human agency, people can overcome constraints, difficulties, fears, hegemony, impediments, injustices, structures, and violence.

4.3 What Strategies Can be Implemented to Promote Empowerment?

Empowerment refers to intentional actions. Based on the results of the one-day focused group discussion, there are several factors that promote empowerment. They include advocacy, coaching, collaboration, education, engagement, gender mainstreaming in organizations, leadership development, mentoring, providing safe and inclusive work space, recognition,

representation, rewards, supportive culture, supportive policies, teamwork, and training. Empowerment comes in three forms: power over, power sharing, and power within. We need to have power over cultural constraints, meaning making, and patriarchy. We need to practice power sharing: community building; partnership, as well as supporting and helping others. To have power within, we need to have acceptance, assurance, confidence, courage, creativity, faith, flexibility, gratitude, hope, inner strength, integrity, joy, laughter, patience, resilience, understanding, and wisdom. See Figure 4 below.

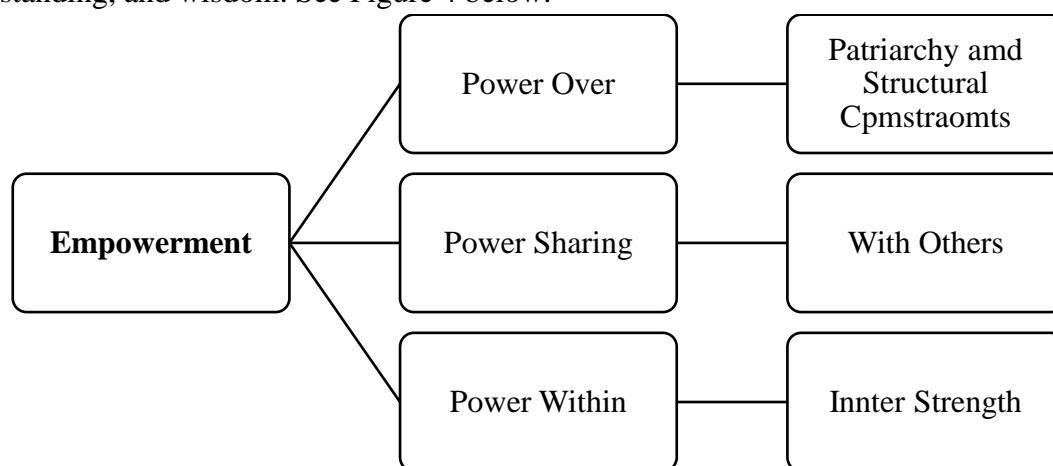

Figure 4: Grounded Theory of Empowerment

CONCLUSION

In summary, empowerment is not only for women or men. Empowerment is for all. In summary, this paper identified 1) the sources of power, 2) factors that promote empowerment, and 3) strategies for empowerment. This paper addressed the importance of studying gender and empowerment in today's world. It explored the implications of actions that promote gender empowerment in society. It provided actionable points in the form of strategies for social intervention that yields gender empowerment in different contexts. This research highlights the data outcomes that structural constraints and human agency that links gender and power.

There are some key lessons learned from the focused group discussion. One, offer an inclusive forum in which women and men of diverse backgrounds can interrelate with one another in the spirit of mutual respect, mutual understanding, and mutual benefit. Two, afford time and a venue in which personal reflection and growth can flourish in a supportive atmosphere. Three, increase knowledge, skills, and values that encourage work for positive social change; Four, shape a caring community from diverse and intersectional backgrounds with a shared commitment to construct positive social change.

Who cares about gender empowerment? This topic is significant to individuals, both women and men, communities, and whole societies. This article explored the economic, political, and cultural impact of gender oppression and the advantages of gender empowerment. It engendered the cognizance of gender empowerment and nurtured a sense of urgency in the necessity to address gender discrepancies.

So what? In this research, there are implications to several stakeholders. The paper scrutinized views about gender relations in society which contribute to our comprehension of gender and power, underscoring their impact on individuals, the community, and society at large.

Now what? Going beyond merely the conceptual level, this paper shed light on the tasks that need to be done in order to promote gender empowerment. Individuals, activists, community organizers, educators, organizations, policy makers, trainers can play pro-active roles in consciousness raising with a view to stimulate actions that advance gender empowerment. As this research relied on a few research collaborators, therefore there are still gaps in the production of knowledge that can be filled. Other researchers and scholars can gather more co-producers of knowledge either for deeper insights from qualitative findings or more generalizable inferences from quantitative research that relies on meta datasets. Step by step, we are committed to continuing our efforts for collaborative efforts with the purpose of achieving meaningful transformation of society that promotes gender empowerment.

The Right To Legislative Initiative Of Members Of The Parliaments Of Belarus And Poland: A Comparative Legal Analysis

Dr. Of PhD in Law, Associate Professor Aksana CHMYHA

Belarusian State University

ch.ok.vas@gmail.com

Orcid: 0000-0002-5793-3798

ABSTRACT

Goal – to analyze the key points of the right to legislative initiative of members of the Parliaments of Belarus and Poland in comparative feature.

Research methodology – The basis of the work is the comparative-legal method of research, as well as other methods of scientific knowledge

Score -. In the article a number of progressive characteristics of the right to legislative initiative of Polish and Belarusian parliamentarians are stated.

Originality/value - A new conclusion has been reached that it is preferable to further improve the regulatory framework that promotes the establishment of the right to legislative initiative of the members of Parliaments, which should be based both in Poland and in Belarus on the study and mutual implementation of the accumulated positive legislative experience of these states in this area.

Keywords: the right to legislative initiative of members of Parliament, Belarus, Poland, EU, comparative legal analysis.

INTRODUCTION

A significant area in the group of parliamentarians' rights related to their activities within the framework of the legislative body is the right to legislative initiative, which was vividly characterized back in 1913 by professor of the Imperial Yuryev University L.A. Schalland, who, arguing about the importance of the powers of some officials, noted that "... the granting of any special rights to the holders of the legislative function can only be justified by the recognition of this function as the prevailing value among others" (Shalland, 1913).

1. THE MAIN PART

As a rule, in any developed state, in its most general form, the content of a deputy's right to legislative initiative includes three elements:

- 1) the possibility of a deputy to submit to the representative body a draft decision (law) of this body or a proposal to change one or another decision of the representative body;
- 2) the possibility of the deputy to demand from the leadership of the representative body to include a draft decision or rule-making proposal in the agenda or to submit a reasoned refusal based on the relevant norms;
- 3) the possibility of a deputy to apply to authorized bodies for the protection of violated rights (Nudnenko, 2004).

This right in the Republic of Belarus is realized through the submission by a deputy of the House of Representatives to the lower house of the Parliament of draft laws and resolutions of the House of Representatives and amendments to them, except for the cases established by the Constitution of the Republic of Belarus. This right can be exercised by deputies of the House of Representatives both individually and collectively.

It should be noted that the Law of the Republic of Belarus of July 17, 2018 "On Normative Legal Acts" contains a concept similar to the term under consideration: a rule-making initiative, which in the said act means the official introduction by the subject of a rule-making initiative into the rule-making body (official) of the project a normative legal act or a motivated proposal on the need for adoption (publication), amendment, official interpretation, suspension, renewal, extension and termination of the normative legal act (its structural elements). These categories cannot be considered equivalent due to the incommensurability of their semantic volume. In this regard, G.A. Vasilevich, commenting on these terms, notes: "Comparing the content of the concepts studied in the law - legislative initiative and norm-setting initiative - one can note the difference not only in the types of projects (law or other normative act), the bodies to which the project is introduced (Parliament or another body), but also in the fact that a rule-making initiative can be expressed not only in the form of submission to the relevant body (official) of a draft, but also a motivated proposal on the need for adoption (publication), amendment, addition, interpretation, suspension, invalidation, cancellation normative legal act or part of it" (Vasilevich, 2003).

Since "the concept of the subject of law-making encompasses both the highest representative bodies of state power and the people themselves, which, through a nationwide vote (referendum) in the manner prescribed by law, adopts normative legal acts that have the highest legal force" (Kondratovich, 1995), we note that in the Republic of Belarus, in addition

to the deputies of the House of Representatives, the right of legislative initiative belongs to the President, the Council of the Republic, the Government, as well as to citizens who have the right to vote, in the amount of at least 50 thousand people, and is exercised in the House of Representatives. Nevertheless, on the grounds that “the circle of subjects of the law of legislative initiative cannot be unlimited” (Kondratovich, 1995), the list of these persons is strictly defined by the Constitution of the Belarusian state. State and public bodies that do not have the right to legislative initiative, or individual citizens may submit draft laws to the House of Representatives through bodies and persons who are subjects of the right to legislative initiative. In our opinion, this circumstance, although it has a limiting nature, is quite justified, since the creation of laws is a rather complex process, the final results of which significantly affect the most significant social relations that arise in society and the state.

On this basis, in the Republic of Belarus, any subject of the right of legislative initiative that has introduced a draft law (of course, including a deputy of the House of Representatives) or his authorized representative has the right to take part in the work on the draft law in the House of Representatives and the Council of the Republic. In accordance with the procedure established by the Rules of Procedure of the Council of the Republic of the National Assembly, the subject of the right of legislative initiative that introduced the draft law, or his authorized representative, must attend meetings of the Council of the Republic, standing committees of the Council of the Republic when considering this draft law, as well as participate in its discussion, provide explanations on individual its provisions. In the event that amendments and (or) additions are introduced into the draft law in the House of Representatives, with the exception of amendments and (or) additions that are of a technical nature, this draft law must be coordinated with the subject of the legislative initiative that introduced it.

Within the framework of this study, we also find it interesting and to some extent applicable the experience of legal consolidation of the right of legislative initiative in a number of developed states, in the practice of which “the right of legislative initiative vested in deputies is often limited by conditions such as the collective procedure for submitting legislative proposals, special conditions of consideration financial bills. In Japan, for example, a bill goes to hearings if it is submitted by at least ten members of the House of Councilors or 20 deputies from the House of Representatives (Aranovsky, 1999). In order to avoid oversaturation of the legislative process in Parliament with minor issues, the Rules of Procedure of the German Bundestag established a rule according to which materials submitted to the Bundestag by members of the German Parliament must be signed by one of the factions or 5% of the members.

In the Republic of Belarus, such restrictions are not provided, although such a need, in our opinion, exists. In accordance with national legislation, the introduction of a bill to the House of Representatives, the adoption of which may result in a reduction in public funds, the creation or increase of expenditures can be carried out only with the consent of the President of the Republic of Belarus or on his behalf - the Government. In this regard, in our opinion, in order to reduce probability of an unconsidered introduction of such important bills for society and the state, it would be advisable for the deputies - the initiators of the bills - to enlist the support of their colleagues, for example, at least 10% of the composition of the House of Representatives. Thus, already at this stage it is possible to find out to what extent this draft

law is “through passage, and the subjects of the right of legislative initiative are more balanced in their attitude to such draft laws. Due to the fact that the Constitution of the Republic of Belarus defines one deputy as a subject of the right of legislative initiative, we believe that compliance with such a rule should be voluntary.

In addition, in the short term, in Belarus “it is necessary to learn to formulate laws sufficiently clearly in order to allow interested parties - with the help of legal advice, if necessary - to foresee, with a reasonable degree of certainty for the given circumstances, the consequences that a particular action may entail”(Vasilevich, 2006).

Due to the fact that the main activity of parliamentarians is law-making, in our opinion, it would be useful in the basic Law to provide these persons with the right, due to their insufficient legal, economic or philological training, to apply for help in the development of draft laws to the National Center for Legislation and legal research of the Republic of Belarus and / or the Secretariat of the House of Parliament (in the Secretariat, we believe, it is permissible to create an appropriate group of specialists engaged in the development of draft laws by order of parliamentarians). This measure is due to the need for the Belarusian people's choice to submit to the Chamber for consideration at the present stage, as well as quite mature and balanced from the point of view of economic feasibility and legal technique of the bill. In our opinion, this measure will significantly reduce the number of unverified bills subject to substantial revision, which are now quite often submitted for consideration to the House of Parliament. In light of the above, we believe that the opinion of the famous Russian pre-revolutionary legal scholar P.I. Novgorodtsev, who back in 1914 wrote that “only a small group of specialists familiar with the technique of legislative affairs can draw up a completed bill. ... The art of legislative technique and the possession of special legal knowledge is always the property of a few persons” (Novgorodtsev, 1914).

As for the subjects of the law of legislative initiative in the Republic of Poland, their list and procedure for the implementation of this right, fixed in the legislation of the Polish state, in comparison with the Belarusian legal consolidation differs insignificantly. Thus, the legislative initiative in Poland, in addition to the Seim deputies (parliamentary bills can be introduced both by the Seim commissions and at least 15 deputies signing the draft), also belongs to the Council of Ministers [as a rule, the majority of bills are initiated by the Seim deputies and the Polish Government] to the President and the Senate (here we emphasize that a group of members of the Senate, unlike the deputies of the Seim, does not have the right to legislative initiative). In addition, the legislative initiative belongs to a group of at least 100,000 citizens who have the right to vote to the Seim.

It is noteworthy that, unlike the deputies of the Seim of the I-III convocations at the present stage, the deputies of the Seim are not the main subjects of the law of legislative initiative in Poland (such a situation in the legislative sphere of the Polish state corresponds to the situation in countries with a stable parliamentary system, in which the share of bills , submitted by parliamentarians of the total number of all proposed bills is 15 - 20%) (Skrzydło, 2008). While, for example, according to Professor Wiesław Skrzydło, 336 bills were submitted to the Seim of the 1st convocation, of which 60% were initiated by the deputies; 25% - the Council of Ministers; 8% - commissions, 3% each Senate and President. In the Seim of the II convocation, bills of deputies amounted to 45%; government bills — 42%; Seim commissions

— 8%; President - 3%; Senate - 2%. The Seim of the III convocation continued the tradition - bills of deputies in it amounted to 41%; government bills - 48%; Seim commissions - 7%; Senate - 2%; President - 1.5%. And only in the Seim of the IV convocation the situation changed, in which the Council of Ministers began to use its right to legislative initiative more intensively (Skrzydło, 2008).

Thus, the subjects of the law of legislative initiative, and, consequently, members of Parliament, both in the Polish and Belarusian states, exercise this right within the framework of the legislative process, regulated by the norms of the relevant national legislation.

It should be noted that, as a rule, in science, the term "law-making process" is understood as a set of successively replacing stages through which the legislative activity of the authorized state body is carried out. With this approach, four main stages of the legislative process are conventionally distinguished: legislative initiative; consideration of the project in the authorized body; adoption of a law; promulgation (Karasev, 2009). At the same time, along with the above, there is also an opinion in science that the legislative process, along with the official activities of the legislative body, also includes activities for the preparation and discussion of draft laws prior to their introduction as a legislative initiative (in such a discussion, not only legislative body, but also other state bodies and public organizations) (Karasev, 2009).

As for the legal consolidation of the procedure for the implementation of the right in question within the framework of the National Assembly of Poland, it should be noted that the Polish legislator, relying on the theoretical provisions of the existing scientific doctrine of the legislative process, in our opinion, went along a rather complicated and, at the same time, reasonable path providing for a rather time-consuming and multi-stage procedure for the implementation of the right to legislative initiative by its subjects. We believe that this circumstance is explained by the fact that the legal consequences of the implementation of this right significantly affect the most important social relations arising in the Polish society and state.

Thus, according to the rule enshrined in Article 34 of the Rules of the Seim, the Seim deputies, exercising their rights to legislative initiative individually, or members of the Senate, exercising their similar collegial right, like any other subjects of legislative initiative, submit a draft Law, submitted to the Seim, to the Marshal of this chamber in writing with the obligatory attachment of justification of the financial consequences of its execution. In addition to the financial implications of the adoption of the bill, the justification must also contain provisions that:

- 1) explain the necessity and purpose of the law;
- 2) represent the current state of affairs in the area that is subject to regulation;
- 3) indicate the difference between the still existing and projected legal status;
- 4) represent the expected social, economic, financial and legal consequences;
- 5) indicate the sources of financing if the draft law entails an encumbrance of the state budget or the budgets of local governments;
- 6) represent the most significant provisions of the drafts of the main executive acts;
- 7) contain a statement on the compliance of the draft law with the law of the European Union or on the degree and reasons for non-compliance with this law, or a

statement that the subject of the draft law does not apply to the law of the European Union.

Describing this most important right of Polish parliamentarians, it is important to emphasize that the Marshal of the Sejm has the right to return a bill to the initiator if the justification does not meet the above requirements. And on the contrary - the initiator of the legislative procedure can withdraw the bill in the Sejm before the end of the second reading of the bill.

It is noteworthy that the procedure for exercising the right of legislative initiative by members of the National Assembly of Belarus has much in common with a similar procedure enshrined in Polish legislation. So, for example, according to Article 118 of the Rules of Procedure of the House of Representatives, the right of legislative initiative is realized by the subjects of the right of legislative initiative by submitting to the House of Representatives projects:

- 1) laws on amendments and (or) additions to the Constitution of the Republic of Belarus;
- 2) laws on the interpretation of the Constitution of the Republic of Belarus and laws of the Republic of Belarus;
- 3) laws of the Republic of Belarus, including on amendments and (or) additions, cancellation, as well as on invalidation of laws of the Republic of Belarus, acts adopted by the Supreme Council of the Republic of Belarus and its bodies.

It should be noted that the members of the Belarusian Parliament, being subjects of the right of legislative initiative, are authorized to submit the above draft laws, like members of the National Assembly of Poland, with the obligatory attachment to these documents of a cover letter and justification for the need to adopt the draft law, including a financial and economic justification (in justification of the need for the draft law must include information on: the purpose of preparing the draft law, the subject of legal regulation of its structural elements that change the existing legal regulation; the analysis of the legislation of the Republic of Belarus and the practice of its application, legislation of foreign states, publications in the media, citizens' appeals and organizations related to the subject of legal regulation of the draft law; a comprehensive and objective forecast of the expected consequences of the adoption of the law; a list of regulatory legal acts (their structural elements), subject to invalidation, change and (or) addition, as well as development in connection with the adoption of the law (if any); a document containing information on the approval of the draft law, a number of expert opinions and other documents.

Such clear regulation of the implementation of the legislative initiative in Belarus, in our opinion, is quite justified, since it is based on high-quality legislation that meets all the requirements of legal technology and the modern socio-economic direction of the Republic of Belarus.

CONCLUSION

Thus, despite the certain complexity of the procedure for the implementation of the right to legislative initiative by members of the Polish and Belarusian Parliaments, at the same time, in both states, it is quite detailed, legal and transparent, which, in our opinion, indicates the

6th International CEO Communication, Economics, Organization & Social Sciences Congress

democratic and legal nature of the relevant legislation in the considered sphere and practice of its application.

It can be concluded that some legislative provisions that streamline relations in the field of the right to the legislative initiative of the parliamentarians are still not devoid of some gap, as well as the practice of their implementation and, therefore, they should be subjected to further scientific understanding, as well as the corresponding legislative revision in the near and medium term. We believe that the measures proposed above can to a certain extent become a catalyst for the intensification of the legislative function of parliamentarians in Belarus and in Poland at the current stage.

Orcid: 0009-0006-1071-5714

ABSTRACT

Many called Argentina the country with chronic inflation *per excellentiam* of the 20th century because, for much of the second half of this century, inflation dominated all governments and stabilization plans. Between the implementation of the “Plan Primavera” (September 1988) and the successive “Erman Plans” (1989-1990), the Argentine economy experienced two hyperinflationary episodes that caused its economic system to collapse. We propose in this article to state the inflection points that determined the hyperinflationary phases, as well as to give answers to conjectures such as whether it is necessary to encourage the imbalance in the price system by the Government to make the structural adjustments that are a starting point for economic growth. Should structural adjustments be made gradually during upswing phase of the general price level? Are these adjustments not the cause of this acceleration? Or should they be done through an unexpected shock so that economic agents must change their consumption and saving preferences? We try to answer these kinds of questions in this article.

Keywords: Argentina, Hyperinflation, Structural Changes, Economic Disequilibrium

INTRODUCTION

The first question is What was the Argentine hyperinflation in 1989?

The Argentine hyperinflation can be superficially described as a violent increase in prices, which underwent a growing acceleration until the moment when it was found to break the trend. It began in February 1989 and continued until July of that same year, when it reached its peak of 194% monthly inflation.

Hyperinflation was not a monetary phenomenon. It did not happen because the radical government issued a lot of money, because the public deficit was huge and out of control due to political measures.

Hyperinflation, on the other hand, must be explained by observing the centrality of the evolution of the dollar in those months of 1989. The profound tensions in the Argentine economic structure and its superior commercial and financial ties with the central countries converged on the dollar. This central element transfers the analysis of the crisis from a monetary approach detached from structural reality, an explanation that accounts for the dilemmas and problems that the Argentine economy faced from the serious situation bequeathed by the civic-military regime that preceded the government. democratic.

The value of the dollar in local currency suffered a strong increase throughout those six months, and the prices of goods and services tended to reproduce with increasing accuracy the increases in the foreign currency. The panorama of uncontrolled prices, which grew without being linked to the demand or the consumption capacity of the population, could not be understood without the leadership of the rapid increase in foreign currency.

So, two processes must be explained:

- 1) The exponential rise of the dollar during the first months of the year.
- 2) The bullish leadership of the foreign currency over domestic prices in an increasingly adjusted manner.

The rise in the dollar is explained by the dramatic imbalance that was generated between the supply and demand of that currency at the beginning of 1989.

This imbalance was latent during the previous years and exploded in the first weeks of February: while the supply of dollars in the exchange market became almost nil -since the traditional private providers stopped liquidating foreign currency-, the demand for the currency acquired completely excessive characteristics, since the habitual demand for dollars (to carry out commercial transactions, tourism or remittances abroad), was drastically increased by the demand for hoarding of the entire population due to the social fear generated by the spectacular devaluation of the currency local currency and the constant appreciation of the dollar.

II. INFLATION AND EXPECTATIONS

The second question is Why was this expectation generated in relation to the movement of the dollar?

It was a combination of "objective" facts (the absence of sufficient dollars in relation to the demand) and "subjective": the behavior of private actors who refused to sell the foreign currency they obtained through exports, plus the alarming rumors that circulated so much both in the media and on the street, in addition to the precautions and customs incorporated by the population in other previous exchange crises that had been repeated in the country.

But the background was deeper. A new episode of strangulation of the external sector of the economy was taking place. In these episodes, the country found that it suddenly lacked the necessary foreign exchange to import the necessary inputs to keep its productive apparatus running, or to provide the population with the usual consumer goods.

The structural bases of this strangulation can be summarized as:

- Low export capacity of the Argentine economy, given the insufficient export capacity of part of the Argentine industry and the very bad current prices of the most traditional agricultural exports. Those prices were among the lowest in the 20th century on the world market and generated an additional restriction on the already reduced level of exports. Argentina's low exportable supply – in relation to the country's foreign exchange needs – was further highlighted by the higher outlays caused by foreign debt servicing.
- Extremely high external indebtedness, caused by the neoliberal policies of the civic-military dictatorship, which not only conditioned the public accounts (diverting almost 20% of the national budget towards the payment of external commitments), but also meant an enormous mass of dollars that added to the normal demand for currencies, causing permanent upward pressure on the dollar.
- Structural weakness of the national State, both in terms of tax collection and customs control of imports and exports. This weakness led to not being able to adequately control external transactions and even less to collect the dollars corresponding to the taxes established for said operations. We must remember in this item that the imprecise numbers of the external indebtedness bequeathed by the dictatorship, were never duly investigated by the democratic government, obeying the conditions established by the IMF to proceed with the "rescue" of the Argentine debt.

III. AGENTS: RATIONAL OR ACTORS

The third question is Rational agents or political-economic actors?

Based on the assumption that the government lacked sufficient reserves to intervene and sustain the official price, the private sector began a bid that led the government to the need to introduce a band of "free dollar" in which the operations for "hoarding" were transacted, and which

6th International CEO Communication, Economics, Organization & Social Sciences Congress

quickly assumed a higher level than the official dollars for imports and exports. While the greed to buy dollars spread progressively to increasingly broad (and poorer) population strata, the country's main exporting companies (except for public ones, such as YPF and SOMISA) stopped liquidating foreign currency, which generated an exchange shortage. growing, contributing to a rapid acceleration of the rise of the “free” dollar.

Why did most exporters stop selling dollars? Conventional economic theory teaches that economic actors are rational and that they make their decisions mechanically to maximize their profits, without considering any other factors. In this case, the approach would explain that, when the exporting companies calculated that the dollar would continue to rise, they decided to wait to sell the currencies obtained abroad at the highest possible price. In this way, they contributed to an increase in the exchange imbalance, and the expected upward effect was verified.

Other interpretations, originating in the political-partisan sphere, have insisted that there was some form of conspiracy among big businessmen, which constituted a truly destabilizing political event, a "market coup."

The concentrated economic agents, aware of their power, decided to exercise it to discipline the majority political parties and impose their own rules of the game on them.

However, another explanation can be formulated. It is evident that a political and economic scenario as complex as the one existing at the beginning of 1989 cannot be built voluntarily by any economic actor unless it is all-powerful. But at the same time, the lack of foreign currency could not fail to grant power to those few social actors –a reduced oligopoly of the foreign currency supply– that could have access to dollars. Once the scenario of extreme scarcity and currency runs has been created, the power is held by whoever can supply the scarce goods. Additionally, the government was very weak after a troubled 5-year administration, in which it faced all kinds of economic, military, and political setbacks. It was not a government that could – or was willing – to confront, intimidate or condition the handful of export companies that could supply the foreign exchange. Most of the population, in general, was totally unaware of what was happening. And the big political parties were far from providing a crude and realistic explanation of the situation, since it implied the denunciation of the existing economic power. The large exporting companies understood the power that the structural situation and the international political situation had placed in their hands, and they proceeded to pressure the political system to obtain measures in their favor, which were uprooted over the weeks following the weakened radical government.

But they achieved something even better: to condition the future government –elected in mid-May, during hyperinflation– and make them feel the capacity to generate economic and social chaos, to the extent that their demands were not adequately addressed.

IV. GENERAL PRICE LEVEL AND THE EXCHANGE RATE

The fourth question is, “Why did prices follow the dollar?”

When the price of the dollar soared at the beginning of 1989, the first reaction of the companies was to calculate their prices, transferring the increases in costs caused by the rise in the dollar. But when the process sped up and became unpredictable, many companies directly set their final prices in dollars, regardless of the impact of the devaluation on costs. The danger of

6th International CEO Communication, Economics, Organization & Social Sciences Congress

decapitalization, that is, of not being able to replace the merchandise that had been sold since the new prices of the inputs exceeded the final prices of what had already been sold, generated pressure to take refuge in an accounting in dollars to avoid this evil. , although in fact it would imply a dramatic fall in the possibilities of selling the production or the goods in stock. In fact, many companies chose to close in the middle of the year, to avoid decapitalization.

V. HYPERINFLATION END

The fifth and last question is How was hyperinflation stopped?

In July 1989, hyperinflation stopped. A few weeks earlier, the slowdown in the rise of the dollar had already begun and a greater offer had appeared in the local market.

President of te Nation had to resign that month, to cede his position to the newly elected president, , who in turn ceded the Ministry of Economy to one of the main export groups in Argentina, the Bunge y Born conglomerate.

The rebranding process continued intensely that month, almost tripling the prices at the end of June. The inflationary blow was enormous in the pockets of the population, which began to recover progressively in the following months. The government managed to prevent an abrupt attempt to control hyperinflation via rigid monetary restriction from leading to widespread bankruptcy of companies and massive unemployment, but it could not stop the growing social violence and looting that began in the poorest neighborhoods of the country, which led to the resignation of the President.

Already in possession of the main economic springs, the local business elite temporarily abandoned the destabilizing strategy via dollar/prices, although two new episodes, one at the end of 1989 and the other at the beginning of 1991, had similar characteristics, although shorter.

Working Capital Management and Profitability: Evidence from Europe

ABSTRACT

The purpose of this study is to investigate the impact of working capital management on firms' profitability. To achieve the study objective, two econometric model was developed to assess the relationship between dependent and independent variables based on the Ordinary Least Square (OLS) regression analysis. The panel data is obtained from the annual financial report of 42 non-financial listed companies on Frankfort and Oslo stock exchange over the period 2017-2021. Profitability is a dependent variable and measure by two indicators return on assets (ROA) and return on equity (ROE). WCM is independent variable and measured by five proxies; accounts payable (AP), accounts receivable (AR), cash conversion cycle (CCC), current ratio (CR) and cash holding (CH). The control variables are firm size (FS), dept to assets ratio (DTA) and debt to equity ratio (DTE). The results revealed that AR, CCC, CR have significant and positive relationship with ROA and ROE. However, AP has a negative and significant association with indicators of profitability. CH is negatively related with ROA and ROE, but the relationship is not significant in case of ROE. The finding also shows a positive and significant connection between firm size and profitability. DTA and DTE as a firm's leverage are negatively related with ROA and ROE. Overall, managers should understand how to organize and control working capital because it is necessary for the firm's profitability and performance.

Keywords: Working capital management, Profitability, Non-financial firms.

1. Introduction

Recently, the concept of working capital management (WCM) is widely accepted and achieved a great attention because it plays an important role on improving firms profitability (Baños-Caballero et al., 2012). It can also offer an efficient and adequate level of liquidity for assisting businesses to meet their short and long term financial commitments that resulted from funding their activities to maintain the firms' operations and increase their profitability (Aldubhani et al., 2022).

In addition, WCM is related to current assets and current liabilities, which contribute a significant portion of firms assets. With respect to this Raheman & Nasr (2007) argued that keeping higher levels of current assets causes the business to make unsustainable return on investments (ROI). However, with relatively low level of current assets, the companies will be more sensitive to suffer from challenges and issues, including failing quickly to manage its operations, being unable to satisfy short-term financial liabilities, and being more exposed to liquidity risk (Aldubhani et al., 2022 & Van Horne & Wachowicz, 2000). Hence, firms can improve profitability and provide investors with added value by creating an acceptable policy for working capital (Nguyen et al., 2020). This means that WCM has a significant impact on the operational productivity of a firms-controlled assets, solvency, profitability, and eventually the overall value of the organization. To achieve the ideal level of working capital management, companies therefore seek to manage the risks and profits that associated with making an investment in current assets (Tsagem et al., 2015).

Further, working capital involves important components, such as, accounts payable, accounts receivable, cash conversion efficiency, cash conversion efficiency, inventory management and cash holding for firm's everyday activities (Gill & Biger, 2013; Isshaq et al., 2009). The importance of these elements can be highlighted by the structure of connection among the cost and method of assets financing, as non- fixed assets that are typically supported through short-term financing (Aldubhani et al., 2022). Additionally, net working capital (NWC) can be seen as the differences between current assets and current obligations (Karaduman et al., 2010) and if funded from long-term financing, it will rise the costs and responsibilities and has an adverse effect on profitability (Subramanyam, 2014). However, the recent COVID-19 outbreak have shown a lack of liquidity and credit constraints which can be comparable to those that experienced before and after financial crisis of 2007 (Aldubhani et al., 2022). This established WCM as a motivating factor for manufacturing companies' performance, where the firms should offer the required liquidity to fund their activities through regular funding (Effective Working Capital Management) and short-term financing as well (Enqvist et al., 2014). Hence, working capital can be viewed as the firm's heart and one of the most important variables that related to the sustainability of the firm's operation. Thus, efficient working capital management (EWCM) is a required process to accomplish the firm's objective.

Several researches have investigated the association between WCM and profitability, such as (Aldubhani et al., 2022; Alvarez et al., 2020; Amponsah-Kwatiah & Asiamah, 2020; Enqvist et al., 2014; Gonçalves et al., 2018; Karaduman et al., 2010; Laghari & Chengang, 2019; Mun & Jang, 2015 & Tsagem et al., 2015). However, none of them have focused on European countries and specifically non-financial firms. Although Germany and Norway have obtained a grate

development in manufacturing sector for many years, and can be seen as two industrialized countries, this paper aimed to explore how the elements of WCM (accounts payable (AP), accounts receivable (AR), cash conversion cycle (CCC), cash holding (CH) and liquidity (LIQ)) influence the profitability of listed non-financial firms on Frankfurt and Oslo stock exchange that is proxied by return on assets (ROA) and return on equity (ROE).

The next part focuses on the study objective and section three reviews various related literature and develop the hypothesis. Material and method are explained in section four, while empirical analysis and discussion will be presented in section five. Lastly, sixth section shows conclusion and recommendation.

2. Study Objectives

The main goal of this paper is to investigate the effect of working capital management (WCM) on profitability of listed non-financial firms on Frankfurt and Oslo stock exchange and the special study aims are listed below:

1. To explore the impact of account payable (AP), accounts receivable (AR), cash conversion cycle (CCC), cash holding (CH) and liquidity (LIQ) on return on assets (ROA) as a measurement of profitability of non-financial firms that listed on Frankfurt and Oslo stock exchange.
2. To explore the impact of account payable (AP), accounts receivable (AR), cash conversion cycle (CCC), cash holding (CH) and liquidity (LIQ) on return on equity (ROE) as a measurement of profitability of non-financial firms that listed on Frankfurt and Oslo stock exchange.

3. Reviewing prior studies and hypothesis development

Working Capital Management (WCM) can be considered as a theory to determine the ideal level of inventories, cash, liquidity, and debtors and also to fund this level via current obligations at the absolute rate in order to satisfy the firms daily activities (Brigham & Houston, 2009). Firms should understand how to control and maintain quick assets because there is a distinction in controlling each of its essential components, where effective management of every aspect has a direct impact on a company's profitability (Ehrhardt & Brigham, 2011).

3.1 Accounts Receivable and Profitability

The average time needed to turn a company's accounts receivable into cash after sales is referred to the average period of collection. It is determined by dividing receivable to the typical daily credit sales (Ponsian et al., 2014). Thus, it can be used to measure the relationship between receivable and flowing cash. Choosing the firm's credit strategy is the first step in managing accounts receivable (Aldubhani et al., 2022). However, the firms should have a process in place to check the application and compliance of credit terms. It is frequently necessary to take corrective action with regard to particular credit strategies, and having an effective receivable monitoring system is a way to determine whether the condition is appropriate and under supervision and control (Ehrhardt & Brigham, 2011). From the previous literature, Alvarez et al. (2020), Amponsah-Kwatiah & Asiamah (2020), Jakpar et al. (2017) & Sharma & Kumar

(2011) found a positive association between accounts receivable and company's profitability. However, Bieniasz & Gołaś (2011) & Enqvist et al. (2014) claimed a negative relationship between account receivable and profitability. They are also concluded that reduction in the number of days receivable to collect money from debtors would result in an improvement in profitability. Therefore, the first hypothesis is developed as follow:

H1: There is a negative connection between receivable conversion cycle with ROA and ROE

3.2 Accounts Payable and Profitability

The payment cycle can be explained by average of time between the purchasing raw materials and cash payment (Ponsian et al., 2014). The accounts payable involves accumulated expenses and trade credit, which gives a continuous funding to enhance corporate activities (Bhattacharya, 2014). Any delays in payments to the suppliers may extend the payable period, which reduces the cash conversion cycle and improves the efficiency of working capital (Deloof, 2003; Ponsian et al., 2014 & Raheman & Nasr, 2007). Thus, accounts payable can be seen as an inexpensive and adaptable source of funding (Enqvist et al., 2014). Prior investigations, such as (Aldubhani et al., 2022; Alvarez et al., 2020; Gonçalves et al., 2018 & Hsieh & Wu, 2013) found a positive and significant connection between accounts payable and profitability. On the hand, Deloof (2003), Enqvist et al. (2014) & Tsagem et al. (2015) reported a negative relationship between accounts payable and firms profitability. As a result, the second hypothesis is developed as follow:

H2: There is a positive connection between payable deferral period with ROA and ROE

3.3 Cash Conversion Cycle (CCC) and Profitability

One of the important and useful measurement of WCM is cash conversion cycle (CCC) and it has been widely applied in the previous literature (Amponsah-Kwatiah & Asiamah, 2020; Deloof, 2003). The CCC, expressed in days, is the period between firms expenses for acquiring materials and the receipt of revenue from selling completed goods (Enqvist et al., 2014 & Ponsian et al., 2014). This study has also used CCC as one indicator of WCM. Several studies, such as (Enqvist et al., 2014; Novak et al., 2021 & Usman et al., 2017) have investigated the link between WCM and firms' profitability and found a negative and significant connection between CCC and profitability and they are stated that an increase in firms CCC brings about an improvement in profitability. However, others claimed a positive and significant association between CCC and firms' profitability (Alvarez et al., 2020; Amponsah-Kwatiah & Asiamah, 2020; Ponsian et al., 2014 & Tsagem et al., 2015). Thus, the third hypothesis is developed as follow:

H3: There is a positive connection between cash conversion cycle with ROA and ROE

3.4 Liquidity and Profitability

A firm's liquidity is characterized by the amount of availability cash, which can be obtained quickly to pay its debts (Ponsian et al., 2014). The management should understand how to manage and control working capital because it is significantly related to firms' performance and profitability. This means that the greatest management of working capital will deliver the useful level of liquidity to support the firm's activity by automatic funding, which can be seen as an important key due to less liquidity and credit issues from crisis (Aldubhani et al., 2022). In this context, Karaduman et al. (2010) & Raheman & Nasr (2007) suggested a negative

correlation between liquidity and profitability. However, Kazi, (2012) & Azam & Haider (2011) have found a positive relationship between companies liquidity and profitability. As a result, the fourth hypothesis is developed as follows:

H4: There is a positive connection between liquidity with ROA and ROE

3.5 Cash Holding and Profitability

Holding of cash may benefit shareholders by increasing financial flexibility, decreasing cost of transaction, and funding expansion with internal financing that are less expensive (Kusnadi, 2019). The association between a company's ability to make cash through activities and actual level of holding cash is significant to comprehend the company's WCM and profitability as well (Mun & Jang, 2015). Several studies pointed out that the relationship between cash holding and profitability is positive (Abushammala & Sulaiman, 2014; Martínez-Sola et al., 2013; Mun & Jang, 2015). However, Ferreira & Vilela (2004) & Kim et al. (1998) found a negative association between firms cash holding and profitability. Hence, the fifth hypothesis is developed as follows:

H5: There is a positive connection between cash holding with ROA and ROE

4. Material and Method

4.1 Sample and Data Collection

The sample panel data was contained from 42 listed manufacturing companies and originally they were 50, but 8 of them were removed due to missing financial data. A panel data was mainly obtained and collected from published annual financial reports of non-financial firms that listed on Frankfurt and Oslo stock exchange during the period of (2017-2021).

4.2 Dependent Variables

Following the prior literature, this paper has two dependent variables for measuring profitability, first, return on assets (ROA) and it is calculated by earnings before interest and taxes (EBIT) to total assets. The second variable is return on equity (ROE) and calculated by net profit to shareholders equity.

4.3 Independent Variables

In order to examine the impact of WCM on profitability, five indicators of WCM were used in this investigation and they are; accounts receivable (AR) is measured by average receivable divided by sales and multiplied by 365 days; accounts payable (AP) is measured by average payable to cost of goods sold and multiplied by 365 days; cash conversion cycle (CCC) is measured by receivable conversion cycle plus inventory conversion cycle then minus payable deferral cycle; liquidity is measured by current ratio (CR) as current assets to current liabilities and cash holding (CH) is measured by natural logarithm of average cash.

4.4 Control Variables

In WCM literature, several investigations have applied the control variables that combined with dependent variables in order to explore the impact of WCM on firms profitability. Following the directions of previous literature, this study has considered three control variables that related to the firm characteristics, such as firm size (FS) which measured by natural logarithm of total assets; debt to assets ratio (DTA) is measured by total liabilities to total assets and debt to equity ratio (DTE) is measured by total liabilities to shareholders equity. All variables are clearly defined in table 1.

Table-1: Variable Definition

Variables	Abbreviation	Measurements	Source
Dependent variables:			
Return on Assets	ROA	EBIT /Total assets	(Alvarez et al., 2020)
Return on Equity	ROE	Net profit/ Total assets	(Aldubhani et al., 2022)
Independent variables:			
Accounts Receivable	AR	(Receivable/Sales) *365	(Amponsah-Kwatiah & Asiamah, 2020)
Accounts Payable	AP	(Payable/Cost of goods sold) *365	(Gonçalves et al., 2018)
Cash Conversion Cycle	CCC	(Receivable + Inventory-Payable)	(Tsagem et al., 2015)
Current Ratio	CR	Current assets/Current liabilities	(Karaduman et al., 2010)
Cash Holding	CH	Log of average cash	(Mun & Jang, 2015)
Control variables:			
Firm Size	FS	Log of total assets	(Amponsah-Kwatiah & Asiamah, 2020)
Debt to Assets Ratio	DTA	Total liabilities/Total assets	(Enqvist et al., 2014 & Laghari & Chengang, 2019)
Debt to Equity Ratio	DTE	Total liabilities/Shareholders equity	(Aldubhani et al., 2022 & Enqvist et al., 2014)

Source: Elaborated by the authors

Based on the above explanation, the regression models are developed as follow:

Model 1:

$$ROA_{it} = a_0 + \beta_1 AR_{it} + \beta_2 AP_{it} + \beta_3 CCC_{it} + \beta_4 CR_{it} + \beta_5 CH_{it} + \beta_6 FS_{it} + \beta_7 DTA_{it} + \beta_8 DTE_{it} + e_{it}$$

Model 2:

$$ROE_{it} = a_0 + \beta_1 AR_{it} + \beta_2 AP_{it} + \beta_3 CCC_{it} + \beta_4 CR_{it} + \beta_5 CH_{it} + \beta_6 FS_{it} + \beta_7 DTA_{it} + \beta_8 DTE_{it} + e_{it}$$

Where, ROA_{it} is return on assets from i at t time, ROE_{it} is return on equity from i at t time, AR_{it} is accounts receivable from i at t time, AP_{it} is accounts payable from i at t time, CCC_{it} is cash conversion cycle from i at t time, CR_{it} is current ratio from i at t time, CH_{it} is cash holding from i at t time, FS_{it} is a firm size from i at t time, DTA_{it} is debt to assets ratio from i at t time, DTE_{it} is debt to equity ratio from i at t time, a_0 is considered to be a constant, $\beta_1 - \beta_5$ is coefficients for corresponding the explained variables and e_{it} is error term from i at t time.

5. Results

5.1 Descriptive Statistics

Table-2: Descriptive Statistics of the Variables

Variables	ROA	ROE	AR	AP	CCC	CR	CH	FS	DTA	DTE
-----------	-----	-----	----	----	-----	----	----	----	-----	-----

Mean	0.3821	0.1685	97.292	97.867	7.4606	2.6570	19.1437	21.4115	0.5385	2.1660
Std. Dev.	0.8830	0.1554	165.638	185.943	87.6939	4.0719	1.68027	2.10073	0.1854	3.1333
Minimum	-10.500	-0.9584	9.1959	5.33291	-696.630	0.2500	15.2902	16.8036	0.0897	0.0985
Maximum	0.6606	0.4960	224.254	172.975	139.920	54.930	23.3652	25.7355	0.9569	22.250
Observations	210	210	210	210	210	210	210	210	210	210

Source: computed the authors

Table 2 demonstrates the descriptive statistics of the variables. The mean value of ROA and ROE is 0.38 and 0.16 with a deviation of 0.88 and 0.155 respectively. The minimum and maximum value of ROA is -10.50 and 0.66 respectively. The lowest and highest value ROE is -0.95 and 0.49 respectively. The standard deviation of AR and AP is 165.63 and 185.94 respectively with a mean value of 97.29 and 97.86 respectively. The minimum and maximum value of AR is 9.19 and 224.25 respectively. The lowest and highest value of AP is 5.33 and 172.97 respectively. CCC, CR and CH have a mean value of 7.46, 2.65.14 and 19.14 respectively with a standard deviation of 87.69, 4.07 and 1.68 respectively. The minimum value of CCC, CR and CH is -696.63, 0.25 and 15.29 with the maximum value of 139.92, 54.93 and 23.36 respectively. Finally, the mean value of FS, DTA and DTE is 21.41, 0.53 and 2.16 respectively with a deviation of 2.10, 0.18 and 3.13 respectively. The lowest value of FS, DTA and DTE is 16.80, 0.08 and 0.09 and the highest value is 25.73, 0.95 and 22.25 respectively.

5.2 Pearson Correlation

Table-3: Correlation Matrix between dependent and independent variables

	ROA	ROE	AR	AP	CCC	CR	CH	FS	DTA	DTE
ROA	1									
ROE	0.601**	1								
AR	-0.276**	-0.133*	1							
AP	-0.563**	-0.261**	0.385**	1						
CCC	0.337**	0.323**	-0.036	-0.398**	1					
CR	-0.412	-0.10***	0.050	0.253**	-0.359**	1				
CH	0.361*	0.200**	0.034	-0.138*	0.254**	-0.082	1			
FS	0.277**	0.320**	-0.033	-0.265**	0.386**	-0.18**	0.280**	1		
DTA	-0.211**	-0.270**	0.024	-0.081	0.232**	-0.36**	0.315**	0.372**	1	
DTE	-0.477	-0.183	0.100	0.186	-0.035	-0.134	0.150	0.088	0.264	1

Notes: * Significant at 5% level; ** Significant at 1% level; and *** Significant at 10% level

Source: computed the authors

Table 3 indicates the Pearson correlation between WCM and profitability. The strong correlation between ROA and ROE is noted, which is 60.1%. AR is negatively related with ROA and ROE with a value of -0.276 and -0.133 respectively. The relationship between ROA and ROE with AP is significantly negative at -0.563 and -0.261 respectively. CCC has a positive and significant association with ROA and ROE at 0.337 and 0.323 respectively. However, the connection between CR with ROA and ROE is negative at -0.412 and -0.10 respectively. CH is positively linked with the profitability measurements at 0.361 and 0.20 respectively. As a control variable, FS is positively related with ROA and ROE at 0.277 and 0.320 respectively.

Additionally, the association between DTA with ROA and ROE is significantly negative at -0.211 and -0.270 respectively. However, a negative and insignificant connection can be observed between DTE with ROA and ROE at -0.477 and -0.183 respectively.

5.3 Variance inflation factor (VIF)

Table-4: Test of multicollinearity

Variables	Tolerance Value	VIF Value
AR	0.270	3.705
AP	0.211	4.747
CCC	0.583	1.715
CR	0.748	1.336
CH	0.203	4.927
FS	0.175	5.717
DTA	0.392	2.550
DTE	0.449	2.229
Mean = 3.031		

Source: Computed by the authors

Regarding to table 4, the Variance Inflation Factor (VIF) was below 10 and tolerance value is bigger than 0.1 for all explanatory and control variables, which shows no multicollinearity issues between independent variables. This estimation is also noted by (Abebe Zelalem et al., 2022; Gujarati & Porter, 2009 & Newbold et al., 2013).

5.4 Multiple Regression Analysis

In order to test the proposed hypotheses, Ordinary Least Square (OLS) regression model was utilized to identify the elements of working capital element that was critical for predicting the firm's profitability. Table 5 presented the results of the models.

Table-5: Regression Results and Estimation

Variable	Model 1 (ROA)	Model 2 (ROE)
C	-10.18 (0.104)	-1.452 (0.040)
AR	0.003 (0.000) **	0.031 (0.052) *
AP	-0.005 (0.034) *	-0.040 (0.008) **
CCC	0.002 (0.001) **	0.066 (0.000) **
CR	0.045 (0.041) *	0.570 (0.020) *
CH	-0.189 (0.048) *	-0.053 (0.751)
FS	0.710 (0.000) **	0.085 (0.014) *
DTA	-0.381 (0.000) **	-0.522 (0.000) **
DTE	-0.054 (0.005) **	-0.014 (0.030) *
R ²	0.845	0.679
Adjusted R ²	0.797	0.581
F-statistic	17.81	6.922
F-sig	0.000**	0.00**

Notes: * Significant at 5% level and ** Significant at 1% level

6. Discussion

Table 5 shows the empirical outcomes of Ordinary Least Square (OLS) regression model for the above estimation. The findings illustrated that the relationship between AR with ROA and ROE is significant and positive with a value of 0.003 and 0.031. Considering that other factors remain the same, this implies that a 1 % rise in receivable conversion cycle brings about an increase in profitability by 0.3% and 3.1% as it is estimated by ROA and ROE respectively. In other words, increasing the number of days to return money from debtors resulted in a great change in net profit because it will build a good relationship with customers. However, it may increase the level of loan from external source where the firms do not have a proper level of cash. This result is consistent with the arguments of (Alvarez et al., 2020; Amponsah-Kwatiah & Asiamah, 2020; Jakpar et al., 2017 & Sharma & Kumar, 2011). However, it is opposite with the findings of (Bieniasz & Gołaś, 2011 & Enqvist et al., 2014). Therefore, the first hypothesis that there is a negative connection between receivable conversion cycle with ROA and ROE is rejected.

AP is negatively related with ROA and ROE with a coefficient value of -0.005 and -0.040 respectively. If other variables remain constant, this means that a 1% decrease in payable deferral cycle leads to an increase in profitability by 0.5% and 4% as it is measured by ROA and ROE respectively. In other words, firms get less profit when they are delaying to pay their bills, which means that shorter period of accounts payable improves firms' profitability. This finding is similar with the arguments of (Deloof, 2003; Enqvist et al., 2014 & Tsagem et al., 2015) and disagreed with the arguments of (Aldubhani et al., 2022; Alvarez et al., 2020 & Gonçalves et al., 2018). Hence, the second hypothesis that there is a positive connection between payables deferral period with ROA and ROE is rejected because firms should get benefits from cash discount on accounts payable and protect them from trade credit as an external source of funding.

The association between CCC with ROA and ROE is positive and significant with coefficient value of 0.002 and 0.066 respectively. Assuming that other factors remain constant, this means that a 1% rise in CCC causes to an increase in profitability by 0.2% and 6.6% as it is estimated by ROA and ROE respectively. The result also recommended that firms should improve operational income by increasing CCC because reduction in CCC will bring a shortage in net working capital that is required to finance firms operations and satisfy their demands. This finding supported the results of (Amponsah-Kwatiah & Asiamah, 2020; Ponsian et al., 2014 & Tsagem et al., 2015) and disagreed with the results of (Enqvist et al., 2014; Novak et al., 2021 & Usman et al., 2017). Thus, the third hypothesis that there is a positive connection between cash conversion cycle with ROA and ROE is accepted.

In addition, the association between liquidity that is measure by current ratio (CR) with ROA and ROE is significant and positive with coefficient value of 0.045 and 0.570 respectively. This means that, if other factors remain the same, a unit raise in CR brings about an equal increase in ROA and ROE by 4.5% and 57% respectively. This implies that firms with a high rate of liquidity can cover their obligations without focusing on external financing. Therefore, companies with effective working capital management (EWCM) are concerned to be more profitable. This finding is agreed with the results of (Kazi, 2012 & Azam & Haidar, 2011) and

disagreed with the findings of (Karaduman et al., 2010; Raheman & Nasr, 2007). As a result, the fourth hypothesis that there is a positive connection between liquidity with ROA and ROE is accepted.

The connection between CH with ROA and ROE is negative with coefficient value of -0.189 and -0.053 respectively, but the relationship between CH and ROE is not significant. This means that a unit decrease in CH resulted in a decrease in ROA by 18.9%. However, CH does not have any influence on ROE, which means that if an increase or decrease recorded to CH, ROE remains unchanged. This finding is consistent with the studies of (Ferreira & Vilela, 2004 & Kim et al., 1998) and inconsistent with the results of (Abushammala & Sulaiman, 2014; Martínez-Sola et al., 2013 & Mun & Jang, 2015). Thus, the fifth hypothesis that there is a positive connection between cash holding with ROA and ROE is rejected.

Regarding the control variables, FS related positively with the firm's profitability in both models and the relationship is significant, which shows that companies can improve profitability by increasing their total assets. Further, Leverage that is measured by (DTA) and (DTE) demonstrated a negative and significant correlation in both models, which indicated that companies' profitability reduced due to increasing DTA and DTE ratios. These findings are similar with the results of (Aldubhani et al., 2022; Amponsah-Kwatiah & Asiamah, 2020; Enqvist et al., 2014).

7. Conclusion

The purpose of this paper is to investigate the relationship between working capital management and profitability of non-financial firms that listed on Frankfurt and Oslo stock exchange for the period of (2017-2021). To achieve the study aim, Ordinary Least Square (OLS) regression model is utilized to measure the above connection. Profitability is a dependent variable and measured by return on assets (ROA) and return on equity (ROE). Working capital management on the other hand, is considered to be independent variable and indicated by five proxies, accounts receivable (AR); accounts payable (AP); cash conversion cycle (CCC); liquidity is measured by current ratio (CR) and cash holding (CH).

The empirical findings of the study indicated that AR has a positive and significant association with ROA and ROE, which reported that a longer period of money collection from consumers will improve profitability. AP has a significant and negative relationship with ROA and ROE, which indicated that shorter period of paying money to the suppliers will enhance the profitability. CCC positively related with ROA and ROE, which demonstrated that an increase of CCC brings an efficient level of net working capital and increase operational income as well. In addition, CR has a positive and significant connection with ROA and ROE, which illustrated that companies can run profitability by enhancing their liquidation margin. CH is positively linked with ROA and ROE, but the relationship with ROE is not significant. This indicated that a unit decrease in cash holding will reduce profitability in case of ROA. However, CH does not have any influence on ROE. Overall, the managers must know how to handle working capital as it is essential to improve the firm's profitability and performance.

Finally, this study has some limitations, first, it is based on secondary data only, primary data however, can be also applied to know an obtain extra information by mixing both survey and

reported data to enhance the finding of the future study. Secondly, this paper focused on non-financial firms in Europe, therefore, future studies should focus on obtaining data about financial firms and possibly make a comparison between financial and non-financial firms.

Brain Drain and Its Repercussions on the Needs of the Palestinian Labor Market: A Study of Causes and Consequences of Migration Among Educated Youth

Ms. Manal HAMARSHA

An-Najah National University
hamarsha.manal@hotmail.com
Orcid: 0000-0002-0865-3204

ABSTRACT

Brain drain is a phenomena in which a large number of highly trained and educated persons leave from their nation of origin to another country, leaving a skilled labor shortage behind. This study will focus on the brain drain from Palestine, particularly among its educated young, and its influence on the Palestinian labor market. The study's goal is to look at the reasons and repercussions of migration among Palestinian educated young.

The research will be carried out using a mixed-methods approach, with both qualitative and quantitative data collection. A focus group discussions will be used to gather information from Palestinian, by 30 person including students, graduates, and experts who relocated from Palestine to other nations.

Overall, this study will add to our understanding of the causes and effects of brain drain in Palestine, as well as the influence it has on the Palestinian labor market.

Keywords: Brain Drain, Educated Youth, Labor Market, Migration, Skilled Labor, Political Instability, Economic Growth, Job Opportunities, Government Policies.

Introduction:

A complex phenomenon called "brain drain" has become significantly more prevalent recently and has an impact on a nation's labor market and economic growth. In order to pursue greater prospects, highly educated and competent people emigrate from their native countries, leaving behind a scarcity of skilled workers in their place of origin (Bhagwati & Rodriguez, 1975). Many educated young people have left the Palestinian territories in recent years in search of better prospects abroad, causing a significant brain drain in the area (Kronfol, 2017).

The brain drain has a substantial impact on the labor market in Palestine since it leaves a scarcity of talented people in a number of fields, including technology, healthcare, and education. This study aims to investigate the reasons behind the exodus of educated young Palestinians as well as its effects on the Palestinian labor market.

A focus group discussion with 30 participants, including students, graduates, and specialists who have emigrated from Palestine to other nations, will be held as part of the study's qualitative methodology. To determine the causes of the brain drain and its effects on the Palestinian labor market, the data collected will be thematically evaluated.

The purpose of the study:

Around 30% of the labor force in the Palestinian territories is unemployed, with an even higher percentage among young people, according to the World Bank (2019). This situation is made worse by the dearth of employment options and the scarcity of funding for local business and innovation. As a result, a large number of recent graduates and professionals leave the country in search of better opportunities overseas, leaving a substantial void in the labor market that calls for professionals and trained workers.

This essay tries to investigate the reasons behind and effects of brain drain in Palestine, concentrating on how emigration affects the demands of the Palestinian labor market. The study will look at the causes of educated youth migration, the economic and social repercussions of their departure, and viable remedies to lessen the negative labor market effects of brain drain.

This study adopted a qualitative methodology to achieve its goals, with all qualitative information being gathered through semi-structured interviews with Palestinian youth who have immigrated to other countries as well as with employers and officials.

The Questions of the study:

- What are the main reasons why educated Palestinian youth are choosing to emigrate from their home country?
- How does brain drain affect the overall skill level of the Palestinian labor market, and what are the economic consequences of this?
- What policies or interventions might be effective in reducing brain drain and retaining talented youth in the Palestinian labor market?

The statement of the study:

The statement of the study focuses on the phenomenon of brain drain from Palestine, particularly among its educated youth, and its impact on the Palestinian labor market. The study aims to identify the reasons for the migration of highly skilled and educated individuals from Palestine and investigate the repercussions of this migration on the Palestinian labor market.

The Problem of the study:

The issue of brain drain has received substantial scholarly attention, and its consequences on nations' economic progress are well established (Docquier & Marfouk, 2006; Bhagwati & Rodriguez, 1975; Baroudi & Abou-Zaki, 2015; Deeb, 2018; Salem, 2019). Nonetheless, further investigation is still required to examine the consequences of brain drain on the Palestinian labor market and its requirements, as well as potential countermeasures.

This tendency has also had an impact on the Palestinian territories, since a sizable number of highly educated and skilled people have left the area in quest of better prospects (Kronfol, 2017).

Causes of Brain Drain in Palestine:

The problem of brain drain is particularly acute among young educated Palestinians, who are seeking better opportunities abroad due to a lack of prospects in the region (Kronfol, 2017). The reasons for this brain drain are complex and multifaceted, with economic, political, and social factors playing a significant role (Nashashibi & Tawil, 2014).

The lack of work prospects in the area, especially in the private sector, is one of the primary causes of the brain drain. A scarcity of jobs has resulted from a lack of investment and economic growth, particularly in high-skilled industries like technology and engineering (Kronfol, 2017). Moreover, the political instability and conflict in the region have also contributed to the brain drain, as it has led to a lack of security and uncertainty about the future (Nashashibi & Tawil, 2014).

Conflict and political instability have been named as two of the main causes of brain emigration from Palestine. Many young Palestinians are looking for chances elsewhere as a result of the prolonged conflict with Israel, which has led to a lack of stability and limited economic prospects. The political climate in Palestine has also resulted in a lack of spending on infrastructure and education, which has reduced the number of jobs available for competent workers according to the Palestinian Central Bureau of Statistic (2019).

Another significant reason for the brain drain in Palestine is economic hardship. The World Bank (2019) reports that the Palestinian economy is highly reliant on foreign assistance and experiences high rates of unemployment and poverty. Young people have a hard time finding meaningful employment and prospects for career progression due to the current economic difficulties.

Another important factor in Palestine's brain drain is the lack of professional growth and career promotion possibilities. Many young Palestinians believe that Palestine offers few chances to further their careers and achieve their professional objectives. Several people have been prompted by this to look for possibilities abroad because they think they will have a better chance of reaching their professional goals elsewhere.

Low professional development opportunities: Some educated young may leave Palestine owing to a lack of career growth and advancement prospects, in addition to the country's limited employment options. Young professionals in specialized industries like engineering, medicine, and technology may find this to be especially true.

Political and social exclusion: Some educated Palestinian youth may feel expelled from political and social institutions, which may influence their decision to leave the nation in quest of better prospects and a sense of belonging.

Brain waste: When educated youth's talents and expertise are not fully exploited or valued in the local job market, it might lead to cases where they leave Palestine. This issue is known as "brain waste." They may seek employment abroad where there is greater demand for their abilities as a result.

Family and social networks: As many educated young people have friends or family who have previously emigrated or who may assist them in finding job and settling in a new country, family and social networks may also have an impact on the decision to leave Palestine.

Restricted employment options: Many educated young people in Palestine may believe that their abilities and knowledge are underutilized in the local labor market, which may prompt them to look for better employment prospects elsewhere.

Political unrest: The ongoing conflict and unrest in Palestine might make the atmosphere for young professionals unstable and unpredictable, which may influence their choice to leave the nation.

Underdevelopment of the economy: The Palestinian economy encounters a number of difficulties, such as high unemployment rates and restricted access to capital and resources for business owners. These elements may make it challenging for educated teenagers to launch firms or locate fulfilling employment in their sector.

Life-quality: Some educated youth may emigrate from Palestine in quest of a greater standard of living, superior medical treatment, or increased family access to education.

Consequences of Brain Drain on the Palestinian Labor Market:

The consequences of brain drain on the Palestinian labor market are significant. The loss of skilled and educated workers has led to a shortage of human capital in key industries such as healthcare, engineering, and technology. This shortage has hindered economic growth and development in Palestine and contributed to the country's high unemployment rate.

The impact of brain drain on the Palestinian labor market has been particularly severe in the healthcare industry. According to a study by Abukmail and Haj-Yahia (2019), the shortage of healthcare professionals in Palestine has led to a decrease in the quality of healthcare services and an increase in healthcare costs.

It has caused a shortage of skilled workers in various sectors, including education, healthcare, and technology. This has hindered the economic growth and development of the Palestinian territories, as it has led to a lack of investment, reduced productivity, and limited innovation (Kronfol, 2017). Moreover, the loss of highly skilled and educated individuals has also had a negative impact on the quality of services and education in the region (Nashashibi & Tawil, 2014).

Loss of human capital: The exodus of highly educated and competent professionals from Palestine may lead to a loss of important human capital, which may impede the social and economic progress of the nation.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

Lack of trained labor: The loss of experts due to brain drain may result in a shortage of skilled workers in important industries and sectors, which may restrain Palestinian economic growth and competitiveness.

Limited diversity in the workforce: Brain drain can result in a lack of diversity in the Palestinian workforce, as many of those who leave tend to be highly educated and skilled professionals from urban areas.

Negative effects on social cohesion: The exodus of educated youth can be detrimental to Palestinian society and the sense of community since it can lead to a sense of disappointment and mistrust among the remaining population.

The loss of qualified workers owing to brain drain might make it harder for Palestine to draw in and hold on to foreign investment, which is sometimes necessary for the country's economic growth and development.

Decreased innovation and productivity: As a result of the exodus of highly qualified individuals, Palestine may experience a decline in innovation and productivity as well as a talent shortage.

More disparity: The exodus of educated youth may result in Palestine experiencing greater inequality since those left behind may not have the knowledge and skills required to compete in the global labor market and land higher-paying positions.

Loss of social and cultural capital: As many of individuals who leave Palestine are young, educated, and engaged in the local culture, brain drain may cause a loss of social and cultural capital in that country. Those who remain may feel disconnected and lost as a result of this.

Possible Solutions to Brain Drain in Palestine:

To address brain drain in Palestine, several solutions have been proposed. Improving the country's political stability and economic conditions is essential to creating an environment that is conducive to retaining skilled workers. Additionally, providing better opportunities for professional development and career advancement can help retain talented individuals and encourage them to contribute to the Palestinian economy.

Promoting entrepreneurship and innovation is also an important solution to brain drain in Palestine. Many young Palestinians are interested in starting their own businesses and pursuing innovative ideas, but they face significant challenges in doing so. By creating an environment that supports entrepreneurship and innovation, the Palestinian government can encourage young people to stay in Palestine and contribute to the country's economic growth and development.

Finding and results:

Due to a lack of employment possibilities, political unrest, and better educational or professional opportunities abroad, many young individuals with educational backgrounds in Palestine decide to immigrate to other nations.

The loss of highly educated and talented individuals has had a substantial influence on the Palestinian labor market, especially in fields like technology, health care, and education.

The industries or sectors that provide little prospects for professional advancement as well as those that have minimal investment and unfavorable working conditions are those that are most impacted by brain drain.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

For Palestine and its citizens, the long-term effects of brain drain are considerable, including the loss of priceless human capital, decreased innovation and competitiveness, and a rise in socioeconomic inequality.

Strategies and policies that could help to mitigate the effects of brain drain on Palestine's labor market include creating more job opportunities, improving working conditions, increasing investment in education and research, and implementing policies to encourage young professionals to stay in Palestine.

Brain drain is a common phenomenon in many developing countries, where highly skilled professionals seek better job opportunities and living conditions abroad (Siddiqui, 2014).

The causes of brain drain in Palestine are complex and multifaceted, including political instability, economic underdevelopment, limited job opportunities, and limited access to quality education and training (Khayyat & Mahmoud, 2016).

The loss of highly skilled professionals due to brain drain can have a significant impact on the development and growth of the Palestinian economy, as it limits the availability of skilled labor in key industries and sectors (Husseini & Ismail, 2016).

The impact of brain drain on the Palestinian labor market is not limited to the loss of highly skilled professionals, as it can also lead to a shortage of mid-level professionals and a lack of diversity in the workforce (Khayyat & Mahmoud, 2016).

In addition to the loss of human capital, brain drain can also have a negative impact on social cohesion and the sense of community in Palestine, as it can lead to a sense of disillusionment and mistrust among those who remain (Siddiqui, 2014).

Strategies for addressing the issue of brain drain in Palestine may include increasing investment in education and training programs, providing incentives for professionals to stay and work in Palestine, and creating an environment that fosters innovation and entrepreneurship (Husseini & Ismail, 2016).

It's important to note that not all professionals who leave Palestine for better opportunities abroad do so permanently, as many may return to Palestine later in life and bring valuable skills and experience with them (Siddiqui, 2014).

A problem known as "brain drain" occurs when highly educated young people leave Palestine due to a lack of economic opportunities, political unrest, and better options for study or career progression overseas. This has had a substantial impact on the healthcare, education, and technology sectors, which have lost highly trained workers as a result of the lack of chances for growth and development, low investment, and subpar working conditions. Long-term effects of this loss of human capital for Palestine include decreased innovation and competitiveness as well as a rise in social inequality. Implementing policies and strategies that encourage young professionals to stay in Palestine, such as expanding job opportunities, enhancing working conditions, increasing investment in education and research, and fostering an environment that encourages innovation and entrepreneurship, are necessary to mitigate the effects of brain drain. Many factors, such as political unrest, economic stagnation, a lack of job prospects, and restricted access to high-quality education and training, contribute to the brain drain in Palestine. Incentives for professionals to remain, more investment in education and training programs, and fostering an innovative and entrepreneurial environment are all necessary to

6th International CEO Communication, Economics, Organization & Social Sciences Congress

address this issue. It is significant to emphasize that some experts might go back to Palestine at a later time, bringing with them essential knowledge and expertise.

Conclusion:

Brain drain is a significant issue facing Palestine, particularly among its educated youth. The causes of brain drain are complex and interconnected, and the consequences on the Palestinian labor market are significant. Addressing brain drain will require a concerted effort from all sectors of society, and a focus on improving the country's political stability, economic conditions, and opportunities for professional development and entrepreneurship. By addressing these issues, Palestine can create an environment that is conducive to retaining skilled workers and encouraging economic growth and development.

The study's findings suggest that brain drain among Palestinian-educated youth is a significant problem that has far-reaching consequences for the Palestinian labor market. The main reasons for brain drain among educated youth are political instability, lack of economic opportunities, and the desire for higher education and better living standards.

The consequences of brain drain are evident in the Palestinian labor market, which suffers from a significant shortage of highly skilled and educated workers. This shortage results in a loss of human capital, lower productivity, and increased dependence on foreign labor. The loss of human capital is particularly detrimental to Palestine's economic development, as it impedes the country's ability to innovate and compete globally.

To address the problem of brain drain, policymakers in Palestine should prioritize improving the country's political stability, creating more economic opportunities, and investing in education and training programs. These policies can help retain highly skilled and educated workers and attract Palestinian expatriates to return to their home country.

Overall, the study contributes to the understanding of the causes and consequences of brain drain in Palestine and highlights the urgent need for policymakers to take action to address this issue.

The results of this study will advance our knowledge of the causes, consequences, and labor market repercussions of Palestine's brain drain. It will give decision-makers understanding of the steps that may be taken to address the problem and keep skilled employees in the nation. The results of this study will add to the body of knowledge on brain drain and how it affects developing economies, especially in the context of Palestine. The study will offer policymakers and stakeholders new perspectives on how to create strategies that will effectively combat Palestine's brain drain issues and keep smart people on the job market.

The findings of this study will contribute to our understanding of the causes and effects of the brain drain in Palestine and its impact on the labor market. It will provide policymakers with insights into the measures that can be taken to address the issue and retain skilled workers in the country. By doing so, the Palestinian government can promote economic growth, increase employment opportunities, and enhance the country's overall development.

As a result, the study will shed important light on Palestine's brain drain problem and how it affects the labor market. The findings of the study will contribute to the creation of policies and initiatives aimed at retaining highly educated and skilled individuals in Palestine and advancing the social and economic advancement of the area.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

Semi- structured interview Process:

Thank you for joining us today to share your thoughts and experiences about brain drain among Palestinian-educated youth. We are interested in understanding the reasons and repercussions of migration among Palestinian-educated young people and its influence on the Palestinian labor market. Your insights will be extremely valuable to our study. This focus group discussion will last for approximately 60 minutes.

Opening question:

- Can you tell us about your experience with brain drain or migration from Palestine, or what you have heard about the experiences of others who have migrated?

Follow-up questions:

- What are some of the main reasons that Palestinian-educated young people choose to migrate to other countries?
- How has the migration of highly educated and skilled individuals affected the Palestinian labor market?
- Have you observed any particular industries or sectors in Palestine that are more affected by brain drain than others? If so, which ones and why?
- In your opinion, what are the long-term consequences of brain drain for Palestine and its people?
- Are there any strategies or policies that could help to mitigate the effects of brain drain on Palestine's labor market?

Closing question:

Do you have any final thoughts or comments about brain drain and its impact on Palestine and its people?

ABSTRACT

A target market is a specific group of consumers that a business or organization aims to sell products or services to.

A "kids market" or "children's market" refers to the segment of consumers that are children. This market includes products and services that are designed specifically for children, such as toys, clothing, books, and educational materials. The market also includes products and services that are intended for use by the whole family, but are popular among children, such as video games, family vacations, and fast food.

The children's market is significant because children have a significant amount of purchasing power and influence on household spending decisions. Additionally, many of the products and services that are marketed to children have the potential to generate repeat business as children grow and develop.

Children are a common target market for many industries, including toys, clothing, and food. Marketers often use a variety of techniques to appeal to children, such as colorful packaging, popular characters, and interactive websites.

Keywords: Kids, Business Opportunity, Target Market

1. INTRODUCTION:

A target market is a specific group of consumers that a business or organization aims to sell products or services to.

A "kids market" or "children's market" refers to the segment of consumers that are children. This market includes products and services that are designed specifically for children, such as toys, clothing, books, and educational materials. The market also includes products and services that are intended for use by the whole family, but are popular among children, such as video games, family vacations, and fast food.

The children's market is significant because children have a significant amount of purchasing power and influence on household spending decisions. Additionally, many of the products and services that are marketed to children have the potential to generate repeat business as children grow and develop.

Children are a common target market for many industries, including toys, clothing, and food. Marketers often use a variety of techniques to appeal to children, such as colorful packaging, popular characters, and interactive websites. However, it is important to be aware that advertising to children is regulated by laws such as the Children's Advertising Review Unit (CARU) guidelines and the Children's Online Privacy Protection Act (COPPA) to protect children's privacy and prevent manipulation.

2. OBJECTIVES OF THE STUDY:

1. To study the major factors influencing purchasing decisions for kids products.
2. To study the buying behaviour of parents towards kids.
3. To study the children's influencing factors towards parents for buying the products.
4. To offer suggestions about the kids in target market.

3. RESEARCH METHODOLOGY:

The Study is based on primary data and secondary data sources. The primary data has been collected from 100 respondents using structured questionnaires and who are affiliated to Bellary city . The secondary data has been collected from authentic websites, published reports. For analysis, the simple statistical tools have been applied like percentages, diagrams and charts. The study has been conducted for 4 weeks.

4. PROFILE OF KIDS

Children, also known as kids, are individuals who are in their developmental stage of life between infancy and adolescence. They can be classified into various types based on factors such as age, gender, abilities, and interests. For example, some common types of kids include:

- Toddlers, who are typically between the ages of 1 and 3
 - Pre schoolers, who are typically between the ages of 3 and 5
 - Elementary school children, who are typically between the ages of 6 and 11
 - Tweens, who are typically between the ages of 8 and 12
 - Children with special needs, who may have physical, intellectual, or emotional disabilities.
-
- **Toddlers:** Toddlers are children between the ages of one and three years old. They are in a stage of development characterized by increased mobility, language acquisition, and the development of self-awareness. Toddlers are also known for their curiosity and their desire to explore and learn about their environment. They begin to understand and follow simple instructions and begin to express themselves through words and gestures. It is a critical period for cognitive, emotional and social development. Parents and caregivers play a crucial role in fostering healthy development during this stage.
 - **Pre-schoolers:** Pre-schoolers are children between the ages of 3 and 5 who are typically too young for formal schooling but are old enough to begin learning basic academic and social skills. They are in the stage of cognitive, emotional and physical development, which is crucial for the child's later success in school. They learn through play and hands-on activities, and typically attend preschool programs at a school or day-carecentre.
 - **Elementary school children:** Elementary school children typically refers to children between the ages of 6 and 11 who are enrolled in primary school or elementary school. This is typically the first stage of formal education, and students in this age group learn a wide range of subjects including reading, writing, math, science, social studies, and often music, art, and physical education as well.
 - **Tweens:** Tweens are individuals who are between the ages of 9 and 12 years old. During this stage of development, children are moving out of childhood and into adolescence. They are becoming more independent and developing their own sense of self. Physical changes such as growth spurts and the onset of puberty can also occur during this time. Emotionally, tweens may experience increased mood swings and may struggle with self-esteem and self-confidence. They may also begin to develop deeper, more complex relationships with their peers and family members. Cognitively, tweens are capable of abstract thinking and problem-solving, and their brains are developing the ability to process and analyse information more efficiently. Overall, the tween years are a time of significant change and growth for children.
 - **There are many different types of products that are designed for kids to use. Some examples include:**

6th International CEO Communication, Economics, Organization & Social Sciences Congress

- Toys: These can include action figures, dolls, stuffed animals, building blocks, puzzles, board games, and electronic toys.
- Clothing and footwear: This includes clothing and shoes that are designed specifically for kids, such as shirts, pants, dresses, and sneakers.
- Books and media: This includes books, comics, magazines, movies, and video games that are specifically targeted towards kids.
- School supplies: This includes items such as pencils, pens, notebooks, backpacks, and lunchboxes that are designed for kids to use in school.
- Safety products: This includes items such as car seats, bike helmets, and baby gates that are designed to help keep kids safe.

The type of products that kids use will depend on their age, interests, and abilities. For example, a toddler may be more interested in playing with simple toys like blocks, while an older child might be more interested in playing video games. Similarly, school-aged children will need items such as pencils, notebooks, and backpacks to use in school, while infants and young children will need safety products such as car seats and baby gates.

5. REVIEW OF THE LITERATURE:

CHILDREN AS A TARGET MARKET IN THE BRANDING PROCESS WITH EMPHASIS ON ETHICAL ASPECTS The authors **Aleksandra Krajnović, PhD, Monika Hordov, mag. Oec, MateaŽupnek, mag. Oec**, that this paper will examine how big brands take care of their youngest clients – children, , how their strategy of creating brand is focused on children, and how much children are perceived as the target market. The aim of this research is also to highlight the future of marketing communication with children in the right way. The authors of this article have concluded that there are numerous studies of the harmful impact of media on children. In order to achieve this, all countries need to harmonize laws and regulations because if we do not work together, innocent children will be harmed, and they should actually build our future.

EMERGENCE OF CHILDREN AS A TARGET AUDIENCE IN ADVERTISING: A CASE STUDY OF URBAN JAMMU: The author **Archana Kumari**, Assistant Professor conveys that this paper tries to find out whether children are really potential target audience in urban Jammu i.e. are they able to influence the purchasing decisions of their parents and if yes, to what extent. The research concludes that the urban population of Jammu depends heavily on their children in every kind of purchase decision, whether it is of their use or not, whether it is as small an item like health drink or as big an item like car. so it is imperative to take their suggestions in each purchasing decision. This also implicates that Jammu has emerged as potentially very fragile target for advertisers. There is no doubt that children are playing big role in purchasing decisions of their parents here too like big metropolitan cities.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

KIDS MARKETING: AN EVALUATION OF PINAR'S KIDS MARKETING OPERATIONS: The authors Prof. Dr. Ahmed B. GÖKSEL, Doç. Dr. E. Pelin BAYTEKİN, Araş. Gör. Deniz MADEN, Araş. Gör. Deniz MADEN, author assists that the attention of this paper is directed to kids marketing, with the objectives of; displaying a general look into the state of the field and analysing the kids marketing efforts of one of the most important Turkish Brands “Pinar”, to have an evaluation of a Turkish kids marketing case. After some general information about the state of kids marketing in Turkey has been given, the Pinar case has been analyzed according to the theoretical information.

UNDERSTANDING THE 4TH MARKET OF CHILDREN AS CONSUMERS The authors **AgusantoMulyawan , JehanNabilah , Silvia Irawan , JonyOktavianHaryanto, President University, Indonesia agusanto**conveys that the study is focused on developing a framework by JonyOktavianHaryanto about the 4th Market of Children as Consumers to synthesise the role of children to parents’ decision-making process. The first contribution of this research is to show the influence of parents’ income and education to their buying behaviour. children behaviour; and parents unconscious behavior. The outcome is were Researchers discovered that the higher a parent's income is, the more thoughts they have before purchasing goods or services, Before purchasing products or services, parents think about their children's health, safety, comfort, and educational value of the goods or services.

CHILDREN AS CONSUMERS - A TARGET MARKET: The author **Dr. Kusum Gupta, Assistant Professor**, conveys that the purpose of this paper is to highlight the reasons that lead marketers to give greater importance to children and targeting them as their future consumers, and also to know buying decisions. The study emphatically indicates that adult consumer behaviour is the direct antecedent of child consumer behaviour, realizing this fact marketer are giving serious consideration to this segment, they are targeting the consumers by using children not only in the case of product meant for them but also for the product used or purchase in household sector.

FOOD ADVERTISING AND MARKETING DIRECTED AT CHILDREN AND ADOLESCENTS IN THE US: The authors **Mary Story* and Simone French** conveys that the purpose of this article is to examine the food advertising and marketing channels used to target US children and adolescents, the impact of food advertising on eating behavior of youth, and current regulation and policies. The emphasis of this article is on food advertising and marketing practices in the United States. The outcome is the food and beverage industry has viewed children and adolescents as a major market force. The principal goal of food advertising and marketing aimed at children is to influence brand awareness, brand preference, brand loyalty, and food purchases among youth.

WHAT IS INFLUENCER MARKETING AND HOW DOES IT TARGET CHILDREN? A REVIEW AND DIRECTION FOR FUTURE RESEARCH: The authors **Marijke De Veirman ,LiselotHudders and Michelle R. Nelson** The author conveys that this paper therefore aims to

shed light on why and how social media influencers have persuasive power over their young followers. The paper starts with providing insights into how and why social media influencers became a new source in advertising. It concludes that the current study aimed to situate and conceptualize social media influencers as a new type of advertising source targeting children.

RESPONSIBLE MARKETING TO KIDS: The author **Monica Chaudhary Assistant Professor**, assists that this paper reviews the current literature and existing marketing practices targeted towards children, this paper gives reader a comprehensive understanding of how corporate use unethical marketing strategies to capture young minds and heart. The outcome tells that these socially irresponsible practices hampers child's mental as well as physical growth, Moreover, by showcasing responsible marketing organizations can actually reap benefits by making a strong, responsible and trustworthy brand.

ETHICAL ISSUES ABOUT KIDS TARGETING: The authors **Saad AIT LAMKADEM1 , Smail OUIDDAD2** The authors conveys that the paper aim is to focus on ethical issues surrounding targeting in the digital marketing era. , we will concentrate on specificities of targeting in the digital marketing context and children targeting that evolve continuously to sway kids purchasing decision. The outcome is that the emergence of digital marketing, made people more cautious than before. Subsequently, most of studies related to digital marketing ethics, and no matter how we think we know about unethical practices today, we may surely be surprised by what we will face tomorrow.

CHILDREN AS TARGET MARKET: The author **SOMESFALEAN Vasilica Magdalena** conveys that the purpose of this paper is to highlight the reasons that lead marketers to give greater importance to children, to explain the increased potential that children have on the existing market and strategies that marketers and companies use in order to reach this market and also the pester power, purchase decision are made. This paper can create a clearer picture for parents, marketers and other stakeholders of the present and future of our children as consumers.

YOUTUBE KIDS: THE APP ECONOMY AND MOBILE PARENTING: The author **Benjamin Burroughs** The author conveys that this research investigates the growing relationship between media industries and the everyday viewing patterns and lives of young children. Specifically, this research focuses on the development of the YouTube Kids app, app economy, infants, parenting, YouTube. The outcome is that the youtube channels have taken advantage of emerging mobile and tablet technologies to target very young children and infants (aged 0–5 years).

KNOWING THE CHILD CONSUMER: HISTORICAL AND CONCEPTUAL INSIGHTS ON QUALITATIVE CHILDREN'S CONSUMER RESEARCH: The author **Daniel Thomas Cook** the purpose of this paper is to offer a selective and necessarily truncated history of the place and use of qualitative approaches in the study of children's consumption in order to provide some depth of understanding regarding differences between and commonalities of

approaches employed by academic market researchers, social science researchers and, to a lesser extent, market practitioners. It is argued that there has been a displacement of psychologically oriented, developmental conceptions of the child with sociological and anthropological conceptions resulting in an acceptance of the child as a more or less knowing, competent consumer.

CHILDREN’S CONSUMER BEHAVIOR: The author **Blandína Šramová** author assists that this chapter is focused on the process of the child becoming a customer (i.e., how they learn the consumer behavior). . Moreover, the research part is focused on findings of the main social factors influencing the consumer socialization of preschool children. The outcome is that in the interest of the protection of the children and young people, it is essential to know the main socialization agents that play an important role in consumer and economic socialization.

THE DEVELOPMENT OF A CHILD INTO A CONSUMER: The authors **Patti M. Valkenburga,***, **Joanne Cantorb**The authors conveys that the aim of this paper is to discuss the phases during which the different characteristics of consumer behavior develop in children and why they occur at particular ages. It concludes that the authors argue that the development of consumer behavior occurs in four phases, and that in each phase, one of the four characteristics of consumer behavior emerges.

THE OTHER “CHILD STUDY”: Figuring Children as Consumers in Market Research, 1910s-1990s: The author **Sevinc Kurt and Kelechi Kingsley Osueke**assists that this article examines how notions of “the child” were constructed in marketing research literature from the 1910s through the 1990s. Over this time period, the desire for consumer products becomes figured by industry observers and researchers as a mode of children’s “self expression.” It concludes that Generations of observers, researchers and marketers have forged workable and working models of children and childhood consistent with an ideology of free choice and presocial desire.

THE GROWING ‘KIDFLUENCE’ ON PARENTS’ BUYING BEHAVIOR: THE ERA OF YOUNG CONSUMERS: The author **1Anadi Trikha**, **2Dr. Kavya Saini**, conveys that this paper highlights the trends of parenting nowadays. It has also explored the different connotations with impact of advertising to children. Latest examples of pester power are also mentioned in the paper. This paper examines the growing market of children’s products it concludes Parents play pivotal role in making the kids understand the difference between good and bad and asking them to choose for healthier options available.

MOBILE PHONES AND THE CONSUMER KIDS: The authors **Christian Downie and Kate Glazebrook**it aims to discover why children want mobile phones, how they pay for them and whether child ownership of mobile phones, as an example of consumerism among children. It concludes that in short, the pressure felt by children to consume, in this case mobile phones, risks commercialising their childhood with negative effects for their development, and may lead them into financial difficulty.

IMPACT OF ADVERTISEMENT ON BEHAVIOUR OF CHILDREN AS CONSUMERS:

The author **Usman Zafar¹** , **Dr.Rab Nawaz Lodhi** assists that the Purpose of this study is to explore impact of product marketing on behavior of children, it concludes that . Findings revealed that as the children are immature and do not understand the marketing approach of companies for their products, so, they go for things that has been advertised and influenced by their Peers.

CHILDREN AS AN EMERGING BUYERS: INFLUENCE OF VARIOUS FACTORS ON CHILDREN CONSTRUCT MAKING PROCESS DURING PURCHASE: - AN EMPIRICAL STUDY IN THE SELECTED REGION OF NORTH INDIA: The authors **Dr.Arun Kant Painoli, Anish Kaushal, Dr.AnkurKukreti**, conveys that the present study cater two major capital cities of North India which are Chandigarh and Shimla where children influence upon parents buying process and decision making process of children have been explored to have better insight on the influence of children during purchase decision directly or indirectly in the family. The study concludes that the Family patterns influences the purchase decisions of the family and children plays more role in the nuclear families as compared to joint families.

IMPACT OF ADVERTISEMENTS ON CHILDREN: PARENTS' VIEW: The authors **1Dr. A. MOHANA SUNDARAM 2 Mrs. P. NITHYA PRIYA** the authors assists that Advertising is multi dimensional and has diverse aims to achieve. The results revealed that rural parents do consider TV ads as important aspects of children learning consumer socialization process, as through it children learn about the products that are available in the marketplace.

6. FINDINGS AND SUGGESTIONS

6.1 Summary of Findings

- The majority of respondents are in the age group of 5-6 years (44 percent).
- 84 percent of respondents like advertisements, with the majority of them preferring toy advertisements (48 percent).
- Most respondents purchase new products for their child monthly (52 percent).
- Quality is the most important factor that influences respondents when making purchasing decisions for their child's products (56 percent).
- Respondents typically use physical stores (52 percent) and online channels (24 percent) to find new products for their child.
- Respondents are willing to pay between 1000-2500 Rs for high-quality products for their child (40 percent).
- The majority of respondents prefer outdoor sports/activities for their child (56 percent).

6th International CEO Communication, Economics, Organization & Social Sciences Congress

- Most respondents prefer to shop for their child's products both online and in-store (48 percent).

6.2 Suggestions

- Focusing on the age group of 5-6 years, as they make up the majority of the respondents.
- Creating advertisement that appeals to children, as 84 percent of respondents liked advertisement.
- Creating more toy advertisements, as they are the most liked type of advertisement.
- Promoting monthly deals or subscriptions for products, as most respondents purchase new products for their child monthly.
- Emphasizing the quality of products, as it is the main factor influencing purchasing decisions.
- Setting up physical stores and online platforms to sell products, as most respondents use physical stores and online platforms to find new products for their child.
- Offering high-quality products at a reasonable price, as most respondents are willing to pay between 1000-2500 Rs for high quality products.
- Creating products and activities that appeal to children's love of outdoor sports and activities, as they are the most enjoyed activity by children.
- Creating a seamless and easy shopping experience for parents, as most respondents prefer to shop for their child's products both online and in-store.

CONCLUSION:

In conclusion, the data analysis and interpretation of the survey of 25 respondents provides insight into the preferences and behavior of parents and children in the kids market. The majority of the respondents are in the age group of 5-6 years, 84 percent of respondents liked advertisement, and the most liked type of advertisement is toys. Most respondents purchase new products for their child monthly and the main factor influencing their purchasing decisions is quality.

Respondents typically use physical stores and online platforms to find new products for their child, they are willing to pay between 1000-2500 Rs for high quality products and the most enjoyed activity by children is outdoor sports and activities. Most respondents prefer to shop for their child's products both online and in-store. These findings can inform the development

6th International CEO Communication, Economics, Organization & Social Sciences Congress

and marketing strategies for businesses targeting the kids market by focusing on the preferences and behavior of their target audience.

ABSTRACT

Fashion psychology is the study of the relationship between clothing and the psyche. It examines how people use fashion as a form of self-expression, and how fashion can influence our emotions, behavior, and social interactions. By understanding the psychological factors that influence our clothing choices, fashion psychology can help designers create garments that resonate with their target audience, and can help individuals choose clothing that reflects their own personal style and self-image.

Color can make us feel a certain way when we see it depending on whether we like that particular color or not. We can also associate memories and thoughts with certain colors. It is a powerful communication tool and can be used to signal action, influence mood, and even influence physiological.

The use of color in fashion is also an important aspect of fashion psychology. Color can have a powerful psychological impact on the way people perceive and interact with clothing. By understanding the psychology of color, designers can use color to create specific moods and atmospheres in their garments and fashion collections. Overall, both fashion psychology and the use of color in fashion can play an important role in the way that clothing is designed, marketed, and perceived by the public.

Keywords: Fashion Psychology, Apparels, India and Colors

1. INTRODUCTION:

Fashion psychology is the study of the relationship between clothing and the psyche. It examines how people use fashion as a form of self-expression, and how fashion can influence our emotions, behavior, and social interactions. By understanding the psychological factors that influence our clothing choices, fashion psychology can help designers create garments that resonate with their target audience, and can help individuals choose clothing that reflects their own personal style and self-image.

Color can make us feel a certain way when we see it depending on whether we like that particular color or not. We can also associate memories and thoughts with certain colors. It is a powerful communication tool and can be used to signal action, influence mood, and even influence physiological.

The use of color in fashion is also an important aspect of fashion psychology. Color can have a powerful psychological impact on the way people perceive and interact with clothing. Different colors are associated with different emotions and meanings, and can evoke specific feelings and reactions in the viewer. For example, blue is often associated with calm and trust, while red is associated with passion and energy. By understanding the psychology of color, designers can use color to create specific moods and atmospheres in their garments and fashion collections.

Overall, both fashion psychology and the use of color in fashion can play an important role in the way that clothing is designed, marketed, and perceived by the public.

2. OBJECTIVES OF THE STUDY:

1. To study the fashion psychology towards colors.
2. To study the major factors influencing purchasing decisions of apparels in fashion market.
3. To study and evaluate the buying behaviour of consumer on products in fashion psychology and colors.
4. To offer suggestions about the colors in fashion market.

3. RESEARCH METHODOLOGY:

The study is based on primary data and secondary data sources. The primary data has been collected from 100 respondents using structured questionnaires and who are affiliated to India. The secondary data has been collected from authentic websites, published reports. For analysis, the simple statistical tools have been applied like percentages, diagrams and charts. The study has been conducted for 4 weeks.

4. PROFILE OF COLORS:

Colors are a visual sensation caused by the reflection, absorption, or emission of light. The human eye perceives different colors based on the wavelength of light that is being observed. The most common colors seen in everyday life are red, orange, yellow, green, blue,

purple, and many variations and shades of these colors. These colors can be mixed together to create a wide range of other colors, such as pink, brown, and gray. The colors of an object are determined by the way it reflects or emits light. In art, colors are often used to convey emotions and to create a certain atmosphere or mood.

Colors can be described in terms of their hue, saturation, and brightness. Hue refers to the color itself, such as red or blue. Saturation refers to the purity or intensity of the color, and brightness refers to the amount of white light that is present. In color theory, colors can be arranged on a color wheel and can be used to create color schemes that are pleasing to the eye.

4.1 Types of Colors

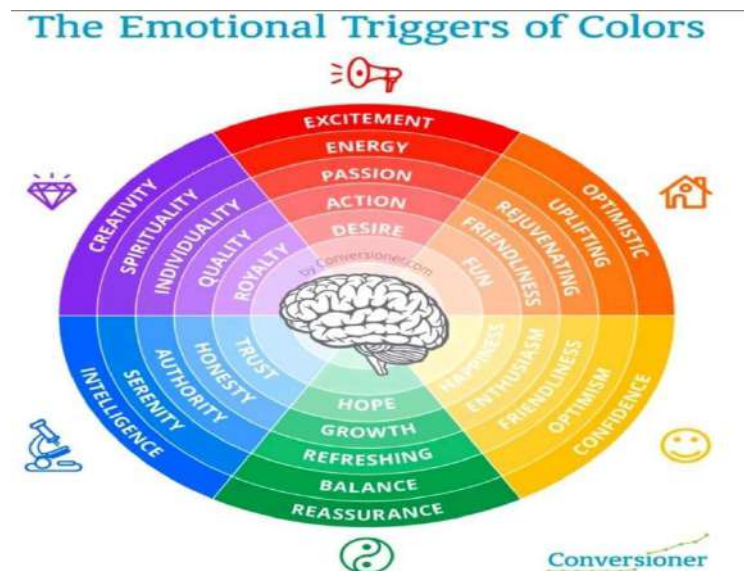

There are several types of colors, including:

- **Primary colors:** These are the basic colors that cannot be created by mixing other colors together. The primary colors in traditional color theory are red, blue, and yellow.
- **Secondary colors:** Orange, green, and purple are considered secondary colors as they are created by mixing primary colors.
- **Tertiary colors:** Tertiary colors are created by mixing a primary color and a secondary color, and includes shades such as red-orange, yellow-green, and blue-purple.
- **Complementary colors:** These are colors that are located opposite each other on the color wheel. When placed next to each other, they create a striking contrast. Examples of complementary colors include red and green, blue and orange, and yellow and purple.
- **Warm colors:** These are colors that tend to evoke feelings of warmth and energy, such as red, orange, and yellow.

- Cool colors: These are colors that tend to evoke feelings of calmness and serenity, such as blue, green, and purple.
- Analogous colors: Analogous colors are colors that are next to each other on the color wheel, such as red and orange, blue and green, and purple and blue-purple.
- Neutral colors: Neutral colors include black, white, gray, and beige.
- Monochromatic colors: Monochromatic colors are variations of a single color, such as different shades of blue or different shades of yellow.

4.2 Different Colors and their Indication

- **Red:** often associated with danger, stop, heat, and anger
- **Blue:** often associated with calm, trust, and authority
- **Green:** often associated with growth, nature, and tranquility
- **Yellow:** often associated with caution, happiness, and warmth
- **Orange:** often associated with energy, enthusiasm, and caution
- **Purple:** often associated with luxury, wealth, and nobility
- **Black:** often associated with power, mystery, and sophistication
- **White:** often associated with purity, innocence, and simplicity
- **Pink:** often associated with love, warmth, and playfulness
- **Brown:** often associated with earthiness, reliability, and comfort

5. REVIEW OF THE LITERATURE:

COLOUR IN FASHION: EFFECTS ON PERSONALITY: The author Jonathan E. T. Kuwornu-Adjaottor assists this paper is purposed to identify major ways in which fashion designers in tertiary institutions within Kumasi metropolis use colors for their fashion objects and the effects of the colors on their clients. The outcome of the article is that, those factors with high ranking the idea of attraction is the most outstanding factors that respondents consider

6th International CEO Communication, Economics, Organization & Social Sciences Congress

for the use of colors in fashion. the concept of charming and invoking spiritual powers, correcting figure faults followed by the idea of therapy are the factors least considered for use of colors in fashion.

THE PSYCHOLOGY OF CLOTHING: Meaning of Colors, Body Image and Gender Expression in Fashion: In the view of author **Duje KODZOMAN**, the aim of this review was to provide a concise and succinct literature overview of over twenty empirical studies of the above-mentioned concept. FACTORS INFLUENCING COLOURS IN CLOTHING SELECTION: The author Adebisi, T.T., Abdulsalam, A.O. conveys that study is all about clothing, color ,factors influencing

colors in clothing selection of female adolescents in Ilorin West, Kwara-State, Nigeria. And also the objective is to Identify demographic characteristics of the female adolescents, Assessed peer group as it influences colours in female adolescent clothing selection, and to Examine social media as a factor that influences colours in female adolescents in clothing selection in the study area. It was concluded that respondents should decide how they are going to apply colours of design to achieve their desired-look for specific task effectively no matter the factors that may influence them in their location.

WHAT COLOUR SHOULD I WEAR? HOW CLOTHING COLOUR AFFECTS WOMEN'S JUDGEMENT OF OTHER WOMEN'S BODY ATTRACTIVENESS AND BODY SIZE.: The authors Nimreth Sidhu, Chloe Qualter, Emily Higgs, KunGuo conveys that Research has indicated that female body perception and associated body-viewing gaze behaviour in women viewers can be influenced by a variety of internal and external factors (e.g., own body satisfaction, clothing style, and viewing angle). Taken together, it seems that the clothing colour and its contrast with skin tone play valuable roles in mediating women's body perception of other women. This would have practical implication to areas such as fashion design and personal body image management or intervention in our modern multicultural society.

COLOR AND SHOPPING INTENTIONS: THE INTERVENING EFFECT OF PRICE FAIRNESS AND PERCEIVED AFFECT: The authors Barry J. Babina*, David M. Hardesty , Tracy A. Suterc assists that in this article depict varying consumer reactions with the three-way congruence between a store's environmental cues, consumers' cognitive categories representing known store types, and salient situational shopping motivations. However ,the objective is to identify the Atmosphere; Color; Retail patronage; Shopping emotion of the consumers. The results suggest that the effects of environmental and price cues are mediated by consumers' cognitive and affective associations.

COLOR AND ITS IMPACT ON PEOPLE IN THE WORKPLACE: A SYSTEMATIC REVIEW: The author **Hamed Amani ,Seyed Hossein Shojaei , HemnZarei**conveys that were a good work environment is a place where one can feel relaxed and focused. In the field of environmental psychology, color is one of the environmental factors that greatly influence human perception and behavior. The purpose of this systematic review study was to investigate the effect of color on work environment. The outcome is that Color perception, color ergonomics, color psychology, color effect, The results showed that color has a significant effect on emotions (eg mood), well-being (eg stress, comfort, well-being) and performance (eg productivity, creativity).

6. FINDINGS AND SUGGESTIONS

6.1 Summary of Findings:

- The majority of the respondents in the study were female (72%) and the remaining were male (28%).

- The age group with the most respondents was 21-25 years (88%), followed by 15-20 years (8%), and the least respondents were in the age group of 31 and above (4%).
- Most of the respondents (88%) felt that colour is important in fashion.
- A majority of the respondents (80%) felt that colour has an effect on personality.
- The top reasons for considering fashion among the respondents were comfort ability (40%), a way to express themselves (32%), and looking cool and hip (16%).
- Most of the respondents felt black is their favourite colour and they look classy in it when they wear.
- The majority of the respondents (68%) felt that their dressing style made them unique in fashion.
- A majority of the respondents (56%) were willing to pay a premium price for clothing based on color.
- The most preferred type of color among the respondents for fashion was solid colors (32%), followed by pastel and multi-colors (24%).
- The most significant demographic factor influencing color choices among the respondents was parental influence (36%), followed by mass media and others (24%), and peer group influence (16%).
- A majority of the respondents (56%) felt that culture influences the colors they wear.
- A majority of the respondents (48%) felt that the color of their clothing affects their mood, behavior, emotions, and the way they feel.
- Most of the respondents (76%) had experienced buying a clothing item in their favorite color on impulse and later regretted the decision.

6.2 Suggestions:

- Based on the finding that a majority of the respondents were female, future studies should focus on producing more equal number of male and female products while producing.
- The finding that most of the respondents were in the age group of 21-25 years suggests that the study may have a bias towards a younger age group. Future studies should consider recruiting a more diverse age range of participants.

- The finding that most of the respondents felt that color is important in fashion can be used by clothing brands and retailers to focus on incorporating a variety of colors in their collections.
- The finding that most of the respondents felt that color has an effect on personality can be used by fashion designers to create clothing collections that evoke specific emotions or feelings through the use of color.
- The finding that the top reasons for considering fashion among the respondents were comfort ability, self-expression, and looking cool and hip can be used by fashion brands to target their marketing and design efforts towards these specific aspects.
- The finding that most of the respondents felt that their dressing style made them unique in fashion can be used by fashion brands to encourage customers to develop their own personal style through their clothing choices.
- The finding that most of the respondents were willing to pay a premium price for clothing based on color can be used by clothing brands to justify higher prices for clothing items that incorporate unique or trendy colors.
- The finding that the most preferred type of color among the respondents for fashion was solid colors suggests that clothing brands should offer more solid color options in their collections.
- The finding that parental influence was the most significant demographic factor influencing color choices among the respondents suggests that clothing brands should target their marketing efforts towards parents.
- The finding that most of the respondents felt that culture influences the colors they wear can be used by clothing brands to design collections that are reflective of specific cultures or cultural trends.
- The finding that most of the respondents felt that the color of their clothing affects their mood, behavior, emotions, and the way they feel can be used by fashion designers to create clothing collections that evoke specific emotions or feelings through the use of color.
- The finding that most of the respondents had experienced buying a clothing item in their favorite color on impulse and later regretted the decision suggests that clothing brands should focus on creating high-quality clothing items that customers will appreciate in the long term.

CONCLUSION

In conclusion, the data analysis and interpretation of the study shows that color plays an important role in fashion for the majority of the respondents. The study also found that the age group of 21-25 years had the most respondents and majority of them were female. The study also found that the majority of the respondents felt that color has an effect on personality and their dressing style made them unique in fashion. Additionally, most of the respondents were willing to pay a premium price for clothing based on color and the most preferred type of color was solid colors.

Furthermore, the study found that parental influence was the most significant demographic factor influencing color choices among the respondents and most of the respondents felt that

culture influences the colors they wear. Lastly, the study found that most of the respondents had experienced buying a clothing item in their favorite color on impulse and later regretted the decision. These findings suggest that future fashion brands should focus on incorporating a variety of colors in their collections, targeting their marketing and design efforts towards specific aspects such as comfort ability, self-expression and looking cool and hip. They should also focus on creating high-quality clothing items that customers will appreciate in the long term.

Orcid: 0009-0007-2421-394X

ABSTRACT

Population is the main factor in the successful development of any country. The peculiarity of the population is that it is constantly being restored in the process of reproduction of life and is in a state of self-development, which is the main component of any society.

Population growth plays a key role in the development of the modern crisis caused by the incompatibility of a large population and techno genic civilization with the stability of the Earth's biosphere.

Studying the size, composition and dynamics of the population makes it possible to evaluate the socioeconomic development of the country and its trends. These indicators dictate the necessary measures to neutralize negative processes in the structure of the population and strengthen positive trends in its development. Population growth, depletion and limited resources lead to the deterioration of the economic condition and excessive pollution of the environment. In this framework the efficient management of energy resources is of particular importance as an essential element of sustainable development processes both at national and regional levels.

The sustainable development case is being discussed in many aspects within various scientific fields. Scientists conducting research in the field of sustainable development are studying the impact of population on sustainable development and want to reveal more detailed information about this relationship. This article provides a description and dynamics of the population, which is considered one of the main factors for the successful development of any country, its constant renewal in the process of life reproduction and self-development, which is the main component of any society.

This article discusses the challenges of increasing population growth and ensuring adequate energy resources. This mismatch and imbalance create certain contradictions in this direction and require the development of new management methods and possibly new research opportunities. As a result, it is asserted that developed countries must move towards zero greenhouse gas emissions and implement strategies to eliminate the harmful effects of human activities on the environment. Therefore, it is time to reconsider the ways of production and consumption of life support resources. This study presents a systematic approach and theoretical analysis of the problem under investigation. The systemic approach and indicators of theoretical analysis showed that demographic characteristics and consumption levels are important factors influencing the success of sustainable development goals. The study concludes that in order to rely on sustainable socio-economic development in the future, it is necessary to balance control over population growth, resources needed to support the population, and the environmental situation in the region.

Sustainable development it is such a development in order to fulfill the human needs and to ameliorate the quality of human life. That is the main reason why it should be based on a more effective and environmental uses of all of the insufficient resources of the society, such as, the natural, the human or the economic resources. As a result, developed countries must move to zero greenhouse gas emissions and implement strategies to eliminate the harmful effects of human activities on the environment. Thus, it is time to reconsider the production and consumption methods of life support resources. This work presents a systematic approach and theoretical analysis of the stated problem. Comparative analysis showed that demographic characteristics and consumption levels are important factors influencing the success of the implementation of sustainable development goals. It is necessary to balance three factors: control over population growth, the resources necessary to provide the population, and the ecological situation in the region to count on sustainable social and economic development in the future.

Keywords: sustainable development, demographic indicators, energy resources management, strategy, world population, sustainable development indicators

Introduction

The "sustainable development" as a concept was introduced by the Brundtland Commission in 1987 as development which meets the needs of the present generation without compromising the ability of future generations to meet their own needs. This concept reflects the importance of the current stage of societal development and the problem of resource constraints associated with exhaustibility, and with the interdependence between society and the biosphere. However, the civilization created by mankind has not yet reached the level at which it could replace the natural environment. Currently, humans increasingly feel disconnected from nature, and the threat to the vital interests of future generations is becoming more acute and serious. The solution to these problems can only be achieved through a transition of society to new principles through the concept of sustainable development, which involves harmonious, orderly dynamics of society in conjunction with its co-evolution with nature.

This circumstance is compounded by the increasing global population, which has a negative impact on the life-supporting potential of our planet. These interacting processes affect the use of the atmosphere, land, water, energy, and other resources. In this regard, there is a close relationship between demographic trends and sustainable development indicators. It is necessary to develop strategies to reduce the negative impact of anthropogenic activities on the environment and the negative impact of climate change processes on the population of the countries around the world.

Goals are:

- a) ensure that demographic trends and energy supply factors are considered in the context of the sustainable development of the Caspian countries;
- b) correlation between population dynamics, development of energy-efficient technologies, and the amount of greenhouse gases emitted into the atmosphere;
- c) monitoring the process of managing emissions of gases into the atmosphere, which is the main indicator of sustainable development;
- d) Assess the level of threat to the population living in environmentally disadvantaged areas and large urban centers in order to determine priority areas of activity at all levels.

Theoretical framework. The study is based on classical developments in sustainable development, which are presented in the works of such authors as R. Carson, M. Strong, D.H. and D.L. Meadows, G.H. Brundtland, N.N. Moiseev, A.D. Ursul, D.D. Wulfson, V.M. Bautin, R. Lenoir, B. Schneider, E. Pestel, D. Hicks, N. Stern, V. Donchev, N. Desai, E. Weizsacker, Ban Ki-moon, and others. The theoretical foundations and strategy of sustainable development in Azerbaijan are reflected in state policies and programs, as well as in the works of academician U.K. Alakbarov and other scientists.

Method. The methodological basis for solving the tasks set has become use of system analysis, historical and chronological, comparative methods, as well as the statistical method of data analysis.

Findings and discussion. The concept of sustainable development has undergone various developmental phases since its introduction. The historical development of the concept saw participation of various organizations and institutions, which nowadays work intensely on the implementation of its principles and objectives. "Sustainable development is development that

meets the needs of the present without compromising the ability of future generations to meet their own needs. [5]"

The new Agenda is guided by the purposes and principles of the Charter of the United Nations, including full respect for international law. It is grounded in the Universal Declaration of Human Rights, international human rights treaties, the Millennium Declaration and the 2005 World Summit Outcome. It is informed by other instruments such as the Declaration on the Right to Development. This Agenda is a plan of action for people, planet and prosperity. It also seeks to strengthen universal peace in larger freedom. All countries and all stakeholders, acting in collaborative partnership, will implement this plan [9].

The 17 Sustainable Development Goals and 169 targets demonstrate the scale and ambition of this new universal Agenda. They seek to build on the Millennium Development Goals and complete what they did not achieve. They seek to realize the human rights of all and to achieve gender equality and the empowerment of all women. They are integrated and indivisible and balance the three dimensions of sustainable development: the economic, social and environmental [9].

As noted above, one of the key concepts that determine the trends in the development of the global and national economies, the priorities of state regulation, has become the concept of sustainable development. This concept is an integrated approach that stimulates a more efficient use of various types of resources in order to improve the overall well-being of the world's population. A sustainable type of development is accompanied by a raise in socio-economic efficiency with an increase in the degree of rational use of resources in order to preserve them for future generations. Sustainable development is also a tool capable of responding to many of the global challenges of mankind, including those related to climate change. The 27th UN Climate Conference, recently held in Egypt, once again drew attention to this global challenge for humanity [10].

The situation with ensuring successful sustainable development is aggravated by the constant growth of the population, which, according to the UN Population Program, has reached 8 billion people by the end of 2022. Against the background of a significant increase in the average per capita resource consumption as a whole and the sharp disparities in income and consumption that are observed both between countries and within many countries, population growth generates many economic and social problems, including uncontrolled migration [3].

The solution to modern challenges to sustainable development can be the concept of ecological civilization, first proposed in 1998 [4]. The basis of ecological civilization is the planning of demographic processes, the formation of an appropriate culture of consumption and lifestyle, in addition, the application of the principles of a green economy. At the same time, a high culture of consumption and lifestyle is not limited to the principles of reasonable sufficiency, but also takes into account the application of modern achievements in various areas of science to ensure demographic stability in general and ensure the health and longevity of the population [5]. This article attempts to assess the possibility of applying the principles of demographic stability and resource efficiency on the example of the Caspian countries.

As can be seen from the data in the table, the average annual population in 2021 was the highest in the Russian Federation. However, the negative values of natural increase indicators that take place indicate a low birth rate and high mortality. The Central Asian countries have high rates in terms of average annual population, natural increase, birth rate and death rate. In these countries, type II natural increase (traditional type) - with the traditional type of natural increase, a high birth rate, average mortality, and a high growth rate are observed. The natural increase here is quite high.

Country	Population Mid-2021 (millions)	Per 1000 population			Infant mortality rate (per 1000 live births)	Life expectancy at births (age, years)	
		natural increase	births	deaths		men	women
Azerbaijan	10,1	3,5	11,2	7,7	7,5	71	76
Kazakhstan	19,0	13,0	22,0	9,0	7,0	69	78
Turkmenistan	6,1	17,0	24,0	7,0	32,0	65	72
Russian Federation	145,8	-5,0	10,0	15,0	4,5	66	76
Iran Islamic Republic	85,0	9,0	14,0	5,0	6,0	76	78

Table 1. Main demographic indicators of the Caspian countries in 2021[3]

The world population is increasing mainly due to these countries, however, in terms of the number of children dying under the age of 1 year per 1000 live births, it is quite high, unlike other countries. Turkmenistan-32.0 Kazakhstan-7.0. The highest rates of life expectancy at birth in the countries of Central Asia are in Kazakhstan (men - 69, women - 78). Estimates are observed in Turkmenistan. In the Russian Federation (men-66, women-76). Life expectancy at birth in Azerbaijan is 69 years for men and 78 years for women. The analysis of the presented indicators shows that women are characterized by a higher life expectancy. Consequently, in the nearest years, the growth and dynamics of the population will increase. In this situation, the problem of providing the population with life support products is of particular relevance. This applies not only to food products, but primarily to energy resources[2].

As noted above, natural resources are limited, their consumption must be rational, but in the context of constant population growth, this is almost impossible to realize. The 20th century is characterized by the largest increase in world population in the history of mankind, as a result of which, over the past 50 years, more resources have been expended than in all previous periods.

Energy, as a universal measure of all types of human activity, is used when considering the demographic history of civilization. Inequality in the use of energy resources causes inequality in the standard of living of people and a large discrepancy in demographic indicators. The continuous increase in energy production by mankind is accompanied by an increase in the world population. In this regard, energy efficiency indicators are the most informative [5].

Energy efficiency is a set of organizational, economic and technological measures aimed at increasing the importance of the rational use of energy resources in all areas of activity. In this regard, energy efficiency is becoming a more important policy priority in many countries around the world, as it is the most cost-effective and affordable means of addressing many energy supply problems, including energy security, the socio-economic consequences of high energy prices and climate change concerns. At the same time, energy efficiency improves competitiveness and promotes consumer welfare. Energy indicators are an important tool for analyzing the interaction between economic and human activities, energy consumption and carbon dioxide (CO₂) emissions. All data are given in kilowatt-hours. To calculate this indicator, data on the total electricity consumption of each country for the year, divided by the

size of its population, are used. The indicator is calculated according to the method of the International Energy Agency, based on data from national statistics and international organizations. This indicator includes energy generated by thermal, nuclear, geothermal and hydroelectric power plants. In order to summarize all these types of energy, they are expressed in a universal unit of measure - kilowatt-hours. A kilowatt hour is the amount of energy produced or consumed by a one kilowatt device in one hour. The statistics are taken from the World Bank website (Electric power consumption (kWh per capita) report), which, in turn, used data from the International Energy Agency, a specialized organization in this area, as a source.

Country	1985	2021	Energy use per person	
			Absolute Change	Relative Change
Turkmenistan	1985 44,113 kWh	72,870 kWh	+28,757 kWh	+65%
Russian Federation	1985 66,839 kWh	59,581 kWh	-7,258 kWh	-11%
Kazakhstan	1985 50,814 kWh	41,673 kWh	-9,141 kWh	-18%
Azerbaijan	1985 35,244 kWh	17,924 kWh	-17,319 kWh	-49%
Iran Islamic Republic	3,899 kWh	39,824 kWh	+35,925	+921%

Table 2. Per capita energy consumption [3]

As can be seen from the data in Table 2, the energy efficiency values are given in the period from 1985 to 2021, in some countries since 1992, i.e., since the beginning of independence. In all the cases presented, the energy efficiency indicators in the period from 1985-1992 are the highest. This is due to the transitional stage of the economy, with the prevalence of obsolete technologies and equipment, which contributed to an increase in greenhouse gas emissions into the environment. In this case, the consumption and production of energy at a certain, specific stage of the development of society is determined by the level of development of this society in its technological and economic aspects. In connection with integration into the world economy, the use of modern achievements of technological progress, the fulfillment of the obligations of the Kyoto Protocol of 1997, the Paris Agreement of 2015, the use of innovative green technologies, energy-saving equipment (modern LED lamps, innovative energy efficiency technologies, smart control networks for energy-independent lamps, equipped with a generation system based on renewable energy sources), etc. led to a significant decrease in these indicators by 2 or more times and the achievement of positive dynamics in this direction. The opposite trend is observed in Turkmenistan and Iran Islamic Republic. Thus, in the period from 1985 to 2021, energy efficiency indicators have increased significantly, as a result of the provision of free use of energy resources to the population since 1993, because at the end of the last century, gasification of settlements in Turkmenistan reached 99%, so almost the entire population of the country uses network or pipeline natural gas.

According to the World Bank statistics one of the sustainable development indicators based on the comparative assessment of national GDPs (USD with purchasing power parity, PPP) produced with using of one unit of energy (equivalent of energy contained in one kg of

oil. One barrel contained 136 kg of oil). This is very important sustainable development indicator, which provide with economic and ecological information which is also influenced on social indicators.

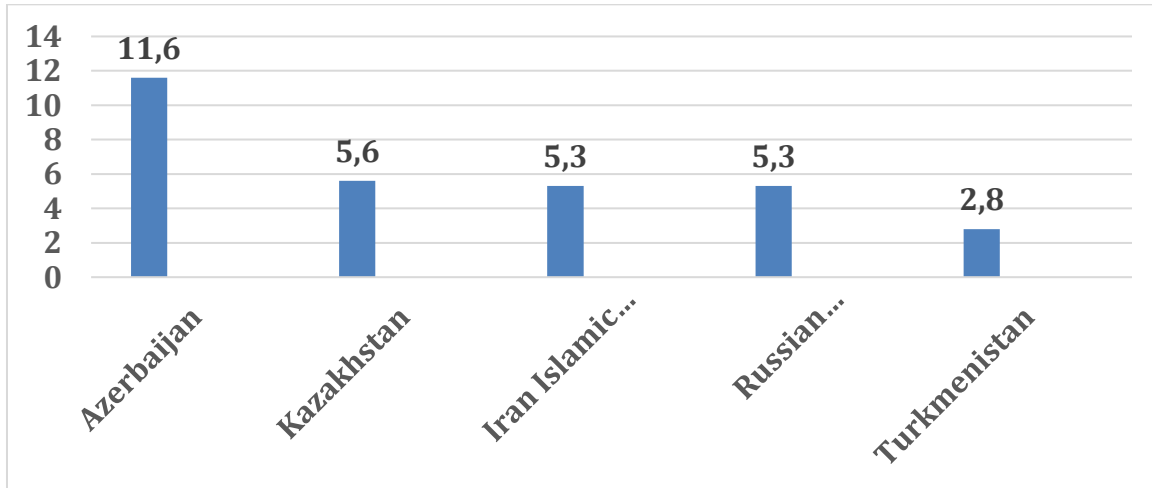

Chart 1. Caspian countries: GDP (USD with PPP) per unit of energy used (equivalent of energy of the one kg of oil), World Bank [4].

Carbon dioxide emission as one of the factors in selecting the paths of energy development. Carbon dioxide is the most important greenhouse gas, the content of which in the atmosphere, along with methane, water vapor and other less important components in this respect, determines the average temperature of the earth's surface. Since the effect of global climate change can have catastrophic consequences up to the complete death of civilization, and anthropogenic emissions of carbon dioxide, methane and number of other gases are considered as one of the main versions of the causes of the observed changes, this problem is now receiving very close attention [7]. The seriousness of the climate change problem prompted the governments of most countries to sign the Kyoto Protocol in 1997 on the limitation and partial reduction of greenhouse gas emissions. The main point was to reduce carbon dioxide emissions, the vast majority of which is produced by the global energy sector by burning fossil carbon fuels. Nowadays, 150–170 billion m³ of hydrocarbon gases are emitted into the atmosphere or flared during the oil and gas production process at several thousand fields in the world, which is approximately 4–5% of their world production. But, despite all the efforts made the volume of flaring of associated gases is not decreasing. The data in the table shows CO₂ indicators for the Caspian littoral countries.

Chart 2. CO₂ emissions per unit of GDP (USD with PPP) produced in Caspian countries [11]

The data in the table shows CO₂ indicators for the Caspian littoral countries (chart 2). As can be seen from the data presented on the Chart 2 the Russian Federation emitted 0,4 kg CO₂ for each USD PPP GDP. For the same GDP value, the Iran Islamic Republic emitted 0,5 kg, Kazakhstan 0,4 kg, Turkmenistan 0,8 kg. The Azerbaijan is characterized by the lowest rates - 0,2 kg per one USD GDP. Developing the agreements of the Paris climate agreement, it is necessary to move to an economy with net zero emissions of greenhouse gases.

The idea of energy efficiency is also a consequence of the emergence of elements of the "green economy". Thus, according to the energy agency, by 2040 in the most probable scenario of financial markets and banking assets will grow from 13.9 billion toe. to 17.7 billion toes, while the share of coal and oil in the global energy balance will decrease from 81% to 74%, the volume of low-carbon energy production in China, OECD countries and India will significantly increase [6]. According to the BP Statistical Observation of World Energy, there is also a steady consumption of growth energy from energy sources [6].

Conclusions and Recommendations. Indicated by the President of Azerbaijan, Mr. Ilham Aliyev, on February 2, 2021, Azerbaijan is implementing the program "Azerbaijan 2030: the priority level of socio-economic development". according to the program of the five priorities of the socio-economic development of the country, which should be implemented in the next decade. The use and use of green technologies as a sustainable strategy for the sustainable development of Azerbaijan acquires a special role in the implementation of the program.

Thus, in the near future it is necessary to actively introduce innovative technologies to improve the indicators of rational environmental management, such as the energy efficiency of production and the culture of consumption, which happened to overcome the current crisis. The role of energy efficiency in achieving net zero emissions in the energy sector by 2050, include an examination of the crucial of efficient appliances and equipment, as well as all major energy efficiency net zero milestones in buildings, transport and industry.

ABSTRACT

The main challenge of Latin American higher education institutions is to promote new and better strategies for cooperation, internationalization and university quality, expressing from their identity the mission of doing with other actors, relocating their role as social actors and contributing to reduce the gap between countries. in terms of development. The internationalization of extension services presents the challenge of designing strategies and actions that integrate extension as an exceptional function of the university within the internationalization of higher education institutions. Multiple concepts are associated with the term "extension" and its consideration is somewhat ambiguous.

Extension processes and products contribute to the emergence of the comprehensive internationalization of higher education institutions as a response to the neoliberal globalization underway. However, this challenge is complex due to the diversity of concepts and ways of understanding university extension and therefore, of the actions promoted by university institutions. The debate on the definition of extension in universities is also crossed by internationalization from a regional perspective, in view of the dynamics of production and dissemination of knowledge that are generated in the region, establishing a marginal role in the agendas of scientific communities. In this complex and changing context, extension should be considered as a critical and dialogic process that seeks to transcend exclusively technical training and promote an extensionist perspective focused on social transformation. A role that transcends the mere work of the actors in the internationalization processes and that should promote the debate on how the university relates to society within the framework of the co-production of knowledge and collective reflection.

The extension proposals in many of the Latin American universities assume a marginal role because they are limited projects in each call, with groups of teachers, and with a conception and dynamics, in many cases, still assistance and knowledge transfer, rather than of collective reflections and dialogic construction of knowledge.

KeyWords: Latin-American universities, Internationalization, Extension and Dialogical Construction of Knowledge

Introduction

The macro trends of world higher education are advancing strongly in the processes of integration and internationalization, post-graduation and the virtualization of educational processes. This last topic has been considered sensitive in the scenario of the global pandemic COVID 19 and in the post-pandemic scenario. Over the past two decades, there has been an exponential increase in all forms international academic mobility: student and academic, programs and providers, policies and regulations, and the universal exchange of knowledge, ideas, values, and culture. The diversity in modes and forms of mobility is unprecedented (Knight,

The global landscape of higher education has changed significantly in the last 25 years due to increasing internationalization driven by factors such as increased student mobility, expansion of branch campuses, validated degree programs, franchising, and joint ratings. The internationalization of higher education is seen as a response to the opportunities and challenges of globalization, and is understood as essential for the economic and social well-being of a nation and its citizens. The predominant characteristics of global higher education that presents a clear trend towards privatization and commodification are exposing the globalization of processes, internationalization, post-graduation and virtualization of educational processes.

At the international level, academic trends coexist, such as the flexibility of the curriculum, the granting of intermediate degrees, the shortening of careers, educational models based on competencies, the increase in virtuality that tends to education without borders, the permanent and continuous education throughout life, interdisciplinary work, international study plans, recognition of studies carried out through credit systems, and the rise of foreign language certifications.

Internationalization

The internationalization of higher education is a phenomenon that has existed since the emergence of universities, but it intensified in the second half of the 20th century. In the 1990s, internationalization policies were implemented and agreements were signed between institutions from different countries, attendance at international conferences and participation in academic networks and alliances were encouraged. Higher education institutions are encouraged to participate in internationalization activities for different reasons, such as the search for income, the complementation of the educational offer, the improvement of competitiveness, prestige and strategic alliances. In Europe, academic internationalization is framed in the process of economic and political integration promoted by the Bologna Process. These activities are oriented towards European institutions, but can be applied to international programs in other regions, especially Latin America.

At first glance, it is possible to recognize two major opposing trends in the literature on the internationalization of higher education, in tension, one oriented towards the market of an exogenous nature, and another of an endogenous nature that refers to internationalization of solidarity. In the first perspective, with an Anglo-Saxon perspective, internationalization constitutes an almost hegemonic paradigm, which is linked to the logic of the market, responds to the logic of North-South cooperation, and is guided by supranational extra-regional organizations such as the World Bank. and the World Trade Organization (WTO),

internationalization is subscribed within the framework of the challenges of higher education in the context of economic globalization and the liberalization of markets (Ramírez, 2017). The World Trade Organization and the OECD recognize Higher Education as a commercial good, and therefore, subject to market rules.

De Zan, et al (2011) suggests that internationalization in the academic-curricular approach refers to the pedagogical and curricular policies and strategies of universities that seek to take advantage of globalization and improve the quality of their teaching, research and projection functions. social. Its objective is to overcome social, linguistic and cultural borders to achieve a joint use of knowledge. This idea focuses on internationalization in the formative dimension of the university and is a commitment of the institutions in the globalized society to train students capable of competing in the international arena. Training in professional skills, according to the author, constitutes one of the alternatives to respond to internationalization in the academic-curricular approach.

On the other hand, the ideas linked to internationalization at home, horizontal and supportive (Didou Aupetit (2007); Siufi, (2009); De Wit, (2011), are based on institutional development and strengthening and quality improvement of higher education in a broad and horizontal conception (Ramírez, 2018). The internationalization of higher education is defined by Knight (1994, p. 2) as the process of integrating an international and intercultural dimension in the functions of teaching, research and service of the institution", alluding not only to the international projection but also to interculturality (Ramírez, 2017). Yarzabal (2005) argues that, although the internationalization of Higher Education is an old phenomenon, there are different academic, political, economic, and socio-cultural motivations that give it meaning, since the different actors involved decide the emphasis and intensity that each one of the motivations that establish the internationalization of Higher Education acquires.

We live in an era of increasing provision of knowledge and recognition of the diversity of viewpoints, perspectives evaluations, possible risks and recognized areas of ignorance or knowledge deficits. With the amplification and multiplication of the available expertise, decision making evolves towards an uncertain bet on the future. In recent decades, scientific claims to social accountability and truth have been increasingly subjected to criticism, as the uncertainty and loss of social trust (Vessuri, 2013).

2. Educational Integration

2.1 MERCOSUR Educational

MERCOSUR has the MERCOSUR Education Sector (SEM) for the configuration of regional education policies. The SEM is made up of different bodies such as the Regional Higher Education Coordinating Commission (CRC-ES), the Postgraduate Work Group, the Degree Recognition Work Group, etc. Actions in higher education focus on three axes: recognition or accreditation, mobility and inter-institutional cooperation. In practice, the advances in higher education policies have been incremental, beginning with the field of accreditation and have evolved towards mobility programs and inter-institutional cooperation.

Perrota (2015) argues that the regional integration processes underway in South America are promoting policies for the internationalization of higher education through agreements such as

the Southern Common Market (MERCOSUR), the Andean Community of Nations (CAN), the Union of South American Nations (UNASUR), the Bolivarian Alliance for the Peoples of Our America - Peoples' Trade Agreement (ALBA-TCP), the Pacific Alliance (Alliance) and the Community of Latin American and Caribbean States (CELAC). These agreements have agendas for higher education and the deepening of these agendas in the last decade has made visible the actions of university cooperation between the governments of the region and the experiences of university institutions. The author identifies at least three internationalization trends of the university in regionalism strategies: one in line with the global trend without questioning it, one that is close to the global trend but questions some aspects, and another that is frankly critical of the global trend. Perrota (2015) differentiates between a Phoenician internationalization and a solidarity internationalization.

MERCOSUR constitutes an agreement whose objective is the institutionalization of educational policies in South America. The MERCOSUR Education Sector (SEM) is the institution in charge of coordinating these policies. Within the SEM there are various agencies and work groups that work on three main axes: recognition or accreditation, mobility and inter-institutional cooperation. The Meeting of Ministers of Education is the highest instance of the SEM and the work is organized by the Regional Coordinating Committee and aims to improve the quality of education, stimulate evaluation and promote mobility and cooperation between universities.

The educational MERCOSUR was an instance of coordination between the Ministries of Education of Argentina, Brazil, Paraguay and Uruguay. In 1992 in Las Leñas, Argentina, the Triennial Plan for the Education Sector in the context of MERCOSUR was approved by the bodies of the Treaty of Asunción and the Regional Coordinating Committee and the Meeting of Ministers were created. This initiative revealed the willingness of the universities of the region to cooperate, above local governments and policies. This Committee has formed working groups of a technical nature in various areas: technological education, higher education, official languages of MERCOSUR and information systems. It was one of the first successful Latin American attempts to converge higher education at the regional level, and it turned out to be a pioneer in terms of the intention to advance in the recognition of titles for professional practice and academic mobility. In the case of MERCOSUR, the program accreditation process began in 1998 with the application of the Experimental Mechanism for Graduate Program Accreditation, called MEXA. This mechanism arises from the actions carried out within the framework of the Cultural and Educational MERCOSUR that began to function from the beginning of the regional bloc, in 1991.

The Association of Montevideo Group Universities (AUGM) has become a network of public, autonomous and self-governing universities from Latin American countries that share similarities in their academic structures and objectives. It was founded in August 1991 to contribute to the strengthening and consolidation of high-level human resources, scientific and technological research, continuous training, university management structures and operations, and interaction with society. Its main objective is to promote the integration process in the region through scientific, technological, educational and cultural cooperation among its members.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

Among its objectives are to contribute to the development, strengthening and consolidation of public education, the training of high-level human resources, scientific and technological research, continuing education and interaction with society in general. The AUGM promotes and supports the implementation of postgraduate courses, multi- and interdisciplinary programs, teacher exchanges, investigators, students and managers, programs in strategic areas, projects linked to the productive sector, environmental management programs and plans to preserve and disseminate regional culture. Currently, the AUGM implements a dozen programs, including mobility programs, the Conference for Young Researchers, the Summer and Winter Schools, the Network of Cities and Universities and the University-Society-State International Seminar.

3. Extension

The main challenge of Latin American higher education institutions is to promote new and better strategies for cooperation, internationalization and university quality, expressing from their identity the mission of doing with other actors, relocating their role as social actors and contributing to reduce the gap between countries. in terms of development.

The internationalization of extension services presents the challenge of designing strategies and actions that integrate extension as an exceptional function of the university within the internationalization of higher education institutions. Multiple concepts are associated with the term "extension" and its consideration is somewhat ambiguous. Extension processes and products contribute to the emergence of the comprehensive internationalization of higher education institutions as a response to the neoliberal globalization underway. However, this challenge is complex due to the diversity of concepts and ways of understanding university extension and therefore, of the actions promoted by university institutions.

The debate on the definition of extension in universities is also crossed by internationalization from a regional perspective, in view of the dynamics of production and dissemination of knowledge that are generated in the region, establishing a marginal role in the agendas of scientific communities. In this complex and changing context, extension should be considered as a critical and dialogic process that seeks to transcend exclusively technical training and promote an extensionist perspective focused on social transformation.

A role that transcends the mere work of the actors in the internationalization processes and that should promote the debate on how the university relates to society within the framework of the co-production of knowledge and collective reflection. Like any social process, it cannot be thought linearly and extension has developed as a limit and bifrontal concept. In this sense, thinking of extension as processes that articulate the university with society in a situated and regional manner, with a transforming function, leads to the generation of comprehensive training processes that go beyond the diffusive tradition or transfer of this substantive function of the institutions.

4. Cooperation Networks

University cooperation networks are associations of stakeholders in higher education whose objective is to achieve agreed results through mutual participation and collaboration (Sebastián, 2004). In Latin America, these networks can be promoted by universities or by governments and are tending to be more symmetrical, autonomous in the choice of topics and supported by

communication technologies. International cooperation in universities strengthens regional integration processes and allows the exchange of knowledge between universities and between them and society, and this form of organization in networks is part of its historical ethos.

South-South cooperation networks can contribute to the construction of knowledge of other characteristics, more diverse, plural and representative, which takes into account the needs and realities of the countries and regions of the global South. That is to say, that this historically situated partner. In addition, these networks serve to create scientific and technological capacities in less developed countries, thus strengthening their autonomy and capacity for development.

There is hegemonic knowledge. The idea of hegemony presupposes the inclusion of the qualitative aspects of the conflict of power that underlies capitalist international relations. In the case of the production of knowledge, there would be a hegemonic science that responds to the cognitive problems raised in the central countries. This suggests the existence of center-periphery relations in the production of knowledge, where in a hierarchical international context characterized by asymmetries between centers and peripheries of knowledge, the center concentrates material, cognitive, human, and symbolic resources.

Meanwhile, scientists from the periphery have historically debated between the desire to join the international scientific system and the desire to have their own voice, autonomy to define their profile and legitimacy. This tension is manifested in the tension between social utility and international visibility. Can these two visions be reconciled?

South-South cooperation networks can help break down linguistic and cultural barriers that often hinder the dissemination of scientific and academic knowledge in the international arena by promoting collaboration and exchange between countries and regions with different languages and cultures, these frameworks they could contribute to the creation of a more inclusive and diverse global space, in which cultural and linguistic diversity is recognized and valued.

Undoubtedly, South-South cooperation networks in the production and dissemination of knowledge represent a valuable and necessary alternative to the hegemonic logic of internationalization, since they promote collaboration, exchange, and diversity in the exchanges and production of knowledge.

Knowledge production

Beigel and Sabea (2014) point out that university rankings and scientific journal indexing systems have been established as "two great inventions from the top of the academic system", which draw attention to the dichotomy generated among Argentine researchers who participate in the international circuit and those that do not.

Quiroga (2021) describes the current characteristics of the production of scientific knowledge a social good produced in local and international environments. It discusses the idea of scientific periphery and center and resumes it in local settings, where the product of research and the exercise of free thinking are basically deployed in academic and/or scientific publications that expose the tension between a universal science and a scientific local and the asymmetry of scientific power. This deployment of knowledge exists in the multiple platforms of today's society, such as academic and/or scientific publications that account for scientific production.

Oregioni (2013) highlights that the main imposition is made through the publication system, because researchers with a certain prestige, renowned institutions and the most outstanding universities, are more pressured by the need to publish in certain internationally prestigious journals that establish limits, themes, methodologies, publication styles and knowledge production styles that guide the dissemination of knowledge in alternative publications. The

scientific production of universities has begun to be measured —among other indicators— in Argentina by the results of research published in the formats of scientific articles, books, book chapters, communications in congresses and symposiums, as well as through technical reports. Ricardo Pérez Mora and Judith Naidorf (2015) point out that the current conditions of intellectual production considerably affect creative work and the fulfillment of the social and intellectual function of research teachers. These conditions are characterized by increased competition between peers; hyperproductivity calculated in quantitative terms; the tension between individualization of evaluation and promotion of group work and networks; the bureaucratization of investigative tasks; short-term work and specific projects; the pressure between hyperspecialization and inter, multi and transdisciplinary approaches; the constant search for research subsidies and the pressure generated by carrying out relevant studies.

ABSTRACT

After independence, some organizations were established in India to expand the concept of Science for Society. This concept emphasizes that growth of science can significantly shift human attitudes toward life and Society and science and technology can be used for the welfare of ordinary people. The interaction between science and Society deserves attention as far as the role of the welfare state is concerned. In a welfare state like India, the state has a responsibility to cater to the needs of the people. For that purpose, science and technology are required to be utilized by the state. Along with the state, some science organizations also try to do some work for the betterment of life through using science and technology. These complimentary efforts have been referred to as Science Movement.

The aim of the movement is to disseminate science in the mother language and to form a rational society. Following the footsteps of Bangiya Bigyan Parishad (1948) of West Bengal, in Assam Guwahati Science Society was established in 1953. However, the attempt to popularize science in the mother tongue in Assam began long before, with the publication of Arunodoi in 1846. In 1958, Guwahati Science Society was renamed as Assam Science Society. The organization was formed to spread science consciousness, protect the environment, and build a rational society. It published magazine, several books, pamphlets, and leaflets. Since 1981, the Society is publishing a bilingual science magazine Bigyan Jeuti (Flames of Science). This proposed paper will try to evaluate the history of science popularization in Assam.

Keywords: Science for society, Science movement, Assam, Arunodoi, Bigyan Jeuti

Introduction:

There was an effort made in India throughout the 19th century to socialise science. Side by side, missionaries established schools in various parts of India. Though their primary aim was to spread Christianity, a number of scientific topics were included in the curriculum of those schools. At that time there was no scope to do scientific research in colonial India. Missionaries started to publish books and periodicals as a part of their civilising mission which significantly aided the dissemination of science. Along with these, newspapers and other periodicals played a significant role in explaining scientific concepts to the general public in a manner that was understandable to ordinary people.

Significance of the Article:

The practise of science in the indigenous language was started to develop in Bengal and that was followed by the people of other states that include Assam. The publication of *Arunodoi* in 1846 marked the beginning of the dissemination of science movement in Assam. It was initiated by the missionaries to make science more accessible to people in their own language. Following that, a number of magazines and books were published in the second half of the 19th century in the state of Assam.

One may mention the stray incident of the publication of a translated mathematical text in Assam in the 15th century. In 1434, Bakul Kayastha translated the mathematical text *Kitap Manjari* into Assamese. However, that was an exception. When the British reached the Brahmaputra in the first half of the 19th century, people still believed in many myths. The pupil used to learn the stories of the *Mahabharata*, the *Ramayana*, and the *Upanishads* in the traditional *pathashalas*. After the introduction of the schools by the colonial ruler, science was added to the syllabus. However, mere inclusion of science had not so much impact on the psyche of the local people.

As the British started to make their rule stronger, they felt the need to form a group of trained people who would work for them and help them to run their business and administration. Even though the colonial government did not do that work on their own. They preferred to support private groups, such as Christian missions and trade companies, to set up schools. Christian preachers, on the other hand, thought that schooling was a great way to spread the Christian faith. Also, they knew that they had to learn the local language to penetrate in the local populace.

So they started to learn the Assamese language. As a result, the *Bible* was translated into Assamese and printed for the first time in 1813. It was the first book printed in the language of Assam. Adam White, a Christian missionary, and his wife Rowe opened a school in Guwahati. Nathan Brown and O.T. Cutter, two missionaries, in 1836, opened another school where Assamese was taught. Starting from Yadia, Cutter set up 14 schools in the Sibsagar area where Assamese was the medium of instruction. In 1836, Nathan Brown and Oliver T. Cutter helped to set up the first modern printing press of the Gutenberg type in Sibsagar, Assam. The establishment of printing press was a big move to disseminate science as the press was used to print periodicals and pamphlets on science in Assamese language.

Thus, books on a variety of scientific topics started to appear in the region. Nathan Brown published Bakul Kayastha's two-volume manuscript, *Kitapat Manjari*, in 1845 under the title of *Padaganit* and *Lilabati* respectively. There were more publications on science as the periodical *Arunodoi* started its journey in 1846.

Thus, it should be mentioned that in Assam, the missionary work was intimately connected with the literary and scientific publications meant for the common people. Dr. Maheshwar Neogi, a noted Assamese scholar, has acknowledged that these missionaries

6th International CEO Communication, Economics, Organization & Social Sciences Congress

performed an admirable job in rural areas of the country in the 19th century, when the telegraph and trains were not there to access the current news. The Sibsagar Mission Press launched the first Assamese newspaper, *Arunodoi*, in January 1846 in an effort to disseminate international news to the people of Assam. It announced its aim in its first issue that the monthly publication would aim to cover topics like religion, science, and general awareness. Anandaram Kian Phukan, an Assamese officer, who was not a missionary but of immense assistance to the missionaries in this area did a lot for *Arunodoi*. The *Arunodoi* had done a lot to expand the minds of its readers; therefore, the magazine's commitment to science and general knowledge is admirable.

In the second issue of *Arunodoi* magazine, there was an article about how planets change over time. At that time, most people believed in a lot of strange things about space. That article offered scientific explanation of that so-called strange idea. In Europe the theory of geo-centric worldview was challenged by the development in astronomy, whereas the indigenous people of Assam still believed that. The scientific article of *Arunodoi* made them acquainted with the solar system where Mercury, Venus, Earth, Mars, Jupiter, Saturn, and Uranus are the seven planets those go around the sun. To make people understand, a section was formed where detailed drawings of the stars and planets in the night sky, as well as drawings of solar and lunar eclipses were published. Along with that, the said number gave a scientific idea of how big the earth really was. *Arunodoi* used to publish news about scientific inventions like the printing machine, telegraph etc. It also narrated the ways to make glass in simple Assamese so that the readers could easily understand them. Obviously being a missionary enterprise, *Arunodoi*'s first priority was to spread Christian ideas. But, *Arunodoi* was the one who really helped its readers to understand modern ideas.

The first Assamese geography book, *Bhugol Shikhok*, was published by Nathan Brown in 1849. Anandaram Dhekyal Phukan published another book in the same year, titled *Bhugol Prokaran*. In 1849, *Samachar Chandrika*, another book on science, was released. Sivasagar Mission Press published *Padarthabidya Sar*, a book on physics by Nidhiram Keot, in 1855. Later, *Lorai Sikkha* (1893) by Panindranath Geogoi was published. The trend of publishing books on science was continued in the twentieth century also. For instance, the books named *Lorar Nija Puthi* (1902) by Sarada Charan Choudhury and *Akash Rahasya* (1916) by Satyendra Bora, may be mentioned.

Beside *Arunodoi* magazine, there were some other magazines which played an important role in popularising science in Assam. Among those *Assam Bandhu*, *Mou*, *Jonaki*, *Alachoni*, *Assam Bandhob*, *Bahi*, *Chetana*, *Milan*, *Abahan* were notable. Following that, several scientific articles were published in the journal *Abahan* (1929), which had a role in the spread of scientific consciousness.

Chandra Kumar Agarwal, the first editor of *Jonaki* put a lot of emphasis on publishing scientific articles in his journal. In his editorial, he said that the Assamese people would be lag behind their fellow citizens if they did not know about steam, railway engines, telegraphs, etc. in that modern age.

Hemachandra Goswami requested Rajinikanth Bordoloi to write essays on science in an effort to make science more accessible to the general public. At his request, Rajinikanth wrote some scientific essays for *Jonaki* during his studies at Calcutta Medical College. The first science-based article published in an Assamese newspaper was his article on human anatomy. The language of that article was simple to comprehend. Examples which that article offered were very specific and easy to understand the argument of the author. Rajni Kant Bordoloi also authored another important article on "the rule followed in the birth of plants and trees" in *Jonaki*.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

Jonaki provided a platform for publication of scientific articles. Writers such as Upendranath Barua, Jnaneswari Barkakati and Chandradhar Barua were the few who took the opportunity to write scientific articles in their mother tongue. Upendranath wrote on water and earthquakes. Kankalal Barua, contributed some articles on commerce and industry which uphold the development of technology. Jnaneswari Barkakati emphasized the importance of physical labour in one of his articles. Chandradhar Barua's article on air deserves mention as the writer was trying to make the people acquainted with the different natural phenomena. The editor Kankalal Barua attempted to introduce the world of modern scientific discoveries to the readers. These included steam-powered automobiles, scorpion-sting medicine, solar-powered clocks, electricity and so on. He even wrote on natural disaster in a different way. Thus he highlighted the usefulness of earthquakes. Another noteworthy article written by him was on evolution. Vijay Ram Barua's article on telephone was another example of the sincere effort of the editor to make the readers informed about the contemporary scientific development. Saifuddin Ahmed wrote article on the utility of plants. Thus it can be said that *Jonaki* tried to make its reader aware of the development of scientific and technological research in a lucid ways. It tried to portray science as friend of the people which is evident in the character of the articles published.

Another periodical *Abahon* magazine began to publish a lot of science articles. It started its journey in 1929. The list of articles published in the periodical showed its intention of informing its readers about the happening in science. The articles published were on bicycles, ships, and aeroplanes.. Health and medicine was one of its concern. It published articles on health in general and women's health in particular which should be highlighted. The *Abahon* was first periodical which addressed the issue of women's health.

Along with the initiatives taken by Christian missionaries and some leading individuals of the indigenous society of Assam, there were others who took interest in the spread of education, People from private trading companies came forward to support educational activities in Assam. John Berry White, a doctor in the Bengal Army and one of the leaders of the Assam Railway and Trading Company, donated a lot of money to the government for initiating a medical school. Thus, Berry White Medical School was started in Dibrugarh when Sir Henry John Stedman Cotton was Chief Commissioner of Assam in the year of 1896.

The district commissioners in Assam were responsible for carrying out the state's efforts in the arena of education. David Scott, an agent of the Governor General in the North East Frontier, gave land for the school to be built. By the end of 1855, the first English-medium school was opened in Guwahati. Wilson's Chronology, Yeats' Elements of Natural Philosophy, Use of the Globe, and other things were taught in the junior class of that school. The syllabus for senior class include Natural Philosophy, Geography etc. Starting from Guwahati, ultimately, as many as eleven schools were established.

Initiative to start a college was also there. The process to establish a college in Guwahati began in 1862. On June 20, 1890, the government granted permission for the establishment of a college in Guwahati. Cotton College was formally inaugurated on May 2, 1901, under the jurisdiction of Calcutta University. William Sudmarson served as Cotton College's first head of the administration. Cotton College gained a new structure in 1909 as a block was dedicated for the teaching of science. There were four rooms for teaching practical physics and four rooms for teaching practical chemistry. There was a lecture-theatre for physics, a dark room and an optical room. The intermediate botany class was started in 1927. The biology department was established in 1939–1940. 1940–1941 saw the introduction of the botany pass course degree.

Initially, European instructors taught in the college's science department. Later the Indians joined to teach. Babu Surendra Nath Chatterjee started teaching at Cotton College in

6th International CEO Communication, Economics, Organization & Social Sciences Congress

July 1908 as a physics lecturer. Babu Anand Kishore Das began teaching chemistry in January 1909. Babu Haridas Bagchi joined the college to teach Mathematics in August 1910.

After independence, there was both quantitatively and qualitatively change in the course of developing scientific awareness in Assam. Undoubtedly there was quantitative increase, but side by side the major player in this movement was changed. Previously the main initiator was the missionaries. They were accompanied by some private individuals. Basically they tried to disseminate science through periodicals and former schools. Now the mantle was given to different science organisational. In this regard, the *Assam Science Society* was instrumental. The year 1948 witnessed the establishment of the *Bangiya Bigyan Parishad* in Bengal to promote science in Bengali. It was initiated by Satyendranath Bose. In subsequent years, efforts were made to disseminate science in regional languages in other Indian states. In Assam, one can observe the same initiative. The *Guwahati Science Society*, a science organisation was founded in 1953. In 1958, the name was changed to *Assam Science Society*. With multiple branches in different districts of Assam, that organisation worked for promoting scientific awareness, environmental consciousness and the development of a rational society. Presently, there are more than 100 branches in Assam, one of which is located outside Assam that is in Tikrikil, Meghalaya. It has five thousand life members. The members of the society are committed to bring science to the general public. The organisation's declared aims and objective were

- To improve both the theory and practise of science and technology.
- To teach people about different parts of science and technology.
- To spread scientific knowledge through seminars and discussions on scientific topics.
- To get people interested in science by using different methods and to take the steps and actions needed to reach certain goals and objectives in society.

The *Assam Science Society* published several books, booklets, and leaflets. In 1955, the society started to publish the *Journal of the Assam Science Society*, a bimonthly English journal where scientific research articles were published. (In 2011, the journal was renamed as the *Bulletin of Scientific Research*.) However the members felt the scientific journals would not serve the purpose of disseminating science among the masses. Thus the Society started to publish a bilingual (Assamese & English) science magazine, namely *Bijnan Jetti*. The organisation did a lot to educate people about environment, health and agriculture. They took the initiative to set up a state library where books on different sciences would be kept. Anyone could go to this library without paying any money. That library was set up in 2003. The Society organised regular science session to impart the excitement of science among the students through contest on science essay and sci-toon (science cartoon) contest.

Through its publication, the *Assam Science Society* tried to emphasise on the study of basic sciences. At the Assam Science Society's Annual General Meeting held in Jorhat, Assam, in 1964, the concept of beginning advanced studies and research in applied sciences was first put forth. It was decided to publish *Bijnan Kosh*, a four-volume science books in Assamese. The first and second volume of it was published in 1969 and 1971, respectively. However due to financial shortcomings other two volumes could not be published immediately. Harekrishna Gayen and Anil Kumar Goswami, the association's secretary, took on the task of raising the money for the publication in the interim. If the necessary funds are eventually raised, the decision to publish the final two volumes in a novel manner will be made.

For the final revision, a subcommittee was set up in 1977. In addition to Jyotiprasad Medhi, the subcommittee also included Pratulchandra Goswami, Vinayakumar Tamuli, Anil Kumar Goswami, Prasanna Kumar Sharma, Haridev Goswami, Balitkumar Deka, Samudradeva Phukan, and Kulendu Pathak. The task of editing was given to Professor

6th International CEO Communication, Economics, Organization & Social Sciences Congress

Shyamaprasad Sharma. With the financial assistance of the Department of Science and Technology of the Government of India, the third volume of *Bijnan Kosh* was released in September 1982. The central government must provide all necessary funding for the third volume's publication. As a result, the fourth volume demonstrates updated financial factors for publication. In the meantime, multiple copies of the three *Bijnan Kosh* volumes started to sell. Later, a decision was made to publish a fourth volume using the proceeds from the sale of the first three volumes. Ultimately, the fourth volume was published in 1987. The life and works of scientists like Pavlov, Archimedes, Erdington, Haeckel, Gilbert and Einstein, was published in the forth volume. The *Bijnan Kosh* also included in-depth discussions on beta rays, electromagnets, electric railways, electric motors, and other topics. The *Bijnan Kosh* covers octopus -gamma rays in the first section, the Gulf Stream -anthropology in the second, and the Nobel Prize-electricity in the third.

Members of the Assam Science Society tried to make the society more science-oriented. They realised that scientists were making a lot of discoveries and doing advanced research, but how these things could reach the people? The trend of learning science in regional languages, which was started in other parts of India, was also common in Assam. The Society felt the need to talk about Assamese science literature. Keeping this goal in mind, a seminar on "Assamese Science Literature" was planned. That conference was at first scheduled to be held in 1979. However, due to various problems, it was put off for several months. On October 4 and 5, 1980, a two-day conference was held at Panbazar, Assam. At that time, Kulendu Pathak was the secretary of the association. A proceedings volume was subsequently published under the title of "Assamiya Bijnan Sahitya" (1982). The Department of Science and Technology, Government of India helped financially to get the book printed. Dinesh Baishya, the editor of the proceedings, opined at the book's release that Assamese science literature was far behind of science literature of other regional languages of India. He expressed his hope that the book would help to uphold the Assamese science literature to the public of other parts of India.

In the book, we find the opinion of different science writers of Assam. Virendra Kumar Bhattacharya said that the Assam Science Society doesn't have a science temple like the Basu Bijnan Mandir or Bose Institute of Bengal. He expressed the hope that if more steps would be taken in the field of publishing the scientific literature, the issue would reach the public. He expressed the necessity to publish more science journals in the Assamese language. Bhuvan Mohan Das and Pramod Chandra Bhattacharya in their writings emphasized the importance of popularising science through mother tongue. Kulendu Pathak, Vijaykrishna Devasharma, Shomeshwar Sharma, and Paramananda Mohanta in their own way narrated the development of scientific literature of Assam in the 19th and 20th centuries. They wrote about a number of books and magazines. In respect of science editing, the articles written by Shyamaprasad Sharma and Dinesh Goswami deserves special mention. In the bibliography section we find the names of a number of books on science in Assamese. The complete list is appended herewith.

Bijnaner kotha	Shasti das	1951
Chapa shikkha	Pratap talukdar	1951
Odbhut gach	Kumud Chabndra Baruya	1953
Bijnaner shikhare	Radhanath fukon	1955
Bijnaner Bismoy Batari	Dipendranath sharma	1956
Paramanu shokti	Jogendranath barua	1956
Poripusti bijnan	Rohini Kanta Bolruya	1958

Osomer bnoushodhi	Shantanu ramuli	1978
Shishur ahar	Pratul goswami	1979

This is a short list of some science-related books.

The Assam Science Society began to publish Bijnan Jeuti magazine in 1962, and is still continuing. In addition to that, the branches of Assam Science Society in various districts started to publish science magazines. Bijnan Rasana was published in 1976 by the association's primary branch. Bijnan Barnali was published by the Nagaon district office during 1979-1982. The other such magazines were Bigyan Patra (1979) of Nalbari branch, Bigyan Barta (1979) of Lakhimpur branch, and Jnan Bigyan (1979) of Dibrugarh branch.

Beside the Assam Science Society, some other organisations started to publish science periodicals. In 1973-1974, Gauhati University published the journal Lahar. In 1974-75, Cotton College published Spandan. Dibrugarh University's Padartha Bigyan Patrika was published in 1975. The journals like Nuclear (1981) by Bigyan Bharati Samiti, Bigyan Sfura by Assam Science Education, Bhugolika (1985) by North East India Geography Association, and Rasayan Siksha (1999) by Assam Chemistry Education Organisation deserve mention.

The Assam Science Society was instrumental in promoting the opening of new labs for performing scientific research. That initiative was taken after 1970. It proposed to build a children's science museum complex, a planetarium, and a basic research institute, for that it asked the financial assistance from the state government. The state government provided the necessary land. The CSIR offered senior and junior research fellowships for conducting cutting-edge research in theoretical plasma physics.

From 1975 to 1979, Anil Kumar Goswami served as the society's general secretary. During that time, he worked with four presidents; Jamini Mohan Chowdhury (1975-76), Narendra Nath Siddhant (1976-77), G. Thyagarajan (1977-78), and Pratul Goswami (1978-79). During these four years, the society received several government approvals of its project proposals, the most significant of which was the implementation of the Science Museum Complex project in March 1976.

Society organised a two-day conference on December 6-7, 1975 at Cotton College's Kalaguru Vishnu Rava Auditorium. Sarat Chandra Singha, the then chief minister (1972-1978), inaugurated the conference. He highlighted the need of fundamental scientific research. He said further that the basic research should be prioritised over applied research. He said it is the duty of the practitioners of science to use science properly in order to develop advanced technology and make the best use of natural resources. The society made an effort to put the Chief Minister's words into practise as it decided to name the new research institute as the Institute of Advanced Study in Science and Technology (IASST).

The Assam Science Society did several things in the field of science education. It set up training camps for science and mathematics teachers in high schools. It provided environmental science education to school teachers. It regularly organised science talent search competition every year. It also organised science exhibitions, seminars, and symposia. The focus was on teaching science and mathematics, the impact of science and technology on society, the science curriculum, the standards textbooks, and so on. Assam Science Society organised Shishu Vigyan Utsav or Children Science Festival and Shishu Vigyan Congress (NCSC). Society organised annual technical session, which provided a platform for researchers from all over India to interact among themselves once a year.

Even though Assam as a whole was advanced in scientific research, and activities, there was a huge gap between the scientific abilities of the people and the superstitious beliefs of many (such as "witch hunting"). So, to get rid of unscientific thinking and actions as soon as possible and create a fair, decent, and well-developed society there was need to cultivate

6th International CEO Communication, Economics, Organization & Social Sciences Congress

scientific temper. Science movement tried to do that task. That was done by a number of organisations.

Beside the Assam Science Society, many other organisations were formed after 1947. In the 1980s, the Student Science Society was set up in Guwahati, Assam. That organisation had been in contact with several scientific groups that had formed in Eastern India. It joined the annual conference of Eastern India Science Club Association (EISCA). Ref was held the Fifth All India Science Club Session at Depal Bidhanchandra Vidyamandir in the Medinipur district of West Bengal. During the session, the proceedings journal of the fifth all-India Science Club conference was released. In this issue, the Student Science Society is talked about.

We had to talk about one more science group in Assam that published several science books written in the local language. That organisation Pragjyotis Mahavidyalaya Vigyan Samiti of Gauhati, tried to compile different elementary science topics in different books. The people who worked for that group did a number of things to make people free from superstitions. The initiative was undertaken through road meetings and talks. In this respect, publication of two books, *Bigyan, Andhabiswas Aru Samaj*, and *Bigyan Aru Mulyobodh*, deserves mention which tried to make common people think about the relationship between science and society.

Asmat Vigyancharcha Dhara (1995), edited by Paramananda Majumdar, was another notable work of Samiti. That book tried to trace the development of the scientific culture in Assam. For the cause of science, the Samiti supported scientific and technological education and research in a variety of fields. Since its foundation, the Samiti consistently shared scientific knowledge in Assam and the North East as a whole through symposia, seminars, and discussions. The always put a strong emphasis on popularising science and fostering a scientific mind-set among masses.

Another science organisation Jnan Vigyan Samiti, Assam (1994) focused on science literacy in Assam in the 1990s. The main goal of that organisation was to increase public awareness regarding the issues like HIV/AIDS, the environment surrounding education, health and nutrition. Gyan Vigyan Samiti organised unique aptitude tests to foster students' interest in science at the secondary level. Additionally, they took the initiative to make science kits for elementary and middle school students.

The Government of Assam took initiative for the development of science. The Assam Science, Technology, and Environment Council (ASTECC) was established in 1986 as a part of the Department of Science, Technology, and Environment, Govt. of Assam. Numerous programmes were organised covering diverse aspects of science, technology, and the natural world. In 2008, the Minister of Science and Technology, Government of Assam, oversaw the establishment of the Aryabhata Science Centre in each of the state's 219 districts. The primary goals were to: 1. promote a scientific mind-set among school children; and 2. make science lessons engaging through experiments and other hands-on activities. 3. advocate for basic science as a profession.

Each centre of ASTECC was provided a designated room that was 20 feet by 12 feet in size. That was used for science workshops. Equipment for science experiments and books were made available. Each centre was run by a member of the executive committee. For block, district, and state-level programmes, annual grants were given. Science-based speech contests, poster contests, science-based model-making contests, and other events were held at the block level. Each year, centre received funding to conduct block-level activities. Across all districts, coordinators were appointed to oversee day-to-day operations at the block and regional levels. The contestants selected at the block level got the entry to compete in the district-level competition. Similarly, district-level competitors were selected to compete at the state level. A

6th International CEO Communication, Economics, Organization & Social Sciences Congress

TV and a video player was provided for each block-level science centre. In addition to that, each centre was equipped with a telescope, science kit, GPS, and soil testing kit.

Conclusion:

To popularise science among the general public, the government decided to establish several science institutes in various Indian states. In the 1990s, a science centre was established in Assam to serve as a hub for connecting science organisations in eastern India. Similar work was initiated in 1900 in Guwahati, Assam. It was decided to locate the institute near the border between Assam and Meghalaya so that it could be affiliated with several educational institutes. The National Council of Science Museums (NCSM) authorised the establishment of the Regional Science Centre at Guwahati on March 15, 1994. The centre attracted students, teachers, and the general public since its opening. The centre continues to host regular educational activities and programmes in addition to hosting a number of participatory science exhibitions. The group took the initiative to launch *NE Vigyan Batori* magazine in an effort to popularise science. All of these were intended to cultivate a scientific temperament in students, teachers, and common people.

“Hindustani Music in Medieval India: A Historical Challenge against Orthodoxy”

Srijayee Das

Banaras Hindu University, Varanasi, India

srijayee01@gmail.com

Orcid: <https://orcid.org/0009-0005-7976-9027>

ABSTRACT

This interdisciplinary work combining the knowledge of both History and Music exhibits two separate moods of challenge faced by Hindustani music originating in twelfth century north India. The first one was the challenge against musicological orthodoxy of the ancient period. It was the latter half of the 18th century when the British Orientalist thinkers like William Jones, Warren Hastings, and Augustus Willard etc. being motivated by their Sanskrit-fascination endeavored to explore the ‘classical’ music treatises of ancient India and blamed the Hindustani music of medieval north India was caught in their eyes as a symbol of ‘cultural degeneracy’ of medieval ruling class. And the other one is, challenge against social orthodoxy. Whereas there was a Brahmanical monopolization upon the ancient Indian classical music, how Hindustani music despite being created by the elite section became a part of people’s music by its language and contents has been taken place in this paper. Though Hindustani music is a vast field of study, two leading genres of Hindustani music i.e. *Dhrupad* and *Khyal* have been focused on specially and some influential musical experimentalists of medieval India have been selected to be analyzed in order to reach the final consideration.

Keywords: Hindustani Music, Medieval India, Historical Challenge, Orthodoxy

INTRODUCTION:

It is an underrated fact that the two words “Hindustani” and “Music”, in Indian context complied with the inevitable principle of getting attacked by the flow of Indian political trajectories. Whether it is northern or southern part of the country, it is a quite less exposed matter of fact that politics had direct or indirect intervention in every movement of Indian music. The internal partition of mind corroborating India’s geographical division into north and south leads a historian of music or a musicologist to concentrate over the different canvases of the north and south India. Terminology of musical genres supporting these two different geographical variations has determined ‘Hindustani’ for the music originated in north Indian court milieu and ‘Carnatic’ for the same in south India. The adjective ‘Hindustani’ evolving out of the noun ‘Hindustan’ has an intricate relationship with the geo-political trajectories of Indian history. In questioning what Hindustani music is, any common Indian man can give a simple, generalized version of today’s conceptualized ‘classical’ music. Not only that, most of the people in India, whether they are students or teachers denoted it as ‘classical’ music as the synonym of Hindustani music. But the doubts regarding what is ‘classical’ and where does this music differ from ‘Hindustani’ has no way but reviewing and revisiting the historical journey of India’s music. In the classification system of the very modern times in India there can be found many people designating ‘pure classical’, ‘semi classical’, ‘light classical’ etc. in accordance with the accessibility of any particular music without considering its ethics or origin. As for example, mixture of two or more *Ragas*ⁱ having the power of diluting the gravity of a piece of classical music and any scholar can catch the exact moment that takes down its position into semi classical genre. If we maintain this law of degradation from classical to semi classical, it can be simply claimed that a Thumri, commonly popularized as a semi classical genre of music can be performed maintaining the ethical purity of the Raga upon which it is based on and can easily protect the piece from the said degradation. But it never happens because the most crucial factor is ‘content’. As this example exhibits the mutual balance between grammatology and literature of the music, the entire phenomenon of the research stands upon these very two factors. But where the main issue implies such a turning point which is motivated by the socio-political wheel of time, it indicates the impact of both the social occurring of the then India and the cross cultural transactions of India and some other regions.

LEGACY OF INDIAN MUSICOLOGY

Classical Music in Ancient India:

First of all, in order to break the myth of evenness between the Hindustani music and Indian classical music, the first and foremost question that is raised first into minds is where was the fundamental difference between Hindustani music and music of the ‘classical’ India. It is needless to say that since antiquity Indian music existed with its vanity and a vivacious history of *Raga-sangeet*. The term ‘Sangeet’ (Sam-geeta in Sanskrit) etymologizes the combination of three performances i.e. song, instruments and dance in the Vedic era which can be recognized as the commencing period of a sense of musicology in human minds. In the context of Indian music, the seals, terracotta figurines etc. of the Indus valley make us sure about the presence of instrumental music and dances prior to the Vedic age. Historians of music are interested to bring the Vedic era as the era of revealing musical mysteries. Since the second millennium BCE the hymns of the Vedas were manifested by the musical interpretations while the scales and pitches were fragmented. The usages of the great seven tunesⁱⁱ were the predominant gifts of the Samaveda the second Veda. Several types of flute

(venu) and lute (veena) were played to keep the tonal expressions of the notes and for creating rhythm a number of variations of *Dundubhi* were used (Bake, 1957). Likewise, the movements of different parts of body during the Vedic sacrifices gave birth to the dance. The later Vedic period witnessed so many acculturations between the Aryans and the Dravidians and led the Indian music to its mature formation with some complex innovations. During the time of second urbanisation in 6th century BCE India along with the dominance of Brahmans the *Gandharva Sangeet* (music performed by Gandharvas, the group of Brahmana musicians) brought the first content based classification within the classical music, i.e. *Marga Sangeet* (finding *Marga* or way of divine association) and the indigenous music or *Deshi Sangeet* (secular or folk music). The age was momentarily marked by the planting the seed of ‘classicism’ of Indian music as the trend of documenting music as a scriptural form was introduced by the then legendary musicologists such as Narada, the 1st century author of ‘Siksha’, Bharataⁱⁱⁱ, the author of *Natyasastram*, Kohala, Dattila, Nandikeshwara, Shastika, Matanga, Shandilya, Vishwakhila and Vishwvasu, Shardula etc. In the Puranic literature, the magical powers of the ragas have been traced through several verses related to the novelty of the Hindu Gods and Goddesses. Eventually the most popularized and effective form within the *Deshi sangeet* that was still untouched by the Perso-Arabian musical culture was *Prabandha Sangeet*, the mother of *Dhruva-pada* or *Dhrupad* constituted breaking the elementary aspects of the former by the experimentalists of early medieval and medieval India. *Dhruva* was one of the four *Dhatus*^{iv} (Goswami, 2018) of the *Prabandha Sangeet* and the *Pada* was one of the six ‘Angas’ of the same, as commonly evidenced in the ancient texts written between 1st and 11th century. In the *Chhayalaga Sur Prabandha* (one kind of *Prabandha Sangeet*) *Dhruva* was absent but the supplementary part *Udgraha* represented with its two consecutive sections of which the second one had transmitted into ‘*Sthayi*’. The second portion of the *Prabandha* was broken into two paragraphs (Sanchari and Abhoga). The Sanchari, the relatively low pitched portion thickened the juice of the appellation of the contents and justified the essence of *Sthayi*. Just after the *Sthayi*, the high pitched juncture was called the *Antara*. Thus today’s four layered structure of the modern song was formulated in that point of time, as stated in the 12th century musicological work, “*Sangeet Ratnakara*” authored by Sarangadeva. Despite such a metamorphic evolution the contents of the *Dhrupad* were same as the *Prabandhas*; i.e. the heroic saga of legends or the kings or divinities. Notwithstanding that, no kind of historical significance did not belong to this evolution and vice versa; rather history had to wait for a century more to witness its full fledged blooming.

Birth of Hindustani Music:

The question that comes into mind next is why the musical accomplishment of medieval north India is termed as ‘Hindustani’. It was not only because the Persian word “Hindustan” indicated India as the land of Indus etymologically, but also because of the screening of a new episode of Muslim invasion by the Arabs during the eighth century. Etymology itself makes it clear that the genesis of Hindustani music was not possible without the Islamic rule in India because along with the Mohammedan religion they did bring so many Perso-Arabian cultural trends such as language, foods, dresses, art, technology and music, the most aspect here. A vast process of cross cultural effect implicating the Indo-Persian cultural assimilation carried the embryo of Hindustani music in its womb. But unlike Indian culture that was saturated with homogeneity; Persian culture, more authentically Perso-Arabic style of music was an ultimate fructification of the elongated amalgamation between the religious, secular and folk music of Afghanistan, Syrian, Spanish and Turkish

region (Kaul, 2007). Now the most relevant work we can make responsible for the Indo-Persian acculturation is to find out a plain ground of equivalence between the two distinct but conceptually relative cultures. The comparative study of Swami Prajnananda shows that the Arabian *Maqams*, *Shobhas* and *Gusvas* (Pragnananda, 2002) are same as the Indian concepts of *that* or *mela*^v. (Kaul, 2007)

Although the centralization of the court culture engulfing Persian language and culture was inaugurated during the reign of Sultan Ghiyasuddin Balban, ninth ruler of Delhi Sultanate, the court milieu of musical practices first came in prominence during the reign of Sultan Alauddin Khilji, thirteenth ruler of Delhi Sultanate. This was a less highlighted revolutionary decision in the cultural world of Islamic history in India because music was restricted in *Shariat*. Alauddin momentarily said, “I do not know what is lawful or unlawful according to *shara*. Whatever I consider necessary for the state or for its welfare” (Chandra, 2003). This was the very first footstep by cultural liberalism against religious orthodoxy welcomed the holy inauguration of the history of royal patronage to court music which had continued till before the complete disintegration of the dynastical powers in modern era.

Study on History of Indian Music in the Colonial Era:

The main argument of the paper, in order to focus on the classicism of the Hindustani music has to involve in some conflicts with some predominant opinions already established since earlier. The retrieval of the ancient past of India was started to be attempted after the advent of British ‘Orientalists’ in the colonial India, as the world famous musicologist Katherine Schofield made it clear in one of her famous article “Reviving the ‘Golden’ Age Again”. The Orientalists like Warren Hastings, William Jones, pointed out the medieval age of India as a ‘dark age’ when the glory and prosperity in ancient Indian art, culture and literature were ruined by the unconscious and ignorant Muslim rulers. Not only that, their fondness of the ancient Sanskrit texts enhanced the effectiveness of the fact that the Sanskrit glory of the Hindu civilization of India was ruined by the medieval darkness which was the ultimate result of the cultural ‘degeneracy’ (Schofield, 2010). In the context of music, the British musical experts started comparing the Indian music prevailed during the seventeenth and eighteenth centuries to the European one which was in contrast to the Indian music entirely notation-based. It was too inaccessible to them to find no means of expressing it but calling it reluctantly of a ‘barbarous nature’ (Woodfield, November, 2000). There was no boundary between the classical past of Indian music and the Hindustani music until the first historical study on today’s Hindustani music was initiated by William Jones, the founder of Asiatic Society in Bengal (1784) and ultimately the notational documentation of the latter was started. Several primary sources such as *Raag Darpan* by Fakirullah, *Tuhfat ul Hind* by Mirza Khan etc. were the initial basis of their historical sources about Hindustani music but the problem later the scholars caught and made responsible for puzzling the Orientalist musicologists was the actualization of the evolution of Indian music through a circular process of adaptation, experimentation and amalgamation was not really easy to express in their canonical mood.

Thus the gradual increase in the complexity regarding the classicism of Hindustani music questioned the absence of canonization of Hindustani music. Looking for the vacuum of Hindustani music in respect to the ideality of the ‘classical’ status became more prioritized. They also explained that it was not completely ‘Indian’; rather the amalgamation between the Indian and Persian classical music. The above mentioned experiments with Indian ragas were never possible to create without breaking the ancient musicological ethics which was

in scriptural form in Sanskrit language. Despite some contextual resemblances between the ancient Indian classical music and Hindustani music of medieval India i.e. patronages by the elite section, skill of the artist musicians etc., the basic principle of the classical music or *Shastriya sangeet* of India was the theoretical music treatise (*Sangeet Shastra*).

BREAKING THE MUSICOLOGICAL BARRIER

Contribution of Amir Khusrau:

The Parrot of Hindustan, Amir Khusrau (1253-1325) was the mastermind of the great amalgamation between the Indian music and the Persian tunes. But beyond being backed by the Sultan's patronage his extraordinary artistry led him to think about the challenging circumstances created by the indigenous Hindu musicians and musicologists. On the other hand, according to Fakirullah, translator of *Raga Darpan*, a musical treatise in Sanskrit, after Alauddin Khilji's invasion upon Ramadevacharya, the ruler of Devgiri the entire musician community migrated towards northern India; especially Delhi with an urge of subsistence and aspiration of getting patronage of the Sultan. Gopal Nayak, the court musician of Devgiri was among such artists. Folklore says that Khusrau's creation of *Taranas*, an item still popular today amongst the Hindustani music was a result of such kind of internal pressure. The inaccessibility of Sanskrit language used by the pundits made him obstinate about the magical tunes of Indian Ragas. It is said that Khusrau, not allowed to enter Gopal Nayak's concert adopted the tunes of Raga Kadambak hiding himself under the chairs (Biswas, 2019). However, later the scholars of colonial age like Captain N. Augustus Willard became very skeptical about the true talent of Khusrau by remarking it as a blind imitation of Gopal Nayak's singing style. It can be argued that Khusrau, a disciple of Chishti Sufi Shaikh Nizamuddin Auliya penetrated, as being failed to access the exact lyrics input some Persian words (e.g. *tum, dere, Na, dim* etc.) in that, the meanings of which indicated a profound impact of Sufi philosophy i.e. the union between man and the Omnipotence (*Khuda*). In Amir Khwurd's *Siyar-ul-Auliya* the opinion of Nizamuddin about the lawfulness (*halal*) of *Sama* (Sufi musical practices) was corroborative of composing music being 'fully devoted to the God' (Aquil, March-April 2012). An example can be added herewith.

Figure 1 – “Amir Khusrau with his invented instrument Sitar sitting in the Khanqa of Shaikh Nizamuddin Auliya” painted by an unknown artist (The actual watercolor painting is exhibited in National Museum, New Delhi)

Yaar e maan biya biya

Dere tana ta dim

Ta nana dim tum ta nana Na.

(O my friend, come soon, come at once.

Come and enter my body,

For I am yours, come) (Biswas, 2019)

In the field of rhythmic study, the invention of *chahar usul* (four types of rhythmic forms – *tan, tana, tanan* and *tananan*) became the primary basis of Tarana and *harakats* (ornamentations) of rhythmic instrument like Tabla designed by Khusrau himself. The most visible Indo-Arabian musical acculturation as a specimen of another daring challenge against the musicological ethics exemplifies Khusrau’s experiments with ragas. From the documentation of Ustad Chand Khan about the hybridization process of the Ragas by Khusrau there have been found twelve new born ragas created by mixing two more Indian ragas and Arabian Maqams as component ragas. The list of the new ragas and component ragas is given herewith -

New raga	Component ragas
<i>Sazgiri</i>	<i>Poorvi+Gaura+Gunakali+Gara+Kafi+Desh</i>
<i>Tawafiq</i>	<i>Zilaf+Husaini+Sarang</i>
<i>Ushshaq</i>	<i>Sarang+Basant+Nawa</i>
<i>Ghanam</i>	<i>Poorvi+Yaman+Hindol</i>
<i>Neshapur</i>	<i>Yaman+Hindol+Azam</i>
<i>Muwafiq</i>	<i>Todi+Malashri+Dogah</i>
<i>Zilaf</i>	<i>Shahnaz+Khat+Husaini</i>
<i>Ghazal</i>	<i>Dhanashri+Khat+Kafi</i>
<i>Oj</i>	<i>Gunakali+Iraq+Malashri</i>
<i>Gara</i>	<i>Kafi+Nauroz+Ghazal</i>
<i>Bakharz</i>	<i>Deshkar+Farghana+Nawa</i>

Source: (Kaul, 2007)

However, it was condemned by some later scholars that nothing was possible to achieve but a musical ‘degeneracy’ (Schofield, 2010) by such kind of random experiments with ragas and their families by quoting Fakirullah and Qazi Hasan that it is a musicological offence to spoil the purity or homogeneity of any raga family. A *ragini* (considered to be the wife of a raga) can never be placed aside or mixed with a different raga except the *Mul raga* (main raga). Ustad Chand Khan argued that the Raga classification system of ancient India and that used by Khusrau in his experiments did not contradict each other (Kaul, 2007).

Not in the vocal music only, the Indo-Persian intermingling was found in Khusrau’s instrumental experiments also. He incorporated the technical concept of *Veena*, the conventional Indian classical instrument into the Arabian instrument Oud and devised a ‘milestone’ instrument *Sitar* (Zaferkhan, 1975) (*Sih* – three, *tar* – string); it was not less than a revolutionary accomplishment in the Hindustani world of music (Figure 1).

Birth of Khyal:

Khyal, a major pillar of the Hindustani music was commonly said to have originated through the musicological experiments of Amir Khusrau, though there are numerous debates among the

scholars about the exact progenitor of khyal. Many historians have agreed with Katherine Butler Schofield, an expert of Indian musicology in King's College in London who was of the opinion that khyal was a Sufi affiliated Hindustani product originated in seventeenth-eighteenth century Mughal India (Ho, Spring/Summer, 2013).

Etymologically 'Khyal' means boundless imagination which can be achieved by a long meditation. Sufi affiliation of Khyal is beyond doubt because meditation is the part and parcel of the Sufi practices of connecting God. Sufi *Qawwali* became more or less associated to the formation of Khyal inevitably, though *Qawwali* had still not evolved with the formation we can find today. As for example, Sufi saints like Shaikh Burhanuddin of fourteenth century composed so many Khyals contextualizing love or pain (Brahapati, Jan-Feb, 1976). Not only that, later Captain Willard referred it as the love song strengthens all the evidences of Sufi affiliation (Willard, Calcutta).

Doubts from another section of scholars directed their fingers towards some folk affiliations with Khyal (Brahapati, Jan-Feb, 1976). Acharya Brahapati noticed a group of Lavni of Rajasthan claiming themselves as the Khyal singers. Apart from that, a very overrated fact that prior to emergence of Amir Khusrau *Qawwali* had been already popularized among a nomadic tribal group named *Qawwal* in the north western region. However, Indian musicologist Nazma Parveen Ahmed mentioned some scholars who are of the opinion to mark the *Qaul* (Arabian compositions eulogizing the Prophet or the God) (Ahmed, 1984) singers as *Qawwals*. However, the internal philosophical approaches between *Qaul* and *Qawwali* were different from each other because there was no mystic approach in *Qaul*. Later Amir Khusrau had been found to modify the style of performing *Qaul* both in form and content; the first one was accomplished by his experiments with ragas, and the later one was by incorporating mystical contents. Thus the difference between *Qaul* and *Qawwali* gradually became subtle. So it is randomly assumed that Khusrau laid the first foundation of Khyal but no scholars have directly ascertained that Amir Khusrau was the inventor of Khyal.

Contribution of Sultan Hussain Shah Sharqi of Jaunpur:

Whatever it is, it was never possible to ground the base of Khyal as Hindustani genre of music without any Indian contents. In an observation to the Sangeet Ratnakara, the seed of khyal can be traced in the *Akshiptika*, a type of the Prabandha Sangeet. The resemblance of khyal with the *Sadharani Geeti*, one kind of Indian classics and *Rupak Prabandha* described in Sarangadeva's documentation evidenced the Indian base of Khyal (Ahmed, 1984). Even Abul Fazl also discovered some linkages of khyal with Prabandha Sangeet. These Indian bases gave the ultimate advantage to the medieval experimentalists of Hindustani music such as Khusrau and Sultan Hussain Shah Sharqi of Jaunpur (1458-1505) in later times to improvise and synthesize Hindustani musical kingdom. A. H. Fox – Strangways and Willard argued that Khyal attained maturity under the reign of Sultan Hussian Shah Sharqi in the first half of the 15th century (Ahmed, 1984); their constant dependence upon Fakirullah's contemporary records declared Khyal as an expressional music of romanticism; while the socio-cultural influence upon the music was entirely omitted. In the twentieth century both the Indian and western musicologists like Thakur Jaidev Singh, Allyn Miner etc. refuted the hypothesis of the above mentioned scholars and marked the phase as that of 'pre-modern khyal' (Miner, 1997). The decisive refinement of Khyal was still undone till the emergence of Sadarang, a musical gem during the Mughal emperor Muhammad Shah. Rather it was much more verified that Hussain Shah Sharqi, as being a great experimentalist innovated a new form named *Chutkala* from his own version of Khyal;

Chutkala contained various secular contents like human love, separation or war stories. Whatever can come as a determinative, it should always be remembered that as Amir Khusrau held a creative entity with such undeniable talents of defusing two or more ragas on the one hand, the spontaneous exploration of Hussain Shah Sharqi in the Hindustani raga music exemplifies some of his improvisations in some ragas like Shyam, Todi etc.; the extraction of multiples of variations from a single raga was passively a metaphorical picture of breaking the barriers of raga-ethics composed by the ancient musicologists on the other. Sometimes geo-political aspects also became explicit in these new variations of the ragas, e.g. *Jaunpuri Todi* created by Hussain Shah Sharqi or *Gurjari Todi* created by the joint collaboration of Raja Man Singh Tomar of Gwalior (1486-1517) and Nayak Bakshoo, court musician of the former was not different from each other only in form and grammar, but also created two different emotional sentiments and different environment while performing, will be discussed later. Apart from this, creator's political background or the indication of his patron's name was attached to that of the raga variant; exemplarily after the death of Raja Man Singh, Nayak Bakshoo left for Gujarat and received patronage of the Sultan Bahadur Shah. In this very time Raga *Bahaduri Todi*, a new Todi variant combining the touch of Raga *Deshkar* came into prominence but as there was no prominent difference between the Gurjari Todi and Bahaduri Todi, he can as assumed to have just replaced the name of the raga in order to glorify the cultural inclination of Bahadur Shah's reign (1536-'37).

BREAKING THE SOCIAL BARRIER

Social Background of Dhrupad:

After the birth of Dhrupad, it was found to be centralized in two specific depots of culture, one was Gwalior, presently situated in Madhya Pradesh and the Vaishnavite belt^{vi} of Vrindavan and Mathura (modern Uttar Pradesh) or the Braj region; Jaunpur, '*Shiraj* of the east' (Chandra, 2003) also reached the zenith of the practices of both Dhrupad and Khyal especially under the realm of Hussain Shah Sharqi. However, the political turmoil of the then Jaunpur hit upon the musical experiments of the Sultan who being worn out of the mainstream attack from Delhi imperia of Sultan Bahlul Lodi had to flee away from Jaunpur to Bihar and Bengal, even sometimes to Gwalior and take shelter under Raja Man Singh Tomar of Gwalior (1487). Whether there was any transaction of musical stylization between the geniuses of these two great experimentalists had been hardly found, but a sphere of comparison can be brought here. As there was a large contribution of Sufi intervention in the elite court culture behind the epoch making invention of Khyal discussed above, there was also some factors which played effective roles in thickening the pulp of Dhrupad. One of the most significant aspects we can point out here is the reason behind this centralization of Dhrupad within such a specific regional perimeter of northern India. Here, the very catalyst was seed the Bhakti movement planted which veiled all the socio-religious machineries of the contemporary time. In case of north India, Bhakti movement evolved out of the ninth century liberal ideas with a protestant mood against the Brahmanical superiority, caste discrimination, polytheism, religious fanaticism and pedantic orthodoxy and reached its apex during the 15th -16th century. *Bhakti* (*Bhakti* means 'devotion') movement became not less than a mobilizing factor in the common minds disturbed by the ritualistic dominance of Hinduism in north India and Jainism and Buddhism in south India led them to embrace the mystic ideology of the Bhakti saints. Music acted as mediator between the Bhakti saints like Mirabai, Kabir, Tulsidas, Nanak, Dadu, Surdas, Brahmananda, Srichaitanyadeva etc. Many of these saints came of the non Brahman

families; as for example Mirabai was a Rajput (*Kshatriya*) woman, even Kabir and Raidas were a weaver and a cobbler respectively. *Bhajan, Doha, Kirtan* - several devotional genres of music composed by some Bhakti saints contained a raga-based skeleton; among which many of the ragas were newly invented by the then experimentalists. Although the regional folk tunes were the constituents of these songs, most of the compositions were made based upon the ragas and multiples of their variants. The propagation of *Kirtans* by Srichaitanyadeva being enchanted in devotion of Lord Sri Krishna from Bengal to north India also led some historians of music to believe that Kirtans were also another variant of Dhrupads. Some saints played some accompanying instruments which were not entirely Indian in nature; Guru Nanak is often found carrying a Rubab, a Persian instrument and to be involved in some spiritual conversations with men of any religion; whether it was Sikhism or Islam (Figure 2).

Figure 2 - An 18th Century Janam-sakhi Painting illustrating an intercourse between Guru Nanak with a Rubab, a Persian instrument in hand and Abdul Ahmad; and between Mardana and Miyan Mitha”

Gwalior’s Contribution in Dhrupad:

Unlike Khyal, Dhrupad free from Perso-Arabian cultural influence was considered to contain a pure and sophisticated history in Hindu society of India. Not only that its origin was directly linked to the religious pursuits with its super religious contents and eulogy of the Hindu Gods and Goddesses. Here, one of the most effective challenges Man Singh Tomar faced was due to his desperate initiative to go beyond Sanskrit, the traditional language of Dhrupad and compose them in a vernacular language, *Brijvasha* (Kaul, 2007). As Bhakti movement acted a sword against the Brahmanical orthodoxy of Hinduism, Man Singh’s Dhrupad compositions in vernacular language led a blow upon the predominance of Sanskrit-fascination in both literary and musical world. But the age of Man Singh was incomplete without the talented *nayaks* (musical professionals) whose contributed meant a lot in the wholesome musical career of Man Singh, Nayak Bakshoo, mentioned earlier, Nayak Bhannu, Nayak Machchhu were the foremost ones. The age in Gwalior was significant because the intervention of so many folk tunes which were indigenous but were popular amidst the Mathura region in the traditional style of Dhrupad. Man Singh struck by

the then cultural mood brought a large novelty in the singing style which knotted the grammar, ornamentation and substance of the Prabandha along with the customs of the common people within it, as documented in his own celebrated work “Man – Kutuhal”.

Miyan Tansen: Pioneer of Novelty in Indian Music:

Figure 3 - Tutinama painting illustrating coexistence of Indian instrument Veena and Persian instrument Rubab (Wade, 1990)

An acculturative ambiance led the embracement between the imperial court culture and the devotional mystic culture. During the Mughal period this particular phenomenon got more objectified which, in context of analysis we have to focus on another dominant musical legend, Miyan Tansen. Tansen can be said to have been obtained by the third Mughal emperor Akbar as a cultural outcome of political liberalism. It was because Akbar, ambivalent of personal enmity with the Hindu Rajput territories he conquered, took the policy of mutual cooperation by bringing them under his own suzerainty and giving higher *Mansabs* (ranks of the nobles determined by their holdings of horses). Likewise, the exchange of gifts was very common between Akbar and the Rajput rulers; but the evidence of importation of a *Kalawant* (artist) from such a subordinate ruler was not very usual. According to all the contemporary sources of the Mughal period, Tansen of Gwalior whose real name was Ramtanu Pande was sent by Ramchandra Baghela of Rewa to Akbar’s court in 1562 (Delvoye, 1999). Following the literary trend of the Gwalior artisans, Tansen also worked on Dhrupads in Braj Language. Not only that, the ingredients of Bhakti philosophy and Vaishnavite contents e.g. *rasleela*, *Holi* (celebration of colors) etc. took place in Tansen’s compositions implied his close discipleship with the Bhakti saint Swami Haridas of Vrindavan. The Akbar-Tansen duo, despite a perfect example of an imperial patron and his patronized was not beyond criticisms; especially the orthodox section attacked him blaming for the sanctity of the Dhrupads. But it can be argued that the impacts of both

Vrindavan and Gwalior style of Dhrupad from Swami Haridas (Figure 4) and Nayak Bakshoo, two of his teachers from those two regions respectively injected into Tansen's own stylization. Francoise 'Nalini' Delvoe pointed out his close association with the Sufi saint Shaikh Muhammad Ghaus of Gwalior can justifiably claim for his Sufi inclinations sometimes. Apart from that, so many Mughal paintings illustrating the coexistence of the Indian and West Asian instruments in a single 'Indianized' court picture. Indianisation was also made possible in the Perso-Arabian instruments a main center of Tansen's experiments as he inputted the tunes commonly used in Indian stringed instruments like Veena in Persian instrument *Rubab* (Figure 3). Not only that, a major use of Veena within Akbar's court signified it as an actual laboratory of 'cultural synthesis' (Wade, 1990) which Akbar dreamt. Akbar's mind, always curious about the musical novelty defended Tansen's several experiments with ragas and their variations he created could repulse against a number of condemnations from the conservative section of the contemporary music critics.

Figure 4 - A Rajasthani miniature painting: Akbar visited to Swami Haridas with his disciple Miyan Tansen

CONCLUSION:

Also apart from these above mentioned experimentalists of medieval India there were a large number of talents whose historical contributions might still be under veil. Along with the strong argument that the colonial conception of 'cultural degeneracy' we can state of some aspects of challenges that the Hindustani music successfully won. Firstly, it took the path of vernacular languages like Braj language initially and Hindi and Urdu later by coming out of the barrier of Sanskrit fascination of the orthodox musicologists. Second, the purported musicologists, instead of obeying those raga ethics, liberally concentrated upon the melody and novelty both in Indian and Persian ragas. The new variants of ragas were not patronized by the ruling class only, but also could reach to the non elite section of the society. Many of the devotional songs composed by the Bhakti saints like Kabir, Mirabai, and Guru Nanak etc. were based on those new raga variants and mobilizing the masses by these songs were the greatest specimen of

6th International CEO Communication, Economics, Organization & Social Sciences Congress

demolishing the elite monopolization upon the Hindustani music. Whereas in ancient India there was a Brahmanical dominance upon the practice of classical music, many Bhakti saints of Mathura and Vrindavan practiced Dhrupad and Sufi saints similarly practiced Khyal in medieval age. Resultantly, the ethical sanctity of the ragas might be destroyed but the random penetration of many folk tunes into these Hindustani genres led it to have a social, dynamic approach. Music can be more scientific and utilitarian when it can have the ability to express all the emotions of the man and society in a simple form. Likewise, Hindustani music, sometimes as a social demand could become the medium of symbiotic interplay between its creators and their patrons; whether it is royal patronage or that from the masses, literally illiterate in musicology.

ABSTRACT

This paper is an attempt to trace the mobility of Mughal history. The background of my work is the post golden age of the Mughal Empire in Bengal under its first effective Subahdar (provincial governor) Murshid Quli Khan and his family. The old Emperor lamentably restricted the trajectories of his political career in a long lasting war with the Marathas of the Deccan (1680-1707). The main intention of this study is to assess the contributions of Murshid Quli Khan in the political, social, economic and cultural spheres of Murshidabad as well as Bengal Subah, which emerged as an emblematic province of the continuation of the central authority and domination. Besides emphasizing on the achievements of Murshid Quli Khan in Murshidabad, another pole of political activities that have been brought to light some negative co-factors persuading the decaying of Delhi power like the “Deccan policy” of Aurangzeb, its deterioration or weakness during the course of time, an interior threat to the throne of Mughals and some intellectual steps regarding the administrative recruitments. Foreign interference and the nature of statecraft in shaping the contemporary Zamindari affairs were the two major issues which were the most crucial targets of Murshid Quli’s steps elucidated here. In the light of his political might, the negotiations with some perspicacious cum influential provinces such as Coach Bihar, Assam and Tripura has been prioritized in this work. The rebuked legacies customs and the contributions of his family have been attempted to bring light in this paper.

Keywords: Revisiting Bengal, Subah, Murshid Quli Khan

INTRODUCTION:

The division of responsibilities and ranks between provincial governor and Diwan, which was introduced by Akbar created remarkable perplexity in the first half of the eighteenth century in Bengal. The condition of the subjects became lugubrious due to the maladministration of the province. The then landlords enjoyed a huge sovereignty in their own areas in return of annual revenue and in order to collect the same the peasants were under an extreme persecution. Sometimes the wives or children were also persecuted by the officials of the zamindars in the absence of the peasant. Due to the extreme exploitation of the peasants the improvement in agriculture was constantly hampered. As a result, peasants used to build up a strong protest against the provincial Mughal officials and forced them to abdicate. We can see this kind of struggle when Sobha Singh and Pathan Sardar, Rahim Khan assembled thousands of people against the Mughal Subahdar Ibrahim Khan in 1688. Between 1697 and 1700 the economic condition of Bengal began to deteriorate due to the corruption and rapacity of Subahdar Azim-Ush-Shan. This resulted in Murshid Quli's nomination by emperor Aurangzeb as an honest and potential administrator. Growing up in an impoverished Brahmin family of Southern India, he was pushed in orphan hood during the age of his five years. He was nurtured by Safi Isfahani and got a new name, Muhammad Hadi. Haji Safi trained him as a man of complete foresight. Within a few days, Hadi made a great impact on the emperor by displaying his honesty and sagacity and received a promotion through the nomination of Diwan of Hyderabad and Berar. The badge of the first independent Nawab of Bengal could easily be affixed with Murshid Quli Khan due to the implantation of his distinct administrative framework. He proved himself as a successful administrator by leaving the contributions in political, social, economic and cultural spheres of Bengal. However, he never asserted his dominant status without manifestation of creditable allegiance to the central authority, especially emperor Aurangzeb. At first he was the Diwan and later became the provincial governor of Bengal on the basis of his personal deception and adroitness.

THE INITIAL REGNAL YEARS: MURSHILD QULI AND HIS ACHIEVEMENTS

1.1 Birth of a New Capital City: Murshidabad was one of the most predominant capital cities in medieval Bengal. According to the Imperial Gazetteer of India the town Maqsudabad later was dignified with Murshidabad in honour of Murshid Quli Khan. Several English documents of the eighteenth century mentioned Maksudabad as Muqsudavad. The transfer of capital city was the most remarkable evidence of Diwan's political acuteness. The administrative significance of the city rapidly increased and the process of urbanization had achieved a motion. Indeed, the prosperity and opulence of Bengal as well as Murshidabad turned into a myth during this time. The head of French settlement in Cossimbazar, Jean Law designated Bengal as the 'heaven of India'. However, the newly emerged capital city had already established itself as a political and commercial centre of Bengal before the arrival of Murshid Quli Khan. At the first half of the eighteenth century Murshidabad appeared as one the most illustrious centres of Urdu language and literature in Eastern India. Historian Jadu Nath Sarkar stated that Parganas (Chunakhali, Morgram, Kherul, Talerpur, Giyalpod, and Saridabad) of this city became the

accommodation of a large number of Arabs, Turks, Iranis and the Mughals. The Paraganas gradually emerged as a centre of Islamic studies. During the time of Murshid Quli Khan education related matters were endeavoured by him. A large number of European merchants had settled in Kalikapur and Farrasdanga, which were located near Cossimbazar in order to gain profit in silk trade as the region used to produce silk unendingly and the amount of labour's wages was not lump sum. (Chaudhuri, 1975) Even Thomas Roe who came to the Jahangir's court as an envoy elucidated the prestige of Murshidabad as a silk trading centre. Jangipur was one 'most prosperous silk trading centre. However, the atrophy of this glorious and reputed capital city had started at the end of the eighteenth century.

1.2. Remarkable Reformist Steps:

Murshid Quli Khan primarily paid attention to the reasonable income and expenditure of revenue and to ameliorate agricultural production. In order to fulfil his motive, he began to appoint honest and adroit collectors in each Sarkars and Paraganas. He used to determine the total cost of land holdings on the basis of data which were procured by his loyal officials or workers, Diwan was also acquainted with the production capability of land and related matters by them. According to Riyaz-Us-Salatin, the most notable contributions of him was to make a compatible list of revenue of jagirs and khalsamahals (royal land).The constriction of government expenditure became possible for Diwan as he had dragged the less important administrative duties under a proper investigation (Salim G. H., 1902) The higher Mughal officials of Bengal who were tasting the lands as jagirs had gone back as Khalisa and as a result, the amount of state income increased to rupees 1021,415 in the sector of royal lands. As a consequence, the officials who were displaced from their jagirs had received the jagirs in non-arable lands near forest regions of Orissa. Jadu Nath Sarkar said that the lands were auctioned to Ijaradars from which the jagirdars had been dismissed and the ijaradars got the charge of collecting revenues in return for signing an agreement. Diwan also realized that it was impossible for him to institute Zabti system wherein, a link had already been created between government and rayyats regarding land revenue collecting issues. So he propagated a new system called 'Mal-Jamini' in which peasants used to pay the taxes to the ijaradars. This system provided rights to the ijaradars to collect the revenues (mal) in return of imparting security bonds to Diwan and receiving a share of collected taxes for their consumption. This kind of contract system led to the advent of new elite groups who started installing control on a number of remaining jagirdars. This eventually demolished the existence of Bengal's traditional Zamindari system. However, N.K. Sinha claimed that Murshid Quli played a key role to form the big Zamindaris. The six big zamindaris of Bengal (Rajshahi, Dinajpur, Nadia, Birbhum, Vishnupur and Burdwan) and the three big zamindaris of Bihar (Tirhut, Shahabad and Tikari) had come into existence under Murshid Quli's regime. Historian Abdul Karim also agreed regarding the existence of big zamindaris of Bangladesh. The land revenues had been ascertained through the fertility of cultivable land and the taxing dexterity of the peasants. Indeed, we can see the discontinuation of the process of land survey supported by missing surveys in Birbhum, Vishnupur and Calcutta; the city was not surveyed due to the Diwani rights of English according to the royal decree of Farrukhsiyar in 1717 (karim, 2018) Another notable

contribution of Murshid Quli was to impose an amount of cess on the zamindars of Bengal in paying the remuneration of the exchequers of the revenue department. However, the peasants fall into a miserable situation as the abwab had been extracted from them at a rate of 50% but their life became more secure to the zamindars. We can easily trace the secular minded nature of Diwan in his revenue department; Darpanarayan Sen and the Jay Narayan Simha were the two names of Murshid Quli's public surveyor (qanungo) and personal assistant respectively (Salim G. h., 1902). So many Hindu Bengalis were well versed with the Persian language and received the promotion of higher official posts (Ray-I- Rayan) during his time.

1.3. Diwan's Importance to the Emperor:

When Aurangzeb engaged himself in a prestigious struggle wilfully with the Southern Marathas the condition of the royal treasury became fatigued due to the expenditure in the battle. During this pestilence, Murshid Quli proved himself as a sentinel of Mughal Empire by through the transmission of revenue amounted one crore. Within a few days he became reliant on the emperor by showing his honesty and capability. He began to enjoy not only the office of Diwan but also Subahdar and Deputy Subahdar of Orissa and the financial head of Bihar. He contemplated on the agricultural amelioration of Orissa. Due to the dismissal of the jagirdars of Bengal from their holdings to Orissa, they became amenable to suppressing the possibility of insurgency for their interest which switched their attention to the agrarian improvements. Indeed, the revenue of the province had been collected as in crop; Murshid Quli grabbed the situation by giving a proposal to the businessmen for selling their crops directly while the entire process was accomplished through the government on the eve of Murshid Quli's arrival. This proposal had also been accepted cordially by them only for the convenience of selling the crops in the ports of the country. This is reflected in the corrugation of state expenditure. Through this phenomenon Aurangzeb's confidentiality was strongly established by Murshid Quli Khan. The importance of him to the emperor could be traced when the recommendation of Sayeed Nazir and Sarfuddin Ali for their promotion was accomplished successfully by Murshid Quli to Aurangzeb and the emperor cordially accepted this through increasing the official's ranks to hundred 'jaths'. We can also see the consequence of Murshid Quli's gentle image to the emperor when it became evident that an official could easily climb the higher empirical post (like sub-inspector of naval fleet) from a general worker. Once upon a time, Aurangzeb had sent a handwritten testimonial and a gorgeous royal dress to Murshid Quli Khan in return of receiving the amount of 2, 33, 64, and 553 from him (Bandyopadhyay, 2002). Even the impression of Murshid Quli in referring the candidacy of a person to the emperor was more adorable than Subahdar Azim-Us-Shan (Aurangzeb's grandson), for instance- Niyamatullah's candidacy as faujdar of Cooch Behar became nugatory to the emperor and the acknowledgement of Abdur Rahman's importance as sub-inspector of naval fleet was done only after the approbation of Murshid Quli Khan. However, Murshid Quli's growing amicable relation with Aurangzeb led to the cause of prince Azim-Us-Shan's indignation on the emperor's beloved. The Prince started to perceive that without Diwan's permission he could not invest the money of the royal treasury for his interest. So he made an attempt to secretly assassination of Diwan without creating any provocation in Diwan's mind. In order to quench his intention, Prince had engaged in a confidential conspiracy with the commander of 'Nagdi' force, Abdul Wahid by showing him a fomentation of incrementing salary and huge amount of gratuity. Though their conspiracy had been crushed completely with Murshid Quilts diplomacy and artifice. The Prince was constantly trying to appease Diwan due to conceal his depravity and beg amity from Murshid Quli. Through this incident, Azim-Us-Shan was ruthlessly

condemned by his grandfather; Aurangzeb blackmailed him that he should submit an explanation if any kind of recurrence shall take place as earlier had happened (Gladwin, 1788). This phenomenon not only paved the way of Diwan's pellucid nature to emperor but also compelled Subahdar to shift Patna in 1704 (later dignified as Azimabad) which made Murshid Quli Khan as an unofficial Subahdar of Bengal.

SPECTACULAR ROLE AND CONTRIBUTIONS AS SUBAHDAR:

It is not a very difficult task to understand that the efficiency, sagacity and expertise of a Diwan would eventually be expressed in his character when he started proving himself as Bengal's first successful Subahdar or Nawab. A man of multiple talents was injected in the personality of Murshid Quli Khan. He made a significant number of contributions during his governorship in Bengal. The Subah of Bengal never forgot him for his remarkable role in every field of politics. As provincial governor of Bengal, several memorable key parts and achievements of Murshid Quli Khan have been discussed here.

2.1. Rise and Prosperity of a Banking Family:

History says that political events and developments cannot run without the support of economic power. In the sixteenth century Europe, we can notice spectacularly that the illustrious banking family like Fuggers of Augsburg and the Medici of Florence had taken a leading role in determining the route of history of the Spanish royal family and the Valois dynasty of France respectively. The repetition of this century's historical incidents could also be traced in the politics of Bengal throughout the mid seventeenth and the entire eighteenth century wherein the family of the Seths were gradually building up their effective figure. The sun of good luck of this monetary group had already woken during Shah Jahan's regime when Hiranand Shaw (man of Gahilarha family of Oswal community) visited to find prosperity in Patna from Marwar in 1652 (Little, The House of Jagat Seth, 2016). The demise of this great merchant personality could not stop the gorgeous advent of this family; rather the journey of opulence was started by Manik Chand, eldest son of Hiranand. He was attracted by the lucrative commerce of Decca and formed his financial business. When Murshid Quli Khan along with his officials left Decca for settling in Maksudabad, he was associated with Manik Chand and made him the head of his newly founded mint. The loftiness of the family's prosperity was remarkably maintained by Manik Chand's descendant, Fateh Chand who was instantly pleased by Murshid Quli (1712) and this led to the winning of his designation from emperor Farrukhsiyar through a special recommendation of Subahdar (Little, The House of Jagat Seth, 2016). Actually this family formed an economic domination in operating the century's political developments and played a vital role in the Battle of Plassey (1757). They also had been accused as the leading figure of Plassey conspiracy. So the family of merchant kings was ever thankful to Murshid Quli Khan just due to his unfeigned support in their proceedings.

2.2. The Nature of Statecraft to Shape the Contemporary Zamindari Affairs:

From the beginning of Mughal regime, Zamindari extension and their revolt became a common phenomenon in Bengal; dominative spirit of the zamindars was severely suppressed by Subahdar Islam Khan (1608-1613). However, their self-independent soul had wished to awake once again in the eighteenth century. Murshid Quli took a little bit of time to put down the

upheaval of Dhir, land lord of Rohtas in Bihar. He also demolished the fort of the rebellions following the instruction of the emperor. Even the zamindari extension of Raghunath Singh was stifled by Murshid Quli Khan and his intervention had dissuaded the landlord of Jayantiya and nominated Yusuf Beg Khan for handling the political environment of Sylhet. One of the most unforgettable contributions of Murshid Quli Khan was to suppress the indomitable nature of Udaynarayan (zamindar of Rajshahi) and the Sitaram Ray of Bhushana. The zamindari blood of Sitaram started flowing in his vein as his father used to provide service as Faujdar of Khulna. Through the expression of his valour in defeating the Pathan Sardar of Bhushana, Karim Khan Sitaram became adherent of the then Subahdar Shaista Khan and got the jagir of Naldi Pargana of Bhushana in 1686 in return of expelling the bandits and afghan rebels (Mitra, 1965). He also promised to pay the regular taxes to the government. This Kayastha originated personality quickly reached the peak of power with the cooperation of his two intimate colleagues, Muniram Ray and Raghuram or Ramrup Ghosh. Within a few days he was able to find peace and order in the Pargana. The subjects of adjoining zamindars were encouraged by the honest and magnanimous rule of Sitaram and began to take shelter under him. Sitaram kept the zamindars who were loyal to Subahdar away from his expedition. In this way he had extended his influence and the magnitude of his dominion from Chakla Bhushana to Pupapat, Paqtani and Rukanpur Parganas. After the death of Zamindar Krishna Prasad, he captured Taraf Kachuberia; the zamindar of Ramdev was afraid of Sitaram's behaviour and ceded the northern part of Mahmud Shahi Pargana to his hand. However, the Mughal Subahdars did pay any attention to the opulence of Sitaram as he became altruistic for the provincial administration through paying the taxes regularly and restoring the peace and order. This led to the enhancement of his kudos by receiving the title 'Raja' from Shaista Khan (Bhattacharya, 1906). We can observe his non-sectarian nature as his Capital (Muhammadpur) was engraved with the name of a Muslim. Within a few days, Muhammadpur rose to commercial prominence. Murshid Quli Khan was also happy with Sitaram's revenue paying capability and tackling the depredators, Muniram used to play a diplomatic role in managing the Subahdar. Though the Mughal faujdar of Bhushana, Abu Turab had submitted a report to the then Subahdar Azim-Ush-Shan but the report was not acceptable to him due to the internal conflict between Diwan and faujdar. Abu Turab became agitated on Sitaram as his embassy was misbehaved by Zamindar; he sent an army to catch Sitaram immediately but ultimately Abu Turab went into vain due to the guerrilla warfare strategy of Sitaram. The impetuous character of faujdar compelled him to send two thousand cavalry men under an Afghan Commander, Pir Khan in 1713, but Abu Turab was assassinated mistakenly by Sitaram in a jungle where he visited to hunting. Murshid Quli Khan was very afraid of faujdar's sudden demise as he thought that the emperor would become doubtful regarding the question of his responsibility. The faujdar's death in the hand of Zamindar proved the growth of Sitaram's wealth and power. Baksh Ali Khan was newly appointed as faujdar of Bhushana by Murshid Quli and strictly instructed to recapture Bhushana. Two eminent personalities- Barendra Brahman Ramjivan and his servant Dayaram Ray, who later founded Natore and Dighpatiya royal family respectively, assisted Murshid Quli to subside Sitaram's authority. The situation became critical for Sitaram due to the siege of Bhushana by Commander Sangram Singh and faujdar Baksh Ali Khan and

Ramrup was murdered in the hands of Dayaram. At the beginning of 1714, the Mughal army seized Muhammadpur fort. Finally, Sitaram was defeated and imprisoned to the hand of the Mughals and brought to Murshidabad. After spending some lamentable days in confinement he was penalized through execution in October, 1714. According to Jadu Nath Sarkar, as a consequence of Sitaram's demise, the sun of the establishment of last Hindu kingdom had gone down (Sarkar J. N., 2003):

On the other hand, Murshid Quli faced a challenge through the revolt of Rajshahi's Zamindar Udaynarayan in 1713; the zamindar established his dominion on the banks of river Padma. He made himself a powerful zamindar of Subah. Udaynarayan ordered his troops to extract money from the subjects through exploitation as the soldiers remained unpaid for a few days, his assistants (Kalia Jamadar and Ghulam Muhammad) insisted that he fight with the Mughals. Ultimately, he and his son Shaheb Ram were defeated and imprisoned by the Mughals in the battle of Jagannathpur. Stewart claimed that Udaynarayan had committed suicide for fear of the Mughals (Stewart, 1813). Indeed, Udaynarayan was caught to the hand of Raghunandan (founder of Natore royal family and the brother of Ramjivan) near Devinagar and was brought in Murshidabad and the zamindari of Udaynarayan was delivered to the hand of Ramjivan. It is noted that Ramjivan was succeeded by his son Raghuram, who expressed his valour against Udaynarayan and due to this Murshid freshly made a zamindari settlement with him (Chakravaty, 1989). His son was none other than the king of Nadia Maharaja Krishna Chandra Ray, who played a significant political role in the latter half of the century. We can say that on the basis of the locomotion of the then socio-political trajectories, Murshid Qualia played a double role in dealing with the traditional zamindars of Bengal.

2.3. Political Negotiations with Some Influential Provinces:

Indeed, the Mughals were incapable of establishing their authority throughout the Indian subcontinent, the hilly provinces of India- Tripura, Cooch Behar and Assam played a crucial role in preventing the expansion of Mughal dominion. However, Murshid Quli Khan had astonishingly win over the provincial threats through a strategic political diplomacy.

- **Tripura:** It was located in the eastern frontier of Bengal Subah, which constantly made a barrier in front of the Mughals. The history of Tripura had passed through the clashes with the Mughals. Ratna Manikya II (1684-1712) who was a very potential king of Tripura avowedly neglected the Mughal power. Even he promised the King of Ahom dynasty, Rudra Singha on two occasions (1709 and 1711) that he should assist him, if he would make an expedition to invade Bengal. When he became a victim of a conspiracy, made by his brother Ghanashyam Barthakur then Murshid Quli Khan immediately sent Mahmud Safi to the court of Ratna Manikya as his representative and demanded elephants copiously. With the demand of these gifts, a large troop was also sent by him from Decca to Tripura. The active support of Ghanashyam to the troop played a significant role behind the scene; actually his main motive was to dethrone his brother and he became successful in this plot. In this way he captured the throne through his step brother's assassination on May 10, 1712 and was dignified with the title Mahendra Manikya. However, he ruled for a very short period and the relations with the

Mughals began to deteriorate at the end of his reign. After his death in 1714, Durjay Dev succeeded him by receiving the title Dharma Manikya II. He was a very courageous ruler and started resisting the Mughals challenge; he also stopped the remittance of fifty-three elephants to the court of Murshidabad (Chowdhury, 2017). Murshid Quli constantly demanded this but ultimately failed. Indeed, Dharma Manikya II was intended to make a revolt. The repression of this revolt was ascertained to Sujauddin Muhammad Khan (son-in-law of Murshid Quli Khan) and he subdued the revolt with a strong hand in 1728.

- **Cooch Behar:** It is situated in the north-east part of Bengal and included in the Himalaya-Terai region. Before the arrival of Murid Quli, the Subahdars were incapable of including this state permanently with Bengal. The Cooch kings refused to accept the Mughal sovereignty. Even, powerful Subahdar like Mirjumla kept Cooch Behar under his regime for one year (December 13, 1661-1662) (Sarkar J. N., 1979). Mainly during the time of Cooch King Rup Narayan who ruled for eleven years (1703-1714), Mughal Bengal made a direct intervention in this state. The accession of Rup Narayan to the throne introduced a new regime. He attempted to recapture the territories, which the state had lost in a clash with the Mughals in 1687. Amanatulla Ahamed stated that, with his accession to the throne Rup Narayan dismounted an armed conflict against the Mughal faujdar of Rangpur. However, Rup Narayan could not build up a challenging resistance against the Mughal power. The main reason for Murshid Quli's paying gradual attention to this state was the high income of Cooch kings and he was ready to face the challenge of Rup Narayan. Though it was not an easy task to defeat the Cooch king due to his defensive strategy in the war, he was backed by the Afghan rebels. Finally, a temporary peace treaty was signed between Faujdar of Rangpur and Rup Narayan, Bora and Patgram had been restored to the Cooch kings. Though the treaty was signed without any consent of Subahdar this was not acceptable and constrained Rup Narayan to sign a new treaty in 1711 (Ahmed, 1936). The Nazir of Rup Narayan, Shant Narayan received Bora, Patgram as leases from Murshid Quli Khan and the Cooch King agreed to send a representative to the Murshidabad court. After the death of Cooch king in 1714, he was succeeded by his elder son Upendra Narayan. There was a cordial relation between the newly Cooch king and Subahdar. During the reign of the new king, the state was able to keep its independence.

- **Assam:** It is located in the north east part of Bengal. After the historic defeat of Subahdar Mirjumla in 1662 against the Ahom kings there was no military expedition against this state. Displacement of the Mughals from Kamrup by Udayaditya in 1671 and the snatching of western Assam from the Mughals by Gadadhar Singha in 1682 were the two most remarkable victories of the Ahom dynasty. With accession to the throne of Rudra Singha in 1696, the peaceful political ambience between Bengal and Assam started deteriorating. However, Murshid Quli claimed his loyalty as usual. Rudra Singha strengthened his state through internal reforms and reorganizing his army. According to historian Gait, he desired to include a portion of river Ganga under his domain (Gait, 1906). Before starting his expedition, Rudra Singha requested the feudal kings and zamindars of Bengal to adjuvant him. He sent ambassadors to the rajas of Morang, Banvishnupur, Nadia, Cooch Behar, Burdwan and Baranagar and advised them to construct an allied power against the Mughals. He also accused the Mughals for demolishing the Hindu temples. In order to struggle against the Mughals, he wished for the active cooperation of Tripura king, Ratna Manikya II and consequently sent deputation to the Tripura royal court three times from 1709 to 1715. He deployed a large force consisting of four lakhs against the Nawab of Murshidabad in 1714 and made a plot to enter

Bengal forcefully at the month of November, but unfortunately his sudden demise in September, 1714 emaciated the dream of his occupying Bengal forever. It is very difficult to say about the existence of any compatible measures of Murshid Quli against him, but his sudden death became an announcement of relief to the Nawab.

3. LEGACY, CUSTOMS AND CONTRIBUTIONS OF NAWAB'S FAMILY:

A ruler and his family can turn their concentration to the other arenas of domain, when the political and economic environment becomes tranquil. Eighteenth century's Murshid Quli and his family had played a significant role in other sectors of their regime. Women empowerment especially, the role of the ladies of the royal family became prominent during this period. Murshid Quli's wife Nauseri-Banu-Begum became well educated in Islamic learning and thoughts and later on she paid careful attention in extending religious teachings among the ladies of her harem. She used to assist her husband in matters related to the state affairs. She solidified the Purdah system in zenana, even no maid of her harem were allowed to enter further if she went out once. She was also conscious about Nawabi food and drinking. She constructed a beautiful mosque near Chawk Bazar in Murshidabad; a madrasa was situated in its inner part, where the indigent students were taught and enlightened without paying money (Khan, Murshidabad O Banglar Nazim, 2008). Murshid Quli's daughter Zinnat-Un-Nisa achieved the title, Azim-Unnisa which meant that preeminent among the Begums. The evidence of her discreteness was traced when she made a diplomatic decision regarding the nomination of Aliverdi Khan (an adventurer who came to the court of Sujauddin) as Deputy Subahdar of Bihar. Indeed, the nomination was done only for her desire (Banerjee, 1942). Durdana Begum (Murshid Quli's grand-daughter) proved herself as an outstanding figure in eighteenth century court politics of Bengal, she persuaded her husband, Mirza Lutfullah to take revenge for her brother, Sarferaz Khan's death in the battle with Aliverdi Khan. However, her husband was defeated and they took shelter to the court of Asaf Jah I by using the sagacity of her begum and this great influential lady was felicitated with the title of '*Mehman*' Begum. The Jafar family also paid their attention in constructing magnificent architectural erections. The construction of Chehelsetun (hall of forty pillars) was one the most prestigious vestige of Murshid Quli's architectural expressions, he also built up mosques- Begum Bazar mosque (amalgamation of Indo-Persian style) and the Katra mosque (dani, 1961); at the end of his regime he instructed his obedient companion, Morad Faras to build up in 1723, the Nawab was buried under the entrance of the mosque. So many Islamic scholars used to assemble in this place and made it a learning centre of greater significance. The endowment of financial aid in constructing the Hindu temples also proved the Nawab's secular mentality, the erection of Shyam Sundar temple (1726) in Nadia also supported this. Tripoli Gate was another excellent erection of Persian style which was constructed by Nawab Sujauddin Khan, located to the eastern side of his palace and the upper portion of this gate known as Naubat Khana, from which the songs were delivered for the beneficence of Nawab. He also spectacularly established a garden, called Roshni Bag (garden of light) on the west bank of river Bhagirathi at the end of his reign; here he spent the last episode of his life by reading the religious texts. Begum Azim-Un-Nisa erected a beautiful mosque, known as Azimkatra mosque located two kilometres far from the Hazarduari Palace;

6th International CEO Communication, Economics, Organization & Social Sciences Congress

it was an emulation of Katra mosque. An unfinished mosque consisting of five domes was situated one kilometre in the north from Chawk mosque, erected by Nawab Sarferaz Khan. The main reason for its imperfection was the involvement of Nawab in the decisive battle of Giriya (1740) with Aliverdi Khan. Even a celebrated Urdu poet Hriday Ram Joda received patronage from him (Khan, Murshidabad O Banglar Nazim, 2008). The sagacity and dexterity of Durdana Begum in Urdu and Persian literature had to be recognized, her husband was a renowned poet and he was familiar as Mukhmur in the Urdu and Persian poetry world. So, we can observe that, apart from political and economic aspects, the Jafar family of Murshidabad left an unforgettable contribution to the different arenas of their regime and this helped them to climb up a high status to the history of Bengal.

CONCLUSION:

It can be concluded that Murshid Quli Khan's regime attained as a climacteric moment on the move of Indian History. Indeed, he should be considered as a redeemer of Bengal due to the knock down the apparatus of the corrupted governance of former Subahdar Azim-Us-Shan and resuscitated the economic, political, social and cultural life of Bengal for a long time. His newly introduced distinct domination (popularly engraved as Nawabi rule) had been continued by his notorious inheritors throughout the eighteenth century. Besides this, Murshid Quli's family left an unforgettable episode in the history of Bengal Subah, their secular minded secular nature provided an opportunity to the Bengalis in establishing their comprehensive roles in distinct arenas and delivered the reputations to the different courts of contemporary Indian genre. Generally, the personality of a man always obstructed by his calumny, Bengal's first independent Nawab was not its exception, during his illustrious regime he became a face of impedance to a particular aristocratic class of Bengal, mainly the traditional Zamindari families of the Subah as the leading part of landlordism had been annihilated by harsh governmental apparatus of Nawab. However, Murshid Quli's character was very brilliant in confronting the foreign merchant organizations but he never completely discontinued the establishments of foreign dominations in the Indian subcontinent. Beyond all the limitations and animadversions, Murshid Quli established himself as a curious character to the history buffed people and in future, there are more scopes to evaluate his personality and achievements.

ABSTRACT

In Social Science, with a special connection to French Sociologist and Literary Critic Michel Foucault, Power refers to the capabilities, capacities, actions, conduct of a social actor. Power does not signify the threat or use of force by one actor against another and also one single social institution cannot hold power in a structure. Challenging the concept of exercising power by any single individual or social institution Foucault declared 'Power is everywhere' and also 'comes from everywhere'. As also mentioned by Sociologist Max Weber Power mainly refers to the ability to carry out one's will despite any resistance. Initiating from the very basic of family, larger organizations also like schools, colleges, universities, Governments can also administer power in an ideological way to make learning reasonable and accessible to the students. Rather Foucault has used the term 'Power-knowledge' to signify that Power is constituted through accepted forms of knowledge. This 'regime of truth' is continuously reinforced and redefined by the social system. Education being a sub system of the whole exercises 'disciplinary power' for controlling the population and promoting the norms to make a productive citizen for society in future. This paper focuses on how Foucault's concept of Power influences the modern day educational practices.

Keywords: Michel Foucault, Power, Education, System

INTRODUCTION

Education in its broad meaning refers to any experience effecting the character or ability of an individual. In a very formal sense Education refers the process of gaining knowledge and development of skills. But Education refers to a lifelong continuing social process where the society through the institutions like schools, colleges transmit the cultural heritage, ideas, values from one generation to next generation. The basic aim is to make a child a productive member of society in future. Sociologist Emile Durkheim pointed Education as **society's means of guaranteeing continuation of its existence by assimilating new individuals into it**. Talcott Parsons is also similar to Durkheim referring the **role of establishing shared norms and values**. According to Swami Vivekananda Education is the **“process by which character is formed, strength of mind is increased and intellect is sharpened as a result of which one can stand on one’s own feet.”** Educational Perspective is a particular attitude in respect to Education to the environment which is consistent with one’s physical & cognitive ability as well as social and emotional needs.

On the other hand Social system is an orderly structured arrangements of the functioning of Social interactions. The networking of this arrangement can be built with the various sub systems in an interrelated approach. Educational system like the other Religious System, Economic system is thus an important sub system of the big umbrella of Social system. The major function of Education in society falls under Functional, Conflict and Symbolic Interactionist approaches. In the Functional approach the functions of Education include mainly Socialization and Social Integration. The Conflict theory deals the social inequality. The Symbolic Interactionism focuses on Social interactions in the classroom, on the playground and in other venues which reinforces social responsibilities and gender roles. In this Social system, Power is the social productivity determining the capacities, beliefs and actions of an individual. Power refers to the ability to have one’s will carried out despite the resistance of others. Power also can be used to influence the actions of others.

1.CHAPTER- LITERATURE REVIEW:

A literature review is a comprehensive summary of previous research on a topic. The literature review surveys scholarly articles, books and other sources relevant to a particular area of research. The review should enumerate, describe, summarize, objectively evaluate and clarify this previous research. It should give a theoretical base for the research and help the researcher to determine the nature of research. The literature review acknowledges the work of previous researchers and in so doing assures the reader that the work has been well conceived. A literature review creates a “landscape” for the reader, giving her or him a full understanding of the developments in the field. The landscape informs the reader that the author has indeed assimilated all previous significant works in the field into her or his research.

In the works of Foucault’s middle years – **“Discipline and Punish”** and **“The History of Sexuality”, Vol. 1** – Foucault traces the emergence of some of the practices, concepts, forms of knowledge, social institutions and techniques of government which have contributed to shaping modern European culture. He calls the method of historical analysis he employs ‘genealogical’. Genealogy is a form of critical history in the sense that it attempts a diagnosis of ‘the present time’. One of the central threads of Foucault’s genealogy of the present is an analysis of the transformations in the nature and functioning of power which mark the transition to modern society. Foucault’s genealogy of modern power challenges the commonly held assumption that power is an essentially negative, repressive force that operates purely through the mechanisms of law, taboo and censorship. According to Foucault, this ‘discursive’ conception of power (Foucault 1978: 82) has its origins in the practices of power characteristic of pre-modern societies. In such societies, he claims, power was centralized and coordinated by

a sovereign authority who exercised absolute control over the population through the threat or open display of violence. From the seventeenth century onwards, however, as the growth and care of populations increasingly became the primary concerns of the state, new mechanisms of power emerged which centered around the administration and management of 'life'. In the complex story that Foucault tells, this new form of 'bio-power' coalesced around two poles. One pole is concerned with the efficient government of the population as a whole and focuses on the management of the life processes of the social body. It involves the regulation of phenomena such as birth, death, sickness, disease, health, sexual relations and so on. The other pole, which Foucault labels 'disciplinary power', targets the human body as an object to be manipulated and trained.

In **"Discipline and Punish"** Foucault studies the practices of discipline and training associated with that disciplinary power. He suggests that these practices were first cultivated in isolated institutional settings such as prisons, military establishments, hospitals, factories and schools but were gradually applied more broadly as techniques of social regulation and control. The key feature of disciplinary power is that it is exercised directly on the body. Disciplinary practices subject bodily activities to a process of constant surveillance and examination that enables a continuous and pervasive control of individual conduct. It is not, however, only the body that disciplinary techniques target. Foucault presents disciplinary power as productive of certain types of subject as well. In **"Discipline and Punish"** he describes the way in which the central technique of disciplinary power – constant surveillance – which is initially directed toward disciplining the body, takes hold of the mind as well to induce a psychological state of 'conscious and permanent visibility'. In other words, perpetual surveillance is internalized by individuals to produce the kind of self-awareness that defines the modern subject. Foucault suggests that in modern society the behavior of individuals and groups is increasingly pervasively controlled through standards of normality which are disseminated by a range of assessing, diagnostic, prognostic and normative knowledge such as criminology, medicine, psychology and psychiatry. Foucault claims that modern regimes of power operate to produce us as subjects who are both the objects and vehicles of power. Foucault's analysis of productive power points to a complex interaction between modern forms of power and knowledge: 'the exercise of power perpetually creates knowledge and, conversely, knowledge constantly induces effects of power' (Foucault 1980: 52). For Foucault, power can be said to create knowledge in two related senses. Firstly, in the sense that particular institutions of power make certain forms of knowledge historically possible. In the case of the social sciences, for example, it is the refinement of disciplinary techniques for observing and analyzing the body in various institutional settings that facilitates the expansion of new areas of social research. Power can also be said to create knowledge in the sense that institutions of power determine the conditions under which scientific statements come to be counted as true or false (Hacking 1986). According to Foucault, then, 'truth is a thing of this world: it is produced only by virtue of multiple forms of constraint. And it induces regular effects of power' (Foucault 1980: 131). This description suggests that the production of 'truth' is never entirely separable from technologies of power. On the other hand, Foucault maintains that knowledge induces effects of power in so far as it constitutes new objects of inquiry – 'objects' like 'the delinquent', 'the homosexual' or 'the criminal type' – which then become available for manipulation and control (Rouse 1994: 97). For example, he claims that it is the knowledge generated by the human sciences which enables modern power to circulate through finer channels, 'gaining access to individuals themselves, to their bodies, their gestures, and all their daily actions' (Foucault 1980: 151). It is in order to signal the mutually conditioning operations of power and knowledge

that Foucault speaks of regimes of ‘power/knowledge’ or ‘discourses’; that is, structured ways of knowing and exercising power.

2.CHAPTER- RESEARCH QUESTIONS:

A research question is a specific inquiry which the research seeks to provide a response to. It resides at the core of systematic investigation and helps to clearly define a path for the research process. A Research question lies at the core of systematic investigation and this is because right questions will always bring out accurate research outcomes.

A research question focuses on the research, guides all stages of inquiry, analysis and reporting. A research question aims to explore an existing uncertainty in the concerned area and points to a need for deliberate investigation.

In this study **Power** is an entity or individual’s ability to control or direct others. Power at its most fundamental sense is the ability or facility of being able to cause something to happen. In its rational and moral application, it regulates society in a balanced manner. In its irrational application it is a tool of oppression. Sometimes it is applied in a coercive manner and sometimes it involves rational incentives. Essentially, its role is management or mismanagement by those who exercise it.

So the research questions identified by the researcher in this study include the following:

1. What impact does power have in nurturing the social system in views of Michel Foucault?
2. What changes can be noticed in respect to Foucauldian power in present day education system?

3.CHAPTER- EDUCATIONAL EFFECT OF MICHEL FOUCAULT IN SOCIAL SYSTEM:

3.1 Impact of Power in Social System in views of Michel Foucault: Michel Foucault (1926-1984) a French social theorist, Philosopher and also public intellectual whose work inspired Sociologists in various sub fields specifically in Sociology Of Education. In the recent post-modern era, following Foucault, the mechanism of Power is more dependent on bodies. The most important feature of Foucault’s concept of Power reveals that Power is not a thing or a capacity which can be owned either by State, social class or any individual. The concept of Foucauldian power is relational. It is neither force nor domination nor authority. Power can never be possessed by any institution. But rather power is exercised through influences which one have on other actions. As society can never be set up with a single individual so none can escape from power relationship in the society. Institutions and Governments are simply the ossification of highly complex sets of power relations which exist at every level of the social body.

He argued that who control, wield power in society and shape the outcomes of the lives of other people. He emphasized that Power is not held by individuals but mainly power is accessible and exercised by those who control social institutions because here the knowledge of powerful is considered legitimate. So he denoted the concept ‘Power/knowledge’. He has used the term ‘Power/knowledge’ to signify that Power is established through accepted forms of knowledge & scientific understanding. He has observed that there is no power relationship without constitution of a field of knowledge. Foucault has examined about discourses. These Power, Knowledge and truth are connected through this discourse. He has adopted the term ‘discourse’ to talk about a social system producing knowledge. Discourse is the way we speak and write about any subject. Depending on the language, it is completely shaped by the structures of power in our society. For instance, Family is a discourse. From earlier days to present days the joint family system has changed into nuclear family system. So, discourse is dynamic and the views of people keep on changing about discourses. Communication in the

society help us to use that ‘pool of knowledge’ of discourses in the society. This pool is accepted by the large section of society and further legitimized for future use. This ‘pool of knowledge’ changes as people adapt it, add to it & subtract from it. Those who control are in the position to influence these discourses and differ across cultures. The factors which influence this power within an individual are -

- Gender
- Race & Community
- Education
- Occupation
- Economic status

Foucault distinguishes his ideas on power by criticizing power models which see power as being purely located in the State or the Administrative and executive bodies which govern the nation State. All relations of power at different levels work together and against each other in constantly shifting combinations. The State is merely a configuration of multiple power relations. Foucault criticizes traditional power models; power is not about simply saying no and oppressing individuals, social classes or natural instincts, instead power is productive. It shapes forms of behavior and events rather than simply curtailing freedom and constraining individuals. He argues in “**The History of Sexuality**”, Volume. One: that power generates particular type of knowledge and cultural order.

In Foucault’s view power and oppression should not be reduced to the same thing for a number of reasons. To identify power with oppression is to assume that power is exercised from one source. By regulating people’s everyday activities, power produces particular types of behaviors. Foucault develops his view of power as productive rather than repressive. Power is not an institution, a structure, or a certain force with which certain people are endowed; it is the name given to a complex strategic relation in a given society. Power should be seen as a verb rather than a noun, something that does something, rather than something which is or which can be held onto. Foucault puts it in the following way in Power/ knowledge:

- “...Power is employed and exercised through a netlike organization...Individuals are the vehicles of power, not its points of application.” (1980:98)

In recent decades, scholars and commentators have distinguished between hard and soft power. The hard power can be exercised through threat or force whereas this soft power is the ability to have influence on others. The hard power considers the interests in terms mainly of costs and benefits but the soft power works on the notion of attractive ideas. Thus power is also the capacity to have control on others. Power is not mainly on the control of various resources rather it is also the control over ideologies. Scholars have found this kind of powers over various social organizations like Government, Education, Religion and many more. In Foucauldian concept, Power cannot be a ruthless domination but rather power has a productive nature because power constraints actions but not the actors. Power can never be acquired or seized as a commodity by any individual or institution because power functions in the form of a chain. As Foucault argues in “**The History of Sexuality**”, **Vol.1** that Power generates particular type of knowledge and culture it shapes the behavior. In the society power must work like a verb. Foucault puts it in the following way: ‘....Power is employed and exercised through a net like organization...Individuals are the vehicles of power, not its points of application.’

So, while introducing the productive nature of Power Foucault has introduced Panopticon which is an architectural settings designed by Jeremy Bentham in the Mid nineteenth century. Through this mode violent methods were replaced by surveillance and observation method. It offers a powerful hierarchical observation structure to regulate behavior in social institution like hospitals, asylum, factories and everywhere. It is used as a metaphor allowing the

relationship between social control and people in a disciplinary manner. This surveillance marks the transformation of an individual shaping their various behavior in prescribed manner for each institution.

Foucault has showed how an institution encourages discipline for self regulation in his book “**Discipline & Punish**”. He has analysed the exercising of power through the use of various mechanism and techniques. Discipline is a concern which is internalized by each individual with time, self control, posture, bodily function, concentration, emotions. It is also a technology keeping one under surveillance to formulate these subjects. It is also used to improve one’s performance, increase capabilities and also to put one’s best activity to the most of use. In his argument, morality refers to the sets of rules and prohibition of a society while ethics refers to the values these rules ascribe to different behaviours and how people behave in relation to these rules. It is mainly the technology for regulating the social relationships and relationship with one self. So Foucault’s power relies on the mechanism of daily interactions in the institutions to allow individuals to govern own behavior. Discipline increases the capacity of an individual, the power of a body. This constant supervision and thoughts of being monitored force individuals to act in prescribed manner where actions encourage individuals with rewards and discourage with penalties. Taking Foucault, on a micro scale, parents set household rules expected to be followed by the children. In formal structure the administrators also set rules to be followed by all. It is evidently clear that the notion of Power in Foucault’s words is a form of soft power with more humane approach.

3.2 Foucault’s Effect of Power in Education System: Foucault has listed a number of techniques or principles which facilitate the operation of power specifically in Education system. During the ancient time in Gurukul system the education was not managed and organized. In the medieval system the knowledge imparted was completely dependent on religious preaching. But in modern education system the most important change is noticed in the views of Foucault is the use of space working with principles of enclosure which means Students are locked in institutional spaces. Within the broad periphery small enclosures like Classrooms, dormitories, libraries, laboratories were created for various purposes. Children are also divided according to their age. All of these are needed to maintain the organized social spaces.

The idea of Panopticon through Surveillance is the technique of through which disciplinary power is exercised. There is no need of physical violence; only a single gaze is enough to regulate an individual. It is about preventing people from doing wrong and taking away their will to do wrong. This is the principle on which modern society operates in schools removing the corporal punishment.

Foucault has mentioned another set of disciplinary techniques which relates to the organization of activities. Firstly the establishment of timetable indicates that groups of people could be engaged in the same task at the same time in schools. Secondly, the group activities where people are trained to perform the same set of movements at the same time for example recitation drills or prayer in assembly hall. Thirdly, methods of training the body and its gestures are perfected. In schools, Students are taught to hold a pen correctly and to sit at their school desks in a particular way. All of these were aimed at making the body much efficient to reduce the waste of minimal time in performing useful activities.

Discussing Power concept with the words of Foucault, it can also be said that the curriculum is the primary process for power transaction by the authorities in educational institutions. Power and knowledge are interconnected. With the policies and the curriculum framework for educational institutions not only the academically strengths are focused but the main aim is to produce a productive individual in future for the society. The recent NEP 2020 also talks about

6th International CEO Communication, Economics, Organization & Social Sciences Congress

the 21st century skills like Critical thinking, creativity, problem solving in all students. These all are necessary for shaping the behavior of students.

CONCLUSION:

Here in the present study the modern concept of Power in the social system has been primarily discussed where Educational Institutions have got a special focus in connection with French Philosopher Sociologist and Literary Critic Michel Foucault. With the help of secondary resources like books, journal, publications it has been showed in the study that the aim of power is not to oppress the weak by the powerful but the management of self and of population in larger aspect. The research study focuses on the relational nature of power in the social system. It also talks about how the accepted values, moral and ethics become powerful through enclutration process in the society and can influence the actors in the society to establish those as "the truth". Schools and other educational institutions as a social set up aim to make the body of an individual more productive through Power. And thus the Power in Foucault's concept rejects the corporeal punishment structure and also bears a humane approach following the soft power concept in society. In future study an amalgamation of Sociology, Power Dynamics, and Nanotechnology is an emerging field of inquiry for specially Educational Management disciplinary purpose.

ABSTRACT

This review article explores the significant role played by social media in elections. It investigates the influence of social media on the electoral process, including voter participation, political campaigns, information dissemination, and democratic participation. Additionally, the article explores the challenges and opportunities posed by the use of social media platforms during elections. This article aims to provide a comprehensive overview of the role of social media in elections and its implications for democratic procedures. This article aims to enhance our understanding of the influence of social media on political landscapes and electoral outcomes by synthesizing existing research and analyzing case studies from different countries. It attempts to identify the critical factors that influence the success or failure of social media strategies in election campaigns. The increasing prevalence of social media platforms has altered the dissemination and reception of political information. It is essential for policymakers, political candidates, and citizens to comprehend the function of social media in elections. This article emphasizes the significance of monitoring and regulating social media platforms in order to guarantee fair and transparent electoral processes. It also highlights the need for media literacy programmes to equip individuals with the ability to navigate the complex social media landscape and distinguish between reliable and false information. This article's primary objective is to shed light on the multidimensional impact of social media on elections. It identifies key benefits, such as increased political engagement, access to diverse perspectives, and targeted campaigning, as well as potential challenges, such as the spread of misinformation, polarization, and public opinion manipulation. By analyzing effective and ineffective social media strategies, the article provides recommendations for politicians and policymakers to leverage the potential of social media by minimizing its negative effects. This review article's findings contribute to the ongoing conversation about the role of social media in democratic processes and provide a foundation for future research in this area.

Keywords: Social Media, Election, Political Campaigns

INTRODUCTION

In the current digital era, social media platforms have proliferated, revolutionizing how people connect, exchange information, and participate in public discourse (Wasim Feroz Bhat ,2020). As a consequence, experts, decision-makers, and the general public have paid close attention to how social media influences democratic processes, notably elections. This study intends to completely investigate and analyze the complex effects of social media on elections, giving light on how it affects voter behavior, political communication, the transmission of information, voter mobilization, as well as the moral and legal issues it raises (Metkar. A, 2020)

Social media has become a significant instrument in recent years that has the ability to change the dynamics of political campaigns (Muhammad, M, 2020) Social media is becoming a crucial part of political communication strategy due to its immediate access to millions of users, capacity to circumvent conventional media gatekeepers, and direct ability to interact with voters. These platforms are being used by candidates and political parties to spread their message, rally followers, and reach a wider audience outside of typical campaign rallies and media appearances.

The influence of social media on voter behavior is one of the review's main themes. According to research, social media use may have a big impact on voters' attitudes, views, and decision-making. Social media platforms' capacity to host political dialogue and material may influence how voters see politicians, broaden their understanding of politics, and affect their preferences. Furthermore, a crucial field of research focuses on how social media may mobilize previously disengaged or marginalized populations, emphasizing the platform's power to influence civic engagement and voter turnout.

The review explores social media's function in political discourse as well. Political parties and candidates have never-before-seen opportunity to contact personally and interactively with voters thanks to social media platforms (Sani, M, 2016) The mechanics of political discourse have changed as a result of the capacity to provide real-time information, reply to constituent questions, and amplify campaign themes, creating new possibilities and problems for political players.

An other important topic covered in this analysis is information distribution. Growing worry has been expressed about the impact of social media on the dissemination of political news, false information, and disinformation during elections. Social media platforms make it possible to share information quickly, but they also have drawbacks including the spread of misleading information, echo chambers, and filter bubbles. In today's digital environment, it is crucial to comprehend the methods by which political information travels on social media and its potential impacts on public opinion and political polarization.

The assessment also discusses how social media affects voting turnout. The capacity to mobilize support via social media platforms, grassroots movements, and internet activism have become crucial in contemporary political environments (Narasimhamurthy, N, 2014). An understanding of social media's ability to increase political involvement and diversity may be gained by analyzing its techniques and efficacy in interacting with a variety of demographics and historically underrepresented groups.

Important factors to take into account are the ethical and legal issues raised by the use of social media in elections. Attention must be paid to privacy issues, the impact of algorithms on content syndication, the dissemination of false information, and the possibility of foreign meddling. While making suggestions to address these issues and guarantee openness, accountability, and fairness in the use of social media during elections, the assessment evaluates current ethical frameworks and regulatory measures.

The goal of this thorough analysis's conclusion is to provide a sophisticated understanding of how social media affects elections. This study adds to the larger conversation on the interaction between social media and democratic processes by examining its influence on voter behavior, political communication, information dissemination, voter mobilization, and resolving ethical and regulatory problems. The results will be a useful tool for scholars, decision-makers, and other interested parties who are trying to understand the complicated world of social media in elections and stimulate informed decision-making to protect the fairness and democratic principles of electoral processes.

1. OBJECTIVES:

The objectives for this review paper are as follows:

1. To assess the impact of social media on voter behavior, including its influence on attitudes, opinions, decision-making processes, and voter turnout.
2. To examine the role of social media in political communication during elections, including how it is utilized by candidates, political parties, and grassroots movements to disseminate information, engage with voters, and shape political narratives.
3. To evaluate the influence of social media on information dissemination during elections, including the spread of political news, misinformation, and disinformation, and their potential effects on public opinion and political polarization.
4. To investigate the role of social media in mobilizing voters, particularly in reaching traditionally underrepresented or marginalized groups and analyzing its effectiveness in promoting political engagement and civic participation.
5. To identify and analyze the ethical and regulatory challenges associated with the use of social media in elections, including privacy concerns, algorithmic bias, the influence of foreign interference, and to propose recommendations for ensuring transparency, accountability, and fairness in its use.

By addressing these objectives, the review aims to provide a comprehensive understanding of the multifaceted role of social media in elections, informing future research, policymaking, and best practices in utilizing social media platforms for electoral processes.

2. REVIEW OF EXISTING LITERATURE:

Mallipeddi, R et al (2021) mentioned that social media content created by human brands increased engagement during the Indian general election 2014.

Wasim Feroz Bhat (2020) stated that Political marketing is expanding rapidly, with each party introducing more innovative tools and techniques to pursue voters. Using social media platforms such as Facebook, Instagram, Twitter, and YouTube, the campaign attracts the attention of all individuals, particularly youthful voters. It informs electors of the party's platform and raises funds for the party. Even frequent statements from personalities and media moguls inspire the general public to form its own opinion.

Sarmah, R., & Mohapatra, N. (2020) stated that In democratic nations such as the United States of America and India, social media has become an integral element of election campaign communications. This new approach to election campaigning is crucial for attracting electors. Social media platforms such as Facebook, Twitter, Google+, Whatsapp, and YouTube, among others, have been made available to political parties and voters, making it easier for political leaders to communicate with voters. During an election, social media enables candidates to share, post, and remark on their views, thereby increasing their direct engagement with their constituents.

Metkar. A & Aade A (2020) stated that in this day and age of digital technology, one of the most effective tools for communicating information is social media. In the current study, the

researcher will look at the impact that social media plays in the management of political campaigns. During the general elections that took place in 2014, social media was a significant factor in influencing the behavior of voters. Beginning in 2014 and continuing forward, an explosion of new businesses centered on social media entered the scene.

Manu, D. et al (2020) stated that in accordance with what is happening everywhere in the world, political parties in India made extensive use of online social media throughout the election process in order to generate a significant amount of conversation about the event.

Muhammad, M., et al (2020) mentioned that through the usage of social media, all of the major parties centered their campaigns on using social media in addition to traditional marketing. During the course of the election campaign, political parties attempted to influence the opinions of voters by increasing the amount of publicity they received in the media and via commercials. People made frequent use of the internet and were attentive to the advertising. The use of social media revealed first-rate characteristics of competing parties or organizations, not only favorable ones.

Marylin, & Sheriff. (2017) mentioned that Due to the anonymous nature of the internet, social media promotes misinformation, misleading information, and hate speech against an electoral candidate. This poses one of the biggest difficulties to electioneering in the twenty-first century. These are used to sway public opinion and become viral. During the 2015 presidential election, social media had a significant impact on voter turnout, public awareness, involvement, and the dissemination of candidate information.

Karamat, A., & Farooq, A. (2016) observed that social media is one of the important players in modern civilization. Social media is altering information behavior by providing users with access to real-time, online information channels that are not limited by time or location.

Sani, M., & Zengeni, K. (2016) observed the rise of social media platforms like blogging and online news portals has implications for national security, encompassing future operational difficulties of a conventional, irregular, and disruptive character. These consequences for national security may be broken down into three categories. Due to the fact that it enables users to circumvent the restrictive influence of censorship, there is little question that the Internet serves as a conduit for alternative information and democratic principles. The policy of making internet open has provided the social media with a tremendous opportunity to significantly contribute to the democratisation process and the consolidation of democracy in Malaysia.

Ahmed, S. et al (2016) observed Popular social media platform Twitter has emerged as the preeminent political communication and campaign instrument in Western democracies. In economically developing democracies with limited Internet access, its influence in politics, particularly during election campaigns, remains mainly obscure. Additionally, it is observed that the winning party's electoral success is strongly correlated with their use of Twitter to engage voters, the large number of first-time voters, and internet accessibility.

Kapoor, K. K., & Dwivedi, Y. K. (2015) mentioned the winning campaign for brand NaMo has been centred on the use of social media and the adaptation of campaigning strategies taken from the Obama campaign for the presidency of the United States. The face of political movements in India has been noticeably transformed as a direct result of the convergence of electoral campaigns and social media.

Narasimhamurthy, N. (2014) stated that Through the use of social media, political parties and candidates are able to more effectively communicate with a huge number of people in a very short length of time. Social media platforms, in contrast to conventional media, make it possible for politicians to actively communicate with the people who could vote for them. Because political parties and candidates may now immediately discuss their opinions, aims, and successes with voters thanks to social media, people might now have the impression that they

are playing a more active role in the campaign. Candidates are able to provide their supporters with a glimpse of what goes on behind the scenes of their campaign and more readily measure participation thanks to social media.

Younus, A. et al (2014) stated The popularity of Twitter as a forum for political discourse has prompted academics to investigate how well it predicts election results. This paper investigates "election trolling," or the personal attacks made by supporters of various political parties on one another during election campaigns, which is a little-studied element of politics on Twitter.

3. RESEARCH METHODOLOGY:

This review paper's research methodology includes a rigorous examination of 26 selected papers obtained through a systematic review of the literature. The systematic approach insured the incorporation of pertinent and high-quality papers that contributed to the comprehension of the use of digital technology and media by governments for public awareness campaigns.

Due to its primary purpose of summarizing and synthesizing the findings of the selected papers, the research design can be characterized as descriptive. The researchers intended to provide an exhaustive overview of the current state of knowledge in this field by conducting a thorough literature review. This required identifying common themes, patterns, and insights across the papers in order to obtain a deeper understanding of the utilization, effectiveness, challenges, and best practices of digital technology and media in public awareness campaigns.

This study seeks to contribute to the existing body of knowledge by consolidating and presenting a coherent summary of the research findings in a systematic and organized manner, using a descriptive research design. This descriptive review can serve as a foundation for future research endeavors, policy development, and practical implementations in the domain of government-led public awareness campaigns utilizing digital technology and media.

4. DISCUSSIONS & ANALYSIS:

Researchers employ a diverse range of statistical instruments to effectively examine and comprehend data for research investigations. These instruments serve as invaluable tools, enabling researchers to detect patterns, establish relationships, and derive meaningful insights from the data they have gathered. Among the commonly employed statistical instruments in this domain are SPSS (Statistical Package for the Social Sciences), ANOVA (Analysis of Variance), chi-square test, reliability test, and backward chaining. Each of these instruments possesses unique functionalities that contribute to the analysis and interpretation of data in distinct ways. This article aims to explore and elaborate on the specific applications and utilities of these research instruments. By delving into the intricacies of each statistical tool, researchers can enhance their understanding of how to harness their potential for valuable data analysis and interpretation in the context of their research studies.

In the conducted review, the papers were segregated according to various criteria, including research approach, research design, sampling technique, and whether the research was conducted in India or elsewhere. This classification facilitates comprehension of the various perspectives and contexts within which studies on the use of digital technology and media for public awareness campaigns have been conducted.

The research approach is the overall strategy researchers employ to answer their research queries. It may consist of quantitative, qualitative, or mixed-method approaches. By categorizing papers based on their research approach, one can identify the various methodological approaches used to investigate the topic, as well as the strengths and weaknesses of each approach.

The research design category indicates the specific design employed by researchers, including experimental, case study, and descriptive designs. This classification facilitates comprehension of the nature of the studies and the degree to which causal relationships can be inferred.

Sampling technique refers to the method by which researchers select study participants or cases. Random sampling, purposeful sampling, convenience sampling, and avalanche sampling are common sampling methods. Categorizing papers according to sampling technique facilitates the evaluation of the representativeness of the samples and the generalizability of the findings. Differentiating between research conducted in India and research conducted outside of India provides insight into the geographical scope of the studies as well as any potential differences in findings across diverse cultural, social, or political contexts. It assists in identifying the unique challenges and opportunities associated with implementing public awareness campaigns utilising digital technology and media in various regions.

By separating the papers based on these criteria, researchers and readers can obtain a comprehensive understanding of the existing literature, identify research gaps, and compare studies conducted in various contexts. It enables a nuanced analysis of the use of digital media and technology for public awareness campaigns and facilitates the identification of best practises, challenges, and opportunities in various research settings.

5. VARIABLES IDENTIFIED:

In a review on the role of social media in elections, several variables can be identified and analyzed. Here are some key variables that are often examined in the studies:

1. **Social Media Usage:** This variable focuses on measuring and understanding the extent and patterns of social media usage by voters, political candidates, and political parties during elections. It involves examining factors such as frequency of social media use, types of social media platforms utilized, and the purposes for which social media is used in relation to elections.
2. **Voter Behavior and Attitudes:** This variable explores the impact of social media on voter behavior and attitudes. It includes measuring changes in voter preferences, candidate evaluations, political engagement, and political knowledge as influenced by exposure to social media content during election campaigns.
3. **Information Dissemination:** This variable examines the spread and impact of political information on social media platforms. It involves analyzing the volume, sources, and characteristics of political news, as well as assessing the prevalence and effects of misinformation, disinformation, and fake news circulated through social media during elections.
4. **Political Communication Strategies:** This variable focuses on how political candidates, parties, and grassroots movements utilize social media for communication purposes during elections. It includes examining the types of messages conveyed, engagement strategies employed, and the effectiveness of social media in reaching and mobilizing voters.
5. **Voter Mobilization:** This variable explores the role of social media in mobilizing voters and encouraging political participation. It includes studying the use of social media platforms for organizing grassroots campaigns, promoting voter registration, facilitating online activism, and targeting specific voter demographics.
6. **Ethical and Regulatory Factors:** This variable involves assessing the ethical and regulatory challenges associated with the use of social media in elections. It includes examining issues such as user privacy, data security, algorithmic bias, the influence of foreign interference, and the need for transparent and accountable social media policies and regulations.

By analyzing and understanding these variables, researchers can gain insights into the multifaceted dynamics of social media's role in elections, its impact on various stakeholders, and the broader implications for democratic processes.

6. FUTURE SCOPE AND LIMITATION:

Future research could explore the impact of emerging technologies, comparative analysis, long-term effects, and innovative strategies for utilizing social media in elections. However, the study's limitations include generalizability, rapid evolving landscape, data quality and reliability, and ethical considerations.

The impact of social media in elections can vary across different contexts, such as political systems, cultural norms, and technological infrastructure. Therefore, caution should be exercised when applying the findings to specific countries or regions without considering their unique circumstances. The rapid evolution of social media platforms and their features makes it challenging to capture the full extent of their impact in a static review. Data quality and reliability are crucial, and researchers must carefully evaluate the credibility and methodology of the studies included in the review.

Ethical considerations should be explored, such as privacy concerns, manipulation of information, and the influence of targeted advertising, to provide a more comprehensive understanding of the subject. By addressing these areas, future research can provide a more nuanced and up-to-date understanding of the evolving role of social media in elections and its implications for democratic processes.

7. CONCLUSIONS:

Social media plays a crucial role in elections, impacting voter behavior, political communication, information dissemination, and voter mobilization. It allows candidates and parties to bypass traditional media gatekeepers and connect directly with voters, reaching previously disengaged or marginalized groups. However, social media also presents challenges such as the spread of misinformation and disinformation, which can distort voter perceptions and undermine the electoral process's integrity. Echo chambers and filter bubbles further exacerbate this issue. Despite these challenges, social media has proven effective in mobilizing voters through grassroots campaigns, engaging younger demographics, and promoting interactive features.

Policymakers and electoral authorities must address ethical and regulatory challenges, ensuring transparency, accountability, and protection of user privacy on social media platforms. Political candidates and parties should adopt a responsible approach, prioritizing accuracy, fact-checking, and meaningful interactions while promoting reliable information and civil discourse. In conclusion, social media plays a significant role in elections, but it also presents challenges such as the spread of misinformation and echo chambers. Policymakers should focus on ethical and regulatory considerations, while political candidates and parties should use social media responsibly to maintain the integrity of the electoral process.

ABSTRACT

The article researches the reporting method of evaluating the role of the service sector in the socio-economic development of regions. In it, the main indicators of the service sector are analyzed by region. On this basis, the development of regions is classified and described by "green", "yellow" and "red" colors. Also, scientific conclusions and recommendations on the need to develop a public-private partnership in the development of the service sector were offered.

Keywords: Region, Development of Regions, Service Sector, Public-Private Partnership, Category of Regions, Description of Regions, Assessment, Rating.

INTRODUCTION

The development of the service sector is one of the main issues of the reforms implemented in our country. Because this sector, as an important driver of economic growth, must be of particular importance in ensuring the competitiveness of the national economy. Therefore, the service sector is the main criterion for evaluating the socio-economic development of regions. In this regard, the tasks of ensuring the rapid growth of the service sector in our country, further supporting entrepreneurial activity in the sector, creating new jobs for the population and introducing a rating system for the socio-economic development of regions have been set [1]. Based on the defined tasks, we paid special attention to the evaluation of the trends in the field of service in the socio-economic development of the regions and the role of private entrepreneurship in this process [2]

Because the issues of increasing the role of entrepreneurship in the development of the service sector have been little studied as an object of research. However, the scientific and practical study of the role of entrepreneurship in this area is also an important component of the ongoing reforms. In this regard, this research is a special method of researching the service sector, and it is of great importance in the development of effective measures aimed at increasing the entrepreneurial activity of the population in this sector.

THEORETICAL FRAMEWORK

According to the problems and factors of the socio-economic development of regions, the directions and methodological concepts of regional research differ. These are the socio-economic policy of regional development [3], socio-economic efficiency [4], socio-economic security [5], etc [6]. In recent years, research in a new approach is also being carried out. In particular, it is worth noting family entrepreneurship and regional development [7], evaluating the role of family entrepreneurship in regional development in the "neighborhood" approach [8]. The results of such assessment also confirm the existence of uneven trends in the development of regions. Reasons for this are related to the favorable geographical location of regions, natural resources, and climatic conditions, level of development of infrastructure facilities and other factors, as well as the level of development of small business and family entrepreneurship in the regions and the role of "neighborhood" and "sector" in this. Relying on these methodological approaches, our study investigated the role of the service sector in the development of regions and the importance of public-private partnerships in these processes.

The assessment of the development of the service sector in the regions covers such activities as trade, transportation and storage, accommodation and food services, information and communication, and health and social services. The final result of the activity of the service sector is determined by the volume of services provided. Therefore, the indicator of the volume of services provided to the population is used to determine the role of the service sector in the economy, in particular, in the development of regions. Based on this, it is possible to assess the contribution of entrepreneurship in the development of this sector. The volume of services provided by business entities operating in the regions was analyzed.

METHOD

In this study, the role of the service sector in the development of the regions of the Republic of Uzbekistan was studied. Using the statistical indicators of the regions of the Republic of Uzbekistan, the main indicators of the development of the service sector and regions were compared and analyzed. It is important in developing the service sector in our country's economy. Therefore, the development of the service sector in the main target regions was assessed in this study. The following system of indicators was used:

- average annual number of permanent residents during the reporting period

(thousand people);

- volume of services provided during the reporting period (billion soums).

Private indicators describing the development of the service sector of the regions were formed on the basis of official statistical data. In this case, the volume of services per capita was calculated using the following formula:

$$AJXH = KXH/AS; \quad (1)$$

here,

AJXH - the volume of services per capita, (billion soums);

KXH – the volume of services provided during the reporting period (million soums);

AS – the average annual number of permanent residents during the reporting period (a thousand people).

FINDINGS AND DISCUSSION

The development of the service sector is important for the structural renewal of the national economy, ensuring the well-being and employment of the population. Therefore, as a result of paying serious attention to the development of the industry in recent years, its importance in the economy of our country is increasing. At this point, if we focus on the state of development of the service sector in our country, as of January 1, 2020, the volume of GDP is 511838.1 bln. amounted to 165,053.2 billion soums. Or its share in GDP was 35.5 percent, which increased by 105.1 [9]. percent compared to last year. The volume of provided market services is 16,272.5 billion soums (an increase of 111.6%), the volume of provided market services per capita is 484,600 soums (an increase of 109.5%), those employed in the sector are 50.7% of those employed in the economy, in this sector the share of operating enterprises and organizations was 65.9% (20.6% increase) [10]. If during this period the number of small enterprises and micro-enterprises operating in our country was 334.8 thousand, the largest share of their number was in the trade sector 30.0%, in the industrial sectors 20.9%, in construction 10.8%, in agriculture, forestry, and fisheries. 8.6%, 7.6% in accommodation and food, and 4.5% [11]. in transportation and storage. As can be seen from these data, in general, a growth trend was observed in the main indicators of the service sector in the economy. However, the role and share of huds in such growth are different (Table 1).

The highest indicator of the volume of services provided by business entities in the regions is Tashkent city (25785.4 billion soums), Tashkent (3289.3 billion soums), Samarkand (2430.5 billion soums), Fergana (2242.8 billion soums)), Bukhara (1750.4 billion soums), Andijan (1524.8 billion soums) and Kashkadarya (1514.3 billion soums) regions. Relatively less Namangan (1227.6 billion soums), Surkhandarya (1216.3 billion soums), Khorezm (1104.0 billion soums), Republic of Karakalpakstan (973.2 billion soums), Navoi (837.1 billion soums) . soums), Jizzakh (790.8 billion soums) and Syrdarya (720.5 billion soums) regions were observed. If these figures are compared to 2018, it can be observed that the volume of services provided by business entities has increased in all regions except the Surkhandarya region (Table 1).

Calculations based on this methodology made it possible to determine the differences in services per capita in the development of the service sector in the regions of our republic. For example, as of January 1, 2020, the average indicator of the republic was 5668.6 thousand soums, while the highest percentage by region was the city of Tashkent (25703.0 thousand soums), Navoi (4904.9 thousand soums), Tashkent (4705.7 thousand soums). and Bukhara (4275.4 thousand soums) regions. Samarkand (3196.9 thousand soums), Andijan (3141.6 thousand soums), Sirdarya (3128.1 thousand soums), Khorezm (3065.0 thousand soums), Jizzakh (3058.6 thousand soums) and Fergana (3034.2 thousand soums)) average indicator was

recorded in the regions. In the regions of the Republic of Karakalpakstan (2964.0 thousand soums), Surkhandarya (2873.2 thousand soums), Kashkadarya (2691.1 thousand soums) and Namangan (2675.5 thousand soums), the volume of services provided per capita are low compared to other regions (table 1).

1- table Rating of regions on the development of the service sector (as of January 1, 2020)

№	The name of the regions	average annual number of permanent residents	* Volume of services provided during the reporting period		** Volume of services per capita		*** Volume of services provided by small enterprises and micro-enterprises		Areas rating	
		a thousand people	million soum	score	thousand soums	score	billion soums	score	∑ score	place
1	Republic of Karakalpakstan	1898,3	5 489 177	26	2964,0	23	973,2	23	72	11
2	Andijan	3127,7	9 730 102	30	3141,6	28	1524,8	28	86	4
3	Bukhara	1923,9	3 363 233	23	4275,4	30	1750,4	29	82	6
4	Jizzakh	1382,1	1 904 054	21	3058,6	25	790,8	22	68	14
5	Kashkadarya	3280,4	4 292 705	24	2691,1	21	1514,3	27	72	12
6	Navoi	997,1	4 847 489	25	4904,9	32	837,1	21	78	7
7	Namangan	2810,8	7 442 909	28	2675,5	20	1227,6	26	74	10
8	Samarkand	3877,4	12 271 115	32	3196,9	29	2430,5	31	92	3
9	Surkhandarya	2629,1	7 469 166	29	2873,2	22	1216,3	25	75	9
10	Syrdarya	846,3	2 621 934	22	3128,1	27	720,5	20	69	13
11	Tashkent,.	2941,9	13 740 175	33	4705,7	31	3289,3	32	96	2
12	Ferghana	3752,0	11 279 996	31	3034,2	24	2242,8	30	85	5
13	Khorezm	1866,5	5 673 929	27	3065,0	26	1104,0	24	77	8
14	Tashkent city	2571,7	64 943 787	34	25703,0	33	25785,4	33	100	1

Source: compiled by the author based on the information of the State Statistics Committee of the Republic of Uzbekistan (https://stat.uz/uploads/docs/khizmatlar_dekabr_uz.pdf) Note: General rating score: max – 100, min – 55; *according to the indicator: max – 34, min – 21; **according to the indicator: max – 33, min – 20; ***according to the indicator: max - 33, min - 20. Based on this, the rating of regions is conditionally high (86-100 points) - "green", medium (71-85 points) - "yellow" and low (60-70 points) - divided into "red" colored categories. When the total score of the regions is the same **The indicator of the volume of services per capita is taken into account.

The rating of the regions was evaluated in a 100-point system (Table 1). In this case, according to the 1st criterion (max - 34, min - 21), according to the 2nd criterion (max - 33, min - 20), and according to the 3rd criterion (max - 33, min - 20) it was evaluated. The rest were rated accordingly relative to the highest score on the indicator. On this basis, the rating of regions was conditionally classified according to high (86-100 points) - "green", medium (71-85 points) - "yellow" and low (55-70 points) - "red" color categories. When the total score of the regions is the same, the points obtained by criterion 2 "Volume of services per capita" were decisive in determining the ranking of the regions.

According to the above methodological approach and on the basis of the rating points obtained by the regions (Table 1), the category and description of territorial units of the Republic of Uzbekistan according to the state of development of the service sector by colors were developed (Table 2).

Table 2. Description of the development of the service industry by regions of the Republic of Uzbekistan (as of January 1, 2021)

Regions	Regions category	Description
---------	------------------	-------------

<p>Tashkent city, Tashkent, Samarkand, Andijan regions</p>	<p>"Green" (in the range of 86-100 points regions)</p>	<p>High level: In these regions, the service sector is the driver (point of growth) of socio-economic development. The entrepreneurial activity of the population, the high efficiency of state-business cooperation and the fact that more than 50 percent of the operating business entities belong to the service sector have a great impact on the development of this sector. Also, this area is considered to be an area with a significant contribution to the socio-economic development of the region, in particular, the formation of the GNP, the high level of services in it, and the creation of new enterprises and jobs in this area.</p>
<p>Ferghana Bukhara, Navoi, Khorezm, Surkhandarya, Namangan, Kashkadarya regions of the Republic of Karakalpakstan.</p>	<p>"Yellow" (in the range of 71-85 points regions)</p>	<p>Intermediate level: In these regions, the effectiveness of state-business cooperation in the development of the service sector is insufficient. In these areas, there are almost no OCs in the areas of services, such as information and communication, health and social services. Declaring 2020 as the "Year of Science and Digital Economy Development" in our country directly implies the development of information and communication services. Therefore, it is appropriate to give priority to crediting social projects in the service sector within the framework of state programs when determining additional measures for the development of the service sector in the regions belonging to this category. It is also proposed to develop a clearly planned "roadmap" for the transition from the "yellow" category to the "green" category.</p>
<p>Syrdarya and Jizzakh regions</p>	<p>"Red" (areas between 55-70 points)</p>	<p>Low level: Regions of this category are classified by the underdeveloped infrastructure of the service sector (services market) and the need for additional financial resources for the development of this sector. The active attraction of investments, the establishment of small business areas, and support of business entities in the development of target regional programs for the gradual transfer of these regions from the "red" category to the "yellow" category, and from the "yellow" category to the "green" category, as well as the development of socially significant projects by PPP measures to attract additional financial resources, should be determined.</p>

Source: compiled by the author

The development of the service sector is linked to the growing needs of the population for modern types of services, and the number of business entities that can satisfy these needs, the volume of service production, household income, the price of services, the development of infrastructures, and small businesses. At the same time, it is related to the effectiveness of public-private partnerships (PPPs) in this area.

The current procedure for evaluating the rating of regions is based on the criteria developed on the basis of the Decision of the President of the Republic of Uzbekistan dated May 1, 2020 "On the introduction of the rating evaluation system of social and economic development of regions" No. PQ-4702. Accordingly, the development of the service sector in the regions was evaluated according to the indicators "volume of services provided to the population" and "volume of services per capita". Based on these indicators, the results of the rating calculated in the practice of statistics confirmed the results of our research.

Conclusions and Recommendations. Based on the results of our research on the development of regions and increasing the role of the service sector in these processes, the following scientific-theoretical conclusions and proposals were developed:

firstly, the system of important socio-economic indicators of regional development shows the need to approach taking into account the influence of additional development factors;

secondly, based on the results of the research, it was concluded that there are still conflicting opinions in determining the socio-economic nature of regional development. Because in different methodological approaches of the socio-economic development of regions, one or another area of regional economy was evaluated using different indicator systems. Therefore, it was not possible to compare the results of the study with other studies;

thirdly, the role and importance of public-private partnerships in regional development were not taken into account in the studied studies. Therefore, there were difficulties in combining or generalizing the results of research on the development of regions based on the principles of synergy;

fourthly, based on the content of the economic reforms implemented in our country, one of the important tasks is to evaluate the development of regions by increasing the role of PPP in the service sector. In this regard, the data collected for research was not enough to assess the role of PPP activities in the development of manufacturing, construction, and agricultural sectors. Therefore, in the next studies, the task of conducting studies on the evaluation of the role and role of PPP in these areas was determined. In this case, the evaluation of PPP-based projects for all types of activities of the service sector, and the development of criteria for the classification of regions according to the "role of PPP in the development of the service sector" index of regions were defined as the tasks of further research.

ABSTRACT

The current research has been carried out with the aim of presenting the employer brand model of insurance companies in order to overcome the challenge of attracting and maintaining talented and expert human resources. This research is practical in terms of purpose, and survey-exploratory in terms of approach. The statistical population of this research was a group of human resources experts, including university professors, organizational consultants, and senior managers of human resources of insurance companies, and they were interviewed in depth. This selection and conducting interviews continued until theoretical saturation was reached and then it was stopped. In this research, the purposeful sampling method was used and this process continued until the theoretical saturation of the researcher was reached. Finally, this method was an interview with 9 experts. In this research, since the grounded theory method was used, the main tool for data collection was an in-depth and unstructured interview with experts. Finally, after open coding, central coding, and selective coding, the conceptual model of the research was designed based on the paradigm model.

1. Introduction

Dynamic organizations have learned to reflect on developments, trends and challenges that appear in various dimensions and fields. Countries should also be equipped with dynamic organizations to carry out their special missions and responsibilities in the economic, social, and political fields. The continuous changes that occur in the environment, the human resource management of organizations faces various challenges and forces this management to coordinate its goals, policies, strategies and procedures with these challenges. The trends and changes in the demographic context, social dimensions and management methods are such that the human resources administration of the organizations has faced difficulties and the resource management units cannot fulfill their mission with the previous attitudes. Bureaucratic structures, specialization of the Tillerian era, centralization, emphasis on the physical strength of employees, inflexible working hours and the like have faded in today's fast-paced world and have caused new challenges that human resource managers in organizations must deal with. to perform their activities and duties effectively. The lack of integration of human resources management operations, short-term manpower planning, paid time payments, insufficiency or lack of clarity of job descriptions and qualification conditions, choices unrelated or little related to job duties and... dissatisfaction of service recipients or consumers, low productivity, Waste of resources leads to lack of motivation of employees and the like and gradually moves the organization away from its goal. (Sha'bani, 2015)

Humans is a complex and unpredictable creature. Therefore, it is very difficult to know the human being and his management. Recruiting and hiring, effective training, effective maintenance of competent employees, efficient development of people, performance evaluation and incentive systems, participation, service compensation, etc. The organization and advancement of the company will result, and in case of lack of attention, it will lead to the decline of an organization and company. From this point of view, human resource development management is considered a very dangerous and sensitive activity for organizations. The current world of change and competition and the diversity of stakeholders' demands have brought about many changes in the way organizations are run and, as a result, human resources management, which our country will not be unaffected by considering the recent conditions. (Budlai, 2016)

Human resources, as one of the most important resources at the disposal of managers, is considered one of the most important strategic planning topics of companies. Human resources are considered the most valuable factor of production (product/service) and the most important capital of any organization, which have the most fundamental role in raising the name of the organization and achieving the goals of the company's strategic plan. Therefore, one of the most important planning in organizations is organizing and organizing human resources, and identifying and solving the challenges of this strategic area. (Dehghanan, 2014)

If we consider the establishment of Iran insurance in 1935 as the beginning of the first stage of the development of the insurance industry and the establishment of the central insurance in 1971 as its second stage, without a doubt, the implementation of the transformation plan of the insurance industry will be its third stage. Iran's insurance industry, in modern and classical standards; It is considered new; Because the growing trend of diversity in providers and diversity in insurance services started in recent years with the beginning of the privatization process. The expansion of this trend requires the clarification of the practical space of competition among the companies providing insurance services, including making the tariff system more competitive. However, the insurance industry in Iran is facing problems that are both related to challenges within the insurance industry and challenges outside the insurance industry. In one of its study reports, the Research Center of the Islamic Council has summarized

the main challenges of the country's insurance industry in the following cases: the governmental nature of the decisions in the country and the collapse of the competitive environment in the insurance industry; structural problems in Iran's economy and its effects on the insurance industry; problems in the field of human resources of the insurance industry (expertise, experience, recruitment, empowerment and development, maintenance, meritocracy, etc.); lack of comprehensive understanding of the needs of insurance service customers in the country; Weak communication between the country's universities and the insurance industry and the need for scientific development and completion of the scientific staff of the insurance industry through the training of specialists; Marketing problems and the lack of insurance marketing in the country, including the methods of insurance companies and existing mechanisms, imbalance in the insurance sectors, and people's lack of knowledge about insurance services and benefits. (Yarahmadi Khorasani, 2014)

According to the global trend, the concern of senior executives about finding and retaining talent in order to achieve their desired growth is increasing. Various surveys show that in 2014, 36% of the world's employers declared that they faced a talent shortage, which is the highest amount since 2007, and in the next research in 2015, 73% of senior managers declared that compared to Access to key skills is a concern. So, how do companies compete effectively in the new war for talent? Before anything else, it's time for leaders to focus on strengthening their organization's employer brand. The approach to creating a strong employer brand has undergone major changes in recent years, so that it affects the recruitment of people and the responsibility of monitoring it. (Vishwas et al., 2017)

The employer brand is the image formed in the mind of the main stakeholders and especially the current and potential employees about an organization. In other words, Kafarma's brand means how the desired organization is defined and portrayed by others at different levels, from market management methods to employee benefits. Organizations that can create a strong employer brand will be seen as worthy employers that provide a favorable working environment and conditions for their employees. This positive vision ultimately leads to more successful results in the field of attracting potential employees and retaining current employees, and also generally forms a favorable perception of the target market of the organization's business. Therefore, the employer brand is the effective representation of the values, personality and culture of a brand in order to create favorable perceptions of the employer. The employer brand affects all interactions of the organization with its employees. This effect starts from the recruitment stage and employee acceptance processes, and then extends to all aspects of employment in the organization, including professional training and skills development, support networks, career development, benefits and incentives, and extends until the termination of cooperation and even after the individual leaves the company. The queue of the organization's employees will continue (Faqhipour, 2015: 12). Based on the rich research background in social psychology about the creation of mental models of phenomena, it seems that the formation of the employer brand has diverse cognitive, emotional, and normative roots (Edwards, 2009). Various theories can be found that can be used to develop various theoretical questions about the psychological formation of the employer's brand. This aspect of the subject needs more theoretical investigations and reflections. But perhaps it can be briefly said that the values, needs, and mental patterns of people create a platform based on which specific information from the target organizations are selected, interpreted and used to form the basis of the formation of the employer's brand. In addition, the interactions of people in the context of the labor market lead to the exchange of information in the field of mental images created at the individual level, and with various mechanisms, the phenomenon of the employer brand emerges as a collective concept (Foster et al., 2010).

As mentioned above and in the report of the Research Center of the Islamic Council, one of the challenges facing insurance companies active in the country's insurance industry is the challenge of attracting and retaining skilled and talented human resources. Conducting initial investigations and informal interviews with several senior managers of human resources of the country's insurance companies proved that due to the intense competition between insurance companies, attracting and maintaining specialized, capable and efficient human resources is a serious challenge in this field. The industry has changed and this is despite the fact that so far no comprehensive research has been done regarding the employer brand of insurance companies with the approach of attracting and retaining skilled and talented personnel, and the senior managers of insurance companies, in managing their employer brand and formulating recruitment and retention strategies. Expert and talented people are faced with weak awareness. An important part of this lack of managers' knowledge is due to the lack of attention of researchers in the fields of human resources management and insurance management in the local modeling of employer brand concepts in the insurance industry, and for this reason, the managers of the said industry lack practical and local models in this field. Therefore, the upcoming research will seek to answer the following main question: "How is the employer brand model of insurance companies in order to overcome the challenge of attracting and retaining talented and specialized human resources?"

2. Research background

Murray et al. (2017) published a study titled "Human Resource Challenges in the Canadian Hospitality and Tourism Industry: Finding Innovative Solutions". The results of this research showed that the hotel and tourism industry of Canada is facing the problem of the downward trend of decreasing labor demand. The solution to this challenge is to try to get more satisfaction from the frontline employees, and to try more to support the nationality of the employees. Maurer (2017), published a research entitled "Challenge of creating sponsors for HR programs". The results of this research showed that the most important factor is the attitude of the leaders. That is, when a leader or a leadership team treats their employees and colleagues with respect and a positive attitude, it can be the best supporter for the success of employee development programs. Willie et al. (2017) published a study entitled "Human capital challenges in the Canadian hotel industry". The results of this research showed that the Canadian hotel industry faces the challenge of filling job opportunities and keeping employees in their roles. The proposed solution for this challenge is the joint cooperation between the industry and the university for the general education of the specialized workforce and providing suitable rewards to encourage them to work in the Canadian hotel industry. Gharezadeh and Hashemi (2016) published a research entitled "The role and challenges of human resource management in organizations in line with the goal of applying solutions to optimize the human resource planning system." The results obtained from this research showed that some of the most important ways to optimize the organization's human resources planning are: standardization of human resources, establishment of appropriate laws for attracting and maintaining human resources, reforming the human resources payment system, and training human resources. Thinker and creative, creating equal educational opportunities, predicting the supply of human resources, developing a system for measuring the scientific competence of employees, reforming the evaluation system of employees, participation of employees in human resources planning, evaluation of human resources programs and development of information and communication technology. Nedai et al. (2016) published a research titled "Compilation of a Systematic Model of Employer Branding". The result of this research is the employer branding model, in which all the influencing factors and employer branding results

are drawn in a dynamic system. This model shows that employer branding affects employee retention, employee attraction, and customer satisfaction in three ways. Mousavi et al. (2016) published a research entitled "Review on the dimensions of employer brand and perceived reputation of employees from the organization". This research showed that the dimensions of the employer brand include training and development, reputation, work-life balance, ethics and social responsibility, organizational culture and diversity. Employees' perceived reputation of the organization: refers to the perceived capacity of the organization's capabilities to meet the expectations of stakeholders in the form of social responsibility and employee care. Dousti (2016) published a research titled "risk assessment in human resource management in Iran insurance company". The results of the research hypotheses test showed that from the point of view of managers and experts, the risk of lack of knowledge and administrative skills, the risk of selection and recruitment, the risk of evaluation and management in performance, the risk of knowledge-skills and the ability of employees have an impact on human resources management. Mesbahi and Seydin (2016) published a research titled "Challenges of Green Human Resource Management (A Qualitative Approach)". The findings of this research confirmed the existence of major challenges under the three main structural, managerial and cultural concepts; which organizations face in the way of implementing green human resources. Ranjbar (2016) published a research titled "Investigating the relationship between employer brand and recruitment and loyalty of human resources". The results of the research showed that there is a positive and significant relationship between the employer's brand and the recruitment of employees. There is a positive and significant relationship between employer brand and employee loyalty. Garavan et al. (2016) published a research titled "Human Resource Development in Mauritius: Contexts, Challenges, and Opportunities". This research showed that the major challenges of Mauritius in the field of human resources development include the following: low academic education, lack of effective establishment of knowledge management systems, low commitment, administrative corruption of human resources, insufficient salaries and wages. Tanwar and Prasad (2016) published a research titled "Effect of employer brand dimensions on job satisfaction: considering the moderating role of gender". The results of this research showed that the six dimensions of the employer brand (including: training and development, reputation, balance between work and life, ethics and organizational social responsibilities, organizational culture, and diversity) can affect job satisfaction. Also, the moderating role of gender was also proven. Fernandez Lores et al. (2015) published a study titled "Emotional Commitment to Employer Brand: Development and Validation of a Scale". This research succeeded in presenting a three-dimensional model (including dimensions: long-term attitudes towards the employer, passion for the employer, and emotional attachment to the employer's brand) for "emotional commitment to the employer's brand". Stone and Deadrick (2015) published a research entitled "Challenges and opportunities affecting the future of human resource management". The results of this research showed that human resource management in the present era is facing challenges such as economic bottlenecks, globalization, cultural diversity, and technology, which of course, each of these, while being considered a challenge, can be an opportunity. also play a role. Alaniak et al. (2014), conducted a research entitled "Attracting talented employees in the company: Do we need different strategies of employer branding in different cultures?" they did. The results of the research showed that respondents in Turkish universities give more importance to the attractiveness of the employer than Latvian students. Also, in this research, cultural, national and gender differences are effective in understanding the basics of the employer brand and its application. Wong (2014), has conducted a research titled the effect of brand branding on the performance of employees to receive a doctorate degree at the University of Manchester. In this research, five items have

been examined to reflect the employer's brand and its impact on employees' performance, which include: personal stability, personal connection and belonging, opportunities and growth, personal interests and influence, and importance and self-confidence. Results A study showed that there is a significant and positive relationship between employees' perception of the employer's brand and employees' citizenship performance. There are also strong signs of the realization of the employees' understanding of the employer's promises regarding its brand, which include: the experience of a favorable and distinctive employment in the organization, considering the organization as a great place to work, having inner happiness to continue working in this place, Not leaving the organization and having positive attitudes towards the implementation of work duties and organizational citizenship of employees. Biswas and Suar (2014), in a research entitled "Antecedents and Consequences of Employer Branding", reviewed and analyzed the phenomenon of employer branding. The results of this research showed that preview of real work, perceived organizational support, justice in providing rewards, perceived organizational credibility, organizational trust, senior management leadership, psychological contract commitment and corporate social responsibility affect employer branding, as well as branding. It affects the financial and non-financial performance of the company. Chhabra and Sharma (2014) published a research titled "Employer Branding: A Strategy to Improve Employer Attractiveness". Based on this research, a four-stage process model for employer branding was presented, which included four stages: organizational characteristics, communication and promotion channels, creating the employer's image, and finally, the employer's attractiveness. Rampl and Kenning (2014) published a study titled "Employer brand trust and influence: Establishing a relationship between brand personality and employer brand attractiveness". This research was conducted in Germany and on students, and its results showed that the dimensions of brand personality (including: honesty, excitement, complexity, strength, and competence) have a significant effect on trust in the employer brand, the effect of the employer brand, and finally, the attractiveness of the employer brand. have. Khodami and Osanlou (2014) published a research titled "Designing a model for creating employer attractiveness based on building a distinctive employer brand". The results of this research show that when the employer brand is created based on the factors of target group needs, distinctive value proposition, people strategy, brand compatibility, employer brand communication and employer branding metrics, the differentiation created in the employer brand due to these factors can lead to the attractiveness of the employer. be in all dimensions. Abdulahi and Rezaei (2012) published a research titled "Employer Branding: Identifying the Dimensions of Organizational Attractiveness from the Perspective of Potential Knowledge Employees". The results of this research show that students who have more academic success than others attach more importance to competitive work conditions. The results also show that women give less importance to competitive work conditions compared to men.

3. Method

The current research is applied in terms of its purpose and applied-exploratory in terms of its approach.

3-1. The statistical population of the research:

In this research, a group of human resources experts including university professors, organizational consultants and senior human resource managers of insurance companies were considered as the statistical population. It should be noted that the expert characteristics included the following: mastery in the field of human resources management in insurance companies, mastery in the field of employer brand, mastery in the field of recruiting and maintaining human resources in insurance companies.

3-2. Statistical research sample and sampling method:

In this research, the purposeful sampling method was used. In this way, the people to be interviewed were selected based on the relevance of their resumes to the research objectives and were interviewed in depth. This process continued until theoretical saturation was reached and finally 9 interviews were conducted.

3.3. Data collection tool:

In this research, since the grounded theory method was used, the main tool for data collection was in-depth and unstructured interviews with marketing experts. In these interviews, the researcher tried to gently enter the discussion and gain the initial trust of the interviewees, completely indirectly asking questions about the antecedents and contexts of the employer brand of insurance companies in order to overcome the challenge of attracting and retaining talented and expert human resources, the consequences bring up this phenomenon and... and in this way get the basic concepts for designing the model. In this research, to ensure the validity of the interviews, the researcher's long-term involvement with the research environment and his continuous observations in the research environment were used, including building trust with the subjects of the research, learning the culture of that environment and controlling misunderstandings caused by the interventions of the researcher or informants. Also, to ensure the reliability of the interviews, after each interview, the extraction codes were shared with the interviewee to ensure that the codes that the researcher deduced from the interview are consistent with the interviewee's mental state.

3-4. Data analysis method:

In this research, in order to analyze the interviews and achieve the conceptual model of the research, the grand theory method and three-stage open, central and selective codings were used.

4. Findings

4-1. Open coding:

This stage of analysis was dedicated to identifying and extracting basic concepts from the content of the interviews. Based on this, after conducting each interview, the researcher extracted and coded the concepts in the text of the interview by reviewing it several times. A total of 9 interviews were conducted, 123 initial concepts were extracted, and after examining and putting them together and removing duplicate concepts, 39 final concepts were identified, which can be seen in Table (1). (It should be said that the codes next to the concepts include a Latin letter and a number. The Latin letter (in alphabetical order) indicates the interviewee, and the number next to this letter indicates the number of the concept extracted from that particular interview.)

Table 1) Concepts finalized in the open coding phase

Code	Concepts
A ₁ , B ₄ , E ₆	Due to the competition that we see in the insurance industry, companies must make a lot of effort to acquire and maintain talented and specialized human resources.
A ₂ , B ₉ , G ₅ , K ₁	Insurance companies should make arrangements so that their skilled and valuable personnel do not lose their motivation during their service and even become more motivated with the increase of their service years.
A ₃ , B ₁ , F ₈ , I ₇	Sometimes it may be necessary for the manager to directly tell the employee how valuable she/he is to the organization

A ₄ , F ₂	Some companies are looking for high-level employees, but they do not have a clear strategy in this field
A ₅ , E ₄ , J ₁	It is very difficult to create a competitive advantage in the insurance industry, and it is better to rely on strong human resources
G ₁₀ , K ₂	Sometimes, the economic situation of the company is so unstable that paying attention to talented and expert personnel is not the priority of the managers
A ₆ , C ₁₀ , I ₄	You should not always do trial and error, you should also use the experiences of successful people
B ₂ , D ₈	The company's honesty in interacting with employees, especially talented and expert employees, is very important
C ₁ , F ₉ , G ₄ , H ₄	If the employee feels that she plays a valuable role in the company, her/his job satisfaction will surely increase
A ₇ , D ₇ , G ₃ , K ₃	It is not like the old days when we are faced with two or three insurance companies and a very limited number of insurance services, today the competition in this industry is very fierce and all companies are trying to attract the best.
A ₈ , C ₈	A company is successful if its skilled and talented employees serve in it for many years
B ₃ , J ₂	Employees should feel a logical connection between their performance level and career advancement
A ₉ , C ₁₁ , E ₁₀	One of the measures that can greatly help domestic insurance companies is to study the history, strategies and growth trends of successful insurance companies in the world.
A ₁₀ , G ₂ , H ₉	Senior managers of insurance companies must show that the interests of employees are considered important in the organization under their command
B ₅ , F ₄ , I ₆	Generally, companies that have a strong foundation and financial ability are more successful in attracting and retaining talented and specialized employees.
A ₁₁ , B ₆ , F ₆ , K ₄	Insurance companies must formulate and approve appropriate strategies and budgets for the process of attracting and retaining talented and expert human resources
A ₁₃ , C ₆ , E ₃	We are faced with a high amount of labor in the insurance industry, but how many percent of them are really capable, expert and committed?
D ₁₁ , E ₂	Recruiting and maintaining specialized human forces is a soft war and requires pragmatism
A ₁₄ , B ₇ , D ₄ , E ₁₃	Compliance with ethical principles in the process of recruiting employees has a great effect on their maintenance and organizational longevity
D ₁ , F ₃ , H ₇	The company's macro strategies should be aligned with attracting and retaining talented and specialized employees
C ₃ , F ₁₀ , G ₈ , H ₁	The appearance of new competitors in the insurance industry has become a normal thing
B ₁₁ , D ₆ , E ₁ , G ₉ , J ₃	Planning to attract and retain talented human resources must also be feasible, otherwise it is worthless
A ₁₂ , C ₉ , F ₁ , H ₃	The point of view of insurance company managers is very decisive regarding the importance and position of talented and expert human resources
B ₈ , C ₂ , G ₇	Human resources should see a specific and motivating career path in front of them

B ₁₀ , F ₁₁	The company's human resource strategies must provide a specific solution to attract and retain talented and specialized employees
F ₁₂ , H ₈	The reason for the separation of many professional employees is the employer's dishonesty with them
C ₅ , D ₉ , I ₅ , J ₄	Attention and support of employees should become a culture in the organization
C ₄ , D ₂	Every person depends on a place where they value her/his
A ₁₅ , C ₁₄ , E ₉	Companies should monitor and manage the average length of service of their expert human resources over long and medium periods of time.
E ₈ , G ₁₁ , H ₂ , K ₅	Modeling the industry's best is a well-known strategy in the insurance industry
A ₁₆ , C ₁₅ , G ₁ , I ₂	Insurance companies should take practical and serious measures to attract experts rather than planning only on paper.
B ₁₂ , D ₅ , F ₇ , H ₅ , J ₅	In the current situation, the supply of labor is high, but not the quality and skilled labor
B ₁₃ , C ₇ , G ₁₂	If it is not clear for the employee what path she/he will follow in the organization in the next one or two years, her motivation will gradually decrease
C ₁₂ , E ₁₁ , F ₁₃	Currently, the insurance industry has become a very competitive industry
C ₁₃ , E ₁₂ , I ₃	It is very difficult to attract talented and specialized workers in the insurance industry
D ₃ , E ₅ , F ₅ , J ₆	Talented and expert human resources are more sensitive to their career path and progress in the organization
G ₆ , I ₁ , K ₆	Unnecessary and unrealistic promises to employees should be avoided
H ₆ , J ₇	The organizational culture governing the organization should support the employees
E ₇ , D ₁₀ , K ₇	First, the attitude of senior managers to employees should be corrected

4-2. Axial Coding:

At this stage, it was tried to create more general categories called "categories" by paying deep attention to the identified concepts and recognizing their similarities and differences with each other, and placing the concepts of the same and the same direction in these more general categories. The result of this process was the identification of 13 main categories, which can be seen in Table (2) along with their related concepts:

Table 2) Identified categories along with related concepts

No.	Category (axial coding)	Concept (open coding)
1	Inducing a sense of worth to talented and expert employees	Every person depends on a place where they value her/his
		If the employee feels that she plays a valuable role in the company, her/his job satisfaction will surely increase
		Sometimes it may be necessary for the manager to directly tell the employee how valuable she/he is to the organization
2	The state of the supply of	In the current situation, the supply of labor is high, but not the quality and skilled labor

	talented and specialized labor in the society	<p>We are faced with a high amount of labor in the insurance industry, but how many percent of them are really capable, expert and committed?</p> <p>It is very difficult to attract talented and specialized workers in the insurance industry</p>
3	Ethical orientation of the company in the process of recruiting and retaining employees	<p>Compliance with ethical principles in the process of recruiting employees has a great effect on their maintenance and organizational longevity</p> <p>Unnecessary and unrealistic promises to employees should be avoided</p> <p>The company's honesty in interacting with employees, especially talented and expert employees, is very important</p> <p>The reason for the separation of many professional employees is the employer's dishonesty with them</p>
4	The positive attitude of the company's senior managers towards talented and expert employees	<p>The point of view of insurance company managers is very decisive regarding the importance and position of talented and expert human resources</p> <p>First, the attitude of senior managers to employees should be corrected</p>
5	Competitors' moves to attract talented and specialized employees	<p>Due to the competition that we see in the insurance industry, companies must make a lot of effort to acquire and maintain talented and specialized human resources.</p> <p>Insurance companies must formulate and approve appropriate strategies and budgets for the process of attracting and retaining talented and expert human resources</p> <p>It is not like the old days when we are faced with two or three insurance companies and a very limited number of insurance services, today the competition in this industry is very fierce and all companies are trying to attract the best.</p>
6	The company's practical efforts to attract and retain talented and expert employees	<p>Insurance companies should take practical and serious measures to attract experts rather than planning only on paper.</p> <p>Recruiting and maintaining specialized human forces is a soft war and requires pragmatism</p> <p>Planning to attract and retain talented human resources must also be feasible, otherwise it is worthless</p>
7	Motivated and continuous presence of the employee in the company	<p>A company is successful if its skilled and talented employees serve in it for many years</p> <p>Insurance companies should make arrangements so that their skilled and valuable personnel do not lose their motivation during their service and even become more motivated with the increase of their service years.</p> <p>Companies should monitor and manage the average length of service of their expert human resources over long and medium periods of time.</p>

8	The economic situation of the company	Sometimes, the economic situation of the company is so unstable that paying attention to talented and expert personnel is not the priority of the managers
		Generally, companies that have a strong foundation and financial ability are more successful in attracting and retaining talented and specialized employees.
9	Designing a motivational career path for talented and expert employees	Human resources should see a specific and motivating career path in front of them
		If it is not clear for the employee what path she/he will follow in the organization in the next one or two years, her motivation will gradually decrease
		Employees should feel a logical connection between their performance level and career advancement
		Talented and expert human resources are more sensitive to their career path and progress in the organization
10	Company strategies	The company's macro strategies should be aligned with attracting and retaining talented and specialized employees
		Some companies are looking for high-level employees, but they do not have a clear strategy in this field
		The company's human resource strategies must provide a specific solution to attract and retain talented and specialized employees
11	Modeling successful insurance companies in the field of attracting and retaining talented and specialized employees	One of the measures that can greatly help domestic insurance companies is to study the history, strategies and growth trends of successful insurance companies in the world.
		You should not always do trial and error, you should also use the experiences of successful people
		Modeling the industry's best is a well-known strategy in the insurance industry
12	The level of competition in the industry	Currently, the insurance industry has become a very competitive industry
		The appearance of new competitors in the insurance industry has become a normal thing
		It is very difficult to create a competitive advantage in the insurance industry, and it is better to rely on strong human resources
13	Organizational culture supporting human resources	The organizational culture governing the organization should support the employees
		Attention and support of employees should become a culture in the organization
		Senior managers of insurance companies must show that the interests of employees are considered important in the organization under their command

4-3. Selective encoding (optional):

At this stage of the analysis, the identified categories were placed on the paradigm model. The paradigm model helps the researcher to know how the categories should be placed back and forth.

In the next part (conclusion), the output of the selective coding process has been tried to be presented as the final result of the research and finally the model resulting from this research has been introduced.

5. Conclusion and final design of the conceptual model

Based on the categories identified and the structure of the paradigm model, the following categories were placed in the model:

Main category: The core of the conceptual model is the concepts and categories based on it. In this research and according to the identified goals and categories, the category "practical efforts of the company to attract and keep talented and expert employees" was considered as the main and central category. This means that the core of the conceptual model is the practical and concrete actions and efforts of insurance companies to attract and retain talented and expert employees.

Causal conditions: It is a set of conditions that cause the emergence of a phenomenon or affect it. The categories related to this dimension were determined as follows:

- **Company strategies:** This category refers to the necessity of aligning the macro strategies of insurance companies in the field of employer brand with the requirements of attracting and retaining talented and specialized employees.
- **The positive attitude of senior managers of the company towards talented and expert employees:** this category refers to the verbal and practical actions of senior managers of insurance companies in order to attract and retain talented and expert employees.
- **The economic status of the company:** This category refers to the economic foundation of insurance companies to support the strategies of the employer brand in order to attract and retain talented and specialized employees.
- **The state of supply of talented and expert labor in the society:** this category refers to the quantity and quality of talented and expert labor available in the labor market in the insurance industry.
- **Level of competition in the industry:** This category refers to the degree of competitiveness of the business environment in the insurance industry of Iran.

Context: Indicates the special conditions in which the phenomenon (main category) is located. In this research and according to the identified goals and categories, the categories of "organizational culture supporting human resources" and "corporate ethics in the processes of recruiting and retaining employees" were considered as background categories. Organizational culture supporting human resources indicates that in insurance companies, the prevailing culture should value human resources and prioritize their interests. Also, the ethics of the company in the processes of recruitment and retention of employees also refers to the necessity of observing ethical principles and honesty in the processes of recruitment and retention of employees in insurance companies.

Environmental variables: the broad structural background and external factors that can affect the main category and even strategies. In this research and according to the identified goals and categories, the category "modeling successful insurance companies in the field of attracting and retaining talented and expert employees" and "movements of competitors to attract talented and expert employees" were considered as environmental categories. Imitating successful insurance companies in the field of attracting and retaining talented and expert employees means that

insurance companies, in order to use successful national and international experiences and also avoid trial and error, should be among the best in the industry in the field of strengthening the employer brand and attracting and retaining employees. Prone and expert to use. Also, the movements of competitors to attract talented and specialized employees also refer to the amount of efforts of competing companies to attract specialized and talented human resources.

Strategies: In a context and with specific mediating conditions, a specific set of strategies or actions becomes possible. In fact, strategies are actions that can turn the main category into consequences. In this research and according to the identified goals and categories, the categories of "inducing a sense of worth to talented and expert employees" and "designing a motivational career path for talented and expert employees" were considered as strategic categories. Inducing a sense of value to talented and expert employees refers to the efforts of insurance companies to remind them of the value of the work and expertise of outstanding employees, as well as to show their high value to the company; In addition, designing a motivational career path for talented and expert employees also refers to the need to be transparent and of course motivating for the career path of talented and expert employees in insurance companies.

Consequences: It refers to the consequences of the realization of the central category in the context of causal, environmental and contextual conditions and through specific strategies. In this research and according to the identified goals and categories, the category "motivated and continuous presence of the employee in the company" was considered as a consequence category. This means that if the causal conditions, contextual variables, main category, environmental variables and management variables happen well, we can hope that talented and expert employees of insurance companies will serve in these companies in a long-term, committed and highly motivated manner.

The next step was to place the categories in the paradigm model, which led to the identification of the conceptual model of the research. The main shape of this model can be seen in figure (1):

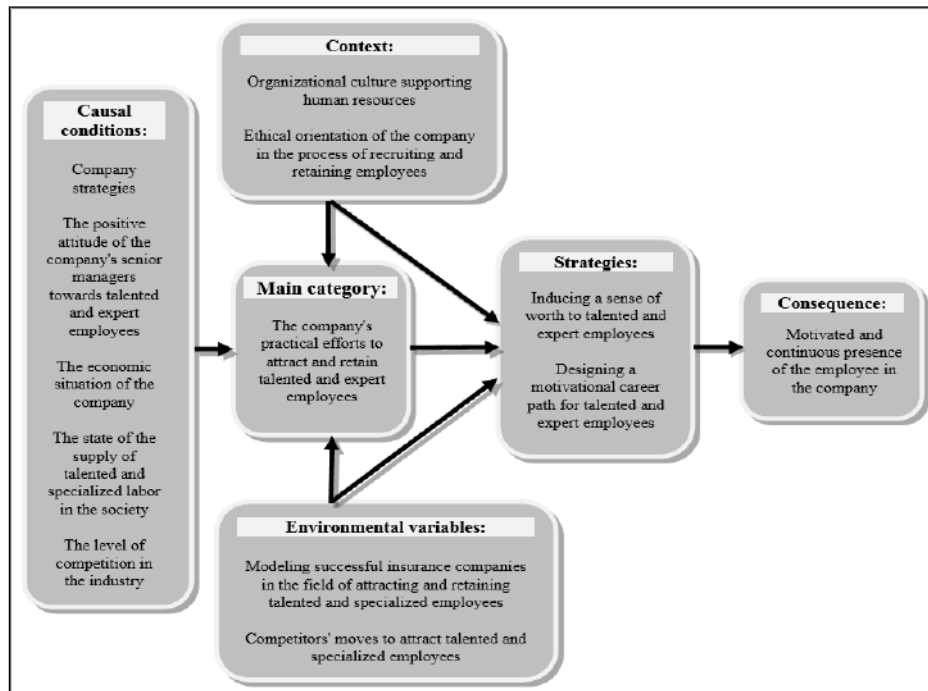

Figure 1) Research conceptual model

5. Suggestions for future research

According to the experiences gained in this research, future researchers are suggested to take steps to explain the conceptual model resulting from this research in a wide society and try to test the conceptual model of this research through quantitative methods such as structural equation modeling. . Also, future researchers are suggested to use other methods such as Delphi method, content analysis, etc. for the modeling phase, in order to overcome one of the main limitations of this research, which is considered to be time-consuming. , somehow disappear.

The Place and Role of National and Spiritual Approaches in Human Resources Management

Dr. Rustamov Parviz Haji oglu

Azerbaijan State University of Economics (UNEC),
rustamovparviz77@yahoo.com,
ORCID NO: 0000-0001-6325-1163

ABSTRACT

As it is known, the main goal of the article is to study the national-moral values and their scientific-theoretical basis in the management of human resources. It is to reveal the contributions of Hazrat Muhammad (may peace be upon him) and Azerbaijani scientists to the national-spiritual approaches in the management of human resources. The main scientific results of the article reflect the improvement of national-spiritual approaches in the management of human resources, conceptual theoretical innovations in this field. The scientific results of the article serve to improve the national-moral approaches in the management of human resources. From this point of view, scientific-research work can be considered admirable from the point of view of the study of national-moral values in the management of human resources.

Keywords: National-Moral Values, Scientific Approaches To National-Moral Values, Human Resources, Human Resource Management.

INTRODUCTION

In the modern management system, especially in the management of human resources, the development of national and moral values is the basis of the development of the economy of Azerbaijan. The basis of the development of each field is the renewal and improvement of the management mechanism. The modern management system consists of the management of material and moral resources, technical processes and operations of industrial enterprises. In the conducted scientific-research work, we give more importance to human capital, its management and development than such resources. Because human capital, being the central figure of organization management, both manages and is managed. That is, it has the ability to achieve the development of the organization by influencing the technical process and material resources, management subsystems, along with being managed. In the current period, the application of innovations in industrial enterprises requires the adaptation of human resources to them and the improvement of management for this purpose. Such actions form the basis of urgent activities for the development of national and moral values in the management of competitive human resources. From this point of view, the issue of the human capital organization mechanism of the digital economy and its improvement in the management of human resources is one of the most urgent issues in the current period.

Hazrat Muhammad's (peace be upon him) scientific approach to human resources management

As it is known, the history of economic thought of mankind has explored the most optimal ways of socio-economic development of society in all periods. He created numerous fundamental socio-economic theories and economic management models that have stood the test of time. Thus, socio-economic theories and economic management models have always played a major role in meeting the needs of society at various stages of development in the history of economic thought. In this sense, the significance of the socio-economic principles in the Holy Quran, the formation of interest-free economic concepts, the establishment of the Islamic financial management system in the economy and the direction of ensuring the transition to it are among the most urgent problems of today. (The Quran).

When talking about the management of human resources in the modern management system, we must first consider the principles and managerial qualities that were inherent in the management system of Hazrat Muhammad (pbuh), the founder and last prophet of this Islamic religion. The principles of the management system of Hazrat Muhammad (peace be upon him) are as follows:

1. Adequately knowing the purpose.
2. Belief in the correctness of the purpose.
3. Transparency of the goal and informing people about it.
4. Using correct and precise styles.
5. Science and sufficient information.
6. Strong intellect, sound thinking style and proper analytical ability.
7. Programmed movement and organization.

In addition to all this, Hazrat Muhammad (peace be upon him) has a number of managerial qualities, which mainly include the following:

1. Good manners;
2. Past transparent;
3. Justice;
4. Savings;
5. Charm, attraction;
6. Care, supervision and care;
7. Consultation;
8. To create social unity and inter-group unity;
9. Determination;
10. Fight against corruption;
11. Training and personnel training.

When we examine the life of Hazrat Muhammad (peace be upon him) in terms of the principles of governance, we witness that he was a very strong political leader. As much as he is a religious, cultural and social figure, he is a political figure and an ideal leader. Islam was a universal school, as it applies to all areas of human life, it was also a caring teacher, an invincible commander, a strong politician, a scholar and a scholar. He founded and managed his state with precise methods based on humanistic principles, and managed to build a healthy society. His socio-political management is the most beautiful example for people and the most ideal model for social and political leaders.

Professor I. M. Abbasov, associate professor R.F. Sadigov's scientific approaches to human resources management

Human resources management is one of the main components of employees' activities. Human resource management is related to the social concept. This concept reflects the content, purpose, tasks, principles and methods of human resources management. This concept also includes personnel management methodology and technology.

During the management of human resources, it is necessary to prepare the following basic documents.

- organizational documents - collective agreement, internal regulations, staff list, service manuals of employees;
- administrative documents – orders, decrees, assignments, instructions, rules;
- information-request documents-information, applications, explanations, presentations, meeting minutes, etc.;
- personnel's personal work - curriculum vitae, questionnaire, employment book, educational document, employment contract, etc.

In the process of managing human resources, they communicate with the collective in the following ways.

- 1) With a one-on-one conversation.
- 2) Through instructions and executive documents.
- 3) Through meeting, deliberations and meetings.
- 4) Through the notice board.
- 5) Book or box of suggestions, complaints, reviews. (Abbasov and Sadigov, 2013: p. 144-148).

Professor T.A. Guliyev's scientific approach to human resources management

In the modern management system, the management of economic problems, including human

resources, is related to general and special, economic-social goals, which have been proven in economic literature and experience, and relevant indicators that express these goals. Here, as a result, both economic and social aspect issues, as well as general national, corporate and individual interests are considered. Thus, in socio-economic efficiency, the matching of human resources activities to the tasks set by individual organizations, the ratio between costs and results, the criterion of labor efficiency, and the systematic effectiveness of production factors and resources occupy the main place. Social efficiency is also important here. As a rule, social efficiency refers to basic conditions such as payment of labor, stimulation, working conditions and labor protection, creation of favorable conditions for the social development of workers, realization of their needs and interests. As seen here, social efficiency is not isolated but directly related to economic efficiency.

Closeness of the connection between the result of the work and the costs of staff retention; differences between short-term and long-term goals, the emergence and resolution of problems related to the time factor; The position of the person in the organization; Labor activity results and their determinants. Employee's motivational structure and attitude to conflict processes related to it; Organization and coordination of work processes, the effect of applied techniques and technology on staff activity; characteristics of the information system; staff stimulation. expenses related to improvement of professionalism, remuneration, as well as social expenses. Here, of course, the policy of companies and companies, staff, and human resources manager have a big role. They play an important role in the formation of collective interests of employees in organizations under equal conditions. Ensuring the balance of interests and making compromise decisions within the framework of the measures taken is also of great importance here. This is the most important condition for ensuring social and economic efficiency and is an important factor influencing the "concept of rational goals", rational economic, political and economic behavior. As you can see, the management of human resources is the main component of the enterprise and manager's activity as a whole. This requires a consistent increase in the professionalism of the manager's activity in that sphere. Therefore, in many foreign countries, as well as in our republic, special service departments for human resources management have been established. (Guliyev, 2013: p. 15-17).

Professor K.A. Shahbazov, professor H.S. Hasanov, associate professor M.H. Mammadov's scientific approaches to human resources management

In the modern management system, every organization is interested in increasing the competitiveness of their products. This requires the involvement of high-level professional employees as well as the involvement of high-quality technology and equipment. In this regard, it is appropriate to develop three complex types;

- a regional complex oriented to the region or a group of organizations of the region;
- the sectoral guidance complex created on the basis of the base organizations of the sectors;
- local complexes of organizations that have concluded agreements on direct contact with special educational institutions.

In the modern management system, personnel training specialists deal formally with issues of professional orientation. Special workers from different departments deal with adaptation issues. These are inspectors of the personnel department, line managers or work colleagues. Their main goal is to organize the adaptation of young workers to the enterprise quickly and without damage. It should be noted that there is no difference between the implementation of the initial adaptation and the implementation of the subsequent adaptation, that is, all measures are similar to each other and are as follows.

In the modern management system, the adaptation process starts directly from the personnel department during the recruitment and registration of the employee. The inspector of the personnel department conducts job-related conversations with the employee and introduces him to the enterprise, department, workshop where he will generally work, then brings the new employee to his workplace and introduces him directly to the management. The leader, in turn, introduces the new employee to the team. The manager can appoint a new employee as a mentor from more experienced and older employees at his discretion. As a rule, the manager regularly talks with the new employee for a month, is interested in the difficulties and successes, and systematically evaluates his work. (Shahbazov, Hasanov and Mammadov, 2005: p. 522-523).

Associate professor M. A. Aliyev, associate professor H.I. Hamidov's scientific approaches to human resources management

In modern management literature, the term "Human resources" includes a person as one of the resources that the enterprise must use to achieve the goal set in the production of products and services. Human is an integral part of production and service processes. The term human resources covers all personnel who can potentially be involved from inside or outside the organization, in short, everyone from the top management to the lower level employees. Human resource management in business refers to the achievements of other sciences to systematically and comprehensively study socio-economic relations between employee-employer, organizational-technical, psycho-physiological, social phenomena. Those events in one way or another affect the labor situation and, depending on it, labor behaviors.

In the modern management system, human resources management is organically connected with labor law. Because labor relations, deviations in this sphere are regulated by means of labor law acts and regulations. It should be noted here that in the typical organizational structure of human resources, accounting and documentation of such personnel is a separate area. (Aliyev and Hamidov, 2013: p. 11-17).

The result

We conclude from the conducted studies that the national and moral values of Hazrat Muhammad (peace be upon him), Azerbaijani scientists T. A. Guliyev, I. M. Abbasov, R. F. Sadigov, K. A. Shahbazov, H. S. Hasanov, M. H. Mammadov, M. A. Aliyev, H. I. Hamidov's scientific-theoretical approaches in this field create great opportunities for achieving and expanding the socio-economic and cultural development of human society.

For the continuous and sustainable development of national and moral values in the management of human resources, it would be appropriate to consider the following results:

- Hazrat Muhammad (peace be upon him) according to, the principles of justice, halal, social justice and social equality should be taken into account in the management of human resources.

- Professor I. M. Abbasov, associate professor R. F. Sadygova according to - national and moral values in the management of human resources include the formation of goals, the creation of an organizational structure, the development and implementation of management decisions, the organization of work, the coordination of joint activities, and the social development of employees.

- Professor. T. A. Guliyev according to, the purpose of national and moral values in the management of human resources is related to the real situation of that problem, the adoption of appropriate decisions on the solution of this problem. In this sense, the goal is also to perform a guiding function. This is also related to the determination of the degree and level of goal achievement to a certain extent. Here, both the direction of the activity and the results form a

6th International CEO Communication, Economics, Organization & Social Sciences Congress

unity. In order to realize the goal, as in other spheres, the goals must be specified and diversified, the points where the goals of companies and companies and the goals of employees match and do not match, and the differences in interests must be clearly defined.

- Professor K. A. Shahbazov, professor H. S. Hasanov, associate professor M. H. Mammadov According to, the higher the level of development of the employee in terms of professional knowledge, skills, work methods, the faster the use of the production factor is organized. One of the main tasks of vocational adaptation and orientation is the creation of mutual relations between general education schools, vocational training centers, organizations, in turn, such relations allow to quickly determine the necessary level of labor resources that meet the demand for personnel.

- Associate professor M. A. Aliyev, associate professor H.I. Hamidova according to -human resources management is related to the scientific organization of work. Human resources management plays an important role in adapting measures for the scientific organization of labor to the characteristics of the business entity.

New Trend, Illegal Migration from Turkey to The USA

Emrah CENGİZ

University of Duisburg-Essen
emrah_ceng12@hotmail.com

ABSTRACT

United States' southern border has been witnessing a record increase in illegal entrance of Turkish citizens. According to the border patrol agents, during the 2022 fiscal year, 15.445 Turkish citizens entered the country illegally through the US-Mexican border, particularly through the border crossing at El Paso. Although it has not gotten much attention in media and academic studies mainly because there are other nationalities constituting higher numbers of migrants entering US illegally such as Mexicans, Venezuelans, Nicaraguans, the rate of increase in the number of Turkish citizens entering the United States illegally is alarming. While the main reasons of the high numbers of people migrating from Erdogan's Turkey seem to be the general insatiation regarding economic and political problems, substandard working conditions, underdeveloped fundamental human rights protection system and other deficiencies in the country, United States' prestigious image in the world, decent working conditions, strong economy and promising future can be counted among the main reasons that migrants prefer it as destination country. The surprising rise of Turkish citizens choosing Mexico as a transit country to enter the States is attributed to the transnational criminal organizations' connections to Turkey. The dire circumstances Turkish people experience and their endeavor to somehow "get out of Turkey" plays into the hands of cartels. The article points out this multilateral phenomenon and sets forth the push and pull factors of the recent migration trend from Turkey to the United States over Mexico.

Keywords: New Trend, Illegal Migration, The USA

Introduction

International migration has continuously grown and found its way despite all measures taken by the states choosing to perceive international migration as a phenomenon can be averted unilaterally. Many experiences have shown that neither setting fences through borders nor building walls is the ideal way to manage migration. As few scientists have recommended, global cooperation in migration stands as one of the most efficient ways to make the best out of migration instead of perceiving it as a “problem” and trying to stop the international movements of people (Hollifield, 2004; Straubhaar, 2000). Today, almost all countries on the earth are somehow affected by international migration. In this regard, Türkiye constitutes a special example as it has all the three following aspects: sending country, transit country, receiving country. Türkiye has been a sending country particularly since the beginning of the second half of the 20th century. Germany, France, the Netherlands, Belgium and some other European countries and the United States are among the primary destinations of migrants from Türkiye. With the conflicts in the Middle East, particularly in Syria, Türkiye’s role as receiving country has gotten greater while the same reasons have made it one of the most popular transit countries in the world. Migrants from Syria and other countries in the region aimed Europe passing through Türkiye. Noticing that, the EU has stroke a deal with Türkiye which provides the migrants passing to EU through Türkiye to be kept in Türkiye in return of some economic and political incentives. This has led an even bigger accumulation of migrants in Türkiye. According to the latest data provided by the Turkish Directorate General of Migration Management (DGMM), there are more than 5 million foreign nationals present in Türkiye, 3.7 million of whom are seeking international protection(IOM).

As mentioned above, besides its receiving country and transit country titles, Türkiye is also a country from which many people have migrated to other countries. While most of these migrants head to Europe, records show that the number of migrants from Türkiye to the United States is on rise as well. While many well-educated, qualified Turkish citizens have been looking for employment opportunities abroad to escape from the country, low-skilled people and the qualified ones who could not make their way abroad legally tend to resort illegal channels to enter the country they wish to migrate to. This paper particularly elaborates the rise in Turkish citizens migrating to the United States illegally over Mexico.

According to the data provided by the US Customs and Border Protection, number of Turkish people who were encountered entering the United States illegally over Mexico in 2022 fiscal year has reached over fifteen thousand, more than ten times higher than the ones of 2021 (Isacson, 2022). One of the primary reasons behind this increase is the connection between the Mexican cartels and their representatives in Türkiye. Hence the despair of Turkish people plays into the hands of transnational criminal organizations.

When it comes to the reasons behind Turkish people’s choosing United States as destination country, the fact that United States is at the top of developed countries, the positive image of the United States in the globe regarding respect to human rights, rule of law, equality and freedom, and better working and living conditions can be counted (Isacson, 2022). It is worthwhile to note that most of these pull factors in the United States are the areas in which Türkiye fails to provide satisfactory outputs. Not less importantly, the fact that the existing Turkish people in the United States reduce transaction costs of migration for their relatives and

acquaintances leads network migration and charms more people from Türkiye to the United States.

Not having global regulations in migration, states' different and occasionally conflicting migration policies, lacking of global international cooperation in managing migration leaves people alone with human smugglers, transnational criminal organizations, dangerous journeys and more hazards in different parts of the world. This study focuses on one of these cases, the raising number of Turkish citizens entering the United States illegally over Mexico. This study does not aim to put forth all the reasons and motivations behind the rising migration trend from Türkiye to the United States. It aims to provide general information on these cross-border movements and find out the main motivations behind the migrants' decision on migrating from Türkiye to the United States. In this regard, alongside analyzing different sources in the subject such as reports, articles, news etc., in-depth semi-structured interviews with 22 migrants who have chosen to migrate from Türkiye to the United States illegally over Mexico were conducted. The main objective of the interviews were to gather information from the first people regarding the practical side of the migration trend and find out the motivations behind the interviewees' migration decision. The interviewees were recruited randomly via casual encounters be it in a restaurant, in the street and through other social interactions. The interviews were held in New York City. Although it was not intentional, all of the interviewees were males. The ages of interviewees were between 22 and 47.

In what follows, after drawing a picture of the general situation at the US-Mexican border, details about the increase in the US Customs and Border Protection officials' encounters to Turkish citizens at the US-Mexican border will be elaborated. After providing the information on the rise of Turkish citizens at the United States border, the motivations bringing these migrants from Türkiye to the United States will be shared. Following that, highlights from the interviews will be listed and the study ends with a conclusion wrapping up the findings.

The Rise of Turkish Migrants at the US-Mexican Border

The US-Mexican border has been one of the most dynamic borders in the world. Despite the relative decrease in the last years, Mexico still constitutes to be the country sending the highest number of migrants to the United States (Isacson, 2022). Although Mexico's own citizens take the first place in the list of nations migrating to the US, they are not the only ones using the route. Many Central and South American countries' citizens use Mexico as a transit country to reach the United States and increasingly, people from all over the world have joined the ones entering the United States over Mexico. Transnational criminal organizations have a significant role in smuggling both Mexicans and other nationalities in the United States. The migrants pay high amount of money to the *coyotes* for facilitating their entrance to the United States (Rohrlich, 2019). In the recent years, Turkish citizens also have been using this way to enter the United States illegally. Based on the data provided by the US Customs and Border Protection, the diagram below was created to provide a better explanation as to the share of different countries in entering the United States illegally over Mexico. Figure 1 shows the top source countries the numbers of migrants from which have risen in 2022 fiscal year, and Türkiye's share in them (Isacson, 2022).

Figure 1 : Nationalities of migrants encountered at the Us-Mexican in 2022 fiscal year

As explained above, the countries being showed in the diagram are the ones which sent more migrants to the US in 2022 fiscal year than the 2021 fiscal year. Therefore, countries such as Brazil, Ecuador, Honduras were not included in the diagram despite the fact that there are large numbers of migrants from these countries entering the US over Mexico, because the numbers of migrants from these countries have decreased in 2022 fiscal year compared to the numbers in 2021. As one can see in the diagram, despite the record increase in Turkish migrants arriving in the United States over Mexico, the proportion of them among total number of migrants crossing to the United States via Mexican border is quite small. This fact causes lack of attention to the drastic rise in Turkish migrants as even the number after the rise constitutes a seemingly (and for now) small one in the big picture. However, as can be seen below, the drastic increase in migration from Türkiye can turn into a crisis in a short time if it keeps the same rate. Only between 2020 and 2021, migration from Türkiye to the US over Mexican border multiplied thirteen-fold and between 2021 and 2022 eleven-fold. 77% of these migrants were single adults while unaccompanied children constitute 1% of the total number. Almost all Turkish migrants have preferred El Paso and the surrounding area to enter the United States (Isacson, 2022). The numbers of Turkish citizens encountered by the US Customs and Border Protection at US-Mexican border from 2020 till 2022 fiscal years and the expected number in 2023 fiscal year with the same rate are as following:

2020

109

6th International CEO Communication, Economics, Organization & Social Sciences Congress

2021	1.409
2022	15.445
2023(expected)	153.947

The expected number in 2023 was established based on the rate of increase between 2021 and 2022 fiscal years without taking any variables into consideration. It must be recalled that mathematical expectations do not necessarily match the actual situation and the expected number for future years are extremely high based on the last couple of years. However, bearing the worsening situation in Türkiye in conjunction with Turkish Lira's continuous lose of value against common currencies such as dollar and euro, and the fact that Title 42, the covid-era rule that let the US expel refugees before they could seek asylum is no longer enforceable in mind, the number of Turkish citizens entering the US over Mexico in 2023 fiscal year can also be higher than stated above. Under the following titles, details on the motivations behind the migration trend from Türkiye to the US over Mexico will be elaborated. Although this study was intended to focus on the pull factors in United States attracting Turkish citizens, because of the interwoven structure of reasons behind Turkish citizens migrating to USA and the reasons for their decision to emigrate from Türkiye, the research to some extent inevitably gives place to the push factors in Türkiye, too. For instance, the interviewees frequently mentioned United States' respecting human rights more than Türkiye among the reasons for their migration from Türkiye to the United States. In this case, lack of respect for human rights in Türkiye can be counted as a push factor while advanced level of United States in respecting human rights is a pull factor.

Push Factors

Today more than ever, migration is a global phenomenon which requires global cooperation and regulations(Hollifield, 2004). People from different parts of the world migrate across borders(mostly from South to North) because of diverse reasons including religious, racial, ethnic and cultural persecution, education, income inequalities, political unrest, war etc. Besides that, global warming and its impacts on certain vulnerable geographies trigger new types of migration flows.

Different emigration incidents since the establishment of the Republic of Türkiye including the mass migration trends of Turkish citizens to European countries, particularly to West Germany in the second half of the 20th century are among the reasons that Türkiye is traditionally known as an emigration country(Kirişçi, 2007). Migration flows from Türkiye to developed European countries such as Germany, France, Netherlands, Belgium, Austria still continue in different forms, be it family reunion, study, work, refuge or other reasons.

The restrictive governance in conjunction with severe pressure and intolerance against the people supporting opposition parties in Türkiye are among the top reasons pushing people to seek the ways to migrate in another country. As a concrete example of the pressure on the opposition, the following incident can be given: In the time of writing, Ekrem Imamoglu, the mayor of Istanbul who has won the last election against AKP and who is seen as a potent opponent for Erdogan in the 2023 elections has been sentenced to jail for 2 years and 7 months and has been imposed a political ban. The limitations imposed by the government in freedom of speech, fairness, employment based on competence in public institutions etc. can motivate people to look for a different place to live in. The answer of an interviewee(the majority of the

interviewees answered this question with similar words) to the question “What made you consider migrating abroad?” was as following:

“I have noticed that the leading party in Türkiye is completely closed to any type of criticism from the people, the ones who think differently than the government face pressure, restrictions including imprisonment in some cases, there is no freedom of speech, the governmental system is corrupted and it is getting worse and worse. There is no sense in living under those conditions.”

Turkish economy have been going through hard times in the last years, particularly after 2018. The friction between Türkiye and the United States following the failed coup d’etat in Türkiye in 2016 exacerbated its economy. The recession shows itself with sharp decrease in the value of Turkish Lira, high inflation rate, increasing borrowing costs and correspondingly increasing loan defaults. Only in 2021, Turkish Lira lost 44% of its value(Turak, 2022). Dire economic, working and living conditions in Türkiye were frequently mentioned while counting the reasons behind interviewees’ decisions to migrate. One of the answers to the question “How would you evaluate the current economic circumstances in Türkiye?” was:

“We used to wake up almost every day with another news simply telling us that affording a normal life in Türkiye was more difficult. Prices of households, food and other things people need in everyday life has been going higher and higher while the income people get has not risen at the same speed. The minimum wage in Türkiye has been doubled with the last decision but even that does not help because the expenditures increase exponentially in a very short time. So we could not afford to meet even the basic necessities of an average family although we worked really hard and under really severe conditions, without proper protection.”

The frictions in society in Türkiye and the belief of exclusion of Kurdish people are one of the greatest reasons behind certain groups’ will to migrate from the country. A significant proportion of the interviewees consisted of Kurdish people. As a republic that was born from the wrecks of an empire and that has a prevailing Turkish nationalism in a large proportion of its population, Türkiye does not have a bright history in terms of respect for Kurdish people’s rights. As part of oppressive attitude of Türkiye against Kurds, speaking Kurdish and listening Kurdish music were banned in Türkiye in 1980s.

One of the interviewees’ answer to the question “What made you consider migrating abroad?” was:

“I decided to migrate from Türkiye earlier this year, when I was fired from my construction job because the foreman heard me talking to my mom on phone in Kurdish . I tried to explain that the only language my mom talks is Kurdish and there is no any law forbidding speaking Kurdish now, but they did not listen to me and fired me that day. That is when I felt need to seek future in another country.”

Kurds from Türkiye have greater hopes for their asylum applications being accepted by the developed democracies once they succeed entering in one of them and submitting their applications because the requirements of international law. The 1951 Geneva Convention relating to the Status of Refugees describes a refugee as a person who:

“As a result of events occurring before 1 January 1951 and owing to well-founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group or political opinion, is outside the country of his nationality and is unable or, owing to such

fear, is unwilling to avail himself of the protection of that country; or who, not having a nationality and being outside the country of his former habitual residence as a result of such events, is unable or, owing to such fear, is unwilling to return to it.” (United Nations, 1951).

With the 1967 Protocol relating to the Status of Refugees, the words “As a result of events occurring before 1 January 1951 and“ and “...as a result of such events”, in article 1 A (2) of the Convention were omitted for the people becoming refugees as a result of events after the mentioned date as well.

The United States is not a signatory of the 1951 Geneva Convention however it is a signatory of the 1967 Protocol and Congress adopted key provisions of the Geneva Refugee Convention including the international definition of a refugee into U.S. immigration law with the Refugee Act of 1980(Rescue.org, 2022). Therefore, the Kurdish interviewees who had proof of being persecuted in Türkiye because of their ethnicity, membership of a particular social group, political opinion and other abovementioned characteristics were seemed to be confident that they would get protection from the United States and that they would live Gere more freely. This conviction is one of the most powerful motivations behind Kurdish people’s migrating to the United States from Türkiye in high numbers.

It is worth mentioning that although among the migrants entering the United States over Mexico in the last years, there are people from many cities in Türkiye, the majority is from one particular city, Agri. 13 out of the 22 interviewees employed in this study were from Agri while the rest were from cities around Agri and 2 were from the south of Türkiye. Agri is an Eastern Anatolian city that has a large Kurdish population. The interviewees noted that the reason so many migrants taking this path to the United States are from Agri is that the connections of Mexican-originated transnational criminal organizations in Türkiye are from this city and the word spreads fast among the people, especially thanks to the advancements in communication technologies. As a result, once a few people made the journey, other people in the area heard about it and many of them took the same way.

Pull Factors

Although the main idea behind many people’s migration decisions is “to get out of Türkiye”, they do not want to go to just any other country. As mentioned before, most of the migrants from Türkiye prefer to migrate to the developed industrial countries where they hope to have a better life. According to the interviewees’ responses, United States is among the most desired countries for Turkish citizens because of several reasons including;

- US is known in the world as a country with the people coming from different backgrounds and geographies, ethnicities, religions etc. which leads respect for diversity. Therefore, just like millions of people in other regions, many Turkish citizens want to live in US knowing that they can easily fit in this multicultural community.
- The reputation and stability of dollar combined with an economy that is marked by steady growth and low inflation are among primary pull factors in US.
- US has a low unemployment rate, abundance of sectors to choose for a career and attractive working conditions that allure people from all over the world including Türkiye.

- A well-developed legal system, properly functioning principle of rule of law and reliable judicial system are other attractive sides of US for migrants.
- The leading medical developments and respected educational system in US offer a promising future especially to the people from developing countries like Türkiye.

Technological advancement is one of the most influential determinant in our age when people choose a place to live. Rapid advances in technology in US makes it a desirable destination for migrants from all over the world including Türkiye.

- Narrowing down the angle on just Turkish citizens, an important pull factor is that some people have either a relative, friend or acquaintance/s in US who would reduce the transaction costs of migration for those people and this seems to be a crucial factor motivating people to migrate to the United States from Türkiye.

The answer of one of the interviewees to the question regarding why he has chosen United States as destination was:

“I studied bachelor degree in Türkiye but I have been unemployed for years. United States has plenty of good job offers for a young person like me. United States is known as the country of freedom. Nobody judges me for my opinions, the political party I support, my look, religion or language. I made some research on the United States and I thought i must live here at all costs. Unlike in Türkiye, you do not need to worry and get stressful about the future, the vagueness of your career, the economic situation here but you can actually enjoy the life as it is supposed to be.”

Another one underlined the stability of dollar and of economy in general.

“As far as I know, United States is the strongest country in the world in terms of economy. Economic advancement and stability have a crucial impact on the quality of life. I have been here only for 1 week and I can already see that people here are happier and more comfortable in general. Almost everyone in Türkiye is concerned about their future because economy gets worse every day, Turkish Lira loses value everyday and no one knows how far can this worsening go. I do not see any indicator of improvement in future. That is why I prefer here(United States) over Türkiye.”

It is worth noting that not all the Turkish citizens crossing the US-Mexican border are intended to stay in the United States. A significant number of these migrants enter the United States for reaching Canada. At this point, United States is not only a destination country for Turkish citizens but also a transit country in their migration route to Canada. The reasons for the migrants' choosing Canada over United States as a destination country vary. The most common reasons include the fact that Canada has an even better image than United States in some people's minds in Türkiye, Canada's being known among the migrants as a country with an easier and shorter process toward residence, family reunion etc. and some migrants' having acquaintances in Canada. 6 of the 22 interviewees stated in the interview that they would not stay in the United States and they would be continuing their journey to Canada after spending a few days in United States. One of the interviewees answered the question regarding his choosing Canada over United States as a destination country with the following statement:

“I have some relatives in Canada and they told me that Canada helps asylum seekers economically, that I could get residence permit in 2 years and already start the family reunion procedures. Without knowing someone who would support me during this period, I do not think staying in the United States is a good idea for me.”

Why Over Mexico?

Despite the fact that Mexico is known as the country sending the most irregular migrants to the US, its transit country role is getting more and more crucial and being the transit country for the migration from Central America to the United States has been a significant policy priority in Mexico (Alba, 2013). In fact, today Mexico is not only the main transit country only for the migration from Central America to the US but also for the migration from countries in other continents thousands of kilometers away including the case of this paper, Türkiye. Mexico is known as the country providing the easiest way to enter the US for Turkish citizens with the involvement of transnational criminal organizations.

An interviewee answered the question “How did your journey from Türkiye to the United States progress?” as follows:

“Some of my relatives migrated to the US using this way and I decided to do the same. I contacted to one of the guys who arrange the journey from Türkiye to the US and paid him 5.000\$ as the first installment. They arranged the tickets etc.. I flew to Istanbul and from there to Mexico City. They sent my photo to the guys at border control. So they let me pass without a problem. Then they took us to a city called Juarez. I stayed in a hotel they arranged there for 2 days. After that, they took us to the border crossing point where they had partners among the passport controllers. They have sent our photos to those controllers beforehand. So he recognized us and let us pass the border. After passing the border, I sent a video to my family telling that I was in US territory and they paid the other 5.000\$ to the guy who arranged the flights etc.. After sending the video, I went to the US police and surrendered. They sent me to a camp in Texas after keeping me for one week somewhere around the place I surrendered. I spent 75 days at the camp and then they let me go.”

Lacking of ideal working conditions in Türkiye and limited visa opportunities offered by the developed industrial democracies leaves the illegal channels to enter those countries as the only way for the ones who are determined to migrate. The illegal way to migrate to the United States over Mexico has been spread across Türkiye by word of mouth which is likely to motivate more people to take the same journey. Many of the migrants I have conducted interview with had bachelor degree. Most of them stated that they have tried to get visa and migrate to the United States legally however their applications have been declined and they lost their hope in getting a visa. I quote answer of an interviewee to the question “What made you choose this way of migration?:

“I have bachelor degree. After realizing that I would not find a possibility to get a job in my field in Türkiye, I have decided to get a student visa and study master degree in the US however my visa application was declined. So, migrating here over Mexico was the only opportunity I had.”

Conclusion

With the developments in communication technologies and transportation, increasing gap between developed and underdeveloped countries, wars, and the ever-growing adverse impact of global warming and environmental changes in certain areas, international migration has risen, and indicators show that this rise will continue in future. The question is, if the states will cooperate with each other to make these migratory movements orderly and regular or will they keep following diverse and often conflicting migration policies pushing migrants to illegal ways of entry and dangerous journeys. The case has been studied in this paper is Turkish citizens' migration to the US over Mexico with the involvement of transnational criminal organizations. The findings show that while the reasons people migrate from Türkiye include economic recession, backsliding in democracy and human rights, restrictive governance, intolerance and frictions in the society, lacking of job opportunities and low income, the main motivations behind choosing United States as destination country are the positive image of the United States in international arena, diversity of the community, advancements in technology, abundance of job opportunities, medical developments, respect for human rights and rule of law, and presence of relatives and acquaintances who would reduce the transaction costs for migrants.

ABSTRACT

The first evidence of advertising was found among the ancient Babylonian empire and dates back to the 3000s BC. Some experts who analyse the marketing business oppose this view. There are two major polarities on this issues, one side believes that advertising is harmful advertising does not affect society in a negative way. Advertising pops up everywhere even in the most intimate of spaces, our home. Advertisements are designed to “attract attention, change attitude and to command our behaviour”. Advertising is a business, an art, an institution and a cultural phenomenon. It helps the consumers to see the possibilities and meanings in the things that they buy. In Indian market advertising has a very influence in the mass media market place as it plays most of the bills and thus plays major role in shaping the content. It promotes a higher quality of goods through the ability of the consumer to identify a particular manufacturer. A variety of techniques are used in advertising, starting with a basic appeal, which is the main selling point or theme of an advertisement. The most used techniques are:-

- 1) Attention getting headlines.
- 2) Competition.
- 3) Slogan.
- 4) Testimonials.
- 5) Product characters.
- 6) Comparison of products.

On the other hand, advertisements effect our society and lifestyle in many ways. The first question arises is that how many advertisements have you seen in your life? The average person’s sees between 280 to 300 advertisings per day. By this, the advertiser’s intention is to try to get into your mind and influence your thoughts and decision.

Keywords: Advertisement, Techniques of Advertisement, social Effects of Advertisements, Consumer Awareness.

INTRODUCTION

ADVERTISING

Advertising is a means of communication with the users of a product or service. Advertisements are messages paid for by those who send them and are intended to inform or influence people who receive them, as defined by the Advertising Association of the UK.

Advertisements are a guaranteed method of reaching an audience. By creating an engaging ad, and spending enough to reach your target users, advertisements can have an immediate impact on business. This effect could be seen in improved trade or boosted brand recognition, among many different metrics.

Advertising is very useful, not just to producers but customers as well, and even the society at large. Advertising performs many functions in the society such as, giving information about the benefits of a product or service, which influences, targets or aims the attitudes and behaviours of customers by using different media outlets to capture their attention.

“Advertising is fundamentally persuasion and persuasion happens to be not a science, but an art.”

In support of advertising as science, many advertising professionals point out that advertising creation and development is driven by specific brand and product goals, not purely from creative vision. Not having complete creative freedom on the advertising design coupled with the requirement to deliver brand and product goals limits creativity and expression thus making advertising more of a science. One of the newer arguments on the side of science is about evolving capabilities in tracking and analytics through just about every step of the advertising process.

Both art and science supporters have an abundance of reasons and rationale for their claim.

Positive social effects of advertisements:

1. Informed society: through advertisements, the society is informed of various products or services, their uses, best bargains, detail information, safe handling, technological advances etc.
2. Health and hygiene awareness: the advertisements on health drinks toiletry products, sanitary items etc. make the people become aware of health and hygiene.
3. Rights of consumers: rights of consumers are made aware through advertisement.
4. New ideas: new creative ideas are gathered from various advertisements which render an effective service.
5. Quality Consciousness: Information regarding product, process or even work, investments etc. is promoted.
6. Social changes: accepting women as equals, empowerment of women, concern for the girl child etc. are created through advertisements.
7. Advertisements contribute to creativity: the art of creativity comes from advertisement which creates new ideas and thoughts among the society.

Advertising plays a very important role in the society; be it the producers, the traders or consumers. Some advantages to customers:

- Advertising enables customers conscious and aware of what is new in the market or an existing product. If the products are not advertised customers will not be aware of what is going in the market;
- Advertising also helps customers find the product that's best for them. When they get to know about the range of products, they are able to compare and buy what is best for them;
- Advertising is also vital to producers or sellers of the product;
- Advertising helps increase in sales of a product;

- Advertising helps companies aware of their competitors in the market and how they can better their product;
- Advertising is the foundation for any company to launch or release a new product;
- Advertising helps create customer loyalty;
- The demand for a product is a result of advertising.

Main benefits of advertising towards society:

1. Helpful in Generating More Employment:

Advertising is instrumental in generating more employment opportunities and creating diverse kinds of jobs. It provides jobs to artists, screen printers, block-makers, script-writers, painter, etc. Today, advertising has become a profession. Some companies do only advertising job.

2. Helpful in Improving the Standard of Living:

Through the medium of advertising people get information regarding new products. As people use these new and latest goods, their standard of living gets a boost. Advertising is helpful in providing employment and increasing income of the people. Both have a positive effect on their standard of living.

3. Helpful in Survival of Communication Media:

The main communication media are Newspapers, Magazines, T.V., Radio, etc. Major source of their income is advertising. If these media of communication do not get support of revenue from advertising, they cannot survive for long. These media of communication keep the society well informed. Their existence is of utmost important and they can survive only by advertising.

4. Helpful in Creating Healthy Competition:

When a company gets its product advertised, it seeks to improve its quality and lower its price. It is their endeavour to improve their own product rather than finding fault with the product of

their rivals. In this way a healthy competition prevails in the market and the entire society stands to gain from it.

5. Helpful in the Economic Development of the Country:

Today, the effect of advertising is no longer confined to the four walls of the country, rather it has crossed the national boundaries. Through the medium of satellite, domestic advertising messages can be transmitted to the rest of the world. As a result, export-potentials of the country get a big boost. Foreign exchange capacity of the country increases and new industries develop. Thus, advertising proves helpful in the economic development of the country.

Some tag lines with its effects:

1) “Customers buy for their own reasons, not yours.”

Advertising is informative. It tells the public what goods are available, in what varieties and at what prices. It is a very competitive industry, with creative minds vying with each other to find new and attractive ways of appealing to what the public is looking for, and of emphasizing the merits that people seek in the goods they buy.

Encouraging consumers to choose the products that are best for them, advertising, at least in democratic nations, allows individuals to learn about the wide variety of lifestyle and political choices available to them and choose the ones that they find best.

1) “Advertising is the glue that holds our culture together.”

It plays a role in social change. It celebrates change and internalizes change for those who become better by using a certain product/service. In short, advertising is the voice of technology; because of that it represents the intention to affect life.

2) “Advertisements sell a great deal more than products. They sell values, images, concepts and dreams.”

Advertising in India has created an incredible awareness among the people in the past decade growing into big industry. It was grown along with the press and today it has found its way into the other two media - Radio and Television.

Critics attribute an awesome ability to advertising to persuade millions of Indians to do almost anything. Advertising has been accused of causing, either directly or indirectly:

- (a) An escalation in the national crime rate;
- (b) An increase in communal riots;
- (c) A decline in the respect for leadership of every kind;
- (d) The employment of strategies for the manipulation of children;
- (e) The use of sub-threshold effects to slip messages past our conscious guard,
- (f) A deliberate sale of products for their status-enhancement value;
- (g) Illogical irrational loyalties;
- (h) The exploitation of our deepest sexual sensitivities and

(i) The application of the insights of depth selling to politics.

There are, essentially, three challenges to advertising:

(a) First, advertising is challenged on the aesthetic front; the “bad taste” argument exemplifies this line of attack;

(b) Second, advertising is challenged on the moral front; the charges here range from exploitation of sex to those of “creating” wants;

(c) Third, advertising is challenged on the economic front; its effect on prices, its influence on the rigour of competition; in short, its effects on the allocation of scarce resources.

Some criticism of advertisement on social:

1. Advertising is frequently false and misleading.
2. Advertising concentrates on selling products to people they neither need nor want.
3. Advertising exhibits bad taste.
4. Advertising stresses small and insignificant differences between products and has resulted in an unnecessary and wasteful proliferation of brands.
5. Advertising is too persuasive.
6. Advertising can be used, to take advantage of children (bad effect on children).
7. Much advertising is irrelevant and unnecessary.

Conclusion

Advertising holds great power. It is a form of art, and art is powerful, thus influential. The Indian audience and consumer base is highly emotional and value centric, and thus comparatively easy to mold. Advertising has diverse effects on the society and its values both negative and positive.

ABSTRACT

Colonization through weapons can only go as far as the weapons last. However, subjugation through mind control will last until a new thought process is developed to challenge it. The English Raj in India understood this soon enough to divert their attention towards 'educating' the indigenous people of India. The colonial education system, which the Indian government still follows to this day, was designed more to legitimise the English rule in India and to streamline the process of economic exploitation, rather than to actually educate the people of the country. This was also a conscious attempt by the Raj to indoctrinate the Indians into believing the superiority of the west while undermining their own tradition and culture. The consequence of such indoctrination, they imagined, would lead the Indians to accept the dominance of the colonizers without ever questioning it. Hence, in the words of the President himself of the General Committee of Public Instruction, which was set up to impart English education to the Indians, he was looking to create a class of Indians who were "Indian in blood and colour, but English in tastes, in opinions, in morals and in intellect." This paper, therefore, attempts to shed light on how the colonizers destroyed the traditional Indian education system and replaced it with their westernized English education system, in order to strengthen the political and economic dominance of the colonialist country over the colony. This paper would also attempt to explore, how many of the modern day problems that exist in India is the direct result of such colonial indoctrination and why decolonisation of mind is the need of the hour.

Keywords: Colonial Education, British Colonialism, Cultural Imperialism

Introduction

Colonialism by its very nature is exploitative. So even if the colonial education bore some positive outcomes for the colonized population, it should not be forgotten that the same was actually a colonial tool to strengthen the rule of the foreign masters over their colonies. Physical enslavement is limited and often invites rebellious demeanor towards the one who enslaves. This risk factor, however, is not much present when the enslavement is psychological. Therefore, colonization by controlling the minds of the colonized people using education, was seen as a better and an effective method as compared to using physical coercion which was much more expensive but with a limited outcome. Psychological enslavement is a method of subtle indoctrination where the subject is made to forget that they are under the control of a foreign power in an exploitative relationship. Education played an important role here in the form of a tool to brainwash the colonized subjects into believing that the colonial rule was not all bad and that it had uplifted the colonies in certain ways and therefore it was much needed. In case of India, the English colonizers had a similar vision where they wanted to produce a class of Indians who would earnestly believe that the elevation of their own country would only be possible under the aegis of the English rulers and hence would be loyal to them. Colonial Education in India, therefore, was aimed more towards naturalization and legitimization of the colonial rule in this colony, rather than to genuinely educate and enlighten the people here.

Methodology

This paper primarily aims to address the questions of How the English Colonialists used western English education not only as a tool to strengthen their rule over India but also to streamline their exploitation of Indian resources. This paper will also look at how the colonial education had destroyed the Indian indigenous system of education and heavily influenced the minds of the Indians, the effect of which can be seen to this day. Therefore, in order to study the ways in which colonial education was propagated into the Indian society, some primary sources along with some secondary historical works would be used. Among the primary data, survey reports by the company officials and missionaries to study the state of indigenous education, would be used. Some personal letters and biographies of various company officials and scholars would also be relied upon. Among secondary sources, scholarly works of historian Bipan Chandra, B.D Basu and work of Gandhian thinker Dharampal would be referred to.

Colonial Education: Philanthropy Or Exploitation?

The English colonial government's effort to propagate English and Western scientific education among the indigenous population of India came more out of their own needs than out of the desire for philanthropy. Historian Bipan Chandra stated that, the colonial education in India, like the railways, was aimed more towards exploiting the country rather than for developing it. [Chandra, 1979, p.49] The truth of this statement can be proven from the writings of a contemporary historian B.D Basu who stated that, initially the English government had no interest in educating the Indians, all they were concerned about were trade and commerce. Indeed, educating the Indian subjects did not hold much importance in the eyes of the British in the initial phase of colonization, when the English East India Company (EIC) was only interested in extracting resources from the Indian soil. This initial phase, which historian Bipan Chandra identifies as the time period between 1600 and 1757 was the 'Mercantile' phase. During this time, the English East India company procured finished goods from India, namely spices, textiles and craft objects, and sold them back home and in other countries in Europe. India, during this phase enjoyed a favorable balance of trade since the number of exports from India to other countries was more than what it imported from outside, especially from Europe. This, however, was not liked by many people in England including novelist Daniel Defoe who

expressed with angst in his weekly newspaper 'The Review', how the clothes from the 'Heathen world' had crept into their houses. He said that, from his closets to cushions everything had some Indian item in it. India had a dominant status when it came to global trade. This dominance was also resented by the British manufacturers who then pressured their government to impose restrictions on items imported from India. Soon enough, heavy duties were imposed on the items that were imported from India. Hence, Indian export to England started to decline. Meanwhile, 18th century was also the period when English society started to witness a massive manufacturing boom, as a result of a phenomenon, popularly known as the industrial revolution. From being an importer of finished items from India, England soon turned into a giant exporter of its manufactured products. On the contrary, Industrial revolution transformed India from being an exporter of its products to becoming the biggest importer of machine manufactured items from England. India became the biggest market for England and along with it, the biggest supplier of raw materials for the industries in England. Henceforth, the truly exploitative phase of the English colonialism in India started.

Industrial Revolution, improved the social conditions of England. With more production and more export came more revenue. English populace now saw an improvement in their living conditions. After 1780s, population of England got doubled just within fifty years. This further put pressure for increasing the industrial production and thereby inducing a more rigorous exploitation of resources from the colonies. India being the biggest market for the industrially produced goods from England and being the largest supplier of raw materials for that industry, it was of utmost importance that the English colonial government in India had a strong administration on ground to ensure proper procurement and supply of the raw materials to the mills of England and also to prepare a strong market for the English manufactured goods. This is where, the English colonizers felt the need to educate the indigenous youths in India with English and western scientific education. They envisioned two possible outcomes from this. First, Indian youths learned in English and western philosophy and sciences would be able to become administrators in the departments of the colonial government in India and therefore run the Colonial Raj in India on the behalf of their English masters sitting in England. Secondly, the western educated youths who shared same tastes as the Englishmen, would become the market for the mill made items from England.

Charles Woods, President of the Board of Control of the East India Company, in his famous Despatch of 1854 called the "Woods' Despatch" stated that English education will ensure a 'higher degree of intellectual fitness' and will build a 'moral character' among the Indian youths that will ensure a regular supply of civil servants for the administrative duties, who can be trusted with the offices. These new Anglicized Indian employees, he added, will ensure a smooth running of the administration in India and therefore will ensure a regular supply of raw materials for the industries in England. [Basu, 1922, p.152-157] Woods' Despatch laid the foundation of the modern 3 tier education system in India with mandatory English education in the higher-level educational institutions. This same idea was also expressed by F. Warden, who was one of the Councilman in the Bombay government. Warden, who in his 'Minute' presented on 24th March 1828 stated that the propagation of the English education will be the 'lasting monument' of the English domination, also expressed that English education would 'ensure supply of men for state service'. [Basu, p. 70-72] The English colonizers were thus hiring Indians for colonizing Indians as it was a much more convenient method than having to train a few Englishmen and sending them off to India to rule an alien country with a population that runs in billions.

Encouraging the Indians to learn a foreign language like English while isolating them from their own mother tongues and cultural languages like Sanskrit was definitely not aimed at uplifting

the Indian Civilization but instead, to solve the language barrier issue of the foreign colonizers with the Indian population. English became the government language in India during the time of the former Governor-General, Lord William Bentinck who, it was said, used to communicate with the Indian Princes in English. Strangely enough Bentinck was against educating the Indians. After Charles Metcalfe took over as the Governor-General of India, he stated in his 'Minutes' dated 16th May 1835 that Lord Bentinck thought that educating the Indians would be dangerous. [Basu, p.63-65] Such a fear, however, was also expressed by some of the directors of the English East India Company. Journalist and historian, J.C Marshman stated before the Select Committee of the House of Lords that one of the directors of the English East India Company had said that they had lost America because they allowed the latter to have schools and colleges and that doing the same in case of India will also prove to be dangerous for the English rule there. Nonetheless, it was under the Governor-Generalship of Lord Bentinck that the famous 'Minute on Indian Education' of Lord Thomas Babington Macaulay was approved on March 1835. Macaulay's minute discussed why it was absolutely necessary for the Indians to be educated with English education and western sciences and why the English government should never invest in promoting the traditional learning of the Indians. He requested the government to not invest in printing oriental works like that of the Sanskrit literatures as he thought that the books of literature written in Sanskrit language were equal to those that were used for children at the preparatory schools in England. [Woodrow, 1862, p.107-108]. Macaulay devalued Sanskrit literature even though he himself admitted in his minute, that he had no knowledge of the language and therefore was not familiar with its literature. Lord Bentinck did not, however, approve English and European education for the Indians to make them knowledgeable, rather he wanted the curriculum to be designed in such a way that it will not only make the Indians educated but will also Anglicize and Europeanize them. Both Bentinck and Macaulay wanted to create a class of Indians whom the latter described as "*Indian in blood and colour, but English in tastes, in opinions, in morals and in intellect.*" This class of Anglicized Indians, they envisioned, would be loyal to the British empire and would truly believe that India could make progress only if it stays within the 'benevolent embrace' of the British Raj.

English industrial needs also prompted the Raj to have a permanent and strong base in India which would not be possible if the people of the country would constantly challenge the foreign rulers. Therefore, the need was felt by the English government to legitimize their rule in India. William Adam, a Scottish missionary, who was appointed to inquire into the status of indigenous education in the districts of Bengal and Bihar, addressed this problem. Adam wrote to Lord Bentinck that the status of their government was that of "*foreigners on a strange soil among people with whom no common associations exists*" [Long, 1868, p.340] He said that they were as alien to the Indians as the latter were to them. As a result, the Indians held no affection for the English government. Adam stated, that only through a "wisely framed system of public instruction" will the English government be able to bridge the gap between the rulers and the ruled. Charles E. Trevelyan, a British civil servant and the brother-in-law of Lord Macaulay also reiterated this need of 'naturalizing' the English rule in India through European knowledge and English education. This according to him will make the subjects to not feel the English rule to be alien anymore and therefore to present their unquestioning submission to the English suzerainty. Trevelyan suggested the English to follow the path of the Roman conquerors who not only extended their physical dominance over Europe but also spread their culture in the lands they conquered. Romans have 'Romanised' Europe in such a way that the subjects of the lands conquered were happy to ape the culture of the conquerors, rather than opposing them. Basu quoted Trevelyan saying "*The natives will not rise against us, because we shall stoop to*

raise them...”. Being an Anglicist, like Macaulay and Lord Bentinck, Trevelyan believed in the superiority of the West. He believed that the west was superior in every way in comparison to the east. Nonetheless, for the sake of proper governance, Trevelyan suggested that the English government should diffuse western knowledge among the Indians and co-opt them into the English culture in such a way that the latter gets swayed by the English way of life and starts perceiving their own indigenous culture as dark and regressive. He wanted a class of educated Indians to be formed, who would believe that only the English government could improve and uplift their society and therefore will ‘cling’ to them. [Basu, p.78] Consequently, this class of Indians would work their best to keep the Raj intact in India. Not to mention, this was also a cost-effective way of running a government overseas. Trevelyan mentioned in his work ‘The Education of the People of India’ that although the Europeans were superior, yet due to limited public revenue too many of them cannot be employed to look after the Indian administration and so in order to keep the administrative machine running, western educated Indians needed to be employed. [Trevelyan Charles E, 1838, p.156] This explains why the curriculum of the colonial education, which is still followed in India, lack so much in terms of nurturing an analytical attitude among the students. The English government simply wanted a system of education that would create skilled yet obedient labours for their administration. They wanted someone who would be intelligent enough to run the government efficiently and yet not erudite enough to question whatever they are being taught. The colonial government, after all, wanted labours who could work under them and not scientists who could work at par with them.

Education As A Tool For Colonisation

Education was a propaganda tool for the English to psychologically enslave the Indians by luring them into an over-glorified European culture while simultaneously isolating them from their own. This, they thought, would make sure that this new class of Indians who were groomed into being the ‘brown skinned English men’ would be loyal to them. Hence, started the ambitious project of rewriting the cultural and social structure of the Indian subcontinent through the medium of education.

The English wanted to design an education system that will not only isolate the indigenous Indians from their own tradition and culture but will also convince them about the superiority of the west. Now this would be possible, only if the indigenous population was made into thinking that everything about their own society and culture is regressive and that in order to uplift their life, they need to adhere to the western ideas and values. India presented a challenging case in this regard, since the subcontinent already had a very rich and glorious past that its population took pride in. When the Europeans landed on its shore, India was a country that had a very strong economy, a rich culture and a population that was both educated and opulent. The Europeans had very little to offer to the Indians, both economically and culturally. Therefore, in order to inject western ideas into the society, uprooting the traditional ideas and values were seen to be necessary. This involved misinterpreting, omitting and mistranslating the historical and religious works of the Indians.

Religion was a big part of Indian identity. It dictated the culture and the lifestyle of its population. So, in order to truly Europeanize the Indians, the need was felt to isolate them from their own religion. This is where the evangelists accompanied the colonizers. Christianity, like education, thus became a tool that enabled colonisation. In fact, this was the time when the whole of education and schooling system in England was controlled by the Church and the missionaries. This system was replicated in the colonies including India, where the onus of educating the population was usually handed over to the missionaries who then used to indoctrinate the people into submitting themselves not only to the Christ but also to the followers of the Christ. This was a symbiotic relationship where both the colonizers and the

missionaries enabled each other to capture and enslave foreign countries. Where on the one hand, the colonizers by capturing new lands prepared the ground for the missionaries to go and proselytize the locals. On the other hand, the missionaries through proselytization helped in naturalizing the colonial rule, since the people who got converted to Christianity automatically became loyal to the English government. As a matter of fact, most of the officials and scholars who were working for the colonial administration in India were missionaries themselves with a clear aim of Christianizing the country for the purpose of colonization. Lord T.B Macaulay, whose famous Minute on Indian education suggested the importance of teaching English and western sciences over the traditional Indian subjects, was one such official present in the colonial administration. He saw the western knowledge and English education as a vehicle for Christianizing the Indian subcontinent and thereby keeping it subservient to the English domination.

Macaulay wrote to his father Zachary Macaulay, in a letter dated 12th October 1836:

“The effect of this education on the Hindoos is prodigious. No Hindoo who has received an English education ever remains sincerely attached to his religion. Some continue to profess it as a matter of policy, but many profess themselves as pure deists, and some embrace Christianity. It is my firm belief that, if our plans of education are followed up, there will be not a single idolator among the respectable classes in Bengal thirty years hence. And this will be effected without any efforts to proselytize.” [Trevelyan G. Otto, 1876, p. 398-399]

Besides urging the colonial government to invest in promoting English education and western knowledge among the Indians, Macaulay also requested them to discourage the traditional Indian learning of Sanskrit, Arabic and Persian literatures. He thought the indigenous education was of no value and that *“a single shelf of a good European library was worth the entire native literature in India and Arabia.”* [Woodrow, 1862, p.107] This was a conscious effort to obliterate the traditional knowledge and ideas that might instil a sense of pride on the minds of the Indian youths. The colonial government thus tried to keep away from Indians, any kind of knowledge that could have invoked nationalism in them, thereby potentially threatening the existence of the English domination over the country.

In contrast to Macaulay’s suggestion for encouragement of English education, people like Monier Williams wanted the government to use traditional languages like Sanskrit, Arabic and Persian as the medium of instruction for imparting colonial education in India. Macaulay was part of the Anglicist group, while Monier Williams was an Orientalist. Unlike the former, Orientalists wanted Indian traditional knowledge to be ‘rediscovered’ and hence, they embarked on a journey to discover ancient Indian historical and religious texts like the Vedas and rewrite them in a new way to propagate among the masses. However, even in this case, the interest of the orientalists in the traditional Indian learning was purely out of the colonial needs. Monier Williams, who was the Professor of Sanskrit at the Oxford University, considered Sanskrit to be the only medium through which Christianity could be propagated in India. In his work titled *‘Hinduism’*, Williams predicted the demise of Hinduism and spread of monotheistic religions in this country. The Orientalists thus wanted to have a deep knowledge of the Indian cultural and religious texts so that it would become easy for them to manipulate the works as per their own convenience. This monumental work of ‘rediscovering’ of India’s past was taken up by one of Monier Williams’ esteemed colleague named Max Muller whom he defeated at the 1860 election for the chair of Boden Professor of Sanskrit at Oxford university. Regardless of the defeat, Muller, by the time of the election, had already won for himself a prestigious reputation for his scholarly edition of the Hindu religious text called the Rig Veda. Muller rewrote the Rig Veda in his own way since he considered it to be the root of the Indian civilisation, especially the Hindu civilisation in India. Hence, he thought, in order to transform the Indian society and

uproot the culture, one needs to strike at its roots. So, in the name of rediscovering of India's past, a new and distorted form of Indian history was written by someone who had never even visited the country of mention. This new colonially constructed history of India was definitely not aimed at informing the Indians about their glorious past, but rather it was focused on highlighting the evils of the Indian Hindu society that would subtly brainwash the modern English educated Indian youths to discard their own culture and religion.

In a letter written to George Campbell, a Scottish politician and the 8th Duke of Argyll on 16 December 1868, Max Muller wrote:

"India has been conquered once, but India must be conquered again, that second conquest should be a conquest by education." [Muller, 1902, p.376]

In another letter written to a German diplomat and a scholar called Chevalier Bunsen, Max Muller wrote:

"India is much riper for Christianity than Rome or Greece were at the time of St. Paul" [Muller, p. 190-191]

In the same letter to Bunsen, Muller also explained why spreading Christianity to India was important. He stated that whatever propagates in India soon spreads all across the Asia and, therefore, Christianity too could fully bloom in Asia if it uses India as its base. Therefore, Max Muller who was an evangelical himself, took interest in learning the culture of the Indians only with an agenda of proselytization and for strengthening the colonial rule here.

Muller's controversial Aryan Invasion Theory (AIT) successfully planted the seed of racial and regional conflict in the country that still exists to this day. By dividing the country into the 'Fair skinned Aryan north' and the 'Dark skinned Dravidian south' he wanted to destroy the unity of the population in India. This was in line with John Malcom's suggestion that '*Divide et impera*' (divide and rule) should be the motto of the English government in the Indian administration. [Basu, p. 188]. Therefore, without any credible evidence, Muller constructed the story of how a fair skinned race of foreigners called Aryans invaded the northern India thousands of years ago, by driving away the dark-skinned aboriginal inhabitants called the Dravidians. This, undoubtedly initiated a great animosity between the northern and the southern population of India and kept the country divided. This divide later culminated into violent Dravidian politics during the 20th century and even in the post-independence India. The AIT has since been challenged and debunked by various scholars due to the lack of proper evidence of an invasion. Unfortunately, this theory is still taught in schools in India which only proves how much of a civilizational indoctrination was carried out in this subcontinent under the colonial education system that the effects are still seen to this day.

Besides these subtle indoctrinations, direct political measures were also taken to actively discourage people from attending the indigenous educational institutions. The onslaught on the indigenous education started with the Charter Acts of 1813 and 1833, that made provisions for the missionaries to preach their religion and establish their religious institutions in India. English schools and institutions of Western higher education were mostly controlled by the Church and the government who made sure that the pupils attending those places forget about their own culture and accept the western suzerainty. These institutions were heavily funded by the English government who, on the other hand, made no financial contributions for the development of the indigenous educational institutions. The 1917-19 Sadler Commission, that was set up to inquire into the working of the University of Calcutta, also stated that most of the public funds were sent to the English government owned educational institutions and none was sent to the indigenous schools. Dharampal holds heavy taxation as responsible for the demise of the Indian indigenous education. He stated that, as the colonial rule progressed in the country, more and more villages got impoverished due to heavy taxation. All the indigenous enterprises,

including temples, were taxed heavily. This affected the indigenous learning since not only privately owned schools but even temples and mosques were places where traditional education were imparted. [Dharampal, 2000, p.44] Students were also actively discouraged from attending indigenous schools and colleges by the government. This was done by stopping the stipends of the scholars who used to attend such Indian institutions of learning. Moreover in 1844, Governor General of India Lord Hardinge passed a resolution making English education mandatory in India for securing government jobs. This was the last nail in the coffin of Indian languages which were then transformed into becoming the second language whereas English became the prime language of public communication. And since western education, with its literature and science, was imparted in English, the Indian literary and scientific works composed in Indian languages went into oblivion.

Education In Pre-Colonial India

Despite their attitude towards the indigenous education system, the English could not deny the fact that Indian society already had a culture of mass education where almost everyone had the ability to read, write and do basic mathematics. This was better than the situation of education in the European countries, especially in that of England and Scotland. Dharampal stated that popular education was uncommon in Britain, although it had many big universities. Rather, he said, till as late as the mid-19th century the most a person could read in England was the Bible and that the curriculum in school used to be limited to religious instructions and some basic arithmetic. [Dharampal, p.10-11] In contrast, pre-colonial India had the presence of both elementary schools and the institutions of higher education where even science and commerce were taught. Education here usually started from the age of five and was expected to continue at least till the age of fifteen. Curriculum included both secular and religious instructions. Elementary education of Hindus was mainly given in 'Paathshalas' whereas higher learnings were imparted in the 'Tols'. In case of Muslim education system, elementary education was given in the 'Maktaabs' and higher education was given in the 'Madrassahs'. A Scottish missionary by the name of William Adam, who extensively toured the various provinces in Bengal and Bihar from 1835 to 1838 to study the situation of indigenous elementary education in these areas, stated that almost everyone in these places could read and write. Adam in a letter to Lord Bentinck stated that unlike his own country Scotland where thousands could not read and write, India actually has a complete system of education. He referred to the presence of two institutions in the Indian education system where one was responsible for the common education whereas the other institution looked after the preservation of literatures that could be handed down from one generation to the next. [Long, 1868, p.2-3] Adam visited various districts of Bengal and Bihar and submitted three extensive reports about the presence of elementary schools in these areas. In these reports, he stated that there were around 1,00,000 elementary schools present in the villages of Bengal and Bihar in the 1830s [Dharampal, p.18] In Bengal's Midnapore area, he reported, there were elementary schools in every village that taught Bengali and accounts. [Long, p.35] In case of the Burdwan district, Adams wrote, there were only a few villages that had no schools [Long, p.45]. In another survey done in 1811 by the Committee of Superintendence, under the Governor General Lord Minto, it was found that, there existed 46 schools in the district of Nadia in Bengal. These schools were mainly run and funded by the local scholars or Pundits.

Surveys of similar nature were also carried out in other states which yielded similar results. In case of Bombay, in 1821, a member of the Bombay Governor's council, G.L Prendergast stated that there were hardly any villages here that did not have at least one school. Stuart Elphinstone, who was the Governor of Bombay, also stated in 1823 that villages without elementary schools were rare in Bombay. Towards the north, Dr. G.W Leitner, who used to be the Principal of the

Oriental college and government college in Lahore spoke very highly of the status of the indigenous education in Punjab. He stated that, there were not a single temple or mosque or a 'dharamshala' present which did not have a school attached to it. [Leitner, 1971, p.(i)] Leitner further observed that education in India was seen as a sacred duty that one must undertake. Down towards the southern part of the country, the governor of Madras, Thomas Munro in 1822 also ordered the district revenue collectors to enquire into the status of the elementary education in the state. The report that was submitted in 1826, revealed that there were at least one school present for every 500 people in the state. Contrary to this, England only had a few schools in the 1800s which were meant for the children of the common people. Therefore, in terms of mass education, India certainly was not lagging behind Europe. As a matter of fact, England even adopted some of the methods of teaching from India and then spread it across Europe. One such method that can be mentioned here is the 'Monitorial system' or the 'Madras system' of teaching. British educator Dr. Andrew Bell adopted this method of teaching from the system that was followed in the elementary schools in Madras where the abler or the advanced students used to help the teacher by teaching the less able students. This technique of pedagogy was also observed and recorded by Mr. Alexander Duncan Campbell, who used to be the collector of Bellary district in Andhra Pradesh. In his report not only had Mr. Campbell shown a lot of appreciation for this system of teaching but he even wished this method to be imitated in the schools of England. [Basu, p.13]

Besides the elementary schools, there were also present institutions for higher education like the modern-day colleges. The city of Rajahmundry in Andhra Pradesh had the largest number of such institutions. Rajahmundry reportedly had 279 such 'colleges' present that supported 1,454 scholars. This was followed by Guntoor with 171 'colleges' supporting 939 scholars and so on. In the Malabar region, one such college was also maintained by Raja Samudrin, also known as Zamorin, who used to be the monarch of the region. [Dharampal, p. 33-35] In the districts that did not have such institutions, knowledge was imparted either in the private residence of the teachers or through private tutors at the residence of the student. Speaking of the curriculum, it usually was multidisciplinary where students were taught various necessary skills and knowledges. Multidisciplinary approach to education is much venerated in the Indian culture where even the Hindu God Lord Krishna is celebrated, for his ability to master 14 types of 'Vidya' (knowledges) and 64 types of 'Kala' (skills) within just 64 days unlike any human being can. Most ancient universities of India also had a multidisciplinary system of education where students along with the knowledge of religion and science also used to learn various technical skills and art forms for their overall development. Education and literacy were, therefore, not unknown to the Indians. In fact, ancient India housed some of the most prestigious universities like Nalanda and Takshashila, where students from all across the globe used to come for their education. A 7th century Chinese scholar named Xuanzang, who had spent a couple years learning Buddhist doctrines at Nalanda spoke about how difficult it was to get admission into that university. According to his accounts, Nalanda even had an elaborate entrance examination designed by the best scholars where only twenty percent of the examinees were able to qualify. [Apte, 1961, p. 27] India thus had an elaborate knowledge and education system prior to the advent of the English. It is, after all, undeniable that decimal system and heliocentrism were already known in India in the 6th century AD, way before it was discovered in Europe.

India's adulation for education was rooted to its religion, where receiving education was considered to be as sacred as praying to God. As a matter of fact, education in Indian culture is attributed to Devi Saraswati, the Hindu Goddess of learning. The Hindu doctrine of Taittiriya Upanishad even deified a teacher or a Guru with its verse "*Acharya devo bhava*" or 'the teacher

is the God'. Moreover, in India the initiation of the academic journey of a child is also done through a religious ritual which is known as 'Haathe khori' (chalk in hand) in the east and 'Vidyarambha' (beginning of learning) in the south. So, education being the part and parcel of the religious life of the Indians, it was considered almost blasphemous to stay illiterate. Therefore, unlike what the colonizers propagated in the name of White Man's burden, Indian society was not 'barbaric' or 'uncivilised' waiting to be saved by the western colonizers. On the contrary, the reason why the Indians were able to grasp the English language and the western education so quickly was because the population already had a favourable and sincere demeanour towards receiving education due to its long history of literacy.

Impact Of Colonial Education

Edward said stated in his work 'Culture and Imperialism' that many of the problems that were persistent in the countries that used to be the former colonies were the direct result of the activities of the colonisers. [Said, 1994, p.19] In case of India, many of the problems like casteism and regional conflicts were also the direct results of the colonial interference in our society. The English government commissioned the scholars to distort and fabricate the historical and religious texts of the Indians and then teach these new editions to the upcoming generations. One of the biggest examples of one such distortion of history was the Aryan Invasion Theory (AIT). Its founder, Max Muller was able to create a permanent division between the population of the northern India and the southern India in lines of race and region, by stating that the people in the north were originally foreigners from central Asia, who invaded India thousands of years ago and hence were fair skinned. He called these invading people, the Aryans. On the contrary, the Dravidians on whom the invasion happened were the original population of the country and hence were dark skinned. Without any proper evidence of any invasion, Max Muller was able to construct this narrative that was popularised by the colonial government through its education system. Unfortunately, even in the independent India, till very recently the AIT was taught in the historical curriculum as the true history of the Indians. Colonial education also exacerbated the caste problem in the country by propagating that the social division of caste was based on birth and that someone of a low caste origin can never elevate their social position. This is far from the truth, since caste is originally a social division that is based on one's skill and occupation. This is also reiterated in the Hindu religious text of Bhagavad Gita where Lord Krishna said '*Chatur varnyam maya srstam , guna karma vibhagasah*', [4.13, Bhagavad Gita] meaning he created the four fold divisions of caste system based on skill (Guna) and occupation (Karma). Nonetheless, even in the post-colonial India, caste is considered to be based on one's birth, therefore, keeping alive the tension between the people of different castes. Colonial education thus acted as tool that not only made the Indians forget their true history and religion but also replaced it with a fabricated one that was aimed to make them abhor their own culture and therefore be loyal to the Raj. These new colonial constructions of the Indian history were also aimed at keeping the country divided so that a united resistance towards the English government can be averted. Colonial education with its imposition of English language and due to active discouragement of the vernaculars, also destroyed indigenous vernacular literature.

Conclusion

England's affluence was premised upon the impoverishment of India. The country that used to dominate the global export trade soon became a mere raw material supplier for the English factories on one hand, and a market for their finished products on the other. What streamlined this exploitation was the colonial education which, by distorting and rewriting the history and the culture of the Indians destroyed their self-pride and autonomy. Sadly, India is still reeling from the experiences of the colonial past and is still heavily under the influence of such

6th International CEO Communication, Economics, Organization & Social Sciences Congress

indoctrination that was framed hundreds of years ago to keep the population enslaved. Although, in the recent years some dialogues have been started regarding the decolonisation of minds, we still have a long journey ahead to get in touch with our estranged past with all its glory.

Orcid: 0000-0001-6567-5963

ABSTRACT

The aim of this study was to examine the standpoints of BS 4 years program (BSCS) students in Pakistani universities regarding the issues and challenges they face. The study utilized a descriptive survey method with a quantitative approach to quantify and measure students' perceptions and issues related to blended learning in education. The study collected data from 219 students out of 480 enrolled in the BS 4 years program (BSCS) at three public universities in Pakistan in the 2022 academic year. A questionnaire with a three-point Likert scale was used to gather data, which was then analyzed using frequencies, percentages, and diagrams. The findings showed that most students had a positive view of blended learning, but they also encountered various issues, such as lack of time, insufficient skills and support for proper use, lack of training, and unavailability of Learning Management Software (LMS) for technological learning tools. The study suggests the need for the development of institutional policies for the effective use of blended learning in universities and the implementation of training and skill development programs for teachers to integrate technology in their teaching.

Keywords: Blended Learning, Challenges, Standpoints, Teacher Education.

INTRODUCTION

The COVID-19 pandemic has had a profound impact on the field of education, necessitating a shift from traditional face-to-face instruction to online modalities. Educational institutions worldwide have faced unprecedented challenges in providing effective and engaging online instruction. In this context, understanding the experiences and perspectives of students becomes crucial in evaluating the success of online learning initiatives. This study focuses on assessing the online instruction provided to university students during the COVID-19 epidemic in Lahore, Pakistan. Lahore, being a major educational hub in the country, offers a diverse and representative sample of students from various academic disciplines and levels of study. By examining the experiences, perceptions, and recommendations of students, this research aims to shed light on the strengths, weaknesses, and potential areas for improvement in online instruction during the pandemic. The outbreak of the COVID-19 pandemic in early 2020 disrupted educational systems globally, necessitating the closure of schools, colleges, and universities. In response to these unprecedented circumstances, educational institutions swiftly shifted towards remote teaching and learning methodologies. Online instruction became the primary mode of education, offering a means to continue academic pursuits while maintaining physical distancing measures.

However, this rapid transition to online education posed numerous challenges for both educators and students. The sudden shift necessitated adjustments in teaching strategies, technological infrastructure, and student engagement. While online education has long been an emerging trend in the field of education, the pandemic accelerated its implementation, placing significant reliance on digital platforms and technologies. This study aims to assess the efficacy of online instruction provided to university students during the COVID-19 epidemic, with a particular focus on the experiences and perspectives of students enrolled in four universities in Lahore, Pakistan. Lahore, as a prominent educational hub in the country, hosts a diverse student population pursuing undergraduate, graduate, and doctoral degrees across various disciplines. Understanding the experiences and perceptions of students is vital to evaluate the effectiveness of online learning initiatives. By exploring their perspectives, this research seeks to identify the strengths, weaknesses, and potential areas for improvement in online instruction during the pandemic. Additionally, the study aims to provide valuable insights into the challenges faced by students, their overall satisfaction levels, and recommendations for enhancing the quality of online education.

OBJECTIVES OF THE STUDY

The objectives of this study are twofold:

- Firstly, it seeks to explore the challenges faced by students in adapting to online learning platforms, as well as their overall satisfaction with the online instruction received.
- Secondly, it aims to identify areas of improvement and recommendations for enhancing the quality and effectiveness of online education in the selected universities.

RESEARCH QUESTIONS

Question 1: What did students' experiences with online learning during the COVID-19 pandemic?

Question 2: What suggestions do students have for online learning throughout the COVID-19 pandemic?

METHODOLOGY

1. Research Design

This study employed a mixed-method research design to capture a comprehensive understanding of the effectiveness of online instruction during the COVID-19 pandemic. By combining qualitative and quantitative components, the research aimed to gather both numerical data and in-depth insights into students' experiences and perceptions. The quantitative phase utilized an online survey, while the qualitative phase involved online in-depth interviews.

2. Participants

The participants in this study were students enrolled in undergraduate, graduate, and doctoral programs at four universities in Lahore, Pakistan. The sample size comprised 600 students, and efforts were made to ensure representation from various academic disciplines. Participants were selected through convenience sampling, targeting students who were actively engaged in online learning during the COVID-19 epidemic.

3. Data Collection Procedure

a) Quantitative Phase

In the quantitative phase, an online survey was administered to the participants. The survey consisted of structured questions designed to gather data on students' satisfaction levels, challenges faced during online instruction, and demographic information. The survey was distributed using online platforms and accessible to participants through email invitations or course management systems. The participants were given a specified time frame to complete the survey.

b) Qualitative Phase

The qualitative phase involved online in-depth interviews to gain deeper insights into students' experiences and perceptions of online instruction. Semi-structured interview guides were developed, covering various aspects of the online learning experience, challenges faced, and recommendations for improvement. The interviews were conducted through video conferencing platforms, ensuring remote access for participants. The interviews were audio-recorded with the participants' consent and later transcribed for analysis.

Overall, the methodology employed in this study aimed to gather robust data, ensuring a comprehensive analysis of the effectiveness of online instruction during the COVID-19 pandemic. By utilizing both quantitative and qualitative approaches, the research provides valuable insights into the experiences and perspectives of university students in Lahore, informing future strategies and enhancements in online education.

CONSIDERATION

Ethical guidelines were followed throughout the research process. Informed consent was obtained from all participants before their participation in the study. Participants' anonymity

6th International CEO Communication, Economics, Organization & Social Sciences Congress

and confidentiality were ensured by assigning unique identifiers to their responses, and personal information was kept strictly confidential. The research was conducted in compliance with the ethical standards and regulations governing research involving human subjects.

FINDINGS

Findings based on the students' viewpoint:

- **Accessibility:**

Students claimed that having online education had a favorable impact on accessibility as a result of the COVID-19 epidemic.

- **Economical:**

According to some students, taking education online rather than in person is more cost-effective for them financially because of the epidemic.

- **Time-Saving:**

Some of the students reported that they were able to save time as a result of their distance education.

- **Internet problems:**

Due to the COVID-19 epidemic, many students reported having difficulty using the internet while doing their coursework remotely.

- **System issues:**

During the pandemic, some students who were enrolled in distance education described the system issues they ran with.

- **Exams were not fair:**

Some students complained that the online exams they took as part of the distance learning process weren't accurate or fair in assessing their knowledge.

SUGGESTION

- **Lessons should be brief in duration:**

Some of the students made comments regarding how long lessons should be for online education.

- **Lessons ought to be participatory:**

The majority of students suggested that interactive lessons be included in distant learning sessions.

- **System issues should be resolved:**

The students offered solutions for system/internet issues in the context of distance learning.

- **Documents must be added to the system:**

The idea of submitting course-related materials to the system while pursuing online education has been suggested by students.

CONCLUSION

The COVID-19 pandemic necessitated a sudden shift to online instruction in educational institutions worldwide, including universities in Lahore, Pakistan. This research aimed to assess the effectiveness of online instruction during the pandemic, specifically focusing on the experiences and perspectives of university students. By employing a mixed-method research design, incorporating both qualitative and quantitative components, this study gathered valuable insights into the challenges, satisfaction levels, and recommendations provided by the students. The findings of this study shed light on the perceptions and experiences of university students in Lahore regarding online instruction during the COVID-19 pandemic. The assessment of students' perspectives revealed a mixed response to online learning, with students expressing both positive and negative aspects of their experiences. Ultimately, the insights gained from this research can contribute to the ongoing development and improvement of online education, enabling educational institutions to better adapt to unforeseen circumstances and provide high-quality learning experiences for students.

ABSTRACT

The purpose of this study was to assess the online instruction given to students during the COVID-19 epidemic. At the four universities of Lahore city that were the center of the study, 600 students pursuing undergraduate, graduate, and doctoral degrees participated. A mixed method was used to design the research using both qualitative and quantitative components. An online survey was employed during the quantitative phase. Online in-depth interviews using a semi-structured interview form were carried out during the qualitative phase. Local Lahore, Pakistan, inhabitants were among the responses. The content analysis led to the identification of 21 categories and three major themes. The following themes were accomplished: "It could have been better!" for their suggestions, "Face-to-face education is better!" for the bad parts of the student's experiences, and "Better than nothing!" for the positive aspects of their experiences. It has been decided that a technology approach should be employed to further expand the distance education curriculum in the four universities that have been selected.

Keywords: Covid-19, Distance Education, Online Education, University Students.

INTRODUCTION

In the past decade, advancements in technology and modern techniques have brought significant changes to the higher education system, resulting in improved standards. However, due to the ongoing Covid-19 pandemic, educational institutions have had to close and social distancing measures have made delivering education and social interaction difficult. In these circumstances, educators and policymakers need to develop effective communication methods between teachers and students, and modern technology is the best solution. The integration of technology in education has led to a more active learning process, including face-to-face and online teaching methods, known as "blended learning." This approach has been successful in developed and developing countries worldwide, as it combines various teaching approaches and incorporates new knowledge and information.

Blended learning provides students with interactive learning opportunities, flexibility, and cost-effective teaching methods that are both meaningful and effective. It combines traditional and modern approaches, including physical and virtual appearances of both teachers and students. However, implementing this method can be challenging for educators, especially those teaching BSCS students who need advanced learning approaches from the beginning of their education to become potential teachers of the future. Therefore, studying BSCS can provide valuable insights for educators and policymakers to improve education policies. The concept of blended learning ensures a continuous process of learning with critical thinking and knowledge transformation for future generations. To become effective teachers in modern times, educators must learn through modern techniques that make learning interesting and motivational, utilizing both face-to-face and technological-oriented approaches to ensure continued teaching and learning.

The current generation is often referred to as the "digital generation", and teaching methods must adapt to meet their needs and expectations. Using technology in the classroom has been shown to increase student motivation and interest, leading to improved learning outcomes. Blended Learning provides a personalized learning environment that allows students to access education from anywhere and at any time. It also fosters a collaborative learning environment and helps students develop 21st-century skills. Researchers have studied the effects of Blended Learning on students' motivation, learning styles, academic achievement, and learning methods.

Blended learning has great potential in teacher education, as it has already demonstrated improvements in teaching practices. For example, the use of Learning Management Systems (LMS) provides teachers with opportunities to receive feedback from students and enhance their understanding of the subject matter. Blended learning also allows students to use a combination of tools such as WhatsApp groups and LMS to share information with their classmates and teachers, which leads to greater satisfaction with the learning experience. However, both students and teachers may face challenges when using technology, such as the absence of institutional policies, lack of technical support, slow internet speeds, insufficient computer resources in computer labs, and difficulties with English language comprehension. Despite encountering obstacles, teacher educators in developing countries are actively working towards incorporating technology into their education systems. For instance, in Pakistan, the Virtual University (VU) and Allama Iqbal Open University (AIOU) have been implementing blended learning since 2002. Furthermore, numerous other public and private universities in the country have adopted this approach, particularly after the establishment of the Higher Education Commission (HEC) in 2000. The Higher Education Commission has taken several initiatives to improve the education sector through technology, with a focus on teachers and prospective teachers. These initiatives include the provision of online lecture facilities, the

establishment of video conferencing rooms, broadband facilities, the Pakistan Education and Research Network, the National Digital Library, and the distribution of laptops with internet access to students. Additionally, the HEC supports the construction of computer labs in universities. Numerous public universities in Pakistan are endeavoring to incorporate technology into their systems by implementing online attendance and examination systems, integrating technology into the teaching and learning process, using pre-recorded lectures, employing peer-to-peer and peer-to-faculty interaction instructional models, facilitating real-time discussions with online experts and experienced individuals. In the current Covid19 pandemic situation, many universities have resorted to online learning, despite limited resources.

RATIONALE

Pakistan, like other developing countries, is striving to improve technological accessibility and its integration into the education sector. The government of Pakistan has initiated various measures to promote and implement blended learning in higher education institutions, particularly universities. Although the use of blended learning is becoming increasingly popular and effective in teacher education in Pakistan, both teachers and students are encountering challenges in its effective implementation, such as a lack of computers in computer labs, insufficient technical support, limited time to use technology, motivation to use technology, inadequate electricity, and difficulties in understanding the English language. Therefore, this study has focused on investigating students' readiness and the challenges of adopting blended learning in Teacher Education Programs in Pakistan.

RESEARCH METHODOLOGY

A quantitative method using a descriptive survey was employed in the research. The study's scope covered students enrolled in the BSCS 4-year program batch of 2022 in various education faculties of three public universities in Pakistan. The study population included a total of 482 students from the three universities, as illustrated in Figure 1. A quantitative method using a descriptive survey was employed in the research. With a confidence level of 95%, the study selected a sample of 219 university students from a total of 482 students using Yamane's formula. The data collected was quantitative and based on a 3-point Likert scale (agree, undecided, disagree) through a questionnaire consisting of 19 items. The questionnaire was developed with the help of a literature review. The researchers used the SPSS version-22 software for statistical analysis.

Figure 1
Participants in the Study

Figure 5

FINDING AND DISCUSSION

Research Question 1: What difficulties do students encounter when utilizing blended learning at the University level in Pakistan?

Most of the surveyed students encountered difficulties when using blended learning in universities. According to Table 1, a large proportion of the participants agreed that they faced

various challenges while using blended learning, such as: 83% felt a lack of motivation, 91% felt a lack of technical support, 93% felt that there was a lack of institutional policies, and 67% felt that they had a lack of time. However, 72% agreed that a lack of skills was a barrier to using blended learning.

Challenges	Agree	Disagree
Lack of Skills	72%	28%
Lack of Time	67%	33%
Lack of Institutional Policies	93%	7%
Lack of Technical Support	91%	9%
Lack of Motivation	83%	17%

Table 1

DISCUSSION

Blended learning is an increasingly popular and cost-effective method of education that students favor over traditional methods due to their familiarity and frequent use of modern gadgets such as smartphones, tablets, and laptops. Social media platforms such as blogs and Facebook have contributed to this trend. Blended learning has a great potential for student learning and engagement. Students find blended learning assignments to be interesting and enjoyable, particularly when using social networking sites like WhatsApp, Facebook, discussion forums, and blogs. This often leads to increased student motivation and time spent on academic work compared to traditional methods. Universities are actively promoting blended learning, as it provides numerous benefits for both instructors and students.

In the study, it was found that blended learning has a positive impact on students' confidence and self-reliance. They develop problem-solving skills while completing their academic tasks and assignments on their own, without relying on constant guidance. Additionally, they have access to a wide range of reading materials, which helps them to comprehend complex concepts quickly. Blended learning also reduces the practice of spoon-feeding. Shy and less confident students also benefit from the blended learning model as they can interact with their teachers and peers through technological means, and they can easily discuss their learning difficulties and concerns with them without any face-to-face contact.

The blended learning approach created a new framework for cooperation among peers and between students and teachers. According to the study, blended learning not only offers students an excellent opportunity for daily learning but also motivates and inspires them to continue their education because they gain a great deal of confidence and enthusiasm to learn more. However, the study also identified some negative aspects of blended learning. Participants acknowledged that blended learning is a time-consuming process that requires special arrangements and supportive environments.

Blended learning was positively perceived by students as they encountered few obstacles while using modern technology for learning. Additionally, it was observed that students of all academic levels, including both fast and slow learners, demonstrated a keen interest in learning all subjects through blended mode. However, the research also identified that students face several challenges in our educational system while learning through blended mode. The most common obstacle was the absence of institutional policies for integrating technology. Other difficulties encountered by students in adopting modern technology for learning included a lack of time, skills, training, logistical support, technical support, qualified staff, power outages, and insufficient resources.

RECOMMENDATION

Research Question 2: What recommendations can be utilizing for blended learning at the University level in Pakistan?

Recommendation 1: It is recommended that universities implement a blended learning approach by introducing their Learning Management Software (LMS).

Recommendation 2: Institutional policies must be established to enforce the usage of blended learning by both teachers and students.

Recommendation 3: Each university should procure licensed software, high-speed servers, and high-bandwidth internet and make them available to students and teachers free of charge for seamless blended learning.

Recommendation 4: Technical and logistical assistance should be provided to facilitate the effective use of blended learning. Teacher education institutions must introduce courses to equip teachers with the necessary technological skills, such as Open Educational Resources (OER), Virtual Reality, Artificial Intelligence (AI), and Block Chain, which are commonly used in developed countries.

Recommendation 5: Continual training and sequential workshops should be conducted to enhance teachers' digital teaching skills.

Recommendation 6: To motivate students to utilize blended learning, strategies such as conducting Online Tests, Quizzes, or Assignments should be implemented.

CONCLUSION

The research discovered that Pakistani university students have a favorable outlook towards blended learning. A majority of the students believe that blended learning has the potential to enhance their learning experience. They found that assignments are more enjoyable and interesting and that academic achievements are improved when blended learning is utilized. Blended learning also improves efficiency in carrying out academic tasks and facilitates better comprehension of complex concepts. It increases learners' self-confidence and enables peer-group discussions. Blended learning provides shy students with an opportunity to interact digitally with their teachers and peers. However, the study identified several barriers that university students encounter when using blended learning, including the lack of institutional policies for technology integration, insufficient resources, inadequate skills, slow internet, and insufficient technical support. In conclusion, there is still much work to be done to establish a robust blended learning system in Pakistani universities that can compare with those of developed countries.

Study the Performance Measures of the Supply Chain for Industry 4.0.

Prof. Dr. Prakash DIVAKARAN

Pro-Vice Chancellor,
Himalayan University,
Itanagar,
Arunachal Pradesh,
India.
prakashtek@gmail.com

ABSTRACT

Industries that go digital could monitor every aspect of their supply chain in real-time, including determining the exact location of the product. Modern inventory tracking systems enable it to be simple for managers to monitor inventory by integrating updates from supplier networks using internet base applications. Supply chain performance is determined using several kinds of performance perspectives but this research paper utilized three performance perspectives namely operational performance perspectives, environmental perspectives, and economic perspectives. Supply chain performance indicators offer an estimate of the productivity of the supply chain system. Understanding the supply chain more effectively and increasing its overall performance can be improved by measuring its performance. The main purpose of this research is to investigate the various supply chain performance measures for Industry 4.0. This research study adopted secondary data that includes published academic research papers, peer review journals, press releases, and websites about supply chain performance measures and the many elements that influence the adoption of Industry 4.0 in general. According to a review of the literature, measures, and metrics of supply chain performance measurement have been analyzed and a structure with an innovative perspective on how supply chain procedures could be measured is offered. This research provides a cross-organizational performance measuring approach from a system perspective to help performance improvement in supply chain management. This study revealed that organizations that carry out collaborative activities with vendors and consumers are able to develop organizational capacity, which ought to spill over into boosted operational performance such as price and quality. Manufacturing resources and expertise should be allocated to the advancement of competitive targets, as obtaining a competitive advantage.

Keywords: Supply Chain Performance Measures, Industry 4.0, Operational Performance Perspectives, Environmental Perspectives, and Economic Perspectives.

INTRODUCTION

Throughout the past decades, logistics has transformed from an entirely operational department that according to sales or manufacturing and concentrated on maintaining the supply of the manufacturing facilities (Sun, Xiaochen and Li, Xiang, 2014). It provides faster delivery to customers, through a distinct management of supply chains function which is presently managed by an executive in the supply chain in some companies. The supply chain administration operates effectively emphasis is shifting to advanced processes for planning, especially quantitative demand planning (Katsaliaki, K et al., 2022). Industry 4.0 causes change and encourages organizations to think again about their methods to develop their supply networks. A number of technologies have come into existence with the aim of causing disruption in traditional methods of execution (Ghadge et al., 2020). Furthermore, major developments and client demands alter the dynamics of the competition. According to Toorajipour, Reza et al. 2020) Aside compared to the requirement to adjust, supply chains possess the potential to move forward to a greater degree of efficiency and effectiveness, take advantage of emerging technologically advanced models of operation, and modify the company into a digital supply chain.

Industries that go digital have the ability to monitor every aspect of their supply chain in real time, including determining the exact location of the product. Modern inventory tracking systems enable it to be simple for managers to monitor inventory by integrating updates from supplier networks using Internet of Things information. This improves the accuracy of orders and estimated arrival time, inventory optimization, and cost reductions (Xie, Y., Yin, Y., Xue, W., Shi, H., & Chong, D. 2020). International supply chains may consist of numerous partners operating throughout the context of a business's supply chain network. It becomes essential to ensure complete visibility and real-time tracking of assets, any deficiencies in the management of supply chain risks could result in supply chain disturbances, reduced revenue, and higher. Industries understand the necessity of keeping track of and comprehending their business performance in order to remain competitive in an environment that is continually shifting. Measuring has been determined to be an essential aspect of boosting corporate performance (expenses (Dolgui, A., & Ivanov, D. 2022).

Supply chain performance is determined using several kinds of performance perspectives (Ramezankhani, M. J., Torabi, S. A., & Vahidi, F. 2018). Operational performance perspectives (Manzoor, U., Baig, S. A., Hashim, M., Sami, A., Rehman, H. U., & Sajjad, I, 2022), environmental perspectives (Sawe, F. B., Kumar, A., Garza-Reyes, J. A., & Agrawal, R. 2021) and economic perspective (Adhikari, A., & Bisi, A. 2020) are numerous instances of supply chain performance measures. According to Govindan, Kannan & Shaw, Mahesh & Majumdar, Abhijit. (2020) The primary purpose of performance measurement utilized is on economic perspective, however, this has been rapidly changing to other than financial aspects. Business organizations are required to take advantage of supply chain resources and capabilities in order to provide goods and services to customers quicker and at lower rates, using appropriate capabilities, along with the most effective overall value. Performance metrics are important for the supply chain's performance. Companies can cease to exclusively focus on strengthening their own operation at the expense of the benefit of their vendor artists and consumers. Pejić

Bach, M., Klinčar, A., Aleksić, A., Rašić Jelavić, S., & Zeqiri, J. (2023) found that supply chain performance indicators offer an estimate for the productivity of the supply chain system. Understanding the supply chain more effectively and increasing its overall performance can be improved by measuring its performance.

Gurtu, A., & Johny, J. (2021) stated that performance measures and metrics are crucial for supply chain operations to be managed effectively, especially within an economy that is internationally competitive. Global operations, using outsourcing, supply chains, and online shopping are elements of the world's economy. The primary challenge facing administrators in the current business climate is in developing suitable productivity and supply chain performance metrics and measures that ensure that they are capable of making the most beneficial decisions for increased company competitiveness (Fan, X., & Zhang, S. 2016). In order for evaluating supply chain performance in an emerging business context, it is currently necessary to figure out whether conventional performance measures may be utilized and which of them should be provided importance (Santos, T. F. dos, & Leite, M. S. A. 2018). Some of the traditional indicators as well as measures could prove to be appropriate in the new environment, during which numerous activities are challenging to determine. The greater challenging problem in determining the value of things and metrics that is not financial in nature. However, measuring them is vital for the performance of businesses in this environment. Considering the importance of supply chain measurements this paper attempts to identify the main performance measures and indicators in supply chain and logistics operations for Industry 4.0.

THE OBJECTIVE OF STUDY-

The main purpose of this research is to investigate the various supply chain performance measures for Industry 4.0.

RESEARCH METHODOLOGY-

The results of this research study investigated the various supply chain performance measures that influence the adoption of Industry 4.0. This study relies on secondary data that includes published academic research papers, peer review journals, press releases, and websites about supply chain performance measures and the many elements that influence on the adoption of Industry 4.0 in general.

LITERATURE REVIEW-

Chauhan, C., & Singh, A. (2020) analyze the emergent issue of Industry 4.0 is analyzed in the framework of supply chain management and recommend important fields for additional investigation. A comprehensive evaluation of the literature on 334 types of research takes place. The publications were examined with particular emphasis on the area of examination, methods of study employed, the primary issues discussed, and the way the discussion developed throughout the years. According to the findings of the study, researchers have traditionally concentrated on theories and practices for digitized supply chain management, highlighted enablers and challenges, and examined Industry 4.0 at various levels, particularly at the

organization level. The majority of research examines manufacturing from the perspective of the primary company.

According to Govindan, K., Kannan, D., Jørgensen, T. & Nielsen, T. (2022), companies need a better comprehension of Industry 4.0's supply chain benefits and that also recommendations and technologies can focus on improving particular supply chain performance measures. This article offers a framework for trying to explore the were using of I4.0 technologies to recognize opportunities in supply chain performance measures based on the findings of the review through content analysis. This study has utilized case studies to justify the research methodology in circumstances such that existing researches are limited.

Sharma, V. et al. (2022) study the intermediary impact of industry 4.0 technology on supply chain management uses and supply chain performance measurements. A survey-based database was gathered from manufacturing companies throughout India, obtaining 361 fully filled-out responses. For the examination of data, the method of structural equation modelling was used. This research has several aspects. First, the results show that supply chain management impacts the adoption of Industry 4.0 technology. Furthermore, the findings demonstrated that industry 4.0 technologies had a considerable positive impact on supply chain performance measurements. The links between supply chain management and supply chain performance measures were mediated by Industry 4.0 technology. In addition, the findings reveal crucial insights into identifying the fundamental processes involved in successfully implementing and effectively employing industry 4.0 technologies.

Mastos, T. D. et al. (2021) stated that organizations that were seeking to eliminate the negative environmental and social consequences resulting from their supply networks had started using sustainable supply chain management activities. Using the context of this structure, the supply chain literature adopted a circular methodology. Innovative circular economy models and remedies, supported by industry 4.0 technology, were designed to transform recyclable materials into new products with distinct applications. The objective of this paper is to add to the existing current research by offering real-world proof of how Industry 4.0 and the circular economy are implemented. In this research, a business 4.0 waste-to-energy strategy was built and tested in a pilot case study by employing an everyday supply chain for the purpose to determine the sustainability effectiveness of continuous supply chain management. The results indicate that implementing Industry 4.0 technology to transform supply chains for the new circular economy might allow circular supply chain management. The numerous advantages of the recommended system were a direct connection with the six circular economy features namely regenerate, share, optimize, loop, virtualize, and exchange. Several of the primary benefits found involve improved accessibility of staff and transportation resources, although supply chain traceability through the complete transparency and automation provided by the system.

Frederico, G. F. et al. (2021) provide a theoretical foundation for performance measurement in supply chains for Industry 4.0 utilizing the balanced scorecard. This study combines performance measures literature, particularly balanced scorecard literature, with supply chain aspects literature in the context of Industry 4.0. Measurements gathered from the literature on supply chains in the framework of Industry 4.0 indicated are closely consistent with each of the

four perspectives of the balanced scorecard, which renders it suitable to be implemented as a performance measurement system for supply chains in this fresh setting. From the perspective of theory, this study extends to the lack of research on performance measures for supply chains in Industry 4.0. The paper indicated a supply chain 4.0 Scorecard and strongly recommends more empirical studies in order to gain a greater comprehension of performance measures in supply chains in the context of the industry 4.0 era.

Xie, Y. et al. (2020) pointed out that an automated supply chain based on Industry 4.0 has gotten a lot of attention from researchers; however, investigations on performance measurement indicators of intelligent supply chains have remained restricted. In order to fill that gap, this paper begins by examining the impact of Industry 4.0 on supply chain management. The research offers a performance-measuring metric structure consisting of seven indicators after evaluating the critical components of an automated supply chain. This measurement structure improves the theoretical knowledge concerning supply chain evaluation of performance and offers a practical approach to strengthen the efficiency and effectiveness of digital supply chain management.

THE PERFORMANCE MEASURES OF THE SUPPLY CHAIN FOR INDUSTRY 4.0

Supply chain and industrial logistical processes are essential components of several both professional and private activities in modern life and they are critically important for the advancement of the world (Ivanov, D., Tsipoulanidis, A., & Schönberger, J. 2021). Due to the swiftness of transformation in numerous industries and in economic, financial, social, and technological factors, supply chains remain constantly shifting and developing. Industry 4.0 comprises an extensive variety of technologies and concepts (Götz, M. 2019). Organizations are able to identify areas for improvement and develop strategies that will enhance their overall performance by tracking these measures. In order to meet management expectations while being competitive, the supply chain must evolve to be more adaptable, flexible, and sustainable (Raj, A., Mukherjee, A. A., de Sousa Jabbour, A. B. L., & Srivastava, S. K. 2022). Sun, Xu & Yu, Hao & Solvang, Wei (2021) found that several supply chain practices have been developed and utilized, including distinct supply chain strategies and practices such as lean, adaptable, green, flexible, sustainable, industry 4.0, and digital supply chain management.

1. Operational performance measures of the supply chain for industry 4.0

The main elements of operational performance measures of the supply chain for Industry 4.0 are cost, time, quality, customer satisfaction, flexibility, inventory levels, and delivery (Leończuk, Dorota. 2016). The strategic variables in which an organization determines competing are collectively referred to as operational performance. Manufacturing resources and expertise should be allocated to the advancement of competitive targets, as obtaining competitive advantage requires the successful implementation of competitive objectives into strategic strengths (Hosseini, A., Soltani, S., & Mehdizadeh, M. 2018). Organizations that carry out collaborative activities with vendors and consumers can develop organizational capacities, which ought to spill over into boosted operational performance, such as price and quality (Chauhan, C., Kaur, P., Arrawatia, R., Ractham, P., & Dhir, A., 2022). Furthermore, it has been

pointed out that supply-chain management activities implemented alone are insufficient to contribute to the effective implementation of the entire supply-chain process, and that sustainability is achievable only through the interplay of various supply-chain management activities done simultaneously (de Haan-Hoek, J., Lambrechts, W., Semeijn, J., & Caniels, M. C. 2020). In order to meet customer demand, businesses should include environmental considerations in both product and process design. With customers, supply chain management assists enterprises in integrating technical organizational advancements, resulting in concurrent gains in operational performance (Ardito, L., Petruzzelli, A. M., Panniello, U., & Garavelli, A. C. 2018). Environmental engagement with consumers typically yields cost, quality, flexibility, and delivery benefits (Chavez, R., Yu, W., Feng, M., & Wiengarten, F. 2016).

2. Economic performance measures of the supply chain for industry 4.0

According to Kumar, P., Singh, R. K., & Kumar, V. (2021) cost, efficiency, environmental cost, and revenues are the most important economic performance measures of the supply chain for Industry 4.0. Rahiminezhad Galankashi, Masoud & mokhatab rafiei, Farimah. (2021) found that economic performance measurement is a basic requirement for a company's success. Many businesses have created various financial statements and reporting methods to evaluate their supply chain performance. However, these efforts appear to be insufficient. Economic performance measurement is associated with a variety of words and criteria. An economic view of a supply chain seeks to confirm whether a supply chain is competitive in meeting the needs of customers (Geng, R., Mansouri, S. A., & Aktas, E. 2017). Similarly, economic indicators determine profitability and growth rates for all supply chain companies. Economic performance measurement is important for an organization. In addition, adopting a proper performance-determining strategy leads to improved economic performance (Govindan, K., Rajeev, A., Padhi, S. S., & Pati, R. K. 2020). It has been recognized that the functioning of the supply chain of an organization has an important influence on its economic performance. Saberi, S., Kouhizadeh, M., Sarkis, J., & Shen, L. (2019) pointed out that supply chain financial managers experience a number of issues. These challenges comprise the adoption of technologies, approaches, and solutions to improve the financial result. According to Rahiminezhad Galankashi, M., & Mokhatab Rafiei, F. (2022) supply chain management economic performance measures are divided into two categories: market-based and accounting-based. Accounting-based economic metrics include return on assets, return on value-added, cost of goods sold, economic value added, cash flow margin, and total economic indicators. Sharpe ratio and anomalous stock returns are market-based economic indicators.

3. Environmental performance measures of the supply chain for Industry 4.0

Khan, S. A. R., Razaq, A., Yu, Z., & Miller, S. (2021) stated that emissions, Business wastage, and green image are the crucial environmental performance measures of the supply chain for Industry 4.0. Environmental management has become an increasingly significant issue in supply chain management (Rupa, Rasheda & Mohammad Saif, Abu Naser. 2021). Jemsittiparsert, K., Siriattakul, P., & Wattanapongphasuk, S. (2019) found that green and

sustainable supply chain management has emerged as an operational strategy that assists organizations and their business associates to meet their financial objectives and revenue objectives by cutting environmental risk and consequences while enhancing ecological efficiency. Growing community and environmentally aware consumer pressure led to stringent regulations pertaining to the environment, such as the waste of electrical and electronic Equipment. The constraints compel manufacturers to include environmental considerations in their business processes (Yue, B., Sheng, G., She, S., & Xu, J. 2020). Furthermore, every business may be held responsible for its suppliers' environmental and social performance in global supply chains.

Moshood, T. D., Nawanir, G., Mahmud, F., Sorooshian, S., & Adeleke, A. Q. (2021) stated that it enhances the capability of the various supply chains levels to coordinate activities and activity in order to adapt to changes in the needs of customers. As a result, it boosts customer satisfaction while reducing organizations' waste, environmental costs, and supply chain costs. Environmental collaboration necessitates that the organization that purchases items devote certain funds to establishing shared initiatives that deal with environmental issues in the supply chain, probably collecting the additional benefits that may arise from these working relationships in order to reduce environmental impact (Sarkis, J., Zhu, Q., & Lai, K. H. 2011). Although purchasing of green materials involves a cost, it can provide a financial advantage by decreasing disposal and responsibility expenses while enhancing the preservation of resources and the organization's reputation among the customers. Implementing green purchasing practices saves waste and environmental expenses. This can be performed by controlling and eliminating waste after it has been developed (Carrete, L., Castaño, R., Felix, R., Centeno, E., & González, E. 2012). This green practice is additionally incorporated into lean practices enabling the elimination of waste or non-value-adding operations throughout the supply chain. As a consequence, in addition to assisting in reducing environmental expenses, it additionally minimizes businesses waste and supports efficiency improvements in the supply chain process and cost reduction. This decreases the costs of eliminating and removing hazardous and toxic items while also limiting company waste (Carvalho, H., Azevedo, S., & Cruz-Machado, V. I. 2014).

CONCLUSION-

All of the conceptualizations have been adopted into significant aspects of the development of both physical and digital supply chain management. Through process integration, digitalization and automation, and the implementation of new analytical capabilities, technologies enable significant performance increases within particular supply chain operations such as acquisition, manufacturing, inventory management, and retailing (MacCarthy, B. L., & Ivanov, D. 2022). Inventory turnover, completion of orders time, and shipment performance are three common measures of supply chain performance (Praharsi, Y., Jami'in, M. A., Suhardjito, G., Reong, S., & Wee, H. M. 2022).

The relevance of measuring business supply chain performance has been highlighted in this research. According to a review of the literature, measures, and metrics of supply chain performance measurement have been analyzed and a structure with an innovative perspective

on how supply chain procedures could be measured is offered. This study examines existing supply chain management performance assessment, particularly in the context of Industry 4.0. This research provides a cross-organizational performance measuring approach from a system perspective to help performance improvement in supply chain management. This study revealed that organizations that carry out collaborative activities with vendors and consumers are able to develop organizational capacity, which ought to spill over into boosted operational performance such as price and quality. Manufacturing resources and expertise should be allocated to the advancement of competitive targets, as obtaining a competitive advantage. Green and sustainable supply chain management has emerged as an operational strategy that assists organizations and their business associates to meet their financial objectives and revenue objectives by cutting environmental risks and consequences while enhancing ecological efficiency.

Further research is needed to determine the framework's applicability in additional sectors. Furthermore, educational research and practitioner-driven initiatives required innovative thinking to discover new measures that assess the overall performance of the supply chain as well as the achievements of each organization that is a part of the supply chain.

Fiscal Policy and Impact of Taxes on The Economy - The Case of Kosovo and The Countries of The Western Balkans

Prof. ass. dr. Agim Berisha

College of Business, Faculty of Economics
Pristina-Kosovo
agim.berisha74@hotmail.com

ABSTRACT

Fiscal policy as an instrument of economic policy in post-war Kosovo, built under specific conditions, includes the implementation of modern concepts of taxation, since the tax system during its gradual construction has been harmonized with the rules of the European Union. In the process of formulating fiscal policy, policy makers define the objectives they aim to achieve and the fiscal instruments by which the objectives are made feasible. Since the post-war period, during the transition period oriented towards the market economy, among other things, Kosovo has given importance to the construction of the tax system and the process of its reformation. Tax reforms aim to improve the economic environment and usually include steps that simplify the tax system. In the framework of the fiscal policy and taxes applied in Kosovo, we can say that despite the results achieved mainly of a fiscal nature, the steps taken through fiscal reforms were not sufficient in the race to create a favorable environment for business. From the economic point of view, the tax system has been mainly characterized by the fiscal character on the one hand, while on the other hand, the unfavorable structure of tax collection continues to remain. Through this study, we aim for the given conclusions and recommendations to be taken into consideration and serve actors in the field of public finance.

Keywords: Fiscal Policy, Tax Reform, Tax System, Economic Environment.

1. Introduction

This paper deals with the fiscal policy, reflecting the tax reform undertaken over the years in the Republic of Kosovo. The purpose of the study is the fiscal reform and its effects, from this point of view the main objective is to analyze the applied taxes and their impact on the economy. Fiscal policy as an instrument of economic policy in post-war Kosovo, built under specific conditions, includes the implementation of modern tax concepts, as the tax system during its gradual construction has been harmonized with the rules of the European Union. The paper presents a theoretical overview of the impact of taxes on the economy, changes and reforms over the years and their impact on economic processes in Kosovo, as well as conclusions, recommendations and references, which are presented at the end of the paper.

2. Literature Review

After the war, Kosovo began to build public institutions with the support of international institutions and at the same time the fiscal system for financing public needs. Fiscal policy is government policy regarding spending and taxation (Boyes. William & Melvin. Michael, 2011). Fiscal policy represents the totality of methods and actions used by the government and its bodies, to find, collect and efficiently use the resources needed to complete its programs during a certain period of time. Fiscal policy is about the use of government spending and tax policy to achieve certain economic and social goals (Mancelari. Ahmet, Sulo. Haderi, Kule. Dhori, Qiriçi. Stefan, 2007). Fiscal policy consists of changes in government spending and/or taxes to achieve specific economic goals, such as low unemployment, price stability, and economic growth (Arnold, A. Roger, 2008).

The economy of Kosovo continues to face many problems after the war, such as: high unemployment, low rate of economic growth, negative trade balance. Undoubtedly, fiscal policy is considered an important instrument of economic policy, through which economic performance can be influenced. Through fiscal policy, the state can directly affect the economy. When a state decides to abort tax collection, transfers, goods and services it buys, deficit financing, in fact it engages in fiscal policy. Any change in the level of these instruments has a direct effect on the general economic course.

Despite the highlighted economic problems, the fiscal policy in Kosovo has been characterized by a one-dimensional feature with a main focus on the collection of budget revenues, leaving aside the creation of favorable operating conditions for the private sector. In other words, the fiscal policy applied so far in our country has given effects of a one-dimensional character, mainly fiscal as progressive results have been achieved over the years in terms of budget revenues, while on the other hand the results and orientation have been insufficient in terms of promoting economic activity and economic development of the country.

Kosovo has laid solid foundations and continues to build a simple tax system with the application of low tax rates. The fiscal system and policy can be viewed in two periods: (Berisha. Agim, 2022).

1. Fiscal system and policy based on UNMIK regulations, from 1999 to 2007, and
2. Fiscal system and policy after the declaration of Kosovo's Independence, based on the tax legislation approved by the Assembly of the Republic of Kosovo.

Until the declaration of Kosovo's Independence in 2008, the fiscal policy at this stage is handled according to UNMIK regulations. The initial period of building a new fiscal system naturally had its own path and difficulties of an institutional and legal nature. This period has been characterized by the construction of a completely new tax administration and the drafting of the legal framework for the implementation of fiscal instruments, being gradually perfected with

new fiscal instruments supported by a legal framework, always harmonized with that of the EU and raising institutional capacities in their practical implementation. In post-war Kosovo, a completely new tax administration was built, which, based on the legislation, has the task of administering every type of tax applied in Kosovo autonomously, except property tax which is administered at the local level. In other words, it remains the duty of the Tax Administration of Kosovo to continuously collect over time the highest revenues that are practical within the legislation in force.

The next phase, with the proclamation of the Independence of the Republic of Kosovo, included the fiscal system based on the laws approved by the Assembly of the Republic of Kosovo.

Undoubtedly, the construction of new institutions with adequate legislation took time, especially the construction of the fiscal system and policy, which includes two aspects:

1. Creation of budget revenues and
2. Promotion of economic development.

Kosovo, with a low level of development, has initially and continuously oriented the fiscal policy instruments to fill the state budget for financing public needs, thus preserving the fiscal character of the fiscal policy. From the economic point of view, the tax system has been mainly characterized by the fiscal character on the one hand, while on the other hand, the unfavorable structure of tax collection continues to remain. In Kosovo since the post-war period, budget revenues have been dominated by revenues collected from indirect (border) taxes, such as revenues from VAT, excise, customs taxes, compared to revenues collected within the country by the Tax Administration of Kosovo-ATK from personal income tax, corporate income tax and VAT. Politicians and the Government of Kosovo should pay attention by focusing on the transfer of taxes and the filling of budget revenues in the country and the removal of dependence on the collection of funds at the border. Undoubtedly, in order to achieve these goals, for taxes to be collected within the economy, in addition to taking time, institutional and economic capacity building is required.

3. Methods

For the finalization of this paper, the presented material has support including scientific literature, as well as reports and publications from the Ministry of Finance, Tax Administration where issues related to applied taxes are addressed, namely their impact and economic effect in Kosovo. The methodology of the study is based on a broad dimension in the review of theoretical and empirical literature. In order to achieve the main objective of this article, different sources of data were used, as well as analysis methods, comparative methods, etc.

4. Results

Fiscal policy is an important part of economic policy and includes the policy of securing budget revenues, the policy of budget expenditures and the policy of managing the state debt. In the process of formulating fiscal policy, policy makers determine the objectives they intend to achieve and the fiscal instruments with which those objectives become feasible. In the economy of different countries, regardless of their level of development, we can say that the peculiarity of the fiscal policy requires special care of the Government in the design and application of its instruments to achieve, in addition to the fiscal goals, also in providing the solutions required in the processes macroeconomic. Reforming the tax system is one of the most important segments of the socio-economic transition led by the aspiration to join the European Union. Tax reforms are aimed at improving the economic environment and usually include steps that simplify the tax system. Based on the Constitution of the Republic of Kosovo, "The administration of the fiscal policy at all levels of the government will be in accordance with the

conditions for low inflation and sustainable economic development and for the creation of jobs".

Being the only instrument of economic policies, the fiscal policy implemented so far in Kosovo, mainly of a fiscal nature, has resulted in the collection of revenues in order to meet public needs, but the preservation of the fiscal nature has resulted in the lack of orientation of fiscal policy, enough to support the private sector. When it is well known that Kosovo is faced with economic problems such as high unemployment, extreme poverty, low rate of economic growth, the negative trade balance that has followed the Kosovar economy since the last war, therefore, in these developmental conditions, the immediate need remains before the decision makers the introduction of active economic policies by orienting fiscal policy instruments to create favorable conditions for encouraging the private sector, which is considered the main generator of economic growth and employment generation.

Since the post-war, during the period of transition with orientation to the market economy, among others, Kosovo has paid attention to the construction of the tax system and the process of its reformation. It is worth noting that the tax system has continuously been exposed to the reformation process. Thus, in 2005 we have an advancement of the tax system of Kosovo, where the reform of the tax system consists in the fact that the prejudicial tax and the salary tax have been merged into the personal income tax, as well as the profit tax has been replaced with the income tax of corporations.

The tax reform of 2009 consists of changing the tax rates as follows:

- Personal income tax rates were reduced from 0% - 20% to 0% - 10%.
- The corporate income tax rate was reduced from 20% to 10%.
- The VAT rate has been raised from 15% to 16%.

Table-1:

Tax rates applied in the tax system in Kosovo until 2009

Personal Income Tax		Corporate Income Tax		Value Added Tax - VAT	
Tax rates until December 2008	Tax rates from January 2009	Tax rates until December 2008	Tax rates from January 2009	Tax rates until December 2008	Tax rates from January 2009
0%	0%	20%	10%	15%	16%
5%	4%				
10%	8%				
20%	10%				

Source: Ministry of Finance, Tax Administration of Kosovo.

Personal income tax is a progressive system, since until 2008 the tax rate was from 0% to 20%, while from January 2009 onwards the tax rates are from 0% to 10%. In the tax system in Kosovo, as part of the fiscal reforms applied from January 1, 2009, changes are made in the tax rates in personal income tax, going from tax rates of 0, 5, 10, 20% to tax rates of 0, 4, 8, 10%. In corporate income tax, the tax rate is changed from 20% to 10%, while in VAT, the tax rate is changed from 15% to 16%.

As part of the fiscal reform from September 1, 2015, tax changes are made separately in the VAT, where the reduced VAT rate is applied in addition to the standard VAT rate. Tax changes in VAT that began to be applied in Kosovo since September 2015, include the change in VAT rates as follows:

- VAT is charged at the standard rate of eighteen percent (18%).
- The reduced rate of VAT is calculated and paid of eight percent (8%) for the supply of goods and services, as well as their import.

Tax changes related to VAT include the reduction of the VAT rate on basic products and services from 16% to 8%, the increase of the VAT rate on other products and services from 16% to 18%, exemptions from VAT- here are some inputs and equipment and information technology as well as the reduction of the VAT threshold for businesses from 50,000 to 30,000 Euros.

Immediately after the war and continuing until 2009, the fiscal policy implemented in Kosovo can be said to have produced one-sided results, i.e. mainly of a fiscal nature. This is due to the fact that the fiscal reforms undertaken were within the framework of changing the tax rates, which in essence were not oriented towards the creation of a facilitating space for business operations.

The fiscal instruments applied in the first years of the construction of the fiscal system in Kosovo have been of a one-dimensional character, continuously maintaining the orientation in the provision of budget revenues, while partially in function of stimulating economic activity. The fiscal reform of 2009 represents the institutional initiative to create a favorable environment for businesses and investments. However, in the name of the fiscal reform of 2009 and 2015, changes are made in the level of tax rates and other fiscal facilities, which do not show any significant improvements in business activity and investments. Even in spite of the results achieved in the sphere of fiscal policy, there is still room for action in the framework of fiscal measures which should be in function of creating a favorable environment for business.

Within the framework of taxes applied in Kosovo, the tax rates are presented in the table below.
Table- 2

Tax rates in taxes applied in Kosovo

Type of tax	Turnover threshold (in Euros)	Tax rate (%)
Value added tax – VAT	30,000.00	8 and 18
Corporate Income Tax	on 30,000.00	10
Corporate Income Tax - Manufacturing, commercial and transport activities, etc. -Servant activity	under 30,000.00	3 9
Personal Income Tax Annual income from 0-960 Annual income from 960-3,000 Annual income from 3,000-5,400 Annual income from 5,400 onwards	on 50,000.00	0 4 8 10
Payroll tax (monthly) Monthly income from 0-80 Monthly income from 80-250 Monthly income from 250-450 Monthly income from 450 onwards		0 4 8 10
Personal Income Tax: - Manufacturing, commercial and transport activities, etc. -Servant activity.	under 50,000.00	3 9
Tax on rent, interest and property rights		10
Tax for special categories		3 or 1
Taxation for non-residents		5

Source: Ministry of Finance, Tax Administration of Kosovo.

The responsibility of the Tax Administration of Kosovo-ATK, as an Executive Agency with full autonomy, is to administer the implementation of any type of tax applied by tax legislation in the Republic of Kosovo. In other words, the fiscal reforms applied in Kosovo, in the sense of the movements in tax rates by creating a simple tax system, with low tax rates, expanding the tax base and maintaining macro-fiscal stability, are considered incomplete, since in the framework of fiscal reforms, there has been a lack of fiscal stimulus measures (fiscal reliefs and exemptions for a certain time) towards investments and economic activity. Taking into account the low rate of economic growth in Kosovo, the high rate of unemployment, the high trade deficit, it can be said that the fiscal policy implemented so far with a mainly fiscal character, has turned out to be a partial fiscal policy oriented towards the private sector, therefore it is considered necessary to take fiscal policy measures in relation to economic problems. From the economic point of view, this line of orientation of the fiscal policy so far by the decision-makers in Kosovo represents the finding of "safe haven of collecting budget revenues at the border" that included two inverse dimensions among themselves: (Berisha. Agim, 2022).

- First, it is easier to collect budget revenues and
- Second, it hinders the growth of economic activity in the absence of alleviating fiscal measures.

The following table presents income taxes and consumption tax (VAT) in the countries of the region.

Table-3

Income tax and VAT in the countries of the region

United	Personal income tax (%)	Corporate income tax (%)	Value added tax (%)
Albania	0, 13, 23	5-15	20
Bosnia and Herzegovina	10	10	17
Bosnia and Herzegovina	10	10	5-18
Montenegro	9	9	7-17
Serbia	10, 15, 20	15	10-20
Kosovo	0, 4, 8, 10	10	8-18

Source: Taxes at a Glance

As for the taxes applied in the countries of the region, looking at the table we can conclude that, in the countries of the region in personal income tax and corporate income tax, the tax rates in these countries are almost the same with some exceptions in Serbia in personal income tax, the tax rate is 12-20%, while in Montenegro, in corporate income tax, the tax rate is 9%. As for the consumption tax (VAT), the countries of the region apply the reduced rate in addition to the general rate.

5. Conclusion

In the economy of different countries, regardless of their level of development, we can say that the peculiarity of the fiscal policy requires special care of the Government in the design and application of its instruments to achieve, in addition to the fiscal goals, also in providing the solutions required in the processes macroeconomic. The fiscal system in Kosovo since the war is, among other things, characterized by:

- The one-dimensional and linear character of fiscal instruments, especially the indirect taxes at the border remain fiscally oriented (filling the budget revenues) and to an insufficient extent towards the private sector.
- Incomplete fiscal reforms, mainly oriented towards the movement of tax rates, are considered insufficient in stimulating economic activity and investments, while on the other hand, they have resulted in providing a slight effect in terms of expanding the tax

6th International CEO Communication, Economics, Organization & Social Sciences Congress

base and mainly in maintaining budget revenues.

- The lack of fiscal stimulus measures (tax exemptions-holidays for a certain period) to the economic activity in certain sectors, are considered one of the flaws that have followed the fiscal policy in Kosovo so far.

ABSTRACT

The primary goal of the study was to examine the effect of an activity-based teaching methodology on the academic performance of slow learners at the primary level. This study used a quasi-experimental design. Multan's Government Institute for Slow Learners was the focus of the study. The experimental group of the Government Institute for Slow Learners Multan had a sample size of 18 slow learners (14 males and 4 females). Study participants came from a diverse range of socioeconomic backgrounds. All of the participants in the study are grouped together for the 2019-20 school year in class 1st (Slow Learners). The first day of this study was dedicated to conducting a pre-test to assess the academic performance of students. The researchers and a teaching assistant administered the test. An intervention plan was devised and implemented for 22 days. The students' academic performance was evaluated at the end of the study by conducting a Post Test on the final day. Before and after test results were compared to determine the impact of activity-based teaching methodology on the performance of slow learners at the conclusion of the research. The percentage, mean, and one sample t tests were used to analyze the data. The results revealed that students learned better through activity-based teaching methodology than traditional methods of teaching. Therefore, activity-based teaching methodology may be implemented in slow learners' institutes

Keywords: Activity-Based Teaching Methodology, Students Performance, Slow Learners

Introduction

Any action of an individual which complete a specific goal is called an activity. All elements of an action accomplished in specific backgrounds at large range of conditions (Su, 2017). Ravi & Xaviera, (2007) outlined activity based methodology as the method of learning within which students physically and mentally explore subject by simulation of the work atmosphere, manipulation of tools and materials related to the planet of labor, or performance of a piece task. This learning technique includes the required activities in terms of information, angle and skill.

Shah and Rahat (2014) are of the point of view that students can learn better through their own experiences and develop their creative thinking. Activity based teaching assist students in constructing knowledge. The interaction among the students is an important factor for achievement of learning outcomes. Interactional resources are proved very helpful to students due to the easy approachable for them. Therefore interaction among the students is the basic need for ABL.

Activity based learning (ABL) methodology may be a learning method within which student's are concerned for the training purpose. ABL methodology is totally different from ancient methodology of teaching on two points, an active role of scholars and collaboration among students (Prince, 2004).

Vygotsky's Zone of proximal development theory (1978), addresses the issue of moderate students. Slow students' own activity is now and then discouraging and that they need to encourage from others. In comprehensive air working and collaborating with a ton of competent people, for instance, in class room cooperation with the Math's instructor, they get an opportunity of creating natural aptitudes through investigation of their possibilities and knowledge (Reddy and Ramar, 2006). In comprehensive training, students can gain proficiency with each aptitude with exceptional instructive needs in customary instructive locales (United Nations, 2003). The Dakar framework for action expresses that inclusive instruction is typically or precisely identified with an ordinary commitment of learners with described, for example, uncommon learning prerequisites (UNESCO, 2000).

Activity-based Teaching (ABT) for the most part educating will energize a positive move of students' job, from latent to dynamic students. Additionally, it will create mental element, flectional and body process areas simultaneously, allowing learners to accomplish higher-request execution. On prime of that, it will cultivate a profound way to deal with picking up, during which learners read learning as a strategy for conceptualizing thoughts or realities (which means direction). Ideal learning happens once there's partner environment that is tributary to dynamic learning. This case agrees well with Petra expressing that "for educating to be viable, learning should occur" (Petra, 2014).

Activity based mostly learning because the learning method within which student is thirstily engaged in doing or in seeing one thing done. Additionally they explained that activity based mostly teaching methodology frequently involves the employment of artful materials. An assortment of exercises structured dependent on social constructivist standards had reenacted the premium and contribution in the learning procedure with the positive result of seeing understudies effectively partaking in the development of their own insight rather than huge uninvolved audience members. Toward the end both instructor and understudies picked up some of accomplishment and regulation. More profound comprehension of the theme and educated relational abilities were created. Action based methods something "hand on it", the exercises fused in learning ideas demonstrated to be successful devices in a study hall condition. In this investigation we use assortment of exercises that strengthened introduction, group building aptitudes during a bunch action in the learning ideas. In study hall atmosphere the

understudies took an interest with energy also, even added to new exercises, along these lines adding shimmer and vivacity to the learning air (Suydam et al., 1977).

Learning experiences supported reality activities facilities learners for the transmission of information of data of information into their personal knowledge for the applying in reality. Presumably the best ways to deal with fathom something is to get ones hands on it and in actuality investigate various roads in regards to it. In present world, there is a prerequisite for a change in our strategy for training and learning. This activity based teaching gives clear yet exceptional to a reasonable investigation corridor instructing. It moreover exploits a wellspring of imperativeness and uplifting demeanor that would enable understudies to create and administer change. It outfits understudies with desire in taking care of conventional issue by using their own one of a kind resources. Consequently it is in like manner a particularly profitable gadget in improving the present conditions in the open field (Edward, 2001).

Sugandi et al. (2017) of the view that there was a major differentiation in learner achievement between the groups of researchers instructed abuse the ABL philosophy which of researchers taught abuse the standard procedure. The gathering of learners got the hang of utilizing the ABL technique had the most elevated accomplishment. The scientist further added that the usage of ABL could realize improvement in student accomplishment.

Amuthavalli and Sivakumar (2014) delineated that a spread of activities designed supported social creative person principles had simulated the interest and involvement within the learning method with the positive outcome of setting students actively taking part within the construction of their own information instead of huge passive listeners. At the top each other and students gained a number of accomplishment and containment. Deep understanding of the subject wise social skills was developed.

However, on the base of the studies (Sugandi et al., 2017; Amuthavalli and Sivakumar, 2014) it may be concluded that there is significant role of activity-based teaching methodology in students' learning. After reviewing related literature, researcher found that there is no any study which is conducted to investigate the effect of activity based teaching methodology on academic performance of slow learners at primary level in government institutes for slow learners in Pakistan. Therefore, it is important to find out the effect of activity based teaching methodology on academic performance of slow learners at primary level in government institutes for slow learners. Therefore, this study was undertaken to investigate the effect of activity based teaching methodology on academic performance of the slow learners at primary level.

Problem Statement

The aim of this study was to ascertain the effect of activity-based teaching methodology on academic performance of slow learners at primary level.

Objectives of the study

The objectives of the study were

1. To analyze the effect of activity-based teaching methodology on the performance of the slow learners at primary school level.
2. To compare the effect of activity-based teaching methodology on the academic performance of the slow learners among English and Mathematics subjects.

Hypothesis

The study tested the following null hypothesis.

H₀1: There is no significant effect of activity based teaching methodology on academic performance of the slow learners at primary level.

H₀2: There is no significant difference of the effect of activity based teaching methodology on academic performance of the slow learners between the subjects of English and Mathematics.

Research Procedure

Slow learners in primary school benefit from activity-based teaching methods, which is why this study is being conducted. As a result, this research utilized a "Quasi-experimental" research design. For the purpose of assessing whether an activity-based teaching strategy improves the academic performance of slow primary school students, the researcher used a pretest and a posttest. Multan's Government Institute for Slow Learners is where this experiment is taking place. For 22 days, the researchers conducted an experiment on a class of slow learners. There were 18 students in the experimental group at Multan's Government Institute for slow learners (14 male and 4 female). There were a wide range of socioeconomic backgrounds represented among the students who were sampled, and none of them were enrolled in a tuition program. Every student had the right to have a slow learner in their classroom. All of the students involved in the study are assigned to a single class for the 2019-20 school years as "slow learners," according to school records.

Instrumentation

Student academic performance was evaluated with a pretest (personally structured and validated by experts) on the very first day of this study. The researcher and a teaching assistant administered the test. Pre- and post-assessment sheets were used to record the results, which was used for remedial and general instruction. The content of both the English and mathematics portions of the test is comprehensive. The students' academic performance was evaluated at the end of the study by conducting a Post Test (Personally structured and validated by experts) on the final day. Pre and post-test results were compared at the conclusion of the research to determine whether the Activity-Based teaching approach had any impact.

Intervention

The researcher devised a series of activities that were used to teach the intervention lessons to the entire class. Suitable measures were taken to ensure that all of the students (n=18) were present in order to control the number of students who were absent. Twenty two (22) days of one-hour-a-day tutoring sessions were held during school hours. The researcher was assisted by an assistant teacher (Primary Educator with at least six years of teaching experience) in the implementation of the intervention program. Assistant teachers received preliminary training on the program before the start of the remedial program, which included evidence of the program, an outline of the lesson, and evidence of procedures for instruction in direction and strategy. The intervention program was explained in detail to the assistant teacher. Direct (explicit) and systematic remediation of the English subject was the primary focus of the remedial plan, which was implemented throughout the school day.

The slow learners' intervention lessons were taught using an activity-based teaching approach. To resolve the issue, the researcher taught the lessons with the assistance of an assistant teacher. During 22 days of school, the intervention plan was successfully implemented. The researcher was tasked with coming up with a slow learner-specific intervention strategy based on the curriculum provided. After the preliminary procedure was

established, a 22-day process was put into place. A schedule was devised to ensure a smooth rollout to the experimental cohort. A pre-test and post-test procedure was carried out to ensure that there was no ambiguity in the process. As an added measure of quality control, the intervention strategy was shared with educators who specialize in classroom instruction. This review and piloting process removed any limitations or errors that were discovered before the processes and procedures were delivered to the experimental group. Appendices include the final intervention plan and the schedule for each lesson.

Researchers and assistant teachers planned and followed a comprehensive understanding of the desired skills and information that assisted them in teaching students who were unable to keep up with their peers. As an assistant teacher or researcher, you set up and determine key vocabulary that supports the layer system, and then you create an explicit name or word that incorporates multiple meanings. Slow learners were able to get their ideas out of their heads because the final set-up was so flexible. The following steps were taken in order to carry out the intervention. Students were first introduced to the research topic by the researcher and an assistant teacher. Math and English concepts were taught to the experimental group through a series of designed activities. Researchers also restricted their research to the study of English and Mathematics. An investigation into the following aspects of the languages of English and Mathematics was carried out:

English

1. Recognition of small alphabets a-z
2. Recognition of capital alphabets
3. The concept of Sky, Grass, and Root letters.
4. Color name
5. Matching the alphabets with objects
6. Matching small and capital letters
7. Spellings
8. Book reading

Mathematics

1. Counting 1-50 (Digits)
2. Sequence of numbers
3. Greater numbers
4. Smaller numbers
5. Increasing order
6. Decreasing order
7. Addition
8. Subtraction
- 9.

Implementation of Intervention Plan

ACTIVITY # 1 Recognition of alphabets small a to z

In this activity, the small letter were placed on the chart and asked the student to choose the respective letters.

ACTIVITY #2 Recognition of alphabets capital A to Z

In this activity, teacher spread the foaming alphabetic on the table and asked the students to recognize the letters. It enhances the ability of recognition of capital alphabets.

ACTIVITY # 3 The concept of sky, grass, and root letter

In this activity students learn easily the concept of sky, grass and root letters. Teacher asked the students to place the letter in the relevant lines.

ACTIVITY #4 Color names

In this activity the students choose the first alphabet to the relevant object.

ACTIVITY #5. Matching the alphabets with objects

In this activity the child choose the first alphabet to the relevant object.

ACTIVITY#6 Matching small and capital alphabets

In this activity teachers spread the alphabets both capital and small and asked the students to match the capital letter with relevant small letter.

ACTIVITY #7 Spellings

In this activity students learn the spelling and it will help the child in preparing the dictation words.

ACTIVITY # 8 Reading

In this activity students read the book.

Mathematics

ACTIVITY#1 Counting 1-50

In this activity student learn the counting 1-50 with the help of chart.

ACTIVITY#2 Sequence of numbers

In this activity sketch of the train on the thermal sheet is used which is attractive for the students to understand the idea of sequence of numbers.

ACTIVITY#3 Greater numbers

In this activity flash cards were place on the table and student choose the greater number by put the ring on the right number.

Activity 4. Smaller Number

In this activity students place the ring on the smaller number.

ACTIVITY#5 Increasing order

Stair model is attractive for the student to understand the concept of increasing numbers.

Activity 6 Decreasing order

Stair model is attractive for the student to understand the concept of decreasing numbers.

ACTIVITY#7 Additions

In this activity students learn addition with the help of flow charts.

ACTIVITY#8 Subtractions

In this activity student learn about the right number in the right place.

Results

One Sample t. test was applied to compare the results of Pretest and Posttest of Mathematics and English.

Table1

Difference between Total score of Pre Test and Post Test of English

	N	Mean	t	Df	Sig. (2-tailed)
Total Pre Test Eng	18	21.89	37.96	17	.000
Total Post Test Eng	18	39.17	72.83	17	.000

*Significance Level **P ≤ .05*

Table 1 shows that there is a statistically significant difference (Sig. .000 & Mean difference= 17.28) between the scores on the pre-test and the scores on the post-test of English after the intervention was implemented. The difference in t-value (34.87) also strongly supports the claim that students' performance in English improves as a result of using an activity-based teaching methodology.

Table 2
Difference between Total score of Pre Test and Post Test of Math

	N	Mean	t	Df	Sig. (2-tailed)
T Pre Test Math	18	20.62	40.76	17	.000
T Post Test Math	18	42.17	64.09	17	.000

*Significance Level **P ≤ .05*

It is shown in the preceding table 2 that there is a statistically significant difference (.000) between the scores on the pre-test and post-test of Mathematics after intervention. The difference in t-value (23.33) also lends strong support to the claim that students' mathematics performance improves when they are taught using an activity-based methodology.

Table 3
Difference between Total Score of Pre Test English and Pre Test of Math

	N	Mean	t	Df	Sig. (2-tailed)
Total Pre Test Eng	18	32.77	36.47	18	.000
Total Pre Test Math	18	39.55	42.23	18	.000

*Significance Level **P ≤ .05*

A statistically significant difference (Mean difference=6.78) exists between the total scores of the posttests in English and Mathematics, as shown in table 3. It is fact that there is a statistically significant difference (.00) between English and Mathematics.

Table 4
Difference between Total Score of Post Test English and Post Test Mathematics

	N	Mean	t	Df	Sig. (2-tailed)
Total Post Test Eng	18	74.21	2.117	18	.048
Total Post Test Math	18	79.89	2.117	18	.048

*Significance Level **P ≤ .05*

Table 4 depicts that a statistically significant difference (.004) exists between the total scores of the post-test of English and Mathematics.

Discussion

The purpose of this study was to determine the effect of activity-based teaching methodology on the academic performance of slow learners at the primary school level, specifically. In its natural setting, the study was a quasi-experiment. Students gained an understanding of the concepts of recognition of small alphabets a-z, recognition of capital alphabets, and the concepts of sky, grass, and root letters, according to the results of the study. Using activity-based teaching methodology, students learn to identify colors, match alphabets with objects, match small and capital letters, spell and read aloud from a book, count 1-50 (digits), sequence of numbers, greater numbers, smaller numbers, increasing order, decreasing order, addition and subtraction more effectively. ABL improves students' understanding of various scientific concepts (Hughes et al., 1997). ABL aids students in understanding the situation and dealing with difficult circumstances. Dean (1999) stated that ABL provides students with the ability to make sound judgments when problem solving. This study also shown the results same as previous researchers result.

Conclusion

H₀₁: There is no significant effect of activity based teaching methodology on academic performance of the slow learners at primary level.

Results depicts that there is significant difference (.00) between the students performance after implementation of intervention. Therefore H₀₁ is not accepted.

H₀₂: There is no significant difference of the effect of activity based teaching methodology on academic performance of the slow learners between the subjects of English and Mathematics.

Results explain that there is significant difference (.04) between the students' performance in English and Mathematics after implementation of intervention. Therefore H₀₂ is not accepted.

The major objective of the study was to determine the effect of activity-based teaching on the performance of slow learners in primary school. The findings indicate that using an activity-based teaching methodology improved students' performance in acquiring basic concepts in English and Mathematics. As a result, it is possible to conclude that activity-based instruction had a considerable impact on the academic performance of slow learners in primary school.

Recommendations

In light of the findings, the following recommendations are made.

The findings indicated that an activity-based teaching improved slow learners' comprehension of mathematics and English. As a result, institutes for slow learners may employ an activity-based teaching technique.

Suggestions for Future Research

This study used a quasi-experimental research design. Researchers may do more research using an observational strategy. At the primary level, it was restricted to the Govt. Institute for Slow Learners in Multan. Additional study on higher classes may be undertaken on a larger population.

Political Economy of the Tourism Industry in Thailand in Current History

Dr. Rey TY

reyty1@gmail.com

Payap University – Thailand

Orcid: 0000-0002-9258-0318

ABSTRACT

This paper addresses the problem with which the tourism industry of Thailand is confronted and the ways in which it responded and rose to the occasion. The purpose of this paper was to examine the Thai tourism industry before, during, and after the pandemic. To achieve this goal, this article reviewed the literature regarding tourism in Thailand prior to the pandemic, at the height of the pandemic, and after the end of the pandemic. The literature used was culled from government sources and the tourism industry. This article used a qualitative research methodology include involving ethnography. Using political economy as the framework of analysis, this study revealed in the findings section that the tourism industry in Thailand in current history has undergone three periods of changes, with the government, the tourism industry, and the society at large responding to the ever-changing situation. This study shed light and added to the knowledge on the changing landscape of the Thai tourist industry. The findings provided a foundation upon which guide the further development of new thrusts in the tourism industry that meets the changing situation.

Keywords: COVID-19 Pandemic, Current History, Political Economy, Thailand, Tourism

INTRODUCTION

This article discussed the evolution of tourism in Thailand with the COVID-19 pandemic as the nodal point from which to distinguish three distinct periods.

Background of the Problem

The economic growth of Thailand is dependent on its tourism sector. The country attracts not only domestic travelers, but also visitors from all over the world. But the occurrence of the pandemic has a momentous negative effect on its tourism sector, for which reason there was a remarkable downturn in activities related to tourism. This sudden and unexpected turn of events interrupted the sources of income of persons and businesses related to the tourism industry.

Statement of the Problem

This research addressed the challenges with which the tourism industry in Thailand is confronted over the years. Before, during, and after the COVID-19 pandemic, the face of the tourism industry in Thailand has changed, as it responded to the shifting times. Government actions have implications for the survival and the flourishing of the tourism industry and national income in general and individuals working in this sector and tourism-related businesses in particular.

1. CHAPTER 1– LITERATURE REVIEW

1.1 Political Economy

This paper used political economy as the theoretical framework that guided the conduct of the research on tourism in Thailand over the years. Political economy refers to a host of phenomena: the allocation of resources in a country with or without government intervention; the historical processes in the ownership of the means of production; the relationship of politics and the economy; the public choice approach; and, institutional adaptation (Wittman & Weingast, 2008).

In addition, political economy is a useful tool to identify historical causal uniqueness and generalizations about events (Gailmard, 2021). Due to several major crises with which the world is confronted today, such as pandemics and climate change, there is a call for a return to classical political economy as a guidepost to put into historical perspective, develop, as well as synthesize the need for sustainable development (Manioudis & Meramveliotakis, 2022). This research investigated the three phases of tourism in Thailand in current history.

1.2 Political Economy of Tourism

Researchers call for the use of political economy with a view to forecast and prepare for the future (Webster & Ivanov, 2010). We need to have critical insights about the role of tourism in development (R. Bianchi, 2018). Crises of all kinds have an impact on the tourism industry, which can be scrutinized by comparing prior to, during, and after the crises events (Bhuiyan et al., 2021). From the perspective of political economy, the COVID-19 pandemic has put a dent on the tourism industry in Thailand (Kaplan et al., 2022). Using the political economy lenses, the pandemic made us deeply consider inclusive growth and decent work, especially as many were hard hit when tourism ground to a halt during the health crisis (R. V. Bianchi & De Man, 2021). Although there were avenues to post-capitalist tourism even prior to the pandemic, post-capitalist tourism of various strands became more and more a reality, during the pandemic, as the Thai government wanted to help people in distress during the pandemic (Fletcher et al., 2023).. See Figure 1 below.

2. CHAPTER 2– METHODOLOGY

The research philosophy of this papers is materialist ontology, as it investigated social realities before, during, and after the pandemic. It utilized the dialectical epistemology, as it identified the changing trends in tourism as well as government responses. The research design employed was a qualitative case study which used ethnographic strategy. Several data collection methods were used, including among others the following: participant observation, field visits, photo and video documentation, informal dialogues, government documents, reports from mass media, review of social media posts, and triangulation of all of these data gathered.

The population of this study was the country of Thailand as a whole. The qualitative sampling of issues discussed related to tourism was non-random, purposive, and convenience, based on

participant observation, field visits, the availability of documents. The accuracy of the findings was based upon member checks. The credibility of the study relied on objective peer debriefing.

The time horizon was longitudinal, sequential, and chronological, scrutinizing the changing trends in the political economy of tourism in Thailand in the pre-pandemic, during the pandemic, and post-pandemic stages. Data analysis was based on data immersion, the coding of the raw data, data reduction, and organized data visual display. Documented used included government reports and industry publications. Data interpretation was based on thematic analysis, contextualization, meaning making, the formulation of a descriptive narrative, and visual representation. No harm was committed in the conduct of this research. The author practiced reflexivity, reflecting on his own potential influences and biases on the research findings. See Figure 2 below.

3. CHAPTER – FINDINGS

6th International CEO Communication, Economics, Organization & Social Sciences Congress

This section responded to the three questions regarding the political economy of tourism in Thailand before, during, and after the pandemic.

3.1 Political Economy of Tourism in Thailand Before the Pandemic

3.1.1 Characteristics

Tourism was a key driver of Thai economy, providing about twelve percent (12%) of the gross domestic product (GDP). In 2019, Thailand had a record of 39.8 million tourists, which was 4.2% increase from 2018. The three pillars of Thailand include: the people, religion, and monarchy, which have offerings for tourism. In general, Thais are very friendly, who themselves are tourist attractions. Aside from the people, Thailand has several offerings in tourism: Buddhist temples, bustling cities, beaches in the south, ancient ruins, royal palaces, nature adventures, wildlife, and ethical animal sanctuaries.

The hospitality industry offers several attractions: festivals, fitness, food, and fun. There are seasonal, regional, and national festivals. For fitness, there are opportunities for relaxation, sports, and wellness.

The whole country is full of attractions. Thailand can be subdivided into different regions: South, Center, North, and Northeast, each of which has so much to offer to tourists (Bindloss, 2022; Culture Trip, 2023; Drillinger & Bocco, 2022; Touropia, 2023). Central Thailand is home to the capital, the royal palace, and the ancient ruins of Ayutthaya kingdom. The south offers sun, sand, islands, and beaches. Northern Thailand offers the Lanna kingdom in and around Chiang Mai, the ancient ruins of Sukhothai kingdom, and the mountain town of Pai. The Northeast region of Isan is the home of agricultural and borders the Mekong River.

People from all over the world enjoy Thai gastronomy. It is an explosion of umami, sweet, sour, and salty flavors, combining indigenous ingredients with Chinese noodles and Indian spices. For this reason, tourists ply the night markets, river markets, street markets, and railway markets to savor Thai dishes, snacks, and desserts.

In addition, many Asians come to Thailand for medical tourism. Many come to have their ailments treated. Others come for cosmetic surgery. Thailand is known to have a good medical infrastructure for which reason many Asians trust the medical personnel and system in Thailand for treating illnesses. In addition, Thailand is known as one of the major places in which plastic surgery is

Tourists also come to Thailand to learn muay Thai or Thai boxing or practice Vipassana Buddhist meditation. Some learn the Thai language, either conversational or written or both.

Others learn to cook Thai dishes or take a certificate course in Thai massage. These certain courses are very flexible and have different durations. There are courses that only take hours, half a day, one whole day, one week, one month, or even years to complete.

Songkran is the Theravada Buddhist New Year celebrated in the hot and humid month of April, during which people enjoy splashing water on practically anyone. During the Yi Ping Loy Krathong Festival in the evenings of the cooler months of October or November, people flock to northern Thailand to set their floating candles on Ping River or set free their flying lanterns.

3.1.2 Challenges

Despite these strengths in tourism in Thailand, there are some weaknesses. Traffic accidents are not rare, as a result of reckless driving (UN DESA, 2020). The air quality from around March to May is not good, due to biomass burning (Vichit-Vadakan & Vajanapoom, 2011). There is a big gap between the rich and the poor (Dablas-Norris et al., 2015). Furthermore, there is a big urban-rural gap, as the countryside, compared to the cities, do not have good access to education, health care, and infrastructure, especially in the Northeast (UN DESA, 2020).

3.2 Political Economy of Tourism in Thailand During the Pandemic

3.2.1 Characteristics

The pandemic had a negative effect on Thai tourism (ADB, 2020). The tourism industry accounts for one fifth of the gross domestic product (GDP) of Thailand and 20% of jobs. Thus, the stoppage of tourism in Thailand affects the people and the national economy very severely (IMF, 2021). The impact was especially felt in the tourism industry where everyone became unemployed all of a sudden

National income contracted and fell from \$90 billion in 2019 to \$24 billion in 2020 at the height of the pandemic (Thaicharoen et al., 2022). In March of 2020, the government declared a state of emergency, enforcing strict travel restrictions for international tourists entering the kingdom. It led to the total cessation of tourist arrivals in April and May 2020 (ADB, 2020). Tourism was hard hit: food, restaurant, hotels, tour agencies, guides, rental vehicles, the hospitality sector, with hotels having only 9% occupancy (Saxon et al., 2021).

Cities were quarantined and were forced to lockdown. Businesses folded. As a result, many workers lost their jobs in a matter of minutes. The unemployed become poor and penniless. Many had no food at the table. Individuals and groups decided to take it upon themselves to provide free food and water of all types in street corners. Soon, the jobless queued up in streets after street. Interreligious leaders organized food pantries, inviting people to bring home-

6th International CEO Communication, Economics, Organization & Social Sciences Congress

cooked food, restaurant-prepared packed dishes, or store-bought canned goods, rice, sugar, and the like. Some brought fresh home-garden-grown organic vegetables to share with those who lost their jobs, as well as the elderly, and children.

Eventually, the government provided all kinds of support to the people. The purpose was to invigorate business amidst the pandemic and the concomitant quarantine and lockdowns. Free COVID-19 vaccines were offered to everyone who stayed in the kingdom, not only for Thai citizens, but also for all foreigners stuck in Thailand during the pandemic (Saxon et al., 2021). Moreover, as the country was shut closed to foreign travelers, the government provided local travel subsidies to Thai citizens. The government offered subsidies for air travel and hotel stays for Thais traveling within Thailand. In addition, the government provided businesses with tax breaks, soft loans, and debt restructuring (ADB, 2020).

The pandemic was the time during which the government decided to come up with creative ways to promote tourism. The national government promoted domestic tourism and homestays as some ways by which to bring about sustainable tourism. By homestays, local villagers were able to have some income during the pandemic. By encouraging locals to travel within Thailand, businesses were kept alive: hotels, transportation, the food and drinks industry, arts and crafts, and souvenir shops.

3.2.2 Challenges

The pandemic situation was one of uncertainty. No international tourists were allowed to enter Thailand. There was a major downward shift in the economic activity during the pandemic. People lost their jobs, including in the tourism industry. Social distancing negatively affecting people leaving their homes, thereby lessening family expenditures, which led to downturn in businesses. For all these reasons, economic growth and national income slowed down.

3.3 Political Economy of Tourism in Thailand After the Pandemic

3.3.1 Characteristics

After the end of the pandemic, the tourism sector in Thailand is slowly picking up. Friends who have met not each other during the pandemic gathered around face-to-face. However, it is a very complex and protracted process. The government has put in place many policy actions to make sure that there will be a safe and gradual recovery and return of international travels to Thailand. It had implemented intentional efforts to stimulate travels, both domestic and international. Clearly, however, Thailand is reliant on the arrivals of foreign travelers for the sustenance of its tourism industry.

After the end of the pandemic, a totally new innovation was the decriminalization of the use of cannabis. By November 2022, marijuana was legal with certain limits, which is an added attraction for international tourists (Benveniste, 2022). However only people who are over 20 years old, not pregnant, and not breastfeeding are permitted to use cannabis (Ives, 2022). Cannabis cannot be smoked outdoors. However, incoming or outgoing tourists are forbidden from carrying cannabis seeds or any part of the plant (Root, 2023). There are two products based on cannabis: CBD and THC. CBD is legal and all products containing CBD, such as tinctures and gummies can be bought and used legally (Bloom Express, 2023; Organic Village, 2023). THC beyond 0.2% by weight is not legal. Cannabis is projected to become a US\$661 million industry by the year 2024 (Organic Village, 2023).

3.3.2 Challenges

Today, there is still uncertainty about the situation regarding viruses and the arrival of new pandemics. As the world is experiencing economic recession, inflation, and petroleum price hike, the recovery of the world economy will be very slow. For this reason, growth in the tourism sector in Thailand will not be rapid as desired, as the global economic crisis impacts foreign travelers who are planning to Thailand. Nevertheless, many hitherto folks who became jobless as a result of the pandemic now have gainful employments.

CONCLUSION

Summary

This article discovered that there are noteworthy vicissitudes in the patterns of tourism in Thailand. It deliberated on the role of the government, confronted with the challenges with which the tourism industry is faced, to assist the hospitality and other sectors that the pandemic hit the hardest. The findings were organized into three sections: tourism in Thailand in the pre, during, and post-pandemic periods. It likewise offered insights into the prospects of tourism in Thailand. It discussed the characteristics, challenges, and the solutions to the challenges faced by the tourism sector of Thailand. See Table 1 below.

Table-1: Taxonomy of the Political Economy of Tourism in Thailand in Current History

Reference Numbers	Political Economy	Before the Pandemic	During the Pandemic	After the Pandemic
1.	Periodization	“Normal”	COVID-19	“New Normal”
2.	Tourism Industry	Tourism was at an all-time high	No foreign tourists	Recovery

3.	Government Prioritization	Traditional attractions	Prop up domestic tourism	Promote sustainable tourism
-----------	--------------------------------------	----------------------------	-----------------------------	--------------------------------

Source: Original Table of the Author of This Article

Recommendations

As a result of almost the demise of the tourism industry in Thailand at the height of the pandemic, the government of Thailand started to rethink about the directions of this important sector that generates income for the whole country. Aside from the traditional attractions for foreign tourists, the government now encouraged 1) domestic tourism, and 2) community-based tourism as sustainable and responsible response to the reality of the tourism industry (Witker, 2020). In this way, tourism could survive, come what may, even when another major negative global event would arise, but we hope not.

Conclusion

This article stressed the importance of taking into account the perspective of political economy in the analysis of the tourism sector in Thailand as well as the significance of the implementation of the sustainable development strategies for the long-term continuance and thriving of tourism industry in Thailand.

The Role of the University in the Government Program for the Integral Transformation of Neighborhoods: the Cuban Case

Dr. C Niurka Tellez Rodríguez. P.T

Universidad de Oriente

ntellez@uo.edu.cu

ORCID: 0000-0001-7470-6311

ABSTRACT

The Universidad de Oriente, since its genesis, has shown its popular and extensionist vocation, in solid connection with Santiago society; Hence, in postmodernity, it has achieved changes in the articulation processes of state and private actors in order to meet the objectives of the Territorial Development Strategies, based on this and in response to the Government's call for accompaniment to the program of Comprehensive transformation of neighborhoods in vulnerable situations, in the midst of a complex crisis scenario, the university became a strategic ally for said program. This accompaniment is deployed through the development of the Integrated Community Work (TCI) from the Universidad de Oriente considering the different municipalities as laboratories of the natural and social fabric where spaces with diverse forms and functions are shown, with unequal housing densities, spaces of intense sociability, cultural repertoires that are built as expressions of sociocultural consumption. The objective of this paper is to: Explain the accompaniment process deployed by the Universidad de Oriente in the care program for the most vulnerable neighborhoods in the Santiago de Cuba province. The research is based on a mixed methodology from which theoretical level methods were used such as: inductive-deductive; analysis-synthesis, as well as the hermeneutic-dialectical and as a methodological procedure, the triangulation of sources and method. The main result is recognized: the willingness and commitment of directors, academics, actors and socio-educational managers to improve territorial development actions by strengthening attributions and planning and management capacities, the participation of social actors and coordination with other instances of the government, in order to enhance local resources and take advantage of opportunities to improve the living conditions of the population in a situation of vulnerability; the reengineering process of university extension based on the accompaniment to the neighborhood transformation program.

Keywords: University Extension, Integrated Community Work, Accompaniment, to Vulnerable Neighborhoods.

INTRODUCTION

The Universidad de Oriente, from its very genesis, was born with a popular and extensionist vocation, in solid connection with the society of Santiago and the eastern region in general, hence the assessment of the Government and its call to the IES for the accompaniment of the program of comprehensive transformation of neighborhoods in vulnerable situations, constitutes an opportunity to redesign and adjust our work in tune with the conditions and complexities of the current context and involves the projection of actions to increase the social impact of University-Society interaction.

The Santiago de Cuba province is one of the strategic scenarios for the development of Integrated Community Work (TCI) from the Universidad de Oriente; Its municipalities are laboratories of the natural and social fabric, in which spaces with diverse forms and functions follow one another, with unequal housing densities, spaces of intense sociability, cultural repertoires that are built as expressions of sociocultural consumption.

The city is a spatial and social form that reveals the ways in which the people of Santiago interact with public spaces and institutions and with the University. The municipalities and popular councils are units of analysis, in the explanation, interpretation and understanding of the processes that are occurring within them. The proposal presented is anchored in the structure of the Popular Council, the first link in community governance, and where the reproductive cultural capital of a condensed, diverse social habitus is concentrated.

Law No. 132/2019 on the Organization and Operation of the Municipal Assemblies of Popular Power and of the Popular Councils, in its article 186.1. The People's Council is a local body of People's Power of a representative nature, invested with the highest authority for the performance of its functions and, without constituting an intermediate instance for the purposes of political-administrative division, it is organized in cities, towns, neighborhoods, towns and rural areas; It is made up of the delegates elected in the constituencies of their demarcation, who must choose from among them whoever presides over it, as established in article 198 of the Constitution of the Republic.

Likewise, it is endorsed in article 187 of the aforementioned norm that the popular council represents the population of the demarcation where it acts and at the same time the Municipal Assembly of Popular Power. It exercises control over local production and service entities, and works actively to satisfy, among others, the needs of the economy, health, care, education, culture, sports and recreation, as well as in the tasks of prevention and social care, promoting the participation of the population and local initiatives to achieve it.

On the other hand, article 206 establishes that the Popular Council coordinates and integrates the delegates, mass organizations, institutions, entities and neighbors in general, to: a) systematically identify the problems and needs that affect the community, and their possible solutions; b) organize and promote the collective effort of residents to solve their own needs, improve coexistence and quality of life; c) promote and encourage the development of integrated community work, as a method to add citizens in the promotion of the formation of patriotic and ethical values; d) decide the work strategy to develop, in a given period, the proposed activities, and e) carry out the evaluation and control of the results of the actions developed (p.89).

For the fulfillment of this assignment, there is a survey, perfectible and in continuous updating of the needs to overcome the various extracts and sectors of the population of Santiago, obtained from the results of investigations, research projects, work of scientific groups that They venture into the line of Cuban Society, highlighting theses, master's degrees, diplomas, as well as student scientific work of related careers of the social faculties, educational sciences, law, humanities, economics, among others. Likewise, the integrated work of professors and

researchers in the advisory groups of the Provincial Administration Council (CAP) and in the Municipal Administration Councils (CAM) in accompanying and advisory actions for the elaboration of Municipal Development Strategies (EMD), this It has allowed the identification of the equity and social justice axis for work with vulnerable groups.

In relation to this survey, since the end of 2020, there have been advances in the rapprochement of the different faculties and Municipal University Centers (CUM) together with many agencies and organizations to more accurately identify the various needs of the population related to various topics. , which were included in the Postgraduate Plan for the year 2021, appreciating an increase in improvement actions.

Currently, improvement and training actions are being developed for the population in various territories, in response to the demands, content of courses and training which can assimilate new enrollments, carry out other editions readjusting in correspondence with the new vision that the moment demands, the diagnosis more and more intentional of the organisms involved and the level of the incorporated trainees; Likewise, training courses can be derived for the population that does not have a university level, for the example: outdated young people, disconnected from study and work.

o this is added the offer of extension courses, conceived as short courses of various organizational forms that favor the use of popular education methods and the systematization of community care models to articulate with municipal and community organizations allowing an inclusive approach to the Comprehensive attention to groups in vulnerable situations. These courses have the popular council as a basic link, where the University professors, together with the social actors, deploy the agreed actions. It is a varied menu that responds to the interests of various age groups, essentially children of early and school age, adolescents, young people, seniors, among others. The IES has ample potential to develop the accompaniment process, these have to do with the existence of 57 extension projects, 21 honorary chairs, a broad and consolidated movement of artists who are fond of the arts and university sports, a network of comprehensive services well-being and human development, health, counseling offices, high-impact research, FORUM work, among others.

The Guidelines of the Economic and Social Policy of the Party and the Revolution for the period 2016-2023, recognize as a priority community work in unity with the strengthening of the role of culture in the new scenarios: the safeguarding of national identity, the creation artistic and literary, the ability to appreciate art, the promotion of reading and the enrichment of the cultural life of the population. What is indicated is understood as the ways to satisfy the spiritual needs, recreation and defense of the values of Cuban socialism. Faced with this reality, the Integrated Community Work (TCI) is conceived with a method of articulated action of the structures of Popular Power.

The multidimensionality of the links between the university and society reflect the dialectic that encompasses the cognitive, investigative, axiological and practical plane. These links connote the content of the Integrated Community Work (TCI), considered as a system of diagnostic, planning, execution and evaluation actions from/with/for the community in order to stimulate, promote and achieve its integral development through participation. and cooperation of its inhabitants, as a way that promotes the development of those who live in it according to their needs, interests and aspirations, in coordination with development projects, institutions and organizations, local (municipal) and at another level (national, provincial), (Tellez, Semanat, Infante and González, 2021).

Miguel Díaz-Canel Bermúdez, President of the Republic of Cuba, when intervening in the debates of the Commission on Education, Culture, Science, Technology and the Environment, pointed out that: Community work has to go through ideological, economic and social

processes. We cannot see the cultural and educational work separately, but rather do it with comprehensive approaches. The Cuban revolutionary ideal has to be the basis of that activity, the symbols, the customs, the traditions.

TCI assumes development as a process of comprehensive transformation that includes economic, social, cultural, environmental, and political-institutional dimensions. This perspective focuses on the promotion of processes of self-management and citizen empowerment; prioritizes the formation and consolidation of values based on an ethic of life, aimed at satisfying material and spiritual needs, in a harmonious relationship with nature.

Legal, political and ideological support for accompaniment to the TCI:

- 2030 Agenda, Sustainable Development Goals (SDG) and goals.
- Constitution of the Republic of Cuba, 2019.
- Law No. 132/2019 on the Organization and Operation of the Municipal Assemblies of Popular Power and the Popular Councils
- Decree No. 33. For the strategic management of territorial development.
- Agreement # 9151, Council of Ministers, August 23, 2021; (refers to the functions in the work of social prevention of universities)
- Improvement of the Cuban Social Economic Model and Plan of the Cuban Nation 2030.
- Improvement of the OLPP (Definition of: Popular Power and Popular Participation)
- Ideas, Guidelines and Concepts of the 8th Congress of the PCC.
- Compliance with the strategic lines, public policy and actions of the Provincial Development Strategy (EDP) and (EDM).

In the strategic axis: Efficient and Socialist Government and Social Integration, its Objective: 5 alludes to the need to: Promote territorial development by strengthening attributions and capacities for planning and managing territories, the participation of stakeholders and coordination with other State instances, in order to enhance local resources and take advantage of international market opportunities.

In the strategic axis: Human Development, equity and social justice establishes, raising the well-being and quality of life of people are priority objectives of the Cuban socialist society and therefore in the National Plan for Economic and Social Development until 2030 (PNDES 2030), one of the approved strategic axes is Human Development, Equity and Social Justice with a conception of inclusive development. This axis became a macroprogram in its project # 4 Social Prevention and Attention to Vulnerabilities, includes among its programs: care for infants, adolescents and young people at risk, the integral transformation of communities, family groups, homes and people in situations of vulnerability and the prevention and attention to violence, social indiscipline, crimes, addictions and consumption of harmful substances.

Methodological-practical support of the accompaniment:

- Fulfillment of the Strategic Objectives and Indicators of the MES
- University Professional Training Model (spheres or areas of influence, professional problems) whose bases rest on knowledge management, which facilitate the production and reproduction of social, economic, technological and cultural goods and services.
- Educational career project and the academic year.
- The National University Extension Program, which in its general guidelines indicates:
 - Strengthen the extension dimension of the comprehensive approach to educational and political-ideological work.
 - Promote the realization of extension projects aimed at community socio-cultural development.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

- Develop an internal and external communication system that promotes dialogue, promotes participation and enables the dissemination and dissemination of culture and university and social work.
- Stimulate research in the field of university extension, as well as the introduction and generalization of its results.

In the Regulation of teaching and methodological work of Higher Education, it is specified in its Article 36: that the group of year, has as one of the main functions of k) Promote the widespread and active participation of students in economic and social tasks of importance for the university and society. And in Article 157: With the purpose of complementing the comprehensive general training of students at the headquarters and in the municipal university centers and affiliates, the leading personnel will guarantee their participation in high-impact economic and social tasks, visits aimed at political, economic and social interest, as well as in exchanges with territorial and national authorities about economic and social development programs and their results.

Taking these assumptions as a reference, it is reasonable to delve into the complexities of the links and social interactions of the Universidad de Oriente in the territorial context, in this sense, it is necessary to delimit that the university is an agent of change and its relationship as a social agent with environment, is not that between a subject (or a consciousness) and an object, but that of "ontological complicity" or mutual "possession" (Bourdieu, 1989) between the habitus as a socially integrated principle of perception and appreciation in the environment that determines it, (Tellez, 2020a).

In order to develop the accompaniment of our university institution, to the program of transformations in the neighborhoods in Santiago de Cuba, a strategy is proposed which identifies as a General Problem: How to organize the accompaniment of the Universidad de Oriente, to the governmental program of integral transformation of the neighborhoods, in correspondence with its mission, vision and strategic planning?

1. CHAPTER THE PROCESS OF ACCOMPANIMENT OF THE UNIVESIDAD TO THE GOVERNMENT

1.1 Brief references to the accompaniment process

The accompaniment is a systematic and permanent process of actions mediated by the sensitized accompanying person, who interacts with the university community in the coexistence scenarios, with the aim of achieving the necessary changes in the different local contexts. The companion, in this case, the actors from the Universidad de Oriente, are carriers of academic, technological and traditional knowledge that, once sensitized to the process, share their experiences and experiences in pursuit of the transformation of the community, (García and Mendía, 2015). The accompaniment constitutes an expression of the relationships that are established between the leaders and/or local actors, in the complex scenario of the TCI, which is synthesized in the transformation of the microenvironment.

The accompaniment is aimed at prevention and support to solve various types of needs, it can be developed from the socio-educational intervention in different modalities: through counseling, consultancies, mediation, community, family, educational orientation; depending on the reorganization of the resources and attention priorities of the institutions and support networks, facilitating the transition towards processes of social cohesion.

The sensitization of local leaders and/or actors is conceived as a systematic process of awareness and reflection, where the university community, in close ties with local leaders and/or actors, assume a change in their attitude towards the socioeconomic and cultural demands of the community. taking responsibility for their actions to consolidate their situation within the community.

1.2 Objectives, actors and principles of the support strategy from the Universidad de Oriente.

The proposed strategy is an expression of the will of the Universidad de Oriente in compliance with the Sustainable Development Goals, embodied in the 2030 agenda; constitutes a laudable response to the PNDES Human Development, Equity and Social Justice macro-program and is conceived in coordination with the nine work objectives, declared in the strategic planning of our institution for the period 2022-2025, hence the actions that comprise it allow the output of the indicators and goals expressed in the nine identified processes: undergraduate training, university extension, postgraduate (includes overcoming cadres and reserves), science, technology and innovation, information, communication and computerization, human resources, material assurance and financial and institutional management.

Principles that underpin the strategy:

- Integrated management of processes, areas and people.
- Strengthening of endogenous resources of the neighborhoods (human, natural, economic and social)
- Community participation for the sustainability of the expected results.
- Respect for the identity, history and values of the neighborhood and individual community actors.
- Development of computerization, communication and transparent information during all stages of work.

Based on the call and specific request of the local governments regarding the communities that are interested in the participation of the University, a set of organizational actions are proposed for the implementation of the accompaniment strategy, among which are:

- Organization of the statistical survey of the human potential of the University that resides in the prioritized communities. Responsible: Deans, Dtres CUM and DRH - Sec/Gral.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

- Organization of the multidisciplinary team (teachers and students) residing in the communities. Resp/ Deans and Dtres CUM * Designate a sociologist in each team. FCS Dean
- Modeling of the map of actors of the OU with definition of tasks, roles and missions of each member. Resp / Deans and Dtres CUM
- Realization of the survey of the investigations related to the object of transformation in the community, conformation of the dossier containing the results that can be systematized and generalized in commendable and pertinent proposals for the solution of identified problems. Resp/VRIP/DCTI. _VDIP.
- Development of exchanges with scientific leaders, coordinators of Research Projects, study centers for evaluation and introduction of social innovation tools to be systematized in the transformation of the neighborhood. Resp/VRIP/DCTI. _VDIP.
- Exchange with coordinators of extension projects and presidents of honorary chairs for the diagnostic contextualization of extension activities to be carried out in communities in vulnerable situations. Resp/VREU_DEU // Deans _ VDEU
- Alignment from the teaching planning and the work system of the IES, the participation of students and academics in the process of accompaniment of the selected demarcation, based on the specific profile of each career and the orders and social demands. Resp/VRD_DFP // Deans _ VDD
- Organization of training actions and improvement to the multidisciplinary groups constituted in the IES for the transformation of the neighborhoods. Resp/VRIP/DP/DPSCER. _VDIP.
- Development of training and improvement actions for representatives of the OLPP and OACE who will participate as managers of the transformation of the neighborhoods. Resp/VRIP/DP/DPSCER. _VDIP.
- Design of the communication plan and public welfare campaign for the accompaniment process. VRRI_DCOM // Dean FH _Dept. Social communication.
- Design of evaluation indicators of the impacts of the Strategy, for the selection and readjustment of monitoring methodologies. VRIP/Dean FCS
- Presentation to the Secretary of the Municipal Assembly of the accompanying strategy for the government program and its intention. Answer VRP
- Development of the University-Society Workshop for the socialization of the best professional experiences and stimulation of the best works that reflect the transformations operated at the C/P level. Answer: VREU/VRIP.

The strategy foresees a time line for the accompaniment of the neighborhoods of approximately 60 days in the first two stages, while in the last two stages the times would be relative and would depend on the level of articulation achieved between the actors. , the diverse and complex nature of the problems identified, the resources available and the problem-solving capacity of the participants.

General objective: Strengthen the accompaniment of the UO to the Government Program for the integral transformation of neighborhoods in Santiago de Cuba.

Specific objectives:

- Stimulate the preparation process of agents based on conscious and creative participation in the search for alternative responses to existing problems in the communities.
- Strengthen the development of capacities of the Popular Council for popular participation in the process of integral transformation of neighborhoods, from the use of endogenous resources, innovation, science and technology.
- Implement actions and accompanying alternatives for the transformation of the community.

Actors:

- At the University level: directors, professors, students and workers, scientific leaders whose specific role consists of becoming facilitators, promoters of change, (leaders of research projects, coordinators of extension and sociocultural projects, prioritized programs, honorary chairs, centers of studies or others).

- Other actors in the community scenario: Members of the Integrated Community Work Group (GTCl) at the constituency level, natural leaders and promoters, representatives of institutions, organizations, companies based in the community, and the population.

Managers: leaders and officials of the Municipal Assembly, Presidents of the People's Council, Delegates, District Executive Offices and others responsible for decision-making.

2. CHAPTER STRUCTURE OF THE UNIVERSITY SUPPORT PROCESS IN THE GOVERNMENT PROGRAM FOR THE INTEGRAL TRANSFORMATION OF THE NEIGHBORHOODS

2.1 Structure of the support strategy

The accompaniment to the program of integral transformation of the neighborhoods was developed from a strategy constituted in four stages:

▶▶ 1rd. Stage: DIAGNOSIS AND AWARENESS.

▶▶ 2nd. Stage: DESIGN OF INTEGRATED AND INTEGRAL ACTIONS.

▶▶ 3rd. Stage: IMPLEMENTATION OF THE ACTION PLAN, MONITORING, EVALUATION AND IMPROVEMENT.

▶▶ 4th Stage: EVALUATION OF IMPACTS.

The accompaniment process was deployed from January 2021-April 2023 based on the use of the different organizational structures in which university-society relations are developed. Each of the stages is explained below.

2.2 Functionality of the strategy stages

▶▶ 1rd. Stage: DIAGNOSIS AND AWARENESS

General Objective: Characterization of the Popular Council with emphasis on the communities or neighborhoods that will be the object of direct monitoring, on scientific grounds.

Specific objectives:

1. Create the basic conditions necessary for the deployment of the diagnosis and characterization of the C/P

2. Sensitize socio-community actors about the need to transform the neighborhood based on the existing potential.

3. Identify the needs and potential for integrated community work in the demarcations.

Actions:

1. Exchange with the structure of the Popular Council (delegates, representatives of the organisms and entities that attend to the problems of the community through their mission); on the sociodemographic characterization.

2. Exchange of members of the (GTCl) around the need to reflect on the potential present in the communities to address the problems identified in the neighborhoods.

3. Development of tours through the geographical area subject to transformation.

4. Development of awareness workshops with community actors (informants, leaders, GTCl, area, CDR presidents, FMC secretary, representatives of institutions, agencies or entities of the state and non-state sector located in the demarcation object of accompaniment).

5. Reconcile with key actors the instruments for the collection of information.

6. Organize, train and apply the instruments for the diagnosis, with the help of students (according to careers), professors and workers of the UO who live in the Community, and GTCI.
7. Apply and tabulate the results of diagnostic instruments and techniques.
8. Carry out the analysis and interpretation of the results, in the academic field.
9. Preparation of diagnostic report and contrast it with the initial characterization offered by the C/P structure.
10. Workshop to disseminate the results of the diagnosis (use of info-communication products: electronic bulletin, sociodemographic map, executive summary, Dafo matrix...)
11. Creation of the communication plan containing the transformation of the community.
12. Determination of promotional supports and communication channels (internal and external) that allow the dissemination of the transformation of the neighborhood.

→ Participants: key informants, community leaders, relevant population groups in the characterization offered by the community management structure. Students, workers and professors of the UO (includes the CUM in the municipalities).

Techniques to be used: interviews with key informants, interviews with experts, focus groups, participant and non-participant observation, surveys, testimonials, life stories, mental maps, pondering of problems, work tables, socialization workshop, document analysis, among others. Necessary resources: sheets, pencils or pens, printers, organization of the PDE (P-4) and planning of work-oriented teaching and methodological activities in the selected communities, readjustments of research projects and postgraduate thesis topics, as well as transportation for mobility of cadres that guide and control actions, and computers for information processing.

Evidence: applied instruments, field notes from students and teachers, audiovisual records of the activities carried out, diagnostic reports, attendance records for the activities carried out.

Output indicators:

- Updating of the historical - geographical, sociodemographic, sociocultural characterization of the community under transformation.
- Determination of the inventory of problems and their weighting by priorities.
- Sociocultural and socioeconomic cartography of the community.
- Community location maps
- Precision of the multifactorial platform that is involved in solving problems based on the priorities and roles to be developed.
- Popular participation in raising the problems and their proposed solution
- Updating of the bank of professional problems of careers and incorporation of topics in the design of student scientific work and research lines of academic programs.
- Contextualization of the profiles of extension projects in coordination with the demands identified in the community.

The first stage lasted approximately one month (30 days) from the approach of the task by the local governments, and concluded with a workshop for socialization and reconciliation of the results of the integral diagnosis, where the Popular Council, the leaders and managers participated. of the community or neighborhood and, representatives of the institutions, organizations and entities located in the locality or responsible for their attention, as well as the students, workers and professors who coordinated and carried out the diagnosis.

▶▶ 2nd. Stage: DESIGN OF INTEGRATED AND INTEGRAL ACTIONS.

General objective: Design the road map of integrated and comprehensive actions for the transformation in the communities.

Specific objective: Strengthen the development of capacities to increase the resolution capacity of community leaders for popular participation and decision-making of managers.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

Actions:

1. Preparation of audiovisual materials (capsules, interviews, collecting life stories, testimonials, among others) that allow recording the transformation of the community.
2. Preparation of training programs for actors for community work in its different dimensions: sociocultural, institutional, environmental, economic and productive in line with the identified priorities.
3. Determination of the strategic lines of social transformation of the neighborhood, and correspondingly define the implementation plan from the platform of social transformation, defining the levels of involvement, roles, work groups, compliance deadlines.
4. Development of leadership workshops for the management of popular participation.
5. Development of popular consultations from the GTIC (constituency, mass organizations, among others).
6. Preparation of proposals for local development projects from the use of endogenous resources from the resources and capacities identified for transformation.
7. Development of training for C/P authorities, on issues associated with governance and resolution capacity and cohesion with state or non-state entities for compliance with social responsibility.
8. Training in trades for unrelated young people, people with disabilities, beneficiaries of social security on an exceptional and temporary basis, among others.
9. Specialized advice on issues of community work and social prevention of cases, groups or communities in vulnerable situations.
10. Articulation with the network of existing centers in the community, the proposals of options for sociocultural resuscitation and healthy use of the free time of the inhabitants.
11. Sponsorship to families, vulnerable people and institutions, by the existing social network (business fabric or social network), taking into account their social responsibility towards the neighborhoods.
12. Implementation of feasibility studies to devise local development projects or MYPIME that generate sources of employment in the community.
13. Exchange with authorities for decision-making and the selection of the alternatives that are considered most appropriate for the transformation.
14. Preparation of the action plan for the transformation and its socialization in the community and in the university.
15. Development of computer products that facilitate the registration, processing and interpretation of C/P information.
16. Advice on scientific events that are promoted by local governments.

→ Participate: Cadres, teachers, UO workers, natural leaders of the community, factors and managers of the community and the Popular Council. Representatives of the organizations and entities located in the locality.

Necessary resources: sheets, pencils or pens, computers, places for teamwork both in the OU and in the community. Teacher planning documents.

Evidence: documents containing the actions by processes, teaching or academic evaluations, photographic and/or audiovisual records.

Output indicators:

Redesign and execution of the integrative tasks of the labor practice, development of socialization workshops of the designs of actions and their reconciliation; accompaniment of research and extension projects, professional workshops for the systematization of experiences and good practices, presentations and participation in scientific, academic and extension events; publications, evaluations, etc.

The second stage requires, during the first fortnight, to strengthen the capacities to reconcile proposed solutions, based on the principle of citizen participation. In the second fortnight, the actors and managers will be deployed, with the accompaniment of the University and community actors. The work plan is organized, and the social transformation platform derives the demand of the multidisciplinary team to the IES and to the authorities of the Municipal Assembly.

The stage must reconcile with the multifactorial platform, the impact assessment instruments. The actions to be carried out from the different processes and actors of the UO, as well as with the other actors of the government Program, must be reconciled, avoiding overlapping of actions and the numbness of the population. A schedule and process managers are defined (these make up the coordinating group for the work with that community), having as key actors 1st -and whenever possible- the university actors who live in the selected communities. The actions must be designed with the Research – Action – Participation (IAP) methodology and the popular education methods, typical of the TCI. At this stage, training in action for the management of popular participation is essential; The participation of other actors outside the community will be valued as a last resort. The implementation plan will be specified and submitted to the consensus of the C/P, with adjustment of the time and designation of those responsible for tasks and processes.

Included as ways of carrying out the DPI actions are pre-professional practices, student scientific work, training actions - career extensionists, studies completion exercises, research projects, postgraduate courses and postgraduate academic programs, among others. .

▶▶ 3rd. Stage: IMPLEMENTATION OF THE ACTION PLAN, MONITORING, EVALUATION AND IMPROVEMENT.

General Objective: Execute the university coordination and cooperation actions, according to the schedule, with the informed consent of the community groups, preceded by attractive calls, using the knowledge and insights contributed by the community and the different sciences.

Specific objectives:

- Accompany the popular council in the deployment of the action plan, taking into account the endogenous potential (social entrepreneurship with the resources of the environment, new economic actors, correct identification of the demand, preparation for employment, etc.).
- Generate a popular movement that stimulates the leading participation of the population in the social transformation of the neighborhood.
- Monitor the performance of the popular council, its impact on the GTCI and popular participation in community transformation actions.

Actions:

1. Development of accompanying actions from the educational project of the year and of the brigade, based on the development of professional skills and the use of extension projects, honorary chairs, integrated health service, artistic and sports manifestations, as well as contributions study centers and research projects.
2. Realization of educational training and extension activities of resuscitation and healthy use of free time.
3. Development of exhibition fairs, sports and cultural festivals, contests.
4. Preparation of calls for productive days, voluntary work involving members of the university community with the residents.
5. Capsule recording, life stories and other audiovisual materials as part of the record of experiences.
6. Offer of advisory services to entrepreneurs.
7. Promote neighborhood debates, training for families.

8. Development of short courses and training for leaders to address topics of interest (prevention of addictions, social indiscipline, gender violence,...)
9. Environmental sanitation actions, based on urban resilience, integrated management of solid waste, risk and disaster management, etc.
10. Professional orientation actions towards the different careers that are convened at the university (open doors, talks, delivery of promotional materials)
11. Organize work in networks from educational centers to offer guidance services to people, families and groups in vulnerable situations (unrelated, numerous mothers, ex-inmates, pregnant adolescents, older adults, people with disabilities...)
12. Guidance and training actions on the legal framework of territorial planning.
13. Legal consulting services on issues of interest to the communities.
14. Call for the management of local development projects for food production from the use of spaces with idle land, family patios that can be exploited as part of the PSAEN, and urban and suburban agriculture programs.
15. Promote, in coordination with the FMC, the House of Orientation for Families, training courses in trades, such as hairdressing, crafts, typing, cooking, cutting and sewing or others that allow the generation of entrepreneurship.
16. Opening of classrooms of the Older Adult University Chair.
17. Tours of the areas in transformation, exchanges with the inhabitants.
18. Application of instruments for surveys of states of opinion, acceptance or satisfaction or others that allow feedback and the necessary readjustments to the plan.

→ Participating: GTCI, community groups and leaders, specialists from entities that address neighborhood problems by mission, managers of state and non-state sector entities located in the town, students, teachers - researchers and workers.

Necessary resources: according to the designed actions. Prioritize the community's own material, spiritual and symbolic resources.

Evidence: photographic and audiovisual records of the activities, the field notes of students, professors and researchers. Partial evaluation reports.

Output indicators: monitoring reports or partial evaluation; Independent or course work by students, study completion reports, publications, undergraduate and graduate theses, among others.

*During this stage, actions are monitored with community groups, following the stages and requirements of the IAP.

▶▶ 4th Stage: EVALUATION OF IMPACTS.

General Objective: Evaluate the efficiency, effectiveness and impact of the social transformation of the community.

Specific objectives:

1. Assess the real transformations that have taken place in the neighbourhood.
2. Evaluate installed capacities and potential for continuous development
3. Ensure the sustainability of the impacts.

Actions:

1. Application of impact assessment instruments, their tabulation and analysis.
2. Identification of good practices in popular participation.
3. Development of experience systematization workshops.
4. Comprehensive training workshops for managers, leaders and authorities to strengthen their capacities to identify new problems and search for solutions with their own resources, with emphasis on their natural leaders and managers.

5. Carrying out an impact self-assessment exercise with the managers of the integral transformation of the neighborhood, systematization of actions and precision of lessons learned.
6. Evaluation of the progress of the actions and processes, according to their requirements and nature, based on the systematization and correction for reformulation of the improvement plan.
7. Evaluation of the results and impacts of teaching, training, extension and research actions deployed in the community.
8. Development of the Integrated Community Work workshop, stimulation of the best works that reflect the best experiences at the C/P level.
9. Development of stimulation for those involved in the popular movement for the social transformation of the neighborhood (individual and collective).

→ Participate: All the actors in the transformation process.

Necessary resources: paper and pencil, audiovisual means, organization of the process and time planning.

Evidence: documentary and audiovisual records of the impact assessment exercises and community exit.

Techniques: ("How I arrived, how I lived during the transformation actions" and how I am leaving").

Output indicators: workshops for socializing experiences and their impacts, photographic and audiovisual records of activities, self-assessment reports, training programs, student scientific work, postgraduate thesis, participation in scientific, cultural, and academic events, publications on studies of case, among others.

2.2 Associated scientific results

1. Systematization of the theoretical foundations around the training nodes: knowledge management, healthy coexistence and entrepreneurship in the successful performance of educators.
2. System of psycho-pedagogical alternatives to promote the inclusive education of children, adolescents and young people with special educational needs.
3. Methodology for the prevention of child and adolescent violence from the school, family and community contexts.
4. Theoretical methodological approach to the characterization of adolescents and young people in the social sphere, with emphasis on technical education; pre-university and higher education from vulnerable popular councils and the rural sector.
5. Theoretical foundation of information as a training tool for adolescents and young people.
6. Scientific management for attention to the problems of adolescents and young people from vulnerable communities
7. Diagnosis of the teaching means that favor learning in the multigrade school, and the methodological work of teachers, directors, heads of zonal cycles and methodologists of the rural sector.
8. Socio-educational strategy for citizen participation of young people with intellectual disabilities who have graduated from Special Education.
9. Diagnosis of the socialization process in special educational institutions (EFI, School of Conduct Type I and II), based on the established dimensions. The characterization of the school culture, the professional problems and the identified educational needs allow us to conclude that the educational institution for children with type I and II conduct disorders still does not

stand as the ideal socializing space for the redefinition of the negative experiences that characterize the subjects that are inserted in it.

10. Characterization of the behavior of social problems that affect the youth of the Santiago de Cuba municipality at the social level. It contributes to the updated characterization of the behavior of problems such as violence, leisure and recreation, STIs/HIV-AIDS and drug use in youth for the social actors of the institutions (mass organizations, Organ of minors of the MININT, EFI) that intervene in the diagnosis of the same, which allows improving the preventive work of the communities.

11. Demographic dynamics of the Santiago de Cuba province: particularities in the policies towards working women and sexual and reproductive health in times of COVID 19. The results are implemented through measures to attend to the demographic dynamics of the municipalities and province. The work of care for mothers of more than three children, demographic aging and internal migration is advised, as well as the work of the different entities of the municipalities such as the direction of agriculture, tourism, construction among others that participate in creating development plans.

12. System of psycho-pedagogical alternatives to promote the inclusive education of children, adolescents and young people with special educational needs. Contributes to the continuous improvement of the training process of Special Education, with emphasis on 45 special schools that are transformed into resource and support centers for the educations that offer educational attention to 2321 students with SEN associated or not with disabilities in various contexts.

13. Identification and justification of the main social factors associated with the management of local development in the municipality of Santiago de Cuba. MSc. Rodolfo Hernández Despaigne et al. Diagnosis of the main problems presented by the communities inserted in the housing change development plan in the municipality of Santiago de Cuba in order to design actions to address these problems.

14. Cultural practices in Santiago society. Factors involved in its configuration. Revelation of the trends that are manifested in the development of cultural practices in the current Santiago society and the social repercussion of these in the sociocultural, political and scientific development of our country

15. Strengthen from the design of student scientific activity and the GCE, the resolution of professional problems in tune with the demands and social urgency of the communities and vulnerable situation, guaranteeing their exit in the investigative work practice and the Student Scientific Work, to through course work and diploma.

CONCLUSION

The process of accompaniment to the government program for the transformation of vulnerable neighborhoods demands the coherent articulation of the substantive functions of the university in correspondence with the potential of the different areas, careers and faculties that are involved in the materialization of the interactive, flexible accompaniment, gradual and ascending.

The accompaniment of the Universidad de Oriente Llegado is deployed from the formation of a multi-stakeholder platform capable of diagnosing and characterizing the social component in neighborhoods that are in a situation of vulnerability; In this process, participation and communication are facilitated in pursuit of knowledge management, based on affective bonds of collaboration-cooperation, respect and complementarity necessary in the process of community transformation.

A Study of Addressing Fairness and Bias in AI and ML in World Health

Srinivas Babu RATNAM

USA

cnu.srini@gmail.com

Bachelors of Electrical and Electronics Engineering from Andhra University, India

ABSTRACT

Machine learning (ML) and artificial intelligence (AI) have the potential to enhance healthcare infrastructure and supply in LMICs. Concerns about algorithmic bias and unfairness need cautious application of machine learning and AI. Due to technological inexperience, preexisting cultural bias against minority groups, and a lack of legislative safeguards, LMIC societies are particularly susceptible to AI bias and fairness. To improve global health guidance, we must assess its appropriateness, fairness, and bias. Fairness involves 1) examining the impact on different demographic groups and selecting one of several mathematical definitions of group fairness; 2) addressing bias, the systematic tendency in a model to favor one demographic group over another that can be mitigated but can lead to unfairness; and 3) determining how the algorithm should be used in the local context and properly matching the machine learning model to the target population. Finally, we present a case study of machine learning's application in the diagnosis and screening for pulmonary diseases in Pune, India. We hope these approaches and ideas may aid others in their efforts to use machine learning and AI to global health.

Keywords: Artificial Intelligence, Machine Learning, Bias, Fairness, Appropriateness, Global Health, Ethics, and Medicine

1.1 MACHINE LEARNING VS. ARTIFICIAL INTELLIGENCE

Computers increased productivity and automation. Robots struggle to imitate higher-level human capabilities like abstraction, understanding, and creativity. Outside of science, machine learning and artificial intelligence are often used interchangeably.

“Machine learning can teach a computer to accomplish everything from binary classification to real-time control tasks like driving or playing a video game. Machine learning techniques are increasingly using simple logistic regression, neural networks, deep learning, and probabilistic approaches like Bayesian networks. A collection of labeled training data is used to design decision-making algorithms, which may be updated and adjusted progressively with fresh data.

Human and artificial intelligence involves more than merely making decisions or operating technology. Medicine requires naturally engaging with patients, understanding their stories, showing empathy through word, touch, or look, and inferring higher-level abstractions, correlations, and meaning from patient encounters. Computer science and artificial intelligence continue to research such initiatives, which go beyond what computers can perform. Machine learning's medical applications are limited to decision support (disease diagnosis and screening), processing patient medical data (e.g., detecting abnormalities in an X-ray or fundus image), and optimizing health care processes and services to increase system capacity, allocate resources, and minimize financial losses.

1.2 ARTIFICIAL INTELLIGENCE AND ITS POTENTIAL IMPACT ON GLOBAL HEALTH

AI and ML in digital health initiatives can improve global health. Lack of medical experts leaves many LMIC clinics understaffed and overworked. Due to the broad availability of PCs and cell phones, machine learning software may be stored and distributed even when these areas lack resources. Many low- and middle-income economies are investigating how computers may enhance healthcare. These include activities like automatically recognizing malaria parasites in a digital microscope or coronavirus symptoms in a chest X-ray, which may assist young, inexperienced doctors and health professionals make better diagnoses and utilize their data.

Any new technology in low-income or low-literacy communities needs careful study without a legislative and legal safety net. Computer and smartphone usage in medicine must be carefully assessed for dangers. Due to the high number of economically and politically disenfranchised people in low- and middle-income countries (LMICs), machine learning medical applications present specific challenges. Many countries have poor legal and regulatory environments for medical and public health professionals. Thus, AI may exacerbate socioeconomic inequalities and political corruption. If used carelessly, AI might worsen health disparities between demographic groups.

1.3 The Role of Categorization in Ethics

In diagnostic testing and sickness screening, machine learning is often used to classify individuals as healthy or unwell using clinical observations or laboratory measurements. Ethics may not seem relevant, yet diagnoses aren't always accurate. Figure 1 indicates that a medical option like a diagnostic test can result in a false positive (Type I error) or a false negative (Type II error), but we can manage the threshold and balance between these two types of mistakes.

We usually address ethical and legal considerations while discussing categorization faults and algorithm modifications or operational points. Depending on model type and algorithm, changing a model's threshold or hyper-parameters might increase output. Figure 1 (b) shows a Receiver Operating Characteristic plot, or “ROC curve,” where the sensitivity and specificity represent the true positive and true negative rates, respectively, for different hyper-parameter settings, allowing us to adjust the proportion of Type 1 and Type 2 errors. Many machine learning examples boost classification accuracy by choosing a ROC curve point at the top left

corner or by increasing the AUC. However, the operating point depends on the model's surroundings and local laws and ethics.

AIDS and strep throat (streptococcal pharyngitis) diagnostics are similar. False positives are seldom a worry because this is a common, benign illness and we often provide antibiotics prophylactically. However, health clinics may choose to minimize false positives in AIDS tests to reduce social stigma and legal liability. In breast cancer screening, false positives and negatives are often discussed. Establish legal and ethical guidelines before choosing a false positive-to-false negative ratio.

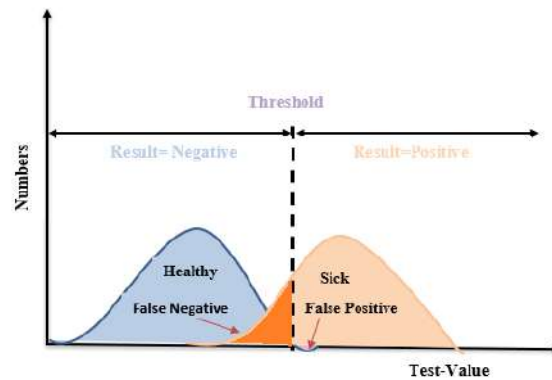

Figure 1 (a) Example of diagnostic test results at a certain cut-off

Figure 1 (b) The effect of changing the Threshold setting on the receiver operating characteristic curve (ROC).

1.4 Demographic Groups and Machine Learning

Machine Learning ethics get increasingly complicated with multiple demographic groupings. Given that sickness etiologies differ on race and gender, a diagnostic test's effectiveness may vary by these aspects. Diagnostic tests may be skewed if one demographic group reacts better than another. Figure 2 shows how a ROC curve may assess the performance of a machine learning diagnostic model with and without two demographic groups. Due to biological variances and sickness prevalence, each demographic group has a distinct ROC curve. The image shows that tuning the model and picking an optimal operating point for both demographic groups is impossible. If just one diagnostic test is employed for the population, the algorithm must be tuned to a middle ground for fairness. This paper quantifies these trade-offs in the latter portions.

Photos, surveys, and clinical data are used in global and public health machine learning. Although biological and genetic causes are most plausible, test results that differ across demographic groups may have other causes. Cultural and behavioral factors including diet, smoking, and measuring equipment design may confuse results. Environmental issues

including cleanliness, air pollution, etc. A large-population algorithm must be tweaked to be fair to all segments. Again, these options are shaped by a society's legal and ethical system. Like medications, new algorithms are not tested or trained on all demographic groups, putting patients at risk. Data used to train or test an algorithm may come from politically strong demographic groupings in LMICs and emerging nations. This is unfair since diagnostic testing may function better on some groups than others.

This paper introduces and defines bias, fairness, and appropriate use in machine learning in global health and shows how a machine learning model can be analyzed to identify and quantify bias and fairness, even though the optimal tuning of an algorithm can depend on many factors, such as local laws and community values. This document was designed for international development and global health professionals to help create machine learning and AI standards.

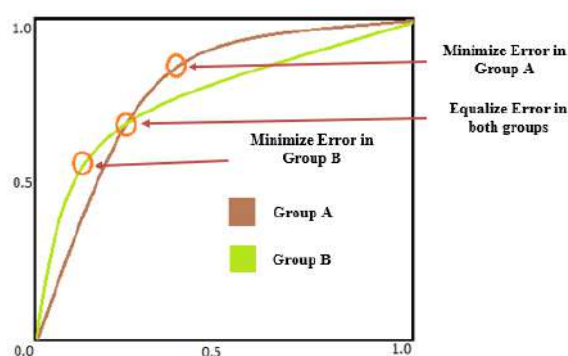

Figure 2 An example ROC curve for many groups demonstrating algorithm parameters.

2. PRIMARY THOUGHTS ON THE USE OF MACHINE LEARNING

Appropriateness, Bias, and Fairness are three key criteria for assessing artificial intelligence and machine learning algorithms in health applications.

2.1 Algorithm Matching to the Specific Problem

Assessing how and why a machine learning model is utilized in a public sector like healthcare is crucial. With the growing availability of machine learning tools, health care decision-making experiments have become frequent. Given artificial intelligence's limitations, it's equally important to assess why a computer algorithm is being used and what the program's aim is from the outset. If a decision has serious consequences, such as whether to remove a patient from life support, it should be considered whether a machine or a person should make it.

Using a machine learning algorithm requires context. An airport biometric security check might include an eye scanner to detect some cancers. This algorithm doesn't work with this hardware. When developing more advanced instruments and machine learning tools for community health professionals, we must consider whether tests are appropriate given their training and therapy options. Such challenges require moral and ethical consideration.

The algorithm's results were problematic. The computer algorithm showed that patients with asthma, COPD, or chest pain had a lower probability of dying and should not be hospitalized. The algorithm also recommended admitting those without co-morbidities due to their greater mortality risk. The result was the opposite of what an experienced human doctor would recommend: hospitalize patients with comorbidities and a history of illness and release those with minor ailments.

When this data was reanalyzed, arriving pneumonia patients with co-morbid respiratory ailments did have a statistically lower probability of death, but this was because they had more experience with respiratory issues and sought medical care sooner, decreasing their risk of

death. However, this explanation ignored the fact that such patients are more vulnerable to developing issues and having more severe illness. The health-seeking behavior of these two groups was neglected, resulting in an erroneous projection that might affect results.

This example shows that the problem was the algorithm's context and inquiry. In this case, a health insurance company may have asked the wrong question about death. The severity of the sickness and risk variables like age and comorbidities should be determined first, and the algorithm can then recommend which patients should be admitted to the hospital. Fever and respiratory diseases may have been used to predict infection severity and outcomes, but they were not.

This example shows the relevance of domain expertise and appropriate algorithm design and data selection. The algorithm's development may have been improved by pulmonologist input.

2.2 Unbalanced Data and Model Adaptation to a Specific Population

Applying machine learning to global health issues requires consideration of model and training method. The Bayesian Network has been widely lauded as a successful model. Neural net approaches like Deep Learning, which are less interpretable yet powerful, are useful for studying patient breathing sounds and tumor diagnosis in radiological images.

In global health, classification is a prominent machine learning task used in training to identify people who may have a condition like cervical cancer or who do specific behaviors like nursing. For practical reasons, the data used to train such algorithms is often unbalanced (unequal numbers in each class), hence the minority class is usually poorly forecasted, even though classification accuracies and specificities may be high. By identifying all patients as negative in a test where 99% are negative and 1% are positive, a diagnostic algorithm can achieve 99% accuracy with 0% sensitivity. As said, balancing sensitivity (true positive rate) and specificity (true negative rate) depends on the application's aims and ethical norms.

When applied in a population, a model must be adjusted to reflect class label frequency. Before utilizing it in south India, a model trained in north India may need to be adjusted. If the model wasn't adjusted to a population, misclassification errors would make bias and fairness analysis impossible.

Depending on the model, several well-established strategies can restore equilibrium to an unbalanced data collection. Below are some common methods.

- If the data set is large enough, resampling can achieve statistically meaningful group parity. When data is limited, oversampling the underrepresented group is common. Popular methods like SMOTE can intelligently randomly generate more data to extend the minority class without overfitting. In health applications, questionnaire data and medical record fields may be binary (e.g., “Does the patient have a fever? (YES/NO)”) and difficult to synthesize without overfitting.
- Combining two or more models creates a “ensemble” classifier that performs well on skewed data. Bagging (bootstrap aggregation) and boosting (variance suppression, overfitting mitigation) are utilized. Adaboost and Extreme Gradient Boost are popular ensemble methods. Even while ensemble techniques may work well for radiography cancer diagnosis, they are less common in diagnostic tasks due to their complexity and lack of interpretability.
- Common machine learning models change the hyper-parameters or cost function used for optimization during training.
- SMOTE-Boost combines Adaboost with intelligent oversampling to enhance the penalty for misclassifying a minority.

To accurately anticipate the minority class, hyperparameter optimization must apply the proper criteria. Instead of seeking perfect classification,

$$\text{Classification Accuracy} = \frac{TP + TN}{TP + TN + FP + FN}$$

Other criteria such as the F₁ score can be chosen,

$$F_1 = \frac{2TP}{2TP + FP + FN}$$

where false positives and negatives cost more.

The Matthews correlation coefficient (MCC) is a new optimization criterion for class imbalanced binary classifiers.

Class inequality is simply one reason to modify a model for the target population. TB rates in the public may be much lower than those among hospital walk-ins.

Bayesian Networks adjust Bayesian priors based on class predominance. Logistic regression may vary the operating point by tweaking the zero-order component in the predictor function.

Logistic regression prediction model, Y,

$$\hat{Y} = \beta_0 + \beta_1 X_1 + \beta_2 X_2 + \beta_3 X_3 + \text{etc.}$$

We can modify β_0 as follows to create a new modified model Y

$$\hat{Y} = \beta_0 + \beta_1 X_1 + \beta_2 X_2 + \beta_3 X_3 + \text{etc.}$$

Where

$$\beta_0 = \beta_0 + \log \frac{\pi}{1-\pi} - \log \frac{\tilde{\pi}}{1-\tilde{\pi}}$$

π actual prevalence in the population

and $\tilde{\pi}$ prevalence in the training data

2.3 An Explanation of Bias

Because of its positive implications of pure unbiased logic, computers were previously seen to be the ultimate solution to human prejudice and bias when making tough choices. Recent study has proven that algorithms and data used to train them are imperfect, human-made constructs.

Algorithm bias is “a systematic error or an unexpected tendency to favor one outcome over another”. Bias occurs when an algorithm inappropriately relies on a data property associated to a demographic group. A fair algorithm wouldn't consider a patient's gender, race, or religion. If algorithmic bias discriminates against one patient group, it may be unethical.

Algorithmic bias has nothing to do with ethics, even yet prejudice is tied to fairness. If an algorithm is biased, a machine learning model can be tuned to fulfill fairness standards. To evaluate unfairness, compare this bias to ethical or legal norms. This article will continue to discuss fairness.

Researchers have identified over 20 types of prejudice, however they may all be grouped into implicit and explicit bias. Data sampling, algorithmic idiosyncrasies, equipment design errors, and irregular participant behavior might cause disparities. The most common bias is sampling bias, which arises when training data does not match real-world distribution. Due to unknown model variable connections, implicit bias is harder to manage. Thus, sensitive patient data like ethnicity, gender, and religion is rarely collected. Machine learning algorithms shouldn't target low-income patients, but using a patient's address or postal code may cause unconscious prejudice.

2.4 Machine learning examples with bias

The batch effect in high-throughput processing of microbiological specimens for testing causes systematic bias owing to tiny machine or environmental changes. Recent research has linked prejudice with justice. IBM and Microsoft's facial identification systems performed poorly (40%) on dark-skinned women. The main problem was the image features employed in the face identification process, which is unjust because race and facial qualities are protected information. Lowering picture contrast and adding additional dark-skinned faces to the model training batch may fix this algorithmic bias.

In 2016, computer algorithms rejected Asian passport applications with closed eyes. The algorithm rejected Asian faces since it was trained on Caucasian eyes.

Subtle biases caused by endemic cultural or socioeconomic characteristics within a group are harder to understand. Due to these differences in risk factors and disease etiology, researchers have been unable to use the Framingham Heart Study, which primarily involved white males, to develop a cardiovascular risk prediction algorithm for African-American patients. An algorithm trained on one demographic group's data cannot predict another. When an algorithm is erroneously advertised and its training data are not available to the public, consumers, or patients, it may be difficult to identify these difficulties in practice.

2.5 Mitigation of Bias

Algorithmic bias has several solutions. Examining the processing approach and adjusting data analysis and feature extraction may decrease bias in image or signal processing systems. Adjusting the sampling technique and ensuring that all classes are properly represented in the training data can also reduce bias during data collection. Adversarial learning algorithms, specific regularization requirements, and cost functions can eliminate algorithmic bias. Labeling outputs can also reduce bias. Algorithm bias is often overlooked despite these methods. Thus, bias testing must be done throughout algorithm development. This paper presents a simple case study of this method.

Prejudice isn't necessarily terrible. In a Rwandan study, a computer software identified infection from a color photo of a surgical site. The machine learning system performed well with black women, but it is unlikely to do well with white women in Ethiopia or Mexico. If only women of color were prejudiced, it may be okay. Thus, a biased algorithm may be legal provided its constraints and appropriate use are adequately stated, disclosed, and documented.

2.6 Individual vs. Group Fairness

Fairness (impartial and just treatment) can be applied to individuals or communities. We can check if a computer algorithm benefits or hurts specific people.

In an ideal world, an algorithm would be personalized to a person and checked for fairness by comparing how it treats similarly situated people. If each individual could be mathematically described as parameters in a multidimensional space, a machine learning algorithm would treat all individuals in the same neighborhood of the parametric space equally and make consistent predictions about their future behavior. Individual fairness measures consistency. This topic requires further study.

However, race, gender, and social status are protected by law in many countries. Scientific investigations have shown that sickness rates differed by race and ethnicity. African-American hypertension or South Asian diabetes). It's also known that South Asians have a lesser lung capacity than Caucasian Europeans. Pulmonary function testing employs normalized spirometry norms for ethnic groupings, while other machine learning algorithms are used

similarly across demographic groups. For pragmatic reasons, machine learning fairness measurements are usually group fairness.

2.7 Definitions of Fairness

The algorithm's impartiality matters. Unlike bias, machine learning model legality and ethics may differ by nation and culture. Machine learning algorithms now anticipate diagnostics, triage, and insurance prices. Because all of these applications have the potential to produce unfair demographic groups, a statistical approach is needed to evaluate their fairness. Fairness may be defined and verified in numerous ways to fine-tune a machine learning system.

Figure 2 indicates that the two demographic groups' false positive and false negative rates differ across ROC curves. We include the three most common fairness definitions, although probability and statistics can define many more.

- Demographic parity assumes that comparable persons have similar results. In this case, the algorithm must approve therapy for Group A and Group B patients equally. Both groups must agree.

Mathematically, this can be described as follows:

$$P(\hat{Y}=1|G=a) = p(\hat{Y}=1|G=b)$$

This definition of fairness satisfies a mathematical criterion known as independence:

$$Y \perp G$$

This prevents each group G's protected attributes from affecting the prediction algorithm Y. This fairness notion prioritizes the end result above error frequency and distribution.

- In compliance with equality of opportunity, genuine positive rates must be the same for both groups notwithstanding categorization error. This ensures equal false positives in both sets of findings. Since the real positive rate is the same as the sensitivity, the two groups must have sensitivity parity, depicted by a horizontal line on the ROC curve (Figure 2).

Mathematically, this can be described as follows:

$$P(\hat{Y}=1|Y=1, G=a) = p(\hat{Y}=1|Y=1, G=b)$$

Equality of opportunity satisfies a mathematical criterion known as separation:

$$\hat{Y} \perp G | Y$$

Fairness assures that the same percentage of patients in each group obtain proper positive test results, but it overlooks negative mistake rates.

- Positive and negative error rates must be equal to equalize chances. Both groups are equally sensitive and particular. On Figure 2, Group A's ROC curve meets Group B's.

Mathematically, this can be described as follows:

$$P\{\hat{Y}=1|Y=y, G=a\} = P\{\hat{Y}=1|Y=y, g=b\}, y \in \{0, 1\}$$

If calibrated, this definition of fairness satisfies a mathematical criterion known as sufficiency:

$$Y \perp G | \hat{Y}$$

Fairness equalizes positive and negative error rates for each group, but classification accuracy falls.

Fairness may vary by circumstance and legal and ethical norms. A college admissions algorithm should choose a particular number of candidates from each demographic category to preserve demographic parity.

It may be fairer if loan algorithms considered the percentage of applicants from each demographic category that were accepted. Because we want medical diagnostic tests to work similarly for all demographic groups, even if the number of positive tests may vary, the equality of odds requirement is often applied.

It can be shown that achieving all three fairness criterion is mathematically impossible unless both groups have similar prevalence rates or the algorithm is 100% accurate. If the equality of chances is inaccurate, it may be better to develop separate models for each group. Demographic

parity or fairness may be required for equal protection of the law. When building an algorithm for a country or region, it's important to understand local rules and integrate key stakeholders' opinions.

3. PULMONARY DISEASE SCREENING IN INDIA: A CASE STUDY

In this section, we present a case study on using machine learning to pulmonary disease screening and discuss bias, fairness, and proper usage.

3.1 CLINICAL STUDY DESCRIPTION

Lung ailment prediction systems were developed and tested. Asthma is the leading cause of disability in LMICs like India, and COPD is the second leading cause of death. Due to rural India's 1:1700 doctor-patient ratio and use of non-allopathic treatment, underdiagnosis and misdiagnosis are common. Researchers used machine learning algorithms to help primary care physicians diagnose lung problems more accurately with a stethoscope, peak flow meter, and smartphone questionnaire. The algorithms were based on IRB-approved clinical studies by MIT and the Chest studies Foundation in Pune, India. 320 people aged 18–73 and 87 healthy controls were studied.

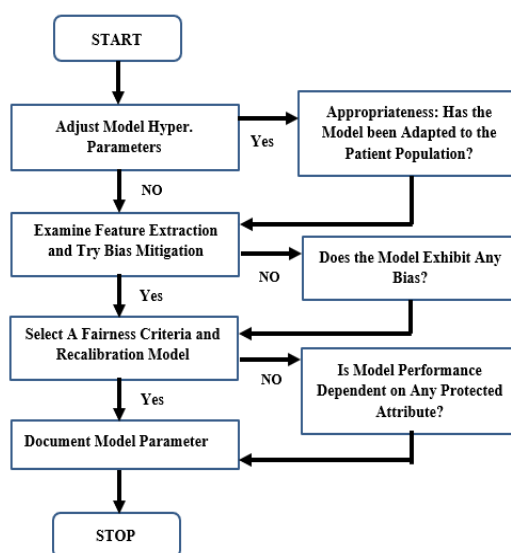

Figure 3 Process flow for pre-implementation model bias, fairness, and use checks.

The total number of study subjects for each pulmonary disease was as follows:

- 26 AR Patients
- 48 Asthma Patients
- 54 Asthma + AR Patients
- 36 COPD Patients
- 11 COPD + AR Patients
- 87 Healthy controls
- 41 Other Patients

Despite recruiting a gender-balanced sample, the dataset had 171 male and 132 female patients. Machine learning models have been created for asthma, COPD, and rhinitis. Spirometry, body plethysmography, impulse oscillometry (IOS), and lung gas diffusion testing (DLCO) were performed on all research participants to give accurate diagnostic labels and training data for the machine learning method. Based on these exams, an experienced chest expert diagnosed each patient.

3.2 Model Creation and Adaptability Analysis

We needed to know our machine learning model's aim before designing and training it. We prioritized the development of a machine learning model for decision assistance to help primary care (GP) physicians who lack lung problem expertise. We utilized a highly interpretable model and fine-tuned it to match the incidence of diseases encountered in a typical local GP practice to achieve this goal.

3.3 Model Selection and Baseline Implementation

This study uses supervised learning using a logistic regression model to ensure interpretability. Logistic regression makes coefficient analysis easy, revealing how each model component affects the overall. The machine learning model used questionnaire and peak flow meter data. Survey responses and peak flow meter data were binary variables, with the latter adjusted to the population mean before being converted.

L2 regularization was used to create a logistic regression model in Python's Scikit-learn module. 80% of the data was used for training and 20% for validation. Asthma, COPD, and AR needed separate models. While numerous patients had co-occurring disorders like asthma and AR or COPD and AR, each model's training data only contained patients with one condition. This training technique has the best AUC.

3.4 Imbalanced data correction and model tuning.

We fine-tuned the logistic regression C-parameter for each model using the grid search function in the Python logistic regression library and the area under the curve (AUC) as the optimization parameter. Next, the Python logistic regression class weights argument was used to give the minority class additional weight in the training data to compensate for the unbalanced data. The F1 score optimized this stage.

COPD, asthma, and AR models had median AUC values of 85, 75, and 95%.

These trained models were utilized for bias analysis.

3.5 BIAS ANALYSIS

3.5.1 General Considerations and Methodology

We employed trained and calibrated models for each lung ailment to assess gender and SES bias. We examined two forms of prejudice:

- We then constructed two homogenous test groups of equal size (all male and all female) and compared their AUC accuracy to check for systematic bias. We examined each population's qualitative ROC curve.
- We kept a steady test set while modifying training data to verify sampling bias. We created numerous training sets with different demographics to see if the model's mean accuracy and variance differed.

Logistic regression is deterministic, but when the training data is updated, the model's performance might vary. Model performance may vary across training cycles due to random data set assignment. Model accuracy must account for stochastic changes in training data.

Our study calculated the mean accuracy of each model and the mean of the regression coefficients after 1,000 iterations to decrease random fluctuation and focus on bias error. The model's findings were described by IQR. Variance was ignored since the distribution is not Gaussian.

3.5.2 Gender Bias Analysis

Figure 4 shows ROC curves from analyzing the model's accuracy on homogenous training sets of identical size to find systematic bias. The graphs reveal qualitative differences between the

male and female COPD ROC curves, showing a statistically significant gender bias. Women had a higher accuracy (AUC 93.6%) than males (AUC 88.5%). Asthma and RA models showed no sexism.

We created four N 104 test sets with different male-to-female ratios (50% female, 37.5% female, 25% female, and 12.5% female) to assess if this disparity was random. Each model iteration included N 104 randomly selected patients. For all iterations, N 160—80 men and 80 women—was the held-out test set. Figure 5 illustrates each experiment's data divisions, and Figure 6 shows 1,000 runs of this analysis for each of the three disease models.

Figure 6 shows a scatter plot comparing the three models' accuracy to the training set's female %. These models are unlikely to suffer from sampling bias.

However, the data show a large systematic gender bias in COPD diagnosis and a lesser one in AR diagnosis. The method benefits asthmatics of both genders.

The interquartile range (IQR) plots reveal that COPD and asthma patients had a broad range of values, with female COPD patients having more variance than male asthma patients. AR exhibited moderate heterogeneity in both sexes.

3.5.3 Socio-Economic Status Bias

To test socioeconomic bias, low-SES and high-SES patient pools were constructed using the same method.

Figure 7 shows ROC curves for two socioeconomically comparable patient groups. Asthma and AR were not biased, but COPD was, with higher accuracy in the high-SES group.

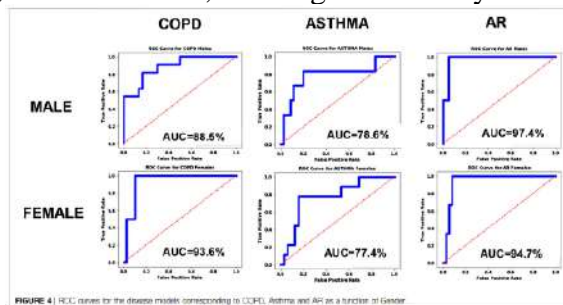

FIGURE 4 | ROC curves for the disease models corresponding to COPD, Asthma and AR as a function of Gender

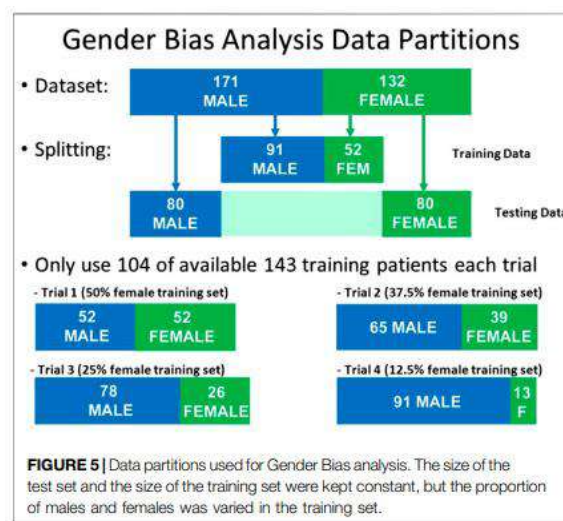

FIGURE 5 | Data partitions used for Gender Bias analysis. The size of the test set and the size of the training set were kept constant, but the proportion of males and females was varied in the training set.

To assess sampling bias, we developed a held-out test group of 58 patients with a similar proportion of high- and low-SES people. The remaining 245 patients were split into four training data pools of 50%, 37.5%, 25%, or 12.5% low-SES patients. Each research iteration

would use a random training set of $N = 140$ patients. 1000 iterations yielded model variance median and IQR. Figure 8 shows data partitioning for each trial, and Figure 9 shows 1,000 iterations of this analysis.

Figure 7 illustrates that for all diseases, low and high socioeconomic level do not significantly vary in ROC curves. Only for COPD, high-SES had a higher AUC than low-SES.

Figure 9 illustrates that when the fraction of low-SES patients is adjusted, accuracy remains generally similar for each disease, demonstrating that sampling in the training set is not biased. However, the variability plots showed that the AUC for Allergic Rhinitis (AR) had higher fluctuation when fewer low-SES participants were included.

3.5.4 Discussion and Investigation of Bias Results

The machine learning algorithm had a significant gender and SES diagnostic bias for COPD, but not for asthma or AR. The issue persists even when the training data is uniformly distributed among demographic groups, proving there is no sampling bias. Why such prejudice?

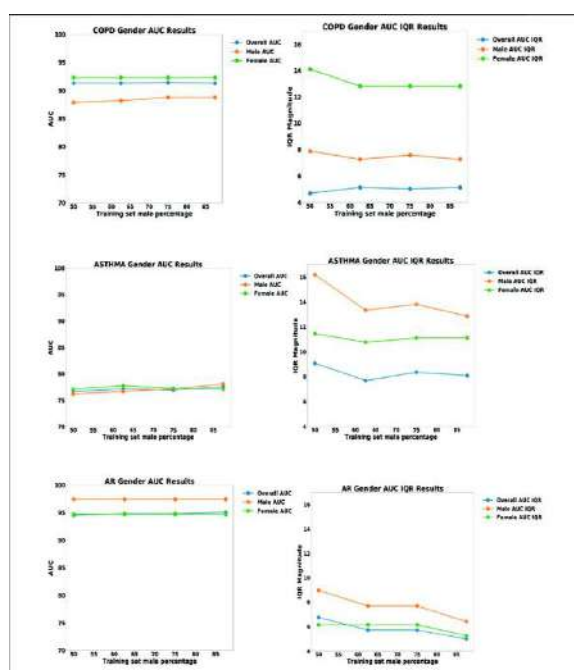

Figure 6 COPD, asthma, and AR gender bias analysis. Each figure contains three colored lines illustrating AUC accuracy for all groups, male only, and female only. Training set males vary from 50% to 100% horizontally.

We investigated COPD risk variable demographic group dependency to solve this riddle. Smoking promotes emphysema, making COPD a risk factor unlike asthma. The coefficient analysis of the logistic regression model, which revealed the smoking variable to be significant, supported these findings.

After further analysis of patient data, men and women smoked differently. Figure 10 demonstrates that men smoked more cigarettes than women. These data suggest that the gender bias in algorithms is largely due to men's higher smoking rate. There were no significant sex differences.

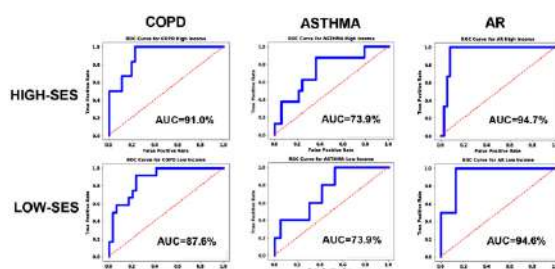

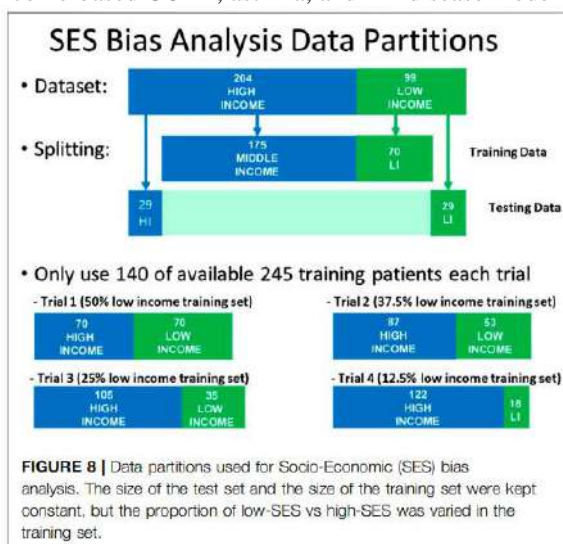

Figure 7 Income-based COPD, asthma, and AR disease model ROC plots.

Smoking data helps explain why the model works better for women than men. The model predicts COPD better in women since smokers are absent.

In the COPD model's SES bias study, we examined the two groups' smoking patterns (Figure 11). The high-SES group is mostly non-smokers, whereas the low-SES group is evenly split between smokers and non-smokers. This suggests that the slight but considerable diagnostic accuracy discrepancy between high- and low-SES individuals is largely due to smoking rates. High-SES patients, like women in the gender bias analysis, had greater COPD model accuracy. Smoking uniformity among high-SES patients may explain this.

The bias study suggests using distinct COPD models for women, males, smokers, and non-smokers. However, we were unable to use gender-specific models. A smoker-specific model might be useful for health insurance rate predictions, but not in this case. Singling out smokers would prevent punishing all male patients with increased insurance premiums.

Another key discovery is the AR disease model's socioeconomic stability. Figure 9 indicates that the model's IQR variability increases considerably when the fraction of low-socioeconomic patients decreases. The AR disease model improves when socioeconomic backgrounds are included.

3.6 Fairness Considerations

3.6.1 Understanding Bias to Improve Fairness

Our COPD prediction model yielded different ROC curves for men and women (Figure 2), and a similar but less significant bias was seen for COPD and SES. If these biases remain, our COPD prediction model may be unfair. The bias here is caused by patients' smoking behaviors and cannot be eliminated. We chose a fairness criteria that the algorithm could apply to assure fairness when bias was present.

After analyzing numerous fairness definitions, we chose the equality of odds fairness criteria and changed the model's threshold to intersect the ROC curves for males and females. This

change somewhat decreased female categorization accuracy, but both sexes had similar results at 89.2%. In the COPD model, this change affected both socioeconomic groupings similarly.

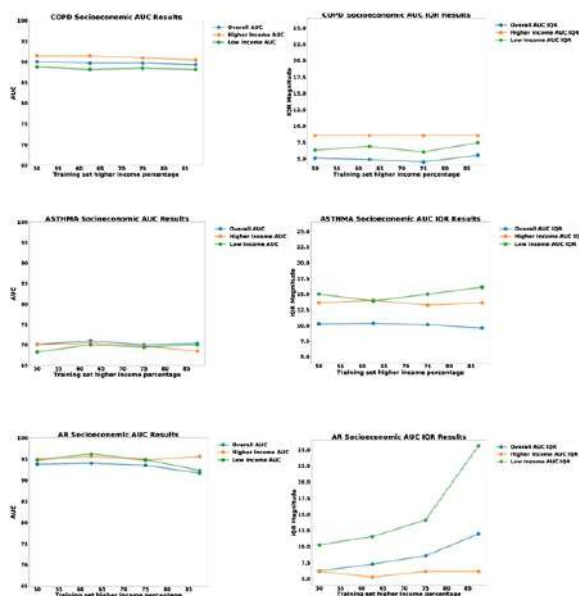

Figure 9 Socio-economic (SES) bias research results for COPD, asthma, and AR diagnostic models. AUC accuracy is plotted for all groups, High-SES alone, and Low-SES only. The horizontal axis displays high-SES training set patients from 50 to 100%.

Figure 10 The percentage of men and women who smoke and who don't smoke.

4. CONCLUSION AND RECOMMENDATIONS

4.1 Machine Learning Challenges in Global Health

The introduction and case study cover fairness, prejudice, and appropriateness. Since LMICs may lack legal oversight of machine learning and anti-discrimination rules, these issues are magnified. Economic disparities in many poor nations make it harder to provide fair access to and profit from these technologies.

Electronic medical records (EMR) can help expand machine learning and artificial intelligence, but they also offer risks. A recent US study found that machine learning algorithms that employ electronic health care data favor low-income and minority communities because they cannot afford continuous medical treatment. Mobile phones offer an intriguing opportunity to bring artificial intelligence to new populations through consumer-facing mobile apps and tools for community health care workers, but they also pose new risks for misuse and health disparities. When using AI and ML to global health, there are several difficulties, including justice, prejudice, and appropriateness. As this technology evolves, technical competence, education, public image, and cultural sensitivity must be addressed.

Figure 11 Smoking rates by socioeconomic class.

4.2 RECOMMENDATIONS FOR FAIRNESS, BIAS, AND APPROPRIATE USE

Disease and human behavior are only two examples of how global health systems are multifaceted and often concealed. Machine learning studies require crude approximations of these processes, but they must be done carefully and with domain expertise to avoid errors. Based on what has been mentioned, we may offer some broad principles for applying AI and ML in global health:

1. Machine learning models answer specific questions. As many health care decisions have unanticipated consequences, it's important to ask the right question. As machine learning and AI expand beyond diagnostic tools into health care access, medical triage, and insurance coverage, it is important to remember that no decision-making tool is perfect and that some important decisions may be better left to humans.
2. Publicize vital facts. As machine learning models get more complex and new models like deep neural networks are developed, explaining a computer's judgment may become harder. "Black box" models can be useful, but not always. Interpretable models are recommended for human-involved decisions like patient diagnosis since they allow for staff appraisal and consensus.
3. Algorithms are not flawless and depend on context, hence data and algorithmic provenance must be disclosed. Algorithms depend on training data and model optimization requirements. To ensure fairness, institutions and people using the model should have this information. Using an algorithm "off-label" might lead to unexpected or unfair results, so it's better to avoid doing so. The government's regulation of algorithms is still in its infancy, but it's likely to be regulated way the FDA does medicines.
4. Respect Bias Bias must be checked throughout the computation, including the training data features. While sampling bias and implicit cultural bias may contribute to bias in other machine learning application domains (finance, employment, law enforcement, etc.), health contains true systematic bias inherent in biological processes that may not be mitigated or "repaired." Race and ethnicity affect sickness prevalence, hence they cannot be ignored in health. If a single algorithm consistently produces very different results for one patient group compared to another, it is best to create a new algorithm for each group.
5. Since "fairness" can be interpreted in numerous ways, it's important to agree on a metric and criterion to optimize. This requires more than technical understanding and involvement from everyone with a stake in the algorithm's success, including affected communities. Even though individual fairness is a good ideal and most laws are written with respect to group fairness, trade-offs and compromises will often be needed to reconcile how the benefit and risk will be shared across multiple groups when applying machine learning decisions.
6. This article provides guidelines for using machine learning to health applications. The health industry is complicated, thus algorithm design must be influenced by a strong understanding of the area to prevent unexpected repercussions. Applying AI and ML will have a substantial positive impact.

ABSTRACT

Different leadership styles are proven to affect the productivity and performance of employees. Human resources are responsible for developing effective leaders who can meet the demands of the organization and its employees. The method used for this research is a qualitative-descriptive approach. Using the Path-Goal theory's leadership styles, employees discussed their different perceptions and experiences with the different leadership styles. Achievement theory is used in this study to assess the success of employees. This study aims to determine the impact of directive, supportive, participative, and achievement-oriented leadership in attaining the success of rank-and-file employees. At the end of this paper, a leadership development strategy is provided in order to address the needs of Air Link International Aviation College's needs in terms of leadership development.

Keywords: Leadership Style, Employees' Success, Leadership Development

1. INTRODUCTION

As the years progressed, the role of the human resource in the organization becomes more challenging because of the crisis in skill gaps that need to be responded to by hiring and training people for them to be well-equipped and effective leaders that direct employees and ensure that there is a source of talents who are capable of leading. The human resource department must maintain and improve leadership development programs and recognize leadership capabilities (Chambers, 2021). Through this, leaders or potential leaders are empowered which helps them successfully perform their roles. Human Resource is also in charge of understanding the demands of the leadership that the company is currently implementing in line with its business strategies and objectives (Eades, 2020).

Leadership styles in terms of directive, supportive, achievement-oriented, and participative have a significant role in influencing and inspiring employees to realize their full potential to achieve important tasks and goals. Over the years, different leadership approaches have been practiced in organizations to guide employees toward contributing to the organization's productivity. Thus, human resources must observe how leaders in the organization can be trained to become effective and efficient leaders. Moreover, to support the management, leadership development programs should be created to open opportunities and identify potential leaders so their skills can be developed through training. The human resource is responsible for ascertaining what leadership style is effective for the company and for facilitating what type of leadership should be practiced by the management (James Cook University, 2019).

In a study conducted in Malaysia by Basit et. al (2017), leaders who encourage employees to voice out their opinions and be involved in decision-making have a great impact on the performance of employees. On the other hand, in a study by Rioveros (2021) conducted in a Philippine airline company, leadership that promotes employee empowerment, is open for change, and drives motivation is more applicable to the employees of this industry.

Determining the right leadership style in terms of directive, supportive, achievement-oriented, and participative in directing employees to achieve success has been a continuous challenge for many leaders and organizations. In the workplace, employees rely on the guidance and leadership of the managers for a better and smooth workflow. Since different leadership styles bring different outcomes, a leader needs to understand the different kinds of leadership styles and their impact on the organization to achieve continuous efficiency. Hence, practicing an appropriate leadership style in the workplace that will deliver success is a must (Rioveros, 2021). Gadirajurrett et. al., (2018) supported that there is no specific leadership behavior that will fit and be effective in all situations, which is why every organization needs an effective leader that will incorporate a specific leadership style that will match to specific needs of the employees and the whole organization (Madanchian et. al., 2017).

Moreover, for a superior to be effective, it is recommended to not just practice a singular style of leadership, instead, multiple leadership styles should be adopted when handling employees at work. Leadership should also have an effective flow of communication to keep

6th International CEO Communication, Economics, Organization & Social Sciences Congress

the employees working on the right track with the right work behavior (Diuno, 2018). Leaders must facilitate an effective line of communication wherein employees will feel seen, heard, and guided, especially, as they adapt to the New Normal setting at the workplace. This sudden shift urges leaders to be more compassionate and understanding when it comes to the concerns and needs of employees for it affects their performance in achieving organizational goals (D'Auria & de Smet, 2020).

Leadership styles affect how employees perform (Basit et. al., 2017). Leadership style has a direct impact on employees' performance which either results in an increase or a decrease (Almer et al., 2017). Leaders have the power to influence change in an organization. By giving the right amount of support to employees, they can establish a healthy working environment for everybody. Effective leadership is said to contribute to improving the morale and motivation of employees (Fakhri et al., (2020).

From the literature presented, the researchers learned that human resources are responsible for producing new leaders that can meet the needs and demands of the employees, leaders that can adapt to the rapidly changing business environment and ongoing demands of the industry, and leaders that are capable of inspiring and motivating people to strive harder and fulfill their career goals. Human resources must assess what leadership style should be implemented by the management and ensure its effectiveness. For this reason, the researchers decided to conduct this study to further gain knowledge and to understand how to address the leadership gaps that are identified through the findings. Furthermore, the researchers chose this study to provide information and a plan of action that aims to improve the quality of leadership, understand the employees' goals, and help the human resource to formulate new strategies that will open opportunities for the path to employees' success.

For this study, the researchers chose rank-and-file employees as respondents. According to article 219 section (m) of the labor code of the Philippines, the rank-and-file employees are those who are not from the managerial and supervisory level of employment. They are the ones who experienced being led the most by the people from the upper management, thus, the researchers believed that the employees from the lower management will provide the sufficient information needed for this study.

This research aimed to determine the impact of leadership styles in attaining the employees' success and to create a leadership development strategy that will benefit the organization to demonstrate an effective and efficient leadership style that achieves organizational goals and empowers employees. In addition, this research aimed to know the goals of employees through a qualitative approach. The success of employees differs from employee to employee, therefore, the company must have a better understanding regarding it to give the employees the proper support needed through leadership styles. Hence, by conducting this study, the researchers identified the gaps in the superiors' leadership style which influences the employees toward achieving success.

Moreover, the purpose of this study is to help the Human Resource Department of the institution to support their employees in working towards their goals through the creation of

applicable strategies in terms of leadership. The researchers developed a leadership development strategy to provide knowledge on how to address the leadership gaps within the organization and provide information about its impact on the success of their employees. Also, this study is beneficial to the human resource departments of other companies, future researchers, the academe, and individuals who aim to further extend this research for academic purposes or to help organizations improve leadership toward employees' and organizations' success.

Leadership Theory of Path-Goal

Professor Robert House developed the Leadership of Path-Goal Theory, which is a theory that focuses on the idea of what leadership styles would fit in certain situations that would lead to attaining the goal. Leader's behavior can be based on two factors: environmental (culture, norms, policy, current situation, and the resources available) and employee's characteristics (ability, skills, and needs). However, for this study, the researchers will only focus on leadership styles provided in this theory.

House provided 4 leadership styles or behaviors that leaders could possess depending on the situation:

1. Directive - Leaders give commands and guides to employees, inform them about the objectives and how a certain job has to be completed, and direct them in every task assigned.
2. Supportive - Leaders show more empathy and care and they assure to give constant support to the employees. Usually, leaders put a lot of trust in their members.
3. Achievement-oriented - Leaders are strict in setting complex or challenging goals. They set high expectations for the employees because they trust in their abilities and are confident that they can attain their goals.
4. Participative - Leaders ensure that employees are involved and taking part in problem-solving. They prefer collaborative work, open to opinions and suggestions from the team (Olowoselu et al., 2019)

In this theory, leaders, such as supervisors and managers, are responsible for communicating, directing, and leading the path to achieve the employee's goals and organizational success (The Path-Goal Theory of Leadership, 2020).

House's theory is used by the researchers in this study, the leaders of the UST Angelicum are classified using the four leadership styles that lead to the path to success. Aside from the organizational goals that they must attain, employees have different goals. This theory will aid the researchers to know and understand the impact of leaders and these leadership styles on achieving employees' success.

Achievement Theory of McClelland

The Achievement Theory of motivation is a theory by a Harvard professor named David McClelland. This theory states that every human has three needs or desires. A person can be motivated by three things: power, achievement, and affiliation. According to this theory, one person may have a dominant need, but he/she will have all three.

1. Achievement - A person's motivation is to achieve their goals and succeed. They are usually not productive when in teams because they like to be solely in charge of meeting their needs and goals.
2. Power - A person is motivated to inspire others and be a leader that can influence people. They like to be the ones leading the way for others and making decisions to solve problems, most likely they will be successful leaders.
3. Affiliation - A person's connection and relationship with other people are their main motivators. They usually prefer to work with teams and are content with the employee position they are in (Kurt, 2022).

The theory of McClelland will be used by the researchers as the basis for determining the employees' success. Since success may be different for every employee, McClelland's Three Needs Theory will be the guide for the factors that employees consider as their success (power, achievement, affiliation).

1.1 Statement of the Problem

This study aims to understand and determine the impact of leadership style in attaining employees' success. The researchers want to answer the following questions:

1. What is the demographic profile of the respondents in terms of:
 - 1.1. Age
 - 1.2. Length of service
2. What are the goals of rank-and-file employees in terms of:
 - 3.1. Achievement
 - 3.2. Power
 - 3.3. Affiliation
3. What is the rank-and-file employee's assessment of their superiors in terms of:
 - 2.1. Directive
 - 2.2. Supportive
 - 2.3. Achievement-oriented
 - 2.4. Participative
4. What is the impact of leadership style in attaining employees' success?
5. What leadership development strategy should be implemented to support employees in achieving success?

1.2 Conceptual Framework

Figure 1.
Conceptual Framework

Based on the conceptual framework, through an interview, the employees defined their goals, assessed the leadership styles of their superiors, and described the leadership styles' impact on attaining their success. The information that the researcher gathered from the rank-and-file employees of ALIAC helps the management to understand what improvements should be made to demonstrate an effective leadership style to support their employees in attaining success. The data assessed from this research are used as the basis for creating an effective leadership development strategy that may be implemented in the company. In the leadership development strategy, a plan of action is provided and recommended by the researchers from the obtained results to provide effective and applicable strategies in leadership that will help employees to become accomplished and also achieve the objectives of the management in terms of leadership.

2. DESIGN

The researchers utilized a Qualitative Approach for this study. This aims to gather information about the insights, experiences, and opinions of the rank-and-file employees of the ALIAC regarding the impact of leadership styles on attaining their success. Also, the researchers used the Descriptive Method because this study requires the employees to describe their success and the impact of leadership styles on it. Through a Descriptive-Qualitative Approach, the respondents were able to freely express their answers to the interview questions conducted by the researchers.

2.1 Selection and Study Site

The researchers used the purposive sampling method for this study. Using this non-probability sampling technique, the researchers were able to analyze and know the impact of leadership style in attaining employees' success and acquire the data needed from the respondents who are identified as the 23 rank-and-file employees from the Non-academic offices of ALIAC. The non-academic offices consist of Administrative Affairs Division, Financial Affairs Division, and Academic Division. The rank-and-file employees are ordinary workers who belong to the lower management. Thus, the researchers chose them as the respondents for they perform their daily tasks at work under the supervision and direction of individuals from higher positions. The data gathering was conducted onsite at the campus of ALIAC and online via Google meet.

2.2 Data Measure

To gather the necessary data, the researchers formulated a set of open-ended interview questions that are aligned with the problems identified in this research. The questions are divided into three parts; the first part consists of questions regarding the employee's goals, questions are derived from the Achievement theory by McClelland; the second part consists of questions about the leadership styles (directive, supportive, achievement-oriented, and participative), the researchers used leadership theory of Path-Goal by Robert House; for the

third part, it consists of questions regarding the impact of leadership styles in attaining the success of employees. To ensure that all the necessary information is gathered, the interview questions that were given to the respondents enabled them to freely express their answers.

2.3 Data Collection Procedure

As stated in the policies under the Data Privacy Act of 2012, the researchers ensured the confidentiality of all the information and data that were gathered from the respondents who are rank-and-file employees of ALIAC. Below is the Data Gathering Procedure that the researchers followed to gather the needed data for this study.

1. The researchers formulated the interview questionnaire, aligned with the statement of the problem, which was validated by the 3 questionnaire content validators.
2. The researchers have acquired permission to conduct interviews from the Research Department Head and Human Resources Head before conducting the in-person interview.
3. The researchers then proposed a schedule for the interview to the department heads and acquired permission.
4. The researchers first used informed consent to seek the permission of respondents to participate in the research interview.
5. With the use of the approved and validated interview questionnaire, the researchers conducted the interviews with the respondents which took 4 days.
6. The qualitative data were analyzed by the researchers and formulated a leadership development strategy.

2.4 Ethical Consideration

The researchers used informed consent in collecting data from the respondents. The researchers first gave information about the study before obtaining consent. Through informed consent, the respondents are briefed about the objectives, risks, and benefits of the research before they volunteered to participate in the interview (University of Oxford, 2021).

2.5 Data Explication/Mode of Analysis

The data collected from the respondents are tabulated and summarized and the method used to analyze the data gathered is the thematic analysis. The thematic analysis is a qualitative method in which the qualitative data is identified, analyzed, and interpreted into patterns of themes (Braun & Clarke, 2017). The answers of the respondents are organized using codes and themes to analyze the pattern in the data collected. Upon analyzing the data, the researchers were able to come up with the findings and draw conclusions for this research.

3. FINDINGS

3.1 The demographic profile of respondents

The respondents are the **23 rank-and-file employees** from the divisional offices of Air Link International Aviation College (ALIAC) who belong to the age range of 22-56 years old. In terms of years of service, employees 1, 2, 4, 5, 7, 9, 14, 16, and 20 are the respondents that

6th International CEO Communication, Economics, Organization & Social Sciences Congress

have only been staying at ALIAC for less than a year. The rest have been in service for 1 to 18 years. Based on the qualitative data, the following are the findings regarding the relationship between the respondents' demographic profile and their needs:

- 9 out of 11 respondents **whose length of service ranges from 2 months to 1 year** have a high **need for affiliation**.
- 3 out of 3 respondents **whose length of service is 6 years** have a high **need for power**.
- 8 out of 9 respondents **whose age ranges from 22-30 years old** have a high **need for affiliation**.
- 10 out of 14 respondents **whose age ranges from 31-56 years old** have a high **need for achievement**.

3.2 The goals of rank-and-file employees

Dominant Need of Employees

After analyzing the gathered data, the researchers are able to determine the dominant need of the employees in ALIAC which is the need for affiliation. 15 out of 23 respondents revealed that they aim to build connections and relationships with other people at work. They also stated that they prefer and are comfortable working with a team. The second dominant need is the need for achievement which is revealed by 11 out of 23 respondents. The researchers also discovered that 7 out of 23 respondents have high needs for both achievement and affiliation. On the other hand, the need for power is the less dominant need of the employees in ALIAC for it is only identified in 3 out of 23 respondents.

A. Need For Achievement

The goal is to complete a task and have a good job performance

Based on the data collected from the respondents, the support staff's priority and goal are to complete all the tasks assigned to them and perform their job effectively. Completing their task is what they considered their success.

Respondents were asked if they want to have the authority or be promoted, and the majority of the respondents answered that they are not aiming to be in a higher position and be promoted. Since the respondents are too focused on completing their current tasks, they expressed that being in a higher position means that there will be more responsibilities for them. For certain tasks, they believe that they can lead the other employees but as of now they only aim to improve, and they do not want to handle more tasks and responsibilities.

B. Need For Affiliation

Building connections and relationships with co-workers

The majority of the respondents expressed that they have a strong need in building connections not just with their co-workers or employees of other departments but also with the students in ALIAC. Having a strong bond with the people around you in the workplace makes it easier to perform tasks and find support whenever you encounter problems at work. Although tasks are assigned individually, employees prefer to work with a team because they feel that they are more comfortable and productive.

3.3 Rank-and-file employee's assessment of their superiors' leadership style

Dominant Leadership Style

After analyzing the qualitative data, the researchers discovered that the dominant among the four leadership styles of superiors in ALIAC is the participative leadership style. 22 out of 23 respondents revealed through their experience that their superior is participative. The second dominant leadership styles that the superiors are practicing in ALIAC are directive and achievement-oriented which is stated by 21 out of 23 respondents. On the other hand, 18 out of 23 respondents claimed that their superior is a supportive leader which makes it the less practiced leadership style.

Directive leaders provide adequate guidance and direction

To determine the experiences of employees under a directive leadership, the respondents were interviewed and some of them revealed that their directive superior gives them guidance and clear instructions which help them finish their tasks and keeps them on the right track.

Directive leadership style is effective

The majority of the respondents claimed that a directive leadership style is effective for them in terms of completing their tasks and in fostering their growth as employees. Respondents revealed that they are fine and grateful for being guided constantly.

The negative side of a directive leader

On the other hand, some respondents expressed their opinions and bad experiences under a directive leader. Unclear instructions, inappropriate tasks, bossy behavior, less interaction, creativity restriction, and consecutive commands in a certain given time make the directive leadership style ineffective to the employees.

Supportive leadership style is effective

According to the findings from the data collected, the majority of the respondents revealed that their superiors are supportive. The superiors provide support to the employees' growth, give advice, and value their well-being. Also, some respondents stated that they received emotional support and a lending hand from their supportive superior whenever they are struggling at work or have personal problems.

Unsupportive direct superior

Conversely, 4 respondents claimed that their direct superior does not practice a supportive leadership style while their indirect superiors are practicing it.

Constant support boosts employee morale and increases productivity

Respondents were asked about how they feel about the constant support their supportive superiors are giving them, the majority responded that they feel grateful, overwhelmed, happy, motivated, inspired, and empowered. Being supportive to the employees increases their productivity at work, allowing the employees to contribute to the organization.

Achievement-oriented leaders help in achieving goals quickly

Some of the respondents stated that their achievement-oriented superiors help them in achieving tasks quickly by giving them opportunities, and encouragement, implementing an effective system, and allocating and organizing tasks to accomplish.

The negative side of an achievement-oriented leader

On the other hand, when some respondents were asked about their experiences and opinions under achievement-oriented superiors, they revealed that superiors who are practicing this type of leadership style are too focused solely on achievements and tend to be selfish at times. In addition, some of the respondents feel stressed whenever they are given a complex task with high expectations.

Participative leadership style fosters teamwork and collaboration

The respondents described their experiences with a participative leader, and they stated that superiors in ALIAC are mostly participative. Their superiors allow them to partake in discussions, exchanging of ideas, and decision-making as they work as a team.

Employees feel heard, involved, and important

The respondents expressed their feelings and thoughts about being able to participate in decision-making. The majority revealed that they are happy when their concerns and ideas are being heard and acknowledged. They feel important, trusted, and grateful when they are involved in discussions and are able to make contributions to the team.

3.4 Impact of leadership style on attaining employees' success

Positive Impact of Leadership

Respondents believe that their superior's leadership style has a positive impact on them, their leaders are able to help them to improve their skills and achieve success. It also makes them perform their duties easier because of the support and guidance their superiors give them. The employees are able to discover new opportunities, increase their motivation, and grow as a professional.

Negative Impact of Leadership

While the majority of the respondents answered that their superior's leadership has a positive impact on their success, five respondents feel that it is ineffective to them. They find it difficult to communicate with their superiors because there are times that they were given unreasonable tasks and their safety was compromised. These employees think that they did not learn from

their superior, sometimes it is hard for them to perform their tasks because of lack of guidance and support from their superior, they feel that they can only rely on themselves.

4. DISCUSSION

Based on the findings, the majority of the employees have a higher need for affiliation while the need for achievement is their second higher need. For the support staff of ALIAC, success is to be able to perform all of their duties and be able to serve the organization. Moreover, employees also stated that they value connection with the other employees in the organization. To the majority of the respondents, promotion is their least priority, and they are content with their current job positions.

The findings showed that the participative leadership style is the most dominant style among the four. Participative superiors allow the employees to be involved and partake in decision-making. Leaders make employees feel that they are important and that they can contribute to the organization. Employees are grateful that their participative superiors believe in and trust them. Directive and Achievement-oriented leadership are the second most dominant leadership styles. Directive leaders are effective when it comes to providing directions and guidance to employees. Sometimes, directive leaders can be perceived as bossy and ineffective when they lack empathy and discernment. Achievement-oriented leaders help employees to achieve goals and to organize and finish their tasks quickly. The negative side of this leadership style is that some superiors tend to be overly focused on achievements itself which makes them appear selfish. Setting high expectations for employees can cause them to feel stressed and unmotivated. Supportive superiors are helpful in the individual growth of employees, they make employees feel comfortable in working and sharing even their personal problems.

The majority expressed that their superior's leadership style has a positive impact on achieving their different goals and success. It is helpful in terms of providing their needed support and guidance to complete their duties and also to improve their abilities as an employee.

CONCLUSION

Based on the findings, the researchers concluded that the majority of the superiors in ALIAC are practicing a participative leadership style. Next to it are the directive and achievement-oriented leadership styles while the supportive leadership style is less practiced among the four. Also, most of the respondents have encountered these leadership styles from the same superior which led the researchers to conclude that most of the superiors in ALIAC are practicing a mix of the four leadership styles. The researchers also concluded that the dominant need of employees is the need for affiliation. The second is the need for achievement and the last is the need for power.

Effective leadership reflects on the performance of the subordinates and all the employees from the lower level. The employees' priority is to complete all the tasks that are assigned to them, have a good performance, and be able to serve the organization and cater to all its needs. Building connections and relationships with other employees are also important because it helps to have a good working environment, strengthens teamwork, and encourages collaboration and exchange of ideas. Employees that aim for promotion need more guidance to

prepare them to take over higher positions and handle new roles in the organization. If the employees receive support from their superiors, they are more confident to finish their tasks and face new and challenging jobs.

In the interview conducted, gaps in leadership are identified in terms of communication, interpersonal skills, knowledge, and effectiveness of leadership styles. After concluding the findings of this study, the researchers recommend the following:

1. Develop a strategy that will help the rank-and-file employees in attaining their success while working in the institution.
2. Improve the current and existing strategies of the human resource and the organization that supports employees and develops leaders.
3. Create a plan that addresses the leadership gaps of superiors to possibly demonstrate effective and efficient leadership that empowers employees.

Leadership Development Strategy

As part of the objectives of this research, the researchers provided a leadership development strategy that involves recommendations of the areas that need to be focused on in order to improve the leadership of the organization. In addition, the researchers formulate this plan to help the human resources of the organization with its objective of developing a diverse workforce of motivated employees and its role in learning and development. Based on the findings of this study, in order for the superiors in ALIAC, to be more effective in helping to attain the employees' success, it is recommended that they improve the following:

1. Understanding Employees' Success

In terms of attaining the success of employees, leaders can attend to the needs of the employees by:

Table-1: Understanding Employees' Success

<p>Need for Achievement</p>	<p>11 out of 23 respondents revealed that they have a higher need for achievement. Employees are focused on accomplishing all the tasks assigned to them. It is recommended that the leaders help the employees of ALIAC achieve these goals to attain success by providing guidance in the whole process of completion of the task.</p> <ul style="list-style-type: none"> ● Encourage the employees to apply their knowledge and problem-solving skills to achieve their goals. ● Offer coaching and mentoring about how they can effectively manage and complete their tasks.
<p>Need for Affiliation</p>	<p>Aside from achievement, 15 out of 23 respondents showed that they have a high need for affiliation. Employees expressed how important it is for them to create connections and establish a good bond with their co-workers for it creates a healthy and comfortable working environment. It is recommended that the leaders help the employees of ALIAC achieve these</p>

	<p>goals to attain success by allowing employees to collaborate with other employees and helping them build connections and relationships with employees in other departments.</p> <ul style="list-style-type: none"> ● Provide quarterly events and exercises that will help to improve the relationship of employees. ● Conduct team building.
<p>Need for Power</p>	<p>Respondents from ALIAC explained that they are content with their current position and consider the need for power as their least priority. Only a few aims for promotion, nonetheless, it is recommended for the leaders to help the employees of ALIAC in achieving this goal to attain success by preparing the employees to be the next leader and to handle more complex tasks.</p> <ul style="list-style-type: none"> ● Show support and build their confidence and morale. ● Provide mentoring, coaching, and training to help equip them with the necessary skills for the higher position.

2. Improvement of Leadership Styles

The findings showed that the majority of the superiors in ALIAC are practicing a participative leadership style. Next to it are the directive leadership style and achievement-oriented leadership style while the supportive leadership style fell last. It is also concluded that most of the superiors are practicing a mix of these four leadership styles. The following gives information on how to further improve each leadership style and ensure its effectiveness in alignment with the findings:

Table-2: Improvement of Leadership Styles

<p>Directive Leadership Style</p>	<ul style="list-style-type: none"> ● Provide clear commands properly and professionally. ● Ensure that all instructions and workloads are in alignment with the job description of employees and the objectives of the organization. ● Provide adequate guidance to foster employees' growth and to keep them on the right track at work. ● Giving ample time for the employees to finish tasks is a must to produce quality work. ● This leadership style is best for employees with high needs for achievement and power. ● Directive leadership style should be practiced properly on employees whose work requires creativity and innovation.
<p>Supportive Leadership Style</p>	<ul style="list-style-type: none"> ● Provide emotional and professional support along with proper guidance. ● Encourage employees to attend training, seminars, or workshops. ● Constant support should be given to employees for it helps in boosting their morale and productivity at work.

	<ul style="list-style-type: none"> • This type of leadership is best for employees with high needs in achievement, power, and affiliation.
Achievement-oriented Leadership Style	<ul style="list-style-type: none"> • Assign tasks to employees that will allow them to grow. • Set clear goals while considering the complexity of tasks and the well-being and capability of employees. • The target dates of goals must be organized and reasonable. • Leaders in this type of leadership should have an equal focus on the goals, process, and the person/team working to achieve them. • Encouragement should be given to employees while working towards that goal. • This leadership style is best for employees with high needs for achievement and power.
Participative Leadership Style	<ul style="list-style-type: none"> • Regularly set meetings with employees. • Participates and collaborates with the team. • Consult the team and acknowledge their ideas and concerns so they will feel more involved, heard, and important to the organization. • Foster a work environment that values trust. • This leadership style is best for employees with high needs for affiliation. • Participative leadership style should be practiced on employees whose work requires creativity and innovation.

3. Improvement of Leadership Skills

To improve the leadership of superiors in ALIAC, the researchers recommend improving the following leadership skills:

Table-3: Improvement of Leadership Skills

Communication	<p>Employees rely mostly on the instructions given by their superiors in completing their tasks. That is why leaders must know how to communicate well with their subordinates, they must improve their oral and written communication to ensure that they provide clear instructions and avoid misunderstandings.</p> <ul style="list-style-type: none"> • Use appropriate language and terms that are easy to understand. • Utilize communication channels that are easy to access and navigate (E-mail, Facebook Messenger, and text/call).
Interpersonal skills	<p>Leaders must establish a good relationship with their subordinates by showing empathy when communicating and making them feel that there is someone that will support them and someone who understands them.</p>

	<ul style="list-style-type: none"> • Be open and willing to listen to the concerns, ideas, and suggestions of employees • Treat them with respect and show that they are trusted by their superiors.
<p>Continual Learning</p>	<p>Undergo more training to improve leadership and understand the role of their position. Lack of knowledge and experience will lead to ineffectiveness and failure to comply with organizational tasks. The employees will be affected by the gaps in leadership which will result in work stress and a decrease in productivity.</p> <ul style="list-style-type: none"> • Offer mentoring and coaching. • Provide workshops and training to continuously update skills.
<p>Time management</p>	<p>Employees felt left out due to the physical absence and the divided attention of their superior between their department and other departments. A leader must maintain their interaction with their subordinates within their department to strengthen bonds and to prevent making them feel they are left on their own.</p> <ul style="list-style-type: none"> • Create a timeline for the completion of tasks or projects. • Schedule frequent monitoring and consultations with the employees.

ABSTRACT

The COVID 19 pandemic has forced the world to embrace a new normal, and emerging evidence on the impact of COVID 19 suggests that women's economic and productive lives have been affected disproportionately and differently from men. According to International Labour Organization, in developing economics, 70% of women work in the informal sector with few protections against dismissal or for paid sick leave and limited access to social protection. In India, the nationwide lockdown imposed by the Government has left millions of migrant labour unemployed and starved for food, placing a huge financial burden on their women, who contribute substantially to their household income. We will review the adverse impact of COVID 19 on the income and jobs of working women and housewives, especially domestic workers, health workers and women working in sectors such as manufacturing, home-based activities for assembling production, teaching, coaching and agriculture-based activities. On an average, women spend two times as many hours as men doing unpaid caregiving work as well as domestic work. With health facilities being overburdened and non COVID 19 related health and social services being scaled down, women will be primary unpaid caregivers to ailing family members. Women's greater involvement in unpaid care economy could also impact their already low workforce participation rate. In India, participation of women in the labour force has been trending downwards for the past several years. By occupation, approximately 80% working women in India have been engaged in agriculture, health, education, paid domestic work, and manufacturing sectors. During COVID 19, the socio-economic conditions of girls and working women have adversely affected their working conditions, exposing them to a high risk of exploitation and abuse for their economic survival. Restrictive social works, gender stereotypes, home quarantine and diversion of resources to respond to the COVID 19 pandemic can limit women's ability to access health services. Global lockdowns have led to several women being stuck at home with their perpetrators and incidents and reports of violence against women has been on a risk. Evidence from the South East Asia region shows that seasonal male outmigration is linked to the reduction in gender-based domestic violence. Women's health services has also been severely impacted due to the COVID 19 emergency. Multiple reproduction has also put severe strain on their mental health.

Keywords: COVID 19, Women, Workers, India, Gender.

INTRODUCTION:

The year 2020, which marked 110 years of International Women's Day and the 25th anniversary of the Beijing Platform for Action, was intended to be ground-breaking for gender equality. However, with the spread of the COVID-19 pandemic, even the limited gains made in the past decades are at a risk of being rolled back. According to United Nations (UN) (2020), the pandemic is deepening pre-existing inequalities, exposing vulnerabilities in social, political, and economic systems, which are in turn amplifying the impacts of the pandemic.

The spread of COVID-19 has affected almost all countries around the world and all sections of the society. According to agencies and researchers, economic growth and jobs have been adversely affected due to COVID-19. Duffin (2020) had predicted that if the outbreak becomes a global pandemic, major economies will lose at least 2.4% of their gross domestic product (GDP) value over 2020. The International Labour Organization (ILO) estimated a loss of 5.4% of global working hours (equivalent to 155 million full-time jobs) in the first quarter of 2020 relative to the fourth quarter of 2019 were estimated to reach 14.0% worldwide, equivalent to 400 million full-time jobs (ILO Monitor: Fifth Edition, 2020). COVID-19 has not only negatively impacted the overall employment but also had a particularly dire impact on domestic workers globally. Accordingly to ILO (2020) estimates, 15th March 2020, 49.3% of domestic workers were significantly impacted. This figure peaked at 73.7% on 15th May 2020, before reducing to 72.3% on 4th June 2020.

Our country was in the depths of a recession since 2017. This crisis was deepened with the advent of Coronavirus pandemic in the year 2020. Before the country could recover from the dearth of economic resources, it received a severe blow that almost shattered its existing condition as well. The disease risked both our health and labour-market. The pre-existing gender inequality was strengthened by this crisis. Even if regional variations existed, evidence suggested that women had generally been more vulnerable to social and economic risks and harder hit by the consequences of the pandemic.

In India, domestic workers were severely impacted by the country-wide lockdown. A survey conducted by Domestic Worker's Rights Union (DWRU), Bruhat Bangalore Gruhakarmika Sangha (BBGS), and Manegelasa Kaarmikara Union covering 2500 domestic workers found that as many as 91% of domestic workers were not paid salaries in April 2020 and 50% of workers, who were aged > 50 years, lost their jobs and 87% of them were told not to return to work after the lockdown, with no communication if they would be called again.

Participation of women in labour force in India has been trending downwards for the past several years. By occupation, approximately 80% working women in India have been engaged in agriculture, health, education, paid domestic work, and manufacturing sectors. During COVID-19, the socioeconomic conditions of girls and working women have adversely affected their working conditions, exposing them to high risk of exploitation and abuse for their economic survival. While there are several reasons for a decrease in women participation in the formal sector, a crisis like COVID-19 is sure to have serious implications. The unemployment tracker managed by the Centre for Monitoring the Indian Economy, May 2020, indicated that

6th International CEO Communication, Economics, Organization & Social Sciences Congress

India has already seen a 20% decline in vacancies. Economists had already sounded the alarm bells for an oncoming global depression; in such a situation, women are at a higher risk of losing their jobs and facing issues of losing their jobs and facing issues re-entering the labour force.

The COVID-19 pandemic has adversely affected thousands of domestic workers across India, who are struggling for basic needs such as food and shelter. Many of them did not get full salary, and even many of them were told not to come to work. A survey conducted by DWRU, BBGS, and Manegelasa Kaarmikara Union covering 2500 domestic workers found that as many as 91% of domestic workers were not paid salaries in April 2020; 50% workers, who were above 50 years of age, lost their jobs; and 87% of them were told not to come to work after lockdown, with no communication if they would be called again. A study by IIHS (2020) covering 382 domestic workers found that the average income for these workers declined by 35% in March and by 93% in April 2020. About 52% household income declined sharply by 75% during April and May 2020.

In case of female domestic workers, the working condition was even more challenging, as most of them belong to economically disadvantaged groups, and live in slum areas. Without any uniformity in their wage structure, they work in the unorganised sector at very low wages. Yet, they are compelled to do this work because of illiteracy as well as their poor financial conditions. Their silent contribution has remained invisible for a long period. During the pandemic, they faced double marginalization. As they are engaged in informal productive work in the unorganized sector, they are not recorded as wage labour and deprived of any benefits given to wage labourers. It is high time to consider their contribution to the society and recognise them as wage labour. A suitable policy may be framed by bringing them to the mainstream, so that if such a situation arises again in future, they would not have to face similar problems like during this lockdown. Paid domestic work (female domestic workers) is categorised under informal and unskilled job without any constitutional guarantees. Declination of joint families and entrance of more number of women into the employment sector have generated the need for a supporting hand to work inside the home (Jyotsnamayee, 2020).

Gender disparity studies pertaining to the epidemic focused on the health crisis worldwide, and how men were the primary victims. Recently some studies reported the deplorable conditions of women in the economic sector as well. The greatest and most persistent gender gap was seen in employment and uncompensated labour, with 26% of women reporting loss of work compared with 20% of men globally in September 2021. Women and girls were also reported to drop out of schools during this period and there was a tremendous spike in the cases of domestic violence.

“The damage is incalculable and will resound down the decades, into future generations”, warned the UN chief, noting that women made up most of the jobs that had been hardest hit by the pandemic, were far more likely than men to lose work, and that women’s and girls’ unpaid care work had risen dramatically owing to factors such as stay-at-home orders, the closure of schools and childcare facilities, and an increased need for elder care.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

As pointed out by him, a dramatic change, rendering gender equality can prove to be beneficial for women in regard to attaining economic and social equality. Women's participation in the labour force enhanced economic development, promoted social security, and also brought about peaceful working conditions. "Women's equal participation", he said, "is the game-changer we need".

The other side of the story brought forth women's sufferings as the primary caregivers during the pandemic. Comprising the chunk of healthcare workers, women were on the frontline providing to the needs of the ailing. This made them vulnerable to the disease and in most cases.

CONCLUSION:

The rights pertaining to the womenfolk around the world received a major blow during the pandemic. A worldwide economic depression dug its fangs into the women's social, economic, as well as personal lives. The otherwise growing equality was torn apart by this scenario. India was no exception in this regard. During the initial months, the affected rate in India was relatively low in comparison to many other countries. The later months saw a sudden rise and a series of deaths marked by the disease. The epidemic shattered the health, economic, social, mental, psychological well-being of the country at large. Even now, when we have successfully eradicated (or almost) the disease, absolute stability for the country still seems to be an illusion. Re-entering the labour force post pandemic should be made easier for women in order to improve their conditions and bring forth the required economic equilibrium in the country, and the world at large. Women employed in the caregiving section of the society as health workers, nurses, doctors should be protected and taken care of by their families and the society as well. The personal arena of women should also be taken care of so that they can be protected from the clutches of domestic violence, forced marriages and other forms of atrocities.

ABSTRACT

Influencer marketing is growing leaps and bounds in recent years and is a force in contemporary persuasion. The persistent growth of social media platforms has allowed their users to view them as valuable information sources and firms to adopt them as effective marketing tools. Our aim was to understand the role that social media and social media influencers plays in acquiring talented staff for the Hotel Industry and the acceptance of social media influencers and social media platforms by the industry. Through the study it has been seen that some of the HR Managers are already hired social media influencers and using social media platforms for hiring and retaining talent into the organizations during the discussion; the others realised that they should be hiring and using social media influencers and platforms for hiring and getting the right talent. Those already using are extremely satisfied with the results and would be continuing to do so and spread over new upcoming platforms (if available) to increase visibility in future. It has been realized that the individuals are more likely to follow social media influencers and hence it has become a necessity to hire them to get the right talent with appropriate experience.

Keywords: Social Media, LinkedIn, Facebook, Twitter, Instagram, YouTube, Best Practices, Influencer Marketing, Influencer Marketing Best Practices, Influencer Marketing Strategy

Introduction

Social Media is a place where netizens across the world meet each other virtually and share a dialogue with each other. It is a super set beyond communication and a tool for social interaction. Its popularity is amongst today's gen Y and Gen X and to an extent baby boomers are the late adopters.

An influencer is someone who can influence others. A social media influencer is someone who wields their clout through social media. When an influencer is hired to promote products or services; that is influencer marketing.

Companies today have changed its view of the last 10 years of reviewing and managing talent. According to jobvite 89% of the companies have selected social media to manage talent since 2011. The trend has big implementation on the way employment process has changed. But the key point is what we can learn from the new age recruitment.

We have noticed that the companies are changing from a slow-moving culture to a super-fast-moving culture. In this world of speed, today, talent is the most critical in finding quick talent and talent which is quick (the thought process). A high performing work place can fierce the horizon and adapt as per the environment. Even the world of recession and high unemployment quality talent has never been in such high demand.

Today the tools have ensured that the professionals take charge of their own career, which has never been seen before. Professionals have come across LinkedIn, Facebook, Twitter, etc., to build brands, connecting to recruitment sites, updating their profiles even when they are not in search of a job.

This enables the recruiter to get quality information up to date. This also helps the recruiter to have a pool of data other than just active job seekers.

How about using social media influencers to attract talent? Promotion of a product is way different from promotion of n experience and even more so, when working with an organisation.

Social media influencers are not just promoting brands on their pages, but also jobs.

Companies which require talent in bulk such as BPO's are using these influencers to attract their talent in drives to be part of their workplace. The reason is clear – Each of these influencers have a million of followers. Theory suggest that social media influencer have an

impact on attitudes as they are likely to be perceived as credible, likable and similar to their audience, attributes that research shows facilitates persuasion. Credibility leads to internalization of source attributes; likability can produce a halo effect; and similarity elicits, social comparisons such as the interference that if a communicator refers to a particular goods or services as preferable; the followers consider it apt for themselves too. (O’Keefe, 2016; Perloff, 2020).

Objective of Study

1. Measure and add to our knowledge the role that social media and social media influencers plays in acquiring talented staff for the Hospitality Industry.
2. Explore today’s challenges faced for finding talent and to what possible extent that social media and social media influencers play to target talent.
3. To review the current and future situation of social media and social media influencers in finding appropriate talent.

Review of Literature:

Oncioiu, Anton, Ifrim, Mândricel (2022) stated that the worldwide employment landscape continues to change due to new technologies, especially automation, online collaboration tools and artificial intelligence. The lack of qualified workers and the increasing number of jobs for e-tourism workers is a challenge to maintain the daily operations of developing a digital recruitment strategy and communicating a good employer brand. The results highlight the great importance of building strategies because professional communication in social networks is the key to successful work with sustainable human resources practices.

Chabbra, Mehta, Panackal (2020), stated that in the future years the millennials would make up for almost three fourth of the workforce and social media has taken over every aspect of their lives. Through their desk research they highlighted that employers attract potential talent that fir in their vision, mission and culture through social media.

Karamustafic, Samra; Stockmaster, Taylor; Palladina, Skye; Harris, Aurora; and Perloff, Richard M. (2020), report an exploration of the qualities that online influencers display in their persuasion attempts, advancing the literature by seeking to spell out the particular strategies they employ to influence the masses.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

With steady growth in the adoption of social media, it remains a growing area of interest for recruitment (Perrin & Anderson, 2019).

Auderzet (2018) Social Media Influencers (SMI's) are increasingly approached by brands to promote products, a practice commonly called influencer marketing. SMI's can take advantage of their influence to obtain personal rewards by entering into partnerships with brands. The findings provide recommendations on how SMI's and marketers might come together to be a win-win relationship situation while preserving SMI's authenticity.

A number of clinical studies have begun to use social media ads or posts for all or part of their recruitment, with reports of varying success. (Darmawan et al., 2020; Topolovec-Vranic & Natarajan, 2016).

Kamlesh Dangi, Group Head – Human Resources, InCred - “In the employer brand-building context, it depends on the organisation if it is in a major scale-up mode. In that case, the organisation needs to go out of its way to increase its workforce, and this would be an exceptional effort.”

Manish Majumdar, former head – HR CoE, Novo Nordisk - “While fighting for talent in an employee market, any edge over competition goes a long way. Finding innovative ways to attract talent is not a leisure activity, but a necessary one. In that context, it makes sense to hire social-media influencers to attract talent.”

Jitender Panihar, CHRO, MoEngage Inc - “Social Media Influencers just provide reach, which is more useful while promoting a product. However, one cannot compare experiences with products. People buy an experience or an opportunity when someone who has already lived it retells it.”

Research Methodology

Our respondents are HR Managers, Training Managers and Talent Managers of 03 Star, 04 Star and 05 Star Hotels of Pune city. A total of 57 hotels responded to the survey. The primary data was collected through an online questionnaire survey.

Secondary data was gathered from previously completed research work including journal publications, online data banks and numerous websites.

Discussion:

6th International CEO Communication, Economics, Organization & Social Sciences Congress

Employer branding is a holistic approach. Social network offers a whole host of opportunities for increasing the visibility of and strengthening the employer market. As these networks are so widely used and accessible, they are the most cost-effective way of communicating with prospective employees in direct and regular manner while also allowing the companies to highlight their strengths and show themselves to be a great workplace. This enables potential applicants to get to know the employer brand, the day-to-day life with a particular employer and come to trust them; which increases the likelihood that they will apply in the future. Last but not the least, smart employer branding not only makes sense for recruitment but also helps retain valued staff in the long term.

Once a company has taken the decision to establish its presence on social media to strengthen its employer brand, it should look at the important issue of social media channels handling successful staff recruitment in a professional manner and integrating this into the employer branding strategy, instead of leaving it down to individual actions.

Many companies have taken a decision to create a separate account for recruiting staff as the Marriott brand has done on their Instagram account @marriottcareers. An alternative is to expand accounts that already exist, with Migros' LinkedIn channel being one example. This channel features employer **branding content** alongside posts to **reach out to their clientele**.

An employer branding strategy never stands still; however, it should have a clear storyline with a uniform editorial tone, the content should be diverse as possible using tailored formats ranging from articles, images and videos to target the right talent group. Content should be updated regularly to keep the community updated. Each social media channel should be monitored closely with a view of checking and optimising the content and its effectiveness.

A survey earlier conducted showed that 77% of marketers say that their prospective customers rely on industry experts. From educational content to sharing their favourite software solutions to the most stable company and job reliability; they are interested in hearing from thought-leaders or influencers from the niche. Today top company brands are investing in social media influencers as there is a rise of influencer marketing in the social media space over the past few hours. Infact the influencer industry is projected to reach \$16.4B by end of 2022.

The reason many companies are looking for social media influencers to be part of their marketing strategies:

6th International CEO Communication, Economics, Organization & Social Sciences Congress

1. **They Make the Brand Relatable:** The social media influencers have been able to create a relationship with their followers and have become trusted voices within their niche. Influencers add the human touch needed to elevate the brand and stand out amongst the competition in today's social media realm.
2. **They Spread Brand Awareness:** Instead of remaining dependent on the current audience for traction; many hospitality companies find it easier spreading their brand message through the power of social media and social media influencers. By utilizing influencer marketing to its fullest potential; the target audience can be given a feeling of reality of your brand.
3. **They Bring in More Sales:** The people trust the social media influencers. Not only the right talent manpower could be gotten through these influencers; but hotel services and sales could be increased because they are propagating the brand name. A digital relationship is built with the influencer and people feel they are buying something on a personal decision rather than an advertisement or promotional strategy.

In the last year two years more and more people have turned to social media for quick entertainment and distraction; but an increase in budding influencers and bloggers has been seen too. The rising popularity of influencers marketing is hidden from none; interestingly, what has come as a by-product of the expansion of the industry is a surge in focus on influencer talent management.

Brands today are allotting much larger marketing budgets specially to influencer marketing. As branded content increases so does content creation. The number speaks for themselves-a majority of brands (59%) have a standalone budget for content and 75% of them intended to dedicate a budget to influencer marketing in 2021.

It is interesting to note that 63% of marketers have increase their influencer marketing budget this year and as the graph continues to rise from every direction; here is where Influencer Talent Management comes in picture. For most part, influencer talent management does exactly what it says; manage influencer talent. However, it is what is under this large gamut of 'manage' that makes things captivating. Earlier, talent management was rather restricted to either an HR and /or celebrity or artist management. Lately, as the very impact of influencers and their content has increased, so has the need for managing this umbrella of talent.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

Influencer talent management today has evolved drastically from what it was when it started. An increasing number of influencers are now looking to be represented by talent management experts. Talent Management experts, today, not just handle the onboard talent but take care of everything at the backend, from A-Z. These experts are storehouse of skills; starting from brand outreach and branded content, to storytelling and managing finances, to name a few.

What came as a repercussion of radical change in content consumption, has now become imperative for the industry, Influencer talent management bridges the gap between brands and influencers to ensure a seamless experience. Every brief is decoded and each brand is connected to an influencer that perfectly fits the brief. This is then followed by carefully curating content which not just fulfils the brief, but also tells a story that caters to the influencers niche. The content planning process in itself can be quite taxing – branded content tends to see a lot of back and forth between talent and the brand and this is where talent management experts step in. These experts are able to oversee content, along with managing finances, curating insights and becoming a PR expert for the influencers.

With the newly announced final draft of Advertising Standards Council of India (ASCI) guidelines for influencers and branded content, it is becoming evident that branded content and influencer management is only set to rise. As these guidelines are put into effect, the challenge is how to create organic yet branded content, and keep up with the guidelines is something the industry will struggle with in the beginning. Here is again, where talent managers will come into picture. From understanding the very requirement of the guidelines, to ensuring it is followed by their talent is something that will be of key importance.

From merely being a ‘managerial’ task, to now being a one-stop-shop for all things influencer related; influencer talent management has come a long way.

Being able to provide the perfect end-to-end solutions for all influencers (& brands) on-board by a team of experts is commendable. The team takes on responsibility for email handling, brand content, calendar management and in some cases, each plan is customised to suit the influencers requirement.

It is believed that customers prefer content that ‘looks organic’ and not advertised, however; it is paramount to understand the immense hard work that goes into creating a single piece of content that satisfies stake holders. Influencer talent management as an industry wasn’t given its due importance or gained prominence till recently.

As per the survey connected with 57 hotels in and around Pune City, below are the statistics discussed from HR point of view in relation to Talent Management. The HR department has realised that the challenges need to be reviewed and resolved through new techniques. Using technology and modern methods is apt and the right decision in order to stay in competition.

Fig. 01: HR Challenges Estimated

Fig. 02: HR Future Concepts

As we have seen in Fig. 01 and Fig. 02 that the HR Managers have already perceived that for their organizational survival, with the millennials and the extensive use of technology and

trends, moving in the same direction would be the apt and a prompt solution for change in direction of reviewing and sourcing the exact talent for the perfection of the organization.

During the survey conducted we found that since the HR Managers have realised that they need to shift resources for procuring perfect talent and through the below figures we have discussed the areas, elements and social media that has been currently identified and will be their future plan of action if not yet and the outcome shows that Talent Management and Social Networks and Influencers are slowly and steadily collaborating with each other.

Fig. 03: Use Social Media Influencer and/or Social Media Platform to Hunt Talent

Fig. 04: Elements of Talent Management

The below chart indicates hotel’s opinion that about being connected with social media platforms and influencers may be to an extent a possibility to be able to procure and manage to acquire talent for the hotels.

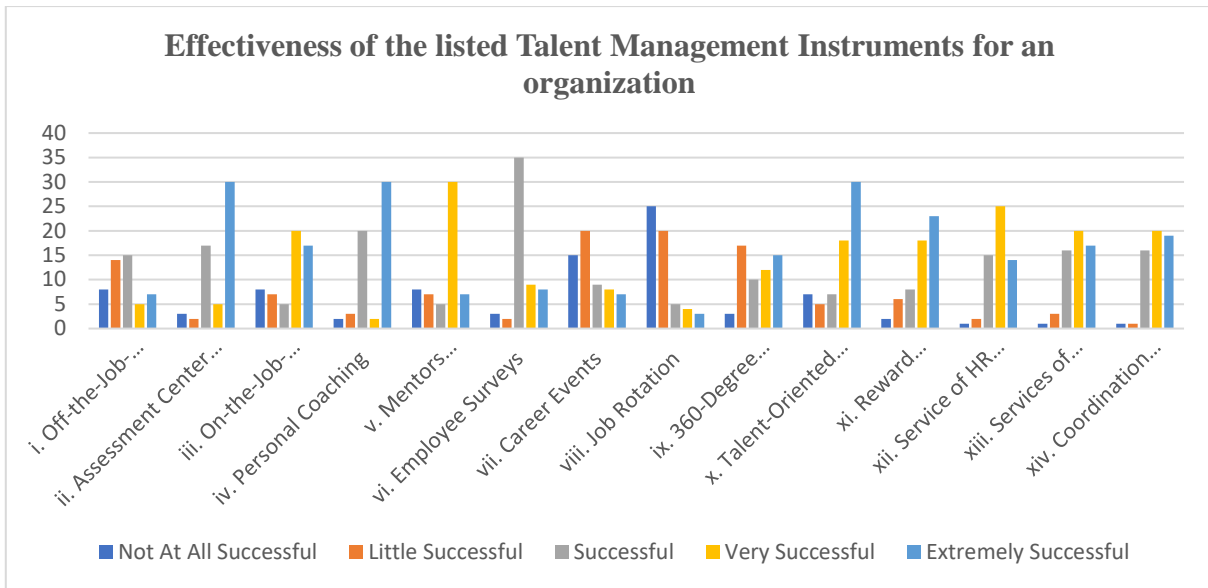

Fig.05: Talent Management Instruments of an organization

The below table shows the futuristic acceptance of HR implementing the listed e-recruitment techniques in their organizations

Fig. 06: E-Recruiting Instruments

During our survey, it was suggested that some goals of the listed goals be connected with Talent as employee would always ask the question and want to know the benefits and future journey within the hotels. Our next figure tells us about the goals and the agreement with the hotels that they could be successful, if they create goals in advance for Talent Management.

Fig. 07: Goals pursued by Talent Management

Fig. 08: Social Media Platforms Currently Hotels Have Registered

Fig. 09: Social Media Platforms Hotels Want to Register with in Future

We see that hotels are on social media platforms and are using it to the fullest of their knowledge in acquiring talent and would increase their visibility on the various platforms in the future. However, though hotels are increasing their visibility on social media and are increasingly wanting their employees to register, like, follow and subscribe to their channels, webpages

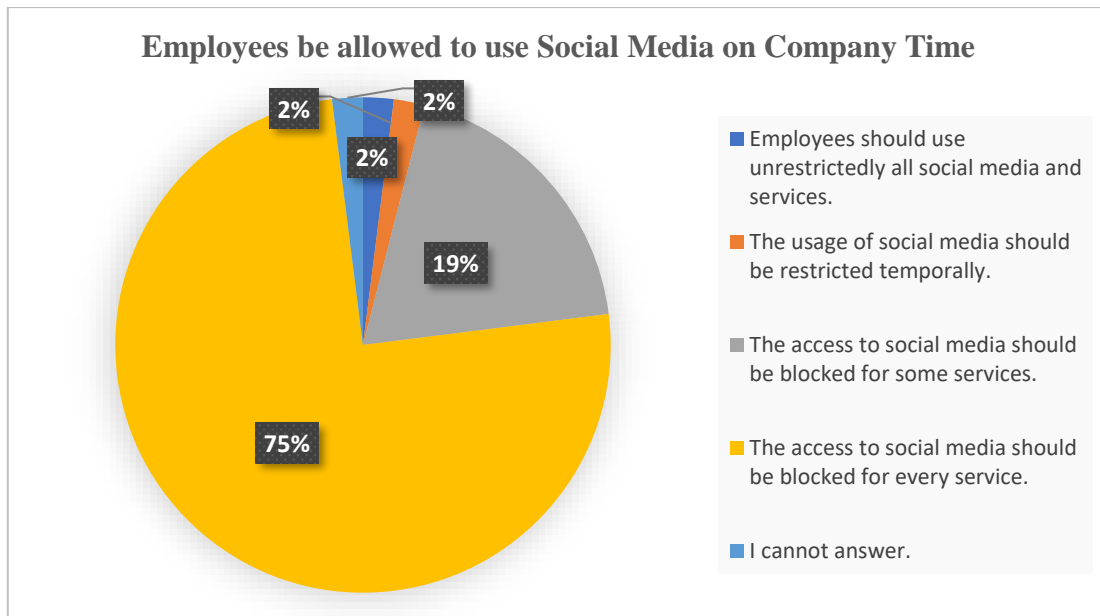

Fig. 10: Employees be allowed to use Social Media on Company Time

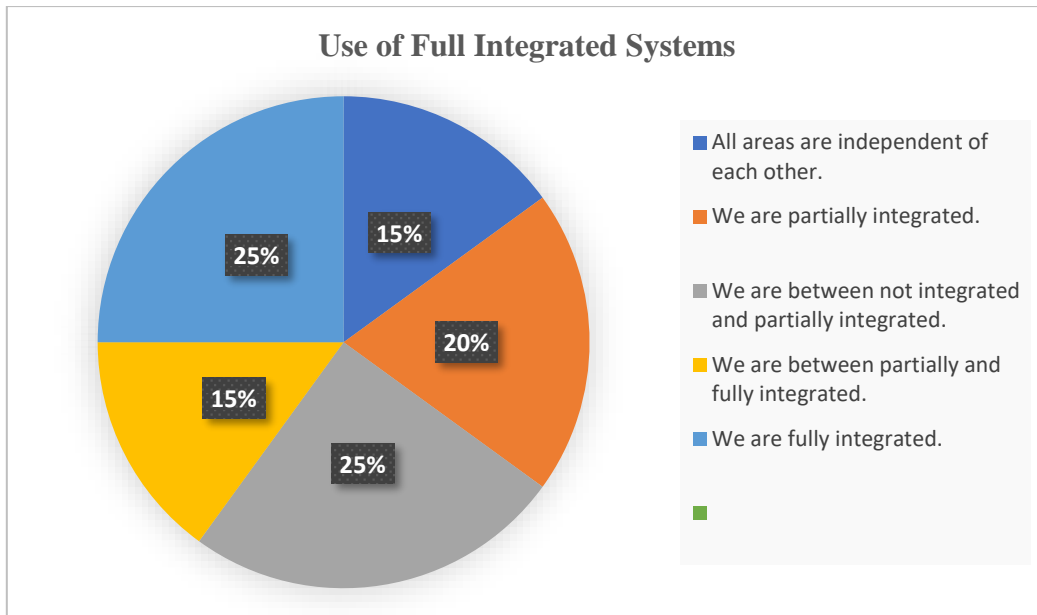

Fig.11: Use of Full Integrated Systems

Fig.12: Suitable Areas to Use Social Media

Fig. 13: Reasons to use social networks

Fig.14: Social Media the future of Talent Management

Employer Brand

‘Employer brand’ is a term used to represent the firms standing and appeal to customers from the viewpoint of a potential employer. It also describes the values the company uphold for its personnel. Employer branding is utilized in the contemporary business sector of talent acquisition as the below figures discuss the strategies hotels use to promote the company and

raise the expectations of the new recruits and convey to present workers as well that it is an excellent place to work in. HR Managers have also identified various aspects/ variables which they uses as competitive advantages in war with competitors to attract and retain talent.

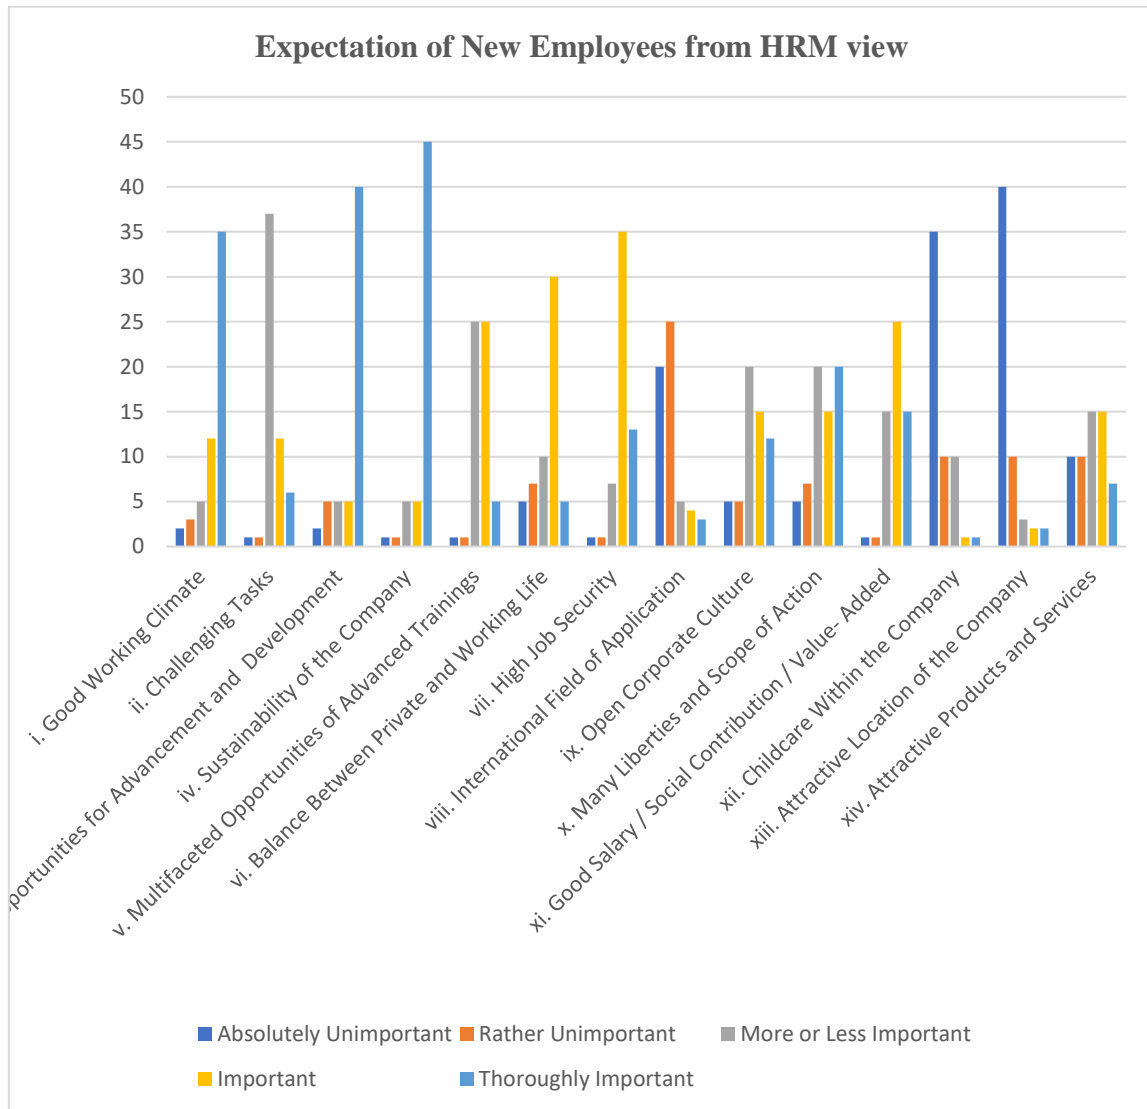

Fig 15: Expectation of New Employees from HRM view

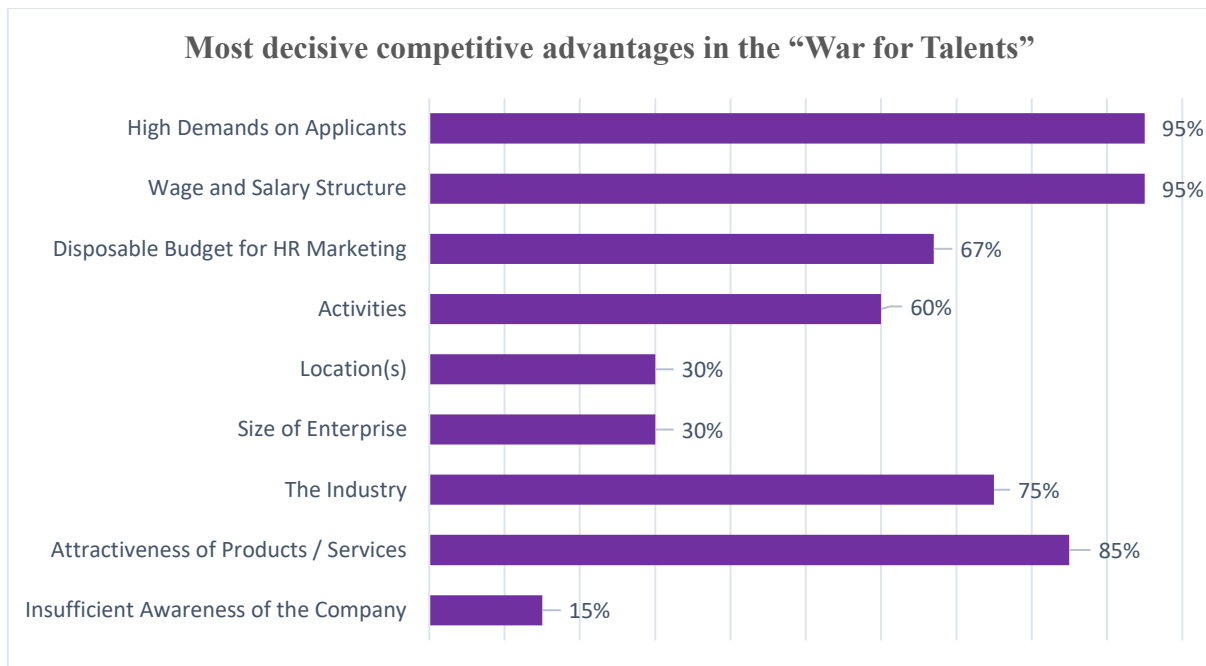

Fig. 16: Most decisive competitive advantages in the “War for Talents”

Conclusion:

The aim of the research was to fill gaps by investigating whether hotels used social media platforms and social media influencers in order to acquire the right talent. The literature review that has enabled us to analyse the data with some insights in mind. Through the research it has been found that hotels are steadily moving towards digitalization and are reviewing potential talent connected through social media platforms and influenced by social media influencers. SMI’s trustworthiness and expertise are important drivers of moderating the relationship between attractiveness and intention and the degree of influence tends to be stronger to followers.

As the hospitality industry has turned its eyes towards social media and social media influencers to acquire the right kind of talent required so has the social media and social media influencer changed the way it functions. This new digital industry has evolved every step of the way and will continue to do as times progress. Through the acquired data it has been observed that most of the hotels are aware that digitalization is the need of the hour and considering the millennials and to acquire younger talent it is the most appropriate need of the hour for talent acquisition.

ABSTRACT

The rapid development of digital technologies opens up new paths for high progress. Now the world is entering the "Fourth Industrial Revolution". And this means the widespread use of artificial intelligence, automation of production, robotization, the introduction of digital technologies in all sectors of the economy. In general, the new industrial revolution leads to the use of the newest, different and more affordable technological infrastructure in all areas related to digitalization.

As a result, developed states are developing programs for faster integration of the digitalization process into social and economic life, which forms competition between them. Large powers process large amounts of data through competitive high technologies. People are also using these digital technologies more and more every day. The emerging favorable environment is shaping the modern market for technology giants. Currently, mobile phone production is growing rapidly, cloud and other storage technologies are being created, and all this is becoming a part of our lives.

Of course, digitalization and technological innovations have a positive impact on the economy, industry and other spheres of each state separately. In particular, it is closely related to the digitalization of the economy, the construction of a sustainable and safe infrastructure. Undoubtedly, large-scale reforms in the socio-economic sphere, including in the field of Public Administration are constantly being carried out in Azerbaijan, innovative projects, e-services are being improved, and the transition to digitalized services in all areas is coming to the fore. The formation of "e-Government" is considered one of the factors that have further improved the development trend of countries in recent years. This creates conditions for provision of information and e-services to all citizens, legal entities and individuals, foreign citizens and stateless persons living in the territory of the Republic of Azerbaijan by government agencies using modern information technologies. The main purpose of the created opportunities is to reduce the "distance" between civil servants and citizens in the provision of social services, as well as to simplify and transparent these relations. The widespread use of electronic services by state bodies, increasing their number and quality, increasing the satisfaction of citizens with services are the means to achieve this goal. "E-Government" serves to provide a qualitatively new form of services provided to citizens of the country, using the possibilities of virtual space, modern technologies, the high level of informatization in state bodies.

As an example, we can take the creation of "ASAN". The purpose of the organization, established on the initiative of President Ilham Aliyev, was to increase transparency in the activities of state bodies, to implement the services provided to citizens with high quality, convenient and modern innovations. Because one of the main tasks set by the head of state is to achieve new standards in the provision of public services. These standards include efficiency, transparency, modernity, technological capabilities in a single space of public and private services, etc. formed on the basis of rendering in accordance with the principles. In general, the development of digital government in Azerbaijan, the solutions applied in the financial sector, the process of adapting legislation to new technological trends continues at a high speed.

Also, after the second Karabakh War, which ended in victory, a lot of work began on the implementation of urban planning on a technological basis in our liberated lands. The basis of the reconstruction is the project "Smart Village", rich in tenological possibilities. The main goal of the implementation of this project is to create conditions

6th International CEO Communication, Economics, Organization & Social Sciences Congress

for people in rural areas so that the population has convenient access to all services available in the city in the villages. At the same time, people should be provided with more income and employment opportunities in the village. The third point is the formation of full conditions for providing rural residents with access to public services. In other words, in the concept of "Smart Village", the difference between village and city in terms of Service, earnings and access to public services has actually disappeared.

"Smart agriculture" is a new concept that uses modern information and communication technologies in order to increase the quantity and quality of products while optimizing human labor required for production. The project, which will be implemented on 5 components, consists of housing, production, social services, "smart agriculture" and alternative energy. Internal engineering communications and heating systems will also be built on the basis of smart technologies. Modern schools, kindergartens, polyclinics and electronic control centers will be built in these villages, and tourism infrastructure will be formed. All residential houses, social facilities, administrative and public catering buildings, the process of processing and production of agricultural products will be provided with alternative energy sources.

According to the concept of "smart village", the electronization of the process strengthens production capabilities. Thus, from the irrigation system to the cultivation and harvesting of the land, it is an automated system, controlled from one center and jointly managed by the entire platform, and also involves the application of the most advanced technologies and techno-transfer. The integration of this system into other areas of rural infrastructure - alternative energy sources and a modern transport system-will complement the concept of a "smart village".

All of these features are an indicator of the new achievements of our country in digitalization and electronic services. Currently, the reforms carried out in our country, important programs implemented by the public and private sectors form an important basis for building a digital economy. Azerbaijan, which has the status of an energy and transport center of the region, has the opportunity to build a digital economy and become a digital center of the region in a short time using the resources and advanced world experience available in the new era.

Keywords: Azerbaijan, Digitalization, Innovative reforms, Public administration, Reconstruction of the State, Evolution of the Public Administration.

INTRODUCTION

In recent years, Azerbaijan has been making great efforts to digitalize its public administration. A number of digital initiatives aimed at improving the efficiency of public services have been implemented in the country.

One of the main initiatives in this area is the "Electronic Azerbaijan" program, launched in 2013 ("Azərbaycan Respublikasında rabitə və informasiya texnologiyalarının inkişafı üzrə 2005-2008-ci illər üçün Dövlət Proqramı"nın (Elektron Azərbaycan)" təsdiq edilməsi haqqında AZƏRBAYCAN RESPUBLİKASI PREZİDENTİNİN SƏRƏNCAMI <https://e-qanun.az/framework/10778>). The program is aimed at transforming Azerbaijan into a digital society through the development of advanced digital infrastructure and the promotion of the use of digital technologies in all sectors of the economy.

Within the framework of the "electronic Azerbaijan" program, the government has developed a number of digital platforms for the provision of public services. These platforms include the "e-government" portal, which provides citizens with online access to a wide range of government services, including filing tax returns, registering property and business. The Portal also provides information on public policies and programs.

Another important aspect of digitalization in Azerbaijan is the development of digital payments and financial services. The government has put forward a number of initiatives to promote digital payments and reduce the use of cash in the economy. These initiatives also include the development of mobile payment systems and the creation of a National Payment System.

In addition, the government has launched a number of initiatives aimed at improving digital literacy and skills among citizens. These initiatives include the development of online courses and training programs and the creation of digital literacy centers in different parts of the country.

1. CHAPTER – INTERNATIONAL EXPERIENCE IN DIGITALIZATION

In the late 90s, management-related IT projects began to grow in the United States. The main goals of these projects were "to provide services to citizens." The U.S. government implemented the National Performance Review (NPR), which proposed restructuring the government using data and technology (February 1997), and this was the first time the U.S. federal Government had addressed e-government.

Since by 2001 the Great Powers had spent more than one billion dollars each (NASCIO 2005), the total annual investment in it at all levels of government can be estimated at about \$ 100 billion. In July 2001, the U.S. government began a process of 'expanding e-Government' under the President's governance program. The goal was to use information technology to eliminate wasteful federal spending, reduce government paperwork, and increase the time it takes for the government to meet citizens' demands. The "E-Government Act" of 2002 paid special attention to strengthening the website and improving customer service. On April 31, 2002, the U.S. government launched the "EZ tax filling" program, which aims to fill and refund taxes online, an initial implementation of the free electronic filling solution under the "Industry Partnership" during the 2003 season. On July 1, 2002, another ambitious project was prepared by the US government. The "federal asset sales" project, known as "electronic authentication", aimed at fully deploying the original prototype authentication Gateway, was launched on March 31, 2003 with the goal of developing pilot business integration and repositioning federal sales (Nikita Yadav & V.B.Singh, (2012,September), e-Governance-Past, Present and Future in India, International Journal Of Computer Science Applications (0975—8887),Volume 53,No-7). In 2009, it was announced by the US government, which aimed to make more information available to the public "Data.gov" it was put into operation. Using services, citizens can use

applications, websites, etc. they can create. Currently, the US federal Government has board framework (G2C) technology to expand citizens' access to government information and services. Likewise, the Government of the United Kingdom has launched a series of projects that provide electronic management services to its citizens. The government's strategy of transformation by Technology, published in November 2005, targeted the development of e-government across the country. A pilot project to create an electronic medical record in Cornwall began in April 2000. This project includes connection to the NHS net Network (national-level NHS virtual private network or intranet), 24-hour emergency log, general information architecture the Plymouth Bus project was developed by Plymouth City Council to conduct comprehensive research on the bus network, to propose initiatives for its future development and investment. The "Integrated Transport" Project began in southwestern Hertfordshire. The goal of the project was to develop a sustainable transport strategy for implementation over the next ten years (Nikita Yadav & V.B.Singh, (2012, September), e-Governance-Past, Present and Future in India, International Journal Of Computer Science Applications (0975—8887), Volume 53, No-7). The New Zealand government prepared the E-Government concept document in May 2000. Since then, the Public Services Commission has established an "e-Government section" to oversee public works. France has the oldest history of e-government. The release of the "Minitel Terminal" in 1984 gives citizens and companies remote access to a range of government services and information. However, later, in 1998, e-government began to be introduced as a public policy. The French government declared 2012 as "digital France". In the Middle East, Jordan has developed an electronic management system for its citizens since 2002. Similarly, Saudi Arabia and Iran have their own e-government. Asian countries are not far behind in terms of providing electronic management services to their citizens. Taiwan has a first-class online transportation service system that provides 21 applications and payment services to its citizens. South Korea's Internal Revenue Service (HTS) provides citizens with 24-hour online services in the form of tax returns. The Singapore Civil portal provides organized access to government information and services. Countries such as Malaysia, China and Thailand have used advanced technology to ensure electronic management of their citizens.

The implementation of electronic management projects in developing countries helps people to enter state schemes. In 2003, Myanmar government created Yangong City Development Committee (YCDC) to provide easy access between government and city residents over the internet, reduce paper usage, reduce city budget, build urban fiber optic ring, provide timely public information, maintain public information (E-Governance- retrieved from - http://www.coe.int/t/dgap/democracy/Activities/GGIS/E-governance/Default_en.asp , Accessed on 30th June 2017).

The government of Nepal, with extensive support from the Korean government, developed the concept, planning and infrastructure of e-Government. The governments of Pakistan, Sri Lanka and Bangladesh have their own e-government and planning strategy. The authorities have developed various web portals to ensure that people have easy access to government activities.

2. CHAPTER – IN THE CASE OF REPUBLIC OF AZERBAIJAN DIGITAL GOVERNMENT

A few examples of how technologies are applied to state processes in Azerbaijan:

E-government portal: the e-government portal in Azerbaijan ("Elektron hökumət" portalı haqqında Əsasnamə"nin təsdiq edilməsi və elektron xidmətlərin genişləndirilməsi ilə bağlı tədbirlər barədə AZƏRBAYCAN RESPUBLİKASI PREZİDENTİNİN FƏRMANI <https://e-qanun.az/framework/25215>) was launched in 2013, giving citizens access to a number of online

government services such as obtaining e-certificates, paying taxes and registering enterprises. The Portal contains more than 400 services. The electronic cabinet system is used by the Cabinet and other government agencies to manage documents related to policy, legislation and other matters. The system allows you to create, view and validate documents electronically, all relevant parties have access to the same information in real time. The system is also designed to increase transparency and accountability, to make government decision-making processes more visible to the public. The electronic cabinet system includes a public portal that allows you to obtain information about government decisions and the process of their adoption. The e-cabinet system was viewed as a positive event in Azerbaijan's efforts to modernize its government and increase efficiency and transparency. The system was highly valued for reducing bureaucracy and optimizing decision-making processes and improving citizens' access to information. However, as in any system, work is carried out continuously to monitor the government and solve the problems that may arise over time as they arise.

Electronic Document Management: the government began to implement electronic document management systems, such as the electronic cabinet, which allows the creation, viewing and approval of government documents electronically, reducing the need for paper funds. Electronic Document Management (EDM) was adopted by the government of Azerbaijan in order to optimize administrative processes and reduce the use of paper documents. EDM is a system that allows you to create, store and manage electronic documents safely and efficiently. The electronic cabinet system is the main electronic document management system used by the government of Azerbaijan. The system began in 2013 and has been implemented in various government agencies, including the Cabinet of Ministers, to manage documents related to policy development, legislation, and other issues. The introduction of electronic document management systems in Azerbaijan allows the government to increase efficiency and transparency by reducing the use of paper documents.

Digital identification cards: in 2019, digital identification cards were introduced in Azerbaijan, which include a number of biometric data and can be used for various purposes, such as access to public services and conducting financial transactions. In 2019, digital ID cards were introduced in Azerbaijan in order to increase the security and convenience of identification of identity and public services. Digital ID cards known as "ASAN Imza" are issued by the state agency for Civil Service and Social Innovations under the President of the Republic of Azerbaijan (ASAN imza) and are based on advanced biometric technologies [2].

ASAN Imza digital ID cards contain fingerprints, as well as personal data and a number of biometric data, such as a unique digital signature. Cards can be used for a number of purposes, including access to government services, digital signing of documents, and conducting financial transactions.

One of the main advantages of digital ID cards is their convenience and accessibility. Citizens can easily and quickly apply for cards online or at ASAN service centers located throughout the country. Cards can be used to access a number of online services without the need for physical availability or paper documents.

Digital ID cards were also seen as a step towards identity identification and increased security in transactions. The use of biometric data and digital signatures stored on cards serves to eliminate problems such as identity theft and fraud.

The introduction of digital ID cards in Azerbaijan has been assessed as a positive event that has the potential to improve the efficiency and security of identity identification and public services. **Blockchain technology:** the government provides opportunities for the use of blockchain technology in various fields, such as secure storage of documents and agricultural supply chain tracking. Azerbaijan is exploring the possibility of using blockchain technology in various

fields, including applications in the public and private sectors. Blockchain is a decentralized and secure digital book technology that allows you to create transaction and data records protected from unauthorized access.

The government of Azerbaijan has identified several potential applications of blockchain technology, including for secure storage of documents, land registration and supply chain management. In 2019, the State Property Committee of Azerbaijan announced plans to use blockchain technology to register property rights and transactions, which will increase transparency and reduce fraud in the real estate sector.

In addition to the government's proposals, several private sector initiatives aimed at studying the potential of blockchain technology have been launched in Azerbaijan. For example, in 2019, the Azerbaijan export and Investment Promotion Foundation (AZPROMO) announced plans to create a blockchain-based platform for promoting international trade and investment.

The introduction of blockchain technology is still in its early stages in Azerbaijan, but it has the potential to play an important role in increasing transparency and efficiency in various areas of Public Administration and the private sector.

Smart cities: Azerbaijan is making significant progress in the development of "Smart Cities", several initiatives and projects are being implemented in the country. The concept of " smart cities " ("Azərbaycan 2020: gələcəyə baxış" İnkişaf Konsepsiyasının təsdiq edilməsi haqqında AZƏRBAYCAN RESPUBLİKASI PREZİDENTİNİN FƏRMANI <https://e-qanun.az/framework/25029>) involves the integration of technology and data to improve the efficiency, sustainability and livability of the urban environment.

One of the main initiatives in the development of the "Smart City" of Azerbaijan is the "Baku Smart City" project. This project is aimed at creating a comprehensive "smart city" ecosystem that combines various technologies and systems to improve urban services, transport, energy efficiency and public safety in the capital Baku.

The "Baku Smart City" project includes the introduction of smart energy management systems, the installation of smart traffic management systems, the development of smart waste management systems, the introduction of digital services to citizens such as mobile applications and online portals.

In addition to the "Baku Smart City" project, Azerbaijan has also launched initiatives to promote sustainable urban planning and green technologies. For example, energy-efficient public lighting systems have been introduced in the country, electric buses have been introduced in ganja, and a renewable energy park has been established in Pirallahi.

In general, the development of "smart cities" in Azerbaijan is regarded as a positive step towards increasing the sustainability of cities and improving the quality of life of urban residents.

Ganja is the second largest city in Azerbaijan and has become a smart city in recent years. The Azerbaijani government invests in infrastructure and technologies to create a more sustainable and livable urban environment in Ganja.

A number of initiatives and projects related to the development of a smart city are being implemented in ganja.

In order to reduce energy consumption and costs, energy-efficient lighting systems and smart grid technologies have been introduced in the city. In addition, solar panels were installed in the city to generate renewable energy. Intelligent Traffic Management Systems have been implemented in ganja to improve traffic flow and reduce congestion. The system uses cameras and sensors to monitor traffic and adjust traffic signals in real time. The city has implemented intelligent waste management systems to improve waste collection efficiency and reduce environmental impact. The system uses sensors to monitor the level of waste in garbage cans and optimize collection routes. A mobile application has been launched in ganja for citizens '

access to public services and information. In addition, the city has provided an online portal for business that provides access to public services. In Ganja city, it adopts "smart building" technologies such as building automation and energy management systems to improve efficiency and reduce costs.

The "Aghdam Smart City" project is an initiative proposed by the government of Azerbaijan to restore and transform the city of Aghdam, which was destroyed during the Nagorno-Karabakh conflict in the 1990s. The project aims to create a modern and sustainable urban environment that uses technology and innovations to improve the quality of life of residents.

The "Aghdam Smart City" project includes plans to build modern infrastructure, including "smart" buildings, energy-efficient lighting systems and advanced waste management systems. An extensive transport network will be established in the city, including electric buses, bicycle sharing systems and intelligent traffic management systems.

In addition to these infrastructure projects, the "Aghdam Smart City" project also includes plans to develop digital services for citizens, such as mobile applications and online portals for access to public services and information. The project also focuses on the development of entrepreneurship and innovation by supporting startups and technology companies.

In general, the project "Smart City of Aghdam" is an ambitious attempt by Azerbaijan to restore and change the city that was once devastated by the conflict. The project aims to use technology and innovation to create a modern and sustainable urban environment that can serve as an example for other cities in the region.

A number of projects and events related to digitalization and digitalization of the Civil Service have been implemented in Azerbaijan. These projects include e-document management, e-government services, e-mail system, etc. takes place.

One of the most important among these projects is "ASAN Service" (Azərbaycan Respublikasının Prezidenti yanında Vətəndaşlara Xidmət və Sosial İnnovasiyalar üzrə Dövlət Agentliyinin "ASAN xidmət" mərkəzlərinin yaradılması məqsədilə pilot layihənin həyata keçirilməsi ilə bağlı tədbirlər haqqında AZƏRBAYCAN RESPUBLİKASI PREZİDENTİNİN SƏRƏNCAMI <https://e-qanun.az/framework/24272>). "ASAN Service" is a portal where all public services are combined into one and provided by electronic methods. Through this service, citizens and employees can apply for public services in a very convenient way and submit their documents electronically. In addition, "ASAN Service" provides e-exams, e-applications and other services in various fields.

Also, electronic document management systems have been introduced. Through these systems, documents are electronically managed and easily transmitted between regions.

In addition to these, many other projects related to the digitalization of the public service are being implemented, and through these projects, the presentation and management of public services becomes easier and more effective.

The "ASAN Service" project is one of the largest and most successful projects implemented in Azerbaijan in connection with the digitalization of the civil service. With this project, all public services are combined into one and provided by electronic methods.

"ASAN Service" allows citizens, companies and employees to apply for public services in a very convenient way. Through this service, many relevant documents can be submitted electronically and the application process becomes even easier.

Through "ASAN Service" services are provided in various fields. Among these services are passport license, driver's license, tax payment, treatment services, job search, social assistance, etc. such services are included.

The digitalization of admission to the civil service in Azerbaijan is manifested by the "e-Government" project. This project aims to digitize the recruitment process of personnel

employed in the civil service. The main goal of the project is to make the recruitment process faster, efficient and uncomplicated.

Through this project, the recruitment process in the civil service is carried out through an electronic application form. Therefore, people looking for a job are able to start the recruitment process in a convenient way by logging into the "e-Government" Portal, filling out the application form and submitting the required documents. The portal is free to use and the application form can be submitted before or after the due date.

Through the project, the recruitment process is carried out more transparently and according to equal rules for everyone. Applicants are required to complete the stages of preparation of the recruitment process, stages of testing, interviews, etc. they are able to follow stages electronically. Therefore, applicants can better understand how the recruitment process is carried out and participate in the results of the processes in a faster way.

The application of technologies to state processes in Azerbaijan has been assessed as a positive event with the potential to increase efficiency, transparency and accountability. However, the implementation of measures to eliminate the potential problems associated with the widespread use and implementation of these technologies continues, especially for citizens in more rural or remote regions of the country.

CONCLUSION

The rapid development of digital technologies opens up new paths for humanity to high progress. The widespread use of artificial intelligence, automation of production, robotization, the use of digital technologies in all sectors of the economy has become widespread. In general, the new industrial revolution leads to the use of the newest, differentiated and more accessible technological infrastructure in all areas related to digitalization.

As a result, developed states are developing programs for faster integration of the digitalization process into social and economic life, which creates competition between them. Large powers process large amounts of data through high technologies. People are also using these digital technologies more and more every day. Currently, the production of mobile phones is growing rapidly, cloud and other storage technologies are being created, and all this is becoming part of our life.

Of course, digitalization and technological innovations individually have a positive impact on the economy, national economy, industry and other sectors of each state. This is especially closely related to the digitalization of the economy, the construction of a sustainable and safe infrastructure. Undoubtedly, large-scale reforms are constantly being carried out in Azerbaijan in the socio-economic sphere, including in the field of Public Administration, innovative projects, e-services are being improved, and the transition to digital services in all areas is coming to the fore.

Gender Aspects of the Development of Socio-Humanitarian Spheres in the Republic of Azerbaijan

Aliyeva Sevda Agamirza

Doctor of Philosophy in Political Sciences,

Associate professor

Azerbaijan University of Languages

ahadova-sevda@mail.ru

ABSTRACT

The article summarizes and analyzes the gender aspects of the development of the social and humanitarian spheres of the Republic of Azerbaijan, highlights positive and negative trends in this area. The main problems that lead to gender inequality in the spheres of culture, education, science are considered, recommendations and proposals are put forward to reduce gender inequality.

Acquaintance with the real situation of gender equality in socio-cultural spheres allows us to say that, despite a certain disproportion in these areas, as well as cases of vertical gender segregation, positive dynamics have been observed in recent years.

The reforms carried out in Azerbaijan in recent years in the healthcare sector and the improvement of a number of medical indicators also have a positive impact on gender relations. An analysis of these indicators confirms that the overall index of population health and quality of life in the country lags behind European countries, but is high compared to most countries in the region.

Key words: The Republic of Azerbaijan; Socio-Cultural Spheres; Gender Structure; Gender Equality

Introduction:

The achievement of gender equality in the modern world is considered as one of the main political strategies of states. Due to the measures to eliminate gender inequality, the Republic of Azerbaijan has reached the level of leading countries in many respects. Nevertheless, there are still problems to be solved in relation to ensuring gender equality in our country, which requires comprehensive analysis of the situation of gender relations in the country, as well as the comparative study of the respective situation in Azerbaijan and other world countries.

The fact that the Azerbaijani territories had been under occupation for about thirty years, as well as objective and subjective factors of the transition period affected all the spheres in the country. Despite the current difficulties, Azerbaijan has gained successful development, and the economic growth has tripled over the last twenty years, thereby paving the way to the revival of socio-humanitarian spheres. Socio-economic crisis arising from COVID-19 pandemic that started in 2020 and the consequences of which are still felt, has adversely affected socio-humanitarian and cultural spheres in which women are most involved in Azerbaijan. However, large-scale measures taken by the government of Azerbaijan allowed to mitigate the negative impact of the processes. Particularly, the liberation of Karabakh from occupation and ensuring the integrity of Azerbaijani territories build confidence in the successful solution of problems related to gender equality in Azerbaijan.

The article summarizes and analyzes gender factors of socio-humanitarian spheres in the Republic of Azerbaijan, highlights positive and negative trends, revises the main problems that lead to gender inequality in the spheres of culture, education, science and healthcare, as well as puts forward recommendations and proposals for reducing gender inequality.

The main part of the article: Today, Azerbaijani woman is actively involved in all the spheres of life - social, socio-economic, scientific spheres, including healthcare, art, culture, education and etc., and worthily represents Azerbaijan in the world. According to the data of State Statistics Committee, women currently make up 51 percent of the population in Azerbaijan. The average age is 71 years old, which is 5.4 years more than the average age of men. Today, 49,5 percent of Azerbaijani women are engaged in employment activity.

We should try to define the position of the Republic of Azerbaijan in the reports of international organizations prior to analyzing the gender aspects of development of socio-cultural spheres. According to the World Economic Forum's Global Gender Gap Report (WEF Gender Gap Report), the Republic of Azerbaijan ranks 100th in the global gender gap index, the 36th in the economic participation and opportunity subindex (sub-indicator), 62nd in education, 154th in health and survival opportunities, and 141st in political representation [21].

Azerbaijan ranks 23rd among 26 countries of the "Eastern Europe and Central Asia" region with a score of 0.688 in the Global Gender Gap Index rankings by region, 2021 [21].

As for the level of education, the gender inequality in the Eastern Europe and Central Asia region has almost been eradicated (99 percent), and in 23 out of 26 countries it even constitutes 99.6 percent. The report of 2021 reveals that Eastern Europe and Central Asia managed to significantly reduce gender inequality according to the health and survival subindex, and it makes up 97.7 percent on average. The index of most countries is above 95 percent. Azerbaijan with the lowest indicator has seen progress in 2020, and gender inequality in this sphere has reached 93, 9 percent in the country.

Belarussia (29), Ukraine (59) and Kazakhstan (72) occupy the highest place among the CIS countries in the global ranking. Russia (81) ranks one of the lowest places among post-Soviet countries. Although the gender equality index in the sphere of education in the CIS countries is high, the exclusion of women from the labor market under the influence of the market economy

has a negative impact on their gender inequality ratings. Eventually, gender differentiation in the sphere of employment marginalizes the situation in the sphere of education.

The forecasts of the WEF regarding the eradication of gender inequality are also of interest. According to the report of 2020, gender inequality will only be achieved in about 99.5 years. It was forecasted that this period could reach 257 years in case of failure to achieve progress in reducing inequality in economic participation and career opportunity [21; 15].

Gender inequality is expected to be reduced within the next 12 years. One of the main reasons for this optimistic forecast is related to the successes achieved in recent years in the sphere of education in developing countries [16].

In the World Economic Forum's Global Gender Gap Report 2021, the first 5 places are taken by Northern European countries (Iceland, Finland, Norway, Sweden (the 5th place) and New Zealand (the 4th place) (Index 0.892 – 0.823) [14, p.18]. Iceland maintains the leadership in reducing inequality between men and women for 12 years. This country has increased the overall gender inequality to 89.2 percent, surpassing the results of previous years (87.7 percent in 2020). As it was mentioned, Azerbaijan (Index 0.688) ranked 100th in this list. Greece, Hungary and Indonesia took places alongside Azerbaijan [14, p.18, 107]. It should be noted that in 2014, Azerbaijan ranked 94th out of 143 countries in the WEF Gender Inequality Index with a score of 0.6754 [19], and in 2020, it again ranked 94th with a score of 0.687 [14, 20-21].

It has to be admitted that the high level of gender equality in humanitarian spheres (education, healthcare, culture) in Azerbaijan (even in some cases in favor of women, for example, they dominate in the spheres of culture and preschool education) was due to the widespread involvement of women in public life during the Soviet era.

The gender factor in the sphere of education in the Republic of Azerbaijan differs in a number of specific features.

Referring to the information developed by International Standard Classification of Education (ISCED 2011), it can be noted that the situation in the Republic of Azerbaijan corresponds to the world standards according to the figures of gender distribution of pupils and students by educational levels. Thus, 47 percent of those who studied the first level (primary education) of ISCED 2011 were women, 53 percent were men; the second and the third levels (secondary education) 46 percent and 54 percent; the fifth and the eighth levels (3rd level education, higher and secondary vocational education) 49 percent and 51 percent, respectively [7, p.107].

As it is seen, although women (51percent) dominate in the gender structure of the population, this balance changes in favor of men at all levels of education. For comparison, the figures for the last educational level in Turkey are completely different: women make up 63 percent, and men are 37 percent, while the percentage of men and women in the lower levels generally corresponds to the overall gender distribution of the country.

The analysis of the gender distribution of students admitted to higher education institutions of the country in 2019 shows that the situation differs in different regions of the country. Thus, women make up 49.95 percent for the city of Baku, 56.1 percent for Ganja-Gazakh economic region, 54.7 percent for Sheki-Zagatala economic region, 43.6 percent for Lankaran economic region, 53.5 percent for Guba-Khachmaz economic region, 48.5 percent for Aran economic region, 49.6 percent for Yukhari Karabakh economic region, 46.7 percent for Kalbajar-Lachin economic region, 48.3 percent for Nagorno-Shirvan economic region, 48.6 percent for Nakhchivan Autonomous Republic (49.9 percent for the Republic of Azerbaijan) [7, pp. 108-110].

Gender equality in education has been fully established by the legislation in the country. Azerbaijan is among the leading world countries in terms of the level of literacy, which is an important indicator of the gender situation. The illiteracy rate of the population aged 15 and

above in the country is 0.3 percent among women, 0.1 percent among men; the illiteracy rate of young people is 0.1 percent among women, and 0.0 % among men [7, p.99]. It is quite a high indicator when 10 percent of girls aged 15- 24 in the world are illiterate. For comparison, in Turkey these figures make up 6.5, 1.2 and 0.4, 0.1 percent. According to these indicators, Azerbaijan surpassed Greece, a member of the EU (the above-mentioned indicators in Greece are 2.6, 1.5 and 0.9, 0.7 percent, respectively).

Gender ratio of pupils and students according types of education at the beginning of the 2019/2020 academic year were as follows: 46, 7 percent women in general educational institutions, 45.5 percent in vocational schools, 64.1 percent in secondary vocational schools, and 48.8 percent in higher education institutions and in education for doctoral degree [7, p.102]. At the beginning of the 2019/2020 academic year, female students in state higher education institutions were 48.5 percent, and men students were 51.5 percent. Women mainly prefer pedagogy, culture and arts, as well as natural sciences [7, p.106]. In 2019, the index of gender equality in education was 0.878 in preschool education, 0.876 in general education, 1.783 in secondary vocational education, and 0.949 in higher education [7, p.101].

Gender equality in Azerbaijan has almost been ensured due to the access of women and girls to education and professional training. However, the number of female students in higher technical institutes and in institutes of natural sciences is rather low in Azerbaijan, as in most other countries, while they constitute a majority among primary school teachers.

The predominance of women in the sphere of education during the Soviet period continued even during the period of independence. Women made up 99.8 percent of teachers employed in pre-school educational institutions, 93.4 percent of teachers in primary educational institutions, 76.4 percent of teachers in general secondary and full secondary educational institutions and 87.7 percent of employees in the sphere of education as a whole [7, p.115]. Women accounts for 65.4 percent of employees in the sphere of education worldwide.

Currently, 81 percent of teachers in state full-time education institutions are women, and 19 percent are men (82 percent and 18 percent in non-state full-time education institutions, respectively), and 79 percent of teachers in secondary vocational schools are women, 21 percent are men. Women also prevail in higher education institutions (55 percent in state higher education institutions, 52 percent in non-state higher education institutions) [7, p.24].

The predominance of women in the education system is, on the one hand, related to the false stereotype that "teaching is not a male profession" formed in the Soviet era, and on the other hand, it refers to the fact that men do not show interest to the field of education because of meagre salaries. Actually, the lack of male teachers in primary and secondary schools has a negative impact on the spiritual education of boys, the formation of their psychological outlook and ego.

Even though female teachers mostly prevail in the sphere of education, gender inequality and "dominance of men" still continue in the management of educational institutions and in decision-making. It manifests itself in all educational stages.

In 2019, women accounted for 38.1 percent of principals and 57 percent of deputy principals in general secondary schools [7, p.111]. Currently, 90.2 percent of rectors, 81.1 percent of vice-rectors and branch directors, 73.5 percent of faculty deans, 73.3 percent of department chairs, 79.2 percent of professors and 51.7 percent of associate professors in state higher education institutions are men. However, as mentioned above, men make up only 19 percent of teachers in general education institutions, and only 45 percent of professors and teachers in higher schools. The situation is almost the same in non-state higher education institutions [7, p. 24, 112], in healthcare and social services predominated by women, and in pension provision, which shows that men mainly take high-paying positions [1, p.206].

Given gender factor, serious quantitative changes have been taking place in the sphere of science in Azerbaijan over the last thirty years. Women are engaged in active scientific work on a par with men in the scientific research institutes of the country. Generally, women make up 53 percent of those engaged in the sphere of science, which is close to the level in some developing countries [10, p.22]. According to the statistics of 2012, 5,521 out of 9,937 employees in the leading scientific institution - the Azerbaijan National Academy of Sciences (ANAS), as well as 7 out of 33 institute rectors, 106 out of 545 doctors of science, and 2,342 out of 4,694 scientific researchers were women [13, p. 36]. In 1991 (the last year of the Soviet power), there were 2,339 female and 6,566 male doctors of philosophy (candidates of sciences) in Azerbaijan. In 2020, this figure was 5,181 and 5,658, respectively [7, p.25], thereby reducing the remarkable differences in the number of female and male PhDs over 30 years. This mainly results from low salaries in the sphere of science. At the beginning of year 2020, women accounted for 56 percent of those studying Doctor of Philosophy and 51.6 percent of those studying Doctor of Science. As per the sphere of science, 69 percent of researchers in humanities, 57.7 percent in medical sciences, 59.5 percent in natural sciences, 37.2 percent in agricultural sciences, 49.6 percent in technical sciences, and 54.4 percent in social sciences were women [7, p.117]. The number of men engaged in science is decreasing, as men are traditionally considered to be breadwinners of the family. However, the predominance of male doctors of science still continues. There were 120 female and 1066 male doctors of science in the country in 1991, while 2020, these numbers increased to 478 and 1981, respectively [7, p.25]. The number of female academic and correspondent members is also in minority, thus, 8 out of 68 academics and 11 out of 94 correspondent members are women [7, p.122]. The minority of female doctors of science, corresponding members, and academics compared to doctors of philosophy can be explained by the fact that after getting the doctor of philosophy degree, they are more burdened with family issues and household chores, and stop engaging in science.

The collapse of the Soviet planned system in the early 1990s and the transition to a market economy led to the expansion of competition in the labor market, to low-paying positions for women, and ultimately to the deepening of gender inequality between socio-humanitarian and economic spheres, and the labor market in the country. Sociologists characterize it as the period of "patriarchal renaissance". Certainly, mental thoughts ("a man should earn bread, and a woman should take care of the house and children") on a par with socio-economic factors play a considerable role.

Healthy Life Expectancy is considered to be the main average index of life expectancy in the world countries. This index accurately characterizes the general state of health and quality of life of the population, the level of efficiency of the national health system and the level of social policy [20]. The study carried out by the World Health Organization (WHO) to measure the level of healthy life expectancy in the countries of the world (World Health Organization: Healthy Life Expectancy Index 2018) shows that Singapore (total life expectancy-76.2; men-74.7; women- 77.6) and Japan (76.2, 74.7, 77.6, respectively) share the highest rating among the countries of the world. As per these indicators, Azerbaijan (64.9, 62.8, 66.9, respectively) takes the 92nd place, one step above neighboring Georgia (64.9, 61.5, 68.4). Armenia took the 71st place in that list (66.3, 63.6, 68.7) [20]. The longer life expectancy of women compared to men in Azerbaijan, as in the whole world, leads to a higher number of women pensioners. Thus, women made up 60.7 percent of the retired pensioners in the country at the beginning of 2020 when the average retirement income was 263.6 manats per month, and made up 41.5 percent of the average monthly nominal salary [7, p.177].

Gender aspects of healthcare indicators in Azerbaijan occupy an important place from the point of view of the analysis of gender equality.

Azerbaijan falls behind most European countries in terms of expected length at birth, which is one of the significant indicators of gender status. This figure was 76.5 years for women and 70.1 years for men for the year 2020. However, these figures reach 86 among women and 79 among men in most European countries, as well as 78 and 70 in Turkey, and 79 and 72 in Armenia.

Maternal mortality is accepted as one of the key indicators of gender policy. Maternal mortality rate was 28.6 deaths per 100,000 live births in Azerbaijan for 1989, 9.3 (the lowest) for 1990, 44.1 (the highest) for 1995, 15.7 for 2010, and 14.9 for 2019. Compared to the previous year, the level of maternal mortality in 2019 increased by 1,1 times in urban and 1,4 times in rural areas. In general, maternal mortality in 2019 increased by 2.1 percent compared to 2018 [7, p.59]. Thus, maternal mortality rate per 100,000 live births in the Republic of Azerbaijan is rather high in comparison with developed countries. This figure is 2-5 in Western European countries. However, Azerbaijan has achieved significant progress compared to the CIS countries. Actually, Belarussia even surpasses Western European countries according to this indicator (1.0). Nevertheless, the infant mortality rate in other CIS countries (33.3 in Armenia, 25 in Kyrgyzstan, 20.2 in Uzbekistan, 17 in Ukraine) is much higher [22]. The government of Azerbaijan regularly implements projects aimed at reducing maternal mortality in cooperation with UNICEF and UNFPA. "The Second National Strategy on Reproductive Health (2009-2015)" approved by the Cabinet of Ministers covers the criteria for the development of maternal health standards, prevention of HIV/AIDS and promotion of reproductive health of young people as well [3].

The Republic of Azerbaijan has made remarkable achievements compared with developing countries in regard to infant mortality rate, but it significantly lags far behind European countries in terms of this coefficient.

In spite of substantial achievements in the sphere of infant mortality in Azerbaijan over the last 50 years, the situation still leaves much to be desired. The infant mortality rate was 41.7 female and 42.7 male deaths in 1960; 6 female and 25.1 male deaths in 1990; 15.5 female and 17.2 male deaths in 2015 per 1,000 live births. Although this indicator has improved significantly over the last 10 years (in 2010, these figures were 11 and 11.5, and in 2019, 9.1 and 12.7, respectively), it falls far behind the global average indicators. Overall male infant mortality rate is higher than female mortality. This also refers to the number of child deaths under the age of 5. The rate of the child death under the age of 5 was 37.2 among male and 43.5 among female babies in 1990; 29.1 and 31.7 in 2000; 13.7 and 14.6 in 2010; and 10.9 and 14.8 in 2019 [7, p.60]. In 2020, 8.6 female and 10.9 male babies per every 1,000 live births were stillborn in Azerbaijan, which is much lower than in Belarussia (2.1 and 2.7, respectively), the leader among the CIS countries. This figure was 5.3 and 6.8 in Armenia, and 8.5 and 9.6 in Turkey in 2019.

As it was mentioned above, the high rate of maternal and infant mortality in Azerbaijan indicates that the level of the quality of medical care leaves much to be desired.

By the end of 2019, there were 31,829 doctors in the country, which left us with the ratio of 32 doctors per 10,000 people. The number of female doctors was 20,980 (65.9 percent of all doctors), and the number of male doctors was 10,849 (34.1 percent) [7, p.90].

Protection of women's reproductive health is one of the main goals of social policy in the country. In 2006, the Cabinet of Ministers of the Republic of Azerbaijan approved "The Plan of Action on the Maternal and Child Health" in order to achieve the 4th (reduction of infant mortality) and 5th (protection of maternal health) development goals of the millennium, to

organize the protection of the reproductive health of the population and to ensure safe motherhood [2]. "The State Program for Poverty Reduction and Sustainable Development in the Republic of Azerbaijan in 2008-2015" by the Decree of the President of the Republic of Azerbaijan dated September 15, 2008, approval of the laws "On Amendments to the Law of the Republic of Azerbaijan on the Protection of Public Health" dated October 28, 2013 and "On Compulsory Medical Examination of Children" contributed to significant changes in the protection of the health of mothers and children in the republic.

Another fact is the decrease in the number of women's clinics from 213 to 131 during the 2010s. However, 99.9 percent of births were attended by skilled health personnel, which significantly reduces the risk of maternal and infant mortality [7, p.90].

The violation of the gender ratio among born babies also causes concern. The high rate of male birth in the Republic of Azerbaijan (53.2 percent of those born until August 1, 2021) [21] indicates the increasing number of selective births in the country. The statistics of 2020 prove that there were 7.8 abortions per 1,000 women aged 15-49 in Azerbaijan in 2000; 9.9 in 2010; and 14.2 in 2019 [7, p.22]. Even though women's access to abortion is a positive factor in terms of gender inequality, the termination of pregnancy is explained by parents' preference for male children rather than medical factors. Thus, boys began to predominate in the gender ratio of the children born, namely 106 male births in 1991, 117 male births in 2001, and 114 male births in 2019 per 100 female births [7, p.53]. In case this tendency continues, it may lead to serious demographic, social and economic consequences in the future. However, it should also be emphasized that despite the predominance of male births, the probability of female babies' survival is higher, which allows maintaining the balance between women and men in the gender structure of the population. Life expectancy at birth in Azerbaijan is 78.7 years for women and 74 years for men, and healthy life expectancy is 68.5 years and 63.6 years respectively [7, pp. 43-44]. The lack of information on the use of contraceptives and the lack of sexual education in the country due to the mentality have a negative impact on women's reproductive health, which consequently prevents Azerbaijan from having high indicators in international rating reports.

Azerbaijan has seen a gradual decline in the fertility rate for many years. This figure decreased from 3.7 (in 1975) to 1.8 in 2002, but slightly increased to 1.9 in 2003 compared to the previous year, then significantly rose to 2.4, 2.3 in 2004-2012, and again decreased to 2.0 in 2019 [7, p.49].

Acquaintance with the current situation of gender equality in the sphere of education and science suggests that despite certain disproportionality in these spheres, as well as vertical gender segregation, positive dynamics have been observed in recent years.

The reforms carried out in Azerbaijan in the sphere of healthcare in recent years and the improvement of a number of medical indicators also have a positive impact on gender relations. The analysis of these indicators confirms that the general index of the population's health and quality of life in the country falls behind European countries thereof, but is high compared to most regional countries.

Women's access to health care have improved in Azerbaijan, however, our country lags far behind European countries in terms of a number of indicators, which are covered in international reports. The fact that most of public health indicators in Azerbaijan are lower than the world thereof implies that the level of quality of medical care is not satisfactory. Therefore, protection of public health should be one of the main goals of social reforms implemented in the country.

Positive results related to the implementation of gender policy in the Republic of Azerbaijan have been reflected in various international documents and reports, among which the reports

submitted by Azerbaijan to the UN Committee on the Elimination of Discrimination against Women and the final notes of the CEDAW Committee on those reports should be particularly mentioned. The report shows that the Azerbaijani government pays due attention to the recommendations of the CEDAW Committee, and actively helps to spread information about the Convention and to explain its provisions in the sense of true equality.

It has to be noted that the national legislation of the Republic of Azerbaijan comprehensively expresses the ideas of gender equality in all the spheres of life. In 1995, the Republic of Azerbaijan adopted and joined the “Convention on the Elimination of All Types of Discrimination against Women”, as well as the main international documents on human rights. All these steps pave the way to the elimination of gender inequality in the country and to the development of a gender-balanced policy. The UN Convention “On the Elimination of All Forms of Discrimination Against Women” (CEDAW) is of particular importance among these documents.

About 150 documents on ensuring women's rights and gender equality have been signed in the Republic of Azerbaijan. The Law of the Republic of Azerbaijan "On Guarantees of Gender (Men and Women) Equality" adopted on October 10, 2006 [11] is considered to be an important step towards promoting gender equality at the level of supreme state legislation in the country. The law is an important step towards improving the legislative basis for gender policy in the Republic of Azerbaijan, and concludes the normative legal act concerning gender equality. The Law of the Republic of Azerbaijan "On Prevention of Domestic Violence" was adopted in 2010 [12]. The law provides legal and social preventive measures against domestic violence. Besides, a number of normative legal acts were also adopted in connection with its application [4, p. 61-83]. A number of amendments were introduced to the Law of the Republic of Azerbaijan "On Prevention of Domestic Violence" by the Decree of the President of the Republic of Azerbaijan dated November 24, 2011. The adoption of the law made the fight against violence more systematic. A number of acts were amended following the adoption of the law. These amendments are of particular importance in preventing early marriages.

According to the sex ratio of the population (50.1 women, 49.9 men), the indicators of the Republic of Azerbaijan coincide with the global indicators. These numbers are slightly different only in the PRC (48.7, 51.3) and India (48 and 52) [22; 24].

Rising divorce rate and the decrease of official marriages in the country in the years of independence is another disappointing fact. It should be noted that the highest divorce rate per 1000 people was recorded in 1990 (2.0). In the 2000s the average number was 0.7-0.9, while in the 2010s, it started to increase again (from 1.0 in 2000 to 1.7 in 2019). In 2010, there were 79,172 marriages in the country (9,061 divorces were registered). In 2019, the number of marriages was only 63,869, and the number of divorces, on the contrary, doubled (17,148). In 2019, there were 6.4 marriages and 1.7 divorces per 1000 people in Azerbaijan [7, p. 68]. Although the percentage of marriages and divorces is lower in Azerbaijan than in other countries, the sharp increase in the number of divorces in recent times cannot but cause concern. Given the sharp decrease in the number of marriages due to the pandemic in 2020-2021, it is not difficult to imagine negative demographic consequences this trend could lead to in the future. The average age of both women and men who got married during this period increased (from 23.4 to 24.7 among women, from 27.9 to 29.4 among men) [7, p. 68-69]. In general, over the last 30 years the highest average age of marriage for women and men was recorded in 2019. Interestingly, despite general gender equality among people with secondary and higher education, the number of women among skilled labor force is low, which is primarily related to the gender stereotype in the country. Typically, women give up work after getting married, and prefer taking care of children.

One of the serious socio-demographic problems in the Azerbaijani society is the early marriage of girls in some regions. Marriage of girls and boys under the age of 18 had traditionally been frequent in Azerbaijan. Researches show that early marriages of girls take place with the consent of their parents. The cases of early marriage of girls were frequent at the age of 16 voluntarily and at the age of 15 due to pregnancy. The cases of abduction occurred in the age group 15 and 17 years [9 p. 11]. Statistics show that over the last 30 years, the number of girls and boys under the age of 18, whose marriages were officially registered was as follows: 471 girls (21 men) in 1990, 4742 girls (7 men) in 2010, 366 (only 1 man) in 2019 (0.57 percent only) [7, p. 70]. The remarkable decrease in the number of marriages at an early age is connected with the fact that the legal minimum age of marriage is 18 years for both men and women in Azerbaijan. However, cases of early marriage of girls still continue to occur. Their marriages are not registered, and they enter into an official marriage once they reach the age of 18.

The national legislation of the Republic of Azerbaijan pursues the aim of ensuring gender equality and prohibiting gender discrimination. Furthermore, the national statistics of the country and international gender reports confirm that Azerbaijan has certain problems in the sphere of economic opportunities and political representation. This factor consistently includes Azerbaijan in the two thirds of bottom ranked countries in the world ranking. The UN IP Gender Equality Index includes Azerbaijan in the list of the countries with the highest, high or average level of human development in recent years.

Female employees in the Ministries of Health, Education, Labor and Social Protection account for 79.5 percent, 68 percent and 60.8 percent, and the women in managerial positions make up 37 percent, 41.3 percent and 24.8 percent, respectively [5, p. 247].

Currently, 30 thousand 108 civil servants are employed in the state agencies of the Republic of Azerbaijan, 28.5 percent of whom are women [8]. In spite of significant achievements in the sphere of involvement of women in management, it should be noted that women, who make up approximately 51 percent of the country's population, are still not represented proportionally in government bodies and management positions. Therefore, the solution of the problem depends on the change of people's mental thinking rather than on the adoption of special laws.

The Human Development Index in the Republic of Azerbaijan in the 2000s, taking into account the Gender factor (based on the data of the State Statistics Committee of the Republic of Azerbaijan)

2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
0,827	0,843	0,824	0,826	0,839	0,840	0,897	0,916	0,927	0,934

Currently, the main goals and tasks in ensuring gender equality in Azerbaijan are as follows: protecting and strengthening the rights of women and men; taking appropriate measures to enjoy these rights; creating conditions for their equal participation in management and decision-making; improvement and development of democratic representation; ensuring equal participation of women and men in the labor market, business and financial sphere, and economic independence as well.

Solving gender issues, which are among national policy priorities firstly requires dealing with the following issues: increasing the life expectancy of women and men; reducing child and maternal mortality; improving the reproductive health of women and men; protection of low-

income population; creating conditions for equal participation of women and men in the education system, increasing equal educational opportunities [22].

Today, in the context of the market economy in the country, the deepening of gender inequality in the labor market, between socio-humanitarian and economic spheres, are also caused to a certain extent by mental traditions on a par with socio-economic factors.

A number of demographic indicators in the country in recent years (declining birth rate, increase in divorces and in abortions, sex imbalances at birth and etc.) lead to the deepening of gender inequality in the country, which in turn necessitates taking a number of political, legal and socio-economic steps.

One of the critical issues is considered to be the elimination of violence against women, which means, first of all, the complete eradication of domestic violence, raising awareness of the importance of eliminating social inequalities, and sharing of responsibilities between women and men.

Increasing women's political rights and opportunities is one of the main conditions for ensuring gender equality. A number of international gender reports confirm that there are certain problems in the sphere of women's political representation in Azerbaijan, which in turn negatively affects the ranking of Azerbaijan among the countries of the world. Even though the national legislation provides equal opportunities for women and men in this sphere, traditional moral values create certain obstacles to the realization of these opportunities. The expansion of women's participation in decision-making and the promotion of their social activity are not of less importance. This will ultimately have a positive effect on the expansion of women's participation in the political life of the country.

The national legislation of Azerbaijan provides a full legal guarantee for gender equality, however, the achievement of this equality is a long-term process that requires the implementation of a number of comprehensive measures.

Conclusion:

International reports and national statistical data confirm that although the inequalities between women and men in the spheres of education and culture in Azerbaijan has been eliminated to some extent, women are under-represented in the public sector and management. Women's participation in decision-making still remains low. Women make up only 33 percent in managerial positions. In spite of the fact that indicators related to women's access to health care have improved in Azerbaijan, the country falls far behind European countries as per these indicators, which is best explained by maternal and child mortality and average age indicators. The fact that most of the indicators reflecting population health in Azerbaijan are lower than the world thereof suggests that the quality of medical care leaves much to be desired. Therefore, protection of population health should be one of the priorities of social reforms implemented in the country.

University of Calcutta
ukichowdhury2001@gmail.com
Orcid: 0009-0001-6408-0439

ABSTRACT

Jinping stays chairman of the military commission directing the People's Liberation Army. The long-speculated reappointment shows the leader's success in centrally consolidating power in Beijing. The Standing Committee line-up is additional evidence that Xi's hold on power is unaffected by last year's tumultuous events including a grave economic stagnation, repercussions of the zero-COVID policy, the State's increasing alienation from the Western countries and standing with Russia regarding the Russian invasion in Ukraine. President Xi has persisted to stare at the Galwan valley, sending a vehement signal to India. Due to China's growing influence in the region, the CBMs have come under less pressure. It has been intimidating in the disputed border regions between China and India, resulting in prolonged standoffs. China fundamentally rethought the nature of India's threat following the Doklam impasse. China is at a disadvantage due to the asymmetry of threat perceptions, despite their disparate national might. The growing alliance between the US and India enrages China. Instead of being merely temporary, the peace processes ought to be long-term. This would start with clearly defining the boundaries that separate China and India, and in the event of a violation, both nations should agree on the pertinent sanctions. To engage diplomatically, India and China must come up with original and sincere strategies.

Keywords: Revaluation, India-China Relations, Commencement of Xi, Jingping's Third Term, Galwan Conflict, Confidence Building Measures, South Asia, Economy, Alliance, USA

Introduction:

After a week-long political rally (October 16-22, 2022) to eliminate major opposition groups and strengthen Xi Jinping's political position, the Chinese president has won a remarkable third term. Around three thousand delegates assembled in Beijing for the twentieth Party Congress which is the chief conference in the rule of Chinese Communist Party's five-year political era to approve major organizational and constitutional modifications. President Xi took the initiative and announced that he would serve a third term as party general secretary. Jinping stays chairman of the Military commission directing the People's Liberation Army. The long-suspected reappointment shows the leader's success in centrally consolidating power in Beijing (Davidson et al., 2022).

It also announced the establishment of a seven-member Politburo Standing Committee (PSC), led by Mr. Xi and the inner circle of power in the Communist Party of China led by the members. The Standing Committee line-up is additional evidence that Xi's hold on power is unaffected by last year's tumultuous events including a grave economic stagnation, repercussions of the zero-COVID policy, the State's increasing alienation from the Western countries and standing with Russia regarding the Russian invasion in Ukraine. In a brief remark before the conference was adjourned, Xi explained that the revised constitution contains precise guidelines to maintain and strengthen the party's overall leadership (PTI News Agency, 2022). President Xi has persisted to stare at the Galwan valley, sending a vehement signal to India. Post the CCP Congress, he gave promotion to three generals who had previously performed as commanders of the Western Theatre (WTC) and commanders nearby the Indian boundaries. General He Weidong formerly received a "dual promotion" and had been appointed as one of vice-chairmen of the Central Military Commission (CMC) (Moorthy, 2022).

Changes In China From 2012 Till Present Under Xi Jinping:

The ascent of Xi Jinping in China started in November 2012 when he took the seat of General Secretary of the Communist Party of China as Hu Jintao's successor. March 2013 was the outset of his journey as President of China. In his administration, China began land reclamation in the South China Sea from 2013 to 2014, building artificial islands with airstrips and additional facilities in the area, spreading its claimed territorial reach along the crucial waterways. After the 2017 terrorist attacks, the Chinese government under Xi Jinping launched an abominable repression on Uyghur and other predominantly Muslim ethnic communities in and around the Xinjiang Uighur Autonomous Region. International condemnation and accusations of genocide have been levelled countering the mass arrests and human rights abuses (Schumann, 2022).

In October 2017, when Xi Jinping began his second five-year term as party leader, the party incorporated his philosophy, "Xi Jinping Thought," into its constitution. It symbolically elevated him to the position of Mao Zedong, the leader whose doctrines are acknowledged by his name. In March 2018, China abolished the two-term limit for the presidents, indicating that Xi wants to remain in power for at least ten years. Schumann (2022) has discussed the exertion in Xi Jinping's propaganda apparatus. Deng Xiaoping, the leader who advocated for a more cooperative form of governance, has been devalued as a result. It is abundantly clear that Xi

6th International CEO Communication, Economics, Organization & Social Sciences Congress

has been laying the groundwork for a resumption of one-man rule over China's political system (Schumann, 2022).

China's opponents received more forceful messages during the second term of Xi Jinping. China responded in a similar manner when the United States of America, led by President Donald Trump, imposed tariffs on Chinese imports in July 2018. Hong Kong eventually endured this harsh messaging as well. Between June and November 2019, the metropolis was incapacitated by widespread demonstrations crying out for democracy. The Xi administration responded halfway through 2020 by enforcing a national security law that suppressed opposition in the city. China quarantined Wuhan when a new virus transpired what became known as the COVID-19 pandemic in the first month of 2020. Officials announced in December 2020 that they would be conducting an anti-monopoly investigation into Alibaba, the world's largest online retailer (Beijing (AP), 2022).

By September 2021, China's heavily indebted real estate industry, a significant growth driver, experienced a prolonged downturn as a result of the developer Evergrande Group's which is China's second largest real estate company, inability to comply with regulatory limits imposed in 2020 to rein in debt. (Charles & Bracken, 2022)

China conducted military drills around Taiwan following the August 2022 visit of House Speaker Nancy Pelosi to the self-governing island that China claims as its territory (Beijing (AP), 2022). In defiance of recent practice, which limited leaders to two mandates, Xi began his third five-year tenure as chief of the Communist Party in October 2022 (Beijing (AP), 2022).

India's Thoughts On China

India and China began to come to terms with one another in the time of the Cold War and the rise of globalization in the ending phase of the 1970s. They were at the identical developmental stage, which laid the groundwork for their promising friendship. Due to this parity, a number of confidence- building measures (CBMs) were agreed upon, enabling India and China to regulate and expand their cooperation in other areas (Nair et al., 2021). Both States joined a number of multilateral organizations, such as the East Asia Summit, the Shanghai Cooperation Organization (SCO), the Asia Infrastructure Investment Bank (AIIB), and the BRICS (Brazil, Russia, India, China, and South Africa) bloc (Nair et al., 2021).

As trade boomed, Chinese investment in India's electronics, solar, telecom and, and chiefly digital sectors increased significantly. Ghoshal (2013) brings up the idea that India felt a hint of jealousy at China's ascent, yet it likewise perceived possibilities for commonly useful cooperation. However, India's awareness of the dangers posed by the growing economic, military, and technical disparities between the two countries has increased over the past two decades. Changes in Chinese behaviour as a result of the Asian power shift are the most significant cause of that (Moorthy, 2022).

Due to China's growing influence in the region, the CBMs have come under less pressure. It has been intimidating in the disputed border regions between China and India, resulting in prolonged standoffs. Up until very recently, India remained neutral and acted as a "swing state" between major regional powers, as evidenced by its affiliation with the NAM during the Cold War. India's initial ambivalent response to the Quad also suggests this. At the 2018 Shangri-La

6th International CEO Communication, Economics, Organization & Social Sciences Congress

Dialogue in Singapore, Indian Prime Minister Narendra Modi in his speech addressed to China and India, urged the countries to "operate together in trust and confidence, sensitive to each other's interests" (Singh, 2018).

According to Smith (2019), numerous individuals contend that the border impasse in Doklam in 2017 was the driving force behind India's decision to reconsider its participation in the Quad. In that case, India's decision to incorporate the Quad and the Indo-Pacific Strategy into its foreign and military policy probably came about as a result of the border dispute in Galwan in 2020 (Shaban, 2020).

Deepak (2022) discusses India's "Act East Policy" connectivity initiatives, which have shifted India's focus away from China and toward Southeast Asia. The India-Myanmar-Thailand-Cambodia-Vietnam Trilateral Highway, which has been extended and is expected to be completed by 2023, is one of these (Deepak, 2022). It is thought that China is encircling India when it builds ports and naval bases close to India's marine outposts, such as Coco Island in Myanmar, Chittagong in Bangladesh, Hambantota in Sri Lanka, Marao Atoll in the Maldives, and Gwadar in Pakistan. India is unquestionably worried about this "String of Pearls" that is around its neck. Sagar (2020) examines how India is stressed over the expanded presence of China in the Indian Ocean Region (IOR) and its obligation trap strategy for little littoral states (Sagar, 2020).

India believes in "ASEAN centrality" and envisions a free, open, and inclusive Indo-Pacific region based on a law-abiding international system (Saha, 2022). India's security cooperation with the United States and other regional powers has improved as a result of this apparent balance. The institutionalization of the India-US 2+2 Dialogue, the Indo-Pacific Economic Framework, the Quad, and the US-India Malabar naval exercises all point to this growing cooperation (Sun, 2022).

China's Thoughts On India:

China is firm in its belief of inherent superiority. India is never considered to be on par with China in Beijing's strongly hierarchical vision for Asia. By supporting Pakistan and establishing relationships with smaller nations in the region, China's policy toward India has largely balanced India in South Asia. This is due to the fact of China's awareness of India's potential as a regional power, its global impact, and its historical influence in South Asia. As a member of the "Global South," Beijing has attempted to form "coalitions" with India whenever possible. Examples include joining forces to demand financial resources under Article 9 of the Paris Agreement, as Mizo discussed, or working together in the WTO to oppose the enormous subsidies given to farmers by western nations. Because neither of the parties wanted to significantly alter the diplomatic situation, disagreements and arguments were contained (Sun, 2022).

Problems on the ground are frequently brought about by this divergent perspective on threats held by both nations. China fundamentally rethought the nature of India's threat following the Doklam impasse. China is at a disadvantage due to the asymmetry of threat perceptions, despite their disparate national might (India's GDP is 20% higher than China's). To put it another way, while India sees China as its primary threat, China views India as a secondary issue. Beijing

places the protection of the Pacific from Western powers at the top of its priority list. In terms of national strength or a nuclear or conventional arms race, India may not yet be able to compete with China. In any case, because of this unevenness of safety goals, it is not entirely set in stone and zeroed in on China than China on India (Sun, 2022).

The growing alliance between the US and India enrages China. This is annexed by the Dalai Lama, Tibet, sharing of river water, and exchange lopsidedness issues. According to Morrishy (2002), a few academics from China have asserted that India's opposition to the "One China Policy" is rooted in the Kashmir dispute, which is the site of a prolonged territorial dispute between China and India. In a similar vein, the late Indian Foreign Minister Sushma Swaraj had also urged China to adhere to its own "One India Policy." In any case, obviously China needs India as an exchanging accomplice to support its Gross domestic product, and the nation can't stand to lose the degree of Gross domestic product, which would strongly decline. Both parties are aware that economic engagement between the nations reduces the likelihood of conflicts. Additionally, the Wuhan Summit demonstrated that the two nations are eager to iron out any misunderstandings in their ties and do not intend to engage in a military conflict (Comparing China and India by Economy, 2021).

Significant Difficulties Ahead For India And China:

In a multi-polar world, China imagines itself to be Asia's only superpower. China considers India's rise to be a threat to its goal of becoming a uni-polar regional power. At the moment, members of the strategic and intellectual community are debating India-China relations which have brought to light a number of issues, including the potential for the relationship in the future and its main current obstacles. There has been more mistrust and suspicion than friendship between India and China over seven decades of relations (Kumar, 2022).

This mutual mistrust and suspicion has grown over time, reaching extreme levels in the current circumstance. Due to the divergent points of view of the two parties, it has always been difficult to reach an agreement on a number of delicate issues like the concerns regarding the Sino-Indian border. China and India have not always disagreed with one another. The two nations have made various earnest endeavours to determine their issues, remarkably as to the line issue. However, China's rapidly shifting behaviour pattern wasn't able to help settle the disputes, which is regrettable. China completely disregards any promises it makes, whether they are bilateral or multilateral (Kumar, 2022).

By arming soldiers with lethal weapons during the standoff, China violated all established protocols and agreements. As a result, the Confidence Building Measures (CBMs) agreements that India and China signed on the military front along the line of the LAC proved to be of no use to India. There was some disengagement from some areas following the Galwan conflict, but this is insufficient until India completes its disengagement and returns eastern Ladakh to its previous state in its military negotiations with China (Shaban, 2020). China's insistence that India cease all involvement has had no effect (Shaban, 2020).

Future Of The India-China Relations:

In order to further strengthen this relationship, both parties can take several actions for their mutual benefit. Both nations must acknowledge that their civilisations have ancient histories and are the oldest. The main cause of this conflict has emerged as the border dispute between the two nations, which must be resolved. This has to be discontinued because it would be turbulent both for the people and governments. As a result, officials from both nations can be sent to lead a discussion on this topic and find solutions. Additionally, peace must be maintained at both countries' borders (Deepak, 2022).

Instead of being merely temporary, the peace processes ought to be long-term. This would start with clearly defining the boundaries that separate China and India, and in the event of a violation, both nations should agree on the pertinent sanctions. This will reduce border apprehensions such as the Doklam deadlock and the Galwan valley events which were exceedingly complex and deprived the relations (Shaban, 2020).

The economic front is another part of the situation that needs to be fixed. The current performance is significantly worse than normal, despite the fact that there is a good chance of a positive association. The trade balance, which is skewed heavily in India's favour but still needs to be improved, is an immediate concern. Counterpoint Research says that Chinese companies made 114 million, or 72 per cent of the 158 million smartphone devices that were exported and put on the Indian market. Chinese companies currently dominate a number of India's consumer markets. These incorporate the PC equipment industry, which is overwhelmed by Lenovo; the market for home appliances, which Haier controls; the market for telecom equipment, which Huawei controls; likewise (Singh, 2020). The Chinese market is shut to countless Indian things, including rice except basmati, products connected with data innovation, and drugs. India's products need to be allowed to enter the Chinese market (Singh, 2020).

Pakistan's proxy war against India has always been supported by China (Shaban, 2020). China, on the other hand, cannot ignore the fact that Pakistan nurtures some of the most wanted terrorists' brains behind the majority of global terrorist attacks. The issue of psychological oppression that is exuding from Pakistan ought to be of essential concentration for both China and India (Moorthy, 2022).

Conclusion:

Since the 1950s, the relationship between India and China has gone through a number of ups and downs, from friendly to hostile to friendly. Their relationship has undoubtedly been impacted by the tensions that have emerged between the two countries. The tactical spending plans of the two nations have expanded because of line interruptions, despite the harmony and peacefulness on the wildernesses that have been laid out lately. There has been an arms race between the two nations as a result of mistrust, which has made the security situation even worse. China has emerged as India's most important trading partner, despite all the contentious issues between the two countries. The two nations have been trading more frequently in recent years. Through informal summits, official visits, and summit meetings, the two countries' relations have also attempted to expand their engagements (Chatterjee, 2019).

A special arrangement structure should be utilized by both countries so that they can communicate with one another and South Asian countries, such as Bangladesh, Myanmar, Nepal, Pakistan, the Maldives, and Sri Lanka, to discuss issues pertaining to the region. During a military crisis, the two nations should stop harbouring mistrust and begin to build trust. Meeting regularly with senior military officials to discuss the most recent military projects is one way to accomplish this. Every year, defence delegations should switch places during military drills. To engage diplomatically, India and China must come up with original and sincere strategies. There are various systems to reinforce the connection between the two countries. Instead of being disengaged and disrupted, both countries must engage in dialogue. India ought to concentrate more on its internal policy because doing so will ultimately strengthen the nation and eliminate any possibility of mistrust. Last but not least, it's essential to always remember the lessons learned in the past (Chatterjee, 2019).

India's Access to Clean Energy is Dependent on Lithium

Uki CHOWDHURY

Orcid: 0009-0001-6408-0439

ABSTRACT

The Geological Survey of India (GSI) made the first-ever discovery of a 5.9 million tonne lithium Reserve in the Reasi area of Jammu and Kashmir and it's regarded as the nation's first lithium reserve. In the past, a lithium reserve of 1600 tonnes was discovered in Karnataka, but sadly, it was not economically viable. The paper will focus on how lithium can support India's goal of developing clean energy economy, its long-term effects, and how the US will profit from the strategic partnership and its future course. In the field of renewable energy, lithium has been hailed as a major contributor, especially in the creation of electric battery vehicles (EVs). Bureau of Energy Resources Assistant Secretary Mr. Geoffrey R. Pyatt of the US Department of State in his trip to New Delhi, Mumbai and Pune between February 13 and 17, 2023, displayed a swift response to the discovery of lithium in Jammu and Kashmir. But Lithium wastes from Reasi mining operations that is discharged into Chenab, could harm its ecosystem and water quality severely. This could therefore have ramifications on local residents' health and well-being as well as the agricultural and industrial operations that rely on the river. The nation's initiative to augment its production of lithium and to become an eminent player in the global lithium market has the potentiality to dispense prominent environmental and economic welfare for its home and the entire world.

Keywords: Lithium, Lithium reserve, Jammu & Kashmir, Geological Survey of India, Electronic battery vehicles, Ecosystem, Economy, Chenab, welfare, cooperation

Introduction:

The Geological Survey of India (GSI) made the first-ever discovery of a 5.9 million-ton lithium reserve in the Reasi area of Jammu and Kashmir, and it's regarded as the nation's first lithium reserve. Although GSI has not yet provided a comprehensive study on how much lithium, can be mined or how it'll increase employment prospects for the people of Jammu and Kashmir, it's of very high quality. In the past, a lithium reserve of 1600 tonnes was discovered in Karnataka, but sadly, it was not economically viable. The paper will focus on how lithium can support India's goal of developing clean energy economy, its long-term effects, and how the US will profit from the strategic partnership and its future course. (Mollan, 2023)

Lithium's Role In Boosting India's Clean Energy Industry

In the field of renewable energy, lithium has been hailed as a major contributor, especially in the creation of electric battery vehicles (EVs). This is because lithium-ion batteries, which have a high energy density, are durable and have a low rate of self-discharge which is the most often utilized battery type in EVs. Hence, there are ways in which lithium conceivably could help India's EV market and clean energy sector grow –

Storage of energy – Because lithium-ion batteries can store and discharge a significant quantity of energy rapidly and effectively, they are perfect for energy storage applications. These batteries are therefore, perfect for usage in electric vehicles (EVs) which need a lot of energy to operate. In the renewable energy industry, where they can be used to store extra energy produced by wind and solar farms during times of low demand, lithium-ion batteries are also helpful because of their capacity to store energy for extended periods of time.

Increase in EV adoption – The utilisation of lithium-ion batteries will be more frequent in EVs as the market for EVs expands. Lithium will be in higher demand as a result, which will help fuel the transition to a more sustainable energy system and stimulate the growth of the clean energy sector.

Reduction in cost – When lithium-ion batteries become more widely used, prices are projected to decline due to the rising demand for them. By making EVs more accessible and inexpensive, more consumers will adopt them, accelerating the transition to renewable energy.

Indian Economy – India possesses a great chance to dominate the global EV industry, and the usage of batteries made of lithium-ion in EVs is anticipated to have a positive impact on the Indian Economy. India may generate new jobs, lessen its reliance on foreign oil, and contribute to the solution of air pollution and other environmental problems by growing a robust EV industry.

Consequently, lithium has the potential to play a significant role in India's EV development as well as the renewable energy sector. India can use this technology to advance the transition to a more clean energy system and build a more just and prosperous future for its people. (India's lithium discovery could boost green energy but creates problems in the region, 2023).

USA'S INTERESTS FOR PARTNERSHIP WITH INDIA

Bureau of Energy Resources Assistant Secretary Mr. Geoffrey R. Pyatt of the US Department of State in his trip to New Delhi, Mumbai and Pune between February 13 and 17, 2023, displayed a swift response to the discovery of lithium in Jammu and Kashmir. According to what was disclosed, the trip was planned as a part of India's G-20 Presidency and strategic collaboration, and their main concerns would be the transition to clean energy and security of energy. The US imports up to sixty-nine per cent of the lithium needed to finish building out its EV battery capacity as reported by the S&P Global estimates. Lithium is a metal that India has considerable deposits of, and the nation is working to enhance its production in order to satisfy the rising demand from international markets. In order to assure a stable and consistent supply of metal for both home and international markets, the US is interested in collaborating with India to develop its lithium resources in a sustainable and ethical manner. The US and India are anticipated to collaborate in the lithium sector in a variety of ways. For instance, the two nations can work together on R&D projects to stimulate the extraction and processing of lithium as well as to discover fresh and more effective uses for the metal in batteries and other products. Additionally, they might collaborate on initiatives to develop new lithium manufacturing facilities in India and create a more reliable lithium supply chain.

In order to ensure that the sector is run in a sustainable and responsible manner, the US might also assist India in creating its regulatory framework for lithium mining and production. This can entail taking steps to lessen the environmental damage caused by lithium mining, to safeguard the health and safety of employees and nearby communities, and to make sure that the advantages of lithium production are distributed fairly. In general, the US sees cooperation with India as a crucial component of its strategy to ensure a consistent and reliable supply for lithium for domestic and foreign markets. Together, the two nations can make sure that the world's need for lithium is satisfied in a way that is conscientious and feasible.(Plus, 2023).

Long-Run Implications

A vital supply of water for cultivation, industry, and home use is the Chenab River, which flows through Jammu and Kashmir into Pakistan. Lithium wastes from Reasi mining operations that is discharged into Chenab, could harm its ecosystem and water quality severely. This could therefore have ramifications on local residents' health and well-being as well as the agricultural and industrial operations that rely on the river. Also, the Indus Water Treaty between Pakistan and India may be affected if Lithium waste is released into the Chenab. The Indus River and its tributaries, including the Chenab, are shared by India and Pakistan under the terms of the treaty. It is crucial that the Indian government and other relevant parties take action to reduce the effects of lithium mining on the Chenab River and Pakistan, which is next door. This could entail taking steps to ensure sustainable and responsible use of the two nations' shared water resources, such as effective waste management, monitoring and regulation of mining operations, and improved bilateral collaborations.

Conclusion

Lithium is a metal that India has considerable deposits of, and the nation is moving to enhance its production in order to fulfil the rising demand from international markets. The Indian government is investing in research, infrastructure, development and administrative framework to promote the expansion of the lithium industry because it acknowledges the significance of the metal as a critical component in the transition to sustainable energy. In the final analysis, lithium has the potential to be significant component in helping India develop its renewable energy sector. By developing its lithium resources in a sustainable and ethical manner, India can contribute to meet its increasing demand and promote the evolution to a future which is more sustainable and clean. The nation's initiative to augment its production of lithium and to become an eminent player in the global lithium market has the potentiality to dispense prominent environmental and economic welfare for its home and the entire world. (Plus, 2023).

Orcid:_0000-0002-5480-451X

ABSTRACT

Encouraging innovation in the workplace is crucial for the growth and success of any organization. One effective way to foster innovation is through the use of employee mentorship programs. Employee mentorship can provide valuable guidance, support, and knowledge transfer, which can inspire and empower employees to think creatively and take risks.

This research utilised the qualitative systematic review to investigate the role of mentorship in organisations and how it plays a role in both employees' performance and organisational success. It traces the various mentorship programs worldwide and other case studies in New Zealand, the country of the researcher. The aim is to establish a trend of how organisations who embed mentorship in their organisational strategies render a rewarding outcome revealed in their organisational competitiveness exhibited through their employees' innovation and creativity.

The research findings identified the merits of embedding a mentorship program in the organisational strategy. This has been reiterated through the various case studies validating how organizations have leveraged mentorship to encourage innovation in the workplace.

Keywords: Workplace Mentorship, Innovation, Creativity, Professional Development, Organisational Competitiveness, Employee Performance.

1. Introduction:

Mentorship and organisational innovation and creativity play a crucial role in fostering growth, profitability, development, and success within an organisation. New ideas and initiatives can lead to increased productivity, improved efficiency, cost savings, and the development of new markets or revenue streams.

To foster mentorship and organisational innovation and creativity, organisations can establish mentorship programs, encourage cross-functional collaboration, provide resources for experimentation, and create a supportive and inclusive work environment that values and rewards creative thinking.

The research questions for this paper are answered by examining the similarities and differences among the role of teaching, versus coaching versus mentoring. A detailed explanation of the aspects of mentorship in the workplace and its key pillar were presented. This was followed by a review of the different mentorship models available for organisations to adopt depending on their unique requirements and what fits best with their respective strategies. The advantages of workplace mentorship and its positive impact on employee performance is clarified. The research further stipulates examples of both global and national (i.e. New Zealand) organisations who adopted mentorship programs to encourage innovation and creativity in the workplace. As a final point, the research reports on findings and conclusion.

2. Research Methodology

This research paper utilised the qualitative systematic review (Grant & Booth, 2009) (Grant & Booth, 2009) drawing on data from multiple studies gathered through wide research executed via google scholar, ProQuest databases and various global organisational websites obtained from Google search.

The research chooses the systematic review for this study to deliver meticulous summary of the available research found in response to the research questions below.

Research Questions:

- What are the advantages of organisational mentorship programs on employee performance?
- Does a mentorship program in the workplace foster employees' innovativeness and creativity?

3. Mentorship in the Workplace

In order to understand the meaning and role of mentorship in the workplace, we need to identify the similarities and differences among various interrelated terms: teaching, coaching and mentoring.

What are the differences between teaching, coaching, and mentoring?

Teaching, coaching, and mentoring are all forms of guidance, help, and support. But they differ in their approaches, goals, and relationships as demonstrated in the following Figure 1 below. The following are the primary differences between teaching, coaching, and mentoring:

1. Teaching:

Teaching is a structured process focused on imparting knowledge and skills to learners. Teachers possess expertise in a particular subject or domain and use various instructional methods to convey information to students. The emphasis is on sharing information, explaining concepts, and facilitating learning. Teachers typically work in formal educational settings such as schools and universities (Hinchcliffe, 2012; Moseley, et al. 2005; & Saphier & Gower, 2012).

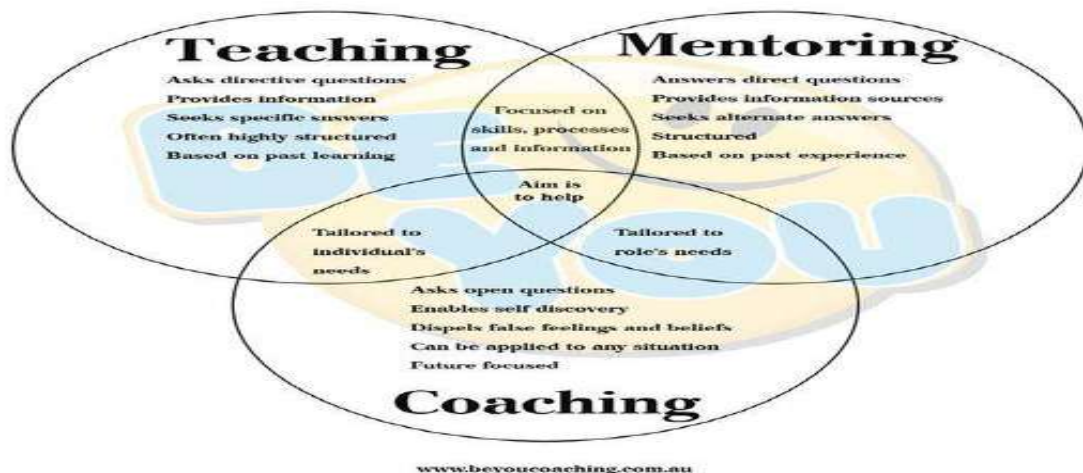

2. Coaching:

Coaching is a goal-oriented process that aims to enhance an individual’s performance, skills, or personal development. Coaches assist individuals in identifying their strengths, weaknesses, and goals, and help them bridge the gap between their current and desired state. Coaches often have expertise in a specific area and use strategies such as questioning, feedback, and guidance to facilitate growth. Coaching can occur in various contexts, including sports, business, and personal development (Herrington, 2023 & Garvey et al., 2016).

3. Mentoring:

Mentoring involves a long-term, nurturing relationship between a mentor and a mentee. Mentors are experienced individuals who provide guidance, advice, and support to mentees based on their own knowledge and experiences. The focus of mentoring extends beyond skills development to encompass broader aspects such as career growth, personal development, and life choices. Mentoring relationships often evolve naturally, and mentors act as role models, sharing insights and wisdom gained through their own journey (Eby et al., 2007; Clutterbuck, 2004; & Garvey et al., 2016).

Figure 1 Coaching vs Mentoring vs Teaching

What is Mentorship in the Workplace?

Workplace mentoring is a “learning partnership between employees for purposes of sharing technical information, institutional knowledge and insight with respect to a particular occupation, profession, organization or endeavor”. If this process is done correctly, the organization may reduce turnover and increase productivity (BC Forest Safety Council, 2008).

Workplace mentoring is not confined to a certain age and is a relationship that develops through close interactions with a mentor and their protégé. Mentoring practices differ from other developmental relationships in the workplace, such as supervision and leadership (Raabe & Beehr, 2003).

Various researchers (Clutterbuck, 2018; Ragins & Kram, 2007; Eby et al., 2007; Fowler & O’Gorman, 2005; O’Neill, 2005; Allen et al., 2004; Kram, 1985; & Levinson et al., 1978) stipulated that mentorship in the workplace refers to a professional relationship between an experienced and knowledgeable individual (the mentor) and a less experienced or junior employee (the mentee). The mentor provides guidance, support, and advice to the mentee, helping them develop their skills, knowledge, and career. They further postulated the following key aspects of mentorship in the workplace:

- **Guidance and Support:** Mentors offer guidance and support to their mentees by sharing their expertise, experiences, and knowledge. They provide insights into the industry, company culture, and career development.
- **Skill Development:** Mentors help mentees develop specific skills necessary for their professional growth. This may include technical skills, communication skills, leadership abilities, problem-solving techniques, or any other skills relevant to their field.
- **Career Development:** Mentors assist mentees in setting and achieving their career goals. They may offer advice on career paths, provide opportunities for growth and learning, and help mentees navigate challenges and obstacles in their careers.
- **Networking and Connections:** Mentors can introduce mentees to valuable professional networks and connections. They may provide opportunities for mentees to interact with influential individuals in their industry, which can lead to new opportunities, collaborations, or mentorship from other experts.
- **Feedback and Accountability:** Mentors provide constructive feedback and hold mentees accountable for their professional development. They offer guidance on areas of improvement, review work, and provide suggestions for growth.
- **Emotional Support:** Mentors often act as a source of emotional support for mentees. They lend a listening ear, offer encouragement during challenging times, and help mentees build confidence and resilience.
- **Knowledge Transfer:** Mentors share their expertise and industry knowledge with mentees. This can include teaching specific techniques, sharing best practices, or providing insights into industry trends and developments.

Mentorship in the workplace can be formal or informal. Informal mentoring is a mentorship that evolves organically, almost like a friendship. Colleagues, family members, and friends can all be informal mentors; they are people you turn to for advice or to challenge you. On the other hand, formal mentoring is an organised program that matches people with mentors who

can help them towards a goal or target. Formal mentoring programs in organisations are naturally fairer and more inclusive, as they don't rely on senior managers or teachers 'taking a shine' to individuals and favoriting them (Cornin, 2020; Laiho & Brandt, 2012; Chun et al., 2012; & Chao et al., 1992).

Lollis (2016) explained that mentoring is built on the following pillars to guarantee its efficiency and success in the workplace.

Pillar 1: Partnership Matching

In this pillar a strong mentee-mentor matching is the foundation of a constructive mentoring relationship. The mentor's career experiences must align with the mentee's needs and the critical gaps that, if filled, could allow the mentee to progress in their career.

For example, a mentee with strong financial acumen who is interested in a CFO position may be better served by a mentor with deep experience in interpersonal communications than by a CFO, who might have similar strengths and weaknesses.

Pillar 2: Mentee, Mentor and Partnership Training

This pillar states that it is essential that each member understands in detail how the partnership will function i.e., who will schedule meetings, how often and what time of day they will meet, how cancellations will be handled. It's also essential that the partnership be "kicked off" with some relationship-building exercises that help partners understand communication styles, personalities, and behaviour norms. This pillar stresses that behavioural and personality assessments are often helpful for creating a common language to facilitate this process.

Pillar 3: Partnership Coaching

This pillar states that within the first two to three months of a partnership, it's critical to ensure that the mentee and mentor are establishing positive habits and connecting in a healthy way. This could be done through an open conversation with each mentee and mentor to identify challenges and create the opportunity for coaching to facilitate connection. In case any challenges or misunderstanding arise about scheduling, it is advised to use a third party to ensure partnership remains on track.

Pillar 4: Supporting Content

This pillar focuses on the value of having rich content as a critical component in sustaining high-impact mentoring partnerships. Whether through interactive workshops or discussion guides, mentees must be continually exposed to content on far-reaching, career-impacting concepts such as executive presence, organizational culture, corporate politics, career planning and strategic communications. Focusing on big ideas and deep discussions leads to meaningful conversations among parties and enhances the relationship by keeping everybody engaged.

4. Different Models of Mentorship in the Workplace

Workplace mentoring programs come in various models, and organizations can adopt different approaches based on their specific needs and goals. Shih et al. (2023), Clutterbuck (2018), Eby et al. (2019) and Laband and Lentz (1995) depicted various mentoring programs and the following are some of those models:

1. Traditional One-on-One Mentoring:

This model involves pairing a more experienced employee (mentor) with a less experienced employee (mentee) in a one-on-one relationship. The mentor provides guidance, support, and knowledge transfer to the mentee, helping them develop their skills and career.

2. Reverse Mentoring:

In this model, the traditional mentor-mentee relationship is reversed. Younger or less experienced employees are paired with more senior or experienced employees to mentor them on topics such as technology, social media, or current trends. Reverse mentoring promotes cross-generational learning and helps senior employees stay updated with new ideas and perspectives (Gadomska-Lila, 2020).

3. Group Mentoring:

Group mentoring involves a mentor working with a small group of mentees. This model allows for peer learning and collaboration within the group, as well as collective problem-solving. Group mentoring is useful when multiple employees can benefit from the mentor's expertise.

4. Virtual Mentoring:

With the advancement of technology, virtual mentoring has gained popularity. It involves mentors and mentees connecting remotely, either through video calls, emails, instant messaging, or online collaboration platforms. Virtual mentoring allows for flexibility and enables organizations to connect employees across different locations.

5. Peer Mentoring:

Peer mentoring involves employees at similar levels or positions mentoring each other. It is a collaborative approach where individuals share their expertise, experiences, and support to help each other grow professionally. Peer mentoring can enhance teamwork, engagement, and skill development.

6. Flash Mentoring:

This refers to quick one-off mentoring sessions aimed at learning a key piece of information or skill. It is useful for creating impactful knowledge sharing without the pressure to develop a long-term relationship. It can be used with other types of mentoring like group mentoring.

7. Team Mentoring:

Team mentoring involves a group of mentors and a group of mentees who carry out mentoring sessions as a team. The key difference between group mentoring and team mentoring is that team mentorship often involves multiple mentors working with the group instead of just one. This type of mentoring can help to promote diversity and inclusion as it creates a space for a number of different people with different opinions and perspectives to come together and learn from one another (Wolf & Ober, 2017).

Organizations can choose a single mentorship model or combine multiple mentorship models based on their specific needs, resources, and organizational culture. The key is to design a mentoring program that aligns with the organization's goals and supports the growth and development of its employees.

The following Figure 2 summarises the multiple benefits of mentorship programs for all involved parties i.e., organisations, mentors and mentees.

Figure 2: Benefits of Mentorship Program

SOURCE: ScetchBubble (2023). *Mentoring Program*. Retrieved on 8 April 2023 from <https://www.sketchbubble.com/en/presentation-mentoring-program.html>

5. Advantages of Organisational Mentorship on Employee Performance

This section answers the first research question by reporting on the research findings of various research studies (Ivey & Dupre, 2022; Gadowska-Lila, 2020; Corning, 2020; Carter & Youssef-Morgan, 2019; Wen et al., 2019; Clutterbuck, 2018; Ragins et al., 2017; Turban, et al., 2017; Park et al., 2016; St-Jean & Mathieu, 2015; San Miguel & Kim, 2015; Grima et al., 2014; Lyle & Smith, 2014; Eby et al., 2013; Tong & Kram, 2013; Ghosh & Reio Jr., 2013; Liu et al., 2012; Chandler et al., 2011; Burk & Eby, 2010; Singh et al., 2009; Eby et al., 2008; Ragins & Kram, 2007; Allen et al., 2006; Underhill, 2006; Eby & Lockwood, 2005; Allen et al., 2004; Higgins & Kram, 2001; & Scandura & Williams, 2001; Burke & McKeen, 1997; Scandura, 1997; Turban & Dougherty, 1994; Fagenson, 1989; & Kram, 1985).

“What are the advantages of organisational mentorship programs on employee performance?”

The following are the results of reviewing and analysing the research results reporting on the advantages and impact on employee performance resulting from participating in workplace mentorship programs.

1. Skill Development:

Mentoring provides employees with opportunities to enhance their skills and knowledge. Mentors can share their expertise, provide guidance, and offer valuable insights to help mentees develop new competencies. As mentees acquire new skills, they become more capable of tackling complex tasks efficiently, leading to increased productivity.

2. Knowledge Transfer:

Mentoring facilitates the transfer of tacit knowledge, institutional wisdom, and best practices from experienced employees to mentees. This knowledge transfer can accelerate the learning curve and enable mentees to gain insights that might otherwise take them years to acquire independently. By leveraging the mentor's knowledge, mentees can avoid common pitfalls, make informed decisions, and work more effectively, boosting their productivity.

3. Career Development:

Mentoring plays a crucial role in employees' professional growth and advancement. Mentors can help mentees identify their strengths, weaknesses, and areas for improvement, and guide them in setting goals and creating action plans. As mentees receive guidance and support in their career development, they gain clarity, motivation, and a sense of direction, which can fuel their productivity and drive them to achieve higher levels of performance.

4. Increased Engagement:

Mentoring fosters a sense of belonging, connection, and engagement among employees. When mentees feel supported and valued, they are more likely to be motivated and committed to their work. Engaged employees tend to be more productive, as they invest their energy and effort into their tasks and are more inclined to go above and beyond to achieve organizational objectives.

5. Confidence Building:

Effective mentoring can boost employees' confidence levels. Mentors provide encouragement, constructive feedback, and validation, which helps mentees build self-assurance in their abilities. Increased confidence leads to a willingness to take on challenging projects, make decisions autonomously, and contribute ideas. As mentees become more self-assured, they become more productive and proactive in their work.

6. Improved Communication and Collaboration:

Mentoring often involves regular communication and interaction between mentors and mentees. These dynamic fosters open dialogue, trust, and improved communication skills. Mentees learn to articulate their thoughts, seek feedback, and actively engage in discussions. Enhanced communication and collaboration lead to better teamwork, reduced misunderstandings, and more efficient workflow, ultimately enhancing productivity.

7. Supportive Environment:

Mentorship programs foster a supportive and nurturing environment where employees feel encouraged to take risks, experiment, and think outside the box. This psychological safety can significantly enhance employees' confidence and willingness to explore innovative approaches, leading to a boost in creativity within the workplace.

8. Feedback and Reflection:

Regular interactions with mentors enable mentees to receive constructive feedback on their ideas and projects. Such feedback can help mentees refine their innovative concepts and identify areas for improvement. Additionally, mentorship encourages mentees to engage in self-reflection, prompting them to evaluate their own creative processes and refine their thinking over time.

Furthermore, Cornin (2020) demonstrates the various benefits of mentorship in the workplace (refer to Figure 3) which encompasses employees wellbeing and development, and organisational success and competitiveness.

Figure 3: Benefits of Mentorship Programs in the Workplace

SOURCE: Cornin, N. (2020). *The Different Types of Mentoring and How to Use Them*. Retrieved on 8 April 2023 from <https://guider-ai.com/blog/types-of-mentoring/>

6. Case Studies of Organisations Using Mentorship to Encourage Innovation in the Workplace

This section aims to answer the second research question posed earlier: “Does a mentorship program in the workplace foster employees’ innovativeness and creativity?” The research looked at both global organisations and New Zealand organisations that fit this profile. These case studies demonstrate how organizations have leveraged mentorship to encourage innovation in the workplace. By pairing employees with mentors, providing guidance, and creating opportunities for knowledge sharing, these companies have created an environment that supports and nurtures innovative thinking and fosters a culture of continuous improvement.

Global Cases of Successful Workplace Mentoring

As explained earlier workplace mentorship is one of the important employee engagement strategies. A recent study conducted about the US Fortune 500 companies using mentoring programs discovered the following:

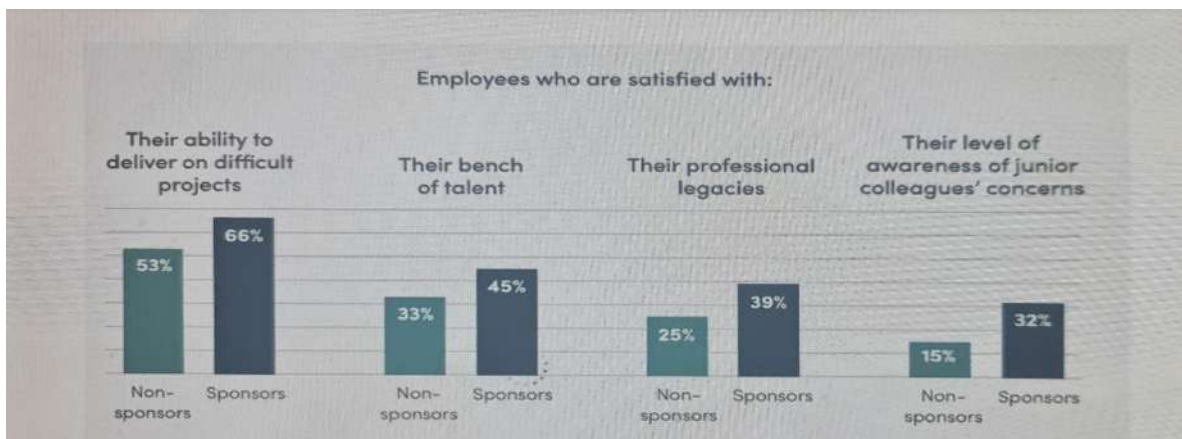

- 92% of all US Fortune 500 companies have mentoring programs.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

- 100% of the top 50 US Fortune 500 US Fortune companies have mentoring programs.
- The median profits for Fortune 500 companies with mentoring programs were over three times higher than those without mentoring programs.
- Fortune 500 companies with mentoring programs were significantly more resilient against employee quitting trends that reigned in 2021, with a median Year-Over-Year (YoY) employee growth of just over 3%. Meanwhile, Fortune 500 companies without mentoring programs had a median decrease of 33% in their number of employees.
- 64% of the Fortune 500 companies that added mentoring programs were tenured to the list, indicating that mentoring was one of many employee engagement strategies successful companies used to secure profitability into 2021 (Cook, 2023).

The following figure 4 provides the opinions and satisfaction level of the employees who were impacted by mentorship (indicated as sponsor in the figure) and how it contributed to their career development and advancement.

Figure 4: Impact of Mentoring on Employees’ Career Development and Advancement

SOURCE: Coqual, In Cook, S. (2023). *40+ Definitive Mentorship Statistics and Research for 2023*. Retrieved from <https://www.mentorcliq.com/blog/mentoring-stats#Fortune500>

As the figure 4 above demonstrates that individuals who choose to be a sponsor, mentor, or coach are more likely to reap the benefits for their own skills. Most (57%) expand their skill sets (versus 40% or non-sponsors); 41% are more likely to pick up tasks they don’t like to do (versus 26% of non-sponsors); 43% expand their knowledge of their customer base (versus 26% of non-sponsors), and 30% expand their knowledge potential new customers or market segments (versus 19% of non-sponsors).

Furthermore Figure 5 demonstrates that employees who are provided workplace mentorship are more satisfied than employees who are not provided this opportunity.

Figure 5: Impact of Mentorship on Employee Satisfaction

SOURCE: Coqual, In Cook, S. (2023). *40+ Definitive Mentorship Statistics and Research for 2023*. Retrieved from <https://www.mentorcliq.com/blog/mentoring-stats#Fortune500>

Figure 5 confirms that employees who are provided with a mentor have a higher satisfaction rate especially among the workers under the age of 45 years old by a margin of up to 20% which decreases with age.

The following are some examples of the global companies identified by the researcher who applied workplace mentoring programs aiming at encouraging their employees' innovation and creativity.

1. Google:

Google's mentorship program, called "EngEDU," aims to foster innovation and professional growth among its engineers. The program pairs experienced engineers with junior engineers, providing guidance, support, and knowledge sharing opportunities. Through this mentorship, Google encourages innovation by allowing junior engineers to learn from experienced professionals, fostering new ideas and approaches (Burnison, 2019). Furthermore Google has a Computer Science Research Mentorship Program (CSRMP) that aims to support students from historically marginalized groups to progress in computing research pathways. This program uses Group Mentorship and One-on-One Mentorship (Computing Research Association, 2022 & Grainger, 2022).

2. Microsoft:

Microsoft's mentorship program, known as "Mentor Makers," focuses on fostering innovation and entrepreneurship within the company. The program matches employees with mentors who have expertise in various areas of innovation, such as product development, design, and marketing. By connecting individuals with mentors, Microsoft aims to inspire innovative thinking, enhance problem-solving skills, and encourage employees to explore new ideas. This program is a movement to inspire and engage entrepreneurs across all industries, geographies, and backgrounds with the time and experience of the industry experts (Nasdaq Entrepreneurial Center, 2023).

Furthermore, Kirti Gahlot (2023) posited that Microsoft's "Engage Mentorship Program" is highly sought after as it connects young talent with experienced mentors from across India. Furthermore, it provides a personalised mentorship to help participants achieve their career goals and aspirations.

3. Adobe:

Adobe's mentorship program, called "Kickbox," is designed to promote innovation and entrepreneurship among its employees. Kickbox provides selected employees with a red box containing resources, tools, and funding to develop their innovative ideas. The program also assigns mentors to guide employees through the innovation process, offering advice and support. By leveraging mentorship, Adobe empowers employees to explore new ideas and turn them into innovative projects (Kickbox Foundation, 2022).

4. Intel:

Intel's mentorship program, known as "Innovation Mentoring," aims to cultivate a culture of innovation and collaboration within the company. The program pairs employees with mentors who have expertise in areas relevant to their innovative projects. Mentors provide guidance, feedback, and resources to help mentees navigate challenges and develop their ideas further. Intel's mentorship program enables employees to access valuable insights and experiences, ultimately fostering a culture of innovation. Recently they launched "Intel Ignite" program to empower startups to succeed through customized support, access to global business, and technology leaders, and a preferred path to the best investors (Intel Ignite, 2023).

5. General Electric (GE):

GE's mentorship program, called "GE Innovation Barometer," focuses on encouraging innovation and idea generation. The program connects GE executives with young professionals to exchange ideas and insights. Through this mentorship, young professionals gain exposure to senior leadership perspectives, fostering innovative thinking and encouraging them to contribute fresh ideas to the company (GE, 2020).

New Zealand Cases of successful Workplace Mentoring

The researcher identified the following New Zealand organisations who applied mentorship programs in the workplace that proved rewarding and successful as it encouraged to answer the following second research question for this research paper:

These case studies highlight the efforts of New Zealand organizations to leverage mentorship programs to foster innovation, collaboration, and professional development among their employees.

1. Fonterra Co-operative Group Ltd:

Fonterra, a leading dairy cooperative, implemented a mentorship program to encourage innovation within its workforce. They recognized the importance of developing a culture of continuous learning and innovation to stay competitive in the global market. The program paired experienced employees with younger, aspiring talent across different departments and levels (i.e. Reserve Mentoring Model). The mentors provided guidance, support, and knowledge sharing, while the mentees brought fresh ideas and perspectives. Through this mentorship initiative, Fonterra aimed to enhance collaboration, creativity, and problem-solving capabilities across the organization (Fonterra New Zealand, 2018 & 2019).

2. Xero:

Xero, a cloud-based accounting software company, prioritizes innovation in its workplace culture. To foster innovation and professional growth, Xero introduced a mentorship program called "Xero Mentors." This program connects employees with experienced mentors who help them develop skills, explore new ideas, and unlock their potential. The mentors guide their mentees through various challenges, provide feedback, and share insights from their own experiences. Xero believes that mentorship plays a crucial role in building a supportive and collaborative environment, enabling employees to think innovatively and drive positive change (Xero, 2013, 2016, 2021).

3. Spark New Zealand:

Spark, a leading telecommunications and digital services company, launched a mentorship program called "Ignite" to foster innovation and entrepreneurial thinking. The program aimed to connect Spark employees with experienced entrepreneurs and industry experts. Mentors offered guidance and support in areas such as technology, business development, and leadership. The initiative aimed to encourage employees to think disruptively, explore new opportunities, and embrace innovative ideas. Spark recognized that mentoring could provide employees with valuable insights and perspectives to drive innovation within the company (Agile Academy, 2023).

7. Findings and Conclusion

This research review demonstrated that workplace mentorship can have a significant impact on employees' innovation and creativity. The following are some of the findings:

- **Enhanced Skill Development:** Mentorship programs provide employees with opportunities to learn from experience professionals who can guide them in developing new skills and expanding their knowledge. This expanded skill set can contribute to employees' ability to generate innovative ideas and think creatively when approaching work challenges.
- **Increased Confidence:** Mentors can play a crucial role in building employees' self-confidence and self-efficacy. When individuals feel supported and encouraged by their mentors, they are more likely to take risks, explore new ideas, and express their creativity without fear of failure. Increased confidence fosters a conducive environment for innovation to thrive.
- **Knowledge Transfer and Access to Resources:** Mentors often possess valuable industry knowledge and networks that they can share with their mentees. Through mentorship, employees gain access to new perspectives, expertise, and resource that can

stimulate their creativity and innovation. Mentors can provide guidance on overcoming obstacles, suggest alternative approaches, and introduce new tools or techniques.

- **Collaboration and Networking:** Mentorship programs can facilitate collaboration among employees, fostering a culture of knowledge sharing and teamwork. Mentees can benefit from exposure to diverse perspectives and experiences, leading to cross-pollination of ideas. Collaborative environments stimulate creativity, as individuals build upon each other's ideas, challenge assumptions, and generate innovative solutions collectively.
- **Risk-Taking and Failure Resilience:** Effective mentors encourage their mentees to embrace calculated risks and view failure as a learning opportunity. By fostering a safe space for experimentation and providing support during setbacks, mentors help employees develop resilience and a growth mindset. This mindset is crucial for promoting innovation and creativity, as it encourages individuals to push boundaries and explore unconventional ideas.
- **Increased Motivation and Engagement:** Mentorship programs have been shown to boost employees' motivation and engagement levels. When individuals feel supported and valued, they are more likely to invest their energy and creativity in their work. Mentors can provide regular feedback recognition, and opportunities for growth, creating an environment that nurtures innovation and encourages employees to generate new ideas.

In conclusion, the effectiveness of workplace mentorship programs can vary depending on various factors, such as the quality of the mentor-mentee relationship, organisational culture, and the structure of the program itself.

Overall research suggests that mentorship positively influences employees' innovation and creativity by providing guidance, support, and opportunities for growth.

ABSTRACT

Unemployment is a problem and an obstacle in the developmental path in India. To get hold government of India from time to time launched different schemes to boost the entrepreneurial environment in the country. Startup India, Make in India, Atal Innovation Mission, Jan Dhan Aadhar- Mobile(JAM), Digital India, Department of Science and Technology (DST), Stand-Up India, Pradhan Mantri Kaushal Vikas Yojana (PMKVY), National Skill Development Mission, Science for Equity Empowerment and Development (SEED). Apart from it, Ministry of Skill Development and Entrepreneurship, government of India, allocated funds and released sector wise potential manpower requirements in entrepreneurial ventures. However, the problem lies in the non-release of funds. The objective of the present paper is to study the pattern in difference of allocated and released fund considering different states and union territory of the Indian union. The study also checks the potential manpower requirements, state wise and sector wise. For the purpose of the study, the secondary data is considered. The data released by Ministry of Skill Development and Entrepreneurship in Indian Upper House of the parliament, Rajya Sabha is referenced. The study reveals that 68% of the total allocated fund remains unreleased; five sectors are projected to account for 69 percent of the total incremental human resource requirement; ten states account for 80 percent of the total requirement total incremental human resource requirement from 2013-22 from 2013-22.

Keywords: Entrepreneurship, Allocated Fund, Released Fund, Manpower Requirement.

INTRODUCTION

Unemployment is a common economic malady faced by each and every country of the world, irrespective of their economic system and the level of development achieved. But the nature of unemployment prevailing in underdeveloped or developing countries sharply differs to that of developed countries of the world.

While the developed countries are facing unemployment, mostly of Keynesian involuntary and frictional types but the underdeveloped or developing countries like India are facing structural unemployment arising from high rate of growth of population and slow economic growth. Structural unemployment may be open or disguised type. However, the most serious type of unemployment from which those undeveloped countries like India are suffering includes its huge underemployment or disguised unemployment in the rural sector.

Unemployment is a serious problem. It indicates a situation where the total number of job vacancies is much less than the total number of job seekers in the country. It is a kind of situation where the unemployed persons do not find any meaningful or gainful job in spite of having willingness and capacity to work. Thus unemployment leads to a huge wastage of manpower resources.

Today India has excelled in fields of science and technology (especially in the space technology and information technology), agriculture, trade and business, art and culture, foreign relationship and many other fields to follow. However, the developing country with huge population is facing a significant problem in unemployment. If checked, the unemployment problem in India is not the result of deficiency of effective demand in Keynesian term but a product of shortage of capital equipment's and other complementary resources accompanied by high rate of growth of population.

Unemployment is characterized as a phenomenon where labourers who are equipped for working and ready to work, don't look for some kind of employment. It is communicated as a proportion of the complete number of jobless people to the all out work power. In India, the National Sample Survey Organization (NSSO) and the Labor Bureau compute work and joblessness. The joblessness rate in the 18–29 age bunch in 2015 was 13.2%. A huge number of youth enter the activity advertise each year. Nevertheless, as indicated by the NSSO finance information, work creation eased back somewhere around 6–7% in January 2019 when contrasted with the earlier year. This has unfavorably affected the work possibilities of youth. The Unemployment rate is evaluated at 6.1% for 2017–18, the most noteworthy over the most recent 45 years.¹ This mirrors a vocation emergency and a bungle of qualified ability and accessible business openings. The issue of joblessness has been developing since Independence, and particularly so for the adolescent.

Several factors have contributed to the unemployment problem in India. High population growth, slow rate of economic progress, joint family system, onset of technology, caste system, prevalence of agriculture, fall of cottage and small industries, and the slow growth of industrialization.

To get hold government of India from time to time launched different schemes to boost the entrepreneurial environment in the country. Startup India, Make in India, Atal Innovation Mission, Support to Training and Employment Program for Women (STEP), Jan DhanAadhar-

6th International CEO Communication, Economics, Organization & Social Sciences Congress

Mobile(JAM), Digital India, Biotechnology Industry Research Assistance Council (BIRAC), Department of Science and Technology (DST), Stand-Up India, Trade related Entrepreneurship Assistance and Development (TREAD), Pradhan Mantri Kaushal Vikas Yojana (PMKVY), National Skill Development Mission, Science for Equity Empowerment and Development (SEED). The Startup India Initiative has contributed to building a robust startup ecosystem in India by nurturing innovation, catalyzed networking, designing policy measures, and mentoring.

The States Startup Ranking Framework accelerates efforts put in by the Center and States that are aimed to enliven the entrepreneurial mindset across the length and breadth of the country. Capacity Building Measures have been undertaken by the Team across States and Union Territories for ecosystem enablers and innovators in promoting economic growth by upholding the spirit of cooperative federalism. The Knowledge Centre presents a one-stop platform of resources for ecosystem enablers to learn about the measures taken by different States/UTs to support their startups ecosystems, to discover the resources and support available to states to build capacities at every level of administration and to gain knowledge on areas of intervention provided by state governments/UT administrations to startups.

Apart from it, Ministry of Skill Development and Entrepreneurship, government of India, allocated funds and released sector wise potential manpower requirements in entrepreneurial ventures. However, in case of funds, the problem lies in the non-release of funds. The data released by Ministry of Skill Development and Entrepreneurship in Indian Upper House of the Indian parliament, Rajya Sabha places the fact that there is a difference between the allocated and released fund.

Following the aforesaid narrative the study objectives are fixed as follows:

1. To study the difference between the allocated and released entrepreneurship development funds for different state and union territories, given by the union government.
2. To study the need of manpower in different Indian entrepreneurial ventures, state and union territory wise.
3. To study the need of manpower in different Indian entrepreneurial ventures, sector wise.

The present study contributes to the existing literature in several ways. The union government has allocated fund for the entrepreneurial ecosystem development. However, a significant portion was not released due to different reasons. The gap points that the fullest released fund would significantly contribute to the entrepreneurial development for the Indian incorporation. Another important factor for the Indian incorporation is its capability to employ. The data released by the Upper House of the Indian parliament indicates that the Indian incorporation is capable of employing a significant human unemployed population. On elaboration, it could be said that- the entrepreneurial ventures in the coming time will take an excellent role in deleting joblessness in the country.

The study is divided into three sections. The section B takes the present literature of opportunities, bright side, positive developments, and problems faced by the startups as well as the entrepreneurial ventures. Section B is followed by section C that discusses the research methodology. The section D captures and further analyzes the data of allocated and released funds by union government for Indian entrepreneurial ventures, and the potential manpower requirement in the entrepreneurial businesses.

LITERATURE SURVEY

Hassan and Nassar (2015) have identified that unemployment rate is negatively affected by economic growth. Balan (2014) concluded that there is a statistically significant negative effect of GDP on unemployment and the effect of net average wage on youth unemployment is positive. Gil-Alana (2010) studied unemployment and GDP of USA, UK and Japan. It has been found that there is negative effect of unemployment on GDP in case of USA and UK and while in case of Japan it is not statistically significant. Fakhri (2011) concluded that there is a nonlinear relationship between inflation and economic growth. Umar and Zubairu (2012) described that there is a negative effect of inflation on economic growth. Sackey and Osei (2006) concluded that younger people are more likely to be unemployed as compared to older people group due to lower labour market skill. Anyanwu (2013) found that young people have less experience as compared to old people due to which it is very difficult to gain the employment; they have to bear less salary and wages for same work as compared to older/experienced people. Shapiro and Stiglitz, (1984) have concluded that increasing the higher wages above the equilibrium wages as incentives to increase the efficiency of employee is the cause of unemployment. Efficiency wages model are kept higher above the market clearing wage with view to reducing employee turnover. Efficiency wages framework creates the difficulty for jobseekers to secure employment. Graetz (1987) has described that working class people are less aware about causes of unemployment. They acquire knowledge from mass media. Media responds to public desire for exposure of deviant behaviour and further belief in personal unwillingness to work as the basic causes of joblessness. Lui (2009) described that there is a relationship between inflation and unemployment that give either positive or negative results which depend on goods and labour market availability. It has also found that a higher rate of inflation increases workers' incentives to work and generates a negative effect on unemployment as compared to inflation lowers.

The research of Singh (2018) examines the cause of unemployment in India in current market scenario. According to Singh, government is rightly concerned about creating jobs for youth and rising levels of youth unemployment because of not only direct economic costs but also social issues related problems like as poverty, acid attacks, violence against women on her working place, drugs, labour force, inadequate education planning, inappropriate education system, new-liberal economic policy, various causes of poor placements. The research also suggests some measure to overcome of the burning problems of unemployment. The researcher, citing the ILO & UN Report, focused on the present unemployment rate which is 3.5 percent in 2018. Singh, also suggested and recommends some points to overcome of this current situation of unemployment prevailing in India.

Economic theory provides several explanations for a positive relationship between unemployment and entrepreneurship. First, the eclectic framework employed by Verheul et al. (2001) emphasizes the importance of demand- and supply-side factors in determining entrepreneurship across regions (Delfmann et al., 2014). Among these factors are economic conditions, demographic composition and the employment status of individuals (Bosma et al., 2008). The occupational choice literature distinguishes between push- and pull-factors regarding entrepreneurship (Van der Zwan et al., 2016). One of these push-factors is unemployment (Niefert, 2021). Unemployment can incentivise people to pursue entrepreneurship and create their own job to avoid unemployment. This is one way unemployment can induce entrepreneurship (for example, see Santarelli et al., 2019; and Carree & Dejardin, 2020). Second, high levels of unemployment are often correlated with firm closures which increase the level of ‘market room’ available in the economy and positively influences the rate of entrepreneurship (Carree & Dejardin, 2007). Third, higher levels of unemployment induce firm deaths, which puts the market into disequilibrium and can result in the redistribution of key resources which are capitalized on by ‘alert’ entrepreneurs (Kirzner, 1999), thus increasing the number of business creations in the region.

Government has taken initiatives from time to time to fund the entrepreneurial ventures. (Bai et al. 2021), we assemble the first comprehensive and detailed data on the universe of government funding programmes of entrepreneurial ventures around the world. We explore whether government entrepreneurial funding programmes can address capital allocation through ties with private capital markets. Consistent with the suggestions of Acemoglu and Robinson (2013), we might anticipate that highly effective governments would anticipate the capital allocation difficulties outlined above and collaborate with private capital markets to address them.

Crowd funding has been defined by many authors (Marelli, & Ordanini, 2016) as a mechanism where individuals, firms or general organizations attempt to undertake a specific project relying on funding collected, usually with the help of an internet platform, from other individuals. Bellefamme et al. (2018) have identified different forms of crowd funding typologies distinguishing between “non-investment-based models” and “investment based models”. According to the authors, “non-investment-based models” groups’ crowd funding campaigns can be either donation-based or reward-based. The donation-based model is characterized by individuals wishing to support a determinate project making donations to the campaign without expecting anything in return. Marchegiani (2013) claims that such supports are based on a sort of “micro-mecenatism” attitude of individuals. Donation-based crowd funding campaigns are quite often adopted for financing either philanthropic or particular research projects (2020). The reward-based model, on the other hand, is based on an agreement in which the supporter of a campaign has, in return for a financial contribution, a non-financial benefit generally fixed in advance by a proponent of the campaign. Generally, most reward-based crowd funding campaigns offer the possibility to pre-order a product in advance before it is available to the general public. Nowadays, most known platforms for hosting crowd funding campaigns, such as Kickstarter and Indiegogo, adopt mainly a reward-based model (2012). In more detail, in Kickstarter and Indiegogo platforms’ project creators choose a deadline and a minimum funding

goal for their project. To thank their financiers for their support, project creators offer a reward, which generally consists of gaining access to a product before it is available to the general public. Both platforms operate under an “all-or-nothing rule” by which project creators only receive money if the total amount raised by the end of the campaign is either equal to or exceeds the minimum funding goal identified at the beginning of the campaign. According to Bellefamme et al.(2018), there are also other typologies of crowd funding activities that can be grouped as “investment-based models”. These can be differentiated as lending based, royalty-based, or equity-based. In such models, individuals are offered a share of the future profit in exchange for an in-advance.

Literature on the topic suggests that crowd funding platforms, especially those based on a reward-based model, provide a good alternative for financing innovative ideas and products that might have been difficult to develop with traditional financing channels (Zheng, H., Qi, Z., Luo, X., Li, L., & Xu, B., 2018). In contrast with traditional financing instruments, crowd funding financiers can be pushed, for instance, by the willingness to support an environmental cause instead of the mere financial outcome, then bear higher risks for supporting an innovative project (Stanko, & Henard, 2017). Reward-based crowd funding platforms can represent a good alternative for developing sustainable products by reducing barriers that, in general, businesses encounter when adopting a sustainability pathway. Research conducted by Van Hemel & Cramer (2019) assessed the barriers to sustainable product development strategies in firms. The authors identified that the main barrier is the presumption that some types of sustainable products have not yet been requested by customers. This leads to the suggestion that firms perceive environmental customer demands as one of the most important drivers for starting a sustainability pathway. Given the necessity that firms understand the interest of consumers in advance, the contribution of crowd funding platforms might be relevant. Indeed, a crowd funding campaign can serve as a marketing research tool. A crowd funding campaign relies on individuals committing their own money to risky projects, thus informing the project creators about the market potential of the newly proposed product ideas. It also serves to pre-test the market uptake of a potential new product (Vismara, 2019]. On the other hand, a reward based campaign might serve as a signaling instrument to highlight market uncertainty for a certain product (Chen, Liu, Ma, & Gong, 2019). More recently, Rousseaux et al. (2019) also explored the barriers to sustainable product development strategies in firms. In this instance, the authors identified a lack of economic resources as a relevant barrier for the implementation of sustainable product development strategies, especially in SMEs. They also noted that the contribution of crowd funding platforms might be relevant as instruments that allow advance-selling of a product. Many reward-based crowd funding platforms allow a pre-ordering mechanism on products that can stimulate sales in the first stages of product development (even a prototype), thus financially supporting the further development of the product (Etter, Grossglauser, & Thiran, 2013). Finally, Rossi et al.(2018) explored the barriers to sustainable product development strategies. The authors suggest that several companies manifest problems in identifying the environmental aspects to address in product development, and have difficulties in matching functional product requirements and sustainability goals. Crowd funding platforms, as tools for helping to collect feedback on products, might be relevant as

instruments to reduce such barriers. Indeed, having prompt feedback from their customers could help them to address these issues by adopting a sort of co-design process. Co-design has been defined as the “*collective creativity as it is applied across the whole span of a design process.*” (Hair et.al ,1998). In other words, it is a process in which product designers use the ideas generated by others as sources of inspiration and innovation. Many crowd funding platforms allow direct interaction between project creators and financiers, and such interaction might represent a good instrument for stimulating co-design and receiving useful feedback on how “*Exploring the development of environmentally sustainable... to improve the product by suggesting how to incorporate relevant environmental enhancements*” (Pimonenko et al., 2020). Considering the aspects presented above, crowd funding might represent a remarkable channel for financing and developing sustainable products for different categories of environmentally oriented firms like the ones proposed in the framework by Schaltegger and Petersen (2019). In such a framework, entrepreneurial activities are distinguished between activists, pioneers and ecopreneurs. Activists are non-professionals who crowd fund in their leisure time. Pioneers aim at being profitable ventures but are operating in market niches and thus serving the specific customer needs of these niches. Finally, ecopreneurs run conventional companies and aim at high and growing market shares. Crowd funding initiatives, allowing projects ranging from individual designers and inventors to large corporations that want to test new product ideas, can be managed successfully by activists, bioneers and ecopreneurs. Unfortunately, at the present time research on this topic is still underrepresented in the available literature. Yet in the last few years, several conceptual studies have started to appear on the topic. For instance, Petruzzelli et al. (2021) conceptualized the implications of crowdfunding for sustainability by providing a guide to better understand the relevance of the crowdfunding phenomenon for sustainable initiatives. Testa et al. (2012), also with a conceptual study, discussed how crowdfunding might represent a novel socio-technical practice with the potential of up scaling and transforming financial and sustainability regimes. However, empirical research is still missing. An interesting investigation has been conducted by Vismara (2013) analyzing equity crowdfunding. The author provides evidence of the attractiveness of sustainability-oriented ventures in equity crowd funding; moreover, he suggests that although sustainability orientation does not increase the chances of success in engaging professional investors, it attracts a higher number of restricted investors.

Entrepreneurship, broadly defined as the process of setting up a business or businesses, involves the recognition and seizing of opportunities in an environment highly characterized by uncertainty (Shane & Venkataraman, 2000). Serial entrepreneurs consistently engage in entrepreneurial behaviors via constant and sequential entrepreneurial activities (Amaral et al., 2011). Seriality in entrepreneurship has been mostly investigated as a matter of occupational choice (Carbonara et al., 2020), with studies ranging in their approaches, forming a dichotomy between those arguing for the importance of learning by doing (Rocha et al., 2015) and those countering with the study of the innate abilities of individual serial entrepreneurs (Westhead & Wright, 1998).

Serial entrepreneurship is not well explained through existing theories of industry evolution and labor market theories of occupation choice. Researchers have thus utilized other theoretical foundations. Several studies on serial entrepreneurship are built upon the behavioral theory of the firm (Cyert & March, 1963) and the concepts of bounded rationality (Simon, 1972), which offer three conditions that may affect seriality in entrepreneurship. Firstly, causal ambiguity surrounding the action-outcome relationship makes it difficult for entrepreneurs to evaluate courses of action (Levitt & March, 1988). Secondly, entrepreneurs are prone to cognitive bias, such as over-confidence, which may cause dysfunctional outcomes due to asymmetry between subjective evaluations and actual abilities (Gudmundsson & Lechner, 2013). Thirdly, entrepreneurs struggle to evaluate outcomes due to the subjectivity of the definitions of success and failure (Hogarth & Karelaia, 2012).

Studies based on the principles of cognitive psychology are also pervasive in entrepreneurship (Baron & Ward, 2004; Mitchell et al., 2002). The concept of entrepreneurial cognition has been widely studied to describe how entrepreneurs think and behave (Sasseti et al., 2018; Vlačić et al., 2020). Entrepreneurial cognition pertains to “the knowledge structures that people use to make assessments, judgments, or decisions involving opportunity evaluation, venture creation and growth” (Mitchell et al., 2002). The focus here is on how entrepreneurs use heuristics and are subject to bias. For example, Ucbasaran et al. (2010) explored how serial entrepreneurs who have experienced failure do not appear to adjust their comparative optimism.

The entrepreneurial intention – as explained by models such as Shapero and Sokol’s (1982) entrepreneurial event model (SEE) and Ajzen’s (1991) theory of planned behaviour (TPB) – has also been applied to the study of serial entrepreneurs. For example, the higher the level of entrepreneurial intention, the faster the serial entrepreneur’s rate of new venture creation (Kautonen et al., 2015; Krueger et al., 2000). According to the SEE model, the entrepreneurial intention is influenced by an individual’s perceived desirability, perceived feasibility, and propensity to act upon opportunities. The TPB model, instead, posits that entrepreneurial intention rests on the individual’s attitude toward an act, the subjective norm, and perceived behavioural control.

3. METHODOLOGY

There is good gap between allocated and released entrepreneurship development funds for the Indian incorporation. The point is explored in the current study. The focusing points considering the gaps are- state-wise unreleased funds. Further, in this study, the potentiality of the existing business enterprises to employ human resources state wise and also sector wise is checked. The secondary data, released by Ministry of Skill Development and Entrepreneurship Development, Government of India is used for the purpose.

3. DATA ANALYSIS AND DISCUSSION

The present section discusses the reports released by Ministry of Skill Development and Entrepreneurship Development, Government of India. In it the Table1 focuses on theState/UT-wise fund allocated/released, while Table 2 checks state and union territory

wise incremental human resource requirement from 2013-22. Finally the Table 3 is on employment base on 2013 and projected by 2022.

Table 1: State/UT-wise Fund Allocated/Released as on 17.03.2021

State/UT	Fund Allocated(crores)	Fund Released(Crores)	Difference(Crores)	Difference(%)
Maharashtra	183.09	51.5	131.59	18.10
Gujarat	80.81	29.95	50.86	7.00
Uttar Pradesh	65.09	20.05	45.04	6.20
Madhya Pradesh	51.27	10.15	41.12	5.66
West Bengal	65.63	25.21	40.42	5.56
Punjab	55.64	16.84	38.8	5.34

Source: <https://data.gov.in/resource/stateut-wise-fund-allocatedreleased-17032021-ministry-skill-development-entrepreneurship> -Presented in Rajya Sabha in response to RAJYA SABHA SESSION - 253 UNSTARRED QUESTION No 2869; Data Figures are INR in Crore (retrieved on 04.04.2023)²

The above mentioned Table 1 focuses on the differences in Allocated and Released Fund. The Table is based on the Ministry of Skill Development and Entrepreneurship, Government of India. The data till 17.03.2021, considering allocated (1080 crores.) and released (353 crores) funds, it comes up that 68% of the total allocated fund remains unreleased. The first five position in the list goes to Maharashtra(131.6) crs, Gujarat(50.86 crs), Uttar Pradesh(45.04 crs), West Bengal(40.42 crs), and Punjab(38.8 crs). However, for this states the difference percentage is significantly high for Maharastra(18%). However, for the other states the difference percentage is less than 10%. However, the smaller states like, Arunachal Pradesh, Manipur, Meghalaya, Mizoram, Nagaland, and Sikkim have less than 5 percent released fund difference. Same is the case for the Union Territories like- Andaman and Nicobar Islands, Chandigarh, Dadra & Nagar Haveli, Daman & Diu, Ladakh, Lakshadeep,i.e, almost all of the Union Territory. If further checked most of them are small states and their allocated funds are also below 5 crores.

Table 2: Incremental Human Resource requirements across States during 2013-22

State	Incremental HR requirement Total 2013-22	HR.Requirement(%)	Deviation from Mean
Maharashtra	15522185	12.9	11224525
Tamil Nadu	13552000	11.3	9254340
Uttar Pradesh	11011055	9.2	6713395
Andhra Pradesh	10871315	9.0	6573655
West Bengal	9342561	7.8	5044901

Nagaland	97382	0.1	-4200278

Source: <https://data.gov.in/resource/incremental-human-resource-requirements-across-states-during-2013-22-ministry-skill> -Presented in RajyaSabha in response to RAJYA SABHA SESSION – 237 UNSTARRED QUESTION No 589(retrieved on 04.04.2023)³

The present Table 2 is on the Incremental Human Resource requirements in different states and Union Territories in India. As per the data, from 2013-22, the Incremental Human Resource requirements are 12 crores(appx). In this list the first ten states with maximum requirements are Maharashtra, Tamil Nadu, Uttar Pradesh, Andhra Pradesh, West Bengal, Karnataka, Madhya Pradesh, Delhi, Gujarat, and Jharkhand. Approximately 80 percent Incremental Human Resource requirements are from these states. However, the average Incremental Human Resource requirements is approximately 43 lakhs(i.e, 4297660). Highest positive deviation from the mean figure is seen in case of Maharashtra(1 crore 12 lakhs) and highest negative deviation, in case of Nagaland(almost 42 lakhs). About ten states have positive deviations and rest 18 states have negative. The states that are above the Incremental Human Resource requirements are - Maharashtra, Tamil Nadu, Uttar Pradesh, Andhra Pradesh, West Bengal, Karnataka, Madhya Pradesh, Delhi, Gujarat, and Jharkhand. Rajasthan has the lowest negative deviation from the mean. The analysis of the Table also floors the fact that, the states that have one percent or less HR requirements are mainly the North-Eastern states and are the smaller ones.

Table 3: Sector wise requirement of human resource from 2013 to 2022

State	Incremental HR requirement Total 2013-22	HR.Requirement(%)	Deviation from Mean
Maharashtra	15522185	12.9	11224525
Tamil Nadu	13552000	11.3	9254340
Uttar Pradesh	11011055	9.2	6713395
Andhra Pradesh	10871315	9.0	6573655
West Bengal	9342561	7.8	5044901

Karnataka	8476134	7.0	4178474
Madhya Pradesh	7816045	6.5	3518385
Delhi	6341921	5.3	2044261
Gujarat	5756711	4.8	1459051
Jharkhand	4452801	3.7	155141
Rajasthan	4242438	3.5	-55222
Haryana	3577999	3.0	-719661
Odisha	3345584	2.8	-952076
Chhattisgarh	3043736	2.5	-1253924
Kerala	2956896	2.5	-1340764
Punjab	2899005	2.4	-1398655
Uttarakhand	2061143	1.7	-2236517
Assam	1234357	1.0	-3063303
Himachal Pradesh	1206379	1.0	-3091281
Jammu & Kashmir	1122787	0.9	-3174873
Tripura	259330	0.2	-4038330
Meghalaya	248954	0.2	-4048706

Arunachal Pradesh	147046	0.1	-4150614
Mizoram	140188	0.1	-4157472
Nagaland	97382	0.1	-4200278

Source: <https://data.gov.in/resource/sector-wise-requirement-human-resource-2013-2022fromministry-skill-development> -Presented in RajyaSabha in response to RAJYA SABHA SESSION – 241 UNSTARRED QUESTION No 273(retrieved on 04.04.2023)

Finally, the Table 3 checks the sector wise human resource requirements. If number wise considered in the sectors than the projected first five human resource requirement sectors in 2022 are – Agriculture (215.6 million), Building, Construction and Real Estate(76.55 million), Retail(55.95 million), Transport and Logistics(28.4 million), and Textile and Clothing(21.54 million). These five sectors are projected to account for 69 percent of the total employment. However, when considered in terms of growth rate in employing human resources, the first two sectors with more than 200 percent are Beauty and Wellness(239) and Media and Entertainment (225). The sectors that comes between 100 and 200 percent, considering the same criteria, are Furniture and Furnishing (175), Leather and Leather Goods(121), Electronics and IT Hardware(107), Health care (106), and Telecommunication(100). However, the sectors that are projected to have a growth of 50 to 100 percent are – Tourism, Hospitality and Travel(94), Pharma and Life Science(93), Domestic Help(82), Gems and Jewellery(78), IT and ITES(73), Transportation and Logistics(70), Security(69), BFSI(67), Food Processing(63), and Handlooms and Handicrafts(53). However, a negative growth of 11 percent was predicted in the Agricultural sector in terms of Human Resource requirement. Overall the percent

incremental growth in human resource requirement is predicted to be 27 percent (approximately).

CONCLUSION

In today's date India stands to be the most populous country in the world, surpassing China. So, providing employment to this huge population is a huge challenge. In this position India has to explore all possible avenues to generate employment. The possible avenues are exploring trends, gaps, unused or underused resources, and finding new technologies for betterment. The exploration in their part will help in launching schemes and programs for the ruling government. Further, the schemes and programs help in creating self-employment and entrepreneurial ventures. To check thorough the endeavor carried out from the government's part, the union government is keeping no stones unturned. Startup India, Make in India, Atal Innovation Mission, Support to Training and Employment Program for Women (STEP), Jan Dhan Aadhar-Mobile (JAM), Digital India, Biotechnology Industry Research Assistance Council (BIRAC), Department of Science and Technology (DST), Stand-Up India, Trade related Entrepreneurship Assistance and Development (TREAD), Pradhan Mantri Kaushal Vikas Yojana (PMKVY), National Skill Development Mission, Science for Equity Empowerment and Development (SEED) are some of the challenging endeavors taken up by the union government in this direction. The result is obvious as at present India is placed among the five top GDPs in the world. The GDPs reward is however the immediate blessings of the big population in which a big portion is youth.

ABSTRACT

The present era is denoted as the social media era, due to its ever increasing popularity. Its role and influence have been felt in several spheres of human life. Politics is no exception. For a long time, political parties have tried to use social media for political communication and mobilization. This paper unfolds how the political parties use this online platform for mobilizing the common people. But it comes here with a twist. The paper has shifted its attention from viewing social media just as a political mobilizer to a political evaluator. The paper seeks to analyse the ‘Mobiluator’ (Mobilizer + Evaluator) role of social media – how it redefines politics and, in the process, how it modifies itself. The role of the social media is thus evaluated in the background of Indian politics in general with special emphasis on Indian political parties and their leaders.

Keywords: Social Media, Politics, Mobilizer, Evaluator, Mobiluator.

I. Introduction:

Media whether conventional or new, always reflect the society. Social media perform the same act. Politics is also embedded in society. So, we can able to analyze the political activities through the lenses of social media. Any changes in politics are also first reflected through the media. Since social media is the latest innovation in the media technologies, this paper intends to evaluate the present Indian political scenario through social media. In doing so it has been realised that the social media has not remained static over time. Not only it has changed our interpretation of politics but in the process has also changed itself. This study focuses on the changed role of social media. Starting simply as a weapon of political mobilization it has turned out into an evaluator itself. Previously the political parties used it as a means to communicate and mobilize the voters. It was labelled as the new yardstick of political mobilization. People were then at the receiving end – just responding to the mobilization strategies of the political parties. Of late social media has redefined its role. Now it is a weapon in the hand of the common people to evaluate the different political parties. People no longer are in the receiving end. They are in the driving seat with the social media as their steering. The political parties which so long relied heavily on social media and made it their best friend to overcome the electoral hurdles are now seeing social media as their evaluator and itself coming up as a challenge to overcome. That technology cannot drive mankind, rather it is the other way round is the main inspiration of this research. Media is considered as the fourth estate of democracy. Social media shares the same dignity particularly then when politics comes under the strong scanner named social media.

II. Theoretical Framework:

Various online articles have been consulted for an easy understanding and analysis of the topic. The online literatures have helped in building a critical understanding of the topic. The websites of the different political parties have been consulted to build up a detailed understanding of the political strategies of the parties. Moreover, the social media platforms like Facebook, Twitter and Instagram of different political leaders have been checked for gaining primary data out of it – the analysis of which has helped in the interpretation of the usage of social media by the political parties. The website of the election commission has been consulted to get information about the different elections, and their results. Apart from these, different articles in the news papers have helped in gathering information and have acted as a source of primary data. The articles mentioned in the references have also been a good source of secondary data.

III. Method:

The study has been carried out with both the primary as well as secondary data. Primary data have been mainly accumulated from online platforms like Facebook, Twitter, Instagram and the different political party websites. The biggest source of primary data has been the social media profiles of different political party leaders which helped me in evaluating the popularity index of the leaders. It has also helped me to bring forward a comparative analysis with US – which saw the first political use of the internet. The websites of the political parties have been a great source of primary data providing inputs on the party structures and the party ideology. The websites of the election commission of India has served as the first hand data to gather information about the electoral results of the Lok Sabha as well as the different state Legislative

Assemblies. Certain personal blogs and tweets have also been studied and included in the research work. Some of the common users of social media have been interviewed randomly to understand the citizen’s perspectives on social media. Secondary data have also helped in forming the knowledge base. Different articles and news papers reporting have helped me to analyse my observation.

IV. Discussion:

The penetration of social media into politics has a long history. The United States realised a striking change in political communication in the mid 2000s with the steady rise of social media as the individuals, party leaders and politicians could actively engage in political dialogues through the new media. Democrat candidate Howard Dean’s presidential election campaign in 2004 saw for the first time the usage of the internet for political purpose and he was credited with organizing the first campaign website. The 2008 presidential election in US was the first election where the candidates used the new media as a campaign or propaganda tool. Barack Obama was in that sense the first one to fully use the social media to organise his followers, mobilize them and to communicate with them. In the following years Obama’s engagement with social media increased further and was far ahead of his chief competitor Mitt Romney. In October 2012, Obama had nearly over 20M followers on Twitter, 29M likes on his Facebook page, 1.4M followers on Instagram. Besides Obama had a good numbers of followers in his social media accounts like Spotify, Pinterest, YouTube etc. The following years of presidential election in US that is 2016 and 2020 saw even greater usage of social media by the candidates irrespective of the parties.

Table 1: Popularity Index of US Presidents on Social Media

US President	Facebook		Twitter Followers	Instagram Followers
	Total Like	Total Follows		
Joe Biden (2021 – Till Date)	9.4M	11M	31.9M	17.6M
Donald J. Trump (2017 – 2021)	32M	35M	193.9K	23.7M
Barack Obama (2009 – 2017)	-	55M	130.3M	34.9M

[Source: Meta © 2021, compiled by the author]

Keeping in track with the global trend Indian political parties also started using social media for electoral purpose. Ahead of the 2014 Loksabha election in India, all the political parties were trying their best to influence and mobilize the voters through social media. Though the 2009 general election in India saw a negligible use of social media, the pre 2014 electoral politics saw a larger use of social media by the political parties. The report which was published in April 2013 by the Internet and Mobile Association of India (IAMAI) and the Mumbai-based

Iris Knowledge Foundation said Facebook users would “wield a tremendous influence” over the results of the polls in 160 of India’s 543 constituencies. Again according to a study in October 2013 by IAMAI and Mumbai-based market researcher IMRB International, the major competitors like the Indian National Congress (INC) and the Bharatiya Janata Party (BJP) put aside 2 – 5 % of their electoral budgets for their social media activities. Narendra Modi was the first among the Indian politicians to set up a website and today his social media presence is just exemplary. Here it is also relevant to refer to the name of Arvind Kejriwal, the Aam Admi Party (AAP) chief who could then accumulate 1.5M followers on Twitter since joining on November 2011. Even AAP launched the campaign called “Missed Call For Free” where they urged the common people to give them a missed call by which the party members could get in touch with them and could then formally enrol them as their own party member. Whatever the situation is, following another social media king Shashi Tharoor, one can say “now no serious politician is seen as being able to avoid social media all together”.

Now I will try to evaluate the social media penetration into Indian politics and its consequent adaptation from three different perspectives. The social media politics has not remained the same in India over the time, rather it has changed character as per the changes in political ecology and its usage by the political parties. Not that these three perspectives that I am referring to are the only available method for analysing the online politics and its reorientation in India, but I have chosen to stick to the following three for my research purpose.

IV(a). Social Media Presence of Political Parties:

All the political parties have maintained their own party website which has now become as basic as a party office. Parties like BJP, INC, All India Trinamool Congress (AITC), Communist Party of India (Marxist) (CPIM) and AAP are very active on social media and always try to mobilise common people through the party website. The websites of different political parties have detailed information about the party, leadership, organization, vision, news, media resources, programme, constitution, document etc. Apart from these general features, some parties have specialised windows on their websites. Here we can cite the example of AITC party as they have separate windows like #Best Bengal, Promise Vs Delivery, #Big Talk Only BJP etc. Similarly INC has designed their websites with some special features like key issues, in focus, voice of the nation, media etc. In Delhi assembly election of 2020, AAP used its social media platforms with attractive one liners memes and parody clips which highlighted the performance of Kejriwal government in areas of health, power, transport and education. The AAP set up a new and innovative campaign strategies particularly for the young voters who are not comfortable with the complex political jargon. Even the other political parties, particularly the regional parties are trying to make a good presence through social media. If we consider the case of Bahujan Samajwadi Party (BSP), they, apart from engaging in ‘BSP Yuva Samvad’ programme or ‘Prabudha Mahila Vichar Ghosthi’ and ‘BSP Mahila Sammelan’, are also planning for a rising social media presence. But on the contrary, the Shiv Sena has claimed that social media platforms are being used systematically to defame Mumbai and Maharashtra. The IT cell of the All India Anna Dravida Munnetra Kazhagam (AIADMK) party has already come up with several campaign strategies against the government which it says is unnecessarily targeting its cadres. AIDMK’s IT cell has plunged into action and all district IT committees have been sent directions from the central head quarters to become ready on the developing issues and to counter the government plans. Even the Left parties are particularly attracting the youth voters through their online campaign named ‘CPIM Digital’.

IV(b). Political Leaders on Social Media:

Political Party leaders irrespective of parties are very keen to have their presence on the social media platforms. If we start with the Prime Minister of India then he once said, “I dream of a Digital India where government proactively engages with the people through social media”. The basis of any democratic government is people’s participation and it is rightly said by Modi that through social media government can engage with the people. For such an active engagement leaders across the world try to make their presence in social media. The Indian democratic politics have taken the shape of net wars now where the leaders are democratically engaged in political debates, discussions, trolls, memes, tweets and re-tweets. Through the different social media app like Facebook, WhatsApp, Twitter, Instagram, the leaders enter into a direct interaction with the common people of the country and can measure their pulses and can thus modify their political activities accordingly. Starting from Narendra Modi, Shashi Tharoor, Rahul Gandhi, Arvind Kejriwal, Mamata Banerjee, Amit Shah, Abhishek Banerjee, Amit Malviya, M. K. Stalin, K. Chandrasekhar Rao, Naveen Patnaik and others have kept no stone unturned to make us feel their presence on social media. They have found social media a ready hand medium to influence and mobilize the public opinion in their favour. Through the different social media activities, they always uphold their developmental plans and programmes and at the same time highlight the failure of their oppositions. The leaders somehow manage to create a virtual bonding with their followers where they build up a 24X7 connectivity. Though this is merely a technical ‘connectivity’ and doubts remain for actual ‘connectedness’, still the followers feel that they can directly communicate with their leaders and through social media the gap between the ‘government’ and the ‘governed’ is reduced. The different surveys conducted have shown how the social media is considered as a tool for the political engagements of the youths which suit appropriately with their tech-savvy lifestyle. Anuj Sayal, Group Chairman, ADG Online said, “political parties have used big data and analytics techniques for increasing mass outreach and conveying their key messages for the general elections” (Metkar & Aade 2020: 5). The political leaders not only try to influence the swing voters through social media but they choose new media against the red tapism of conventional media as this new media saves their time, money and resources. Social media indulges in an innovative political communication and enriches the public dialogue.

A table is provided below to see the popularity index of some of the political leaders of India.

Table 2: Popularity Index of Some Indian Political Leaders in Social Media Apps

Leader And Their Party Name	Facebook		Twitter Followers	Instagram Followers
	Total Like	Total Follows		
Narendra Modi (BJP)	46M	46M	73.2M	63.6M
Rahul Gandhi (INC)	3.9M	4.5M	19.5M	1.7M
Sitaram Yechury (CPIM)	261K	270K	1M	16.8K
Arvind Kejriwal (AAP)	8.2M	8.8M	23.5M	1.2M

Mamata Banerjee (AITC)	3.8M	4.7M	6.3M	183K
M. K. Stalin (DMK)	2.6M	2.7M	2.8M	1M
K. Chandrashekar Rao (TRS)	779K	838K	1.2M	5K
Naveen Patnaik (BJD)	1.5M	1.6M	3.3M	159K

IV(c). Citizen’s Perspective:

The social media politics was introduced in India with the main intention to mobilize the people of India. The citizens including the youths are influenced and mobilized by the political party leaders. The different social media platforms turned out to be the main agent of political mobilization in India. The new media gave the scope to the people to engage into dialogue with their leaders rather than the monologue character of the conventional media. The people felt free to connect with the different party leaders, follow them through the social media and in the long run get mobilized either overtly or covertly. The 2013 Delhi Legislative Assembly election and 2014 Lok Sabha elections were thus a game changer in the sense that the prominent entry of social media in politics has changed the approach towards politics in India, generally by the people and particularly by the political parties of India. The AAP which placed an alternative model of governance as opposed to INC and BJP was formed in November 2012. Within few months the AAP made an electoral debut in 2013 Delhi Legislative Assembly election and emerged as the second largest party after BJP. Again in 2015 Delhi Assembly election AAP won 67 out of 70 seats. AAP also made a grand result in 2020 Delhi Legislative Assembly election with 62 seats. All these grand victories were possible due to the political revolution brought forward by AAP in the Indian politics. The AAP pioneered the crowd-sourced model of electoral fund raising in India with small donations running the party right from the beginning. Moreover, the party’s clarion call “Paanch Saal Kejriwal” or the birth of “Mufflerman”, a nick name for the muffler-clad anti-corruption crusader of Delhi, Arvind Kejriwal, all got circulated in the screens of the social media, leading to the tremendous popularity of the party. Similarly, the 2014 Lok Sabha election in India saw a grand victory of the Modi led BJP. There were innumerable reasons behind it but the most pronounced among all was the social media popularity of the party. Amongst the social media, individuals came up with the satirical takes on sports, movies (in Hindi and English) and songs amongst other things in support of the BJP campaign slogan that were premised on “Aab Ki Baar, Modi Sarkar” (this time we will have Modi government). The 2019 general election was also remarkable for BJP which received 37.36% of the vote, the highest vote share by a political party since the 1989 Lok Sabha election and won 303 seats, further increasing its substantial majority. In addition, the BJP led National Democratic Alliance (NDA) won 353 seats. Political parties spent over 53 crore rupees with the largest spending by BJP on digital platforms for online advertisements. The BJP placed 2005 advertisements on Facebook while the INC placed 3686 advertisements. According to a study by Vidya Narayanan and colleagues at the Oxford Internet Institute, social media was used by all the major parties and alliances, and all of them linked or posted divisive and conspiratorial content and images.

Now when the social media is in its heyday, there is again a game change. The change is in perspective towards politics and this time by the people of India in particular. So long social media was mainly used by the different political parties as an agent of political mobilization. So, for long it was a mobilizer. Now with the increased social media politics in India, people of the country are using it as an ‘evaluator’ to evaluate the role of any political party. People before any election can check the facts regarding the contesting political parties, can evaluate their roles and performances in other states, can draw comparison with other parties which definitely help the people to draw a decision about voting in favour of a particular political party or against it. This is what exactly happened in the 2021 West Bengal Assembly election. Though the BJP’s national level’s leaders flew to West Bengal innumerable times, with their relentless propaganda on social media, the party could not come into power as it could not built up a realpolitik image coming out of its virtual world. Even in November 2020, the BJP placed Amit Malviya, the head of its information technology cell as its co-convenor of the party in West Bengal. This was a remarkably significant development as it formally recognised the role that social media as a medium which the BJP has relied on largely since 2014 general election and had become an integral part in the West Bengal Assembly election. People in West Bengal compared the worksheet of the two main contesting parties through the social media and they voted for the AITC party both for its online image and popular politics strategies adopted and implemented by the party supremo Mamata Banerjee. Similarly though the onscreen Modi wave created magic in the 2019 Loksabha election, it could not stand against the honest and hardworking image of the Chief Minister of Odisha, Naveen Patnaik and thus BJP lost the 2019 Odisha Assembly election to Biju Janata Dal (BJD).

V. Findings:

Thus, with the passage of time the role of social media has also changed covertly. It is setting up a new trend. From being just a simple mobilizer it has now turned out into a MOBILUATOR (Mobilizer + Evaluator). The medium which was so long a means of political mobilization for the parties has now turned out into a weapon in the hand of its users to evaluate the same political parties. Thus, social media in the process has also modified itself. It’s a game change for the entire political scenario, political leaders and the medium itself. The new medium which was brought into politics by the leaders to help themselves, at present has turned around 180 degree to be a medium of their own assessment now and from.

VI. Conclusion:

Thus, social media is not an easy medium to handle rather it should be handled with care. With the changing political scenario the role of the medium is also changing slowly. No political party can think to win an election just by mere propaganda in the screens of social media rather it has to be active, honest and hardworking with a clear image throughout the country to pass the social media test. Social media can play a catalytic role (along with hard work and clear image) to bring a party in power like in case of AAP but it cannot singlehandedly make a party win election like the case of BJP in the West Bengal Assembly election 2021. At the end it should be noted that social media is nothing but a technology and technology is always driven by human beings and not the other way round. So, it is ultimately the people of the country who acts like the ‘umpire’ to evaluate the performance of the political players in the open field named social media.

ABSTRACT

An investigation on environmental knowledge, attitude towards environment and values of high school students of Bathinda district was undertaken. The objectives of the study were to find out the differences between boys and girls with respect to environmental knowledge, attitude towards environment and environmental values; to explore the relationship between the environmental knowledge, attitude towards environment and environmental values of high school students. Stratified random sampling technique was used to collect data from four government high schools of Bathinda district of Punjab. The total sample size was 152 and the proportion with respect to number of boys and girls in each school was 76. This was calculated with the help of Rao software sample size calculator. survey method was followed. Self-made tools like environmental knowledge test, environmental attitude scale and environmental value scale were administered to collect the data. T-value was calculated to find out the significant differences among boys and girls with respect to environmental knowledge, environmental attitude, and environmental values. The main results of the study revealed that, there is significant difference at 0.05 level between boys and girls with respect to environmental knowledge. It was also revealed that environmental attitude and environmental values between boys and girls do not differ significantly.

Keywords: Environmental Attitude, Environmental Knowledge, Environmental Values

Introduction

Environment means surroundings which constitute all living and non-living components. Living creatures like animals, plants and non-living components like soil, air and water are elements of environment. All things are directly or indirectly depending on environment for our survival. Environment refers to the sum total of conditions which surround human beings at a given point of space and time. Environment is the combination of all of physical and living factors that act on a living being, populations, or natural society. It includes physical component, which is known as physical environment. The natural surroundings like air, water, land, atmosphere is also part of physical environment but they are commonly known as natural environment. Knowledge is a precondition for environmental awareness to ignite individuals. It is the students' ability to understand and evaluate the impact of a society on the ecosystem. Rational actions toward the environment are the translation of knowledge that individuals have. High level of knowledge on the environment will create positive attitude towards the environment. Knowledge increase awareness which combination would motivate environmentally responsible actions. Student's attitude towards the environment is worldview; environmental concern and environmental attitude towards environment. Environmental awareness among students is highly influenced by their background, knowledge, attitude and sensitivity towards the environment. The objectives of this study are to identify level of knowledge on environmental literacy among high school students and to identify their level of attitude towards environmental issues that are occurring currently. Values are on the other hand enriching education.

According to Mukherjee (1949) values are the socially approved drives a goal that are internalised through the process of conditioning, learning or socialisation and that become subjective preferences, standards and aspirations. Bhatia and Narang (2002,) defined values as the things we strive for. Values are that which guide our behaviour and put meaning into our existence.

Review of the Related Literature:

Sun (2018) Conducted study on impact of environmental knowledge and product quality on student attitude toward product with recycled/manufactured content. The study indicates: (1) a significant positive relationship was found between both the intention to purchase and the purchase of recycled products; (2) the perception of recycled product risk has a significant negative impact on the perception of recycled product quality and the attitude toward environmental protection; (3) perceived quality of recycled product is positively related to attitude toward environmental protection; (4) perceived quality of recycled product and attitude to environmental protection are positively related to intention to purchase recycled products; and (5) surprisingly, knowledge regarding environmental damage and pollution is unrelated to attitude toward environmental protection.

Chouhan (2017) Conducted study on attitude level of male and female teachers regarding environmental attitude. The major findings revealed that majority of the teachers were found to have favourable attitude towards environment and there was no significant difference found

between the level of attitude of male and female teachers in all the areas (health and hygiene, wild life, forests, polluters and environmental concern) except population explosion on environmental attitude scale.

Parveen (2015) Conducted study on attitude of Muslim students towards environment and knowledge on environmental education in and around Chennai. The study showed that all age groups had moderate knowledge and attitude towards environmental knowledge toward.

Zheng (2015) Conducted study on correlation between the environmental knowledge, environmental attitude and behavioural intension of tourists for ecotourism in china, the results of this study indicate that 1. there is a positive correlation between the environmental knowledge and the environmental attitude, 2. there is a positive correlation between the environmental attitude and the environmental behaviour, and 3. there is a positive correlation between the environmental knowledge and the environmental behaviour.

Upadhyay (2013) Conducted study on knowledge and attitude towards environmental pollution among youths. The study showed that environmental knowledge was correlative with educational hierarchy of gender. With urban dwellers having an edge over the rural counterparts. However there seems to be increased need of environmental knowledge in our areas.

Pyrkhtlang (2013) Conducted study on environmental attitude ethics and practices among jaintia students in Jaintia hills district Meghalaya. Results indicates that both private and government institutions having same level of environmental attitude and environmental ethics. Whereas, positive Environmental practices were high in government institutions than private institutions.

Statement of the problem

The aim is to strengthen their knowledge and understanding about the environment and to convey adequate knowledge and inculcate the right environmental attitude and values among young generation specifically. Hence the study is entitled as **environmental knowledge attitude towards environment and values of high school students**

Operational Definition

The different terms as used in the title of the study and proposed to be used in the body of the report have been operationally defined as follows:

• Environment

It is natural surroundings for all living beings and plants to carry on their life functions.

• Environmental knowledge

Individuals knowledge on environmental issues and their ability to understand and evaluate its impact on society. With following dimensions awareness, consciousness.

• Environmental Values

One's belief towards environment, and its protection. In the present study role in sustainability of human beings. With following dimensions self-interest, openness to change, altruism

High School Students

High school students are those students who are studying in 9th class in government schools in Bathinda.

Objectives

The objectives of the study are as follows:

- To study the difference between boys and girls of high school students with respect to environmental knowledge.
- To study the difference between boys and girls of high school students with respect to environmental values

Hypotheses

- ❖ There is no significant difference between boys and girls with respect to environmental knowledge
- ❖ There is no significant difference between boys and girls with respect to environmental values.
- ❖ There is significant relationship between environmental of knowledge and environmental values among high school students among high school students.

Methodology: The major thrust of this research is to identify the influence of environmental knowledge towards environmental attitude and values of high school students. so, Descriptive research is method is considered as suitable for this study. The research method will be survey design. Survey method is scientific and reliable. it is a method to collect data in a systematically and methodical approach about characteristics of interest from some or whole population using well defined plan and procedures and assemble that information or data into a summary. It mainly deals with the present, although it often considers past events influences as as the relate to the present situation.

Population: All the government secondary school students of Bathinda City will constitute the population of the present study.

Sampling Frame:

In the present study, 04 government high schools have been selected randomly by using the lottery method. Out of these schools total 249 students are studying in the class 10th. Out of these 124 boys and 125 girls are studying in the class 10th

SAMPLING TECHNIQUE

For the present study, the researcher will use the proportionately stratified random sampling technique for data collection. Data will be collected from the four government secondary schools of Bathinda city of Punjab.

Tools: Investigator will develop three self-made tools on.

Environmental knowledge

Environmental value scale

The tools will be validated by the experts before administering on the target sample.

Technique of Analysis and Interpretation

All the hypotheses of the study will be analysed through Mean, Standard deviation Pearson's coefficient correlation

Delimitations of the study

- The study will be conducted only on the students of 10th class.

The study will be confined in government schools of Bathinda City only.

ABSTRACT

An investigation on effect of flipped classroom model on critical thinking, knowledge transformation and achievement in social science among high school students in Kashmir. The objectives of the study were to explore the difference between experimental and control group of 9th class students with respect to flipped classroom model, with respect to their critical thinking and with respect to their achievement and knowledge transformation in social studies. Quasi-experimental with non-equivalent control group design was used as the design of the research. The present study focused on a sample of 50 students in two groups, namely, 25 experimental group and 25 control group. The investigator adopted the stratified random sampling technique to select the respondents. CT skill: This study adopted the traditional Chinese version of the California Critical. Thinking Skills Test (CCTST) Form A to assess student CT skills (Facione, 1990).

Keywords: Achievement, Critical thinking, Flipped, Social Science, Students

INTRODUCTION

Education is one of the fundamental necessities of man. It is a systematic process which aids the human being in developing harmoniously by acquiring requisite knowledge, skills, values, beliefs, and habits. In other words, it assists human beings in their pursuit of wholeness. Here wholeness implies the harmonious development of all the potentialities of human beings (Parankimalil, 2012), which ultimately contributes to the development of a nation as well as the global world. Education is a process of development which includes three major activities of teaching, training, and instruction. Its objective in any discipline is to help its students to achieve the highest degree of individual development of which they are capable. In the process of growth and development and social change education has undergone an incredible change in the recent past and is still going through a phase of continuous. Every new development or change of larger social relevance brings opportunities to the respective fields. Education in general and students have witnessed a tremendous change due to the change brought in by ICT. It can be defined as the use of hardware and software for efficient management of information. It refers to the forms of technology that are used to transmit, store, create, share, or exchange tasks by helping the common man in fulfilling his needs ICT has empowered teachers and students by providing a learning environment that helped to address different learning styles and thereby fostered the development of 21st century. ICT has supported fabulously the pedagogy and complemented teacher's existing pedagogical approaches' learning is the most popular influence of ICT in the field of education attempted through computer-assisted instruction, computer-based training, online education, and web-based training etc. students are very much popular with ICT which gets reflected on their satisfaction when they use ICT tools in education with which they are comfortable. Today's learners get not satisfied with only traditional methods of Teaching. ICT has provided some of the essential characteristics to meet students' needs to succeed in a learning environment. Passive learning days have gone where students have used their senses to take information from a lecture, reading assignment or audio-visual ICT has now provided active learning where the student gets to learn through participation and investment of energy in all three phases of the learning process (input operations and feedback) therefor education in ICT age is nothing but a blend of both which start yielding a new and good impact on whole education scenario. It is thus declared by the 86th constitutional amendment in 2002 that Education is the basic right of every individual and must be provided to all without any discrimination. But the targets of 'education for all' as declared by the 86th constitutional amendment in 2002 Education is a lifelong process which brings behavioural changes throughout life. Education plays a vital role in changing the behaviour of an individual according to the need of the present situation. Hence it plays an important role in changing the society. The new emerging trends in society decide what a child should learn, how to learn and who will bring these changes.

Blended Learning

Blended Learning is defined and implemented in multiple ways. It is defined as a hybrid of classroom and online learning without the complete loss of face-to-face contact. A blended Learning programme is considered a flexible learning strategy because it combines e-learning and conventional teaching methods.

Models of Blended Learning Programme

Most blended-learning programs resemble one of four models: Rotation, Flex, A La Carte, and Enriched Virtual. The rotation model includes four sub-models: station rotation, lab rotation, flipped classroom, and individual rotation:

- ✓ Rotation model
- ✓ Flex model
- ✓ Self-blend model
- ✓ Enriched virtual mode

Successful learning depends on the model which was used by the teacher according to the nature of the content and knowledge of the students.

Rotation model: A course or subject in which students rotate on a fixed schedule or at the teacher's discretion between learning modalities, at least one of which is online learning.

Station rotation: A course or subject in which students experience the Rotation model within a contained classroom or group of classrooms.

Lab rotation: A course or subject in which students rotate to a computer lab for the online-learnings

Flipped classroom: A course or subject in which students participate in online learning off-site in place of traditional homework and then attend the brick-and-mortar school for face-to-face, teacher-guided practice or projects.

Individual rotation: A course or subject in which each student has an individualized playlist and does not necessarily rotate to each available station or modality. An algorithm or teacher(s) sets individual student schedules.

Flex model: In this method material is primarily delivered through an online platform. Teachers provide only support and guidance. It is self-learning as students learn independently and practice new concepts in a digital environment.

A La Carte model: A course that a student takes entirely online to accompany other experiences that the student is having at a brick-and-mortar school or learning centre.

Critical Thinking

Critical thinking is the process of analysing and evaluating one's thinking with the idea of improving it and taking it to a higher level. Critical thinking means opening one's mind by thinking more deeply. It helps us to deal with complex situations in a very simple way.

LITERATURE REVIEW

Daulay (2012) indicated the effect of flipped learning instruction on tertiary English learners' writing achievement. A significant effect of FL instruction on tertiary English learners' writing achievements. Hence, the implementation of FL instruction is highly recommended for teaching writing at the tertiary level. Johnson (2012) regarded the effect of the flipped classroom model on a secondary computer applications course: student and teacher perceptions, questions, and student achievement. Students in the computer applications class would benefit from the flipped method due to the transitioning of class time from lower-level activities to collaborative group work. Davies (2013) considered Flipping the classroom and instructional technology integration in a college-level information systems spreadsheet course. The results of this study support the conclusion that a technology-enhanced flipped classroom was both

effective and scalable; it better-facilitated learning than the simulation-based training and students found this approach to be more motivating in that it allowed for greater differentiation of instruction. Jou (2014) conducted the Effect of a blended learning environment on students' critical thinking and knowledge transformation. A blended learning environment was effective in improving student Critical thinking and knowledge transformation. Zahrani (2015) proposed from passive to active: The impact of the flipped classroom through social learning platforms on higher education students' creative thinking Furthermore, the students viewed the flipped classroom as an approach that may significantly facilitate their creativity. Obari (2015) identified Successful EFL teaching using mobile technologies in a flipped classroom. students were satisfied with their flipped classroom lessons and motivated by the Blended Learning (BL) environment that incorporated mobile learning. Ahmad (2016) considered the effect of a Flipping Classroom on Writing Skills in English as a Foreign Language and Students' attitudes towards flipping. There was a statistically significant difference between the mean scores of the pre and post-application of the questionnaire of the experimental group in favour of the post-application. This difference can be attributed to using flipping

The Rationale of the Study

The primary purpose of this research is to determine the impact of a technology-integrated, blended learning and flipped classroom model on the achievement of students in ninth-grade, social studies classrooms. To enable teachers to work more effectively with the so-called, Net Generation.

OBJECTIVE OF THE STUDY

- ✓ To explore the difference between the experimental and control group of 9th-class students concerning flipped classroom model/critical thinking/achievement

Hypothesis

- ✓ There is a significant difference between the experimental and control group of 9th-class students in flipped classroom model/critical thinking/achieve

RESEARCH METHOD

The writer chooses the quantitative method where the experimental method is needed to gather the data. Quasi-experimental with a non-equivalent control group design was used as the design of the research. The sample for the present study consists of 50 students from the 9th class students studying at, Holly mission high school of Kashmir. The present study focused on a sample of 50 students in two groups, namely, 25 experimental groups and 25 control groups. The investigator adopted the stratified random sampling technique. The study is quasi-experimental where a pretest-post-test non-equivalent group design was employed. In this research, the investigator selects an IQ test where the students are divided into two groups. Assigning participants to the experimental and control groups. The experimental group was taught using flipped Classroom strategies, whereas the control group was taught by the regular teacher using the conventional teaching method. Then post-tests will administer to both groups. The design is represented and outlined in the following.

Q1 X Q2 - Q3 C Q4 Where Q, Q1 and Q2 = Pre-tests and Post-test
Q3 and Q4 = Pre- test a Post-tests

X = Experimental treatment

C = Conventional teaching

Tools

✓ CT skill: This study adopted the traditional Chinese version of the California Critical Thinking Skills Test (CCTST) Form A to assess student CT skills (Facione, 1990).

✓ Pre- and Post-writing test

CONCLUSION

Today's learners get not satisfied with only traditional methods of Teaching. ICT has provided some of the essential characteristics to meet students' needs to succeed in a learning environment. Passive learning days have gone where students have used their senses to take information from a lecture, reading assignment or audio-visual ICT has now provided active learning where the student gets to learn through participation and investment of energy in all three phases of the learning process (input operations and feedback) therefor education in ICT age is nothing but a blend of both which start yielding a new and good impact on whole education scenario

Limitations of the Study

- The study is confined to 9th-grade students
- The study will be confined to Holly Mission Public School of Budgam Kashmir

All fifty students of 9th grade will be selected for investigation

ABSTRACT

Background It is increasingly believed that the interaction between skin microbes and host immunity plays an important role in acne. Acne also has close connections with the gastrointestinal tract, and many argue that the gut microbiota could be involved in the pathogenic process of acne. The emotions of stress, have been hypothesized to aggravate acne by altering the gut microbiota. The presence of a gut-brain-skin axis that connects gut microbes, oral probiotics, and diet, currently an area of intense scrutiny, to acne severity. This study concentrates on the skin and gut microbes in acne, the role that the gut-brain-skin axis plays in the immunobiology of acne, and newly emerging microbiome-based therapies that can be applied to treat acne.

Objective The purpose of this study was to compare the diversity of the skin microbiota in acne patients before and after taking Polenoderm.

Materials and methods A longitudinal cohort study was performed on 20 participants with moderate to severe facial acne with no recent use of oral and topical antibiotics/retinoids.

Results Hence, it is crucial to understand Polenoderm impact on the acne skin microbiota which is thought to be perturbed, our study provides insight into the skin microbiota in acne and how it is modulated by Polenoderm and diet.

Conclusion Acne also has close connections with the gastrointestinal tract, and many argue that the gut microbiota could be involved in the pathogenic process of acne. As understanding of the microbiome in healthy skin and the pathophysiology of acne continues to develop, new therapeutic targets are arising.

Keywords: Acne, Gut-Brain-Skin Axis Microbiota, Polenoderm, Diet

Introduction

Acne is one of the most common skin diseases worldwide and results in major health care costs and significant morbidity to severely affected individuals.

Acne vulgaris is a chronic inflammatory disease affecting nearly 85% of young people. Acne is a highly prevalent inflammatory skin condition involving sebaceous sites. However, the pathophysiology of this disorder is not well understood (1).

The pathogenesis of acne is attributed to multiple factors. The skin is a reflection of the gut, and acne may be a sign of deeper imbalances in the gut, like inflammation and dysbiosis. The skin is the largest epithelial interface separating the human body from the outside environment, and its surface is colonized by a diverse community of bacteria, fungi, and viruses (2-5).

These commensal microorganisms play critical roles in lipid metabolism, colonization resistance to transient organisms, and regulation of the immune system. It is increasingly believed that the interaction between skin microbes and host immunity plays an important role in this disease, with perturbed microbial composition and activity found in acne patients. Host-microbiome interactions that affect both innate and adaptive immune homeostasis appear to be a central factor in this disease, with recent observations suggesting that the composition and activities of the microbiota in acne is perturbed (6).

In addition, the composition of skin microbiomes varies depending on internal and external factors such as skin integrity and physiological status, antibacterial therapy, and demographic characteristics. Dysregulation of both the innate and adaptive immune systems has been implicated in the pathogenesis of acne (7).

The chronic inflammatory and recurrent skin condition acne vulgaris, commonly referred to as acne, is a disease of the pilosebaceous unit (hair, hair follicle, erector pili muscle and sebaceous gland) and, strikingly, the eighth most prevalent disease globally, affecting approximately 10% of the world's population (8-10).

The disease has a multifactorial aetiology and is triggered initially during adrenarche in susceptible individuals, and can be mild to very severe with respect to symptoms. The emotions of stress (e.g., depression and anxiety), for instance, have been hypothesized to aggravate acne by altering the gut microbiota and increasing intestinal permeability, potentially contributing to skin inflammation and change in sebum production and fatty acid profiles (11).

Fig. 1 (11)

In this article, we review recent developments in the interactions of skin microbes with host immunity, discussing the contribution of dysbiosis to the immunobiology of acne and newly emerging skin microbiome-based therapeutics to treat acne.

Many studies have confirmed that the skin bacterial microbiomes differ between young women and older women (12).

Acne also has close connections with the gastrointestinal tract, and many argue that the gut microbiota could be involved in the pathogenic process of acne. Few studies have examined the effects of antibiotics on the skin microbiota in acne (13).

Recent studies also showed that the gut microbiome is involved in acne, through interactions with the skin microbiome. The term ‘microbiome’ refers to microorganisms (bacteria, viruses and fungi) and their environment. A microbial imbalance or ‘dysbiosis’, compared with the normal distribution in healthy tissues, has been suggested to be involved in the pathophysiology of acne (14-16).

Staphylococcus epidermidis and *Cutibacterium acnes* (*C. acnes*; formerly *Propionibacterium acnes*) are two major inhabitants of the skin that are thought to contribute to the disease but are also known to promote health by inhibiting the growth and invasion of pathogens. The anaerobic bacterium *Cutibacterium acnes* is believed to play an important role in the pathophysiology of the common skin disease acne vulgaris. It is understood that *Cutibacterium acnes* plays an important role in the synthesis of porphyrins on skin. It is alternatively possible that porphyrin levels (determined by the activity of specific *Cutibacterium acnes* strains) directly affect the presence of other bacteria (12).

(Fig. 2) (17)

In relation to acne pathogenesis, the perceived wisdom has always been that the condition develops within a follicle as a result of four main events: (1) androgen-induced hyperseborrhoea, (2) follicular hypercornification, (3) colonisation and proliferation of *C. acnes* and (4) stimulation of a local innate immune reaction (18).

As the old naturopathic medicine saying goes, “The skin is a reflection of the gut.” More recent studies evaluating the role of oral probiotics on acne have largely been published in foreign journals. Probiotics are live micro-organisms that provide a health benefit to the host. The term probiotic has been defined as “living microorganisms which, when consumed in adequate amounts, confer a health effect on the host”. Probiotics modify several factors in the pathophysiology of acne development and can potentially improve compliance as well. The immunomodulatory effects of probiotics on keratinocytes and epithelial cells suggest a physiologic mechanism to support the use of probiotics as an adjuvant treatment of acne (19).

A reduction on the inflammatory cascade again targets a factor in the pathogenesis of acne. People with acne may have more inflammation in their bodies. Oral probiotics can calm inflammation systemically (20).

The aim of this review article is to evaluate the role of pro- and prebiotics on the normal function of healthy skin as well as their role in the prevention and therapy of skin disease. Thankfully, oral probiotics can remedy this situation, improving both your gut and skin health.

Gut dysbiosis (or imbalance in your gut) has been linked to acne and other skin conditions. Oral probiotics like *Lactobacillus acidophilus*/*Bifidobacterium bifidum* can resolve dysbiosis. Acne patients were found to have a decrease in *Lactobacillus* and *Bifidobacterium* bacteria. Stress is associated with acne and also impairs *Lactobacillus* and *Bifidobacterium*. Besides helping your digestion, oral probiotics can also heal key issues linked to skin health and acne reduction. Hormone levels contribute to acne, and oral probiotics can improve hormonal balance, per a study of women with polycystic ovarian syndrome (21).

Propolis has been attracting the attention of researchers because of its antimicrobial, antioxidant, antiviral, and antifungal properties.

Researchers are also currently testing probiotics that contain healthy bacteria to be applied directly to your skin. These are known as topical probiotics (22).

Prebiotics are worth keeping an eye on for acne treatment (23).

There are many dermatological conditions associated with alteration of the intestinal microbiota and / or skin. In the last ten years there have been many researchers who have studied this connection. We can divide these diseases into two groups: The first includes all chronic inflammatory diseases such as psoriasis and atopic dermatitis and autoimmune diseases such as vitiligo and alopecia. In all these conditions, it is very important to explore intestinal inflammation and dysbiosis of the intestinal microbiome. In the second group we can list the diseases usually considered as infections such as acne, seborrheic dermatitis, rosacea and pityriasis versicolor. They are caused by microorganisms that normally live on the skin, even in healthy people. For this reason, we should begin to consider such diseases not as infections, but as a form of dysbiosis of the skin microbiome. The approach to the microbiome in dermatological problems is a 360° approach that assigns a very important role to the diet, but also includes the use of certain natural immunomodulators of the intestinal and skin microbiota. For example, Deniplant, a patented blend of medicinal plants with fruit tree buds, has been tested in dermatological conditions with psoriasis, atopic dermatitis and acne.

(Fig. 3) (1)

CONCLUSION

Skin microbiota (bacteria, fungi, and viruses) are indispensable parts of the skin barrier; they regulate inflammatory processes and provide innate and adaptive immunity. The main inducer for this multifactorial disease is microbial fluctuation of common resident microbes on the skin with each microbe possessing their own purpose and style in protecting the human body. Oral administration of probiotics was found to constitute an adjuvant therapy to conventional modalities for treating mild-to-moderate acne vulgaris.

ABSTRACT

Digital technologies development leads to increase in internet gaming popularity to several audiences, in which these behavior may get non- chemical addictive features as phenomenon of modern society. Although there are studies representing the benefits of gaming, evidences documented considerable difficulties in psychological functioning and distress, not solely in individual/ personal level, but also in facets of family and social context functioning. Nowadays, scientific evidences showed that Internet gaming disorder is recognized as a mental health problem and a psychiatric condition, but with unclear pathogenesis. Within this potential clinical entity, multiple factors are associated with IGD onset, from affective to interpersonal, as well as identifying role of cognitive factors in IGD conceptualization. In this study, we aimed to explore the association between metacognitive beliefs and IGD among university students. A total of 720 individuals participated in the study, with administration of sociodemographic form, Metacognitions Questionnaire- 30 (MCQ- 30), and The Internet Gaming Disorder Test (IGD-20 Test). All variables were significantly correlated, with exception of Cognitive Self- Consciousness. Pearson's correlation and multiple linear regression analyses were conducted to examine the associations between metacognitive beliefs and IGD. Furthermore, Cognitive confidence, and Positive beliefs about worry were associated with IGD. Results showed that dysfunctional metacognitive beliefs are related to IGD among young adults. Findings indicate that interventions should consider targeting modification of metacognitions as with potential for benefits in treatment of individuals with IGD features. However, important is to highlight need for longitudinal studies in order to formulate a definite framework of metacognitive implications on IGD.

Keywords: Gaming, Addiction, Metacognitions, Internet, Internet Gaming

INTRODUCTION

Technology has made internet gaming popular among college students, offering enjoyment, accomplishment, and social interaction. However, excessive online gaming can limit real-life experiences, leading to internet gaming disorder (IGD) and inclusion in DSM-5 (Ko., 2014). Internet addiction is a significant social issue affecting academic, social, and occupational functioning, similar to substance or alcohol addiction.

University students' problematic internet use requires therapeutic intervention. Factors like gender, metacognitive views, and personality may be related, but studies are limited and inconsistent (Kaval et al., 2022). The incidence of IGD in the Bosnian population is not specifically known. A 2018 study conducted in Serbia, which has cultural ties to Bosnia and Herzegovina, discovered that problematic gaming is common among teenagers (Jović et al., 2018).

THEORETICAL FRAMEWORK

Metacognition is the self-operation process and knowledge one has about it, focusing on control of behavior. It includes meta-reductive regulation and metacognitive knowledge, which involves strategies for various expressions (Pintrich, 2002). Flavell defines metacognitive knowledge as beliefs or knowledge that overshadow objects or variables in the receptive regions. It can be divided into declarative, procedural, and situational knowledge. Metacognitive regulation involves activities that help negotiate and learn, minimizing and maintaining mental processes to reduce effective performance. Internet gaming has become a public health problem, particularly for young people, due to its high prevalence and addiction. The American Psychiatric Association's DSM-5 has identified internet gaming disorder as a "needs more research" and emphasizes its serious risk for public health. The disorder is a separate disorder and requires further research to prove its existence.

The prevalence of Internet gaming disorder in society, its clinical course, and the requirements of determining biological factors are emphasized (Arıcak, et al., 2018). This situation has become a health problem that threatens the public, especially students, and it is seen that individuals have problems in their psychosocial, academic and professional functions along with their physical health. Spada et al. say that metacognitions are related to gaming disorder for two reasons. The first sees the internet as a tool to control negative thoughts and emotions and is seen as a tactic that should be guided by metacognition. According to the component, hardware internet use causes negative emotions, according to the metacognitive model, these emotions are associated with metacognitive dissonance. The authors state that metacognition plays a mediating role between negative emotions and questionable internet use and that the metacognitive model of psychological load (Wells & Matthews, 1996) may also include internet use. Studies on the relationships between metacognitive and internet gaming disorder are limited and this issue has been done in recent years.

Metacognition and internet gaming disorder have a clear connection, according to studies. Additionally, it was found that gender positively influenced metacognitive thoughts. The use of online gaming was found to be compatible with metacognitive beliefs (Kaval et al., 2022). Metacognitions were shown to be utilised in a different investigation to forecast IGD. When daily internet usage was controlled, it was discovered that metacognitions contributed

independently to the prediction of IGD. As a result, IGD susceptibility characteristics include a poor ability to notice faulty metacognitions (Aydın et al., 2020). A study compared students with and without IGD, revealing significant disparities in metacognition and IGD disposition. Special interventions for high-risk players improve game metacognition (Dang, et al., 2022).

METHODS

The quantitative research approach is the foundation of this study. To answer research questions and evaluate hypotheses, a quantitative study approach relies on collecting and evaluating numerical data. Statistical analysis techniques (SPSS) are applied to the data in order to gain insightful information and draw conclusions. A survey was distributed as part of the investigation. All participants got informed consent and information about the study's purpose. A set of questionnaires were filled out by participants to evaluate tests IGD-20 and MCQ-30. The survey only took participants 10 minutes to complete.

1. Sociodemographic form:

Our socio-demographic form; gender, age, ethnicity, education, degree, academic year, number of hours of playing video game/s in a week, interesting game type, and loot box parts. Socio-demographics involve; sex (Male-Female), age, ethnicity (Bosnian / Turkish / Other), education (Bachelor / Master / Ph.D.), degree (FASS / FENS / FBA / FEDU / FLW / ELS), academic year (ELS / First / Second / Third / Fourth / Master / Ph.D.), number of hours of playing game/s in a week (None / 0-5 hours / 6-11 hours / 12-17 hours / 18-23 hours / 24+), interesting game type (Real-time strategy / First-person shooter / Role- playing / Turn-base / stimulation / Sports / Facebook / Others), loot box part (- Opened a loot box? - Purchased a loot box or a key? - spent money on loot box in past 12 months? - used loot box but not paid for loot box?)

2. Internet Gaming Disorder Test (IGD-20 Test) (Pontes et al., 2014):

The IGD-20 Test (Pontes et al., 2014) comprises 20 items that are answered using a five-point Likert-type scale: 1 (“Strongly disagree”), 2 (“Disagree”), 3 (“Neither agree nor disagree”), 4 (“Agree”) and 5 (“Strongly agree”). These 20 items assess both online and offline video gaming activity engaged in over the previous 12 months in terms of the diagnostic criteria for IGD (American Psychiatric Association, 2013). At the same time, the 20 items are mapped onto the theoretical addiction components model set out by Griffiths (2005) due to the overlaps between the nine IGD criteria and the components model of addiction. The purpose of this test is to analyze the different profiles found in a sample of players. The IGD-20 Test assesses six different dimensions: salience, mood modification, tolerance, withdrawal symptoms, conflict, and relapse.

3. Metacognitions Questionnaire 30- (MCQ-30):

The Metacognitions Questionnaire 30-(MCQ-30) (Wells & Cartwright-Hatton, 2004) assesses metacognitive beliefs and processes. It comprises five subscales: ‘Positive beliefs about worry’; ‘Negative beliefs about worry’; ‘Cognitive confidence’; ‘Need to control thoughts’; and ‘Cognitive self- consciousness’. For each subscale, six items are scored 1–4, yielding total scores of 6 to 24. High scores indicate, respectively, reduced confidence in memory, greater belief in the need to control thoughts, and an increased tendency towards self-

focused attention. The MCQ-30 has excellent internal consistency and good convergent and predictive validity in normal populations (Spada, Mohiyeddini & Wells, 2008).

FINDINGS AND DISCUSSION

The research questions were asked to the participants for sociodemographic components of the group population, IGD-20 test for internet gaming disorder and MCQ-30 for metacognition levels. The trends between internet gaming disorder and metacognition in Bosnia are examined. Anonymous data were collected from the participants and the obtained data were stored.

Table-1: Sociodemographic features of the sample.

	Mean	S.D.	Count (%)
<i>Age</i>	20.52	1.92	
<i>Gender</i>			
Male			332(44,4%)

No		623(83,3%)
<i>No Pay Loot</i>		
Yes		195(26,1%)
No		523(69,9%)

According to the sociodemographic form, female participants were found in research (44.4% (n = 332) were male and 51.9% (n = 388) were females). The mean age of the participants was 20.52 (SD = 1.92). Ethnicity was indicated into three aspects, 6.6 % (n = 49) of them were other, 36.0% (n = 269) of them were Turkish, 53.7% (n = 402) of them were Bosnian. Moreover, education has been considered into four aspects, bachelor students were 94.4% (n = 706), master students were 1.2% (n = 9), PhD students were 0.1% (n = 1).

DISCUSSION

The aim of this study was to examine the relationship between metacognition and Internet gaming disorder (IGD) among university students in Bosnia and Herzegovina. The focus was on saliency, mood change, tolerance, withdrawal symptoms, conflict, and relapse to examine university students' online gaming disorder. According to the results of 720 participants, a significant relationship was found between metacognition and IGD.

Similar results have been reported in social networking sites addiction (Ünal-Aydın et al., 2019), internet addiction (Spada & Marino, 2017; Chen, Poon, & Cheng, 2017), substance use disorder (Bayrakçı et al., 2015). Worrying about internal situations increases the trigger of online gaming and may worsen the emotional state that facilitates relapse (Aydın et al., 2020). Considering the factors, the IGD facets may be perceived as addictive behavior “automaticity”; hence, internet gaming can become exclusive, rapid reward attainment, automatic, and as relaxation from psychological distress.

Positive meta-worry was found to be connected to saliency, tolerance, conflict and relapse. According to the Aydın et al. (2020) this is key in the various forms of coping activation (rumination, thought suppression, worry) in distressing triggers presence (e.g. upsetting thoughts, sensations, emotions) that may possibly lead to an escalation of negative affect (Wells, 2000). In turn, due to cognitive- affective regulation, it may increase the probability of engaging in internet gaming (e.g. affective states worsening may lead to relapse facilitation).

Our study also found association between negative meta- worry and withdrawal and conflict. This finding was aligned with a study Aydın et al. (2020), in which negative meta-worry presence indicates psychological distress, which may lead to escalation to higher thresholds, and explaining the pathology that may be linked to mentioned aspects of IGD and negative meta-worry (conflict, an indicator that behavior is beginning to impact interactions with others, and withdrawal, an indicator of dependence).

Prior to our knowledge, this is the first research exploring associations of metacognition and IGD among university students in B&H; however, some limitations must be highlighted. We used a cross-sectional design which is not providing causality definite statements. Also, the study relied on self-report questionnaires that are affected by answer accuracy and recall bias; as well as that the diagnosis of IGD was not evaluated by a structured clinical interview. In addition, it is likely that the true prevalence of IGD in our sample is underestimated.

CONCLUSIONS AND RECOMMENDATIONS

The findings of this study suggest that metacognitions may influence IGD. Targeting both areas might be advantageous. Examples of interventions aimed at "re-parenting" and/or building assertiveness skills include cognitive behavior therapy (Speed, Goldstein & Goldfried, 2017).

A large body of research has indicated that metacognitive therapy is effective in reducing psychological distress (Wells, 2013), and there is growing evidence that it can also be used to treat addictive behaviors (Spada et al., 2015). These interventions may include techniques for directly modifying metacognitions, as well as ways to improve attentional flexibility (like the attention training approach) and stop rumination.

Connection between effects of internet gaming and metacognition should be taken into a consideration in future research endeavors. We recommend that future studies use longitudinal design, to assess, monitor are and how metacognitions changing in different sequences of time intervals, and whether these changes are correlated with IGD.

ABSTRACT

The world is not a wish-granting factory. When we repeat something constantly, it starts to lose its meaning and sounds like a noise. And here, people like Cliff learn how futile it is to disturb the universe with the trumpet's clarion call. Hence, this game has no rules. It takes one to be Prufrock; with his sad natural intelligence of the self-taught to identify the cruel steel traps of life which awaits in the end. How often do we fall in a soup of complexities that we judge through selfish eyes. We be in a questioning as to why things didn't commence the way which gives us pleasure. The constant self-obsessive gratification of our demanding conscious cause trouble with our lives.

We often run inside our created dream to escape from the clutches of our reality. The dance of the critically wounded mis-happenings perforates the very fabric of life and relationships. Thus, we all escape to this game to exhale the hardships we don't dare elucidate. What is the solution? We escape. We escape our fantasy and use our doomed reality as the very foundation stones.

Keywords: Futile, Cruel Steel Traps of Life, Complexities Self- Obsessive Gratification, Escape, Doomed Reality, Fantasy World.

INTRODUCTION

“Here we go round the prickly pear

Prickly pear prickly pear

Here we go round the prickly pear

At five o’clock in the morning.”

-T.S. Eliot

Life is “prickly” and full of pain and hardships. Osborne’s *Look Back In Anger* is contemporary, it merges both the strains of the real, and the absurd, into one theatre of feeling. It has spoken the truth through an apparent cobweb of absurdity. He is a great artist who served his audience a series of tragic facts about life, punctuating the narrative with comic relief. This way the audience could absorb the grim nature of the narrative better, without feelings worse, as they are subjected to the art. Jimmy Porter knows how futile it is to convey his emotions to the unsympathetic world ; the individual helplessness of Alison and Cliff makes them retreat to the world of fantasy, the world where the momentary illusions of happiness would sustain them in an otherwise meaningless world.

BODY

In a play of naturalism, “the Bear and the Squirrel game”, symbolically conveys this mood of absurdity, which ironically, the characters have to live, in the life of reality. It is a silly symphony for people who would not bear the pains of being human being any longer – a symphony that offered the momentary indulgence of undulating instincts, far simplified from an existence of complex intellect. It was the one way of escaping from every thing –a sort of “unholy priesthole of being animals to one another”.

The warm trees and the snug caves will now have the edges of “cruel steel traps” as the fine line of tragic laughter and comic tears has been suspended pathetically. For the first time they know that their game is an escape from the absurd into the absurd, that can sing a song about themselves -the pretty ugly things have indeed torn the insides out of each other.

These comic relief might be a release from the pressures of existence, but it adds to the consistently, careful with temper of tragedy, as we recognise absurdity of life. In an attempt to escape the soul, destroying cruelty of life, we as “Hollowmen” turn themselves into a joke that makes us laugh at ourselves. Their only existence lies in transposing their existence into a “stinking old bear” or “a randy little mouse” or a squirrel with an “ostrich feather of a tail” participating in the Morris Dance of Life. These ‘whimsy little half wits’ recognise the story of futility called Life, and yet choose to sustain it, with the hope of securing some moments of emotions. We perhaps choose to forget that these comic moments of relief only accentuates the

6th International CEO Communication, Economics, Organization & Social Sciences Congress

temperament of absurdity and whimsicality, that the modern world has lost its unifying principal.

In every relationship there comes a time where people tend to forget their dialogues. We want to run away from our regular life and find our drive. It is a realistic slice of life that we tend to ignore and try to avoid. There's no plot that goes on, no story to follow, no words to recite. We wait for some kind of significance in the insignificant life. There come a time when language gets broken into pieces and failure of language gives rise to failure of communication. It is then when we resort to the "bear and squirrel game" which turns out to be the endgame to compensate the failure of broken relationships. The game blends comedy and tragedy. The sensation of a laugh will escape to onlookers but the tears stream down to both who satirised this game. We would laugh at this stupidity of this game while the two people involved watch their bliss disappear in thin air.

The bear and squirrel games acts as an epiphany, making us realise the games we play to fix gaps in relationships. The culmination of marriage is after all not always, "All's well that ends well." It gets darker as we anticipate a new beginning. It is funny how every relationship is jazzed up with blush and sparkle, the backstory is such a stark contrast!

CONCLUSION

Post modernism beckons a new drug to inject us. Fortunately or unfortunately mankind helped themselves to the end game graveyard with highly interactive applications and artificial intelligence. Augmenting the very fabrics of reality and summoning billions to join this endless circus of falsification. Helping not only two but millions more who found themselves trapped in this game. Easing their pain by hiding their flaws through dating profiles and relieving them through artificial companions.

Like all evolutions the bear and squirrel game metamorphoses into an artificial domain all over the World Wide Web. Where every Jimmy and every Alison has their own sweet gratification and pain, some people give in to delusions and get lost in them forever. Delusions, so worse, that they claim a reality of bondage with virtual elements. Some abusing its pleasures, some getting abused by its pleasure. Some being the master and some the slave. But all snowballing towards an end game-a game which feeds of the emotional vulnerability of its victims. People forget how to smile without a lens and how to laugh without memes. People forget how to live without videos and self entertain without reels. There is no real escape all are virtual ones which open more doors to escape from someone safe to some other kinky forgery.

Ethiopian Business Incubation Environment Perspectives

Mequanint Birhan Alem (MSc, MBA)

Mizan Tepi University, Ethiopia

Orcid: 0000-0002-1079-9114

ABSTRACT

Business incubators are organizations support for companies in their early stages of life to provide a workspace, business and legal advice. Business Incubation Center addresses several bottlenecks in the Ethiopian incubation eco-systems. Even though limited numbers of incubation centers were launched in Ethiopia, they are still in infant stages. Lacks of sustainable/technically sound business models for exciting incubators were through regional benchmarks. There never been indigenous incubation expansion motions. As a result the environment was aided only by foreign agencies. EU, UNDP, PUM, Tel Aviv, Seratera, Adelphi, and, GIZ are among the most well-known aid agencies in Ethiopian Business environment. Focusing on agriculture, ICT, research and training, construction, livestock, fisheries and forestry sectors were majors. Hence the main objective is to adhere the indigenous business incubation environments in locally available resources.

Employed of the study were both primary and secondary data methods of collection. 12 countries from 6 continents of the world were taken as a sample to triangulate their current business environment. Specifically in Ethiopia there are 6 Business Incubation centers in public and private academic institutions. Among them 34 census samples were taken as a respondent. Thus collected data analyzed using system dynamics (venism) software to associate the cause and effect relationship.

The results show that there are systematic differences in the number, performance, and amount of registered business for incubations collected by the two methods, indicating the importance of more establishments for localized incubation centers are required. In this study 1:1000000 BIC to population ratio was randomly offered. However, the study shows 117 BIC are left in Ethiopia and also highlights some challenges in the implementation of incubations, such as community attitude and informal markets.

Keywords: Accelerators, Business, Enterprise, Ethiopia, Incubation, Open Innovation, Venism

1. Introduction

A business is an organized economic entity with economic and social goals for profit and community facilities [5]. Then idea and practice of business incubation (BI) were pioneered in developed nations some 60 years ago, where a sophisticated incubation ecosystem with a wide variety of incubator types and funding sources has since grown [1]. While Qurbani et al (2023) said “it was born between the economic periods of classical and neoclassical capitalism”. According to many academics, BI fosters the growth of entrepreneurs by building a network of resources and knowledge. Few researchers have, however, examined how incubation affects knowledge expansion, which speeds up innovation as compared to rivals[2]. BI can be defined as an innovative, developing organizational form that combines the start-up's entrepreneurial spirit with resources typically available to large or medium-sized businesses to create value. Due to the quick and significant changes in technology, telecommunications, and digitalization as well as deregulation and globalization, BI is a new requirement in the global economy. Every actor affected by these developments, whether they operate on a national, corporate, or individual level, must alter [5]. They support emerging companies through their most vulnerable developmental stages, assisting them in surviving and developing into thriving commercial enterprises [3], [4]. They are organizations or institutions that support small and medium businesses and startups by offering facilities, infrastructure, and business development services in the management and technology realms(et al., 2023). They are thought to be a cornerstone of initiatives for economic development and add value by combining the startup's entrepreneurial spirit with resources that are often made available to new businesses. The commercialization of technologies and the creation of jobs in the local economy are two of the main goals of business incubators[7].

Incubation is the “process of keeping something at the right temperature and under the right conditions so it can develop” is often characterized by a favorable atmosphere or a superior umbrella that protects newcomers and inspires owners who do not have a solid foundation for a business Organization (Karambakuwa, 2022a). The collaboration between incubator managers and business owners is crucial to the project's success since the more time incubator managers invest in coproduction in general as well as in each episode and the larger range of modalities they employ, the more significant the impact.

The goal of BI is to nurture entrepreneurial dreams with the intention of making them come true. All administrators are currently quite concerned about the business incubation develops due to the quantity and variety of useful services it promises. It is a social business solution platform that can manage businesses from their birth to their maturity [8]. It can provide entrepreneurial start-ups with critical network resources. network resources acquired by the start-ups' own efforts (rather than network resources facilitated by an incubator) were most critical in all phases of enterprise development [9]. Less is known about how business incubators handle failure, a regular occurrence in the establishment of new ventures. The failure of an entrepreneurial team to create a scalable company model can be understood by using a value creation viewpoint[10]. Business incubation services enhance startup companies' absorptive capacity characteristics like exploratory, transformative, and exploitative learning, which hastens the commercialization of technological advancements[2]. The practice of BI is

an important undertaking that can support the expansion of new businesses. However, there hasn't been much study done to support what goes on in an incubation center [11]. In order to foster the creation of new businesses and spur innovative economic growth, it is crucial. In order to facilitate the incubation of new technological firms, many nations throughout the world are fostering "innovation orchards" in the form of government-industry-academia partnerships[12]. The cooperation between government and academia in the establishment of new R&D institutions has a positive effect on business incubation, and other types of cooperation between government-industry, industry-academia, and government-industry-academia have no significant impact on business incubation[12]. According to Karambakuwa & Bayat (2022), entrepreneurship development focuses on those who wish to start or grow emerging enterprises as well as extending the base of entrepreneurs to speed up the rate at which start-ups are developed. "Sustainable business models have the potential to radically improve environmental and social performance of firms"[13]

By giving people a way to make money and give back to society, entrepreneurship can enhance social inclusion and is therefore important to the economy. People from all backgrounds can participate in and profit from the economic process through inclusive development, which has the potential to increase income and living standards [14]. Three characteristics define start-ups: they have been around for less than ten years; they deploy highly inventive inventions or business strategies; and their ventures are focused on creating meaningful employment and increasing income. Open innovation (OI) is the real structure for utilizing outside resources and larger networks in order to carry out innovation as opposed to only using internal resources [4]. OI outbound activities, whereas, OI inbound activities are less common in tenant performance [21]. It is the actual framework for exploiting external resources and wider networks in doing innovation instead of just operating with in-house resources [22]. For incubators, various reinforcements are needed to assist tenants and implement pre-incubation and incubation. However, the explanation of how OI in pandemic transforms business incubation is absent from studies on business incubation and incubators as OI partners fostering co-creation, collaboration, and co-petition. As a strategy "to help small start-ups overcome liabilities of newness and smallness," BIs are described [24].

1.1. Business Incubation Functions

Startups experience substantially greater rates of mortality than larger, more established businesses. To succeed in today's difficult business environment, organizations need to be able to effectively integrate internal functions within the organization and effectively link them with the external operations of members of the supply chain [16]. Hence the existent literature has strongly endorsed the roles and beneficial effects of business incubators, including virtual ones, in nurturing entrepreneurship and innovation across a variety of industries and their ensuing contributions to fostering sustainable economic growth and social development. They are recognized as essential for promoting social development and sustainable economic growth across a range of industries[17]. According to Ahyani et al.(2022) The significance of defining and comprehending the business and the Islamic business environment in the 5.0-period society that exists now in order to adjust to that era and make it more meaningful. It's 9 dimension of the virtual business incubator model were: integrated human resources and capital; focus on

6th International CEO Communication, Economics, Organization & Social Sciences Congress

strategic alliance formation; valuation and management of intellectual capital; internet-based; for-profit; private sector playing the leading role; formalized management control systems; national and international business and market; and collaboration with physical incubators when necessary[17].

Creative industries need to innovate in this digital era to face the rapidly changing business environment and fierce competition[20]. When Small business enterprises perceived usefulness increases it will literally increase the benefits and reduce the perceived cost. Also, the government should provide funding support to the those[23]. The aiding agencies in providing higher education startup assistance, such as coaching (BMC, Business Plans and Marketing Strategies) and assisting startups to obtain funding or investor. Because there are only a small number of academics who are conscious of the need to work to commercialize their unique goods or conduct research toward product commercialization, the implementation of help for university startups is not ideal [6]. Because the business incubation curriculum significantly affects both product and marketing innovation[20].

The purpose of technology business incubators (TBIs) is to give early-stage technology-based businesses or startups a place to navigate and overcome obstacles so they can progress faster towards sustainability and success [25]. TBI leadership team strengthened its programs, forged partnerships with international and local incubators and entrepreneurs, and completed various capability- buildings, including the Visiting Professor program for curriculum-based entrepreneurship. It required the assistance and support of the community at the local, regional, and international levels to flourish and be successful in the university. This covers the executive branch, private sector, commercial sector, and industry.

The initiation of various business support programs in the government, aims at improving the performance of small and medium enterprises, nurturing talent and entrepreneurial skills, and provision of entrepreneurial training programs[7]. BIs ensure networking and facilitate OI collaborations both inside the incubator among entrepreneurs and outside with external stakeholders[26]. The creation of linkages (networking) that are mutually beneficial to the start-ups as well as the incubation hubs is essential. Learning was assisted by networking in incubation hubs since incubates had the chance to share knowledge among themselves. The contact produced exposure to lifelong learning, which was successful in fostering personal growth [27]. The study made it easy to comprehend the significance of networking in incubation hubs. It was discovered that start-ups might use relationships to their advantage through networking. The convergence methods for assisting knowledge-based firms before and after their incubation can be supported well by business incubators. It is important to remember that business incubators improve the environment for entrepreneurship rather than replacing entrepreneurial activities [28].

Entrepreneurship and innovation are seen as crucial components of the digital economy's ability to propel high-quality economic growth. The digital economy can strengthen the synergistic effect of entrepreneurship and innovation and bring about the integration of digital entrepreneurship and digital innovation, digital entrepreneurship and traditional entrepreneurship, and digital technology and the real economy all need to be thoroughly studied[29]. Innovation for Solutions evolved beyond local contexts but with end-users in mind.

Innovation with the solutions co-created between actors in and beyond local end-user contexts. Innovation by solutions is designed by actors in local end-user contexts[30]. The importance of small enterprises to numerous worldwide economies has sparked an expansion in small business incubation studies and practices. Due to the high failure rate of many start-up businesses, small business incubation is also regarded as crucial. The community-based incubation model for small business incubation inside the urban peripheries of Cape Town is one of the various models for business incubation that are now available[20].

The development of the country is directly influenced by the business's success. Therefore, it is crucial to assess and forecast whether or not the firm will be profitable [32]. Because Success in general refers to the accomplishments made possible by achieving small life goals or making a profit. For BI professionals, academics, entrepreneurship support policy makers, and tenants, the structure of the national BI guidelines is innovative in that it explains the purpose of business incubation, OI practices and strategies used to BI, and incubators as OI partners[33]. Processes for choosing incubates and the standards by which incubator clients are chosen are now crucial to the business incubator's success[5]. The global economic landscape is radically altering as a result of technological advancement and entrepreneurship. These factors function within the framework of free markets, deregulation of the government, and privatization, as well as new considerations for the human condition, ethical leadership, environmental protection, gender parity, and equitable economic growth[34]. For many stakeholders, a well-run incubator might have a variety of advantages: For governments, tenants, universities and research institutions, business for the neighborhood, & the world community[34]. In the agriculture sector play a significant role in nurturing start-ups, creating job opportunities, and positively impacting the economy, implies it is crucial for developing to include business incubators in their policies and strategic plans. The function of business incubators and the results of their incubation programs have not been fully realized in promoting industrialization and entrepreneurship. A sustainable strategy that can support sector-specific businesses is necessary to promote rural development in developing areas where the majority of the population relies on agriculture[35].

2. Materials and Methods

This study was exploratory in nature and aims to understand the participants' opinions. Mixed approach was used in primary data and secondary data and then analyzed using the cause and effect analysis using System dynamics. A qualitative approach can reach people who would not ordinarily volunteer for the research like incubation hub start-ups businesses. Primary data was obtained through gathered using an interview guide which were then processed and analyzed to determine the perspectives. Secondary data was obtained from internal institutions, organizations or related ministries, journals, and related research results which then formulated a grand strategy by describing how efforts to develop strategic management in strengthening business incubators in Ethiopia. In order to associate the cause and effect relationship of BI environment factors a 5 point Likert Scale was used which (1) Strongly Disagree, (2) Disagree, (3) Uncertain, (4) Agree and (5) Strongly Agree. A result modeled in to system dynamics (Venism) software.

This model was cocreated and validated with 34 incubator managers and startup founders from 8 business incubation centers during interview and organized into 8 dimensions concluded as fundamental in future digital incubation programs. Moreover, this study offers knowledgeable guidelines to support academics, practitioners, organization managers, or other professionals interested in building and running virtual business incubators.

3. Results and discussion

Participants' were aged from 27 to 61 years; female participants represent 39.1% of the sample, while males correspond to 60.9%. Regarding their educational level, all participants had completed higher education. Their fields of education were diverse, but mostly related to FBE (n = 28), followed by engineering or technology (n = 1), human sciences (n = 2), natural sciences (n = 2), and mathematics (n = 1). Furthermore, the incubators and startups were linked to 8 different incubator centers i.e., they represent 100% of the total number of national incubators, located in 5 cities of Ethiopia: AA (n = 3), Amhara (n = 3), Oromia (n = 1), Sidama (n = 1), Tigray (n = 1), and others (n = 2). As already mentioned, the official names of the incubators represented by the clusters knowledge about business incubators was focused on whether the respondents, the results showed that 71.04% respondents already knew what BI was, while 28.96% or as many as 75 people did not know what BI. This shows that largest number of respondents already know about BI. This is certainly a good start for determining a strategy to strengthen startup assistance because the academic community is considered quite educated about what a business incubator is.

However, out of 34 respondents, only 64.48% people knew the benefits or purposes of a business incubator and 35.52% or other people did not. These results show to give more concern in providing education and outreach about BI, so that the selection of startup candidates can be maximized and evenly distributed. As many as 93.05% of respondents agreed that efforts to change the research mindset towards an entrepreneurial mindset as a basis or initial step for product commercialization for Higher Education Startups need to be carried out and increased by Government. This also made 93.05% that changing the research mindset towards an entrepreneurial mindset as the basis or initial step for product commercialization for university startups needs to be done periodically every year. As many as 94.98% of respondents also agreed that so far the incubator has provided optimal service in assisting product commercialization to the academic community. This shows that almost all respondents agree that so far incubators have been considered optimal in carrying out their services in assisting product commercialization. In addition, it also shows that respondents are aware of the importance of the entrepreneurial spirit as a basis for the emergence of Higher Education incubations.

Based on the qualitative analysis of the interview data and a literature review, 5 key environmental and incubator-level dimensions emerged Environment for entrepreneurship, Incubator financial support model, Incubator service mix, including financial services, Government/university /industry involvement, and Role of Incubator networks to set the context the major Ethiopian incubation models are described, followed by analysis of key findings under each of the major dimensions identified from the interview data[6].

Table 3.1 qualitative benefits of BI from 8 cluster respondents

Cluster 1 & 2	Cluster 3 & 4	Cluster 5 & 6	Cluster 7 & 8

3.1. Various Business Incubations Models

Business models are focused on maximizing customer value and as a result offer a promising way to gain an advantage over rivals in up until now hardware-centric company sectors[31].

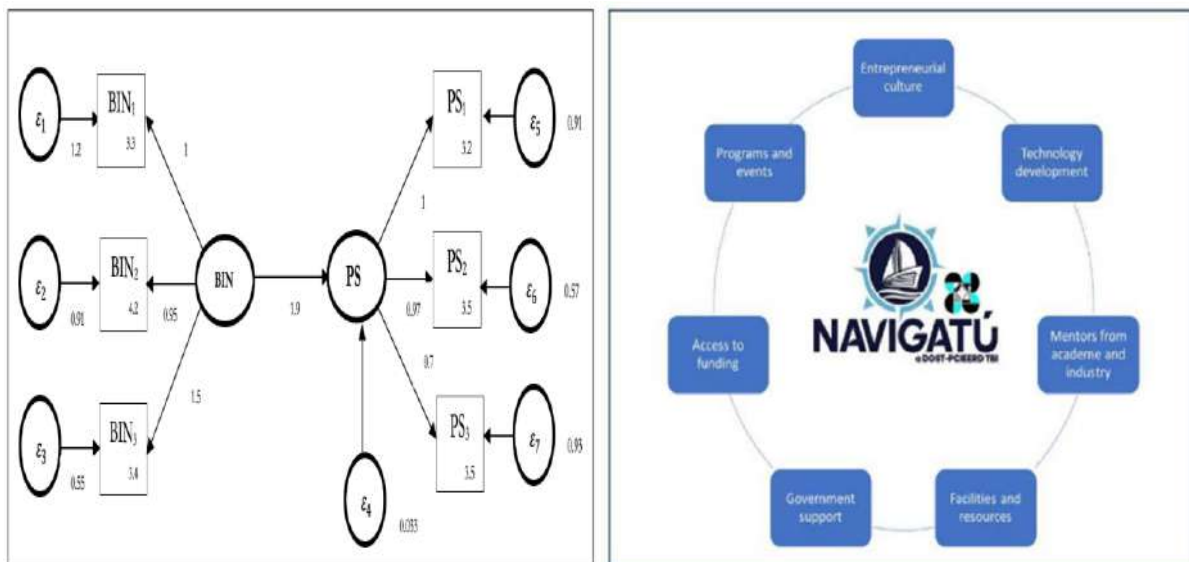

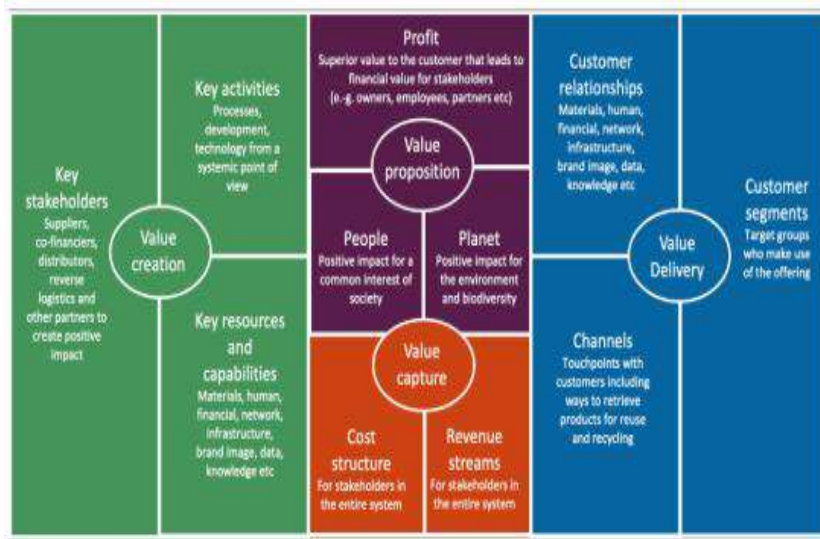

Figure 3.1 Models that Influence of Business Incubation on the performance of start-ups[8].

A business model essentially describes how a firm operates and provides a succinct explanation of how the business functions and remains successful. Three components make up a business model: the value proposition (the basic provision of a product or service); value generation and delivery (the use of resources, partnerships, activities, customer connections, segments, and channels); and value capture (the cost structure and income sources)[13]. Incubator managers ought to put more of an emphasis on helping startups in the technology sector expand their businesses. The results imply that the firm only perceives its reputation as having improved as a result of the incubator arrangement[36].

The TBI framework defined by Navigatu [25], the leadership team was set up by the university as the main implementers of the TBI programs and associated services. The percentage of entrepreneurs needs

to be increased, and one method to do so is to integrate technology-enabled entrepreneurship, or technopreneurs, in a university setting, which is crucial for the development of creative and innovative talent [37].

Figures 3.2 sustainable business model canvas[13]

In particular, on new technology platforms, establishing influential mechanisms for fostering fresh ideas into actual businesses requires business incubation and business strategy to secure networks that ensure growth [8]. Combined business ethics such as (a) "corporate social responsibility, ethics/morality, sustainability, and "ESG" (environmental, social, and governance); (b) "business," "management," and "accounting" (to align the results with our field of study); and (c) "education, teaching and learning" [41].

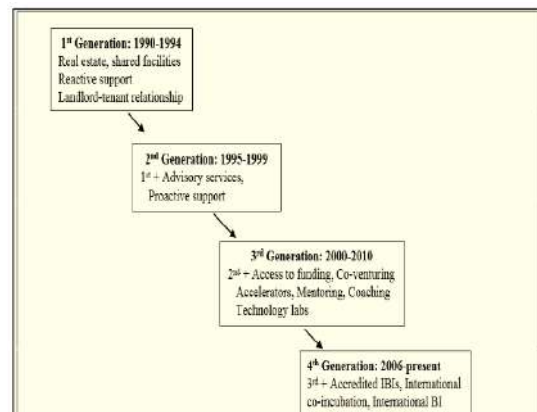

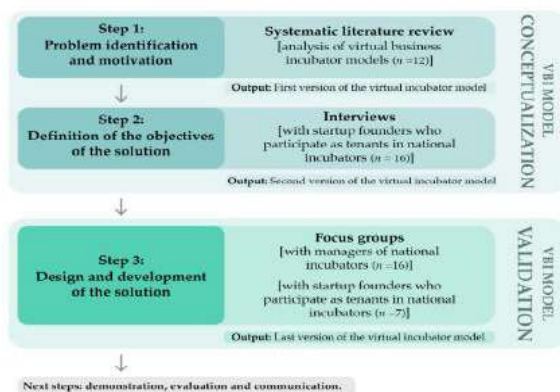

Figure 3.3 A)Schematic organization of the study phases and activities conducted by adopting a design science research methodology[17]. B)Generations of Business Incubator Development in Malaysia[1]

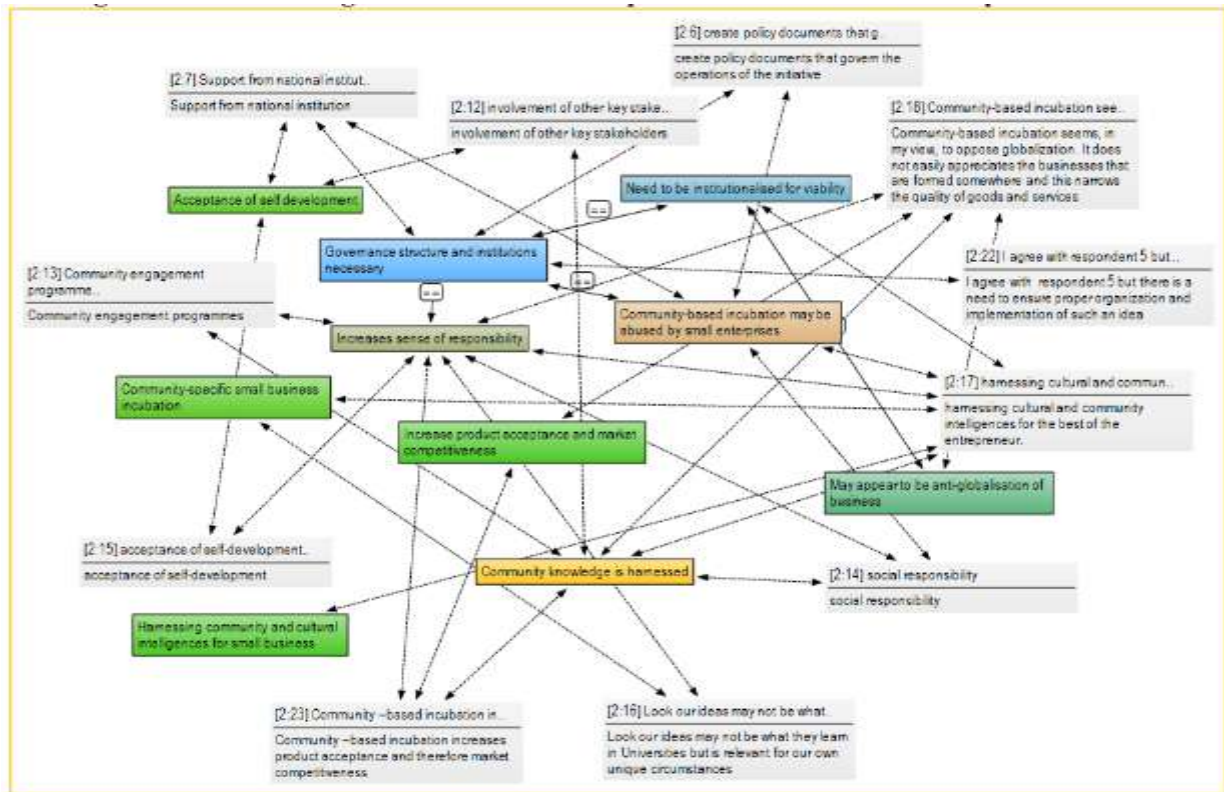

Figure 3.4 Network diagram of the codes and quotations extracted from responses[38].

The role of ICT BDS in Small and Medium Enterprises Source[39]: increase number of customers, quick performance of tasks, reducing operational, and placing order online. The main factors of TusPark’s success and explores its approaches for encouraging future development under new domestic and international circumstances. TusPark was defined with three main functions - “transforming scientific and technological achievements, cultivating innovative talents and incubating startups.”[40].

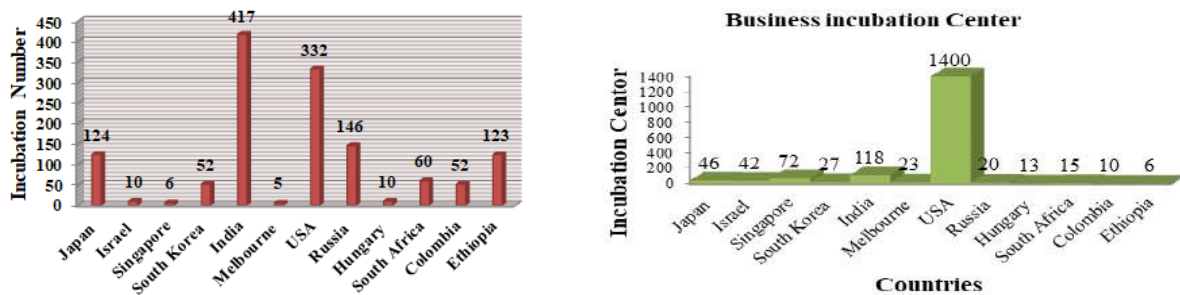

Figure 3.5a) Number of incubation center in different countries b) proposed number of incubation center for different countries: Ratio of business incubation center per 1 million populations.

According to Asoba & Mefi (2022) community-based small business incubation is important, there were indications that there is need for strong and properly governed institutions for the benefits to be realized. A start-up is a transient entity in the first step of its lifecycle or part of an already developed Organizational system. It comprises Start-Up Formation and Start-Up Success Factors. The critical activities of business incubation program are: Conduct an effective feasibility study, Select an appropriate facility, Select staffing, Work towards self-sustainability, Partner with other organizations, Nurture healthy board member relations,

Educate the community, Invest in professional development[41]. At the moment, business operations around the world are not running perfectly without any issues. Particularly in emerging nations like Ethiopia, people encountered numerous issues in their daily lives. Poor access to infrastructure, such as energy, transit options, and a proper market and market place, for instance, might impede development [43].

Figure 3.6 BI growth in Brazil (Source: ANPROTEC Annual Report 2007)

BIs have the potential to nurture and develop entrepreneurial talent at the micro level and establish an environment for entrepreneurship at the macro level by timely assisting and supporting new ventures. Brazil is currently one of the most successful incubation movements in Latin America, with around 400 incubators and a well-developed incubation environment, thanks to innovation and the adaption of incubator models to local demands. Brazil's incubation process is mostly bottom-up, with the university serving as a vital catalyst and facilitator [19].

With a population of 170 million, a thriving economy, and a per capita income of US \$4,500, Brazil is the eighth-largest economy in the world[19]. Modern BI tends to focus more on high-tech and high-growth clients who are involved in the creation of biotechnology products, computer hardware, and software. While the different client business types span all industries, including high-tech applications, specialised fields, and organisations that offer both goods and services[1]. Building codes, zoning, location, traffic and parking, rentable space, security, are only a few of the milestone actions of the BI program from numerous studies. risks, material flow, insurance, and access to shared facilities air conditioning, ventilation, and heating Telecom, electrical, and floor loads, among other things. Job Creation, profitable enterprise, research commercialization, Export Revenues, entrepreneurship awareness, policy impact, Export Revenues are major objectives of BI. The content side refers to ‘questions regarding what is value/valuable, who values what, and where value resides’ while the process side refers to ‘how value is generated, and the role, if any, of management in this process’. Entrepreneurs from a discovery perspective, recognize and exploit opportunities and from a creation perspective, create them actively in interaction with other stakeholders Edelman and Yli Renko, (2010). With the former, perception and recognition of emerging opportunities would become important whereby value creation depends on correctly identifying the market needs. The failure to do so will mean that new value creation is considerably delayed, often being unrecoverable Danneels, 2007; Gruber et al., 2008, (2013). Moreover, the value arises when the right people, ideas and markets combine at the right time to take advantage of these opportunities Gilbert, (2014). With the latter, new venture creation is a process over which entrepreneurial opportunities are constructed by entrepreneurs in interaction with other stakeholders that brings forth the temporal dynamics of dealing with a future that is unpredictable and uncertain Sarasvathy, 2001; Venkataraman et al., (2012). As such, the entrepreneurial opportunities although clear in retrospect are not apparent in prospect Dimov, (2011). The value creation in such circumstances might then depend on the dynamic response of the entrepreneur to create a preferred future. Value creation depends on utilizing the temporality of the opportunity presented by the markets and can only be created successfully

from technological innovations by remaining at the cutting edge by addressing emerging market needs promptly West and Meyer, (1997). New ventures can achieve a competitive advantage from their innovations only if they are fast enough to take them to the market Bird and West, (1997) through an appropriate business model Teece, (2010). Such a business model might then be a temporal vision that encapsulates what is currently possible in anticipation of future value Nair et al., (2012); Zott et al., (2011). Moreover, the value created by one source will be appropriated by another, even if it's unintended, which Lepak et al. (2007) describe as 'value slippage'. This is important in an entrepreneurial setting, as the value capture occurs at different sources and not entirely at the level of the new venture. Value slippage is an incentive for external partners and stakeholders to be engaged in the new venture creation process. An assessment of value slippage enables incubators to find out 'who' benefits from the value being created and 'what' is deemed valuable for them. New venture value creation through business incubation, Understanding business incubation from value creation perspective is a recent phenomenon[42].

3.2. Trends in Ethiopia

Ethiopia Business Incubation addresses several bottlenecks in the incubation eco-system: it targets the lack of sustainable and technically sound business models of exciting incubators through regional benchmarking, best practice examples, new revenue models, standardized curricula, and professionalized.

The Business Incubator Center (PIB) also initiated a collaboration with the financial institution PT Permodalan Nasional Madani (PT PNM), in which the financial institution is engaged in developing ultra-micro businesses with the Mekar scheme and MSMEs with the ULAM scheme[26]. They play a vital role in the sustainable development of an economy to promote the entrepreneurial ecosystem and innovation[43].

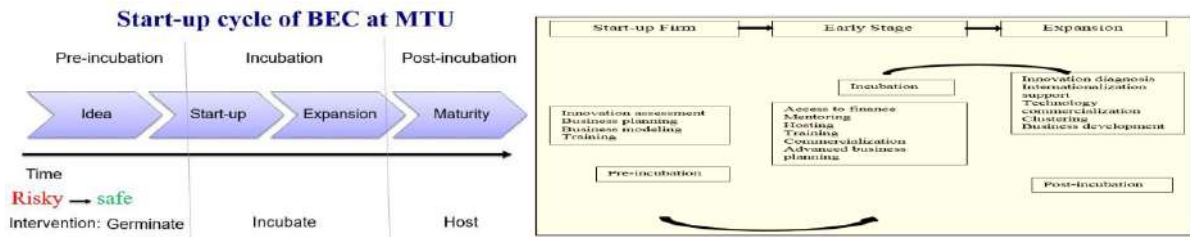

Figure 3.8 Different births to die graduate cycle (process) of business incubation

Figure 3.8 stages Recruiting prospective tenants, basic training to recruit prospective tenants, and finalizing technology ideas and ideas to be commercialized; making written contracts with tenants, training and skills development, guidance, consulting, mentoring, production processes, production trials, marketing, exhibitions, business meetings, and business administration; & completing incubation contracts, building networks with alumni tenants, monitoring and evaluating tenant business developments for at least 2years, and providing consultancy.

4. Conclusion and recommendation

All 43 reviewed literatures advocated that graduated businesses are effective in the competitive environment and graduated are business 87% reliability. Every jobs created by an incubator client generate another 50% direct jobs and 0.5 additional indirect jobs in the community, as a result half a million jobs were created since 1980. Few studies conclude that each Incubator tenants employ an average of 85 people less cost to run a business[34]. This study looked at 34 respondents' opinions on supporting marginalized strata s' potential entrepreneurs. The connections that exist between marginalized groups and well-established networks in the entrepreneurial ecosystem, such as incubation hubs, can be advantageous to them. And policy recommendation highly needed as per their responses.

If successful creative enterprises are to emerge, incubator managers and sponsors must develop a greater awareness of the incubation ecosystem, particularly with regard to incubators that focus on innovation[1]. This study, 78.04% of participants considered the activities in the BI programs were helpful and eager to use the information in their present or future firms.

Provide a policy reference for optimizing the holding mode of new academic, Research & Development institutions. A thriving entrepreneurial ecosystem has emerged, and it would be wise to understand the role of start-ups and provide support for them to thrive.

The problem facing start-ups has been that of survival beyond the first few years of their formation. Because of lack of awareness and would not graduate by incubation centers. The challenge facing small businesses is not that they lack ideas but that an enabling environment is needed in which start-ups can thrive.

The study recommends that the government at the national and county level ought to develop policies that will ensure the integration of training to young entrepreneurs by establishing functional business incubation centers. This move will enhance the transmission of ideas, information, or research to the market. Outputs from the Visiting Professor Program include: (1)workshop to create a strategy for CSU to implement based on the best practices; (2) consultation on best practices in integrating social impact in the TBI; (3) reviewed the TBI framework; (4) resources and incentives in the program; (4) conducted webinars with the representatives of the business sector; (6) establishment of the strategy on academe – industry

team teaching; (7) development of internationalization work plan to be incorporated in the TBI framework; and (8) development of the framework on partnering with other higher education.

ABSTRACT

The most significant players in Bangladesh's economy are entrepreneurs, yet little is understood about what drives them, how they form, and why they are successful. Studies on women are notably lacking. This study aims to identify the key impediments and variables affecting female business owners in Bangladesh. Studies found that insufficient capital, sales promotion, gender discrimination, illiteracy, a lack of technical help and training programs, a lack of managerial knowledge, are the main issues. Women still do not participate in traditional economic activities to a sufficient extent. The current study also noted that a variety of factors, including parenting responsibilities, access to a market and informational network, start-up capital, knowledge and skill sets, and financial flexibility, influence women's decisions to establish their own enterprises. The results shown from the previous studies found that while financial accessibility has a positive effect on women's entrepreneurial development, knowledge level has a constructive link with it. Making financial support available for knowledge creation is essential.

Keywords: Capital, Economic development, Entrepreneurs, Network, Sales promotion, Women

INTRODUCTION

Entrepreneurship is the ability to start a business to make a profit. It is a multidimensional concept that can be analyzed at different levels. In terms of economics, entrepreneurship involving land, labor, raw materials, and capital can be profitable. In general, an entrepreneur is a person who possesses the aptitude and motivation to launch, manage, and be successful in a startup enterprise, coupled with the risk necessary to do so (Hossain et al., 2021). The entrepreneurial vision is characterized by exploration and taking risks, and it is a crucial component of a country's ability to prevail in a world market that is always evolving and becoming more competitive. Small business owners can function as catalysts to break the cycle of poverty and create jobs in underdeveloped nations because of their low capital intensity and employment generation potential (Saleh, 1995). The United Nations Convention (CEDAW) (2003) explained that women's empowerment is gaining importance in international organizations. Furthermore, Bangladesh has undergone a dramatic transition since the 1980s. The nation, which experienced a protracted famine, is now self-sufficient in food, and in recent years, its economy has expanded by an average of 6% a year. Microcredit is no longer adequate to meet an entrepreneur's financial needs in Bangladesh as they move from micro to small- and medium-sized enterprises (SMEs) (Hossain et al., 2009). They consequently turn to bigger commercial bank loans. Due to their poor financial knowledge and societal norms that prohibit borrowing and lending, women may find it challenging to make this choice (Morshed and Haque, 2015). Small businesses frequently need to transition from the illicit to the legal economies in order to increase their output, lease new spaces, hire personnel, and negotiate export deals. Islam and Ahmed (2016) added that, during that process, regulation and governance difficulties are present, and women in particular experience bias.

This decision may be difficult for women due to their limited financial literacy and societal norms that restrict borrowing and lending (Chamani et al., 2017). Regulation and governance issues are present during that process, and women in particular face prejudice. Women's economic engagement is essential for long-term economic progress and the eradication of poverty, despite the fact that there are still barriers in the way, and the success of the SME sector is linked to economic performance (Aktaruddin, 1999). SMEs are seen as the driving forces behind economic expansion, promoting the creation of new jobs, innovations, and goods and services. Although women are less likely than men to seek a career, women's entrepreneurship is a critical issue for the world since it has the ability to increase gross domestic product (GDP) and create new jobs (Chowdhury, 2018). Due to the fact that it requires women to take on risks and responsibilities in business, administration, and society, women's entrepreneurship significantly boosts economic development. Furthermore, it entails taking on the risks and obligations associated with starting, purchasing, or inheriting a business (Hossain et al., 2021). Although gender bias and complicated social and administrative institutions are also among the factors affecting women's entrepreneurship in Bangladesh, it nevertheless offers substantial opportunities for growth and socioeconomic advancement; a comparative study is necessary (Oridi et al., 2022).

Significance of Women Entrepreneurship

Entrepreneurship has a lot of importance for women, including;

- ✓ Employment Creation:
 - Entrepreneurship creates jobs and raises people's standards of living;
- ✓ Impact on Society and Community Development:
 - A vast and diverse labor force contributes to the growth of a society
- ✓ Raising Living Standards:
 - By generating more revenue, entrepreneurship contributes to raising a person's living standards (Smallbone & Welter, 2006).

Literature studies found on this topic is added, can provide a more understanding on the entrepreneurship among women.

Ramadani et al. (2015) explained that entrepreneurship plays a crucial role in the sustainability of global economies. According to Sowmya et al. (2010), Ramadani et al. (2015), and Mustapha and Subramaniam (2016), women entrepreneurs are still seen as an inconsequential factor in entrepreneurship (Rao et al., 2012). According to studies, Aktaruddin (1999) human characteristics, Aktaruddin (2000) socioeconomic status, Ahmed (2008) proficiency in financial management, and Saleh (1995) training are excellent instruments for entrepreneurship development in Bangladesh (Habibullah, 1987). Bullough and Abdelzaher (2013) and Halkias et al. (2016) discovered that women with low levels of education struggle to secure financing and create strong company concepts. Women business owners are typically perceived as less serious and have fewer financing options, according to Rao et al. (2012), which leads to insufficient product restocking and inventory. A number of studies (Jaya et al., 2011, Anwar and Rashid (2012), Themba and Josiah, 2015, and Nsengimana, 2017) have found that stereotypes, a psychological fear of failure, a lack of education and training, and a lack of personal assets are other difficulties that women entrepreneurs face. Furthermore, Amalu and Okafor (2010), Anwar and Rashid (2012), and Ali and Ali (2013) all noted that it is still challenging for female business owners to obtain funding to launch or manage a company. According to studies, women are prevented from taking on leadership responsibilities in their families by low self-esteem and a fear of failing brought on by engrained belief systems in historically male-dominated roles (Mandipaka, 2014; Athanne, 2011; Gichuki et al., 2014; Rao et al., 2012; Mwobobia, 2012). It is important to emphasize the role that entrepreneurship education plays in empowering female company owners as well. As shown in separate studies by Amalu and Okafor (2010) and Magesa et al. (2013), many women entrepreneurs lack technical skills and knowledge because they have few opportunities for vocational and technical education and training in entrepreneurship, a field that has always been thought to be for men.

In Bangladesh, female company entrepreneurs have a particularly difficult time juggling their commitments at home and at work. Ihugba and Njoku (2014), Behara and Niranjana (2012), Jamali (2009), and Bruin et al. (2016) claim that female entrepreneurs' attempts to manage work and family obligations, particularly in terms of time allocation, commonly jeopardize their success. Rao et al., Starcher, and other researchers found that only a small percentage of women can devote the majority of their time and energy to their businesses. Wendy's (2007)

study, which found that many women-owned firms regularly encounter major development challenges and potential barriers because of job restrictions, lends additional evidence to this. Women entrepreneurs in Bangladesh continue to face difficulties due to a lack of access to information and communication technology, which includes devices like laptops, the internet, video conferencing, and others (Ewere et al., 2015; Dutta and Bibao-Osorio, 2012). This technology is required to facilitate effective corporate communication with stakeholders and expedite commercial transactions. Due to a lack of access to and training in the use of these tools, female entrepreneurs have a tough time keeping up with fast changing business information, which affects the success of their business endeavors (Motilewa et al., 2015). The majority of women entrepreneurs find it challenging to properly market their goods and services since they have not received any training in entrepreneurship education (Kumari, 2012; Itani et al., 2022). On the other side, one other barrier to women's business success is a lack of family support. According to Maziku et al. (2014), family support is crucial for the commercial endeavors of women entrepreneurs, particularly in terms of the growth of their entrepreneurial tendencies. Studies have shown that having unsupportive family members can have a negative impact on one's self-esteem, desire, and drive to start and/or maintain a business venture (Itani et al., 2023). The fact that female entrepreneurs frequently have limited, or no, networks make this situation worse.

Entrepreneurship education may teach female business owners a variety of networking techniques to help them become more visible in the industry. A nation's legal and administrative systems can either support or obstruct women's entrepreneurship. This is supported by Singh and Belwal (2008) and Mansor and Mat (2010), who claimed that in the absence of government support in the form of a favorable legal and regulatory environment, female entrepreneurs may face considerable barriers. According to Bharthvajan (2014), Nawaz (2009), Sarker (2014), and Palit (2014), onerous legal and regulatory requirements for small businesses may be a barrier to the success of female entrepreneurs. According to the study, there is a significant correlation between knowledge level and the growth of women's entrepreneurship. (Mehta et al., 2022; Rudhumbu et al., 2020).

THE PRIMARY GOAL OF THIS STUDY

- To identify the key impediments and variables affecting female business owners in Bangladesh. An analytical research analysis was used based on both primary as well as secondary sources of data.

DISCUSSION

Lack of entrepreneurial skills is one of the most difficult barriers for respondents to start micro-businesses, which is one of the many challenges that women in Bangladesh encounter that are covered in this study. Financial issues, gender discrimination, management skills, a lack of information, access to business support, a lack of self-confidence, locating the right contacts for business ventures while juggling family and enterprise work, and concerns about societal acceptance are the remaining challenges that are listed. Similar to this, Bhuiyan and Rubab's 2007 empirical study in Bangladesh identified the following elements as obstacles to the

growth of women's business. Lack of awareness, an excessive amount of labor and responsibility, a poor credit orientation, high levels of stress, and managerial tasks were the identified difficult aspects (Bhuiyan and Rubab, 2007). A small percentage of business owners were forced to rely on their own financial resources since they were unable to obtain financing from banks or the government (Chamani et al., 2016). The number of minority business owners and their ability to get government assistance differ. According to Noorr et al. (2021), there are several factors that result in women having fewer opportunities to obtain credit than men. These factors include a lack of collateral, a refusal to use household assets as collateral, the small amounts of credit that women request that formal financial institutions cannot afford to provide, and the unfavorable perceptions of female borrowers. Aliyu et al., (2019). Accessibility to finance encourages organizational innovation, which helps an organization's sustainability over the long term. But it was discovered that innovation had a mediating effect (Mehta et al., 2022).

Leadership is essential for ongoing value generation and appropriation in a company, according to Gupta et al. (2004), and it must be able to sustain inventiveness and adaptability in hectic, unpredictable circumstances. The two key responsibilities of an entrepreneurial leader, according to Gupta et al. (2013), are developing and communicating a vision for growth results as well as influencing followers and other stakeholders to achieve this goal. In current leadership writing, these concepts frequently come up as topics. The core of modern leadership philosophy is the concept of contingency, which supports leadership tactics that are flexible to the situation, environment, task, and followers. A leader's vision and their followers' engagement are essential to creating value in the corporate environment. As a result, the aforementioned problems are hindering the growth of women's entrepreneurship. Putnam (2000) asserts that business owners can develop prospects for success by forming direct and indirect networks with their associates, engaged consumers, and contacts with other market participants or people through social capital links. The application of such information depends on how reliable its resources are, which is a key component of social capital (Djankov et al., 2016). The act of sharing information and providing knowledge to solve problems is known as knowledge transfer. Similar to knowledge management, knowledge transfer tries to organize, create, capture, or exchange knowledge and ensure future users may access it. Because interaction is essential to creativity, it can be utilized as a stand-in for learning ability. Knowledge and innovation transitions, it has been found, are challenging, especially when there are organizational barriers (Lyu et al., 2022).

CONCLUSION

Women are more likely than men to start businesses with tenacity and creativity. Successful female business owners have traits like entrepreneurship, higher education, significant family and governmental support, company experience, internal motivation, ICT innovation, access to resources, social acceptance, customer happiness, diversification, individual liberty, and security. Because of their creativity, willingness to take calculated risks, financial resources, personal qualities, and familial support, women are successful business owners. For women-owned SMEs to grow, financial institutions should offer lending options with innovative

6th International CEO Communication, Economics, Organization & Social Sciences Congress

financing. As a result, in order to ensure women's sustainable development through entrepreneurial activities, support for knowledge creation and external financing must change and be made available.

Building Smart Cities: Technology, Education, and Inclusive Governance for Smart Communities

Sandra COSTA

Universidade Aberta, Portugal
Universidade do Minho
sandramfc23@gmail.com

ABSTRACT

Technology, by itself, is no guarantee of achieving a smart city and subsequently evolving into a smart community. Educating people, from preschool to higher education, for smart cities involves raising awareness, promoting digital literacy, and promoting active citizen participation.

It is important to finance not only innovation but also the social sphere to reduce differences, providing greater balance and cohesion between territories. Smart cities, and subsequently smart communities, must be inclusive, but smart is not necessarily sustainable.

An influential holistic view requires the collaboration of all stakeholders, including public institutions, the private sector, voluntary organizations, schools, and citizens. And that's where governance comes in, establishing rules and good practices that can and should be followed to obtain a better result worldwide.

Keywords: Education, Technology, Smart cities, Inclusive, Governance, Smart Communities.

INTRODUCTION – EXPLORING PHENOMENA: UNVEILING INSIGHTS THROUGH QUANTITATIVE RESEARCH AND BIBLIOGRAPHIC SEARCH

In the realm of social sciences, researchers are driven by a curiosity to uncover the truths behind various phenomena that shape our world. Field (2009) emphasizes this pursuit, highlighting the inherent interest in discovering and understanding the existence of these phenomena. To achieve this, scientific research often relies on quantitative methodologies, as described by Stake (2010), which involve the analysis of linear attributes, measurements, and statistical tools to derive meaningful insights. In the quest for answers to our research questions, one valuable avenue lies in the utilization of bibliographic research platforms. These platforms serve as repositories of knowledge, housing a wealth of scholarly resources that provide valuable insights and evidence. However, navigating these platforms can be a challenge, particularly when it comes to formulating effective search strategies. The choice of keywords and search terms plays a crucial role in retrieving relevant and comprehensive literature on the desired topic (Shokri, Khany, & Aliakbari, 2022). In this article, we aim to explore the connection between quantitative research methods and bibliographic search techniques in the social sciences. By leveraging quantitative approaches, we strive to unravel meaningful patterns and relationships within the data, employing statistical analysis to gain deeper insights. Additionally, we delve into the art of conducting effective bibliographic searches, focusing on the selection of appropriate keywords and search terms to optimize the retrieval of relevant literature. By combining the power of quantitative research methods and effective bibliographic search strategies, researchers can enhance their ability to uncover valuable knowledge, contribute to existing scholarship, and make informed decisions based on evidence. This article serves as a guide for researchers navigating the vast landscape of social science research.

1. CHAPTER – BIBLIOGRAPHIC RESEARCH PLATFORMS: ADVANCED SEARCH

In the digital age, researchers have access to an unprecedented amount of scholarly information through bibliographic research platforms. These platforms provide a vast array of resources that can be instrumental in expanding knowledge and enriching research endeavors. However, effectively harnessing the power of these platforms requires proficiency in advanced search techniques. This chapter aims to explore the intricacies of advanced searching within bibliographic research platforms.

1.1 B-ON

Access to reliable and up-to-date scientific literature is crucial for researchers and scholars in their pursuit of knowledge and advancement in their respective fields. The b-on platform serves as a valuable resource, providing unlimited and permanent access to a vast collection of scientific journals and online ebooks. Through national-level subscriptions, b-on offers researchers and higher education institutions in Portugal the opportunity to explore a wealth of scholarly content from renowned content providers.

1.2 Ebscohost

In the digital age, surveys have become an essential tool for researchers, organizations, and institutions to gather valuable data and insights. Ebscohost, an intuitive online survey platform, has gained popularity among thousands of institutions and millions of users worldwide.

1.3 Portal Discover

The increasing volume and diversity of scientific information available today necessitate efficient research tools that can streamline the process of information retrieval. The Portal Discover is one such tool, designed to facilitate simultaneous research across multiple scholarly resources, including those subscribed to by the University of Minho as well as selected open-access resources.

2. CHAPTER – MEASURING RESULTS OF ADVANCED SEARCH OPTIONS ON B-ON, EBSCOHOST AND PORTAL DISCOVER

Measuring the results of advanced search options on b-ON, Ebscohost, and Portal Discover is essential for evaluating the effectiveness and impact of these research platforms. By assessing the effectiveness of search filters, researchers can gain valuable insights into the performance of these platforms and identify areas for improvement. This evaluation process contributes to the enhancement of these platforms, ensuring researchers have access to high-quality and relevant scientific information for their research endeavors.

CONCLUSION - CAPITAL LETTERS, BOLD AND DO NOT HAVE CHAPTER NUMBER

In this simple article, the guidelines of the manual for writers of research papers, theses, and dissertation (Turabian, 2018) were followed as a base reference for the structure of the text.

The author utilized a limited number of bibliographic research portals based on predefined keywords within the research area. The analysis revealed that "smart cities" emerged as the most frequent keyword in the summaries of various resource types. The research focused on a 15-year time interval and primarily considered resources in the English language. Among the available resource types, academic articles were the most abundant. Furthermore, it was observed that European institutions were the primary contributors to academic articles within the chosen research scope. These findings shed light on the availability and distribution of scholarly resources related to smart cities, emphasizing the importance of European institutions in generating academic knowledge in this field.

Based on the results obtained, the author of this study suggests the continuation of the literature review in order to further explore the identified trends and patterns. By extending the literature review, researchers can delve deeper into the existing knowledge and identify gaps or areas that require further investigation in the field of smart cities.

People's Republic of China's Digital Yuan (e-CNY)

Mr. Saptak MAITRA

Bachelor of Arts (BA), Political Science (Major), Economics (Minor)

ABSTRACT

The People's Bank of China (PBC) has been developing a central bank digital currency (CBDC), specifically the digital yuan or the e-CNY. The digital yuan has a link to the legacy yuan in value terms but could act for retail digital transactions in a centralized payment system. The Chinese digital yuan has been designed to increase greater domestic state control and to gain a strategic global position of influence. Beijing carries a strong belief that a digital currency will play a critical role in the future of geopolitical competition, and its creation of the e-CNY is a crucial step to getting ahead in that field. Through this paper, I will delve into the likely-made contributions of the digital yuan to financial inclusion and financial stability in the PRC. Furthermore, focusing on the potential impact of it on global trade, including oil trade. This paper includes the following:

- A brief analysis of the contribution of the PBC's digital yuan to financial stability, taking into account the possible after-effects of the introduction of the digital yuan on the assets and liabilities of commercial banks and on private borrowing behavior, as well as the possible impacts on non-bank firms.
- An analysis of the contribution of the PBC's digital yuan to financial inclusion, taking into consideration the expected value contributions of the digital yuan to retail users beyond what they obtain from the current system.
- A potential briefing of its impact on global trade, focusing on the globalization of financial technology, effect on other established currencies and cross-border trade.

Extending the potential impact of PBC's digital yuan at a global level in reference to oil trade in particular alongside "de-dollarisation".

Keywords: Banking System, De-Dollarisation, Digital Yuan, Globalization

INTRODUCTION

The People's Bank of China (PBC) has made pioneering progress nationally toward the successful implementation of the world's first digital currency: the e-CNY (digital yuan). Many authors on this subject tend to believe that digital currencies will have revolutionary effects on financial systems around the world. However, the effects are surely not confined to financial systems, it goes beyond saying that it has a huge potential in the global economy leading to a rise of China in this particular sector which poses a challenge to other established currencies and economies within the domain of Fintech, with a substantial effect on trade.

While contextualizing the financial landscape of the PRC, the Ant Group–Tencent duopoly in mobile payments and digital finance as elaborated in a report by the Asian Development Bank Institute must be included since the inclusion of bank firms and non-bank firms play an important role. As we shall see, these two companies have and will continue to play a critical role in the development of the e-CNY. Besides their importance to the e-CNY, both companies are continuing to make substantial progress toward the goal of expanding financial inclusion in the PRC.

One of the key reasons behind developing e-CNY is to improve efficiency within its domestic financial system. At the domestic level, digital currency is showing itself to do this through the development of unique and easy payment methods. This includes methods such as barcode payments, tap-and-go transactions through a digital wallet, the ability to pay offline, and facial recognition.

Importantly, the digital yuan is not the same thing as other forms of digital currency payable in China. It is not like WeChat Pay or Alipay. Rather, the e-CNY is an actual legal tender that is not tied to one particular platform. It can be transferred across several electronic wallets but as of now, it cannot bear interest. The Chinese yuan did not appear out of nowhere. It's the outcome of a six-year adventure that started when the People's Bank of China announced to the world in 2014 that it was researching digital currency. It's also prevalently appearing in the context of large-scale change in global financial markets. Central banks around the world are paying close attention to the development of central currencies, with over 80% of the world's central banks engaged in CBDC research reportedly and 40% of them already working on induction-level or pilot-level programs.

The e-CNY, with the capability of being traced and tracked, has bestowed an impact on money laundering and financial crimes. Its financial inclusion has also been deliberated upon in this paper. Now, recently there has been an idea over several reports by researchers that the PRC is going to include the e-CNY in the global trading domain, extending its use to trade oil. In this particular scenario, there has been news coming in from the Middle East as well and therefore, it finds its inclusion in this paper respectively but briefly.

LITERATURE REVIEW

Discussion of the e-CNY till now has essentially included a brief history of the project's development. Following this, the design of the e-CNY using a modified taxonomy that Di Lucido (2020) developed, has also been deliberated upon by the Asian Development Bank to prove certain impacts of the e-CNY upon few groups in PRC and also mentioned the groups which get excluded from this status-quo. We will be discussing the same in this paper because, without those demographic representations, it is difficult to understand the impact of the implementation of e-CNY in the PRC, without which we cannot predict its effects on the global platform. The establishment of an understanding of the 'future implementation of the e-CNY', which now has been done, and discussions regarding its potential effects on financial and monetary frameworks, financial oversight and crime prevention, RMB internationalization, and financial inclusion have also been deliberated upon till now. This paper will discuss all the mentioned aspects with respect to e-CNY internationalization.

Many authors, on this topic, believe that the design of the e-CNY is intended to have a minimal impact on the structural conditions of monetary and financial frameworks. Few reports have also stated that minimal or marginal changes can be expected with respect to the elimination of paper currency printing costs, offering new monetary policy tools such as an expirable or restricted stimulus, etc. Furthermore, risks regarding cybersecurity and the expansion of a particular duopoly have also been mentioned by previous authors, however, this paper will only borrow deliberations provided on the duopoly to effectively predict the fate of the duopoly in the international platform.

Lastly, RMB internationalization is an important aspect that is included in this paper as well. Till now, authors have provided data on it regarding its definition, usage, and its viability as an international currency. The ADB suggests that the most substantial impact of the e-CNY may be on financial oversight and crime prevention. It is because the e-CNY, being the PBC's own digital currency, comes with the capability of being traced, monitored, blocked, or reversed. This essentially gives the government almost unprecedented control to access all transactions completed using the e-CNY. This paper will focus on this aspect with respect to the international context, as the domestic results have already been researched. However, it is important to highlight the positive impact of this provision in the domestic domain. Therefore, this paper will cover it, and try to elaborate on at least one or two positive impacts with respect to international context as well.

A few articles also tend to cover some of its post-implementation effects in the global trading domain. However, those articles have a certain research gap that we intend to fill. That gap is related to the political aspect. To understand the political aspect, we will use a very recent example and deliberate on the oil trade because it is related to it. Distinct nations coming together and taking progressive steps oriented by globalization certainly implies an impact on the Chinese digital currency which we believe, is set to go international.

PURPOSE AND OBJECTIVES

- **Purpose** – The purpose of this paper is to present an idea of the currently called "Utopic scenario" within the domain of financial technology as a corresponding reality that is currently en route along with an understanding of the criticisms it faced and the challenges it may pose.
- **Objectives:**
 - a) To attempt an analytical analysis with brief data interpretation of the financial landscape of PRC and the financial inclusion of the e-CNY, extending to its contributions as much as possible, in the domestic as well as international domain.
 - b) To understand the possible scenario of internationalizing the digital currency along with its effects on the global trade platform.
 - c) To focus particularly on the shift of current dominant currencies in the realm of oil trade to the digitized currency of PRC, focusing on RMB internationalization and its fulfillment alternatives through the CBDC.

1. FINANCIAL LANDSCAPE IN PRC.

1.1 Digital Payments:

According to Asian Development Bank's report, UnionPay is the largest and most famous traditional payment system in PRC. Functioning similarly to the famous and globally accepted Western payment processors, such as Visa or Mastercard, UnionPay formulates business protocols, including technical standards for inter-bank bank card transactions.

Despite PRC's reliable payment system within UnionPay, third-party mobile payment platforms continue to play an integral role, such as WeChat or AliPay, particularly in PRC. According to data from the People's Bank of China, the amount of money that changed hands in the PRC via mobile payments grew from RMB 11.7 trillion (\$1.9 trillion) in 2013 to a staggering RMB 347.1 trillion (\$51.8 trillion) in 2019 (Center for Strategic & International Studies).

So Alipay and WeChat having a stronghold in the financial landscape of the PRC pose certain financial risks to the economy. Essentially, if there are large outflows from bank deposits to either of the third-party platforms, it could strain commercial banks' liquidity, resulting in credit shortages. Additionally, there have been contentions regarding the fact that being the PBC's own digital currency will have the same amount of extended access to its transactions and payments as in the above-mentioned financial platforms, giving the PBC unprecedented power to monitor, trace, block, or reverse any payment done through e-CNY and will therefore, centralize the clearing mechanisms of the PBC.

This will provide a backstop, reducing the autonomy of the two third-party companies, and hopefully, also increasing financial stability, as the PBC will be backlogging any disruptions to these two companies' infrastructure resulting in compromised transactions.

1.2 Digital Finance:

The access to financial products and services such as consumer credit, small-to-medium-sized loans, and investment, services through digital platforms is referred

to as Digital Finance in this section. In this domain, Ant Group and Tencent reportedly hold a dominant position in PRC's digital finance sector.

The widespread use of Alipay and WeChat as mentioned earlier, along with their ongoing expansion into financial services, makes both the firms relevant to the goal of expanding financial inclusion in the PRC. However, there have been signs of both firms' dominance in the digital payment space which raises concerns that they may use their market power to raise transaction costs (Reported by Bank for International Settlements 2021).

If both firms also expand their dominance into financial services, there have been tensions that they could raise credit and investment fees as well which is likely not to be confined to these third-party platforms. Rather they are likely to extend to the PBC's own digital currency soon and therefore, affecting digital finance i.e. the access to financial products and services in which the dominant position is held by Ant Group and Tencent.

Hence, these groups are essential parts that hold stark contributions in the formulation and expansion or development of the e-CNY, firstly at the domestic level as it has been happening currently and then secondly, proceeding into the international domain.

With the importance of these companies in developing the PBC's digital currency at the domestic level, there comes a chance of these companies dominating the global platform of digital payments if the digital currency is set to be accepted internationally, paving the way for PRC's rise in the financial technology sector which will adversely affect the established models. If we nuance it to the very question of power relations, then it is safe to say that PRC will have a dominant position, given the above-mentioned circumstances take place accordingly and practically.

2. FINANCIAL INCLUSION IN PRC.

2.1 Contributions:

The World Bank Institute defined financial inclusion as “individuals and businesses having access to useful and affordable financial products and services that meet their needs – transactions, savings, payments, credit, and insurance – delivered responsibly and sustainably,” in the PRC. However, there are a few groups that are excluded from access to these. These groups have been respectively highlighted in a report from Asian Development Bank. A few of them are as follows:-

- Rural Communities
- The Uneducated
- The Unemployed
- Age Group
- Gender Disparity

Rural communities have comparatively less access to financial services in the PRC. There have been analytical interpretations suggesting that most of the people belonging to these communities did not have access because financial institutions were too far away from their place of habitat, this problem even though may seem like a small one, affected the rural communities at large.

However, it is important to note that being unbanked or isolated from financial institutions and amenities does not necessarily correlate to a lack of ownership of an

electronic device or gadget i.e. mobile phones and computers or other amenities such as a stable internet connection. Then again, globally, only 25% of unbanked individuals are reported of having access to both mobile phones and a stable internet connection – both of which are necessary to access Chinese digital payment platforms now. All these sums up to a certain extent that having a digital currency won't necessarily fill such gaps as this system is neither without loopholes. The solution to this loophole certainly is retrospective concerning the fact that people having access to digital platforms can use the e-CNY while others cannot. The infrastructural development in such areas will certainly lead to better circumstances in the future. At that time, the e-CNY will have an even more stable platform, covering the rural areas of the PRC as well.

Source: Data from the World Bank 2017 Global Findex Survey.

As per the data provided by World Bank Findex, individual educational status is one of the greatest driving factors when it comes to financial inclusion metrics. These metrics are in correspondence to financial technology and its usage. For example, 65% of respondents with a secondary education or higher educational qualifications reported using a mobile phone or the Internet in order to access an account compared with just 24% of those with a primary education or less than that – a huge difference of 41%.

Such disparities have concerning implications. For example, data collected by the ADB suggests that 69% of educated respondents reported saving money in the past year compared with 40% of the less educated, and 77% of educated respondents said that they could come up with emergency funds compared with only 45% of those with less education.

Therefore, poorer people in this scenario (the ones in debt) continue to have lesser access to financial products and wealthy people usually tend to progress in terms of usage regarding financial products as they make more digital transactions. The poorer people have reportedly turned to family or friends in case of emergency funds. This initially suggests that the poorest 40% of PRC citizens are likely to be

credit constrained and would make use of financial services, such as consumer credit or small- to medium-sized loans if they were more accessible.

Source: Data collected from the World Bank 2017 Global Findex Survey.

Another parameter is the distinction in terms of financial inclusion between the labor force and wealthy people. Education, wealth, and labor force participation disparities are very likely to be complimentary factors in the financial inclusion of PRC, which all relate to the most evident reason for individuals not having an account at a financial institution – 60% of respondents (of a survey conducted by the ADB) stated not having an account.

Source: Data collected from the World Bank 2017 Global Findex Survey.

Another driving factor is the age group availing the financial technology services. Demographic data represents the younger age group likely having more usage of

fintech services as compared to the older age group. Surprisingly, 87% of people belonging to the age group of 15-25 had more accounts in financial institutions than 79% of people who are 25+. Therefore, the fintech usage will be centered around the younger age group quite evidently. There are other potential factors as well, such as the demographic findings of the age group being more tech-savvy, having used digital transactions, etc. All of these result in the formation of data represented in the following graph.

Source: Data collected from World Bank 2017 Global Findex Survey.

Finally, PRC has a gender gap in terms of ownership of an account at a financial institution. 84% of men reportedly had an account at a financial institution while only 76% of women did. Men were also 5% more likely to have borrowed money or be in debt and 10% more likely to have saved money as well, in the past year. Women, on the other hand, were 5% more likely to state that they would not be able to come up with emergency funds. This essentially puts an impact on fintech services as well. If men are most likely to have accounts then evidently men are most likely to avail fintech services as well. Women not being able to come up with emergency funds do not directly indicate that they would be dependent on men for the funds, but to some extent, it can be said so just for a counterfactual to produce a demographic analysis.

Source: Data collected from the World Bank 2017 Global Findex Survey.

As we can see, a lack of financial inclusion is a problem in the PRC, disproportionately affecting some sections of the population more than others. Rural communities are imperatively lacking in terms of financial inclusion. The unequal access to the Internet and mobile technologies that rural communities face significantly limits the adoption of fintech services in expanding financial inclusion for them. However, in an overall analysis, it is likely to expand financial inclusion given the fact that these are not in the majority community of the population of the PRC.

2.2 Implications of Financial Inclusion:

In 2018, Deputy Governor Chen Yulu spoke at the 'Conference on Innovative Development of Digital Financial Inclusion', where an announcement was made which focused on inclusive growth, poverty alleviation, and development of the country and efforts have been made to establish a model of 'One Platform Four Systems' in pursuit of three goals, i.e. every village will have access to digital financial inclusion services, every household will have access to financial inclusion loans, and every individual will have access to digital financial inclusion services (People's Bank of China 2018).

The e-CNY is very likely to increase and improve financial inclusion by accelerating the development of digital payments and financing, which would further increase financial accessibility for anyone with a smart gadget and stable internet access. However, if we refer to the previous demographics, we find that 86% of the population in the PRC already uses mobile payment services. Therefore, after the shift to e-CNY, the propensity for improvement cannot be calculated as of now since it requires prolonged usage and review. Given the circumstances, it is pretty evident that PRC's rural population is in dire need of improvement concerning financial

inclusion. Much of its population does not even have a bank account, as per reports produced by the Asian Development Bank.

However, the PBC claimed that "An e-CNY system will make financial services more accessible, providing money for a large population in various scenarios. Those without bank accounts can enjoy basic financial services provided via e-CNY wallet, and foreign residents temporarily traveling in the PRC can open an e-CNY wallet to meet daily payment needs without opening a domestic bank account" (People's Bank of China 2021), it is quite clear that the overall financial inclusion scenario in PRC is set to expand. Another important plus point per se is, the e-CNY is not bound to be linked to a bank account, which implies that transactions made through digital platforms such as WeChat and Alipay will no longer need a connection to a traditional bank. However, it is worth noting that, decoupling the e-CNY from traditional bank accounts does have a potential financial risk of draining capital from traditional banks and further consolidating the Ant Group-Tencent duopoly. The e-CNY has increased financial inclusion by allowing the PBC to cut out any sort of intermediary channels and issue subsidies directly to citizens. This provides PBC with more real-time economic data, which allows it to target poverty alleviation programs and government loan issuance more precisely and effectively. After summing up all such after-effects and after reviewing a couple of surveys conducted by the PBC and ADB, it is safe to say that in terms of expanding financial inclusion within the PRC, the e-CNY has been successful, even though there remains a certain financial instability risk, the benefits have been comparatively more than the harms respectively.

3. GLOBALIZATION

3.1 Impact on Global Trade:

At the end of the day, the development of the e-CNY is backed by some political motives. The Chinese Digital Yuan has been designed to gain greater domestic state control which we can derive from the financial stability and the financial inclusion chapter, focusing within the borders of the PRC. However, it is evident that it also has a strategic position of global influence.

The e-CNY with the capability of offering data of the citizens to the government gives Beijing a wonderful real-time idea of what their citizens are spending on, and as the economy happens more through CBDC, this control keeps increasing. At this stage, it is very unlikely to stay confined to PRC. As it hits the global economy, it favors several political aspirations of the PRC as well, thereby, dominating the political economy from 2023 onwards.

3.2 Globalization of Financial Technology:

Currently, with the rise of 'Fintech' and the digitalization of everything, in the era of cryptocurrencies, new payment methods, and more, the development of a nation-backed digital currency sets a precedent that may unleash a new wave of financial technology. In China, there is a push to digitize everything – health sectors, markets, industrial sectors, manufacturing, etc. With the digital currency and its exposure at the global level, China can facilitate this 'push' globally, compelling all the countries (Western or Non-Western) to catch up in this domain.

With the exposure of e-CNY on the international platform, it may enable financial institutions to settle payments through this digital currency across the world, rather

6th International CEO Communication, Economics, Organization & Social Sciences Congress

than clearing through traditional systems such as SWIFT (Society for Worldwide Interbank Financial Telecommunications).

3.3 Impact on Other Currencies:

The growing prominence of e-CNY could pose challenges to other currencies in the global fintech platform, particularly to those countries which have close economic ties with PRC. As the e-CNY gains traction, it could potentially reduce the demand for other currencies in bilateral trade settlements which could further lead to a re-configuration of currency preferences and exchange rate dynamics.

It also is likely to have an impact on the U.S Dollar, as the e-CNY will make international payments easier and cheaper, particularly to those emerging markets that are held back due to the costly access of dollar-based payments. This will bring us to the next domain where PRC will gain traction, the influence it will have over global trade, backed by the mentioned benefits, countering the benefits that were provided by established currencies, paving the way for a major shift in the global platform, thereby, digitizing the currency.

3.4 Enhanced Trade and Cross-Border Trade:

The widespread acceptance of e-CNY due to its easier access and cheaper transaction rates can lead to further simplification of international transactions, predominantly used for trade purposes, paving the way for international businesses to engage in trade with PRC itself. The e-CNY has the potential for seamless integration with digital platforms which may lower barriers to trade and allow greater entry, thereby, promoting Chinese businesses, particularly for Small-Medium Sized Enterprises (SMEs) that face challenges with respect to currency conversion.

Furthermore, the digital Yuan is a great opportunity for PRC's digital infrastructure to create seamless cross-border trade operations. Having a CBDC could change the way China's ports and logistics operations work by allowing contactless digital export and import transactions, including customs processing. There is no doubt that the e-CNY in this sphere, is providing for a very important aspect which has always been the core motivation of any digital currency – reduced time and costs associated with cross-border trade and any other trading activity per se.

3.5 Regulatory and Geopolitical Implications:

The successful implementation of the e-CNY in the global platform, particularly bagging the domain for trade and enhancing PRC's own economy at first, will very likely prompt other countries to develop their own digital currency or payment systems to maintain financial sovereignty.

There can be speculations regarding other issues as well since it is a digital currency controlled by a single country. Such issues include concerns regarding data privacy, surveillance, and potential implications for stability in the global financial platform. This will likely prompt discussions and regulations at the international level.

4. IMPACT ON OIL TRADE

Recently, Saudi Arabia became a dialogue partner of the Shanghai Cooperation Organization (SCO) which was established in 2001 as an economic, political, and defense alliance; it is the world's largest regional organization. Although Saudi Arabia is not yet a part of the BRICS, the country has reportedly expressed interest in joining. There has been a meeting between the President of the Russian Federation and the Crown Prince of Saudi Arabia at the beginning of 2023 itself, where discussions regarding potential collaboration between Saudi Arabia and BRICS have reportedly taken place. Saudi Arabia becoming a member of China-dominated SCO and BRICS would certainly accelerate bilateral trading being conducted in Yuan, which is already a vision of the PRC's RMB Internationalization plan.

Meanwhile, Saudi Arabia has been reportedly actively negotiating with PRC for oil sales to PRC in Yuan. Even though this discussion has been going on for more than 6 years now, this year it has intensified. Therefore, a growing number of countries are already shifting away from their reliance on the U.S. dollar.

As part of PRC's bid to internationalize the Renminbi (RMB), several countries beyond Russia – including Saudi Arabia, Bangladesh, India, Argentina, Brazil, Pakistan, Iraq, and Bolivia – have recently either traded in Yuan or at least expressed their willingness to do so in the future. However, cross-border transactions done through the RMB is still fractionally lower in comparison to the U.S. dollar or Euro.

Now with the new advancements and benefits offered by the e-CNY in the international domain, it is quite likely that it will not negatively affect PRC's RMB internationalization, but rather add fuel to it. Since there is a potential for all such international trade to be denominated by e-CNY, due to its design, it will help successfully achieve PRC's RMB internationalization goals. It is so because the main aim is to consolidate the global market. This goal will be fulfilled either way with the RMB or the e-CNY.

Furthermore, the possibility of Saudi Arabia joining the BRICS already has an impact on the dominant U.S. dollar. A shift in this structure will affect the oil trade market is due to the fact that Saudi Arabia is one of the largest dealers of oil, which is predominantly traded in dollars. Now the recent developments regarding Saudi Arabia partnering up with BRICS will evidently lead to a dichotomy. If this particular trade takes place through e-CNY, that will boost the economy of the BRICS, causing heavy inflation in the United States of America.

Other than these economic factors, a matter of consolidation also plays an integral part. Currently, the U.S. currency's dominance in this sector brings about the fact that the other nations conducting trade or business activities through it are heavily dependent on the U.S. dollar. This dependence will not end but shift towards PRC, giving PRC a place or platform of power in international trade, including oil and natural resources.

Trading oil using the e-CNY will have its own plethora of incentivization such as changes in price for regions that faced hardships due to the conversion rate of the U.S. dollar, a place of power for the members of BRICS in the domain of oil trade, factors relating to the countries belonging to the group will continue to affect the international market, mainly factors in PRC as the digital currency will single-handedly belong to the PRC, etc.

Regarding the setting up of regulations surrounding such respective trading activities, it is safe to say that this will be done by a collaborative and cooperative initiative taken up by the members of the BRICS and Saudi Arabia when it comes to oil. This has to be abided by all the nations engaging in trade activities with the BRICS. For further monitoring and assessments, there are international organizations such as the United Nations and the World Trade Organization.

METHODOLOGY

This research paper explains the motives behind the implementation of e-CNY and further explains its contributions to the People's Republic of China's financial stability and financial inclusion. This also includes digital payment platforms which essentially play an important role in expanding the usage of the digital currency, along with its effects.

Except for such domestic circumstances, this paper also puts emphasis on the globalization of the e-CNY and its implications on global trade, international businesses, and transactions. Thereby, explaining its potential of being used for oil trade, with a brief emphasis on RMB internationalization and impacts on other established currencies in the global economy, particularly the U.S. dollar.

The qualitative method has been dominantly used throughout the paper, however, to explain the limitations and possibilities regarding financial inclusion in PRC, a quantitative method has been used, taking reference from several surveys done by the World Bank. We find that if we divide financial inclusion according to a few communities in PRC, we can highlight the challenges of the e-CNY in expanding the PRC's financial inclusion.

Furthermore, I used references from the Asian Development Bank to collect data such as the motive behind the implementation of the CBDC, its goals, and its design. I also used reports produced by the Bank of International Settlements, to effectively understand the economic disparities that the e-CNY might cause at the global level, which I predicted. Therefore, this paper also deliberates upon the sovereignty-related contentions that may arise after the internationalization of the e-CNY, as predicted by this paper.

After conducting secondary research on this recent topic, I found out that the digitization of the Yuan, bearing certain characteristics of being monitored and tracked, gives Beijing full control over its domestic market. However, it is important to note that in the global platform, certain rules and regulations must be adhered to, and therefore, has a lesser impact in this particular area.

Lastly, in the development process and in expanding the usage of the e-CNY, certain third-party payment platforms play an integral role. This has also been deliberated upon with a special emphasis on WeChat and Alipay. It extends to the benefits received from the Ant group-Tencent duopoly, which is a two-way multi-faceted approach. However, this paper begins with the digital payment systems available in PRC, extends to financial stability (explains the reduction of financial crimes such as money laundering), and to financial inclusion, thereby, explaining the impact on global trade, ending at its potential impact on oil trade (explaining Saudi Arabia's potential collaboration with BRICS and effect on U.S dollar leading to inflation).

FINDINGS AND DISCUSSION

This paper has been written based on reviewing reports, official news articles, journals, and research papers. The state-released information on the digital currency of China has been imperative for this paper.

We find that the Digital Yuan (e-CNY) has characteristic similarities with cryptocurrencies. All transactions using the e-CNY, are liable to be traced, monitored, blocked, and reversed. Furthermore, financial inclusion in PRC can be expanded using the e-CNY. However, with a few groups being excluded from the status quo, a few challenges and outcomes can be assessed. This gives birth to the first hypothesis:

- i) The e-CNY can be accessed through mobile devices, even without a traditional bank account. This accessibility allows individuals who are unbanked or underbanked to

participate in the formal financial system, opening up avenues for savings, payments, and other financial services.

Due to the implementation goals of the e-CNY, improvements in many areas of the PRC have been assured by the government. Rural development is crucial as we observed that rural communities are the most deprived with respect to financial inclusion. Developmental initiatives have been launched to incorporate the digital Yuan among more communities in PRC. This proves our second hypothesis:

- ii) To promote financial inclusion through the e-CNY, the Chinese government has launched pilot programs and initiatives encouraging the adoption of the Digital Yuan in underserved areas, providing incentives and support to individuals and businesses.

Furthermore, we find out that the Digital Yuan will eventually get internationalized. However, it is crucial to note that the successful adoption of the Digital Yuan in international trade would require a multi-faceted approach and widespread acceptance by trading partners, the establishment of supportive regulatory frameworks, and cooperation with existing financial systems. It has certain effects on the global market, which gives us our third hypothesis:

- iii) Traditional cross-border transactions usually involve various intermediary actors, such as correspondent banks, which can lead to higher transaction costs. By using the e-CNY, transactions could potentially bypass some intermediaries, achieving cost-efficient methods for businesses involved in international trade.

Lastly, the political aspect gives birth to our last hypothesis regarding the usage of e-CNY for the oil trade. The hypothesis stands as:

- iv) Introducing the Digital Yuan and encouraging its adoption in oil trade would act as a strategy favoring the PRC to challenge the dominance of the U.S. dollar and further gain economic power as other nations would be dependent on the Digital Yuan for international transactions involving businesses, trade, settlements, etc.

CONCLUSION

Transactions using the currency totaled just 100 billion yuan (\$14.5 billion) by the end of last August, equivalent to an average of 3.6 billion yuan per month since the trial started, according to the most recent data released by the People's Bank of China.

To understand the possibilities that the e-CNY might inflict on the global platform, we have to understand its design. Firstly, the e-CNY adopts a two-tier intermediated system through which the People's Bank of China (PBC) issues the digital currency to commercial banks and other institutions, which then provides circulation and retail management services. Secondly, the PBC retains the authority to monitor, block or reverse transactions, such actions usually require explicit approval. This gives us the hint that the e-CNY is anonymous in small-value transactions and traceable in high-value transactions. Lastly, the e-CNY is stored in digital wallets. It is worth noting that, different digital wallets have different characteristics and features. The usage of e-CNY will have to be subject to such disparities.

As stated previously, the implications of the e-CNY will vary from community to community within PRC. We find that financial inclusion in China plays an important role in predicting the success of e-CNY in the long run. Also, financial inclusion is the least in rural areas due to several factors, the inception point being a small number of people having an account at a financial institution which will parallelly have an effect on the usage of e-CNY as they are less likely to make digital payments given the fact that they would turn to family and friends for emergency funds and not to financial institutions due to previous debts perhaps. Furthermore,

6th International CEO Communication, Economics, Organization & Social Sciences Congress

the lack of stable internet connectivity also decreases the chances of e-CNY being used on a large scale in rural areas. However, given the population index of the PRC with respect to its financial state, overall the usage of e-CNY will increase.

When talking about the possible effects of the globalization of the e-CNY, one important fact that is worth noting is that, if the e-CNY dominates the global trade platform, it will somehow affect the financial sovereignty of other nations. They would be dependent on PRC for financing global trade at large. Fluctuations are an unavoidable fact that we have experienced in response to major cryptocurrencies as well. Since the e-CNY is the PBC's own digital currency and revolves around several internal factors including third-party digital payment platforms, any kind of fluctuation in PRC's domestic domain will affect the global platform imminently. By adhering to such circumstances, other nations would feel as if their own sovereignty is affected since they are directly or indirectly dependent on PRC for their trading activities (International monetary transactions made for trade/business purposes, settling of payments, etc.).

Lastly, focusing on the global political economy with respect to the oil trade, it is quite imperative to understand the global political affiliations, aims, and ideologies of the member nations of BRICS in order to have an understanding of the possibilities of using the RMB first and then the e-CNY instead of U.S dollar for oil trade. Speculations regarding this issue are imminent given the circumstances, however, it is unavoidable that Saudi Arabia joining the BRICS gives PRC a strategic position in further expanding its e-CNY program, in accordance with the principles of its RMB internationalization project.

However, it has been reported by the Asian Development Bank that the e-CNY will have little to no financial and monetary impact on RMB internationalization. But at the same time, it is important to note that the CBDC might be forwarded instead of the RMB, backed by the potential success in the global trading platform – beginning from payment settlements to conducting cross-border business activities and ending at oil trade.

Finally, it is reported that the e-CNY could expand financial inclusion by providing the PBC with the ability to issue subsidies directly and by offering more extensive economic data, which could help to target poverty alleviation programs better. However, providing universal internet access remains the best way to expand financial inclusion retrospectively to other measures.

A Study on Performance Management as a Strategic Employees and Management Perspectives

Dr. Salla Vijay KUMAR

Senior Lecturer
Institute of Hotel Management Ahmedabad, India
sallavijaykumar75@gmail.com

Mr Vinayak SHARMA, M.Sc.

Institute of Hotel Management Ahmedabad, India
vinayak09199@gmail.com

ABSTRACT

Background: Hospitality is the act of kindness in welcoming and looking after the basic needs of customers. The hospitality industry is a broad group of businesses that provide services to customers. Hospitality is actually one facet of the service industry. It primarily involves addressing customer satisfaction and catering the needs of guests. **Significance:** Hotels that practiced Performance Management according to the employees and management perspectives understand the system and are achieving expected outcomes whilst other hotels could not effectively manage the system because of their level of understanding in its implementation.

Method: This study used conventional statistical methods were used to determine if observed differences were statistically significant. And with this research, readers should exercise caution when generalizing results and take individual circumstances and experiences into consideration when making decisions based on these data to identify, encourage, measure, evaluate, improve, and reward. The study involves all the formal and informal measures adopted by the hotel to increase individual and team effectiveness. Management and employees should be enabled continuously to develop knowledge, skill and capabilities employee performance at work.

Results: The results show effective performance management systems boost ongoing communication between the individual and leadership teams. It allows for trusted sources of conversation to be established, therefore giving employees an opportunity to express concern, discuss obstacles and brainstorm ways to improve.

Conclusion: The review indicates that none of the studies has systematically examined the variables of Performance Management based on the prior literature in the field concerned. Similarly, the design of the research model is developed to evaluate how Performance Management influences employee commitment is based entirely on the random selection of variables including the moderator (i.e. company type), with no theoretical underpinning.

Keywords: Performance, Management, Consideration, Communication, Conversation, Underpinning

INTRODUCTION

The provided report revolves around Pullman-Novotel Aerocity New Delhi and of a detailed study on how Performance Management is used as a strategy according to the employees and management perspectives. The two hotels with a combined inventory of 670 rooms were inaugurated by the Union Minister of Civil Aviation, Ashok Gajapathi Raju. Both the hotels have been developed under a strategic partnership between Inter Globe Enterprises Ltd, APHV India Investco Pte Ltd and Accor Hotels. Both the hotels represent the finest amalgamation of legendary Indian and French hospitality and culture.

Performance Management is gaining momentum as a strategic Human Resource Management tool that facilitates the performance of employees, teams, departments to achieve their strategic goals. The aim of the study is to examine the extent to which Performance Management is practiced in hotels through the review of relevant literature.

The study indicates that hotels that practiced Performance Management according to the employees and management perspectives understand the system and are achieving expected outcomes whilst other hotels could not effectively manage the system because of their level of understanding in its implementation. It is identified that Pullman-Novotel Aerocity New Delhi is practicing Performance Management using the same process (goal setting, feedback, performance assessment etc.) and had similar challenges. The variations are the implementation strategies, the cultural diversity and practical delivery of the system.

Hospitality is the act of kindness in welcoming and looking after the basic needs of customers. The hospitality industry is a broad group of businesses that provide services to customers. Hospitality is actually one facet of the service industry. It primarily involves addressing customer satisfaction and catering the needs of guests. This can be addressed by dealing with issues such as lodging, amenities and travel arrangements. Guinness World Records officially recognised Japan's Nishiyama Onsen Keiunkan, founded in 705, as the oldest hotel in the world. During the Middle Ages, various religious orders at monasteries and abbeys would offer accommodation for travellers on the road.

Luxury hotel statistics shows there are over 4,400 4 and 5-star hotels around the world. The leading group in the world is the Wyndham Hotel Group with over 9157 properties. Followed by Choice Hotels International which have over 7,045 and Marriot International with 7,003. As per the Federation of Hotel & Restaurant Associations of India (FHRAI), in FY21 the Indian hotel industry has taken a hit of >Rs. 1.30 lakh crore (US\$ 17.81 billion) in revenue due to impact of the COVID- 19 pandemic.

Scope of the Study:

The main aim of the study is to identify, encourage, measure, evaluate, improve, and reward. The study involves all the formal and informal measures adopted by the hotel to increase individual and team effectiveness. Management and employees should be enabled continuously to develop knowledge, skill and capabilities employee performance at work.

The scope of the study covers the following parts:

Job performance:

Considers meeting goals and developing mutually decided standards.

Working relationships:

This aspect focusses on maintaining professional relationships with co-workers, subordinates, and managers.

Need of the Study:

Human Resource is the real resource for any organization. All other resources in the

organization are utilized by human resource and so fullest utilization of all resources depends on employee performance of the organization. Today the globalization of the world economy and several other factors are again generating changes in how organizations organize, manage and use their Human Resource. Technology is also changing the nature of work. Knowledge-intensive techniques, industrial automation, reengineering with optimum utilization of resources sets the current working environment. To add to this the personal life of the individual employees also affect his professional work, aims & ambitions and decisions. Hence managing employee's performance continuously is becoming critical to the policies and planning of the top management.

Performance management has attracted the attention of all organizations as the information provided by PMS can be utilized for taking various important HR decisions related to Human Resource Planning, Recruitment and selection, Training and Development, compensation Management, career planning, talent management, performance based pay etc.

LITERATURE REVIEW

Helm et al. (2007) says that PMS is important tool to improve an organization's performance; it facilitates the organization to achieve its goals and objective. It can develop a performance-oriented culture within the organization. It helps the individual employee to have the clarity about what exactly is expected from him as there will be proper performance planning of each employee. PMS can also identify talented individuals for promotion and it also establishes linkage between pay and performance. It means various important HR decisions can be accurately taken with the help of PMS.

Bhattacharjee and Sengupta (2011) emphasized in their study that employees are the most crucial and valuable assets of an organization. If an organization wants to gain competitive advantages, it is very important to bridge the gap between the actual competence of human resource working in the organization and the desired competence expected from them. It is with the help of well-established Performance management system the organization can bridge this gap between actual performance and expected performance.

Sunil Kumar Pradhan and Dr. Suman Kalyan Chaudhury (2012), This study found that the main objective of performance management system is to align the individual and organizational goals in such a way that to give best possible platform to the employees to perform with 100% efficiency which will lead to organizational development, employee satisfaction and increased employee retention.

OBJECTIVES OF STUDY

- To understand clear role definitions, expectations and goals
- To understand the employees towards achievement of superior standards of work performance.
- To Learn That How to Boost productivity through improved performance.

RESEARCH METHODOLOGY

A sample of hospitality professionals was randomly selected at Pullman and Novotel. These professionals were the employees of the hotel. In January 2023, an e-mail that included a link to the performance Management Survey was filled by 10 employees, yielding a response rate of 100%. The survey was fielded for a period of three weeks, and weekly reminders were sent

to sample members in an effort to increase the response rate.

Analysis: Throughout this report, analyses by respondents organization staff size, the existence of performance management initiatives, organization sector and HR department staff size are presented and discussed, when applicable.

Differences: Conventional statistical methods were used to determine if observed differences were statistically significant.

Generalization of results: As with any research, readers should exercise caution when generalizing results and take individual circumstances and experiences into consideration when making decisions based on these data.

TABULATION AND DATA ANALYSIS

Age Group

7 responses

Mostly the response came from 25-40 age group which is 57.1% followed by the age group 18-25 which is approx 28.6%.

1. Performance Management System is clearly defined in the organization?

7 responses

100 % respondents agreed that the performance management system is clearly defined in the organization .

2. How would you think performance management can be improved in the following individual factor?

7 responses

42% response believe that the performance management system can be as in thr skills of the person in the property.

3. From which of the following organizational factor, do you think performance management system can get improved?

7 responses

57.1% response believe that through the management support the performance management system can be improved .

4. Formal feedback regarding your performance is given to you

7 responses

100%respondents agrees that their formal feedback is given in their organization .

5. The existing performance management system and performance appraisal system is

7 responses

71.4% employees says that their performance management system and performance appraisal system issatisfactory and 28.6% says it is neutral

6. The company has a great future and I would you recommend this organization to friends or family members as a good place to work

7 responsee

100% respondents says that their company has a great future and they would recommend the work cultureand workplace to the family and friends .

7. Performance Management System helps people set and achieve meaningful goals

7 responses

71.4 % respondents says that their performance management system helps to achieve meaningful goals followed by 28.6% who says that it is neutral they could not comment any of the thoughts

8. What are the barriers to effective performance?

7 responses

57.1 % respondents says that training is an barrier to effective performance followed by the 14.3% who says lack of resources and 28.6% says that barriers are through constant monitoring

9. PMS implemented in the organization creates a participative environment

7 responses

100% respondents agrees that PMS implemented in their organization creates a participative environment .

10. The job responsibilities are clearly defined

7 responses

71.4 % people agrees that their job responsibilities are clearly defined whereas 14.3% have an neutral approach towards it and the mix of 14.3% strongly agrees to the given statement

11. The excellence in performance and achievement of results are rewarded in time

7 responses

85.7 % respondents agrees that their performance and their achievements are rewarded in time followed by the 14.3% strongly agree .

12. How would you rate your companies policies and procedures are periodically reviewed to meet with the business needs and creates create a positive work environment?

7 responses

85.7% respondents says that their company policies are good in terms of business needs and positive workenvironment .followed by 14.3% says its very good

13. Are any steps taken to improve the performance if not upto the mark?

7 responses

100% respondents agrees that steps are taken to improve performance management by the organization

14. Does your Job Description clearly define KRA's on which your performance is rated?

7 responses

100 % people agreed that that their job description clearly define KRA on which performance is rated.

15. How performance can be improved?

7 responses

85.7% respondents says that the performance can be improve with the training factor and 14.3% says by thereward systems

16. In your opinion what is Performance Appraisal?

7 responses

Both 42.9 % says that performance of employees and motivation are performance appraisals . and rest 14.3% says it is evaluation of employees .

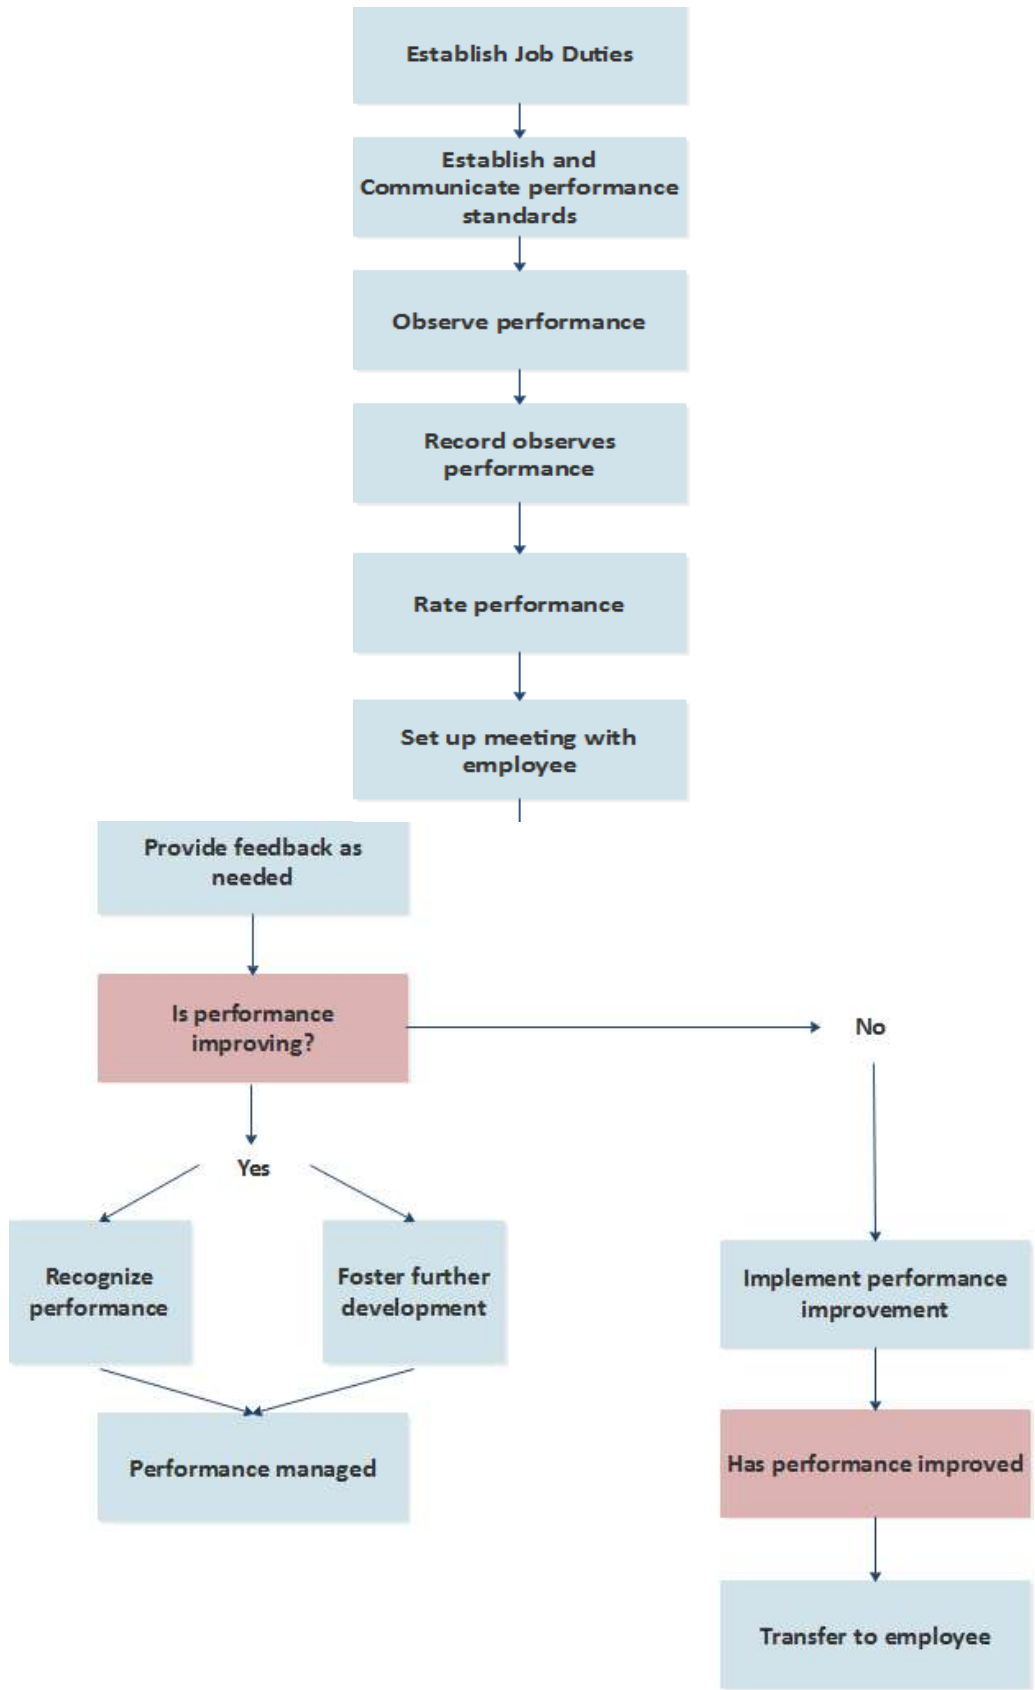

Some feedback and suggestions in the given questionnaire:

17. Please kindly provide your valuable suggestions for further improvement

4 responses

- Performance management system should be evolved according to the new generation of employees keeping in mind about various trends in Human Resource management .
- Performance managment system process should be made very clear and the most important part is that it should be to the point .
- Pms is an effective way for monitoring staffs performance
Pms should be made very precisely .
- As an HR employee I would suggest that the PMS System should be language friendly so that most of the employees could participate in it .

FLOWCHART OF VARIABLES

FINDINGS

All respondents have aware about the current performance management systems.

Majority of HR professionals told that they are comfortable with conducting performance review but some of the HR professionals are felt comfortable while conducting the performance review

All HR professionals and majority of respondents told that they were satisfied with the current performance management systems work well and no need for change

Majority of respondents are told the checklist techniques used in organization for accessing the performance

Most of the respondents are sure in current performance and in improving in their performance

Majority of HR professionals are not satisfied that performance management techniques used in accessing employees performance more effective

Some HR professionals are told that performance review techniques have more impact in employees performance employees incentives and morals but some of them are not agreed with that.

CONCLUSION

With this study it can be said that Performance Management System is the important strategic tool of Human Resource management. A well-designed PMS can help the organization to maximize employee performance and encourage organizational climate of trust, collaboration, communication, team work etc. It is important for an organization to have such system which not only identify to high performer but also help poor performer to improve his performance with well-designed Training program and personalized counseling. The performance management system is the strategic tool that can be used to transform people's talent and motivation into a strategic business advantage.

It is concluded from the survey that all the respondents are aware about the current performance management and does not need to change current performance management system works well and that improves the performance of the employees

This study has shown that performance management is a comprehensive approach to planning and sustaining improvements in the performance of the employees so as to meet the standards. Most of the HR professionals are not feel comfortable with conducting performance review.

So, create a trust in them. About performance review techniques and maintaining good relation with the employee's for improving their performance and accomplishing goals and objectives of the organization.

RESULTS

Effective performance management systems boost ongoing communication between the individual and leadership teams. It allows for trusted sources of conversation to be established, therefore giving employees an opportunity to express concern, discuss obstacles and brainstorm ways to improve.

Improved organizational performance, employee retention and loyalty, improved productivity, overcoming the barriers to communication, clear accountabilities, and cost advantages. Saves time and reduces conflicts, ensures efficiency and consistency in performance.

LIMITATIONS

The analysis indicates that the majority reported that the outcomes of the research were difficult to generalise. The limitations include a sample drawn from only one or specific contexts, a limited or small sample size, a cross-sectional or snapshot approach to data collection, self-selection bias or a convenience sampling approach, lack of empirical research, the lack of more specific variables and exploratory or ongoing research.

The future research can address the limitations including small sample size, limited empirical research, exploratory analysis and lack of suitable variables.

The limited extent of empirical research can be dealt with by using quantitative analysis to understand the turnover intention of talent using structured equation modelling. Moreover, as this research is based on a comprehensive review of the available literature on Performance Management, it can be said to have overcome the issue of identifying the most suitable variables.

The review indicates that none of the studies has systematically examined the variables of Performance Management based on the prior literature in the field concerned. Similarly, the design of the research model is developed to evaluate how Performance Management influences employee commitment is based entirely on the random selection of variables including the moderator (i.e. company type), with no theoretical underpinning.

ABSTRACT

There is a debate among education professionals today regarding the definition of successful teaching, which focuses on the characteristics of such teachers. After much discussion (Grigg 2010), three characteristics have been defined:

- charismatic teacher;
- expert;
- reflective.

This debate is not only at academic levels, but its conclusions are important to evaluate the work of successful teachers. Let's look at these models briefly.

The charismatic teacher

Good teachers are often cited for their personality. They bring enthusiasm and passion for teaching to the classroom. They are cheerful and attentive to students. Often these teachers stand out for taking care of students, especially in delicate cases when they have behavioral problems or some other kind. They are long preserved in the memory of students and colleagues for their personality and it happens that many other teachers follow them as a model, therefore they imitate them in their profession and in life.

The question of where 'good' teachers differ in personal qualities from those who are not as good has been examined by Morrison and McIntyre (1969). The problem with the charismatic teacher model is that there is little mention of what the students have learned. These teachers stand out for their teaching methodology, explain well, recite nicely, qualities that are distinct from teachers who have other qualities.

The expert teacher

This is more about demonstrating the qualities of these teachers. They are quite good masters of the subject, illustrate well every aspect of it and influence its understanding in the students. They have good communication skills. Some researchers (Gipps et al. 2000; Wolf, 1995) seek to standardize the characteristics of these teachers, who serve as models, by formulating the competency model. Such teachers are difficult for others to match when it comes to their model of competencies, which they possess at a fairly high level.

Expert teachers are usually also called competent. Competence is a broad concept, it describes the ability that someone has to demonstrate in a given occupation. The competence is related to the general qualities of the demonstration of some qualities which are evaluated according to the expected results, for which the formulation has already been made. Competencies include knowledge, habits and values.

Keywords: Debate, Teacher, Success

Introduction

Naturally, it is impossible to describe, in a few pages, the school life of two and a half million teachers working in different circumstances, all over North America, let alone all over the world. The following section, written by a teacher, gives us a comprehensive view that, despite the slightly pompous tones, represents the experiences of many high school teachers. Therefore, instruction circumstances require a lot from teachers, in terms of daily maintenance and their responsibility towards the students; and they give teachers very little in terms of time needed for planning, constructive discussion, thinking, and very little reward and time for self-reflection. The central tendency of these conditions, as I will describe in this section has, definitely, negative consequences.

Teachers' effectiveness is measured by informal and general observations of students - 50% of teachers in Dade County, Florida responded this way. The second, more frequent choice was related to exam results - but only 13.5%. In short, teachers rely heavily on their own, informal observations.

Lortie (1975), also, found that "sense of success" in their work with students, here and there, was the main source of pride (as opposed to improving the test scores of the whole class) (p. 121). For high school teachers, success stories only became apparent a year or two after graduation, when a former student came back to thank the teacher. Comparing the individual cases of success, with the results of the group, it is significant that 64% of the teachers, of the Five Cities, mention the first category and only 29% of them mention the second, as a very great source of satisfaction.

- The prevailing model of classroom organization is a group of students, with whom the teacher interacts as a single group;
- Each student, in essence, works and achieves results alone, within a group.
- The teacher is almost completely autonomous in terms of decisions in the classroom - the choice of materials, the determination of the organization of the classroom, the choice of teaching procedures.
- Most of the time, the teacher is engaged either with face-to-face teaching, or with supervising the work of the students in the banks, or with the exams s/he gives to the students. Students, relatively rarely, were involved in direct learning from each other or in conversational processes with teachers, initiated by the students themselves.
- There is very little praise and correction of student work, and little guidance from teachers on how to do things better next time.
- Students usually engage in a fairly narrow range of classroom activities - listening to the teacher, writing answers to questions, and doing tests and assignments.
- A large percentage of the students observed seemed to be passively satisfied with their classroom life.
- Even in the first grades of primary school, there was strong evidence that students did not have time to finish their lessons and they did not understand what the teacher was asking them to do.
- The teacher has little influence and is little involved in school-wide or other extracurricular matters (1984, pp. 123-124,186).
- In short, we need to combine the ideas of cognitive scientists, who are working on the problem of how to engage all students, with the opinions of sociologists, who show how we need to change power relations in school, to achieve significant progress in our work. When

these two forces are integrated into the culture of professional instruction communities, the fact is that educators, in these types of schools, play the role of "moral agents of change," or, as Oakes (1999) puts it, passionate "educators", for the common good". But where are the students, now, in this equation?

Good teaching is difficult to define, while successful teaching can be proven. A successful teacher is one who is able to realize the goals and objectives of the program. The nature of instruction still remains the most important, but two different teachers, as mentioned in the above example, can try and reach different conclusions and both can be called successful. The main dimensions of successful instruction are two: intention and results.

Without goals, the student's results become fortuitous and lacking criteria. However, goals alone are not enough. If the student does not achieve the defined learning objectives (even when the lack of success and failures do not depend and are not in the hands of the teacher), then it cannot be said that the teacher's work has been really effective.

The key to the students' success lies in a strong, personal, teacher-student relationship. It is difficult to measure success, and in the academic world, teachers constantly re-evaluate the quantitative way of instruction.

If you ask a student what makes them successful in school, you won't hear a fancy new book or a series of lectures. Most likely you will hear: **"It was my teacher. He always trusted me."**

The key to the students' success lies in a strong, personal, teacher-student relationship. The teacher inspires the students to follow their passions and realize the projects. But the first and most important question to ask is: Are teachers guiding students toward success? Here are some of the things that successful teachers do differently.

Successful teachers expect their students to succeed

This concept is also similar for parents. Students need someone to trust them. They need a wise and older man to put stock in their abilities. Set the sick aside and then create an environment where it's okay to fail. This will motivate your students to keep trying until they reach the expectation you have set for them.

Successful teachers have a sense of humour

Humour and wit make a lasting impression. They reduce stress and frustration and give people the opportunity to see their circumstances from a different perspective.

Successful teachers congratulate students

Students need encouragement, but real encouragement. There is no better solution than to praise their work when you know it is only 50% of what they are capable of doing. You don't want to create an environment where there is no praise or recognition; you want to create an environment where the praise you offer is valuable because you use it in an encouraging and personal way, each student is praised for their ability that differs from others.

Successful teachers never stop learning

Good teachers find time in their schedule to teach themselves. Not only does it help strengthen your knowledge in a particular subject, it also puts you in the shoes of the learner. This gives you a perspective about the learning process that you can easily forget when you're always in teaching mode.

Successful teachers come out of the "box"

It can be a self-made box. "Oh I could never do that," you say to yourself. Perhaps you vowed never to become a teacher who would allow students to grade each other (perhaps you had a bad experience as a child). Sometimes the biggest obstacle to growth is us. Have you built a box around your teaching methods? Good teachers know when it's time to get out of it.

Successful teachers are masters of their subject

Good teachers must know their craft thoroughly. In addition to the "instruction" methodology, you must master your subject. Learn, learn and never stop learning. Successful educators are constantly curious.

It does not mean that the titles and ranks owned by the teachers necessarily guarantee successful instruction. A successful teacher is the teacher who realizes the goals and objectives of the curriculum, as far as the drafting of those curricula is successful, for the different school levels, also as far as the compliance with the curricula is successful, drafting and compilation of texts, literature and various teaching tools.

A successful teacher in education has been shown to be a teacher who is affectionate in relation to students, is attractive and has a consolidated mood according to situations, has high moral and intellectual virtues, is enthusiastic, optimistic and fair to students, is connected with them, democratic, responsible and capable of being comprehended, s/he is bright, balanced and encourages students to learn, s/he is prudent and self-confident in his work with students.

Conclusion:

It seems that the debates about this type of categories have a positive answer: While on the other hand, the unsuccessful teacher is the teacher who is a bureaucrat, biased and self-absorbed, who is rigid, harsh and boring in his work and in relation to the students, who is monotonous, uniform, apathetic, distracted and insecure in himself (herself) and dishonest, s/he is angry and has many mistakes in relation to his teammates, in relation to the students and in relation to the organization of the educational – teaching process - during his working hours.<

The knowledge considered as most special that a successful teacher should possess are:

1. Getting to know the student as best as possible by following his/her development through different periods,
2. Getting to know the environment outside the classroom and outside the school,
3. Getting to know the best of the educational contents of the subject he teaches and their differentiation in essential and secondary ones,
4. Equipped with a set of necessary moral values, which guide him/her throughout his/her educational work,
5. The best possible knowledge and the differentiation between how students learn in different stages and how adults learn, which make the learning process as easy as possible for students and the acquisition of knowledge and their understanding and basic knowledge of the pedagogical and psychological, didactic and methodical culture, to be able to treat instruction in front of students both as a science and as an art.
6. Believe in the potential of your students
7. A teacher's success begins with the success of their students. You always have high expectations for your students. Believe in their potential to succeed and be sure to push and encourage them as much as possible.
8. Even when they fail, motivate them to try again and work harder. This strategy helps push them out of their comfort zone so they can pursue success knowing you're there to help them whenever they fail.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

Learn everything you can about your field

Being well-versed in your field of study is also a crucial step towards a successful teaching career. It is true that even the most successful teachers do not know everything. But the more you know, the easier it will be to teach your students and provide them with immediate answers to their questions. You can also create exciting technology-based activities

Be fun and energetic

Did you know that most students are more willing to share their academic problems with teachers who are humorous and enthusiastic than with teachers who are grumpy and "always serious"? Yes! The way you carry yourself determines a lot about your approachability.

Smile whenever you talk to your students, crack a joke or two, and so on. This helps to ease any tension or fear students may feel when approaching you for help.

Anyone who has been in the classroom and observed the appearance of a lifeless, static teacher without variety of intonation of voice, has easily noticed that the lesson lacks emotional values. However, it is difficult to find an instrument or tool to equip teachers, such as those discussed above. Even this element is missing from the studies that have been done on the success of teaching. Although it is difficult and such an instrument is missing, students notice quite well in the classroom such a lack in the qualities of the teacher (in those cases when, indeed, it is missing). Students are good perceivers and receivers of the emotions that the teacher conveys and, often, they react to them. A teacher who is enthusiastic about the subject and shows it through facial expressions, variety of intonation, general actions (sign language), is more likely to keep students' attention than one who does not have these qualities. Enthusiasm is one of the most important aspects of teacher influence. Enthusiasm is the energy, power, involvement, emotion and interest of the teacher during the development of the lesson. We all know that enthusiasm is something 'sticky', 'infectious'. Enthusiasm is conveyed to the students in many and different ways, but the most common are the intonation of the voice, with its various changes, actions (gestures), the continuous and uninterrupted look of the students directly in the eyes, as well as the liveliness and the inspiration. Studies have shown that teacher enthusiasm affects student achievement (Gabello & Terrell, 1994). Enthusiasm is also important in motivating students to engage in the learning process.

ABSTRACT

Background: People with Disables have great contributions in countries' development that they endowed with great accumulation of knowledge and skill through participations in different production sector like agriculture even stigmatized. Based on this inception, this research activity was initiated with objectives of scale up the best climate smart agriculture practices to people with disable, engage people with disable in technology promotion and scaling up the lessons, and disseminate the knowledge and skill to people with disable in alternative income generation enterprises.

Materials and Methods: To achieve these all objectives, Babile district Erer Ibada and Ifadin kebeles were selected where people with disable these infected by leprosy disease. Accordingly, 27 PwD were involved in study and provided training on different topic of agricultural technologies both on pre- and post-harvest production, and provided with many inputs for pre-and post-harvests. After all, two sorghum varieties Melkam and Dekeba; Two Haricot-bean varieties KTAB1 and Batu with full packages were sown on provided land.

Results: As a result, Malkam variety performed high yielder 38.5 quintal/hectare compare to Dekeba yielded 31.5 quintal/hectare, similarly Melkam variety marketed more 1005 quintal because of its demand on market in turn they earned good income. Moreover, the Haricot-bean variety KTAB1 yielded high 14.5 quintal/hectare compare to Batu yielded 12.8 quintal/hectare, however, Batu variety is marketed as produced because of its high demand in both urban and rural areas.

Conclusion and policy implications: For all these technology implementations, different networking and media coverage by mass media like regional and national TV programs, FM Radios, field days, workshops and published and printing materials were used. Therefore, it is recommended that scaling up of these research activities lessons and experiences by governments, no-governments organizations and other stakeholders should mainstream People with Disable in their development and research programs.

Keywords: People with Disable, Inclusive, Scaling up, Agriculture

Introduction

People with disabilities—more than a billion people worldwide—are frequently excluded from social and political life, and often experience stigmatizing attitudes and behaviors from people without disabilities. This stigma, coupled with inaccessible environments and systems and institutional barriers (e.g., lack of inclusive legislation), may result in discrimination against people with disabilities (and their families) to the degree that they are not able to enjoy their rights on an equal basis with others (Saran et al, 2023). These exclusions result in lower participation of people with disabilities in education, economics and policies compared to others in the population (WHO, 2010). Consequently, people with disabilities tend to have a lower level of educational attainment, poorer health, fewer economic opportunities, and increased poverty risk (Banks et al., 2017; Bright & Kuper, 2018). As a result of social exclusion, people with disabilities encounter various challenges in accessing services that others have long taken for granted, including healthcare, education, employment, and transportation (UN, 2018).

Social inclusion of people with disabilities is recognized as a fundamental right in the UNCRPD, including in ‘participation in cultural life, recreation, leisure, and sport’ (Article 30) and ‘participation in political and public life (Article 29). Furthermore, the Sustainability Development Goals (SDGs) are also relevant to this issue (UN, 2016), including SDG4 ‘Guaranteeing equal and accessible education by building inclusive learning environments and providing the needed assistance for persons with disabilities’, and SDG 8 ‘Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all’, SDG 10 ‘Emphasizing the social, economic and political inclusion of persons with disabilities’ and SDG 11 ‘Creating accessible cities and water resources, affordable, accessible and sustainable transport systems, providing universal access to safe, inclusive, accessible and green public spaces’. The SDGs may not be achieved if people with disabilities are excluded from equal participation in all aspects of life (Saran et al, 2023). People with disabilities have great contributions in countries’ development that endowed with great accumulation of knowledge and skill through participations in different production sector like agriculture which provide different alternatives in their livelihood strategies such as earning extra incomes in addition to other enterprises they engaged in. Therefore, to make the PwDs to be not always dependent on others for their livelihood improvement, this research activity was conducted with the following objectives.

Objectives

- To scale up the best climate smart agriculture practices to people with disabilities
 - To engage people with disabilities in technology promotion and scaling up the lessons
- To disseminate the knowledge and skill to people with disabilities in alternative income generation enterprises

Research Methods and Materials

Site and Farmers Selection—the sites were selected based on the kebeles these have people with disabilities are many in number and sampling techniques was purposive because the numbers are diverse across locations and accordingly Erar Ibada and Ifadin kebeles around Bisidimo Hospital included in this research activity based on their interest to engage study from starting

6th International CEO Communication, Economics, Organization & Social Sciences Congress

end, land availability and willingness to share lessons to large community. The disability type were interviewed based on WGSD that is eye, ear, mental, physical-based, accordingly, this study focused on physical of them that most of them were affected leprosy diseases and damaged their hands and legs. Total numbers of PwD were 30 in addition to 20 people without disable to share the experiences of one another among them.

Land designation and implementation process

Land was allocated as per their land holding that from 0.25 ha to 1.5 ha 20m*20m, 50m*50m, 100m*100m. The crop varieties used for this study were sorghum (Melkam an Dekeba), and Haricot-bean (KTAB-1 and Batu) as double cropping practices within a single season first sowing Haricot-bean that stays 58-70 days after bean harvest sow the Melkam and Dekeba varieties based on the farmers preferences. Planting practices were 75cm*20cm between row and plants for sorghum and 40cm*10cm for Haricot-bean variety respectively. At first sowing, all plots were received a basal application of Di Ammonium Phosphate at the rate of 100 kg/ha. Four weeks after emergence for sorghum and KATB-1 N in the form of urea (46 kg N) was applied at the rate of 100 kg/ha and for Haricot beans 23 kg N was applied at the rate of 50 kg/ha when the soil moisture was enough.

At the end of June the preceding crops was harvested and threshed after it is sun dried for one weak except the control since it takes nine months to mature and grain yield per plot was recorded. The succeeding crop and the control all sorghum were harvested on maturity. The stalks from net plot were cut close to ground level and later ears were separated. The ears were sun-dried, threshed and grain yield per plot was recorded after 8 days of sun drying.

Inputs Provision

The all packages of the technology such as improved variety, fertilizer, pesticides, PICS storage sack and mechanization technology that was Sorghum thresher were provided to people with disable (physical).

Cooperative form

Forming PwD is in cooperative helps them to sell their products in fair price and timely, have access to inputs in affordable price and share experience among themselves easily. Accordingly, they grouped into PwD cooperative and act all farming activities in mass and hire labor in collective actions at time of difficulties such as heavy rains and protect bird attack when crops reached maturity stage.

Crop residues usage

The livestock feed is very serious problem at off-season in this areas because of this the farmers in areas collect the residues in bale and sell to other farmers faced the feed shortage. Based on this, the study prepared the plan of storing their crop residues at active season and sell off-season I good prices which helped in earning alternative income from diversified agricultural activities.

Training

Training is very important agenda in research part, accordingly, the agronomic practices, pathology, marketing, cooperative formation, minimization of postharvest loss through agricultural mechanization, and food utilization of the crops tiles were covered.

Data Collection and Analysis

The quantitative data were collected through sheet and checklist and qualitative data were collected through focus group discussion. And quantitative data were analyzed by descriptive statistics such as mean, average, frequency and percentage and qualitative data were analyzed by narration.

Way of communicating the results

Delivering the findings of research to beneficiaries is very important part of this research. The mechanisms of disseminating results of this research were National and Regional TV program, FM Radio, field days, publication, workshops and seminar preparation to stakeholders and farmers.

Result and Discussion

3.1. Scale up the Best Climate Smart Agriculture Practices to People with Disable

To achieve this objective the first activities after participant selections training was provided for PwDs on different topics of climate smart agricultural practices on pre and post-harvest handling of sorghum and Haricot-bean improved crop varieties in the selected kebeles such as agronomic practices, post-harvest handling, food utilization as home consumption, marketing of the surplus products in earning extra income, and scaling up of these lessons to other places where such experiences are rarely reached. Accordingly, twenty seven PwDs, twelve people without disable were training in order for helping PwDs in time of difficulties from the PwoDs and show good lessons to others who have stigmatized to them (PwDs) as depicted on Table 1 below. After training was provided to PwDs, PwoDs, DAs, experts and other participated stakeholders like unions and primary cooperatives in the areas, many agricultural inputs for pre and post-harvest production were provided to PwDs as shown Table 2

Table 1 Training

Participants	Sex		Training titles
	Female	Male	
People with Disable	3	27	Agronomic practices
DA	-	5	Postharvest handling
Experts	-	3	Food utilization
People without Disable	9	12	Marketing
Others*	-	6	Scaling up lessons and networking

Table 2 inputs of pre-and postharvest

Inputs	Items type	Items amount	Remarks
Improved seeds	Sorghum	Melkam	2.9 quintal
		Dekeba	1.2 quintal
Fertilizer	Haricot-bean	KTAB-1	8 quintal
		Batu	4 quintal
		NPS	42 quintal
		Urea	25 quintal
Mechanized equipment	Sorghum thresher	1	
PICS sacks	100kg	102 packs	
	50kg	102 packs	

3.2. Engage People with Disable in Technology Promotion and Scaling up the lessons

This research activity was also incited to achieve the objectives of involving the PwDs in agricultural technologies in different models of production within single season that helps to produce more than two times as depicted in Table 3 below. Moreover, the sorghum (Melkam and Dekeba) and Haricot-bean (KTAB1 and Batu) improved varieties were provided to them and sown by the model of preceding and succeeding of crops respectively in single season that is sown Haricot-bean in April then harvest after two-halve months then sorghum sown in June, then harvested after three months on the same land. Accordingly, Melkam variety yielded as compare Dekebe variety and marketed more in bringing high alternative source of income for PwDs as depicted on Table 3 below.

Similarly, KTAB1 Haricot-bean improved variety yielded high per hectare productivity as compare to Batu, however, farmers sown this KTAB1 on small plot land because this variety was newly released, thus, they intended to verify the adaptability of the crop in study areas. These people with disable also marketed these Haricot-bean variety in different rate, as shown Table 3 below, they marketed huge amount of Batu variety to market because it is very demanded in color and for different home consumption in urban areas.

Captured picture: 2020 yield produced

Table 3 Yield performance of crops

Crop and Model	Varieties	Coverage in hectare	Yield q/h	Total quintal	Marketed in quintal	Home consumed in quintal
Preceding (Haricot-bean)	KTAB1	3	14.5	43.5	42.5	1
	Batu	10	12.8	128	128	0
Succeeding (Sorghum)	Melkam	29	38.5	1116.5	1005	4.5
	Dekeba	12	31.3	375.6	370	5..6

3.3. Disseminate the knowledge and skill to People with Disable in alternative income generation enterprises

The other important point for this research activity was large community outreach of demonstrating how PwDs invest their knowledge and skill in agriculture production as their alternative income generation in addition to participating different enterprises. In this outreaching the lessons of these knowledge and skill different techniques of communications technologies and networking of PwDs with different primary cooperatives and unions around the areas was implemented. Accordingly, the direct connections of PwDs with other stakeholders helped them marketing their surplus agriculture products in price and with low cost of transactions because these primary cooperatives and unions came to their home and nearby store and bought products which reduces different transactions costs like transportations and other costs. Through these all connections and experience sharing different regional and National TV program, FM, field day events, printing materials, workshops and exchange visits were used.

Captured picture: 2020 crop production for food and as income source

Ways of communicating results

The mass Medias like TV, FM Radios, field days, and exchange visit, extension materials like brochures, poster, and leaflet were used for disseminating the outcomes of the technologies for large communities.

Conclusion and Policy Implications

4.1. Conclusions

This research activity focused on People with Disabilities in Babile district around Bisidimo Hospital and purposively because there are a number of people infected by leprosy and physically disabled, the Hospital included these disabled people in their different programs, however, the program they engaged in are not fulfilled their livelihood objectives. Based on this problems and their interest of agriculture participation, this research involved them cultivating potential crops in the study areas that provides high yield in short periods, accordingly, two improved sorghum varieties Melkam and Dekeba, two Haricot-bean varieties KTAB1 and Batu varieties in two models that preceding Haricot-bean succeeding sorghum as

6th International CEO Communication, Economics, Organization & Social Sciences Congress

double cropping in single season on the same plot of land. As a result, the good yield performance, knowledge and skill of producing mode of cropping and networking of People with Disabilities with different stakeholders work on marketing and technology promotion through different communication Medias are used.

4.2. Policy Implications

Promoting the alternative enterprises like improved agricultural technologies for PwDs
Capacitating PwDs on the different skills of other agricultural productions technologies like mechanizations and stores .

ABSTRACT

Financial inclusion became the common goal globally during the post-economic crisis of 2008, and in Indonesia, this has been promoted as a “National Strategy” to encourage economic growth. This has been supported by the entire Government’s Institutions, including Bank Indonesia, through issuing a Macroprudential Inclusive Financing Ratio (RPIM). This ratio requires banks to allocate at least 20 percent of their total lending to MSME and low-income people starting December 2022 and 30 percent by 2024 through 1) Direct financing, 2) Financing through Non-Bank Financial Institutions and qualified business entities such as financing companies and Peer to Peer (P2P) lending, and 3) Financing through Investment Securities. These factors drive the increasing growth of digital banks whose business model collaborates with financing companies and P2P to provide unsecured loans to unbanked customers. This business model differs from existing traditional banks with well-diversified products and segments from Wholesale banking and Consumer Banking businesses where the loans are mainly secured, and the inherent credit risk is lower than unsecured loans for unbanked customers. Those factors are reflected in the financial ratios. The current problem is some negative perceptions of the uniqueness of digital banks’ financial ratios, particularly compared to traditional banks. This study aims to analyze and measure the financial ratios of three digital banks, three traditional banks, and two financing companies. Any misleading perception might trigger negative public sentiments toward digital banks. Hence, alignment among regulators and relevant stakeholders is critical. Some suggestions are proposed to cater to this problem.

Keywords: Digital Bank, Digital Financial Inclusion, Digital Economy, Bank Financial Ratios

INTRODUCTION

There has been increasing growth of digital banks in Indonesia from 2019 until now as an alternative to traditional banks. They offer a similar range of products and services through their advanced technology and focus on tapping the unbanked population in Indonesia. The business model adopted by the digital banks for the loans is a collaboration with Non-Bank Financial Institutions such as financing companies, microfinance institutions, and P2P entities.

The unbanked customer segment has below characteristics:

1. They work in the informal sector
2. Have non-fixed income
3. Have no salary slip
4. Have no financial records about their spending and income
5. For productive sectors, they only have online stores; hence they don't have an actual store
6. Low financial literacy
7. Have no qualified collateral to be qualified as a deduction in calculating the provision under OJK regulations, such as land and building.
8. Have no credit histories in SLIK (Financial Information Service System as developed by OJK starting January 2, 2017, which contained all credit ratings of debtors from all banks, financing companies, and other financial services companies)

With the above characteristics, it is reasonable that under the risk-based pricing principle, the lending product offered to this customer segment would have a higher interest rate than credit card products with an interest rate of 21%. Table 2 compares various products' interest and lifetime losses with each corresponding claim and lifetime loss.

The entity's business model will determine the risk management strategy and controls; infrastructures must be developed; resources strategy such as human resources, IT, network distribution channel strategy, etc. Those factors will be captured and translated into the digital banks' financial statements and financial ratios, which have significant differences (and sometimes are viewed as anomalies) compared with the banking industry and traditional banks. Without having a robust and comprehensive understanding of the above factors, misinterpretation of the financial ratios may lead to negative sentiment toward digital banks and harm public trust. It, therefore, may prohibit the growth of digital banks as one key enabler for accelerating digital financial inclusivity.

1. UNDERLYING REGULATIONS PERTAINED TO FINANCIAL INCLUSION

Financial inclusivity has become the key priority of the Indonesia government as stipulated in the following regulations:

- a. Presidential Regulation Number 114 of 2020 on "the National Strategy for Financial Inclusion" to encourage economic growth, speed up poverty reduction, and reduce inequality between individuals and regions to realize the Indonesian people's welfare.
- b. "Roadmap of Indonesian Banking Development 2020-2025 (RP2I)" as designed by the Financial Services Authority (OJK) as an independent body tasked with the duty of regulating and monitoring the banking industry as well as protecting banking customers.
- c. Bank Indonesia Regulation (PBI) No. 24/3/PBI/2022 concerning the Macroprudential Inclusive Financing Ratio (RPIM) for Conventional Commercial Banks, Sharia Banks, and Sharia Business Units, effective from 3 January 2022. Bank Indonesia promulgated

the regulation to increase economic inclusion and unlock financial access while strengthening MSME's contribution to the national economic recovery. Furthermore, the policy affords the banking industry more excellent options to participate in MSME and low-income earner financing and another inclusive financing. RPIM requirements and obligations will be implemented gradually, starting at 20% in 2022, before increasing to 25% in 2023 and 30% in 2024.

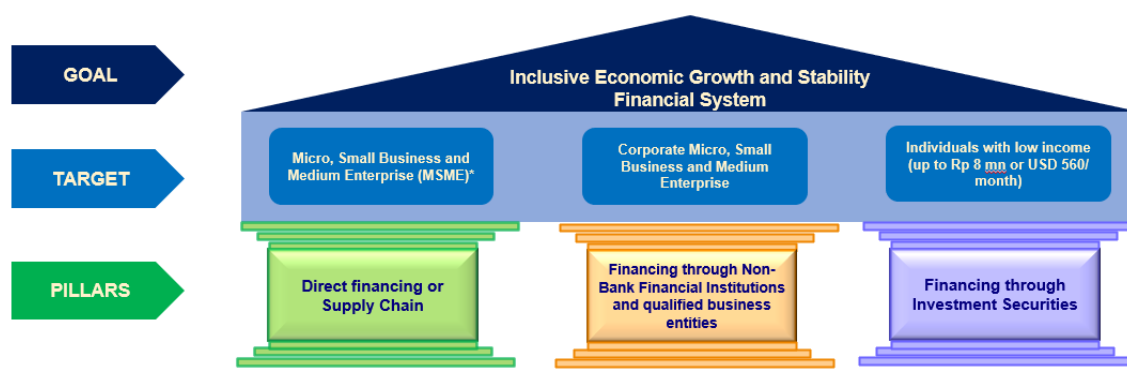

Figure 1: The Macroprudential Inclusive Financing Ratio Framework per BI Regulation

Source: Bank Indonesia socialization of RPIM, 2021

(<https://www.bi.go.id/id/edukasi/Pages/Infografis-PBI-RPIM.aspx>). Has been summarized and modified by the author, 2023.

From the above Macroprudential Inclusive Financing Ratio (RPIM) policy framework, the banking industry has three options to achieve the ratio:

1. Direct financing;
2. Financing through Non-Bank Financial Institutions and qualified business entities such as financing companies and Peer to Peer lending;
3. Financing through Investment Securities.

The second option drives the increasing growth of digital banks, whose business model collaborates with financing companies and P2P to provide unsecured loans to unbanked customers. This business model is significantly different from existing traditional banks with well-diversified products and customer segments comprised of Wholesale banking businesses and Consumer/ Retail Banking businesses where the loans are mainly secured, and the inherent credit risk is lower compared to unsecured loans for unbanked customers. The different business models and cost structures are reflected in the financial ratios.

2. DIGITAL BANKING BUSINESS MODEL

To close the gap between the demand for lending products for unbanked segments, from 2019, digital banks are increasingly growing. The most powerful capability of their advanced technology is opening a digital deposit account through a mobile application in a short time, i.e., less than 10 minutes. Through their mobile application, the customer can also do banking transfers with significant amounts as if they do it via the teller; they do it anytime, 24/7, and anywhere; 24/7 customer services are always readily available to provide assistance and solutions for any issues, the customers can also enjoy high interest, and some banks pay daily interest which gives more significant benefit for the user with smaller ticket size and the non-

stable and reducing trend of funding balance (due to low-income and utilized for daily primary needs). This breakthrough and solution can motivate low-income people to have saving behavior and better financial literacy. Traditional banks only offer high interest for priority customers with significant deposit placements, i.e., above Rp 500 million, and specific terms and conditions such as a locking period. While people with low income will not enjoy the benefit of saving their salary in a bank account because they cannot get the interest from their low daily saving balance in a month; instead, they must pay admin fees and interbank transfer charges. In short, compared to traditional banking product propositions, digital banks provide higher interest, daily interest payment, free of admin fees, no minimum balance, and interbank transfer charges. People with low income or individual MSMEs who only have the deposit balancest for several days and not until an entire month cycle will enjoy the most from the above benefits provided by digital banks.

From a lending product perspective, most unbanked customers usually have limitations in getting approval on traditional banking products because of the following:

1. No evidence of income
2. No evidence of financial records nor proper financial statements for individual SME
3. No historical credit data in SLIK
4. Lack of assets to be pledged as collateral for a credit facility

This caused some of them to seek a loan shark to get loans to bridge their needs with the income which commenter. This segment will generate the highest credit risk for the traditional banks, as evidenced by market historical credit loss data. Based on research, the penetration of these unbanked segments might be less than 5%.

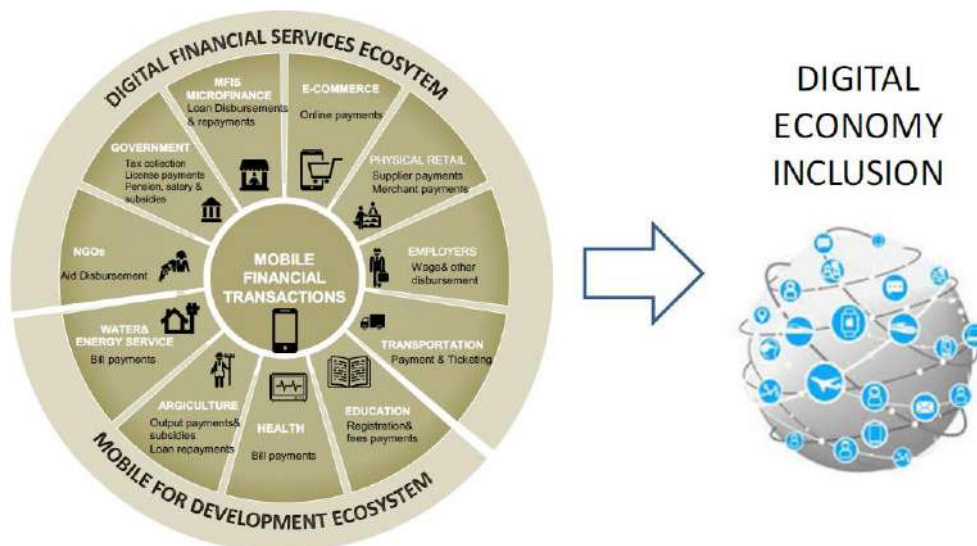

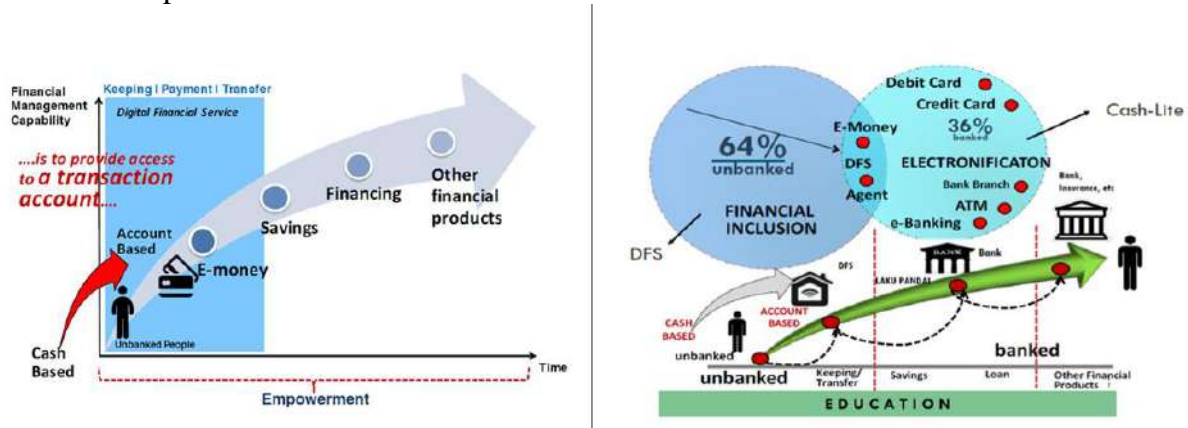

Figure 2: Digital Financial Services Ecosystem to Achieve Digital Economy Inclusion
Source: OJK Material, Digital Financial Inclusion in Indonesia presentation material by Financial Inclusion and Electronificaion Task Force, Bank Indonesia Transformation Office, 2016 (<https://ojk.go.id/id/berita-dan-kegiatan/publikasi/Documents/Pages/Materi-OJK-PROKSI-2016/7.Digital%20Financial%20Inclusion%20-%20OJK.pdf> page 24)

The above picture of the Digital Financial Services Ecosystem involves a wide range of entities across different industries and is not limited to banks to achieve Digital Economy Inclusion. For instance, loan disbursement and repayment involve Micro Finance institutions, e-commerce of online payments, etc.

Figure 3: Digital Financial Inclusion Dual Strategy: Infrastructure and Ecosystem to Help Unbanked Population Become Banked Customer

Table 1: Financial Services Product for Consumer Individual Segment

Key Differentiation Factors	Unbanked unsecured	Unbankable	Bankable Customer
<i>Served by</i>	Informal Loans provider MFIS P2P	Financing Companies	Bank
<i>Products</i>	Payday Loans Consumptive loans Productive loans	Pay Later Motorcycle financing (new and used) Car financing (new and used)	Unsecured loans (KTA) Credit Cards SME unsecured SME Unsecured

Source: The respective website of banks, financing entities, and P2P providers

Table 2: Pricing of Financial Services Product for Consumer Individual Segment & Respective Risk Premium or Expected Lifetime Losses (Risk-based Pricing Principle)

Type of Customers based on financial inclusion	Financial Institution Providers	Lending Product	Effective Interest Rate (EIR) per Annum	Risk Premium (EIR basis)
Bankable customers	Bank	SME secured	9-10%	2%
		SME unsecured	13-15%	7-12%
		Credit Card	21%	5-15%
		Unsecured loans (KTA)	35-40%	10-20%
Unbankable customers with collateralized assets	Financing Companies	Car Financing	18-25%	6-13%
		Motor Financing	38-52%	23-25%
		Pay Later	35-60%	24-25%

Unbankable customers unsecured	Micro Financing Institutions or P2P	Productive loans purpose	12-37%	2-27%
		Consumptive loans purpose	60-78%	3-60%
		Payday	208%	>150%

Source: Internal information as collated by Author, 2023

The 'unbankable' segment is a significant portion that has not been served by the banking industry (underserved) due to limited geographical access, lower income with more limited documentation, absence of historical credit data, working in the informal sector, or other reasons. The credit interest rates are generally determined according to the segment and credit risk inherent in the product and customer segment. The higher the risk, the higher the interest rate applied. The interest rate also depends on the collateral pledged and the credit tenor (generally, the higher rate is charged to a longer tenor).

LITERATURE REVIEW

The banking sector is the backbone of Indonesia's highly regulated economy. One of the critical regulatory requirements for the banks is to conduct a self-assessment of the Bank's Soundness Level by applying Risk-Based Bank Rating ("RBRR" approach). The Bank's Soundness Level assessment should include evaluating risk profile, corporate governance structures, rentability, and capitalization as prescribed in the OJK Regulation No. 18/POJK.03/2016 on implementing Risk Management in Commercial Banks. The implementing rule is specified in OJK Circular Letter No.14/SEOJK.03/2017, which revokes BI Circular Letter No.13/24/DPNP and has come into effect as of 17 March 2017.

Before examining the financial ratios of Digital Banks and Traditional Banks, below are the differences:

1. "Traditional Bank": operates through physical branches across the region, incorporates mobile banking features to accommodate online transactions, and manages depositors' accounts plus linked credit accounts like mortgages, credit cards, personal loans, auto loans, etc. For instance: BCA mobile, BRI mobile, Mandiri mobile. Some "Traditional Bank" also operates as an "online" product option of a commercial bank; the system is not separated from the commercial bank's main offerings or shares the same mobile app as regular commercial bank users. For instance: Permata Me, OCBC Nyala, CIMB Octo, Danamon D-Bank. In terms of banking products, including loans, deposits, investments, and other wealth management products and services, the business model adopted is universal banking with robust and comprehensive products to serve all customer segments. In a nutshell, the Traditional Bank has a more diversified business model.
2. "Digital Bank": generally operates online without any physical branches; provides the digital or online processes for the entire customer life cycle starting from account opening. This journal will focus on the loan products business of digital banks compared to Traditional banks. Digital Bank generally collaborates with Non-Bank Financial Institutions like financing companies and P2P within their ecosystem, for instance:
 - a) Jago with Go To Group (for instance: GoPlaylater CiCil – a new product from Tokopedia; Go To Financial by integrating its service with Go Biz for GoFood merchants); BFI Finance (financing companies for auto loans); Carsome (channeling

loans for a used car financing) and other institutions using either channeling loans or joint financing scheme. Total lending partners are more than 30 institutions.

- b) Neo Commerce with Akulaku (Financing Companies) and Assetku (P2P). Similar to Jago, Neo Commerce's primary business model is a collaboration with the digital financial ecosystem through pay-later products through e-commerce (Blibli, Bukalapak, Tiket.com, Shopee, JD.id) and cash loan products by having cooperation with P2P entities. They also provide channeling loans to retired members of the army/ police force (TNI/ Polri), civil servants (PNS), and State-Owned Enterprises (SEOs).
- c) BCA Digital has a similar business model; its loan portfolio comprises joint financing and channeling, followed by the corporate segment. Nonetheless, unlike Jago and Neo Commerce, whose customer segments are unbanked individuals and have both consumptive and productive loans, the majority of loan products are working capital loans for MSME customers' invoice financing, working capital for corporate customers, and investment loans in trading, construction, and processing industries.

RESEARCH METHODS

This study aims to analyze and measure the financial ratios of digital banks and traditional banks for 2022 and 2021 using secondary data which are audited and public financial reports of the banks for the periods of 2020 to 2022 for three digital banks (Jago, Neo Commerce, and BCA Digital); 3 conventional banks (BCA, Bank CIMB Niaga, and Bank Danamon); and Financing Companies (CIMB Niaga Finance and Adira Dinamika Multi Finance). This journal uses Financial Ratios Analysis as a methodology. The ratios are based on prevailing OJK and other prevailing regulations to evaluate critical aspects of banking law and regulations mainly related to Risk-Based Bank Rating (RBBR).

Based on OJK Regulation No.4/POJK.03/206 and OJK Circular Letter No. 14/SEOJK.03/2017 regarding the Assessment of RBBR for Commercial Banks, there are four critical factors:

1. Risk Profile
2. Good Corporate Governance
3. Earnings
4. Capital

For this journal, we will only cover the following financial ratios:

Table 3: Summary of Banks' Key Financial Ratio

No	Description	Formula	Regulatory Threshold
<i>I</i>	RISK PROFILE		
1.1.	Risk Profile – credit risk		
	Gross NPL (Nonperforming loans)	$NPL / \text{total gross loans}$	Not specified, the lower, the better
	Net NPL (Net Nonperforming loans)	$(NPL - \text{provision}) / \text{total gross loans}$	Max 5%
	Provision coverage	$\text{Loan Provision} / \text{total gross loans}$	Generally, the higher, the better (in line with conservative banking principles based on banking Law); nevertheless, it depends on the business model & credit risk mitigation strategy.
	NPL coverage	$\text{Loan Provision} / NPL$	
	Cost of Credit	$\text{Provision for impairment losses charged in Profit and Loss} / \text{average loans}$	
1.2.	Risk Profile – liquidity risk		

	Loan to Deposits Ratio	Total Loans / Total Deposits	The optimum level depends on capital structure and other liquidity measures, e.g., LCR and NSFR under Basel 3
1.3	Risk Profile – strategic risk		
	Business plan vs. actual	Approved business plan vs. actual financial performance	Meet the business plan. Due to data limitations, this will not be covered in the following analysis.
3	EARNINGS		
	NIM	Net Interest Income/ Average Productive Assets	Not specified; depends on the business model
	Cost to Income Ratio	Operating Cost/ Operating Income	Not specified, the lower, the better
	BOPO	Operational Expense/ Operational Revenue	Not specified, the lower, the better
	Return on Assets	Profit Before Tax/ Average Total Assets	Not specified, the higher, the better
	Return on Equity	Profit After Tax/ Average Total Equity	Not specified, the higher, the better
4	CAPITAL		
	CAR	(Tier 1 Capital + Tier 2 Capital)/ Risk Weighted Assets	It depends on the bank’s soundness level and as determined by OJK

Source: summarized by Author from OJK Regulation No.4/POJK.03/2016 and OJK Circular Letter No. 14/SEOJK.03/2017

RESULTS AND DISCUSSION

Based on Indonesian Banking Statistics, Commercial Banks’ financial performance shows positive trends (see Figure 4 below). Total national banking assets continue to grow, coupled with the growth of loans and customer deposits. The profile of national banking risk is at a controlled level with a relatively low impaired credit ratio (NPL gross) and substantial capital (CAR), supported by solid profitability with improving trends in efficiency ratio (BOPO). Meanwhile, the number of commercial banks continues to decline along with the consolidation and digital transformation processes.

Below is the summary of the financial ratios analysis of sampled digital banks and traditional banks, as depicted in Table 5:

A. Risk Profile – credit risk

1. NPL gross in the banking industry was 3% in 2020 and has improved to 2.7% by 2022. There is no written regulation of this, however, the regulator’s expectation is below 5% as a healthy indicator. All selected traditional and digital banks have NPL gross of below 5%. For conventional banks like BCA, CIMB Niaga, and Danamon, the trend is relatively stable and has an improvement trend, as shown in BCA from 2021 to 2022, CIMB Niaga, and Danamon for the past three years. While for BCA Digital only has a loan balance in 2021 and has no NPL in 2020 and 2021, while having only 0.1% of gross NPL in 2022. Bank Jago has an increasing trend of NPL from 0% in 2020, 0.6% in 2021, and 1.8% in 2022. Bank Neo Commerce has a gross NPL of 4.1% in 2020, lower significantly to 1.8% in 2021, and increase to 2.6% in 2022. BCA Digital, Bank Jago, and Neo Commerce are digital banks transformed

from small traditional banks. Nonetheless, although it's not disclosed in any published report, BCA Digital and Bank Jago have zero legacy loans which explains why their BCA had nil loans balance in 2020 and 2021, and Bank Jago only had around Rp 1 tn in 2022. Both have zero NPL gross at the beginning of the transformation period. While Bank Neo Commerce still has a legacy portfolio and carries NPL from such legacy accounts. For new loans portfolio, it will sometimes take them to mature and become NPL. That explains why the NPL gross ratio in digital banks is increasing and contradicts the improving trend in the banking industry and traditional banks.

2. NPL net showed how much the NPL, after considering the provision made and under prevailing regulation, should be below 5%. All selected banks have complied with this requirement and have below 3% of NPL net. Bank Neo Commerce has the highest level among the selected banks, with around 2.1% NPL net in 2022 vs. other banks below 1% in 2022.
 3. Traditional banks' credit cost is below 5%, while some Digital Banks have higher CoC levels, i.e., Bank Neo Commerce has the highest CoC with 8.7%, followed by Bank Jago at 3% and then BCA with 0.6%.
- B. Capital (point 4) and liquidity risk (point 1.2) of RBBR assessment
4. CAR in the banking industry is above 20%, which shows a strong capital level. For all selected traditional banks, BCA, CIMB Niaga, and Danamon have CAR above 20% ranging from 22% to 27%. While for digital banks, the CAR level is even relatively higher compared to the banking industry and traditional banks, ranging from above 30% to more than 100% due to the minimum capital requirement for commercial banks of Rp 3 trillion, while digital banks are still in the early stage of growing the lending business.
 5. Due to the above level of capital of the banking industry and consistency across traditional and digital banks, the liquidity is ample and way beyond minimum regulatory requirements, as shown in high LCR and NSFR and low LDR.
- C. Earnings (point 3)
6. RoA of the banking industry for the past three years has improving trend from 1.6% in 2020 to 1.8% in 2021 to 2.4% in 2023. This is consistent with enhancing trends in selected traditional banks, i.e., BCA with RoA of 3.3% in 2020 to 3.9% in 2022; CIMB Niaga from 22% in 2020 to 23% in 2023 and 22% in 2022; while Danamon with 1% RoA in 2020 to 1.2% in 2021 to 2.3% in 2022.
 7. Net Interest Margin (NIM) of Bank Jago and Bank Neo Commerce are higher than the banking industry (Figure 4), selected traditional banks, and Bank BCA Digital.
 8. The higher Net Interest Margin aligns with, the higher cost of credit observed for Bank Jago and Bank Neo Commerce.
 9. Risk-based pricing principles allow lenders to use credit profile characteristics to charge borrowers interest rates that vary by credit quality. These characteristics are identified in a borrower's loan application and analyzed through risk-based pricing technologies and underwriting procedures. Generally, lenders will focus the risk-based analysis on a borrower's credit score and debt-to-income ratio. However, lenders also closely consider all items on a borrower's credit report, including delinquencies and severe adverse items such as bankruptcy. The higher the credit risk, the higher the interest rate risk would be charged (refer to Table 5 and Table 6).

10. Based on the annual report of each bank, it is observed that Bank Jago and Bank Neo Commerce’s business models are mainly Joint financing and Channeling loans of unsecured loans with customers segmentation focussing on Small Businesses & Individuals with low income. While BCA Digital seems to have a similar business model, i.e., Joint financing and Channeling loans, most loan products are working capital loans for MSME customers’ invoice financing, working capital for corporate customers, and investment loans in trading, construction, and processing industries. This explains why BCA Digital’s credit risk of the loans portfolio is considered lower compared to Bank Jaga and Bank Neo Commerce. While traditional banks, as a universal bank type, have a more diversified business model, mainly consisting of secured loans and complete segment mixes from wholesale banking customers and consumer banking businesses. Hence, the credit risk is much more stable and lower than Digital Bank, which focuses on the Financial Inclusion business model. In line with risk-based pricing principles, this explains why the NIM and CoC of Bank Jago and Bank Neo Commerce are higher compared to other banks and the overall banking industry (see Table 2 for the Risk-based pricing and Table 6 for the summary of business model and impact to relevant vital ratios). Before the rise of digital banks, we observed that financing companies focused on retail individuals’ secured loans and tapped the unbankable customers; hence, they also have double digits of NIM, as shown in Figure 5.

Key Indicators of Commerical Banks	2022	2021	2020	22/21	21/20

CONCLUSION

The significant differences in financial posture and financial ratios between digital banks and traditional banks are mainly due to the following:

1. The business model adopted, which has impacted different loan and funding strategies;

2. Risk-based pricing policy for loans that impact the provision for loan impairment needs to be booked based on prevailing accounting standards..e need to consider historical losses and expected losses;
3. Cost strategy impacts the different cost structures, personnel composition, IT cost, premises (physical branch offices and ATM), marketing cost, etc.

The financial ratio of the banks depends on the following:

1. Cycle of the bank (early periods of stability).
2. Business model -> single business model vs. well-diversified business model
3. Commercial arrangement, i.e., with credit insurance, transfer of credit risk (see in the annual report).

The financial ratios reflect the business strategy as well as the risk management (prudent vs. optimistic), which cover the main financial risk management liquidity risk and credit risk, as well as the asset, liability, and capital management which determine the sustainability of return as generated from the opted business model and business strategy execution.

The current problem is that some news negatively perceives the uniqueness of digital banks' financial ratios, particularly compared to traditional banks. This study aims to analyze and measure the financial ratios of three digital banks, three traditional banks, and two financing companies. Any misleading perception might trigger negative public sentiments toward digital banks. Hence, alignment among regulators, government, and relevant stakeholders is critical.

RECOMMENDATION

Financial inclusion has become a national strategy to encourage Indonesia's economic growth and reduce inequality between individuals and regions to realize the Indonesian people's welfare as prescribed under Presidential Regulation 114 of 2020. This goal has been aligned at the "framework and strategy" level among regulators and government bodies as stipulated in the "Roadmap of Indonesian Banking Development 2020-2025 (RP2I)" as designed by the Financial Services Authority (OJK) and Bank Indonesia Regulation (PBI) No. 24/3/PBI/2022 concerning the Macroprudential Inclusive Financing Ratio (RPIM) for Conventional Commercial Banks, Sharia Banks, and Sharia Business Units, effective from 3 January 2022. From the above Macroprudential Inclusive Financing Ratio (RPIM) policy framework, the banking industry has three options to achieve the ratio. The second option drives the increasing growth of digital banks whose business model collaborates with financing companies and P2P to provide unsecured loans to unbanked customers. As both BI and OJK aimed, Digital Economy Inclusion also acknowledged that Digital Financial Services Ecosystem needs to collaborate to achieve this goal.

Notwithstanding the preceding, the alignment at the policy level is needed to accommodate, facilitate, and protect the banks' business model and other Digital Financial Services Ecosystem. Some critical questions and different opinions towards this collaboration might be answered by the government, for instance:

1. Are digital banks expected to have the same critical financial ratios as established traditional banks? If yes, it implies that all digital banks should adopt a universal bank business model, i.e., have wholesale banking and serve corporate and multinational companies. At the same time, the background of digital economy inclusion is how to increase financial inclusion and serve the underserved population. It leads to whether the digital bank can only focus on serving the underserves, i.e., MSMEs and low-income individuals (refer to the unbanked customer segment's characteristics in the introduction section). This will impact the overall strategy of digital banks, which will be translated

into capital management strategy and resource utilization. Digital banks do not need to invest in wholesale banking infrastructure, as existing banks have catered to this segment. The purpose of digital banks is to close the gap in the banking industry due to limited capabilities to serve the underserved.

2. Is there any umbrella policy to incorporate and facilitate the collaboration between banks and Non-Bank Financial Institutions such as financing companies and P2P to provide unsecured loans to unbanked customers? For instance, a double-digit NIM is acceptable for financing companies. Whenever the banks collaborate with financing companies through channeling and joint financing schemes, it is reasonable that their customer segment, credit risk characteristics, and risk-based pricing will be like financing companies.
3. What is the alignment at the policy level between OJK in the banking sector and the NBFi sector to facilitate this collaboration, including educating customers and relevant stakeholders? This is to avoid misleading perceptions which might trigger negative public sentiments toward digital banks. Hence, alignment among regulators, government, and relevant stakeholders is critical.

Some suggestions are:

1. The regulators and stakeholders need to understand each bank's business model, including the combination of product and segment, rather than directly comparing the ratio of traditional and digital banks.
2. Some ratios need to be analyzed together, for instance, NIM and CoC as Risk-Adjusted NIM, in line with risk-based pricing principles.
3. The alignment of understanding among OJK and the government regarding whether the digital bank should have a diversified business model like existing banks rather than having a focused retail business model
4. Regulators may consider requiring the banks to provide more granular information on average lending rates and write off over respective disbursement by below crucial product for all nine (9) customer segments (NBFi, corporate, commercials, MSME enterprise, ME individuals, Small Business individuals, Micro individual, non-low-income individual, low-income earner financing) as follows:
 - a. Investment loans for corporate, commercials, MSME enterprises, MSME individuals
 - b. Working capital loans
 - c. Mortgage
 - d. Auto loans
 - e. Credit cards
 - f. Unsecured cash loans

The regulator may consider analyzing the risk profile by product type and different customer segments captured by write-off by each corresponding disbursement to have more accurate risk-based pricing by each credit risk characteristic rather than analyzing at the bank-wide level and high-level comparison. This is because the credit risk characteristics of unbanked populations are significantly different from existing bankable customers and hence require other loan terms, i.e., shorter tenor and higher interest rate to cover higher losses of this loan type.

LIMITATION

Banks and the public have limited access to NIM, average interest rates, and risk premium by each type of general banking product and customer segment, which can be used as a reference for "acceptable credit risk appetite" from a regulatory perspective. Current published

information on Prime Lending Rates (Table 5) and Average Lending rates Loans Composition (Table 6) is considered insufficient. Nonetheless, some research and informal surveys have been conducted to support risk-based pricing and its impact on NIM and digital banks' credit cost. The understanding of this risk-based pricing will have a strong correlation with RBBR of the banks in the three aspects, as follows: commercial part (a product must be sustainable/generate a reasonable profit, including interest factors and fees or total relationship), risk aspects (considering the lifetime losses, according to the Basel framework) and financial aspect (ECL based on PSAK 71 with Expected Credit Loss).

ABSTRACT

In today's highly competitive global business environment, customer acquisition and retention are essential for success. Customer satisfaction is a crucial factor in achieving this objective. With changes in consumer lifestyles, there is a growing demand for instant food, and people prefer food that is easy and convenient to prepare. PT X is a company that produces instant mixed flour under the brand name XYZ and is currently focused on increasing its sales. Therefore, it is necessary to conduct a study on consumer buying intention. However, more research is needed to examine the influence of price, product quality, and accessibility on the buying intention for mixed flour while also checking health consciousness as a moderating variable. This research was conducted through a survey among 134 respondents, and the results were analyzed using PLS-SEM. The results indicate that to increase sales, it is necessary to pay attention to the role of accessibility and consumer health consciousness, which significantly influence buying intention. While price and product quality do not have a significant influence on buying intention. Moreover, health consciousness as a moderating variable strengthens the influence of accessibility on buying intention.

Keywords: Price, Product Quality, Accessibility, Health Consciousness, Buying Intention

INTRODUCTION

The growth of the mixed flour industry continues to increase, the estimated value of the global prepared flour mixed market in 2021 was approximately USD 27.28 billion with a projected increase to USD 29.23 billion in 2022. Furthermore, the global prepared flour mixes market is expected to grow at a compound annual growth rate of 8.0% from 2022 to 2030 to reach USD 54.34 billion by 2030. Figure 1.1 shows the global growth of the mixed flour industry

Figure 1.1 Global Growth of Mixed Flour Industry
(Source: [www.grandviewresearch](http://www.grandviewresearch.com))

The global growth of the mixed flour industry is not in line with the growth of XYZ mixed flour products at PT X. The XYZ brand was introduced to the market in 2016, but over the course of seven quarters, it experienced a consistent decline in sales. Figure 1.2 shows of the sales data for XYZ's instant mixed flour products.

Figure 1.2 Sales contributions (%) of instant mixed flour XYZ 2020-2021
(Source: Author, 2022)

Figure 1.2 illustrates a consistent decline of 23% in the sales contribution of XYZ's instant mixed flour over the past seven quarters. In order to enhance the sales growth of this product, it is crucial to develop a comprehensive improvement strategy. To achieve this, the research will primarily concentrate on analyzing customer behavior as the central approach. Has the XYZ instant mixed flour fulfilled the requirement of consumers? So this research aims to examine the influence of price, product quality, accessibility, and health consciousness as moderating variables on buying intention for mixed flour

LITERATURE REVIEW

Consumer Behavior

According to Kotler and Keller (2020), consumer behavior is the field of study that explores how individuals, groups, and organizations make choices, acquire, use, and seek satisfaction from products, services, ideas, or experiences to fulfill their desires and needs. Similarly, Hawkins and David (2010) define consumer behavior as a scientific discipline that investigates how individuals select, utilize, and employ products, services, ideas, or experiences in order to meet their wants and needs.

According to Blackwell et al. (2001), consumer satisfaction is influenced by their perceived value, which encompasses factors like price, product quality, service quality, and corporate image. It is argued by some theorists that the uniqueness of a product plays a crucial role in developing, maintaining, and comprehending the factors that impact customer satisfaction. For consumers to be satisfied, they need to understand the product and align with the company's standards. Furthermore, consumer behavior can be accessed from two perspectives: the factors that influence the buying process and the decision-making process related to consumer purchases.

One model of purchasing behavior that is quite influential where this model emphasizes the processes of influencing consumer behavior is as Figure 2.1

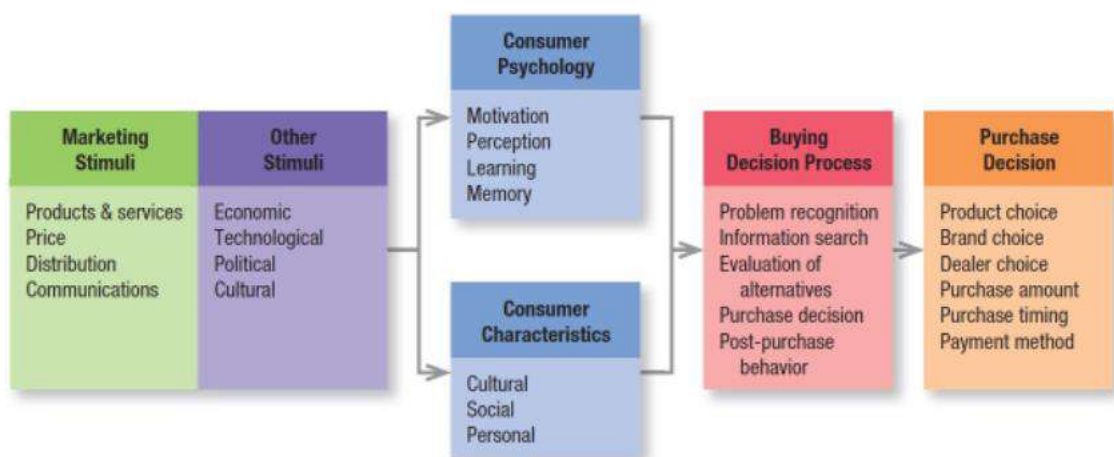

Figure 2.1 Consumer Behavior Model (Kotler & Armstrong, 2019)

Buying decisions are common things consumers consider in the process of fulfilling products and services. In most people, consumer buying behavior is often initiated and influenced by many stimuli from outside themselves, both in the form of marketing stimuli and from other environments. The stages in the consumer purchase decision process according to Kotler & Armstrong (2019) are presented in Figure 2.2

Figure 2.2 Consumer Purchase Decision stages (Kotler & Armstrong, 2019)

Price

According to conventional economic theory, the cost of a product must be considered when determining its price. Higher prices negatively impact product evaluations and purchase intentions because they increase the perception of economic costs (Mahrinasari MS, 2020). According to Molinillo et al. (2020), the price of a product serves as a significant determinant of a customer's purchase intention. One method to assess the perceived price is by examining a customer's willingness to pay a premium for the product.

Product Quality

Delivering quality is of utmost importance for businesses, as it is a vital factor in gaining a competitive edge. Quality serves as a crucial link between customer expectations and business goals. Consistently providing high-quality products or services enables businesses to outperform their competitors, as satisfied customers are more inclined to demonstrate financial support, trust, loyalty, and commitment (Hartanto, 2019).

Research by Dwiantari (2020) and Wijaya & Nurcaya (2017) confirms that both product quality and service quality contribute to customer satisfaction. Furthermore, quality has an indirect but noteworthy impact on a company's marketing performance or overall performance. According to Kotler and Keller (2020), product quality is associated with the functional capabilities of a product, which in turn generates benefits for its users. In essence, product quality encompasses attributes such as reliability, convenience, innovation (allowing for cost reduction), and other values that provide benefits to customers.

Accessibility

As stated by Warren J. Keegan (2003), a distribution channel refers to the path used by producers to deliver their products from the producers to the end consumers or industrial users. It is a component of marketing channels that focuses on the distribution of products to meet consumer or industrial demand. The purpose of distribution, as a marketing strategy, is to facilitate producers in providing goods and services to customers in accordance with their

specific requirements, including type, quantity, price, location, and timing. In essence, the distribution process is a marketing endeavor that aims to streamline the physical and non-physical movement within marketing channels (Tjiptono, 2008). The flow of marketing encompasses the activities involved in the movement among marketing institutions during the marketing process. This includes various flows such as the physical flow of goods, ownership flow, information flow, promotion flow, negotiation flow, payment flow, funding flow, and risk coverage flow.

Health Consciousness

The global COVID-19 pandemic in 2020 has brought about significant changes in people's lifestyles. Individuals are now inclined towards making healthier food choices as improper dietary habits can make them more susceptible to the virus itself (Bracale and Vaccaro, 2020). There is an increasing consumer focus on nutrition, health, and the quality of the food they consume (Gil, 2000). This heightened awareness has also led to a surge in demand for organic food products, as highlighted by Phuah et al. (2011). Worldwide, consumers are altering their food purchasing behaviors to prioritize healthier options, driven by a greater understanding of the importance of health and nutrition (Maehle et al., 2015; Chamhuri and Batt, 2015; Rana and Paul, 2017; Yu et al., 2018). This shift in consumer behavior is influenced by evolving lifestyles, increased awareness of the benefits of health and wellness foods, and a desire to maintain overall well-being (Crofton et al., 2013; Ali et al., 2018; Wang et al., 2018). Consequently, consumers are recognizing the significance of consuming nutritious foods to support their overall health and well-being.

RESEARCH FRAMEWORK

Based on the description above, the research framework for this study has been formulated utilizing a consumer behavior model (Kotler & Armstrong, 2019). As previously stated, the study aims to investigate the impact of price, product quality, and health consciousness on the buying intention of mixed flour products. The dependent variable in this framework is the buying intention, while the moderating variable is health consciousness. The independent variables include product quality, price, and accessibility. The framework is shown below:

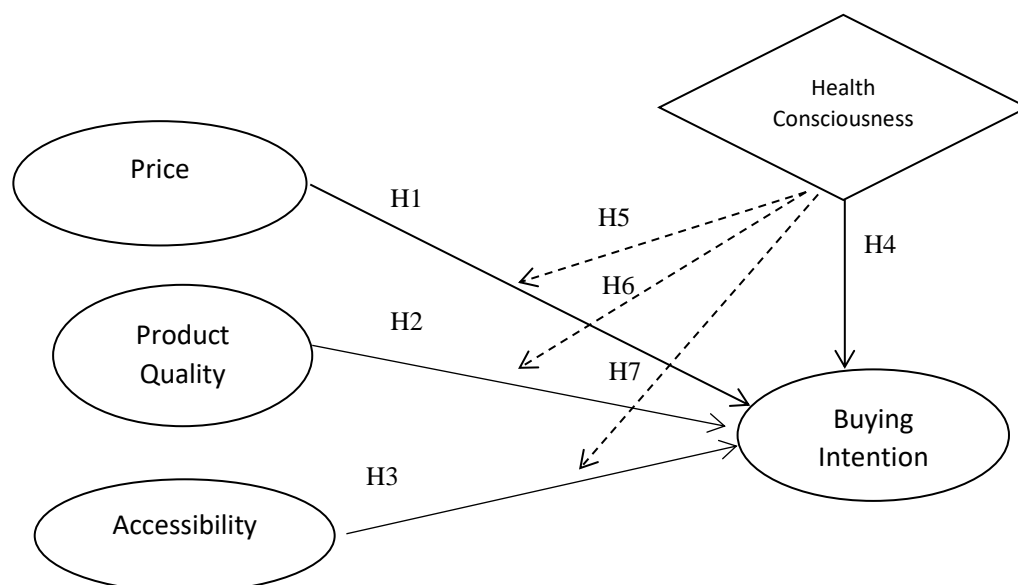

Figure 2.3 Research Framework (Author, 2023)

Based on the research framework, there are several hypotheses to examine:

- H1: Price has a negative effect on buying intention
- H2: Product Quality has a positive effect on buying intention
- H3: Accessibility has a positive effect on buying intention
- H4: Health Consciousness has a positive effect on buying intention
- H5: Health Consciousness has moderating effect on product quality to buying intention
- H6: Health Consciousness has moderating effect on price to buying intention
- H7: Health Consciousness has moderating effect on accessibility to buying intention

RESEARCH METHODOLOGY

This research using two types of data and information. Primary data is data received directly from the source (respondents of the survey) in individual viewpoints to solve research difficulties. Meanwhile, secondary data is data that has been managed by other parties and obtained by studying references, books, and several other kinds of literature related to the variables in this study. Collection data using a survey (likert scale of 1-5) in the form of a designed questionnaire will be distributed to consumers who have used mixed flour in the Greater Jakarta (Jakarta, Bogor, Depok, Tangerang, Bekasi) area. The technique sampling used in this study is non-probability sampling with purposive sampling. A survey was conducted among 134 respondents, and the data were analyzed using PLS SEM. The variables are calculated using the following variables and their sources are presented in table 3.1 below:

Table 3.1 Operational Variable

Variable	Item	Measurement Item	Source
Price (P)	P1	Product prices affordable by consumers	Stanton (1994)
	P2	The price of the product is lower than other products	
	P3	The price of the product is in accordance with the quality obtained	
	P4	The price offered is in accordance with the benefits	
Product Quality (PQ)	PQ1	Has a good and interesting taste	Sangadji and Sopiah (2013)
	PQ2	A simple and practical way of cooking	
	PQ3	Has a variety of flavors	
	PQ4	Has a variety application of cooking	
	PQ5	The size of the product in the package corresponds to the standard cooking portion	
	PQ6	Attractive color packaging	
	PQ7	The product has a long shelf life	
	HC1	I'm very self-conscious about my health	

Health Consciousness (HC)	HC2	I'm aware of the state of my health as i go through the day	Samala Nagaraj (2020)
	HC3	I take responsibility for the state of my health	
	HC4	I'm alert to change in my health	

Variable	Item	Measurement Item	Source
Accessibility (A)	A1	Were available in more store	Barbara et al (2015)
	A2	Were available closer to home	
	A3	Were cheaper	
	A4	Were have benefit of health but far	
Buying Intention (BI)	BI1	Looking for more information about the product	Habl (1996)
	BI2	Willingness to understand the product	
	BI3	Desire to try the product	
	BI4	Re-visits to places that sell products	
	BI5	Have a desire to recommend the product	

Researchers will describe the demographic profile of respondents. This will be followed by data tracing which involves handling missing data and outliers. Data on gender, age, education, and profession of the survey will be explained in tables, charts, and graphs. Descriptive statistical analysis represents the general view of the survey responses by showing the main measures of variables such as mean, standard deviation, variance, kurtosis and skewness. PLS-SEM (Partial Least Square – Structural Equation Modeling) is a method for building a predictive model when the factors are many and highly collide. This gives a value of R^2 and indicates the significance of the relationship between constructs.

To use the SEM method for analysis, the researcher must first do a model analysis. The two components of the analysis are the measurement model and the structural model. Measurement models are utilized to assess the existing indicators of variables and can also serve as a means of evaluating construct validity. On the other hand, the structural model is used to analyze the connection between independent and dependent variables (Wong, 2013). PLS estimates parameters and predicts causality without making any assumptions about distributions.

Hypothesis testing is done by looking at the partial test results for each variable. The size of the significance of the hypothesis support can be used to compare the values of the t-table and t-statistics. Whether there is an effect of exogenous variables on endogenous variables can be seen from the t-statistic value compared to the t-table value, if the t-statistic value is greater than the t-table value, it is significant. On the other hand, if the t-statistic value is smaller than the t-table value it is not significant. In this study, for the 95% confidence level ($\alpha 0.05$), the t-table value for the one-tailed hypothesis was 1.65 (Hair et.al., 2014).

DATA ANALYSIS AND DISCUSSION

Step of data analysis was shown on Figure 4.1

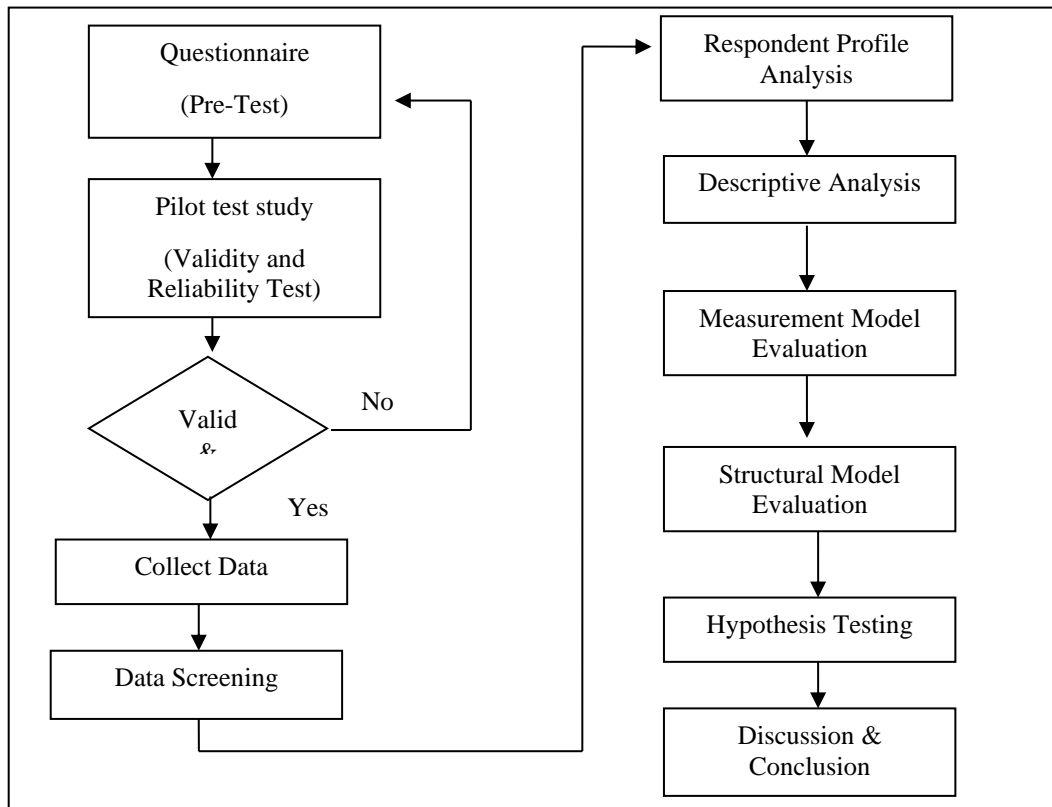

Figure 4.1 Step of Data Analysis (Source: Author 2023)

Validity and Reliability

Internal reliability values (Cronbach’s alpha) and validity indicate that both test met the minimum requirements, with values above 0.3 for Pearson’s Correlation and above 0.7 for Cronbach’s alpha. As a result, the author proceeded to distribute the questionnaire to a larger of respondents.

Respondent Profile

Respondent profiles are utilized to offer a comprehensive overview of the characteristics of sample, which facilitates the analysis of research findings by researchers. In this particular study, a sample of 134 respondents was selected and grouped by their gender, age, level education, occupation, and income. Profile respondent is shown in Table 4.1.

Table 4.1 Profile Respondent

Variable	Category	Amount	Percentage (%)
Gender	Male	18	13.4
	Female	116	86.6

Table 4.1 Profile Respondent

	Category	Amount	Percentage (%)
Age	15-25	1	0.75
	26-41	86	64.18
	42-57	47	35.07
	>58	0	0.00
Education	Junior High School	2	1.49
	Senior High School	22	16.42
	Bachelor Degree	87	64.93
	Master Degree	22	16.42
	Doctoral Degree	1	0.75
Occupation	Student	1	0.75
	Employee	55	41.04

	>10.000.001	43	32.09

Descriptive Statistics

The descriptive statistics of the indicator variables from SmartPLS which shows the amount of data, minimum, maximum, mean, standard deviation, skewness, and kurtosis. When the standard deviation of a variable in SmartPLS is lower than its mean value, it indicates that the data points are closely clustered around the mean and there are fewer extreme or outlier values. This suggests that the data is more consistent and less variable in comparison to when the standard deviation is higher than the mean. Descriptive statistics value shown that the minimum response for every indicator was 1 and the maximum was 5, it appears that the majority of respondents tended to answer with a score of 4 or 5 on the likert scale.

Measurement Model Evaluation

The testing of this study used Partial Least Square (PLS) analysis with SmartPLS 4.0. The measurement of research variables for the structural model used reflective constructs. The following is a figure of the estimated PLS model.

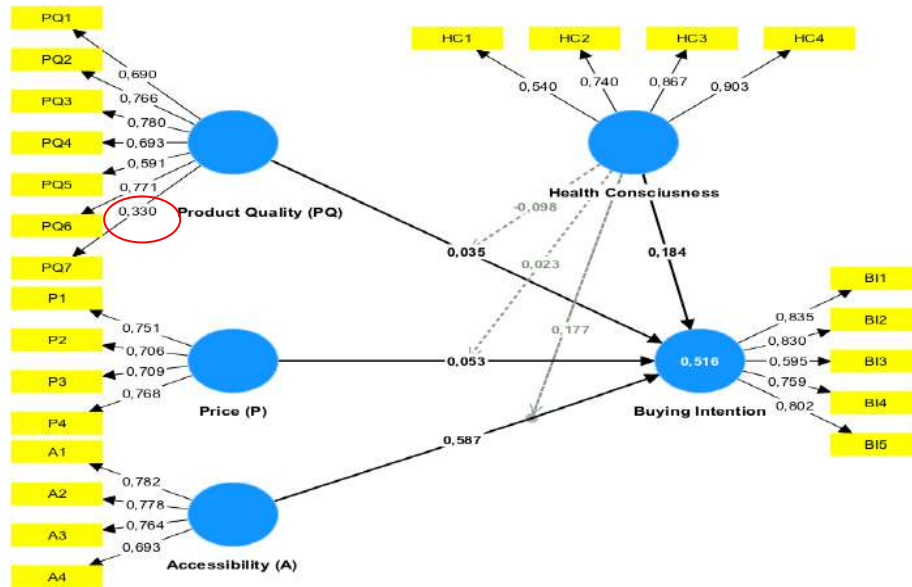

Figure 4.2. Estimated PLS Model (Source: PLS-SEM Report by Author (2023))

Based on the figure 4.2 above, indicator PQ7 had loading factor of less than 0.5 meaning that these indicators were not valid and needed to be eliminated. Figure 4.3 showed the modified model in which PQ7 indicator had been eliminated and the author used this model for further process.

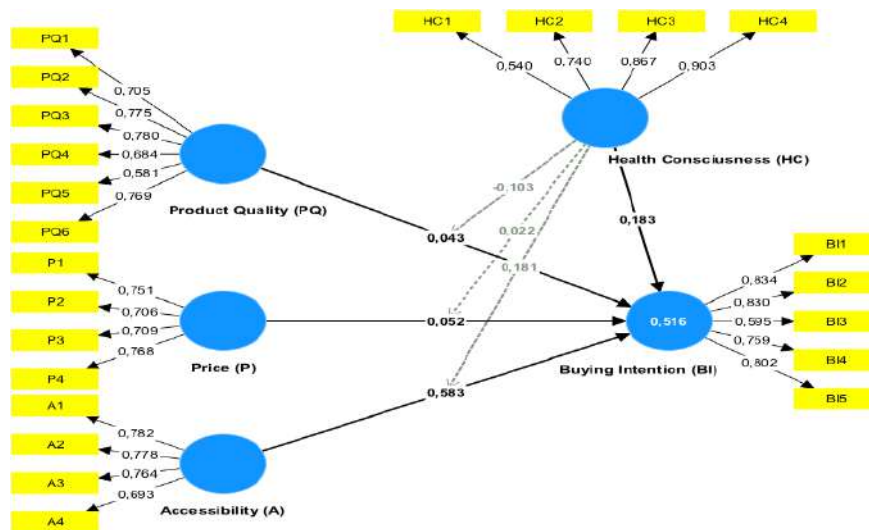

Figure 4.3. Modified PLS Model by Eliminated Indicator PQ7

(Source: PLS-SEM Report by Author (2023))

The discriminant validity testing can be determined by examining the cross-loading value. A model has good discriminant validity when each indicator has the highest cross-loading value on its own variable compared to other variables in the model. All values of indicators and variables fulfilled the cross-loading criteria. Indicating that discriminant validity based on cross loadings was achieved. According to the Fornell criteria, Larcker's condition requires the square root of each construct's AVE to be greater than its highest correlation with any other

construct. Additionally, to evaluate the convergence validity of the measurement model with reflexive indicator, the relationship between the item score/component score and the construct score derived by PLS is assessed. All value HTMT less than 0.9, its meaning that the discriminant validity between variable price, product quality, accessibility and health consciousness based on HTMT criteria was achieved discriminate validity. It also shown that discriminate validity met with all method (the Fornell-Larcker Criterion, Cross-Loading, and HTMT method).

Cronbach's alpha values that were greater than 0.70 for all indicators and variables indicating that the model has internal consistency. The Composite Reliability (CR) values were above 0.6, indicating that the measurement model had very high reliability (Ghozali, (2015)). The result shown that all of variable price, product quality, accessibility, health consciousness and buying intention have accuracy, precision and consistency.

Structural Model Evaluation

Murti et al. (2022) suggest that assessing the structural model can be accomplished through several methods, including collinearity measurement using VIF, determination of path coefficient (β), evaluation of the coefficient of determination (R^2), and analysis of effect sizes (f^2).

The coefficient of determination, or R^2 is utilized to measure the variance of the dependent variable in response to changes in the independent variable. A weak, moderate or significant relationship between R^2 value of 0.25, 0.5 or 0.75, respectively might be used to describe to strength of the endogenous variable (Murti et al., 2022) (Hair Jr et al., 2014). The value of the coefficient of determination (R^2) and effect size (f^2) shown on Table 4.2 and 4.3.

Table 4.2 The value of coefficient of determinant (R^2)

Variable	R-square	Category
Buying Intention	0.516	Moderate

Source: PLS-SEM Report by Author (2023)

Table 4.2 indicated that buying intention variable has an R^2 value of 0.516. This implies that 51.6% of variation in buying intention can be explained by knowledge of price, product quality, accessibility, and health consciousness by 51.6%, while the remaining 48.4% is attributed to other variables that are not included in the model. According to Murti et al., (2022) and Hair Jr et al., (2014), an R^2 value greater than 0.5 can be classified as having a moderate relationship.

Table 4.3 The value of effect size (f^2)

Effect	f^2	Category
Accessibility \rightarrow Buying Intention	0.419	Large
Health Consciousness \rightarrow Buying Intention	0.050	Weak
Price \rightarrow Buying Intention	0.005	Weak

Table 4.3 The value of effect size (f^2)

Effect	f^2	Category
Product Quality \rightarrow Buying Intention	0.002	Weak

Health Consciousness x Price → Buying Intention	0.001	Weak
Health Consciousness x Product Quality → Buying Intention	0.012	Weak
Health Consciousness x Accessibility → Buying Intention	0.035	Weak

Source: PLS-SEM Report by Author (2023)

According Cohen et al., (1988) the f^2 value of 0.02, 0.15 and 0.35 could be interpreted whether the predictors of the laten variable have weak, medium or large influence at the structural level. The value f^2 of accessibility to buying intention has large significant impact size (0.419), and another have weak impact size.

Hypothesis Testing

Hypothesis testing is used to see the significance of the independent variable on the dependent variable. The bootstrapping test, which determines the significance of path coefficients (t distribution values) by calculating empirical t values greater than the critical value. According Hair Jr et al. (2014), suggested using 5000 as the bootstrap sample size. SmartPLS4's bootstrapping approach was used to test hypotheses and evaluate the significance and t values of route coefficients. The result of bootstrap is presented on Figure 4.4.

Figure 4.4 Bootstrap testing (Source: PLS-SEM Report by Author (2023))

The independent variable is declared influential if the t-statistical value for the one tail test is greater than 1.65, and the p-value is 0.05 (at 5%), respectively. The result of hypothesis analysis is presented on Table 4.4

Table 4.4 Hypothesis analysis result

Source: PLS-SEM Report by Author (2023)

According to Table 4.4, the path coefficient on the relationship between product quality and buying intention was 0.043 which indicated that the effect was positive. Both the *t*-value of 0.407 (*t*-value < 1.654) and a P value of 0.342 (P value > 0.05) indicated no significant effect or relationship. Therefore, H₁: product quality has positive effect on buying intention of mixed flour is rejected. The path coefficient on the relationship between price and buying intention was 0.052 which indicated that the effect was positive. Both the *t*-value of 0.741 (*t*-value < 1.654) and a P value of 0.229 (P value > 0.05) indicated no significant effect or relationship. Therefore, H₂: price has a negative effect on buying intention of mixed flour is rejected. The

Effect	Path coefficients	Result	T Value	Result	P values	Result
Product Quality <input type="checkbox"/> Buying Intention	0.043	Positif	0.407	Not Significant	0.342	Not Significant
Price <input type="checkbox"/> Buying Intention	0.052	Positif	0.741	Not Significant	0.229	Not Significant
Accessibility <input type="checkbox"/> Buying Intention	0.583	Positif	4.841	Significant	0.000	Significant
Health Consciousness <input type="checkbox"/> Buying Intention	0.183	Positif	2.153	Significant	0.016	Significant
Health Consciousness x Product Quality <input type="checkbox"/> Buying Intention	-0.103	Negative	1.054	Not Significant	0.146	Not Significant
Health Consciousness x Price <input type="checkbox"/> Buying Intention	0.022	Positif	0.354	Not Significant	0.362	Not Significant
Health Consciousness x Accessibility <input type="checkbox"/> Buying Intention	0.181	Positif	1.656	Significant	0.049	Significant

path coefficient on the relationship between accessibility and buying intention was 0.583 which indicated that the effect was positive. Both the *t*-value of 4.841 (*t*-value > 1.654) and a P value of 0.000 (P value < 0.05) indicated significant effect or relationship. Therefore, H₃: Accessibility has positive effect on buying intention of mixed flour is accepted.

The path coefficient on the relationship between health consciousness and buying intention was 0.183 which indicated that the effect was positive. Both the *t*-value of 2.53 (*t*-value > 1.654) and a P value of 0.016 (P value < 0.05) indicated significant effect or relationship. Therefore, H₄: health consciousness has positive effect on buying intention of mixed flour is accepted. The path coefficient on the relationship between health consciousness as moderating effect on product quality and buying intention was -0.103 which indicated that the effect was negative. Both the *t*-value of 1.054 (*t*-value < 1.654) and a P value of 0.146 (P value > 0.05) indicated no significant effect or relationship. Therefore, H₅: health consciousness has moderating effect on product quality to buying intention of mixed flour is rejected. The path coefficient on the relationship between health consciousness as moderating effect on price and buying intention was 0.22 which indicated that the effect was positive. Both the *t*-value of 0.354 (*t*-value < 1.654) and a P value of 0.362 (P value > 0.05) indicated no significant effect or relationship. Therefore,

H₆: health consciousness has moderating effect on price to buying intention of mixed flour is rejected. The path coefficient on the relationship between health consciousness as moderating effect on accessibility and buying intention was 0.181 which indicated that the effect was positive. Both the *t*-value of 1.656 (*t*-value > 1.654) and a P value of 0.049 (P value < 0.05) indicated significant effect or relationship. Therefore, H₇: health consciousness has moderating effect on accessibility to buying intention of mixed flour is accepted.

Discussion on Findings

The Effect of Product Quality on Buying Intention

- This study found that product quality has no significant effect on buying intention, and thus the hypothesis is rejected. From the bootstrap testing PLS-SEM results, it is apparent that the PQ3 indicator (diversity of taste variance of mixed flour) has the greatest influence on buying intention in quality products with *t*-value 19.765, followed by the PQ2 indicator (most practical usage) with *t*-value 15.942. This indicates that taste variation and ease of use are important factors that affect consumer buying intention when buying quality products of mixed flour.

The Effect of Price on Buying Intention

- This study found that price has no significant effect on buying intention, and thus the hypothesis is rejected. Based on the result of the bootstrap testing of PLS SEM, the price indicator has a low *t*-value in influencing buying intention. The lowest value is found in the PQ2 indicator (“*I will buy mixed flour that is cheaper*”) with a value of 4.222. This suggests that the consumers who participated in this study are not sensitive to price.

The Effect of Accessibility on Buying Intention

- This study found that accessibility has significant effect on buying intention, and thus the hypothesis is accepted. To gain a better understanding of which variables contribute significantly to the importance of the variable Buying Intention (BI), an Importance-Performance Map Analysis (IPMA) for BI was calculated using the software SmartPLS4. Figure 4.5 shown important performance map analysis on variable that influence buying intention. It is show that the variable accessibility has the greatest importance in influencing buying intention but lower performance than three other variables. This means that the ease with which consumer can access mixed flour product is the most important factor in determining their likelihood to buy. This analysis suggests that effort to improve the accessibility of mixed flour, such as ensuring that it is available in a variety of retail outlets or offering delivery services, may have the greatest impact on increasing consumer demand for the product.

Figure 4.5 Importance-Performance Map Analysis of Variable (Source: PLS-SEM Report by Author (2023))

The result of the bootstrap testing of PLS SEM show that the accessibility indicator has the highest t-value in influencing buying intention. The indicator with the highest value A1 (“I will buy mixed flour in the store that has a complete taste variant”) with a value of 26.296, followed by A2 (“I will buy mixed flour in the store near my home”) with value of 16.236. From this result indicates that the accessibility indicator which represents how easy it is for consumers to purchase mixed flour has the strongest effect on consumer’s intention to buy. This means that consumers are more likely to buy mixed flour if it is readily available and accessible to them. The indicator A1, which represents the availability of mixed flour with a complete taste variant, has the strongest effect on buying intention, following by A2 which represents the proximity of the store to the consumer’s home. These results suggest that offering mixed flour with a variety of taste and making it available in stores that are conveniently located can positively influence consumers’ intention to buy.

Health Consciousness Effect as Moderating Variable

- The direct relationship between product quality and price with buying intention was found to be insignificant in this study. Therefore, the moderating effect of health consciousness on the relationship between product quality and price with buying intention was also found to be insignificant. However, the moderating effect of health consciousness on the relationship between accessibility and buying intention was found to be significant. On the other hand, the direct relationship between health consciousness and buying intention was found to have a significant and positive effect. Slope stability of health consciousness as moderating effect on accessibility to buying intention presented on Figure 4.6

Figure 4.6 Slope Stability of Health Consciousness (HC) as Moderating Effect on Accessibility (A) to Buying Intention (BI). (Source: PLS-SEM Report by Author (2023))

Figure 4.6 illustrates how slope stability of health consciousness at +1 SD has a larger slope than at -1 SD, indicating that higher health consciousness has further strengthens the relationship between accessibility and buying intention.

CONCLUSION AND RECOMMENDATION

Conclusion

The goal of this research is to determine the extent to which product quality (PQ), price (P), and accessibility (A) variables significantly influence consumer buying intentions (BI) or not. we examined the relationship between four independent variables: PQ, P, A and HC and their effect on the dependent variable BI. Based on the PLS SEM analysis, it was found that product quality and price did not have a significant effect on buying intention. Therefore, the results of this study suggest that buyers may be influenced by other factors besides product quality and price when making purchasing decisions. Or the respondent is not price sensitive, The respondent feels that once the desired standard of price and product quality has been obtained, the variables of price and product quality are no longer a priority.

Based on inner model, the indicator with the highest t-value A1 (“I will buy mixed flour in the store that has a complete taste variant”), followed by PQ3 (“I interest buy mixed flour with taste variant”). From this result indicates that the accessibility indicator which represents how easy it is for consumers to purchase mixed flour has the strongest effect on consumer’s intention to buy. This means that consumers are more likely to buy mixed flour if it is readily available and accessible to them. The indicator A1, which represents the availability of mixed flour with a complete taste variant, has the strongest effect on buying intention, inline with PQ3 which represents the variety taste of mixed flour. These results suggest that offering mixed flour with a variety of taste and making it available in stores that are conveniently located can positively influence consumers’ intention to buy. The direct relationship between health consciousness and buying intention was found to have a significant and positive effect.

The Theoretical Implication of the Study

Theoretical implication from this study was to reaffirm the application of a classical theoretical consumer behavior model in buying intention by Kotler & Armstrong, 2019. According to this theory, buying intention and buying decision are influenced by marketing stimuli, as well as other stimuli related to consumer psychology and characteristics. In this research, the marketing stimuli used are price, product quality, and accessibility or distribution channels. Communication related to promotion is not included in the study. Meanwhile, other stimuli in this research include health consciousness, among other stimuli such as culture, social factors, and personal consumer characteristics. The researchers acknowledge that the factors used in this study do not fully represent all the factors that influence buying intention.

Managerial Implication

The accessibility indicator has the strongest effect on consumers' intention to buy mixed flour. As a result, the company should focus on improving accessibility to make it easier for consumers to purchase the product by: Increase distribution channels: The company can expand its distribution channels to reach more consumers. This can include partnering with more retailers, online marketplaces, and delivery services to make the product easily accessible to consumers. Improve availability: The Company can ensure that the product is always available in stores or online, and that it is easy to find. This can be done through better inventory management and strategic placement of the product in stores.

The variety taste of mixed flour has also the strongest effect on buying intention, the company should focus on improving the taste and flavor options of the product by: Introduce new flavors, Use high-quality ingredients, Offer recipe suggestions, and Have unit selling point (USP) from the product.

Limitations and Recommendation for Future Study

The author acknowledged that there are several limitations to this study. The sample size of 134 respondents was calculated by using at least 5 times the number of indicator (Sekaran, 2011). While this is enough for PLS-SEM and for this research, more samples can be collected to draw an accurate conclusion for generalization. The respondents were selected from the Greater Jakarta (Jakarta, Bogor, Depok, Tangerang, Bekasi) area. Sampling from a broader area could provide a more diverse representation of respondents.

From the result of this study, the variable of product quality, price, accessibility and health consciousness have a 51.6% influence on buying intention. Another 49.4% is influenced by other factors that are not included in this study.

Future studies are also recommended to investigate another factor that influence buying intention of mixed flour such as another marketing stimulus like advertising or promotion, so the customers have willingness to try new brand/purchase the product. Promotion also can build brand reputation so the product can easily recognize by customer. Another factor can also investigate regarding green life style to implement on packaging concept to reduce waste. The

Company can also conduct market research to understand the taste preferences of their target audience. This can help them create flavors that are tailored to their customers' preferences and needs.

ABSTRACT

Oceans are central to Indonesia's prosperity through economic activities, with more than 17,500 islands, 108,000 kilometers of coastline, and three-quarters of its territory at sea. Indonesia's ocean economy is worth over \$256 billion annually, more than one quarter of the national economy. Being the source of food and livelihood to the substantial portion of population, oceans have potential to achieve major sustainable goals of eliminating hunger and poverty. Around five million of Indonesians fishermen live in coastal areas and rely on the ocean for incomes and nutrition, however, these communities are amongst the country's poorest. Although the blue economy policy has been launched in 2021 by the government which includes quota-based measured fishing and development of marine, and coastal fishery, we argue that addressing social benefits and equity for traditional fishermen, is necessary to design and implement as an integral part of the policy, alongside environmental and production concerns. This paper examines the significance of social entrepreneurship by cooperative to foster community development through further social value creation. The model theorizes community development processes namely, community support for co-operative, co-operative readiness, perceived benefit, and quad helix innovation. A concerted effort of quad helix innovation (academicians, industry, government and community) is crucial to work on cooperative development. It contributes to knowledge by illustrating the interactions between fishermen's social enterprises and intervention in the upstream value chain which enablers empowering lives of marginalized people.

Keywords: Co-operative Social Entrepreneurship, Blue Economy, Perceived Benefit, Quad Helix innovation

Introduction

*... Perhaps love is like the ocean
Full of conflict, full of change
John Denver*

Attention to ocean sustainability has grown steadily since the Earth Summit in 1992 and accelerated with the 2015 adoption of Sustainable Development Goal (SDG) 14: Life Below Water. The Blue Economy has been proposed as an ocean-based counterpart to the Green Economy development plan (Silver, Gray, Campbell, Fairbanks, & Gruby, 2015) to improve human well-being and social equity while achieving environmentally sustainable economic growth (UNEP, 2010). This distinguishes “Blue Economy” from the “Ocean Economy,” which comprises any and all economic activity related to oceans. “Blue Economy,” is the expansion of this Ocean Economy in a market economy sense with some implied observance of environmental sustainability (Park, Seo, Kildow, & Judith, 2014). The term is used in the discussion of how to best manage the exploitation of marine resources. In Indonesia since the early years (1957), the country has paid attention to the maritime economy as issued in the Djuanda Declaration. It stated that in building the nation and the economy, it must be based on the potential and sovereignty of the archipelagic state. The Declaration reiterated the identity of Indonesia. As the biggest archipelagic country, Indonesia has 17,508 islands which all of its regions rely on and are connected by sea. The Indonesian sea covers 65 percent of the total area of Indonesia with a total ocean area of about 6,400,000 km². Oceans are central to Indonesia’s prosperity, with 108,000 kilometres of coastline, Indonesia’s ocean economy is worth over \$256 billion annually, more than one quarter of the national economy. Being the source of food and livelihood to the substantial portion of population, oceans have potential to achieve major sustainable goals of eliminating hunger and poverty. However, around 5.23 million fishermen live in coastal areas and rely on the ocean for incomes and nutrition, and these communities are amongst the country’s poorest. Similarly, most programs, which have gained recognition and increasingly engage in developing regions, remain focused on environmental sustainability, rather than social sustainability, equity or fairness (Teh et al., 2019). SME marine fisheries they are sometimes excluded from ocean development plans due to their low contribution to GNP (Symes, Phillipson, & Salmi, 2015).

For Blue economy to be a truly useful approach, we argue that social benefits and equity must be explicitly prioritized alongside environmental and economic concerns. Greening the Blue economy is necessary to achieve socially equitable blue economy. It is necessary to encourage the emergence of social entrepreneurship in a form of cooperative in Indonesia. The cooperative is expected to become a driver for the growth of entrepreneurs and cooperation so that the development of social entrepreneurs’ activities must incorporate aspects of capital, technology, facilitation of marketing or promotion, legal protection, and incentives for the work of creative industries and the development of the business or institutional networks. Cooperative must encourage the development of businesses based on innovation, creativity, and science and technology (Rizal, Maulina, & Kostini, 2018). Traditionally, cooperatives emerge with a broad set of social, political and economic objectives (Burdín & Dean, 2012; Soboh, Oude Lansink, & Van Dijk, 2012). These objectives include self-help and grassroots participation to welfare and distribution, exploitation of economies of scale, and social control over resource allocation and mobilization (Lele, 1981)

As cooperatives solve local problems by mobilizing local resources (Wilkinson & Quarter, 1996), they are viewed as a tool for community development (Brennan, Spranger, Cantrell, & Kumaran, 2004). Similarly, other authors consider cooperative development as a strategy and

an important vehicle for creating further value in the society (Shahidullah & Islam, 2018). Dana and Dana (2008) see cooperative's roles more as entrepreneurial; a vehicle for collective entrepreneurship in which individual skills are integrated into a group, and that group's collective ability to innovate becomes greater than the sum of its parts. Collective entrepreneurship can offer a cooperative the opportunity to tap into individual talents and to harness the energy of the community" (Dana & Dana, 2008). This business notion has become a social movement in rebuilding social fabric, and healing and empowering lives of marginalized people (Restakis, 2010).

According to Indonesia Law Number 12 of 1967, Indonesian cooperatives are people's economic organizations with a social character and consist of people, an economic arrangements as joint efforts based on the principle of kinship. Cooperatives have goals for the benefit of their members, including improving welfare, providing needs, helping capital, and developing businesses. Coastal fishermen communities in outside Java island experience poverty, lower education level, unemployment, poor health and food insecurity. Consequently, economic and social conditions are dwindling in these communities. Co-operatives with a community development goal can catalyse growth and value creation in those societies. One of the value creation mechanisms is 'value chain intervention' (Webber & Labaste, 2009). A value chain encompasses all the activities or stages of value addition—from primary production to after sales services through which a business creates economic value (Kaplinsky, 2000). Value chain intervention offers the opportunity to enhance social impact of fisheries EAC (2013). One approach to value chain intervention is through quadruple helix innovation. Quadruple Helix model is a conceptual framework of collaboration between university, industry, and government and community (Hudani & Dhewanto, 2015). University and industry, each with their knowledge and infrastructures, provide a conducive and supportive environment where all forms of creativity can arise. In turn, governments assure the growth of this creativity through the provision of financial support, the regulatory system, and infrastructure that showcase the output of this creative process. With the support and collaboration of university, industry, and government, the community must continue innovating goods and services.

Focusing on community support for social entrepreneurship, is crucial to include community perceptions or perceived benefit by the community which are influenced by a range of factors that have been extensively explored in the literature such as the potential for economic gain, economic involvement, community attachment, their degree of involvement in the planning and decision-making process (Látková & Vogt, 2012). Moreover, a range of theories have been applied to the investigation of the effect of these factors, including social exchange theory (SET) (Látková & Vogt, 2012). Social exchange theory (SET) is a theoretical framework used to explain the perceptions of communities (Wang & Pfister, 2008). According to SET, if community or resident perceive the benefits of cooperative development, they will be inclined to support cooperative development (Andriotis, 2005). While, most studies using SET have been conducted in the context of tourism development, few studies have focused in the context of social entrepreneurship development in coastal fishermen village in developing world (Sharpley & Telfer, 2015).

Theoretical Framework

1. Quad helix innovation towards community support for cooperative development mediated by community perceived benefit

Kolehmainen et al. (2016), found the Quad helix (QH) approach to be useful for supporting knowledge-based development and innovativeness in rural and less-favoured regions. The QH approach is an extension of the triple helix (TH) model that emphasises the role of universities

in the knowledge economy (Borkowska & Osborne, 2018). According to the TH model, the best environments for innovation are created at the intersection of the helices, where different types of knowledge and institutional logics intermingle. The TH model (Etzkowitz & Leydesdorff, 2000) is used to describe both dynamic interaction between universities, companies, and public organisations and institutional continuity, as these helices consist of historical institutions with selection environments or rules. To fruitfully implement quadruple helix innovation processes, the specific forms such interactions might take are yet to be determined. Academia, government and business—the other three of the four subsystems of the quadruple helix—have already framed collaboration with society as *transdisciplinary*, *open science* and *deliberate democracy*, and *user-cantered innovation* respectively (Schütz, Heidingsfelder, & Schraudner, 2019).

Social value creation is the act of enhancing societies and communities to improve individuals' well-being. Social entrepreneurs are defined as individuals who start a new for-profit or non-profit venture with an aim to bring systematic social change through the development of new products, services, or solutions (Trivedi 2010). Social entrepreneurs can provide innovative and creative solutions to social problems. They take the initiative to solve major social issues and recommend new solutions to social problems. They do so by indulging in activities to change, educate, and train people and convince society to take responsibility for solving problems on their own. Communities and people in underdeveloped areas are facing health crises, hunger, and other developmental and economic problems. These problems are caused by the lack of governments' interest (WorldBank 2016) . The need for individuals who participate in the development of society and economy is evident. Such individuals can lead policymakers and academic researchers to be interested in investigating factors that affect entrepreneurial behavior and intention of individuals toward social development (Zulfiqar et al., 2019).

2. Community's' perceptions toward the impacts of cooperative development

Several previous studies have explored the perceived impacts of community development (Nicholas, Thapa, & Ko, 2009; Vareiro, Remoaldo, & Cadima Ribeiro, 2013). The value chain intervention, and a new way of doing social entrepreneurship, have a direct effect on communities (Sharpley & Telfer, 2015). These forces can result in changes to a community's values, behaviour patterns, lifestyles, and resident's quality of life (Hall & Page, 2014). Cooperative can exert a range of economic, social, and environmental effects on host communities. Positive economic effects include increasing family incomes, raising the standard of living, creating more jobs and employment opportunities, and improving tax revenues (Choi & Sirakaya, 2006). A range of factors affects residents' perceptions of tourism development. These factors have been extensively explored in previous studies (Látková & Vogt, 2012).

3. The potential moderating effect of Co-operative Readiness Level

Social entrepreneurial readiness among community depends on their ability to discover environmental opportunities and use their capabilities based on available resources. Carsrud and Brannback (2009) and Nga and Shamuganathan (2010) emphasize that social entrepreneurial readiness depends on the mindset of resident toward social values, social welfare, and entrepreneurial activities. According to Olugbola (2017), entrepreneurs are likely to have a positive mindset toward social entrepreneurial activities, especially if they feel that they are ready and able to serve society by creating a successful entrepreneurial venture. Various factors can influence the readiness of young people for entrepreneurial activities. Social entrepreneurial readiness among community in coastal area is created by analyzing and interpreting their society, environment, lifestyle, and social attachments (Coduras, Saiz-Alvarez, and Ruiz 2016). Resident can extract information by observing and discussing the

living conditions of other people. Educational and training institutions and institutional environments can play an essential role in encouraging entrepreneurship among community. According to the researchers, the link between perceived benefit and community support for social entrepreneurship offers the potential for expansion and the incorporation of new components. Scholars have incorporated various dimensions to describe the influence of cooperative readiness on action to boost the explanatory power of behavioral theories (Zulfiqar et al., 2019)

4. West Kupang villages

East Nusa Tenggara (Nusa Tenggara Timur – NTT) has Indonesia's third highest relative poverty rate (22.2 percent of the provincial population according to Central Statistics Bureau) after West Papua and Papua, largely because the majority of the population still lives a subsistence agricultural life-style. Health and education services remain limited outside the capital of Kupang. West Kupang is a sub-district in Kupang Regency, East Nusa Tenggara, Indonesia. This sub-district is approximately 49 Km from the capital city of Kupang Regency and 16 Km from Kupang City and is the westernmost sub-district. Its capital is in Batakte Village. Population around 20,155, with 4,092 households. West Kupang District consists of 2 (two) kelurahan and 10 (ten) villages: Batakte, Oenesu Bolok, Kuanheun, Lifuleo, Manulai I, Nitneo, Oematnunu, Oenaek, Sumlili, Tablolong and Tesabela. West Kupang is a beautiful, magical part of eastern Indonesia. Australia is just to the south and has a significant influence on the climate - and on the people. The following hypotheses have been developed based on this theoretical background and the results of previous studies:

- H1. Quad helix innovation has a positive influence on the community perceived benefit.
- H2. Community perceived benefit has a significant effect on the community support for cooperative
- H3: Cooperative Readiness Level moderate the relationship between community perceived benefit and community support for cooperative

Methods

We employed a quantitative research design for this study, using a questionnaire with question-statements adapted from similar questionnaires as used in previous studies ((Nicholas et al., 2009)Wang & Pfister, 2008). Question-statements were answered on a 5-point Likert scale, with 1 referring to strongly disagree and 5 referring to strongly agree. Respondents were sampled from ten villages in West Kupang subdistrict. The population of these villages totaled 20,155, with 4,092 households. Using systematic sampling, we sampled the first of every three households, leading to the distribution of 273 questionnaires. From this sample, 250 questionnaires (92%) were returned as completed. We used G*Power to calculate the sample size. Based on a power of 0.95, we needed a sample size of 119 for model testing. Therefore, given that our sample size exceeds 250, the power value in this study exceeds 0.95.

This study used a single source respondent to generate the data about dependent as well as independent constructs, and therefore it is necessary to check for common method variance. We employed Harman's one-factor test to test for common method variance (CMV). According to (Podsakoff & Organ, 1986), CMV becomes problematic where a single latent factor might account for the majority of the explained variance. We also performed an un-rotated principal component analysis on all measurement items, finding that the first factor accounted for only 21.82% of the variance. Therefore, according to this method, CMV does not appear to be a problem in this study.

Result and analysis

1. Profile of the respondents

Table 1 shows that the number of male and female respondents was fairly even, with their being slightly more male respondents than female. Respondents were categorized into three age groups: 17–35 years (n = 110), 36–55 years (n = 80), and 56 years and above (n = 60). Most of the respondents had a secondary-level education (n = 140) or less (n = 43), while a smaller number had a diploma/certificate-level of education (n = 33). and degree (n = 13). Among the 250 respondents, 163 (65%) has occupation of full-time fishermen, part-time and additional part-time fishermen, while the rest (n = 88) worked in other businesses, such as agriculture (Tabel 1).

Model assessment using PLS-SEM

The assessment of a model using SmartPLS generally follows a two-step process including assessments of the measurement model and the structural model (Chin, 2010; Hair et al., 2011). This evaluation involves the assessment of the relationships between the variables and their associated dimensions. The assessment of the structural model is concerned with the relationships between variables (Chin, 2010; Hair et al., 2011).

Table 1 Profile of the respondent

		Frequency	Percentage
Gender	Female	110	44
	Male	140	56
Age	17 - 35	110	44
	36- 55	80	32
	56 and above	60	24
Education	No formal education	23	9
	Primary	43	17
	Secondary	140	56
	Certificate/diploma	33	13
	Degree	13	5
a full, part time and additional part time fisherman?	Yes	163	65
	No	88	35

Assessment of the measurement model

The measurement model used in this study was comprised of four constructs, each measured through four or more items. These constructs include quad helix innovation, perceived benefit of residence, cooperative readiness level of West Kupang residence, and support for cooperative development. Certain criteria for establishing construct validity and reliability must be met in order to evaluate the measurement model. The first criterion to be used to evaluate the outer model is outer loading, they are the estimated relationships in reflective measurement models (i.e., arrows from the latent variable to its indicators). They determine an item's absolute contribution to its assigned construct. As can be seen in the Fig 1 that most of the indicator loadings on their corresponding variables were higher than 0.7. Outer loading 0.7 or higher are considered highly satisfactory (Henseler, Ringle, & Sinkovics, 2009). Therefore, the research model has fulfilled the criteria of evaluation.

Figure 6 The Research Model

Second criterion is internal consistency measured by Cronbach Alpha (CA) and composite reliability (CR). Cronbach's alpha tests and composite reliability can both achieve internal consistency reliability. (Hair et al., 2014; Wilden et al., 2013). There are four variables in Table 2 that show the Cronbach's alpha value is more than or equal to 0.70, indicating that the model has internal consistency. As long as all four variables have a Composite Reliability (CR) value greater than 0.7, the measurement model is highly reliable (Chin, 1998). The third criterion is Convergent Validity occurs when a measure's correlation with another measurement of the same variable is positive. To test for convergent validity, the Average Variance Extracted (AVE) was employed to calculate the average variance retrieved from the data. AVE must be more than 0.50 in order to prove convergent validity (Joe F Hair Jr et al., 2014).

As can be seen in Table 2 the CAs and CRs for all of the variables in the measurement model exceeded 0.7. These results indicate that the measurement model presents acceptable reliability. Further, the AVEs of the variables should also be higher than 0.5 for their convergent validity to be considered highly reliable ((Chin, 1998); Chin, 2010; Hair et al., 2011).

Table 2. Assessment results of the measurement model.

	Cronbach's Alpha	Composite Reliability	AVE
Co-operative readiness level	0.852	0.900	0.693
Community perceived benefit	0.943	0.956	0.814
Community support for co-operative	0.947	0.959	0.825
Quad helix innovation	0.818	0.874	0.588

The fourth criterion for evaluating the measurement model is Discriminant Validity, which shows that the extent to which each variable is distinct from other constructs in the model (Chin, 2010; Joe F Hair Jr et al., 2014). To evaluate discriminant validity Fornell Larcker criterion is used. The square root of the AVE for each construct should be greater than the all of the correlations among the construct and the other constructs in the model (Chin, 2010; Hair et al., 2011; (Henseler, Ringle, & Sinkovics, 2009). Table 3 shows the square roots of the AVEs for the constructs along the diagonal and the correlations among the constructs.

Table 3 Result of discriminant validity

	Co-operative readiness level	Community perceived benefit	Community support for co-operative	Quad helix innovation
Co-operative readiness level	0.833			
Community perceived benefit	0.505	0.902		
Community support for co-operative	0.496	0.791	0.908	
Quad helix innovation	0.652	0.446	0.528	0.767

Note: The square root of AVEs shown diagonally in bold

As shown in Table 3 the square roots of the AVEs for the constructs along the diagonal and the correlations among the constructs, indicating that the model presents acceptable discriminant validity. Fornell-Larcker’s criterion was established, providing evidence for the constructs’ discriminant validity.

Assessment of the structural model

Each hypothesis is associated with a causal link in the structural model, which depicts relationships among constructs. To evaluate the structural model for research model, coefficient of determination (R^2), Collinearity concerns (VIF), path coefficient, and effect sizes (f^2) are all used to evaluating the structural model (Hair et al., 2014). The coefficient of determination (R^2) quantifies the variance of the dependent variable in relation to the change in the independent variable. The R^2 value is between 0 and 1, with a higher number indicating greater precision. R^2 values of 0.25, 0.5, or 0.75 can be interpreted as being small, moderate, or substantial for an endogenous variable (Joe F Hair et al., 2011).

Table 4 Result of discriminant validity

	R Square	R Square Adjusted
Community perceived benefit	0.199	0.188
Community support for co-operative	0.658	0.644

Table 4 shows the R square adjusted for Community perceived benefit is 0.188, and Community support for co-operative (0.644), indicating that the variance shared is small and moderate. The second criterion for evaluating structural models is the path coefficient, which indicates the association between two variables and ranges between -1.00 and 1.00.

Table 5 Result of discriminant validity

Path	Path coefficient (β).	VIF	f^2
Community perceived benefit → Community support for co-operative	0.712	1.350	1.099
Moderating Effect → Community support for co-operative	0.117	1.095	0.058
Quad helix innovation → community perceived benefit	0.446	1.000	0.248

Table 5 shows that path coefficient between community perceived benefit on community support for cooperative has a sizable effect (0.712). The smallest path coefficient is moderating effect of readiness level on community support for co-operative (0.117). A large effect was seen of Quad helix innovation on community perceived benefit (0.446). The third criterion in structural model evaluation is multicollinearity. The result in Table 5 indicates of no collinearity issues for research model, because all of the VIF value below 5 (Hair Jr, Sarstedt, Hopkins, & Kuppelwieser, 2014). The fourth criterion in structural model evaluation is the f^2 values, which assesses a predictor variable’s comparative influence on an independent variable (Hair et al.,

2014). which ranging from .02, .15, and .35, correspondingly, indicate small, medium, and large effect sizes (Cohen, 1988). The results in Table 5 shows that large effect size, has been shown in the relationship between community perceived benefit and community support for co-operative (1.099). The small effect size is shown on the relationship between moderating effect on community support for co-operative. (0.058).

The final stage in data analysis was to use SmartPLS to validate the hypothesized associations by calculating the significance of the path coefficients using bootstrapping computations. The bootstrapping procedure determines the significance of path coefficients by calculating empirical t values that, if greater than the critical value, are regarded significant at a given likelihood of error (t distribution values). The following critical values were used in this investigation for one-tailed tests: 1.65 (significance level= 5%). (Hair et al., 2014). The hypothesis was evaluated using the bootstrapping procedure, which determines the importance of path coefficients by producing empirical t values that exceed the critical value (t distribution values). At a given margin of error (0.05), the coefficient is considered significant. Hair et al. (2014) suggest a bootstrap sample size of 5000. To determine the significance of path coefficients, the bootstrapping technique in SmartPLS3 was used. Using one tail, the t-value is 1.65 and the p-value is 0.05 (at = 5%), and upper and lower confident interval doesn't contain zero (Hair et al., 2014). As shown in Table 6, the effect of Community perceived benefit on Community support for co-operative is positive (0.712), with p-value of (0.001) smaller than 0.05 (at = 5%), and the confident interval bias corrected doesn't contain zero.

Table 6 Result of hypothesis testing

	Original Sample (O)	T Statistics	P Values	Confidence Interval Bias Corrected	
				5.0%	95.0%
Community perceived benefit → Community support for co-operative	0.712	7.894	0.000	0.553	0.854
Moderating Effect → Community support for co-operative	0.117	2.383	0.009	0.034	0.189
Quad helix innovation → Community perceived benefit	0.446	4.954	0.000	0.267	0.570

According to Hair Jr, Sarstedt, Ringle, and Gudergan (2017), the effect is significant; thus, H1 is supported. The effect of Quad helix innovation on Community perceived benefit is moderate, as showed by the path coefficient 0.446, and p-value 0.000, accordingly H2 is supported. The moderating effect of Moderating Effect on Community support for co-operative revealed that the effect is significant (0.117) and p value (0.000), respectively, show that there is an evidence to support H3.

Conclusion and Recommendation

The first research goal is to explore the direct impact of Quad helix innovation on Community perceived benefit. The result indicating that H1 was supported This means that there is a medium and significant direct influence of quad helix innovation towards community perceived benefit. The second objective of this study is to assess the impact of Community perceived benefit on Community support for co-operative. The result indicating that Community perceived benefit has a positive effect on Community support for co-operative. The third research goal is to examine whether co-operative readiness level has a moderating effect in the relationship between community perceived benefit and Community support for co-operative. The result indicates co-operative readiness level moderates the relationship between perceived benefit and community support for cooperative.

Implications and limitations of the study

In this study, we adapted framework for SET for first time in the cooperative literature. In addition, most previous studies into residents' perceptions have been undertaken in developed countries (Sharpley & Telfer, 2015). The results of an investigation in a poorest village in developing country may be significantly different from those in developed countries. The results of this study have some important practical implications for the authorities responsible for the management of West Kupang. Our results allude to the importance of perceived benefit in support of cooperative development. Therefore, local authorities should endeavour to improve the positive perceptions of residents. Improving the economic benefits to residents and involving them in the planning and management process would significantly enhance the positive perception of residents. However, the results of this study cannot be generalized beyond West Kupang due to the relatively small sample size. This should be considered another limitation of the present study. Therefore, for future research we recommend to collect a large sample.

Acknowledgment

The authors would like to extend their appreciation to the Indonesia Ministry of Fishery and Maritime (KKP) for the research grant that make this paper possible.

ABSTRACT

The notion of "blue economy" has evolved as a significant way to promoting sustainable development of coasts and oceans, with a direct impact on economic growth. However, the principles have remained ambiguous, particularly for use in the development of vocational education and its impact to coastal fisheries communities' village. The paper provides a framework to measure the adoption of the green and blue economy concept and uses the framework to analyze the effectiveness of the vocational program in improving the current economic and societal values of the oceans, which could be a novel approach to address key ocean economy challenges. The Blue Education Maturity Model (BEM) was developed to assess the efficacy of vocational school programs in integrating the triple helix: education, business, and coastal village community. The BEM is an effective evaluation tool based on BAN-PT and Blue Economy Company Index (BECdex), and Risk Maturity Model (RMM) broken down into five variables, 10 dimensions, and 20 competency items that show where the HMM program stands on five levels of maturity, ranging from Ad hoc (1) to Optimized (5). Data was obtained at the three vocational schools in Eastern Indonesia through observation and response of questionnaire. With a total score of 80, 78, 79, or a maturity level of 3 (Repeatable), the vocational school of maritime and fisheries in Kupang, Ambon, and Bitung,, has established a hybrid green and blue economy in policies, curriculum, research and innovation, and community development. The school's strategies include: improving curriculum, capacity building in entrepreneurship, sustainable coastal aquaculture, research and innovation for economic growth and environmental sustainability.

Keywords: Green Economy, Blue Economy, Hybrid Maturity Model, Fisheries Vocational School, Fishing Village Community

Introduction

Despite that oceans are central to Indonesia's prosperity through economic activities, worth over \$256 billion annually, more than one quarter of the national economy (Bank, 2021), yet the maritime sector is not well-known in the field of education, so it receives little attention (Sari & Muslimah, 2020). Indonesia has 17,500 islands, most of Indonesia's territory is about 62% surrounded by ocean. With 108,000 kilometres of coastline, Indonesia's marine and fisheries potential is quite large and requires graduates majoring in marine and fisheries to manage the potential of marine wealth resources. The lack of literature on marine education and the fact that many researchers have not focused on this area demonstrate the gap (Umuhire & Fang, 2016). Furthermore, marine education is the most uncommon field of study and is extremely difficult to come by because marine research methodologies are difficult to implement since early education (Hapidin, Nurjannah, & Hartati, 2018). According to Gandha and Pranata (2015) the existing curriculum still focuses on teachers and textbooks without direct interaction with the learning object, resulting in the underdevelopment of Indonesian children's awareness of Indonesian nature, particularly in the maritime sector. Teachers' knowledge of the curriculum is also still limited especially in coastal areas. Marine education is critical in helping student develop the knowledge, skills, and attitudes necessary to preserve the environment in the future, particularly coastal ecosystems. (Irawan & Hindrasti, 2018) discovered that in order for maritime education to be successful, students must be taught to have a strong understanding of the ocean. According to (Fletcher, Potts, Heeps, & Pike, 2009) a lack of information about marine affairs contributes to a lack of public knowledge and awareness. In Indonesia, marine education is not explicitly mentioned in the 2013 curriculum. However, there are several topics that allow teachers to develop it as marine learning, such as life sciences or biology. At several universities Marine education is implemented at the tertiary level by organizing the Marine Education Study Program. Increasing concern for ocean protection begins with a paradigm shift from seeing it as an effort to protect the earth to seeing it as an effort to protect human life because it is human nature that will be threatened if environmental damage occurs

The notion of "blue economy" has evolved as a significant way to promoting sustainable development of coasts and oceans, with a direct impact on economic growth.) Education, research and innovation is a central driver not only for developing a sustainable blue economy but also for green recovery from the COVID-19 crisis, certainly cannot be achieved without skilled people. For Blue economy to be a truly useful approach, we argue that the role of education to support public awareness, research and community service must be explicitly prioritized, particularly for use in the development of vocational education and its impact to. the growing demand of the marine-based industry (e.g. shipbuilding) in the digital domain, green technologies, and coastal fisheries communities' village.

Indonesia has 14 Marine and Fisheries Polytechnics, which is a vocational school education in the field of marine and fisheries within the Ministry of Marine Affairs and Fisheries, which is under and responsible to the Head of the Marine and Fisheries Research and Human Resources Agency (LAUT). The Polytechnic has the task of 1) organizing vocational education, 2) research, and 3) community service in the marine and fisheries sector. In carrying out its duties, Polytechnics in Indonesia carries out the following functions: a) Implementation and development of vocational education which includes teaching and training in the marine and fisheries sector; b) Development of the academic community and its relationship with the environment; c) Implementation of research and community service d) organizes Diploma Three (D3) education programs.(Huwae, 2016) The programs are varying in range of: Marine Fisheries Nautical, Marine Fisheries Engineering, Fishery Product Processing Technology, Aquaculture Technology. Nevertheless, there are concerns in knowledge and skills

development in blue economy, such as related to the lack of: i) communication and cooperation between education and industry; ii) communication and cooperation between education and community and iii) attractiveness and awareness of career opportunities in the blue economy. Thereby, a continuous monitoring and evaluation of vocational education system in order to ensure blue objectives are achieved. With the fast-paced introduction of new technologies in the blue economy sector, there is also urgent need for a continuous evaluation of vocational education system in order to ensure objectives are achieved for societal inclusion, and up to date with the market dynamics.

There has been a lot of research done on the marine education, However, research that produce a maturity model to assess the effectiveness of the adoption of blue economy in marine & fishery education is still very rare. This study examines the continuous evaluation of vocational education, by developing an instrument of maturity model in order to ensure they are achieving Marine & Fishery Education's objectives and adopt the blue economy for societal inclusion, and up to date with the market dynamics. The study provides a framework to measure the adoption of the blue-green and economy concept and uses the framework to analyse the effectiveness of the vocational program in improving the current economic and societal values of the oceans, which could be a novel approach to address education in blue economy

Literature Review

Blue Economy Definition

The concept of “Oceans Economy” or “Blue Economy” is recent and originated from the United Nations Conference on Sustainable Development held in Rio de Janeiro in 2012. (Smith-Godfrey, 2016). At the heart of the concept is a separation of socio-economic development from environmental degradation. In the Economist, specifically the Intelligence Unit of 2015, in a report on “The Blue Economy: Growth, Opportunity and a Sustainable Ocean Economy”, a working definition of Blue Economy is stated as follows: “A sustainable ocean economy emerges when economic activity is in balance with the long term capacity of ocean ecosystems to support this activity and remain resilient and healthy”. (Smith-Godfrey, 2016). In the Rio+20 Green Economy Initiative, Blue Economy was espoused with the desired outcome of “improved human wellbeing and social equity, while significantly reducing environmental risks and ecological scarcities, endorsing low carbon, resource efficiency and social inclusion’ (Smith-Godfrey, 2016). This desired outcome is based on the current circumstances and needs of a developing, changing and increasingly populous world, whose future resource base is located in the oceans: “Improved human wellbeing and social equity, while significantly reducing environmental risks and ecological scarcities, endorsing low carbon, resource efficiency and social inclusion”(Choudhary et al., 2021).

The Complexity in Small Island Developing States (SIDS) concept paper of the World Bank provides a working definition as follows: “Blue Economy is a marine-based economic development that leads to improved human wellbeing and social equity, while significantly reducing environmental risks and ecological scarcities”.(Smith-Godfrey, 2016). In a synthesis report in 2012, UNEP initiated the consideration of ‘Green economy in Blue world’ which stated the importance of marine environment as integral component for urgently needed paradigm shift in bioeconomy called as “blue economy” as coined by pacific Small Island Developing States (SIDS) (UNEP et al., 2012). To Smith-Godfrey (2016) and Spalding (2016), ‘Blue Economy’ is a systematic way of utilizing ocean resources by integration of short-and

long-term economic activities based on principles of social inclusion, environmental sustainability and innovations on and around the sea.

The Blue Education Maturity Model (BEM)

The maturity model is a solution to help vocational education evaluate the effectiveness of their organization’s in adopting education for blue economy. The Blue Education Maturity (BEM) model for vocational education in maritime and fishery is an effective evaluation tool to benchmark verses other organizations. It identifies the areas where organization is weakest, as the weakest links are ultimately what drive down the program effectiveness.

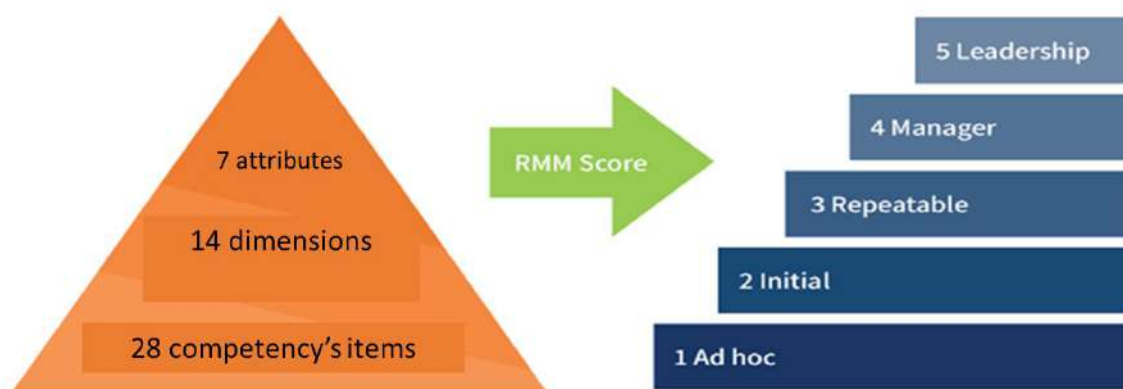

Figure 7 The Research Model

The instrument is adapted from previous research’s questionnaires used in previous research (Misuari, Bambang, & Purwanto, 2015) and Blue Economy Company Index (BECdex) (Akhir, Farand, Araujo, & Nahumariri, 2021) and Risk Maturity Model (Minsky, 2017) broken down into 7 attributes or variables, 14 dimensions, and 28 competency items that show where the program stands on five levels of maturity, ranging from Ad hoc (1) to Leadership (5). The seven variables of BEM are: 1) Adoption of Blue economy-based approach 2) Curriculum 3) Teaching Factory 4) Facilities and infrastructure 5) Research and Innovation 6) Social equity and inclusion 7) Pollution control

Marine and Fisheries Polytechnics in Kupang, Ambon, and Bitung

Marine and Fisheries Polytechnics is in administration of the Ministry of Marine Affairs and Fisheries, which is under and responsible to the Head of the Marine and Fisheries Research and Human Resources Agency. The profile of three Marine and Fisheries Polytechnics in Eastern Indonesia is shown in Table 1.

Table 7 Profile of Polytechnics in Kupang, Ambon and Bitung

Location	Kupang	Ambon	Bitung
D3-Study Program	Fishing techniques Fisheries mechanization Aquaculture technology	Fishing technique Fisheries mechanization Aquaculture technology	Nautical, Engineering, Fishery Product Processing Technology,

			Aquaculture Technology
Number of students	1600	1300	1500
Number of staff	60	50	55

Methods

This research uses a combination of quantitative and qualitative descriptive methods in understanding the phenomenon under study as well as to describe compare between indices in the results. Respondents were sampled from three Maritime and Fishery Polytechnics in 3 location in eastern Indonesia: Ambon, Kupang and Bitung, through observation, interview, and focus group discussion session. The population of staff and managerial level totalled are 100 in every location. Using stratified and quota sampling, we sampled 35 staff and 15 managers in every location. Data collection was carried out through questionnaires, observations, and interviews of school residents consisting of educators, education staff, and students. The implementation of blue economy in terms of seven criteria's: 1) Adoption of Blue economy-based approach 2) Curriculum 3) Teaching Factory 4) Facilities and infrastructure 5) Research and Innovation 6) Social equity and inclusion 7) Pollution control were examined by conducting assessments or scoring through questionnaires. The assessment's result is classified into 5 levels, consecutively as shown in Table 2.

Table 8 Maturity Level

	Level 1	Level 2	Level 3	Level 4	Level 5
	Key drivers: degree of ...				
Adoption of Blue economy-based approach	<ul style="list-style-type: none"> • vision, mission and goals far-sighted orientation toward blue-economy, internalized to the school community. • support from senior management • process definition determining ownership and assimilation into all area • blue culture's accountability, communication and pervasiveness 				
Curriculum	<ul style="list-style-type: none"> • the structure of the curriculum contains blue economy principles • lecturers have the competence to develop learning activities on the environment and sustainable fisheries • students carry out learning activities on fisheries and environmental resource management. • application of knowledge in problem solving in everyday life. 				
Teaching Factory	<ul style="list-style-type: none"> • the school carries out the development of an entrepreneurial culture based on blue economy principles • students take part in field work practice activities in the business world • the school establishes partnerships with various parties • the school provides support for increased environmental sustainability 				
Facilities and infrastructure	<ul style="list-style-type: none"> • availability of infrastructure to overcome environmental and resource issues • availability of infrastructure facilities to support learning and research p 				

	<ul style="list-style-type: none"> • maintenance of environmentally friendly school infrastructure • facility management and maintenance mechanisms are available
Research and Innovation	<ul style="list-style-type: none"> • research and innovation road map to support the blue economy for lecturers and students is available • funding is budgeted and access to funds available lecturers and students produce research that is associated with the principle of sustainable development goals • research and innovation collaborate with quad helix (government, industry, community and other school/university)
Social equity and inclusion	<ul style="list-style-type: none"> • community service activities as a graduation requirement • assist in the formation of fishing cooperatives and facilitate the supply chain of cooperative products • providing scholarship programs to fishermen's students in sub-districts • incorporate environmental education and conservation, and local economic benefits without compromising environmental sustainability
Pollution control	<ul style="list-style-type: none"> • policy and procedures are available in pollution prevention due to learning activities • conduct research and innovation for pollution prevention • educate local residents about pollution prevention • participate in pollution prevention activities of the ministry

Based on the score of maturity level a polytechnic can be classified into five categories maturity level: Ad-hoc, Initial, repeatable, Managed, and Leadership, as shown in Table 3

Table 9 The maturity level category

Maturity Level	Category	Score
5	Leadership	101 - 120
4	Managed	81 - 100
3	Repeatable	61 - 80
2	Initial	41 - 60
1	Ad-hoc	0 - 40

Findings and Discussion

The assessment results show that Marine and Fisheries Polytechnics in Kupang, Ambon, and Bitung have had a good blue education maturity level through Adoption of Blue economy-based approach, Curriculum Teaching Factory, Facilities and infrastructure, Research and Innovation, Social equity and inclusion, Pollution control with total scores of 80, 78, 79 respectively. The strength of the three polytechnics is in categories 1 to 5, namely: Adoption of Blue economy-based approach, Curriculum Teaching Factory, Facilities and infrastructure, Research and Innovation. Results also indicated that Polytechnic Kupang tended to have a higher score on the research and triple helix innovation and co-operation with industry, and coastal community development. Example of the program is cultivated of lobsters in the waters of Mulut Seribu, Pukuafu Village and increase productivity of seaweed in Tablolong village including: seaweed coffee, Kajarula innovation program to increase seaweed productivity so as to increase fishermen's income. (Hariyadi, 2023).

What needs to be improved is in the category of Social equity and inclusion and Pollution control, especially in student community service activities, the formation of service cooperatives and participation in participation in the development of fishermen village by lecturers and students, facilitating the down streaming of fishermen's cooperative results, and collaborating with quad helix, namely with the government, industry, universities / schools and cooperatives communities and facilitate the supply chain of cooperative products. In the Pollution Control category, it is necessary to conduct research and innovation for pollution prevention, and educate local residents about pollution prevention. We also found that school strategy and policies in Implementing the Blue Economy was carried out in four-year basis, through SWOT analysis, should be improved to more frequently strategy review

Conclusion and Recommendation

Marine and Fisheries Polytechnics in Kupang, Ambon, and Bitung already has maturity level 3, with strength in categories 1 to 5, while areas that need to be improved are in categories 6 and 7. We contribute to the body of knowledge in the blue economy adoption in education by created and tested Blue Education Maturity (BEM) model for Vocational Education among the first in the blue economy instrument to assess vocational education, based on literature review and applied the initial model in three Polytechnic in eastern Indonesia: Ambon (Maluku), Kupang (East Nusa Tenggara), and Bitung (North Sulawesi). This analysis, based on guidelines set forth in the model, will provide Polytechnics educations a roadmap for improvement

The results of this study have some important practical implications of three major area, learning and teaching, research and community development, and the adoption of blue-green economy. Therefore, the report should endeavour the management which is the Head of the Marine and Fisheries Research and Human Resources Agency, within the Ministry of Marine Affairs and Fisheries. Improving the system of vocational school should give economic benefits to residents and involving them in the learning, teaching, research and innovation process would significantly enhance the livelihood of residents.

Acknowledgment

The authors would like to extend their appreciation to the Indonesia Ministry of Fishery and Maritime (KKP) for the research grant that make this paper possible.

Örgütsel İkiyüzlülük: Betimsel İçerik Analizi

Asst. Prof. Dr. Mesut ÖZTIRAK

İstanbul Esenyurt University

mesutoztirak@esenyurt.edu.tr

Orcid: 0000-0003-4828-7293

ÖZET

Örgütsel ikiyüzlülük işyerindeki kişilerin ve yöneticilerin sahip olmadığı duyguları, düşünceleri, değer, erdem ve özellikleri sahipmiş gibi göstermesi veya sahip olduğu iddiasında bulunmalarıdır. Ayrıca bireylerin kendilerini diğer iş arkadaşlarına, yöneticilerine ve toplumdaki bireylere karşı tanıdıkları halden, inandıklarından ve olduklarından farklı göstermeleridir. Tüm bu ilişkilerden yola çıkarak ikiyüzlülük kavramı örgütlerde güvenin azalmasına, örgüt iklimindeki olumsuz tutum ve davranışlara, çalışanların tükenmişlik duyguları yaşamasına ve örgütten ayrılma isteği oluşmasına sebep olabilmektedir. Örgütsel ikiyüzlülük kavramı işletmeler için önemli bir kavram haline gelmektedir. Bu nedenle çalışmanın amacı, örgütsel ikiyüzlülük ile ilgili literatürde yer alan çalışmaları incelemektir. Çalışmanın araştırma yöntemi olarak betimsel içerik analizi yöntemi kullanılmıştır. Bu amaçla 2003-2023 yılları arasında araştırılan ve ulaşılabilen makale ve tez çalışmaları incelenmiştir. İlgili yıllar arasında toplamda 40 çalışmaya ulaşılmıştır. Literatürde yer alan ve elde edilen bu çalışmaların içerikleri incelenmiş ve analiz edilerek yorumlanmıştır. Araştırma sonucunda örgütsel ikiyüzlülüğün eğitim, üretim/perakende, tekstil, bankacılık ve spor örgütlerinde bulunduğu görülmektedir. Bunun yanında araştırma sonucunda, örgütsel ikiyüzlülüğün örgütsel dedikodu, örgütsel mutluluk, sinizm, örgütsel güven, örgütsel vatandaşlık, örgütsel destek, örgütsel meşruiyet, örgütsel sessizlik, işyeri maneviyatı vb. kavramları etkilediği görülmüştür. Ayrıca örgütsel ikiyüzlülüğün daha çok örgütsel bağlılık üzerinde etkili olduğu sonucuna ulaşılmıştır.

Anahtar Kelimeler: İkiyüzlülük, Örgütsel İkiyüzlülük, Örgütsel Davranış

Organizational Hypocrisy: A Detail Content Analysis

ABSTRACT

Organizational hypocrisy is when people and managers in the workplace show or claim to have feelings, thoughts, values, virtues and characteristics that they do not have. It is also the fact that individuals show themselves to other colleagues, managers and individuals in the society as different from what they are known, what they believe and what they are. Based on all these relations, the concept of hypocrisy can lead to a decrease in trust in organizations, negative attitudes and behaviors in the organizational climate, feelings of burnout of employees and a desire to leave the organization. The concept of organizational hypocrisy is becoming an important concept for businesses. For this reason, the aim of the study is to examine the studies in the literature on organizational hypocrisy. Descriptive content analysis method was used as the research method of the study. For this purpose, the articles and thesis studies that were researched and reached between 2003-2023 were examined. A total of 40 studies were reached between the relevant years. The contents of these studies in the literature and obtained were analyzed and interpreted. As a result of the research, it is seen that organizational hypocrisy is found in education, production/retail, textile, banking and sports organizations. In addition, as a result of the research, organizational hypocrisy, organizational gossip, organizational happiness, cynicism, organizational trust, organizational citizenship, organizational support, organizational legitimacy, organizational silence, workplace spirituality, etc. concepts have been affected. In addition, it was concluded that organizational hypocrisy was more effective on organizational commitment.

Keywords: Hypocrisy, Organizational Hypocrisy, Organizational Behavior

GİRİŞ

Bir örgütün etkinliğini ve etkililiğini belirleyen faktörlerden biri de çalışanlarının örgüte karşı tutum ve davranışlarıdır. Bu örgütsel davranış olgusu, hem örgütsel hedefleri hem de bireysel ihtiyaçları karşılamak için dikkate alınmalıdır. Örgütsel davranış ilk olarak işletme yönetiminde tartışıldı, ancak daha sonra bölündü ve ayrı bir disiplin haline geldi. Örgütsel davranış, bir örgüt içindeki çalışanlar arasındaki sistematik ilişkilerle ilgilenir. Çalışanların ve grupların eylemlerinin nasıl gerçekleştiğini, nedenlerini, olası sonuçlarını ve bu eylemlerin sistemi nasıl etkilediğini incelemekle ilgilidir.

Bir örgütte üyelerin düşündükleri, deneyimledikleri, hissettikleri ve yansıttıkları şeyler örgütsel ilişkiyi oluşturur. Bu ilişki çalışan algılarından kaynaklanır ve çalışanların tutum ve davranışlarına yansır. İş yaşamının sorunları örgütsel işlevleri yönlendirir ve şekillendirir. Çalışanların olumsuz algıları örgütsel davranışları da olumsuz etkilemektedir.

Örgütsel davranış alanında son zamanlarda çeşitli faktörler ortaya çıkmıştır. Bunlardan biri örgütsel ikiyüzlülük olgusudur. Örgütsel ikiyüzlülük birkaç şekilde tanımlanabilir. Birincisi, yöneticilerin teori ve pratiği arasındaki uyumsuzluk, ikincisi, sözler, kararlar ve eylemler arasındaki uyumsuzluk ve üçüncüsü, tek bir norm setini benimseyen çok normlu bir sistemdir (Fernando ve Gross, 2006).

ÖRGÜTSEL İKİYÜZLÜLÜK

İkiyüzlülük kavramı Türk Dil Kurumu (2023) tarafından “inandığını, düşündüğünü, sözün özünü yapmamak, ikiyüzlülük, ikiyüzlülük ve ikiyüzlülükle bir olmamak” şeklinde tanımlanmaktadır. Brunsson'a (1989) göre örgütsel davranışa yön veren düşünce temelli bir ideoloji vardır. Bu ideolojiler örgütsel çatışmaya yol açar. Bu sistemik çatışma, sistematik ikiyüzlülük kavramının şekillenmesine yol açtı.

Örgütsel ikiyüzlülük kavramını tanımlayabilmek için öncelikle ikiyüzlülük kavramının ne olduğunu açıklamak gerekir. İkiyüzlülük kelimesi, Yunanca "hyprocrisis" kelimesinden türetilen Latince "hyprokrisis" den türetilmiştir. Bu kelimelerin her ikisi de hareket etmek anlamına gelir. Diyalog yoluyla konuşma, sahnede rol oynama şeklinde de ifade edilebilir (Crisp & Cowton, 1994). İkiyüzlülük kavramının ana kaynağı tiyatroya dayanmaktadır. Gerçek bir ikiyüzlülük, klasik bir tiyatro oyuncusudur ve Yunanca hypokrisis, rol yapma anlamına gelmektedir (Koşar ve Koşar, 2017).

Bir kimse ikiyüzlü olarak gösterildiğinde, söyledikleri ile yaptıkları arasındaki uçuruma dikkat çekilir. Çünkü bu insanların çoğu ikiyüzlülük hakkında konuşmak istemiyor. Bu boşluk, ikiyüzlülüğün geleneksel resminin bir parçasıdır. Bireylerle aynı fikirde olmayan insanlar genellikle ikiyüzlülükle suçlanır. O bir ikiyüzlülük gibidir. Bunun nedeni, aktörlerin izleyici için insanları oynaması ve var olmayan eylemler hakkında konuşmasıdır (Barden, Rucker ve Petty, 2005).

İnsanlık tarihi boyunca insanlar hep mutluluğu aramış ve ortaya çıkan mutsuzluk iş tatminini ve işyeri ortamındaki sinerjiyi düşürmüştür. Örgütlerin ve yöneticilerin genellikle vaatlerini ve söylemlerini uygulamaya çalışmaları beklenir. Weick'in (1995) çalışmasında, "söylemleri oluşturma" yaklaşımı, ikiyüzlülüğe karşı mantıklı bir tampon sağlar. İkiyüzlülük, davranışsal tutarsızlıklar ve samimiyetsizlikle gösterilebilir. Ayrıca aldatma niyeti, irade zayıflığı gibi bireysel özelliklere dayalı tutum ve davranışlarda tutarsızlıkların varlığını etkileyebilmektedir (Alicke vd., 2013: 674).

Söylem ve eylem arasındaki tutarsızlık, dışsal operasyonel ve normatif taleplerinde tutarsızlığa maruz kalan örgütlerde ikiyüzlülük yaratır (Lipson, 2006: 9). Bu durum onların iç yapılarına, özellikle de kurumsallaşmış yapılarına yansımaktadır (Meyer ve Rowan, 1977: 340). Örgütsel ikiyüzlülük (Chen ve Chang, 2013: 490; Han ve Koo, 2010: 40), ortak hedef belirleyememe ve

bireylerin tüm örgütsel eylemlere karşı şüpheciliği nedeniyle örgüte olan güvenin azalması (Carlos ve Lewis, 2017: 4), olumsuz örgüt iklimi, tükenmişlik Örgütten ayrılma isteğinin artması, mutluluk duygusunun zayıflaması gibi sonuçlar ortaya çıkabilmektedir. Ayrıca örgütsel ikiyezlülük, örgütlerin üyeleri ve gözlemcileri arasında sinizmi teşvik edebilir (Han ve Koo, 2010: 40). İkiyezlülüğün diğer olumsuz sonuçları; İş güvencesinin yıpranması (Foote, 2001: 25), çalışanların iş performansının düşmesi (Kowal ve Roztocki, 2015: 129), işe devamlılığın azalması, örgütlerde örgütsel bağlılığın ve iş tatmininin azalmasına neden olabilir. Örgütlerin olduğundan farklı davranması ve gerçekleri saklaması örgütler için zarar verici ve patolojik bir durumdur. Fakat bazen örgütsel ikiyezlülük, örgütün hizmet verdiği sektördeki diğer örgütler ile rekabet alanında yer almasına, popüler olmasına ve örgütün yaşamını sürdürmesine yarar sağlayabilir. (Kılıçoğlu, 2017).

Çatışmalar, sorunlar ve akılcılık ikiyezlülüğe yol açabilir. Söylenen her eyleme karar vermek ve üzerinde anlaşmaya varılan her eylemi uygulamak zordur. İkiyezlülük, günümüz örgütlerinin temel bir özelliği ve hayatta kalma ve büyüme için itici bir güçtür. Ancak iyi yöneticiler kurumlarının bu şekilde işlemlerini hedeflemeli ve bunun için çaba göstermelidir. İkiyezlülük tutarsızlıkla ilişkilidir ve ahlaki sorunlara ve kötü davranış sorunlarına yol açabilir. Nitekim Brunsson (1993) ikiyezlülük kavramının genel olarak ahlak ve özel olarak da kötü ahlak ile ilgili olduğunu belirtmiştir. İkiyezlülük literatürüne bakıldığında, çoğunun tutarsızlığa odaklandığı görülür (Hale ve Yastık, 2014). Buna karşılık, Crisp ve Cowton (1994) algılanan ikiyezlülükte dört ikiyezlülük biçimi tanımladılar: tutarsızlık, girişkenlik, suçlama ve kayıtsızlık. İkiyezlülük algısının yaygın olduğunu kabul ederek söylenenlerin uygulanmadığını ve bunun ikiyezlülük olduğunu söylüyorlar. İddia, kişinin ikiyezlülüğe inandığı veya kamu standartlarını desteklemediğidir. Suçlama, başka birini benzer bir hata yaptığı için eleştirdiğiniz zamandır. Öte yandan kayıtsızlık, ikiyezlülüğün örtülü veya açık ahlaki inançları olduğunu iddia eder. Dolayısıyla bu inançların gerektirdiği zor şeyleri yapmaktansa kolay şeyleri yapmayı tercih ettikleri söylenmektedir. Bu tür ikiyezlüler ahlaki önemsizleştirir ve yapılması gerekenleri görmezden gelirler (Hale ve Yastık, 2014).

Bir örgütün çevresini etkileyen iki ana faktör vardır. Bu ahlaki ikiyezlülük ve güçtür. Ahlaki ikiyezlülük sistematik değildir. İlkeleri eyleme en iyi uygulayanlar daha bencil ve güçlüdür. Sonuçları, bilinçli ve bilinçsiz ikiyezlülüklerini test etmelerine izin vermiyor. Birincisi, ikiyezlülük evrenseldir ve ahlaki normları ihlal etmeye yönelik bilinçli bir girişimdir. İkincisi, ikiyezlülük temel olarak kendini kandırmaya dayanır ve birey ilke ile eylem arasındaki çelişkinin tam olarak farkında değildir. Başka bir bakış açısıyla ahlaki ikiyezlülük, kişinin kendi kurallarına aykırı davranışını, başkalarının ihlallerinden farklı olarak değerlendirmesidir (Rustichini ve Villeval, 2014). Örgütsel ikiyezlülük, bir örgütün söylemi, kararları ve eylemleri arasındaki tutarsızlığı açıklamaya çalışır. Örgütler ikiyezlülük yapmak istemezler. Ancak beklentileri, sosyal ve kurumsal çevrelerinin istekleriyle çelişen kuruluşlar, tutarsız talepleri yöneten çözümler sunarken ikiyezlülüğe başvurmak zorunda kalabilirler (Cho vd., 2015). Örgütsel ikiyezlülük heterojen bir şekilde dağılmıştır. İkiyezlülük bir organizasyonun bazı birimlerinde veya alanlarında yaygınken bazılarında hiç görülmeyebilir (Weaver, 2008).

Örgütsel İkiyezlülük Özellikleri

Örgütsel ikiyezlülük, çelişen çevresel ve tutarsız baskılara veya örgüt içi ayrılmış unsurlara bir tepki olarak ortaya çıkmakta ve örgütün örgütsel yapılarında, süreçlerinde ve ideolojisinde gözlemlenebilmektedir. Ayrıca çıkar çatışmalarında farklı fikirler ortaya çıkabilmektedir (Brunsson, 1989: 216). Bu durum örgütte güvensizlik ve şüpheciliği teşvik edebilmekte, dürüstlük ve samimiyetsizlik gibi konulardaki algı ve deneyimleri örgütsel ikiyezlülüğü tetikleyebilmektedir (Naus, Iterson ve Roe, 2007: 690). Weick'e (1976) göre, örgütlerdeki

ikiyüzlülük genellikle esnek bir şekilde birbirine bağlı veya ayrılmış iç örgütsel unsurların çatışan çevresel baskılara eşgüdüksüz tepki vermesinden kaynaklanır ve Brunson'a göre örgütün çevresinin tutarsız baskıları örgütsel yapılara, süreçlere ve ideolojilere yansır. (1989). Ayrıca Brunson'a göre örgüt içinde veya çevresinde belirli çıkarlar doğrultusunda farklı gruplar arasında bir çatışma olursa örgütlerde farklı ideoloji türleri üretilebilir ve bu durum örgütlerin iç yapılarında güvensizlik ve şüpheciliği teşvik edebilir. Literatürde örgütsel ikiyüzlülüğün nedenleri ve boyutları ile ilgili sınırlı sayıda çalışma bulunmaktadır.

Eroğlu ve Eroğlu (2014) örgütlerde ikiyüzlülük kavramını üçüncü bir boyut olarak incelemiştir. Bunlar:

- **Sözler:** Kuruluşun çalışanları gayri resmi anlaşmalara varır veya tartışmalarda anlaşmazlıklar yaşar.
- **Kararlar:** Kuruluş tarafından arşivlenen resmi kararlar, stratejik planlar, vizyon, misyon, temel değerler ve politikalar, genel kabul görmüş yazılı belgeler ve içerik planları arasındaki tutarsızlıklar.
- **Davranışlar:** Gayri resmi söylem ve resmi olarak kabul edilen söylem karşısında örgütsel aktörlerin davranışları arasındaki tutarsızlık.

Kılıçoğlu ve ark. (2017) yaptıkları çalışmada örgütsel ikiyüzlülük kavramını üç boyutta incelemiştir. Bunlar:

- **Sözlerin tutulması:** Bileşenleri, söylemler, kararlar ve eylemler arasındaki tutarlılık derecesini ifade eder.
- **İç yapı ile çevre arasındaki uyum bileşeni:** işletmelerin çevrelerinin değerlerini yansıtarak misyon ve hedeflerini gerçekleştirip gerçekleştirmediklerini ölçmeyi amaçlar. Aynı zamanda bu boyuttaki çalışanların işletmelerin amaçlarına hizmet edip etmediğini ve örgüt içi uygulamalarda işin içeriğini gerçekleştirip gerçekleştirmediğini sorgulamaktadır.
- **Uygulamalardaki tutarsızlıklar:** bileşende, işletme yönetiminin paydaşlarını aldatıp aldatmadığını, gerçekçi hedefler belirleyip belirlemediğini, bir şey söyleyip başka bir şey yapıp yapmadığını ve çözeceğini belirtmesine rağmen şirketteki bir sorunu çözüp çözmediğini inceler.

Örgütsel İkiyüzlülüğü Ortaya Çıkaran Sebepler

Örgütsel ikiyüzlülüğünün ortaya çıkmasını tetikleyen çeşitli faktörler vardır. Örgütsel ikiyüzlülükte örgütün duruma karşı tutumunu ve bunun sonucunda ortaya çıkan tutarsızlığı etkileyen bu faktörler, irade zayıflığı, kendini kandırma derecesi ve başkalarını aldatma niyetidir (Alicke, Gordon ve Gül, 2012). Ayrıca, insanların örgüt içindeki haksız davranış ve yalan algıları örgütsel ikiyüzlülüğü ortaya çıkarabilir (Naus, Iterson, & Roe, 2007). Örgütsel ikiyüzlülüğün ortaya çıkmasında etkili olan bu kavramlardan ilki TDK'ya (2023) göre irade zayıflığıdır. Bir şeyi yapıp yapmamaya karar verme yeteneği de tanımlanır ve zayıflık olarak adlandırılır. Kopya çekme niyeti, bireyin aldatma olasılığı olarak tanımlanmaktadır (Jones, Olderbak ve Figueredo, 2011). Aldatma niyetini ikiyüzlülüğün bir unsuru olarak görmek, bir kişinin bir işi başarma sözü yerine getirilmediğinde ortaya çıkabilir (Crisp & Cowton, 1994). Kendini kandırma ise daha önce verilen sözleri yerine getirememek olduğu için aldatmanın bir unsurudur (Alicke, Gordon ve Rose, 2012).

Perez ve Robson (1999) ise örgütsel ikiyüzlülüğün ortaya çıkmasına neden olan faktörleri üç maddede toplamıştır. Bunlar (Perez ve Robson, 1999: 389):

- Görüşme sonucunda gayri resmi anlaşmalarda tutarsızlıklar veya anlaşmazlıklar,
- Genellikle planlar ve bütçeler de dahil olmak üzere yazılı belgeler aracılığıyla yürürlüğe giren resmi tartışmalar veya politikalarla sonuçlanan kararlar;

- Örgütsel aktörlerin, resmi olarak kabul ettikleri veya gayri resmi olarak yapacaklarını söyledikleri şeylerin aksine yaptıkları eylemlerden kaynaklanır.
- Genel olarak dürüstlük eksikliği veya tutarsızlık olarak kavramsallaştırılan örgütsel ikiyüzlülük, iddia edilen standartlar ile eylemler arasındaki tutarsızlık algısından kaynaklanan olumsuz bir değerlendirmedir (Greenbaum, Mawritz ve Piccolo, 2015: 930).

YÖNTEM

Bu çalışmanın amacı, literatürde örgütsel ikiyüzlülük ile ilgili önceki çalışmaları gözden geçirmek ve sonuçlarını açıklamaktır. Bu çalışmanın verileri, ilgili literatür taraması ve betimsel içerik analizi yoluyla elde edilen dokümanların incelenmesiyle elde edilmiştir. anlatı içerik analizi; Belirli bir konuda yapılan araştırmaların değerlendirilmesi ve betimsel düzeyde eğilimlerin ve araştırma sonuçlarının değerlendirilmesini içeren sistematik bir çalışma olması nedeniyle bu çalışmada kullanılmıştır (Albayrak ve Çiltaş, 2017: 260). Bu yöntem, belirli bir konu veya alanda birbirinden bağımsız olarak yürütülen nitel ve nicel çalışmaların derinlemesine analiz edilmesini ve sıralanmasını sağlar. Böylece sektördeki genel eğilim ortaya çıkıyor. Betimsel içerik analizi ile elde edilen sonuçların konu ile ilgili ileride yapılacak araştırmalara yardımcı olması beklenmektedir (Ültay, Akyurt ve Ültay, 2021: 189). Bu amaçla 2000 ile 2023 yılları arasında Türkçe ve yabancı dillerde yazılmış makale ve bildiriler incelenmiştir. Çalışmadan elde edilen verilere ulaşılabilen toplam 40 makale ve makale betimsel içerik analizi yoluyla incelenmiş ve yorumlanmıştır.

BULGULAR

Örgütsel ikiyüzlülük üzerine mevcut çalışmalara bakıldığında, Eriş ve Arun'un (2020) kamu malı olduğu görülmektedir. eğitim alanında Arlı (2019); Elber Börü ve diğerleri (2020) otomotiv sektöründe; Eğitim alanında Demirel (2015) ve Bahadır (2018) tarafından; tekstil sektöründe Uzunbacak, Yıldız ve Uzun (2019), Yalçınsoy ve Işık (2018); Çetinkaya ve Ordu (2017) ile Kasalak ve diğerlerinin (2019) turizm alanında çalıştıkları tespit edilmiştir. Bu durum Tablo 1 de de görülmektedir.

Tablo 1. Çalışma yapılan alanlar

Çalışma Yapılan Alan	Çalışma Sayısı
Eğitim Kurum ve Kuruluşları	22
Tekstil	1
Farklı Kurum ve Kuruluşlar(Kredi Ve Yurtlar Kurumu)	1
Kavramsal	6
Bankacılık	1
STK	3
Farklı Kurum ve Kuruluşlar(Siyasi)	1
Üretim/Perakende	3
Spor	1
Farklı Kurum ve Kuruluşlar(İnsan Kaynakları)	1

Tablo 1'de görüldüğü gibi örgütsel ikiyüzlülük üzerine çeşitli alanlarda araştırmalar yapılmaktadır. Ayrıca örgütsel ikiyüzlülüğün en çok çalışıldığı alanların eğitim kurum ve kuruluşları olduğu tespit edilmiştir. Bu, üretim/perakende ve STK'lardan geliyor. Bu alanlarda doku ikiyüzlülüğü üzerine yapılan çalışma türleri Tablo 2'de gösterilmiştir.

Tablo 2. Kullanılan Eserler: Ulaşılan Kaynak Türü Sayısı

Ulaşılan Kaynak Türü	Sayısı
Makale	37
Tez	3
Toplam	40

Tablo 2'de gösterildiği gibi, literatür taraması sonucunda en yaygın tez türünün araştırma kaynağı olarak kullanıldığını belirtmekte fayda var. Bu konudaki çalışmaların sayısı oldukça fazladır ve sistemik ikiyüzlülüğün veya sistemik ikiyüzlülük kavramının önemini göstermektedir. Reyhanoğlu ve Akın (2016), Taş, Akdemir ve Çiçek (2019), Uysal (2018), Maden (2019), Yağcı (2020), Küçük (2020), Singh ve diğerleri (2017), Kaptanoğlu (2020), Lipman Blumen (2005), Schmidt (2008) ve Wilson-Starks (2003) örgütsel ikiyüzlülüğü inceleyen yazarlar arasındadır. Bu sanatçıların ürettikleri eserlerin yıllara göre dağılımı Tablo 3'te gösterilmiştir.

Tablo 3. Kaynakların yazım yılları

Yazılan Yıllar	Yazılan Eser Sayısı
2022	9
2021	5
2020	7
2019	6
2018	2
2017	1
2016	1
2015	1
2014	4
2006	2
2005	1
2003	1
Toplam	40

Tablo 3'te görüldüğü gibi 2000'li yılların başında örgütsel ikiyüzlülük kavramı üzerine çok az araştırma yapıldığı görülmektedir. Öte yandan son yıllarda örgütsel ikiyüzlülük konusunda daha fazla araştırma yapıldığı dikkat çekmektedir. Örgütsel ikiyüzlülüğe ilişkin yayınlarda kullanılan çalışma diline ilişkin bilgiler Tablo 4'te yer almaktadır.

Tablo 4. Kullanılan eser dili

Eserlerin Dili	Sayısı
Türkçe	13
Yabancı (İngilizce)	27
Toplam	40

Tablo 4'te gösterildiği gibi, İngilizce kaynaklar çalışmanın büyük bölümünü oluşturmaktadır. Bu çalışmalarla ilgili diğer alanlar Tablo 5'te listelenmiştir.

Tablo 5. Örgütsel İkiyüzlülük davranışının ilişkilendirildiği diğer alanlar

SONUÇ, TARTIŞMA VE ÖNERİLER

Örgütsel ikiyüzlülük, her türlü örgütte ve toplumsal oluşumda yaygın olarak görülmesi nedeniyle her zaman dikkate değer bir olgu olmasına karşın, literatürde örgütsel ikiyüzlülük üzerine yapılan çalışmalar sınırlı düzeyde kalmıştır. İkiyüzlülük siyaset dahil her türlü örgüt ve toplumsal oluşumda sıkça görüldüğü için her zaman dikkat çeken bir olgu olsa da bu konudaki çalışma sayısı açısından durum tam tersidir. Yani örgütsel ikiyüzlülük kavramının popüleritesi bu konudaki yayınlara yansımamış ve bu konudaki yayın sayısı oldukça azdır.

Literatür incelendiğinde ikiyüzlülük kavramı hem kurumsal hem de örgütsel yapı açısından taahhütler ile uygulamalar arasındaki tutarsızlık olarak ifade edilmektedir. Örgütsel ikiyüzlülüğün örgüt üzerindeki en büyük etkisi, çalışanlar arasında örgütsel güveni azaltmasıdır. Bir kurumda samimiyet, dürüstlük, adalet ve bütünlük olmadığında tutarsızlıklar baş göstermeye başlar. Bu durum çalışanların örgüte yönelik inanç ve davranışlarını olumsuz etkilemektedir. Davranış veya uygulamaların ikiyüzlülük olarak nitelendirildiği kurum ve/veya kuruluşlarda güvensizliğe neden olur. Bu durumlar hem çalışanların işyerine hem de örgüt içindeki tutum ve davranışlarını etkilemekte, çalışanların örgüte bağlılığını ve iş doyumunu azaltmaktadır. Bu durum, bir kuruluşun performansını ve üretkenliğini olumsuz etkileyebilir.

Bir şirkette örgütsel ikiyüzlülük düzeyi arttıkça çalışanların örgüte olan güveni azalmaktadır. Bireylerin sözleri, kararları ve eylemleri arasındaki tutarsızlıklar ve tutarsızlıklar çalışanların güvenini azaltır. Bu durumun temel nedeni tutarsızlıkların genellikle bireylerin inanç tarzlarına ve niyetlerine bağlı olarak davranışlarını etkilemesidir (Kılıçoğlu, 2017). Kurumsal açıdan bakıldığında vaatler ve uygulamalar arasındaki uyumsuzluklar hem kurumsal itibarı hem de marka imajını güven ve özgünlük açısından olumsuz etkilemekte ve müşteri kaybına neden olmaktadır. Bu nedenle kurum ve/veya kuruluşlar gerek söylemde gerekse uygulamada taahhütlerini yerine getirmeli ve bu konuda özverili olmalıdır. Örgütsel ikiyüzlülük kavramının örgütsel davranış alanında yeni bir kavram olduğu düşünüldüğünde, bu kavramın örgütler içinde yaygınlaşmasını engelleyecek önlemler alınması gerekmektedir. Örgüt içinde ikiyüzlülüğün oluşmasını önlemek için, etik ilkelerle tutarlı bir etik iklim geliştirilmelidir. İlk olarak, örgütsel ikiyüzlülük daha geniş ve daha çeşitli bir örneklemde kurumsal bir bağlamda gerçekleştirilebilir. Bu çalışma birkaç değişkenle ilişkili olarak incelenebilir. Organizasyonunuzdaki örgütsel ikiyüzlülüğün nedenlerini araştırabilirsiniz. Gelecekteki çalışmalarda örgütsel ikiyüzlülük algısını etkileyebilecek çeşitli değişkenler arasındaki ilişkinin belirlenmesine yönelik araştırmalar yapılabilir. Örgütsel ikiyüzlülük ortaya çıkarılmalı ve karşı önlemler alınmalıdır. İş başında eğitim, çalışanların davranışlarını anlamalarına yardımcı olacak şekilde yapılandırılabilir. İş gezileri, kahvaltılar ve yemekler gibi etkinlikler planlayarak, çalışanların katılımını sağlayan bir organizasyonel iklim yaratabilirsiniz. Bir örgütteki yöneticiler astlarına adil davrandığında, örgüt içindeki ikiyüzlülük algısı azalır ve örgütsel bağlılık artar. Bir organizasyon yöneticisinin çalışmalarını denetleyebilecek veya yönlendirebilecek organizasyon birimleri sağlayabilirsiniz. Çalışanların örgütsel ikiyüzlülük konusundaki farkındalıkları arttıkça örgütsel bağlılık konusundaki farkındalıkları azalacaktır. Bu sonuçlardan hareketle, örgüt yöneticilerinin özellikle örgüt yöneticisi ile iş tutarsızlığı konusunda briefingler düzenleyerek örgütün ikiyüzlülüğünün daha fazla farkına varabilecekleri doğrulanabilir.

Mevduat Bankalarının Kurumsal Sürdürülebilirlik Performanslarının LOPCOW-RSMVC Modeli ile Ölçülmesi

Assoc. Prof. Dr. Nazlı ERSOY

Osmaniye Korkut Ata Üniversitesi

nazliersoy@osmaniye.edu.tr

Orcid: 0000-0003-0011-2216

ÖZET

Bu çalışmada, Türkiye’de faaliyet gösteren mevduat bankalarının 2021 dönemi kurumsal sürdürülebilirlik performansının ÇKKV yöntemlerinden LOPCOW-RSMVC modeli ile ölçülmesi amaçlanmıştır. Çalışmada, dört sosyal sürdürülebilirlik, dört ekonomik sürdürülebilirlik, dört çevresel sürdürülebilirlik olmak üzere 12 gösterge kullanılmıştır. Literatür taraması sonucunda belirlenen göstergelerin ağırlıkları LOPCOW tekniği ile belirlenmiş, bankaların performans skorları ise RSMVC yöntemi ile hesaplanmıştır. Analiz için gerekli veriler bankaların sürdürülebilirlik raporları aracılığı ile elde edilmiştir. LOPCOW tekniğine göre önem derecesi en yüksek göstergeler çalışan devir oranı, öz kaynak karlılığı oranı ve toplam tehlikeli atık olarak belirlenmiştir. Diğer taraftan, toplam ATM sayısı, sermaye yeterliliği oranı, toplam sera gazı emisyonu en düşük önem derecesine sahip kriterler arasında yer almıştır. Çalışma sonunda, bankaların boyutlar ve yıllar bazında performans sıralamaları değişirken, A2 bankasının diğer bankalara kıyasla ön sıralarda yer aldığı tespit edilmiştir. Bu çalışma, LOPCOW-RSMVC modelinin kurumsal sürdürülebilirlik performans ölçümünde kullanıldığı ilk çalışma olması bakımından önemlidir ve literatüre katkı sağlayacağı düşünülmektedir.

Anahtar Kelimeler: Kurumsal Sürdürülebilirlik, ÇKKV, LOPCOW, RSMVC

Measuring the Corporate Sustainability Performance of Deposit Banks with the LOPCOW-RSMVC Model

ABSTRACT

This study aims to measure the corporate sustainability performance of deposit banks operating in Turkey during the 2021 period using the LOPCOW-RSMVC model from the MCDM method. In the study, 12 indicators were used, including four social sustainability, four economic sustainability, and four environmental sustainability indicators. The weights of the indicators identified at the end of the literature review were determined by the LOPCOW technique, and the performance scores of the banks were calculated using the RSMVC method. The data for the analysis were obtained through the banks' sustainability reports. According to the LOPCOW technique, the most important indicators were determined to be the employee turnover rate, return on equity and total hazardous waste. On the other hand, the total number of ATMs, capital adequacy ratio, and total greenhouse gas emissions were among the criteria with the lowest degree of importance. At the end of the study, it was found that the performance rankings of banks varied by size and year, while A2 bank was found to be among the top performing banks compared to other banks. This study is important in terms of being the first study to use the LOPCOW-RSMVC model in corporate sustainability measurement in the domestic literature, and it is believed to contribute to the literature.

Keywords: Corporate Sustainability, MCDM, LOPCOW, RSMVC

GİRİŞ

Sürdürülebilirlik, insanların ihtiyaçlarını karşılayabilmeleri amacıyla kaynakları korumak, insan refahını artırmak ve insanı korumak olarak ifade edilmektedir (Goodland, 1995: 6). Sürdürülebilirlik kavramı, ulusal ve global düzeyde sürdürülebilir kalkınma kavramını, işletme düzeyinde ise kurumsal sürdürülebilirlik kavramını ifade etmektedir (Dyllick ve Hockerts, 2002: 131). Kurumsal sürdürülebilirlik kavramı, ekonomik, çevresel ve sosyal amaç ve değerler arasındaki bir dengeyi ifade etmektedir (Signitzer ve Prexl, 2007: 3). Bu kapsamda, kurumsal sürdürülebilirliğin ekonomik, çevresel ve sosyal olmak üzere üç boyutu ortaya çıkmaktadır.

Sürdürülebilir kalkınmanın başarılmasında büyük bir öneme sahip olan bankalar, ekonomik sistemin de yapı taşlarını oluşturmaktadır. Bu noktada, bankalardan sürdürülebilirliği kurumsal stratejilerine entegre etmeleri, üst düzey toplumsal katkı sağlamaları, çevreye saygılı olmaları ve paydaşlarla ilişkilerde şeffaf olmaları beklenmektedir (Özçelik ve Öztürk, 2014: 192).

Küreselleşme ile birlikte varlığını devam ettirmek isteyen kuruluşların performanslarını düzenli olarak ölçmeleri ve ortaya çıkan sorunları objektif bir şekilde değerlendirmeleri kuruluşların sektördeki yerlerini görebilmelerine ve gerekli önlemleri alabilmelerine olanak tanımaktadır. Küresel rekabet ortamı nedeniyle finansal sistemin en önemli elemanlarından birini oluşturan bankaların performans değerlendirmeleri de kaçınılmaz olmaktadır (Çalışkan ve Tamer, 2016: 86). Performans ölçümü sırasında karar verici birden çok değişkenden oluşan karar problemi ile karşılaşmaktadır. Bu tür problemlerin çözümünde ise Çok Kriterli Karar Verme (ÇKKV) yöntemleri yaygın bir şekilde kullanılmaktadır (Akgül, 2018:580).

Bu çalışmada, Türkiye’de faaliyet gösteren dört mevduat bankasının 2021 dönemi kurumsal sürdürülebilirlik performanslarının ekonomik, çevresel ve sosyal boyut temelinde ÇKKV yöntemleri ile ölçülmesi amaçlanmıştır. Göstergelerin ağırlıkları logarithmic percentage-change driven objective weighting (LOPCOW) tekniği ile belirlenirken, alternatifler performansları doğrultusunda ranking the solutions based on the mean value of criteria (RSMVC) yöntemi ile kıyaslanmıştır.

1. LİTERATÜR TARAMASI

Literatürde, bankaların kurumsal sürdürülebilirlik performansının ÇKKV yöntemleri kullanılarak ölçüldüğü çalışmalar giderek yaygınlaşmaktadır. Tablo 1’de bahsi geçen çalışmaların özeti sunulmuştur.

Tablo-1: Örnek Çalışmalar

Yazar(lar)	Dönem	Yöntem(ler)	Göstergeler	Bulgular
Eş ve Kamacı (2020)	2014-2018	Entropy, EDAS, ARAS	Toplam şube-çalışan sayısı, toplam ATM, çalışan başına ortalama eğitim saati, sermaye yeterliliği, özkaynak/toplam aktif, özkaynak karlılığı, aktif karlılığı, vergi öncesi kar/toplam aktif,kapsam 1 ve 2 emisyonları	Ziraat Bankası, Halk Bankası, Türkiye Vakıflar Bankası, Akbank, Şekerbank, İş Bankası ve Yapı Kredi Bankasının ekonomik, çevresel ve sosyal sürdürülebilirlik performansının ölçüldüğü çalışmada, ÇKKV sıralamaları değişirken İş Bankası tüm yıllarda ve tüm yöntemlerde ilk sırada yer almıştır.
Ecer (2019)	2018	Entropy-ARAS	“Toplam çalışan sayısı, toplam ATM, çalışan başına ortalama eğitim süresi, toplam müşteri sayısı, personel devir hızı, sermaye yeterliliği oranı, özkaynaklar/toplam risk ağırlıklı tutarlar*100, özkaynak/ toplam aktif oranı, özkaynak/ toplam aktif,	Türkiye’de faaliyet gösteren altı özel sermayeli bankanın kurumsal sürdürülebilirlik performansının ölçüldüğü çalışmada, ilk üç sırada İş Bankası, Akbank, TEB bulunmaktadır.

			<p>öz kaynak karlılığı, net kar/öz kaynaklar, aktif karlılığı, net kar/toplam aktifler, sürdürülen faaliyetler vergi öncesi kar/toplam aktifler oranı, sürdürülen faaliyetler vergi öncesi kar/toplam aktifler), çalışan başına doğrudan sera gazı emisyonu (ton CO2), çalışan başına dolaylı sera gazı emisyonu (ton CO2), çalışan başına elektrik tüketimi (gigajul*), çalışan başına su tüketimi (m3), çalışan başına kağıt tüketimi (kg), çalışan başına yakıt tüketimi (gigajul*)”</p>	
Bektaş (2022)	2014-2021	MEREC-ARAS	<p>Toplam şube sayısı, toplam ATM sayısı, toplam çalışan sayısı, sermaye yeterliliği oranı, öz kaynak kârlılığı, aktif kârlılığı, kapsam 1 ve 2 emisyonu</p>	<p>Devlet bankalarının (Ziraat Bankası, Halk Bankası ve Vakıf Bankası) kurumsal sürdürülebilirliğinin ölçüldüğü çalışmada, ilk üç sırada sırasıyla Vakıf Bank, Halk Bankası, Ziraat Bankası yer almıştır.</p>
Oral ve Geçdoğan (2020)	2013-2018	AHP, TOPSIS	<p>“Net kar, aktif büyüklük, öz kaynak, mevduat, krediler, kadın çalışan sayısı, üst yönetim kadın çalışan sayısı, çalışan başına eğitim saati, elektrik tüketimi, su tüketimi, toplam karbon salınımı”</p>	<p>BIST’de işlem gören bankaların (Halkbank, İş Bankası, Yapı ve Kredi Bankası, Garanti Bankası ve Akbank) kurumsal sürdürülebilirliklerinin ölçüldüğü çalışmada, ekonomik ve sosyal boyut bakımından tüm yıllarda Akbank ilk sırada yer alırken, çevresel sürdürülebilirlik bakımından 2013-2016 yıllarında ilk sırada Halkbank, 2017 yılında Akbank, 2018 yılında ise TIB yer almıştır.</p>
Yarlıkaş ve Öztürk (2021)	2020	CRITIC, MOORA	<p>“Toplam şube sayısı, toplam ATM sayısı, toplam çalışan sayısı, toplam müşteri sayısı, ortalama eğitim süresi, personel devir hızı, sermaye yeterlilik oranı, öz kaynak karlılığı, toplam aktifler, net kar, kişi başına düşen doğrudan sera gazı emisyon miktarı, kişi başına düşen su tüketim miktarı, kişi başına düşen kâğıt tüketim miktarı, kişi başına düşen yakıt tüketim miktarı”</p>	<p>Altı bankanın kurumsal sürdürülebilirlik performansının ölçüldüğü çalışmada, performans sıralamaları İş Bankası>Yapı Kredi>Akbank>Garanti>TEB>Şekerbank şeklinde gerçekleşmiştir.</p>
Doğan ve Kılıç (2022)	2019	Entropy-GIA	<p>İnsan hakları, çalışan hakları, fırsat eşitliği, iş kazaları verileri, kişisel verilerin korunması ile ilgili düzenlemeler, etik politikası, toplumsal yatırımlar, sosyal sorumluluk, finansal kapsayıcılık açıklamaları, finansmana erişim</p>	<p>Altı Bankanın kurumsal sürdürülebilirlik performansının değerlendirildiği çalışmada, performans sıralamaları Garanti BBVA> Türkiye İş Bankası> VakıfBank> Türkiye Sınai ve Kalkınma Bankası> Yapı Kredi> Ziraat Bankası şeklinde gerçekleşmiştir.</p>

			<p>açıklamaları, çalışanlara verilen eğitimlerle ilgili açıklamalar, atık yönetimi, çevre ile ilgili yapılan çalışmalar, karbon ölçümü, sera gazı salınımı, temiz enerji yatırımları, iklim ile ilgili açıklamalar, geri dönüşüm çalışmaları, çevresel ayak izi açıklaması, çevresel risk açıklaması, çevresel etki açıklaması, rüşvet ve yolsuzlukla mücadele, vergisel açıdan dürüstlük ilkesine yönelik politika ve programlar, sosyal sorumluluk projeleri, uluslararası standartlara ve inisiyatiflere üyelik, toplam aktif ve kredi büyüklüğü, özkaynaklar toplamı, net karlılık oranları, sermaye yeterlilik rasyosu</p>	
Aras vd. 2016	2013	Entropy, TOPSIS	<p>Ekonomik, finansal, çevresel, sosyal ve yönetsel sürdürülebilirlik temel boyutları altında toplam 86 kriter</p>	<p>Geleneksel ve katılım bankalarının kurumsal sürdürülebilirlik performansının karşılaştırıldığı çalışmada, performans sıralamaları Garanti BBVA> Türkiye Finans> Şekerbank> Yapı Kredi> Yapı Kredi> İş bankası> Akbank> Ziraat bankası şeklinde gerçekleşmiştir.</p>
Yılmaz ve İne (2018)	2015-2016	Balanced Scorecard, TOPSIS	<p>Net kâr, toplam aktif, krediler, mevduat, özkaynak, sermaye yeterlilik oranı, düşük kredi oranı, dahili elektrik tüketimi, yenilenebilir enerji kredi tutarı, su tüketimi, geri dönüştürülmüş kağıt tutarı, çalışan başına ortalama eğitim süresi, çalışan ortalama yaşı, toplam çalışan sayısı, toplam şube sayısı, ATM sayısı, internet bankacılığı kullanan müşteri sayısı, mobil bankacılık aktif müşteri sayısı, engelli dostu atm sayısı</p>	<p>2015 yılında 7 bankanın ve 2016 yılında ise 6 bankanın kurumsal sürdürülebilirlik performansının değerlendirildiği çalışmada, bankalar sembollerle ifade edilmiştir. 2015 ve 2016 yılında ilk sırada A bankası yer almıştır.</p>
Ömürbek vd. (2017)	2015	Entropy, ARAS, MOOSRA, COPRAS	<p>“Toplam aktif değişim oranı, nakdi krediler değişim oranı, toplam özkaynak değişim oranı, mevduat değişim oranı, sermaye yeterlilik oranı ve büyüme puanı ortalaması, toplam şube sayısı, toplam müşteri sayısı, toplam ATM sayısı, toplam çalışan sayısı, çalışan başına ortalama eğitim süresi, kapsam 1-2 emisyonu”</p>	<p>Büyük ölçekli bankaların kurumsal sürdürülebilirlik performansının değerlendirildiği çalışmada, farklı yöntemlerle elde edilen sıralamalar küçük sapmalar göstermiştir. Elde edilen bütünleşik performans sıralamaları Ziraat > İş Bankası> Halkbank> Akbank> Yapı Kredi> Garanti Bankası> Vakıfbank şeklinde gerçekleşmiştir.</p>

Aras vd. (2017)	2010- 2014	Entropy, TOPSIS	Ekonomik, çevresel, sosyal ve yönetim boyutları altında toplam 130 kriter	Garanti bankasının kurumsal sürdürülebilirlik performansının değerlendirildiği çalışma sonunda, performansta yıllar itibariyle bir artış gözlenirken, ekonomik boyut en yüksek ağırlığa sahip olan boyut olarak tespit edilmiştir.
Ecer ve Pamucar (2022)	2020- 2021	LOPCOW- DOBI	“Sermaye yeterlilik rasyosu, özkaynak/toplam aktifler, ortalama özkaynak karlılığı, ortalama aktif karlılığı, vergi öncesi kar/toplam aktifler, şube, personel, müşteri, ATM, eğitim, devir hızı, doğrudan emisyonlar, dolaylı emisyonlar, elektrik tüketimi, su tüketimi, kağıt kullanımı, yakıt tüketimi”	Sekiz bankanın kurumsal sürdürülebilirlik performansının değerlendirildiği çalışma sonunda, Garanti BBVA'nın diğer bankalardan daha iyi performans gösterdiği tespit edilmiştir.
Aras vd. (2018)	2012- 2014	Entropy, TOPSIS	Ekonomik, finansal, sosyal, çevresel, yönetim temel boyutları altında toplam 86 kriter	Dört bankanın kurumsal sürdürülebilirlik performansının değerlendirildiği çalışma sonunda, yıllara göre bankaların performans sıralaması değişmiştir.

Tablo 1'e göre farklı örneklemeler kullanılarak bankaların kurumsal sürdürülebilirlik performansı ÇKKV yöntemleri ile değerlendirilmiştir. Buna göre, en sık kullanılan ağırlıklandırma tekniklerinin başında Entropy gelirken, ARAS ve TOPSIS yöntemleri en sık kullanılan sıralama yöntemleri arasında yer almıştır.

2. METODOLOJİ

Çalışmada kullanılan LOPCOW ve RSMVC yöntemlerinin açıklamalarına bu bölümde yer verilmiştir.

2.1. LOPCOW Tekniği

Ecer & Pamucar (2022) tarafından ortaya konulan LOPCOW tekniği objektif teknikler arasında yer almaktadır. Tekniğin adımları aşağıdaki gibidir (Ecer & Pamucar, 2022: 4-5):

Adım 1: Karar matrisi oluşturulur.

Adım 2: Karar matrisi normalize edilir.

$$r_{ij} = \frac{x_{max} - x_{ij}}{x_{max} - x_{min}} \quad \text{maliyet} \quad (1)$$

$$r_{ij} = \frac{x_{ij} - x_{min}}{x_{max} - x_{min}} \quad \text{fayda} \quad (2)$$

Adım 3: Her bir kriterin yüzdelik değerleri (PV) hesaplanır.

$$PV_{ij} = \left| \ln \left(\frac{\sqrt{\frac{\sum_{i=1}^m r_{ij}^2}{m}}}{\sigma} \right) \right| * 100 \quad (3)$$

σ ve m , sırasıyla standart sapmayı ve alternatif sayısını ifade eder.

Adım 4: Kriter ağırlıkları hesaplanır.

$$w_j = \frac{PV_{ij}}{\sum_{i=1}^n PV_{ij}} \quad (4)$$

$$\sum_{i=1}^n w_j = 1$$

2.2.RSMVC Yöntemi

Thin & Van Dua (2022) tarafından ortaya konulan RSMVC yöntemin adımları aşağıdaki gibidir (Thin & Van Dua, 2022: 2):

Adım 1: Karar matrisi oluşturulur.

$$A = \begin{bmatrix} a_{11} + b_{11} & \dots & a_{1n} + b_{1n} \\ a_{21} + b_{21} & \dots & a_{2n} + b_{2n} \\ a_{31} + b_{31} & \dots & a_{3n} + b_{3n} \\ \vdots & \vdots & \vdots \\ a_{ij} + b_{ij} & \dots & \vdots \\ \vdots & \vdots & \vdots \\ a_{m1} + b_{m1} & \dots & a_{mn} + b_{mn} \end{bmatrix}$$

Adım 2: Kriterlerin ortalama değerleri hesaplanır.

Kriterlerin ortalama değerleri Eşitlik 7 kullanılarak hesaplanır.

$$\bar{x}_{ij} = \frac{a_{ij} + b_{ij}}{2} \quad (5)$$

Eşitlik (5) kriter değeri $[a_{ij}, b_{ij}]$ aralığında olduğunda kullanılır. Kriter değerinin tam sayı olması durumunda $a_{ij} = b_{ij}$ durumu dikkate alınarak yine aynı formül kullanılmaktadır.

Adım 3: Her bir kriter ortalama değere dayalı olarak sıralanır.

Fayda yönlü kriter: En yüksek ortalamaya sahip çözüm 1. sırada ve en küçük ortalamaya sahip çözüm en son sırada yer alır.

Maliyet yönlü kriter: En küçük ortalamaya sahip çözüm 1. sıralanır ve tam tersi, en yüksek ortalamaya sahip çözüm en son sırada yer alır.

Eğer n kriter varsa, çözümler için n sıralama zamanında yapılması gerekir.

Adım 4: Alternatiflerin skorları hesaplanır.

Eşitlik 8 ile her bir alternatifin toplam skoru hesaplanır.

$$S_i$$

$$= r_{ij}$$

$$* w_j$$

(6)

r_{ij} , 3. adımda belirlenen kriterin sıralamasıdır; w_j , j kriterinin ağırlığıdır.

Adım 5: Alternatifler sıralanır.

S_i puanı en küçük olan alternatif en iyi çözümdür.

3. UYGULAMA

Bu çalışmada Türkiye’de faaliyet gösteren mevduat bankalarının kurumsal sürdürülebilirlik performanslarının LOPCOW-RSMVC bütünleşik modeli ile ölçülmesi amaçlanmıştır. Türkiye’de faaliyet gösteren 32 mevduat bankası vardır. Verilerine ulaşılan dört banka analiz kapsamına alınmış ve çalışmanın alternatiflerini oluşturmuştur (Tablo 2). Literatür taraması sonucunda belirlenen kriterlerin (Tablo 3) ağırlıkları LOPCOW tekniği ile belirlenmiştir. Alternatiflerin sıralaması RSMVC yöntemi kullanılarak gerçekleştirilmiştir. Veriler, bankaların sürdürülebilirlik raporları aracılığıyla elde edilmiştir.

Tablo-2: Alternatifler

Banka	Kod
TÜRKİYE HALK BANKASI A.Ş.	A1
TÜRKİYE İŞ BANKASI A.Ş.	A2
TÜRKİYE VAKIFLAR BANKASI T.A.O.	A3
YAPI VE KREDİ BANKASI A.Ş.	A4

Tablo-3: Kriterler

	Gösterge	Birim	Kod	Opt.
Sosyal sürdürülebilirlik	Toplam Şube Sayısı	Adet	S1	maks
	Toplam Çalışan Sayısı	Adet	S2	maks
	Toplam ATM Sayısı	Adet	S3	maks
	Çalışan Devir Oranı	%	S4	min
Ekonomik sürdürülebilirlik	Sermaye Yeterliliği Oranı	%	E1	maks
	Öz Kaynak Karlılığı Oranı	%	E2	maks
	Aktif Karlılık Oranı	%	E3	maks
	Öz Kaynak/Toplam Aktif	%	E4	maks
Çevresel sürdürülebilirlik	Toplam Su Tüketimi	m ³	Ç1	min

	Toplam Tehlikeli Atık	ton	Ç4	min

3.1. LOPCOW Tekniği ile Kriter Ağırlıklarının Belirlenmesi

LOPCOW tekniği ile kriter ağırlıklarının belirlenmesi için ilk olarak karar matrisi oluşturulmuştur (Tablo 4). Ardından, karar matrisi (Tablo 4) eşitlik 1 ve 2 ile normalize edilmiştir ve sonuçlar Tablo 5'te sunulmuştur. Eşitlik 3 ile kriterlerin yüzdelik değerleri hesaplanmış, eşitlik 4 kullanılarak ise kriter ağırlıkları belirlenmiş ve tüm sonuçlar Tablo 6'da sunulmuştur.

Tablo-4: Karar Matrisi

	S1	S2	S3	S4	E1	E2	E3	E4	Ç1	Ç2	Ç3	Ç4

w _i	0,2486	0,2339	0,0335	0,4839	0,2239	0,2997	0,2461	0,2303	0,2502	0,1282	0,3008	0,3208

Tablo 6'ya göre, 2021 yılı için önem derecesi en yüksek ve en düşük kriterler sırasıyla sosyal boyutta S4-S3; ekonomik boyutta E2-E1; çevresel boyutta ise Ç4-Ç2 olarak belirlenmiştir.

LOPCOW tekniğine göre önem derecesi en yüksek göstergeler çalışan devir oranı, öz kaynak karlılığı oranı ve toplam tehlikeli atık olarak belirlenmiştir. Diğer taraftan, toplam ATM sayısı, sermaye yeterliliği oranı, toplam sera gazı emisyonu en düşük önem derecesine sahip kriterler arasında yer almıştır.

3.2. RSMVC Yöntemiyle Alternatiflerin Sıralanması

RSMVC yöntemi ile bankaların performans sıralamalarını elde etmek amacıyla ilk olarak eşitlik 5 kullanılarak kriterlerin yönü dikkate alınarak kriterler sıralanmıştır (Tablo 7). Ardından, eşitlik 6 ile ağırlıklı matris oluşturulmuş ve alternatiflere ait performans skorları elde edilmiştir (Tablo 8). Tüm sonuçlar Tablo 9'da sunulmuştur.

Tablo-7: Kriterlerin Sıralanması

	S1	S2	S3	S4	E1	E2	E3	E4	Ç1	Ç2	Ç3	Ç4

	A4	3,933	4	1,700	2	3,020	4

SONUÇ

Bu çalışmada, Türkiye’de faaliyet gösteren dört mevduat bankasının 2020-2021 dönemi kurumsal sürdürülebilirlik performansı ÇKKV yöntemlerinden LOPCOW ve RSMVC kullanılarak ölçülmüştür. Literatür taraması sonucunda belirlenen 12 kriterin ağırlıkları LOPCOW tekniği ile belirlenmiştir. Bankaların performans skorları ise RSMVC yöntemi ile belirlenmiştir.

LOPCOW tekniği ile elde edilen sonuçlara göre 2021 yılı için önem derecesi en yüksek ve en düşük kriterler sırasıyla sosyal boyutta S4-S3; ekonomik boyutta E2-E1; çevresel boyutta ise Ç4-Ç2 olarak belirlenmiştir. RSMVC sonuçlarına göre bankaların genel olarak boyutlar temelinde sırası değişirken, A2 bankası sosyal ve ekonomik boyutta ilk sırada yer alırken, çevresel sürdürülebilirlik bakımından ikinci sırada yer almıştır. En yüksek çevresel sürdürülebilirlik performansına ise A3 bankası sahip olmuştur.

Karar matrisleri incelendiğinde A2 bankasının sosyal ve ekonomik sürdürülebilirlik performansının daha yüksek olmasında kârlılığının ve sermaye yeterlilik oranının yüksek olması etkili olmuştur. A3 bankasının çevresel sürdürülebilirlik performansı bakımından ilk sırada yer almasında enerji-su tüketiminin ve sera gazı emisyonunun diğer bankalara kıyasla daha düşük olması etkili olmuştur.

KOBİ Çalışanlarında Toksik Duygu Deneyimlerinin Duygusal Bağlılığa Etkisi

Asst. Prof. Dr. Mehmet Ali TAŞ

Burdur Mehmet Akif Ersoy University

matas@mehmetakif.edu.tr

Orcid: 0000-0001-9714-7188

ÖZET

Neredeyse her örgütte görülebilen toksik duygu deneyimlerinin olumsuz etkileri nispeten uzun sürmektedir. Bu toksik olayların tekrar deneyimlenme ihtimalinden dolayı çalışanlar, uzun süre boyunca tedirgin olabilmekte, yalnızlaşabilmekte, duygusal anlamda yorulabilmekte ve tükenme noktasına gelebilmektedirler. Duygusal anlamda toksik bir örgüt ortamında kendini sürekli tehlike altında hisseden, her an örgütsel toksisitenin bir hedefi haline gelebileceğini düşünen bir çalışanın o örgütte aidiyet duygusuyla hareket etmesi güçtür. Bu bağlamda duygusal bağlılığı zayıflayabilmektedir. Çünkü duygusal toksisiteyle mücadele eden çalışanın örgüte olan sadakatinin azalacağı düşünülmektedir. Buradan hareketle çalışanların maruz kaldıkları toksik duygu deneyimlerinin duygusal bağlılıklarıyla ilişkisi araştırılmıştır.

Araştırmada nicel araştırma yöntemi ve anket tekniği kullanılmıştır. Bu amaçla Burdur ilindeki Küçük ve Orta Ölçekli İşletmelerde (KOBİ) çalışan 258 bireyden veri toplanmıştır. Yapılan analizler neticesinde toksik duygu deneyimlerinin çalışanların duygusal bağlılıklarıyla negatif bir ilişkisinin olduğu tespit edilmiştir. Ayrıca toksik duygu deneyimlerinin duygusal bağlılığı negatif şekilde etkilediği ortaya çıkmıştır. Sonuç olarak, toksik duygu deneyimlerinin varlığı, tekrar etmesi, sosyal ilişkilere zarar vermesi ve bezdirici bir hal alması çalışanların örgüte olan duygusal bağlılıklarını düşürdüğü söylenebilir.

Anahtar Kelimeler: Örgütsel Toksisite, Toksik Duygu Deneyimleri, Duygusal Bağlılık

The Effect of Toxic Emotional Experiences on Affective Commitment in SME Employees

ABSTRACT

The negative effects of toxic emotion experiences, which can be seen in almost every organization, last a long time. Due to the possibility of re-experiencing these toxic events, employees may experience anxiety for a long time, become lonely, get tired emotionally and become exhausted. It is difficult for an employee who feels constantly in danger in an emotionally toxic organizational environment to act with a sense of belonging in that organization. In this context, affective commitment may weaken. Because it is thought that the loyalty of the employee to the organization who struggles with emotional toxicity will decrease. From this point of view, the relationship between the toxic emotion experiences of the employees and their affective commitment was investigated.

Quantitative research method and survey technique were used in the research. For this purpose, data were collected from 258 individuals working in Small and Medium-Sized Enterprises (SMEs) in Burdur province. As a result of the analyzes, it was determined that toxic emotion experiences have a negative relationship with the affective commitment of the employees. In addition, it has been revealed that toxic emotion experiences negatively affect affective commitment and reduce its level. As a result, it can be said that the presence of toxic emotion experiences, their repetition, damaging social relations and becoming tiring reduce the emotional commitment of employees to the organization.

Keywords: Organizational Toxicity, Toxic Emotional Experiences, Affective Commitment

GİRİŞ

Olumsuz bir ruh halinin temel kaynağı olan toksisite nerdeyse her örgütte görülebilmektedir. Örgütler ve çalışanları ise bu toksisitenin etkilerinden muzdariptir. Çünkü örgüt içerisindeki olumsuz durumların etkisi daha kalıcı olmaktadır (Robert ve Vandenberghe, 2021). Toksik bir örgüt ortamında çalışanların bezmesi, kırılması, tükenmesi söz konusu olabilmektedir. Toksik duygular tekrar ettiğinde insana önemli bir duygusal yük getirmektedir. İnsanın fiziksel ve zihinsel kaynaklarını tüketmektedir (Kiefer ve Barclay, 2012). Bu nedenle iş ortamında mutluluk veya güven gibi olumlu duyguları sürekli vurgulamak ve göz önünde bulundurmamak, mutsuzluk, kaygı ve stres gibi olumsuz duygu deneyimlerinin yarattığı etkileri örtememektedir. Böylesine bir zihinsel ve duygusal olumsuzlukların çalışanların duygusal bağlılıklarına zarar vermesi beklenmektedir. Özellikle toksik duyguların süreklilik kazanması çalışanların örgütten ayrılma niyetlerini besleyebilmektedir (Wu vd., 2020; Taylor vd., 2012).

Taylor ve diğerlerinin (2012) örgütsel toksisitenin çalışan tutumları ve davranışları üzerindeki olumsuz etkisinin hala merak konusu olduğunu belirtmektedirler. Wu ve diğerleri (2020) ise örgütler eskisinden daha karmaşık bir hal aldığını ve işyerinde toksik tutum ve davranışların arttığını ifade edilmektedirler. Bu durum örgütsel toksisitenin, araştırmacıların dikkatini çekmeye devam etmesine zemin hazırlamaktadır. Buradan hareketle söz konusu çalışmada toksik duygu deneyimlerinin çalışanların duygusal bağlılıkları üzerindeki etkisi araştırılmıştır. Araştırma, Kaynakların Korunması Teorisinin (Hobfoll, 1989) ve Sosyal Mübadele Teorisinin (Blau, 1964) varsayımlarında hareketle tasarlanmıştır.

Kaynakların Korunması Teorisi (Hobfoll, 1989), toksik duygu deneyimlerinin çalışanların duygusal bağlılığını neden etkileyebileceğine dair önemli bir teorik açıklama getirmektedir. Bu teoride insanlar; kaynakları elde tutmak, korumak ve arttırmak için çabaladıklarını varsaymaktadır. Çünkü insanlar sınırlı ölçüde kaynağa sahiptir. Toksik bir iş ortamı ve toksik duygu deneyimleri gibi stres faktörleri ise bu kaynakları tükettiği ve insanların kaynakları korumak için bu stres faktörlerinden kaçınmaya çalıştığı bilinmektedir (Hobfoll, 1988). Bu amaçla insanlar kaynaklarını korumak adına işe ve örgüte dair olumlu tutumlarını değiştirerek rol ötesi davranışları sergilememeye ve örgütle özdeşleşmemeye başlamaktadırlar (Sliter vd., 2012).

Duygusal bağlılığın aslında sosyal mübadele ilişkilerinin bir sonucu olduğu belirtilmektedir (Taylor vd., 2012). Sosyal Mübadele Teorisi (Blau, 1964), iş ortamında üstler ve iş arkadaşları tarafından sergilenen olumlu/olumsuz muameleye aynı şekilde karşılık verileceğini varsaymaktadır. Dolayısıyla sosyal mübadele olumlu/olumsuz karşılıklı ilişkisine vurgu yapmaktadır. Bireyler, toksistenin yarattığı kirli bir örgüt ikliminde çalıştıklarında olumsuz bir tepki olarak kendilerini izole etmekte, aidiyet duyguları azalmakta ve örgütten ayrılmak için fırsat kollamaya başlamaktadırlar (Rasool vd., 2021). Öte yandan çalışanlar, örgüt içerisinde kendini rahat ve güvende hissettikten sonra duygusal bağlılıklarının güçleneceği ve örgüte katkı sağlama eğiliminde olacağı ifade edilmektedir (Wu vd., 2020).

KAVRAMSAL ÇERÇEVE

Toksisite, zararlı veya ölümcül bir zehir anlamına gelmektedir (Frost, 2003). Toksik bir işyeri ortamı, narsistik davranışların yoğun olduğu bir çalışma ortamını tanımlamaktadır. Böyle iş ortamlarında genellikle yöneticilerden ve iş arkadaşlarından gelen saldırgan, agresif ve tehdit edici davranışlar mevcuttur. Dolayısıyla toksik bir işyeri, örgütün verimliliğini bozmakta (Rasool vd., 2021) ve ayrıca çalışanın iş hayatında zorluk yaratabilmektedir (Anjum vd., 2018).

Çünkü toksik bir iş ortamında deneyimlenen olumsuz duygular çalışanların strese, kaygıya ve tükenmişliğe maruz kalacağı ifade edilmektedir (Rasool vd., 2021). Bu olumsuz duygular aslında belli olaylara duyarlı olup kısa ömürlüdür. Dikkati toparlamakta ve kişiyi eyleme odaklamaktadır. Fakat toksik duygu deneyimleri ve yarattığı etkileri daha uzun sürelidir (Kiefer ve Barclay, 2012).

Toksik duygu deneyimleri; olumsuz duygulardan kaynaklanan ve psikolojik olarak tekrar eden, bağlantıyı kesen ve bezdiren olmak üzere üç boyuttan oluşan daha uzun süreli bir duygusal durumu ifade etmektedir (Frost, 2003). Psikolojik olarak *tekrarlanan duygular*; bireye yük olan, psikolojik olarak çözülmemiş hissi veren veya bireyin tekrar edeceğini tahmin ettiği deneyimlere işaret etmektedir. Olumsuz duygu deneyimlerinin tekrarlanacağına veya mevcut toksik olayların bitmeyeceğine dair korku veya beklenti vardır. Bu durum psikolojik bir yük haline gelmesi sebebiyle de toksik bir hal almaktadır. *Bağlantıyı kesen duygular*; bireyin olumsuz duygular sebebiyle fiziksel ve psikolojik enerji kaybına uğraması, sosyal ağından ve/veya iş arkadaşlarından kopması anlamına gelmektedir. Yeterli bilişsel ve duygusal kaynaklara sahip olmayan bireyler, durumu derinlemesine düşünmek veya başkalarını rahatsız etmemek için diğerlerinden uzaklaşabilmektedirler. *Bezidirci (yorucu) duygular* ise, bireyin zihinsel ve fiziksel enerji düzeylerinin toksik deneyimler nedeniyle tükenmesi ve enerjisinin sömürüldüğünü hissetmesidir. Toksik deneyimler çalışanların bitkin ve yorgun hissetmelerine neden olmakta ve ciddi şekilde stresi arttırdığı bilinmektedir (Frost, 2003; Kiefer ve Barclay, 2012; Chu, 2014).

Duygusal bağlılık, örgütsel bağlılığın en önemli bileşenidir. Çalışanların örgüte olan sadakatini ve örgütle özdeşleşmesini ifade etmektedir (Allen ve Meyer, 1990). Dolayısıyla çalışanları örgüte bağlayan önemli bir araçtır (Robert ve Vandenberghe, 2021). Çalışanlar kendilerini örgütleriyle özdeşleştirdiklerinde, örgütün amaç ve beklentileriyle tutarlı şekilde hareket edecekleri ileri sürülmektedir. Bağlı çalışanlar, örgütün yararına olacak davranışlarda bulunmak için motive olmaktadır (O'Reilly ve Chatman, 1986). Duygusal anlamda bağlı olan çalışanlar daha fazla çaba harcamakta (Yu vd., 2016) ve prososyal davranışlarında artış gözlenmektedir (Wang vd., 2021). Bu çalışanların motivasyonu yüksek ve katkı sunmaya istekli bir vaziyette olmaktadır. Ayrıca sorumluluk alma ve otokontrol düzeyi de yüksek olmaktadır (Rasool vd., 2021).

Toksik duygu deneyimlerinin genellikle örgütsel bağlılığı ve güven duygusunu aşındırdığı, olumsuz ve istikrarlı sonuçları beraberinde getirdiği bilinmektedir. Bu duyguların devam etmesi ise çalışanların sosyal bağlantıyı koparmasına ve yalnız kalmasına yol açmaktadır (Kiefer ve Barclay, 2012). Çalışanlar; korku, öfke, şaşkınlık ve hiddet gibi duygularla karşılık verme eğilimine girebilmektedirler. Diğer çalışanların ve yöneticilerin tacizci davranışları devam ettiğinde durum kritik bir eşiğe ulaşır ve mağdur çalışanlar kendilerini savunmak için bir pozisyon almak durumunda kalmaktadırlar (Frost, 2003; Chu, 2014). Örgütlerdeki toksik ortamlar çalışanların tatmin düzeylerini ve yaratıcı düşünme repertuarını dahi düşürebilmektedir. Çünkü iş ortamındaki güveni zedelemektedir (Saleem vd., 2021). Güvensizlik ve adaletsizlik algısı yerleştiğinde dengeyi sağlamak adına tutum ve davranışlar yön değiştirmeye başlamaktadır. Bu durum elbette toksik duyguların deneyimlenmesine sebep olmaktadır (Frost, 2003; Chu, 2014). Çalışanların işten uzaklaşmalarına yol açmaktadır (Appelbaum ve Roy-Girard, 2007). Hatta zorbalık, nezaketsizlik ve bezdirmek gibi toksik tutum ve davranışlarının mutsuzlukla ilişkisi tespit edilmiştir. Bu nedenle çalışanların yaşam kalitesi düşmekte ve duygusal bağlılıkları zayıflamaktadır (Rasool vd., 2021). Haliyle toksik duygu deneyimleri çalışanların psikolojik ve duygusal yüklerini ve sorunu çözmek için hissettiği kaynak ihtiyacını da arttırmaktadır (Kiefer ve Barclay, 2012).

Literatürdeki kanıtlar ışığında aşağıdaki hipotezler geliştirilmiştir.

H1: Toksik duygu deneyimlerinin duygusal bağlılıkla anlamlı bir ilişkisi vardır.

H2: Toksik duygu deneyimlerinin duygusal bağlılık üzerinde anlamlı bir etkisi vardır.

Araştırmanın Yöntemi

Bu çalışmada nicel araştırma yöntemi ve anket tekniği kullanılmıştır. Katılımcılar, Burdur ilindeki Küçük ve Orta Ölçekli İşletmelerde (KOBİ) çalışan 258 bireyden oluşmaktadır. Çin'de ve Pakistan'da bulunan KOBİ'lerde yapılmış bazı çalışmalar; toksik bir işyeri ortamının çalışanların iyi oluşunu ve duygu durumlarını olumsuz etkilediğini ortaya koymuştur (Rasool vd., 2021; Samma vd., 2020). Bu kanıtlar, bu araştırmanın verilerinin KOBİ'lerden toplanması için önemli bir gerekçe olmuştur.

Araştırmanın örneklem kitlesini oluşturan katılımcıların 48'i (%18,6) kadın ve 210'u (%81,4) erkeklerden oluşmaktadır. Bu katılımcıların 189'u (%73,3) evli, 40'ının (%15,5) bekâr ve 29'u (%11,2) ise kayıp veri olduğu saptanmıştır. Örneklemi oluşturan katılımcıların yaş dağılımı ise şöyledir: 25'inin (%9,7) 25 ve altı yaş aralığında iken; 89'u (%34,5) 26-35 yaş, 72'si (%27,9) 36-45 yaş, 59'u (%22,9) 46-55 yaş ve son olarak da 13'ü (%5) 56 ve üzeri yaş aralığında yer aldığı tespit edilmiştir.

Araştırmanın anket formunda Toksik Duygu Deneyimleri ve Duygusal Bağlılık Ölçeği olmak üzere iki farklı ölçeğe yer verilmiştir.

Toksik Duygu Deneyimleri Ölçeği (TDDÖ): Keifer ve Barclay (2012) tarafından geliştirilen bu ölçek 14 maddeden ve 3 boyuttan oluşmaktadır. Bu boyutlar ise tekrarlanan duygular, bağlantıyı kesen duygular ve bezdirici (yorucu) duygulardır. Türkçeye uyarlaması, geçerlik ve güvenilirlik çalışması Bektaş ve Erkal (2015) tarafından gerçekleştirilen bu ölçekte 1) Kesinlikle katılmıyorum ve 5) Kesinlikle katılıyorum şeklinde 5'li bir Likert tipi derecelendirme kullanılmaktadır.

Duygusal Bağlılık Ölçeği (DBÖ): Meyer ve Allen (1991) tarafından geliştirilen örgütsel bağlılık ölçeğinin bir boyutudur. 6 maddeden oluşan bu ölçek, Baysal ve Paksoy (1999) tarafından Türkçeye uyarlama çalışması yapılmıştır. Ölçekte 1) Kesinlikle Katılmıyorum ile 5) Kesinlikle Katılıyorum arasında değişen 5'li bir Likert tipi derecelendirme kullanılmaktadır.

Ölçeklerin faktör yapılarını test etmek amacıyla AMOS 23 Programına başvurularak Doğrulayıcı Faktör Analizi (DFA) yapılmıştır. Verilerin normal dağılım göstermesi sebebiyle Maximum Likelihood hesaplama yöntemi kullanılmıştır. Modelin uyumluluğunu değerlendirmek için dikkate alınması gereken bazı uyum endeksleri bulunmaktadır. Yapılan DFA analizleri neticesinde elde edilen bu uyum indeks değerleri incelenmiş ve raporlanmıştır.

Üç faktörlü Toksik Duygu Deneyimleri ölçeğinin birinci düzey çok faktörlü DFA analizi uygulanmış ve uyum indeks değerlerinin yazın dünyasında kabul edilen düzeyde olmadığı tespit edilmiştir. Bu nedenle gerekli modifikasyon işlemlerinin uygulanması neticesinde Tekrar Eden Duygular boyutuna ait TD5 maddesinin çapraz yüklenme eğilimi göstermesi ve gerekli faktör yüküne sahip olmaması nedeniyle analizin dışında tutulmuştur. Bunun yanında Bağlantıyı Kesen Duygular boyutunun TD6↔TD8 maddeleri ve Bezdirici Duygular boyutunun ise TD11↔TD13 maddeleri arasında modifikasyon işlemi uygulanarak birbirine bağlanmıştır.

Aynı ölçeğin ikinci düzey DFA analizi uygulandığında da aynı modifikasyonlar uygulanmıştır. DFA analizleriyle ilgili elde edilen uyum indeks değerleri ise Tablo 1’de gösterilmiştir.

Tek faktörlü ve 6 maddeden oluşan Duygusal Bağlılık ölçeğine tek faktörlü DFA analizi uygulanmıştır. Elde edilen bulgular sonucunda uyum indeks değerlerinin modifikasyona ihtiyacının olduğu tespit edilmiştir. Bu noktada 1↔2, 2↔3 ve 1↔5 maddeleri arasında modifikasyon işlemi uygulanarak birbirine bağlanmıştır. Modelin son haliyle ilgili uyum indeks değerleri Tablo 1’de gösterilmiştir.

Yazın dünyasında hangi uyum indeks değerlerinin daha güvenilir ve makbul görüldüğüne ilişkin tam bir fikir birliği olmasa da genel olarak geniş örneklem (N>250) üzerinde yapılan güncel araştırmalarda; X^2 ve bunun p değeri, X^2/df , CFI, SRMR ve RMSEA değerlerinin raporlandığı görülmektedir (Gürbüz, 2019; Braun Santos vd., 2016; Tarhini vd., 2016). Bu çalışmada da söz konusu değerler raporlanmıştır.

Tablo 1. Doğrulayıcı Faktör Analizi Modellerine İlişkin Uyum İndeksleri

	X^2	df	p	X^2/df	CFI	SRMR	RMSEA
^a Toksik Duygu Deneyimleri	151,72	60	,00	2,53	,95	,05	,07
^b Toksik Duygu Deneyimleri	151,72	60	,00	2,53	,95	,05	,07
^a Duygusal Bağlılık	14,35	6	,03	2,39	,98	,04	,07

^a: Birinci Düzey Çok Faktörlü DFA
^b: İkinci Düzey Çok Faktörlü DFA

Tablo 1’te verilen analiz bulgularına göre tek faktörlü duygusal bağlılık modelinin ile toksik duygu deneyimlerinin hem birinci hem de ikinci düzey DFA modellerinin veri ile uyumlu ve kabul edilebilir düzeyde oldukları görülmektedir. Dolayısıyla ölçeklerin kuramsal yapılarının doğrulandığı ifade edilebilir. Ardından veriler; normal dağılım, güvenilirlik ve korelasyon analizine tabi tutulmuştur. Elde edilen bulgular ise Tablo 2’de gösterilmiştir.

Tablo 2. Değişkenlerin Ortalama, Güvenirlik, Normal Dağılım ve Korelasyon Değerleri

	\bar{X}	S.S.	1	2	S/K
1.Duygusal Bağlılık	3,02	,93	(,78)		-,115/-,433
2.Toksik Duygu Deneyimleri	2,57	,82	-,418**	(,89)	,453/,189

** : $p < ,01$

Cronbach Alfa değerleri parantez içinde kalın puntuyla gösterilmiştir.

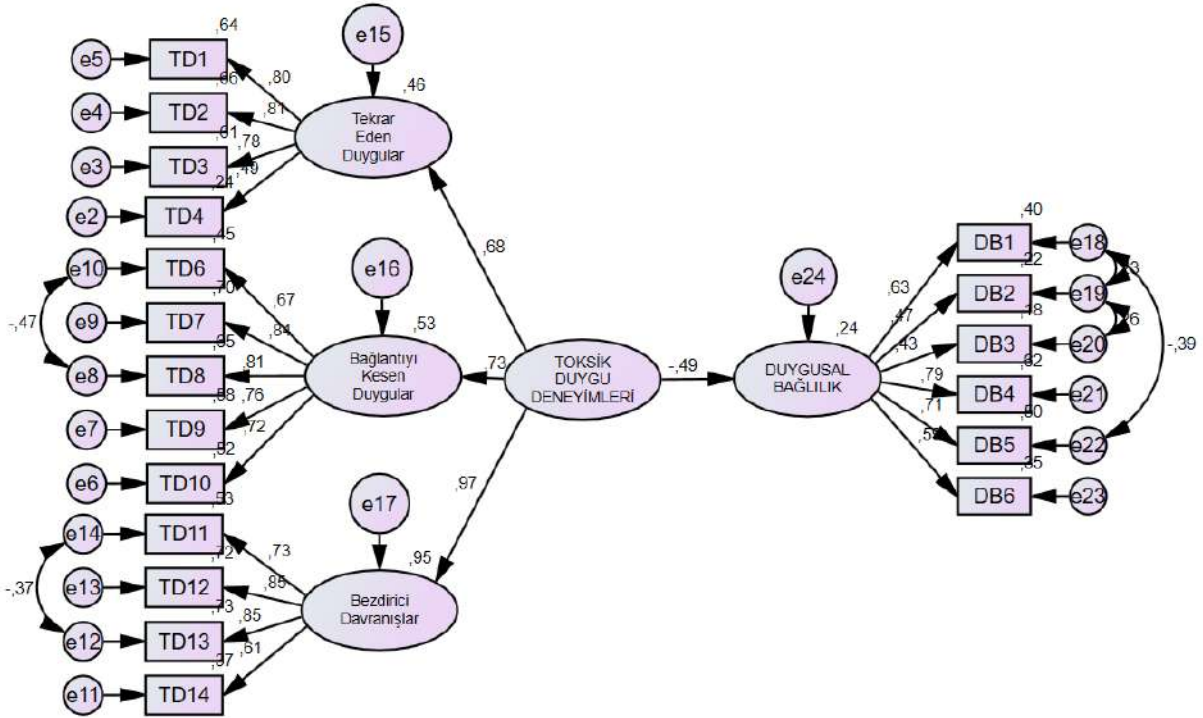

S/K: Skewness/Kurtosis

Yapılan analizler neticesinde değişkenlerin normal dağılım gösterdiği ve kabul edilebilir güvenilirlik düzeyinde oldukları tespit edilmiştir. Ayrıca toksik duygu deneyimlerinin duygusal bağlılıkla negatif bir ilişkisinin olduğu ortaya çıkmıştır ($r = -,418$; $p < ,05$). Bu analizlerden sonra Yapısal Eşitlik Modellemesiyle (YEM) toksik duygu deneyimlerinin duygusal bağlılığa etkisi incelenmiştir.

Öncelikle yapısal modele dâhil edilecek toksik duygu deneyimleri ve duygusal bağlılık değişkenlerinin birlikte test edildiği ölçüm modeli sınanmıştır. Değişkenler arasında kovaryans matrisi oluşturularak analiz edilmiştir. Analiz sonucunda elde edilen uyum indekslerinin ($X^2=381,53$; $df=143$; $X^2/df =2,67$; $p=,00$; $CFI=,90$; $SRMR=.07$; $RMSEA=,08$) iyi düzeyde olması sebebiyle ölçüm modelinin doğrulandığı tespit edilmiştir.

Ölçüm modelinin test edilmesi ve doğrulanması sonucunda yapısal model sınanmış ve hipotezler test edilmiştir. Analiz sonucunda elde edilen model Şekil 1’de, YEM parametre tahminleri ve uyum indeks değerleri ise Tablo 3’te gösterilmiştir.

Şekil 1. Yapısal Model

Tablo 3. YEM Analizi İle İlgili Parametre Değerleri (N=258)

Parametre Tahminleri		Standardize	Standardize Olmayan	S.H.	
Duygusal Bağlılık	<---	Toksik Duygu Deneyimleri	-,49	-,64	,18
$X^2=381,53$; $df=143$; $X^2/df=2,67$; $p=,00$; $CFI=,90$; $SRMR=,07$; $RMSEA=,08$, $R^2=,24$					

Yapısal modele ilişkin elde edilen analiz sonuçları incelendiğinde (Şekil 1 ve Tablo 3) Toksik duygu deneyimlerinin duygusal bağlılık üzerinde anlamlı ve negatif bir etkisinin olduğu görülmektedir ($\beta=-,49$; $p<,01$). Duygusal bağlılık değişkenindeki değişimin yaklaşık %24’ünün ($R^2=,24$) toksik duygu deneyimleri tarafından açıklandığı tespit edilmiştir. Ortaya çıkan bulgulardan yola çıkılarak H1 ve H2 hipotezlerinin desteklendiği ifade edilebilir.

Tartışma ve Sonuç

Bu çalışmanın amacı, örgütlerdeki toksik duygu deneyimlerinin çalışanların duygusal bağlılığını anlamlı şekilde etkileyip etkilemediğini araştırmaktır. Yapılan analizler sonucunda toksik duygu deneyimlerinin duygusal bağlılıkla negatif bir ilişkisinin olduğu tespit edilmiştir. Daha da önemlisi toksik duygu deneyimlerinin çalışanların duygusal bağlılığı üzerinde negatif bir etkisi olduğu ve duygusal bağlılığı düşürdüğü ortaya çıkmıştır.

Yapılan bazı çalışmalarda (Kiefer ve Barclay, 2012; Rasool vd., 2021) toksik duygu deneyimlerinin duygusal bağlılıkla, performansla ve algılanan sosyal destekle olumsuz bir

ilişkisinin olduğu saptanmıştır. Örgütte deneyimlenen toksisitenin örgütsel vatandaşlık davranışlarıyla negatif bir ilişkisi bulunmuştur (Chu, 2014). Çünkü örgütsel toksisitenin muhakeme bozukluğu, gerginlik, kaygı, öfke, konsantre olamama gibi sonuçları olmaktadır (Appelbaum ve Roy-Girard, 2007). Bu durum Kaynakların Korunması Teorisinin (Hobfoll, 1989) varsayımlarını da destekler niteliktedir. Çalışanların toksik bir ortamda çalışması belli baskılara maruz kalmasına yol açmaktadır. İşgörenlerin zihinsel ve duygusal yükü baş etmeye çalışması onların uykusuzluk, tükenmişlik ve stres gibi durumlarla karşı karşıya kalmasına sebep olmaktadır. Örgütlerin toksisiteyi görmezden gelmesi bireylerin umutsuzluğunun artmasına, özgüvenlerinin ve öz saygılarının azalmasına yol açmaktadır. Çalışanların örgütten kopmalarına, bağlılıklarının ve aidiyet duygularının zayıflamasına yol açmaktadır (Frost, 2003; Chu, 2014). Oysa duygusal bağlılık, çalışanın performansı üzerinde önemli bir etkisi bulunmaktadır. Devamsızlığı ve işten ayrılma niyetini düşürmektedir (Wu vd., 2020). Bu durum Sosyal Mübadele Teorisinin (Blau, 1964) varsayımlarını da desteklemektedir. Çalışanlar, örgütlerinden memnun kaldıklarında, pozitif bir çalışma ortamında çalıştıklarında, gerekli sosyal desteği aldıklarında aynı şekilde karşılık vermek ve örgüte geri ödeme yapmak zorunda olduklarını hissetmektedirler. Böylece çalışanların bağlılığı artmakta, performansları yükselmekte ve işten ayrılma niyetleri düşmektedir (Rasool vd., 2021).

Sonuç olarak bu çalışmanın bulguları; toksik bir işyeri ortamının ve yarattığı toksik duygu deneyimlerinin çalışanların duygusal bağlılığını doğrudan düşürdüğünü göstermiştir. Örgüt içerisinde yayılan toksik duygular, çalışanların ruhsal ve zihinsel sağlığını etkilemekte, onların örgüte ve işe olan ilgilerini azaltabilmektedir. Bu toksisite örgüt içerisindeki uyumluluğu bozabilmektedir. Çalışanlar da sürekli tetikte olmakta ve sosyal ilişki ağlarından kopmaktadırlar. Bu durum doğrudan örgütlerin verimliliğine de yansımaktadır.

Öneriler

Örgütte sağlıklı ve uyumlu bir örgüt kültürünün olması işbirliği, desteği ve sağlıklı ilişkilerin gelişmesini etkilemektedir. Çalışanların dinlenmesi ve sorunların çözülmeye çalışılması onların duygusal bağlılıklarını pekiştirebilmektedir. Yöneticilerin, çalışanlarına bireysel ilgi göstermesi ve taleplerinin karşılanması neticesinde sosyal destek bulduklarını dair algılarını geliştirebilmektedir. Bu durum onların tekrar eden, bezdirici ve bağlantıları kesen toksik duygularının etkisini azaltabilmektedir (Wu vd., 2020).

Örgütlerde toksisitenin yayılmasını önlemenin en kritik yolu toksisitenin ne olduğunu tanımlamaktan ve kim tarafından kaynaklandığını belirlemekten geçmektedir (Appelbaum ve Roy-Girard, 2007). Ardından onu hızla önlemeye çalışmak gerekir. Uzun süre ihmal edilirse toksisite örgüt kültürüne dönüşme ihtimali vardır. Bu da örgütler için ağır bir faturaya sebep olabilmektedir. Bu anlamda mağdurları korumak, faileri sorumlu tutmak ve açık iletişimi teşvik etmek için bazı davranış kurallarının benimsenmesi gerekmektedir. Çalışanların işyerinde kendilerini güvende hissetmelerini sağlamak önemlidir. Bunun için geri bildirim teşvik edilmelidir. Örgütlerde açık iletişim kanallarına izin verilmelidir. Her türlü toksik tutum ve davranışlarla baş edebilmek için gerekli şikâyet prosedürleri oluşturulmalı ve şikâyetlerin uygun bir şekilde soruşturulacağına dair güvence verilmelidir. Saygılı ve hassas davranışlar özendirilerek toksik duyguların üretimi ve yayılması azaltılmalıdır.

Bu çalışmanın katkılarının yanı sıra farklı kısıtları da bulunmaktadır. Söz gelimi, örneklemin Türkiye'de bir ilde (Burdur) görev yapan mavi yakalı KOBİ çalışanlarından oluşması bulguların genellenebilirliğini azaltmaktadır. Bu nedenle araştırmanın bulgularının genellenebilirliğini

artırmak için KOBİ'ler dışındaki farklı çalışan grupları üzerinde de söz konusu bu araştırmanın ilişkileri test edilebilir. Öte yandan veriler anket tekniği kullanılarak toplandığından dolayı çalışma kesitsel bir tasarıma sahiptir. Bu nedenle gelecekte toksik duygu deneyimleri; nitel bir yöntem kullanılarak keşfe dayalı şekilde incelenebilir. Toksik duygu deneyimlerinin öncülleri ve sonuçları derinlemesine araştırılabilir.

ÖZET

Bu çalışma üst yönetimin yeşil öz yeterlilik inancının, yeşil insan sermayesine ve rekabet avantajına etkisini değerlendirmeyi amaçlamaktadır. Bu amaçla, üst yönetimin yeşil öz yeterlilik inancının rekabet avantajına hem doğrudan hem de yeşil insan sermayesi aracılığıyla dolaylı etkisini değerlendirmek için kavramsal bir model geliştirilmiştir. Geliştirilen kavramsal modeli analiz etmek için enerji sektöründe faaliyet gösteren 138 firmadan anket yöntemi ile veri toplanmıştır. Toplanan veriler SmartPLS analiz programı ile analiz edilmiştir. Çalışmanın sonuçları, yeşil insan sermayesinin, üst yönetimin yeşil öz yeterlilik inancı ile rekabet avantajı arasındaki ilişkide tamamlayıcı kısmi aracılık rolü olduğunu göstermiştir. Bu durum, yeşil öz yeterliliğin rekabet avantajını yalnızca doğrudan olumlu yönde etkilemekle kalmayıp, aynı zamanda yeşil insan sermayesi yoluyla dolaylı olarak olumlu yönde etkileyebileceği anlamına geldiğini göstermektedir. Bu çalışma, firmaların rekabet avantajını artırmak için yeşil öz yeterlilik inancının ve yeşil insan sermayesi gelişiminin önemini göstererek, teoriye ve pratiğe katkıda bulunmaktadır.

Anahtar Kelimeler: Yeşil Öz Yeterlilik, Yeşil İnsan Sermayesi, Rekabet Avantajı

Do Green Self-Efficacy and Green Human Capital Provide Competitive Advantage?

ABSTRACT

This study aims to evaluate the effect of top management's green self-efficacy belief on green human capital and competitive advantage. For this purpose, a conceptual model has been developed to evaluate the impact of top management's green self-efficacy belief on competitive advantage, both directly and indirectly through green human capital. In order to analyze the conceptual model developed, data were collected from 138 companies operating in the energy sector by survey method. The collected data were analyzed with the SmartPLS analysis program. The results of the study showed that green human capital has a complementary partial mediating role in the relationship between top management's green self-efficacy belief and competitive advantage. This means that green self-efficacy can not only positively affect competitive advantage directly, but also indirectly positively affect it through green human capital. The present study contributes to the theory and practice by showing the importance of green self-efficacy belief and green human capital development in order to increase the competitive advantage of companies.

Keywords: Green Self-Efficacy, Green Human Capital, Competitive Advantage

GİRİŞ

Günümüzde, girişimcilerin ve akademisyenlerin yeşil iş uygulamalarına olan ilgisi artmış durumdadır. Bunun temel nedeni, çevresel etkiler konusunda artan kamuoyu bilincidir. Yeşil endüstri raporuna dayanan anket sonuçları, 60 ülkeden tüketicilerin %58'inin çevreye duyarlı işletmelerin ürünleri için daha fazla ödeme yapmak istediğini ortaya koymuştur. (Endiana, Suryandari, & Ardiant, 2023). Mevcut yeşil trend hareketinin ortasında hayatta kalabilmek için, bir firmanın rekabet etme becerisine sahip olması gerekmektedir. Yeni ekonomik çağda, maddi olmayan varlıklar rekabet avantajı elde etmenin önemli belirleyicilerinden biridir ve entelektüel sermaye her zaman finansal sermayeden daha fazla olarak nitelendirilmektedir (Yu & Nilsson, 2019). Entelektüel sermaye kavramı firmaların maddi olmayan varlıklarını değerlendirmek için önerilmiş bir kavramdır (Stewart, 1994). Güçlü maddi olmayan varlıklar geliştiren firmalar, rekabet avantajını artırma fırsatları yakalamaktadır. Entelektüel sermaye konusu yirmi yılı aşkın süredir geniş çapta tartışılmasına rağmen, günümüzdeki popüler çevrecilik eğilimi nedeniyle ortaya çıkan yeşil entelektüel sermaye kavramı Chen (2008) tarafından önerilmiştir. Yeşil entelektüel sermaye, çevreye yönelik bir entelektüel sermaye olup (yeşil insan sermayesi, yeşil yapısal sermaye ve yeşil ilişkisel sermaye), firmaların çevresel sürdürülebilirlik ile ilgili sürekli değişen senaryolara proaktif bir biçimde uyum sağlamalarını ve rakipleri karşısında rekabet avantajı elde etmelerini sağlayan hayati bir varlık olarak kavramlaştırılmıştır (Ahlawat, Sharma, & Kumar, 2023).

Yeşil entelektüel sermayenin en önemli unsuru olarak nitelendirilen yeşil insan sermayesi, çalışanların doğal çevreyi korumaya ve yeşil inovasyona yönelik bilgileri, becerileri, yetenekleri, deneyimleri, tutumları, bilgelikleri, yaratıcılıkları, bağlılıkları ve girişimcilikleri olarak tanımlanabilir (Chen, 2008; Yusliza vd., 2020). Doğal kaynak temelli teori (Hart, 1995), bir firmanın doğal kaynakları yönetebilmesi durumunda iyi bir performansa ve yüksek rekabet gücüne sahip olacağını varsaymaktadır. Dolayısıyla, bir firmanın üstün ve kaliteli yeşil insan sermayesi yaratabilmesi bu noktada önem kazanmaktadır. Bu ifade, bir firmanın daha iyi performans yaratmak için insan kaynaklarının kalitesini verimli bir şekilde iyileştirmesi gerektiğini belirten araştırmalarla desteklenmektedir (Yusoff vd., 2019). Ayrıca, bu sonuçlar, yeşil insan sermayesinin rekabet avantajı üzerinde olumlu bir etkiye sahip olduğunu gösteren ampirik çalışmalarla da doğrulanmıştır (Chen, 2008; Huang & Kung, 2011; Chaudhry vd., 2016; Rezaei vd., 2016; Cavicch & Vagnoni; 2017; Susandya vd., 2019; Yusliza vd., 2020; Wang & Juo, 2021; Astuti & Datrini, 2021). Dolayısıyla, yeşil insan sermayesi, rekabet avantajını geliştirebilir.

Diğer yandan sosyal bilişsel teoriye (Bandura, 1997) göre, bireylerin çevresel hedeflere ulaşmak için belirli bir görevi yerine getirme yeteneğine olan inancı olarak da ifade edilen yeşil öz yeterlilik bu noktada önem kazanmaktadır (Chen, Chang, & Lin, 2014; Chen vd., 2015a). Yüksek öz yeterlilik duygusuna sahip bireylerin, daha yüksek performans seviyelerine ve hedeflerine daha fazla bağlılık duygusuna sahip oldukları bilinmektedir (Bandura, 1993). Öz yeterliliğin performansı geliştirdiği de ileri sürülmektedir (Gist & Mitchell, 1992). Dolayısıyla üst yönetimin yeşil öz yeterlilik inancının rekabet avantajını etkileyebileceği varsayılabilir. Hiçbiri çalışma yeşil öz yeterliliğin rekabet avantajı üzerindeki etkisini keşfetmemiştir.

Ayrıca, önceki literatür, yaratıcılık gelişiminin öz yeterliliğe dayandığını göstermektedir (Mumford vd., 2002; Kumar & Uzkurt, 2010; Hsiao vd., 2011; Tepper & Yourstone, 2018). Daha yüksek düzeyde öz yeterliliğe sahip kişilerin, yeni fikirler üretme konusunda kendi yeteneklerine daha fazla güvenme olasılığı daha yüksektir (Hmieleski & Baron 2008; Alkailani ve Kumar, 2016). Alan yazındaki araştırma sonuçları yeşil yaratıcılığı geliştirmenin yolunun, yeşil öz yeterliliği artırmak olduğunu ortaya koymaktadır (Chen vd., 2015a; Aeknarajindawat & Jermsittiparsert, 2019). Dolayısıyla, üst yönetimin güçlü bir öz yeterlilik duygusuna sahip olması, daha yaratıcı davranışlar sergilemelerini ve yeşil insan sermayesini artırmaları beklenebilir.

Bu nedenle, bu araştırmanın birinci motivasyonu, üst yönetimin yeşil öz yeterliliğinin rekabet avantajı üzerindeki etkisini keşfederek, alan yazındaki boşluğu doldurmaktadır. Bu çalışmayı yürütenin ikinci motivasyonu, üst yönetimin yeşil öz yeterliliğine yönelik başka önemli bir araştırma boşluğunu belirlemeye yöneliktir. Önceki araştırmalar üst yönetiminin yeşil öz yeterliliğinin yeşil insan sermayesi üzerindeki etkisini keşfetmemiştir. Bu çalışma bu ilişkiyi ele alarak alan yazına katkı sunmayı hedeflemektedir. Çalışmanın üçüncü motivasyonu, “yeşil insan sermayesi rekabet avantajını etkiler mi?” sorusunu enerji sektörü bağlamında incelemektir. Bu araştırmanın dördüncü motivasyonu ise doğal kaynak temelli teoriyi (Hart, 1995) ve sosyal bilişsel teoriyi (Bandura, 1997) birleştirerek, “yeşil insan sermayesi, üst yönetimin yeşil öz yeterliliği ile rekabet avantajı arasındaki ilişkiye aracılık eder mi?” sorusunu ele almaktır.

Enerji sektörü, doğal çevrenin korunmasında diğer tüm önemli sektörlerin stratejik kararlarını yönlendiren çok önemli bir rol oynadığından dolayı (Ghosh & Haque, 2023), bu çalışmanın evrenini oluşturmaktadır. Buradan hareketle, Türkiye’de enerji sektöründe faaliyet gösteren firmalardaki yöneticilerden veriler toplanmış ve Smart PLS 3 analiz programı aracılığıyla analiz edilmiştir.

1. TEORİK ÇERÇEVE VE HİPOTEZ GELİŞTİRME

1.1. Üst Yönetimin Yeşil Öz Yeterliliği ve Rekabet Avantajı

Sosyal bilişsel teoriye göre öz yeterlilik, bir bireyin davranışını yönlendirme ve düzenleme sürecini açıklamanın anahtarı olarak görülmektedir (Bandura, 1997; Beck & Schmidt, 2015). Bireylerin belirlenen düzeyde performans geliştirme yeteneklerine ilişkin inançları, öz yeterlilik olarak tanımlanabilir (Bandura, 1997). Kendilerini oldukça yeterli olarak algılayan bireyler, olağanüstü sonuçlar üretebilecek yeterli çabayı harekete geçireceklerdir (Stajkovic & Luthans, 1998). Öz yeterliliği yüksek olan bireylerin performansı daha iyidir ve amaçlarına olan bağlılıkları yüksektir (Maddux, 2016). Görev performansı, öz yeterlilik aracılığıyla önemli ölçüde tahmin edilebilmektedir (Maddux, 2016; Tepper & Yourstone, 2018).

Alana özgü öz yeterliliğin, o alandaki davranışı tahmin etme konusunda gelişmiş bir yeteneğe sahip olduğu ileri sürülmüştür (Choi 2004). Çevre ile ilgili hedefleri başlatmak ve uygulamak için bir kişinin yeteneğine olan güvenini tanımlayan yeşil öz yeterlilik, çevresel konularda yeni bir düşünce olarak ortaya çıkmıştır (Chen, Chang, & Lin, 2014). Yeşil öz yeterlilik, öz yeterlilik temelinde çevresel faktörleri, özellikle bir bireyin veya firmanın çevresel hedeflere ulaşma yeteneğinin değerlendirilmesini içermektedir (Chen vd., 2015a). Diğer bir ifadeyle, yeşil öz

yeterlilik, bireylerin çevre ile ilgili görevleri yerine getirme ve gerçekleştirme konusundaki yeterliliklerine ilişkin inançları olarak işlevselleştirilmiştir (Faraz vd., 2021). Yeşil öz yeterlilik, çevresel sorunların üstesinden gelmek için yararlı, benzersiz ve orijinal yolları yansıtan yeşil prosedürler, yeşil tesisler, yeşil ürünler ve yeşil uygulamalar (Chen vd., 2015b) ile ilgili yeni düşüncelerin kavranmasına yardımcı olmaktadır (Chen, Chang, & Lin, 2014).

Alan yazın, yeşil öz yeterliliğin, çevre yanlısı davranış üzerinde olumlu bir etkiye sahip olan bir tür öz biliş olduğunu göstermektedir (Nordlund, 2003; Meinhold & Malkus, 2005). Yeşil öz yeterliliğin yöneticilerin sorumluluğunu güçlendireceği ve firmaları atık yönetimi gibi çevre yanlısı faaliyetleri benimsemeye teşvik edeceği üzerinde vurgu yapılmaktadır (Gholami, 2014). Yöneticilerin yeşil öz yeterliliği, yöneticilerin çevre yanlısı uygulamaları gerçekleştirme konusundaki kararlılığını güçlendirmektedir. Diğer bir deyişle, daha yüksek yeşil öz yeterliliğe sahip yöneticilerin, kurumsal atık yönetimi yoluyla kurumsal yeşil sürdürülebilir uygulamalar üzerinde olumlu bir etkiye sahip olma olasılığının daha yüksek olduğu ampirik bir çalışmayla doğrulanmıştır (Guo vd., 2019). Dolayısıyla, sosyal bilişsel teoriye göre, üst yönetiminin yeşil öz yeterlilik inancı rekabet avantajını geliştirebilir varsayımı altında H1 hipotezi geliştirilmiştir. H1: Üst yönetimin yeşil öz yeterliliği ile rekabet avantajı arasında pozitif yönlü bir ilişki vardır.

1.2. Üst Yönetimin Yeşil Öz Yeterliliği ve Yeşil İnsan Sermayesi

İnsan sermayesi, çalışanların hedeflere ulaşmak için bilgi, beceri, yenilikçilik ve yeteneklerinin toplamı olarak tanımlanmaktadır (Dzinkowski, 2000). Firmaların yeşil inovasyon ve yeşil yönetim geliştirebilmesi için çalışanların içine yerleştirilmiş çevresel bilgi önemli olduğundan, Chen (2008) yeni bir kavram olan “yeşil insan sermayesini” önermiştir. Yeşil insan sermayesini; çalışanların çevre koruma ve yeşil inovasyon hakkında bilgilerinin, becerilerinin, yeteneklerinin, deneyimlerinin, tutumlarının, bilgeliklerinin ve yaratıcılıklarının toplamı şeklinde tanımlamıştır (Chen, 2008).

Çevre bilinci yüksek olan firmalar, çalışanlarının çevre politikalarını bilmelerini sağlamakta ve çalışanlarının çevre yönetimi ve yeşil inovasyon konusundaki yetkinliklerini artırmaya eğilim göstermektedir. Alan yazında, çevre bilincinin, yeşil insan sermayesi ile olumlu bir şekilde ilişkili olduğu vurgulanmaktadır (Chang & Chen, 2012).

Öte yandan, yeşil öz yeterliliği daha yüksek olan bireyler, aşağıdaki nedenlerden dolayı yeni çevre koruyucu ürünler yaratma ve geliştirme konusunda daha yüksek bir inanca sahiplerdir. (a) Çalışanlar, uzun vadeli kariyer planlamalarının firmanın sürdürülebilir gelişimi ile uyumluluğunu önemserler (Mittal & Dhar, 2016). Firmanın amacı, çevresel hedeflere bağlılığı yerine getirmek için yeşil ürün geliştirme performansını iyileştirmeye çalışmaksa (Chen & Chang, 2012), daha yüksek yeşil öz yeterliliğe sahip bireyler, yatırım ve sebat, olumlu düşünme ve öz düzenleme yoluyla daha yüksek yeşil performans seviyesine ulaşırlar (Chen, Chang, & Lin, 2014; Guo vd., 2019). (b) Sosyal bilişsel teoriye göre, yeşil öz yeterliliği daha yüksek olan bireyler, işin çekiciliğine dikkat ederler ve çevresel sorunları ve kurumsal sosyal sorumluluğu dikkate alırlar (Guo vd., 2019). Dolayısıyla, üst yönetiminin yeşil öz yeterlilik düzeyi, yeşil insan sermayesinin gelişimini etkileyebilir. Sosyal bilişsel teori perspektifinden hareketle, H2 hipotezi geliştirilmiştir.

H2: Üst yönetimin yeşil öz yeterliliği ile yeşil insan sermayesi arasında pozitif yönlü bir ilişki vardır.

1.3. Yeşil İnsan Sermayesi ve Rekabet Avantajı

Chen (2008), bilgi, deneyim, yetenekler, beceriler, yaratıcılıklar ve çevre korumasına yönelik taahhütler açısından çalışanların varlıklarını kullanarak, yeşil insan sermayesinin farklı değerini kaydetmiştir. İnsan sermayesine yatırım yapan firmalar daha iyi performans göstermektedir (Wang, Chang, Huang ve Wang, 2011). Daha yüksek düzeyde yeşil insan sermayesinin, çevresel bilgi ve beceriler nedeniyle yeşil organizasyonun gelişimine daha fazla katkıda bulunma eğilimi söz konusudur (Yong ve ark., 2019). Bu nedenle, yeşil insan sermayesi bir firmanın somut olmayan varlıklarını (bilgi, beceri ve yetenekler) tanınmasını sağlar ve daha iyi performans göstermesi için dinamik bir rekabet ortamında yeşil stratejilerin uygulanmasına yardımcı olabilir.

Benzer şekilde, Eisenstat (1996), insan sermayesinin etkili uygulanmasının firmaların kurumsal sürdürülebilirlik performansını artırabileceğini belirtirken, Rayner ve Morgan (2018) çevre bilgisi ile çalışanların yeşil davranışları arasında pozitif bir ilişki olduğunu belirtmiştir. Ampirik araştırmalar da yeşil insan sermayesi ile rekabet avantajı arasında pozitif yönlü anlamlı ilişki olduğunu doğrulamaktadır (Chen, 2008; Huang & Kung, 2011; Chaudhry vd., 2016; Rezaei vd., 2016; Cavicch & Vagnoni; 2017; Susandya vd., 2019; Yusliza vd., 2020; Wang & Juo, 2021; Astuti & Datrini, 2021).

Bu çalışma, yeşil insan sermayesi ve rekabet avantajı arasındaki ilişkiyi kavramsallaştırmak için doğal kaynak temelli teoriye atıfta bulunmaktadır. Doğal kaynak temelli görüş, çalışanın zımnı bilgisi, katılımı ve çevre ile ilgili yetenekleri gibi maddi olmayan varlıkların, rekabet avantajı sağlayacağına vurgu yapmaktadır (Hart, 1995). Dolayısıyla enerji sektörü bağlamında yeşil insan sermayesinin rekabet avantajı sağlayacağı varsayımı altında H3 hipotezi geliştirilmiştir.

H3: Yeşil insan sermayesi ile rekabet avantajı arasında pozitif yönlü bir ilişki vardır.

1.4. Yeşil İnsan Sermayesinin Aracılık Rolü

Bireylerin psikolojik özellikleri kurumsal performansı açıklamak için kullanılabilir (Palmer vd., 2019). Yüksek derecede bir özgüvene sahip olmak, insanları eylemleri başlatma, eylemleri sürdürme ve sebat etme olasılıklarını artırmaktadır. Çünkü bu tür bireyler istediklerini veya yapmaları gereken şeyi halledebileceklerinden emindirler (Chen vd., 2016; Guo vd., 2019). Yüksek öz yeterliliğe sahip bireyler, daha yüksek performansa ve görevlere odaklanma konusunda daha yüksek kararlılığa sahip olabilir ve başarısızlığı tolere edebilirler (Chen, Li, & Leung, 2016). Çalışmalar da öz yeterliliğin performansla olumlu bir şekilde ilişkili olduğunu göstermektedir (Rapp vd., 2015; Honicke & Broadbent, 2016). Daha önce de ifade edildiği üzere yeşil öz yeterlilik, bir bireyin çevresel hedeflere ulaşma sürecini uygulama ve organize etme yeteneğine olan inancıdır (Bandura, 1997; Guo vd., 2019). H1 hipotezinde tartışıldığı gibi sosyal bilişsel teoriye göre, üst yönetimin yeşil öz yeterliliği rekabet avantajını geliştirebilir. Yine, H2 hipotezinde tartışıldığı üzere, üst yönetimin yeşil öz yeterliliği yeşil insan sermayesini geliştirebilir.

Diğer yandan, Johnson (1999) ve Dzinkowski (2000), insan sermayesinin rekabet avantajı üzerinde olumlu bir etkisi olduğunu öne sürmüşlerdir. Ayrıca, çevre yönetimi ve yeşil inovasyonla aktif olarak ilgilenen firma yöneticileri, yalnızca üretim atıklarını en aza indirip üretkenliği artırmakla kalmaz, aynı zamanda yeşil ürünler için nispeten yüksek fiyatlar talep

edebilir, kurumsal imajlarını geliştirebilir ve böylece popüler çevrecilik eğilimleri altında kurumsal rekabet avantajı üzerinde olumlu bir etki yapabilirler (Chen, Lai, & Wen, 2006) Dolayısıyla, H3 hipotezinde tartışıldığı üzere, çalışanların çevre koruma veya yeşil inovasyonla ilgili bilgi, beceri, yetenek, deneyim, tutum, bilgelik, yaratıcılık ve bağlılıkları, firmaların rekabet avantajı elde etmesine yardımcı olabilir (Chen, 2008; Huang & Kung, 2011; Chaudhry vd., 2016; Rezaei vd., 2016; Cavicch & Vagnoni; 2017; Susandya vd., 2019; Yusliza vd., 2020; Wang & Juo, 2021; Astuti & Datrini, 2021). Tüm tartışmalardan hareketle bu çalışmada, doğal kaynak temelli teoriyi ve sosyal bilişsel teoriyi birleştirerek, üst yönetimin yeşil öz yeterliliğinin, yeşil insan sermayesinin gelişimini destekleyerek, firmanın rekabet avantajını arttırabileceğini varsayarak, H4 hipotezi geliştirilmiştir.

H4: Yeşil insan sermayesinin, üst yönetimin yeşil öz yeterliliği ile rekabet avantajı arasındaki pozitif yönlü ilişkide aracılık rolü vardır.

Araştırmanın kavramsal modeli Şekil 1’de sunulmuştur.

Şekil 1: Araştırmanın Kavramsal Modeli

2. ARAŞTIRMANIN METODOLOJİSİ

2.1. Araştırmanın Evreni ve Örneklemi

Bu araştırmanın analiz birimi firma düzeyidir. Mevcut araştırma, Türkiye’de enerji sektöründe faaliyet gösteren firmalardaki yöneticilerden anket yöntemi ile veri toplanarak gerçekleştirilmiştir. Katılımcılar üst düzey yöneticiler, CEO’lar ve çevre koruma departmanlarının yöneticileridir. Araştırmanın yanıtlayıcılarına, bu araştırmanın bilimsel yöntemlerle yapıldığı ve toplanan verilerin gizli tutulacağı konusunda güvence verilmiştir. Veri toplama süreci Aralık 2022 ile Şubat 2023 arasında gerçekleştirilmiştir. Bu araştırmaya, 138’i kullanılabilir olmak üzere 144 firma katılmıştır.

2.2. Veri Toplama Aracının Geliştirilmesi

Bu çalışmada yeşil öz yeterlilik, yeşil insan sermayesi ve rekabet avantajı dahil olmak üzere tüm yapılar, 1 (kesinlikle katılmıyorum) ile 7 (kesinlikle katılıyorum) arasında değişen bir ölçekle ölçülmüştür. Hazırlanan anket formunda öncelikle yeşil öz yeterliliği ölçmeye yönelik

maddelere yer verilmiştir. İkincisi, yeşil insan sermayesini ve üçüncüsü rekabet avantajını ölçmeye yönelik maddelere yer verilmiştir. Yeşil öz yeterlilik (5 madde), Guo ve diğerlerinin (2019) çalışmasından uyarlanan ölçekle ölçülmüştür. Yeşil insan sermayesi (5 madde), Chen (2008) tarafından geliştirilmiş ölçekten uyarlanarak ölçülmüştür. Rekabet avantajı (6 madde) ise Chang (2011) tarafından yapılan çalışmadan uyarlanan ölçekle ölçülmüştür (bkz. EKA).

3. VERİ ANALIZI VE BULGULAR

3.1. Ölçüm Model Analizi

Bu araştırmanın kavramsal modeli, analiz mantığı Kısmi En Küçük Kareler Yapısal Eşitlik Modellemesine (The Partial Least Square Structural Equation Modeling-PLS-SEM) dayanan SmartPLS 3.0 yazılımı aracılığıyla analiz edilmiştir. Bu çalışmada SmartPLS 3.0 yazılımının kullanılmasının nedeni toplanan verilerin normal dağılım göstermemesi ve ilişkilerin aynı anda analiz edilmesidir (Dijkstra & Henseler, 2015). SmartPLS’de analizler ölçüm modeli ve yapısal model olmak üzere iki aşamada gerçekleştirilmektedir. Mevcut araştırmanın tüm değişkenleri yansıtıcı olduğundan dolayı Tutarlı PLS Algoritması/PLSc adımı takip edilerek analizler yapılmıştır. Ölçüm modelinde birleşme ve ayrışma geçerliliği test edilmiştir. Birleşme geçerliliğini değerlendirmek için öncelikle madde yükleri incelendiğinde, YİS5, RA5 ve RA6 maddelerinin değeri 0.70’den küçük olduğu için bu üç madde analiz dışı bırakılmış ve analiz tekrarlanmıştır. Tablo 1’de görüldüğü üzere tüm maddelerin yükleri 0.70’den yüksektir. Benzer bir şekilde tüm yapıların Cronbach Alpha, Composite Reliability ve rho_A değerleri ≥ 0.70 ’dir. açıklanan ortalama varyans/average-variance-extracted (AVE) değeri ise önerildiği gibi 0,50 kritik değerini aştığından dolayı birleşme geçerliliğinin sağlandığı söylenebilir.

Tablo 1: Ölçüm Modeli Sonuçları

Değişkenler	Göstergeler	Faktör Yükleri	P-Değeri	Cronbach’s Alpha	rho_A	Composite Reliability	AVE
Üst Yönetimin Yeşil Öz Yeterliliği (YÖZ)	YÖZ1	0.780	0.000	0.864	0.867	0.902	0.648
	YÖZ2	0.767	0.000				
	YÖZ3	0.835	0.000				
	YÖZ4	0.860	0.000				
	YÖZ5	0.780	0.000				
Rekabet Avantajı (RA)	RA1	0.825	0.000	0.864	0.866	0.907	0.710
	RA2	0.835	0.000				
	RA3	0.865	0.000				
	RA4	0.845	0.000				
Yeşil İnsan Sermayesi (YİS)	YİS1	0.829	0.000	0.901	0.902	0.931	0.772
	YİS2	0.894	0.000				
	YİS3	0.893	0.000				
	YİS4	0.898	0.000				

Ayrışma geçerliliği için öncelikle Fornell-Larcker kriteri incelenmiştir. Tablo 2’de koyu renkle yazılmış köşegende gözükten değerler, ilgili değişkenin AVE değerinin kareköküdür. Bu değerler, istenildiği gibi aynı sütun ve satırdaki korelasyon değerlerinden yüksektir.

Tablo 2: Fornell-Larcker Kriteri

Değişkenler	1	2	3
YÖZ	0.835		
RA	0.513	0.843	
YİS	0.530	0.452	0.879

Note: Köşegen değerler AVE'nin karesidir

Ayrışma geçerliği için ikinci olarak Tablo 3'teki çapraz yükleme kriteri incelendiğinde, maddelerin her birinin ait olduğu değişkende en yüksek faktör yüküne sahip olduğu görülmektedir.

Tablo 3: Çapraz Yükleme Kriteri

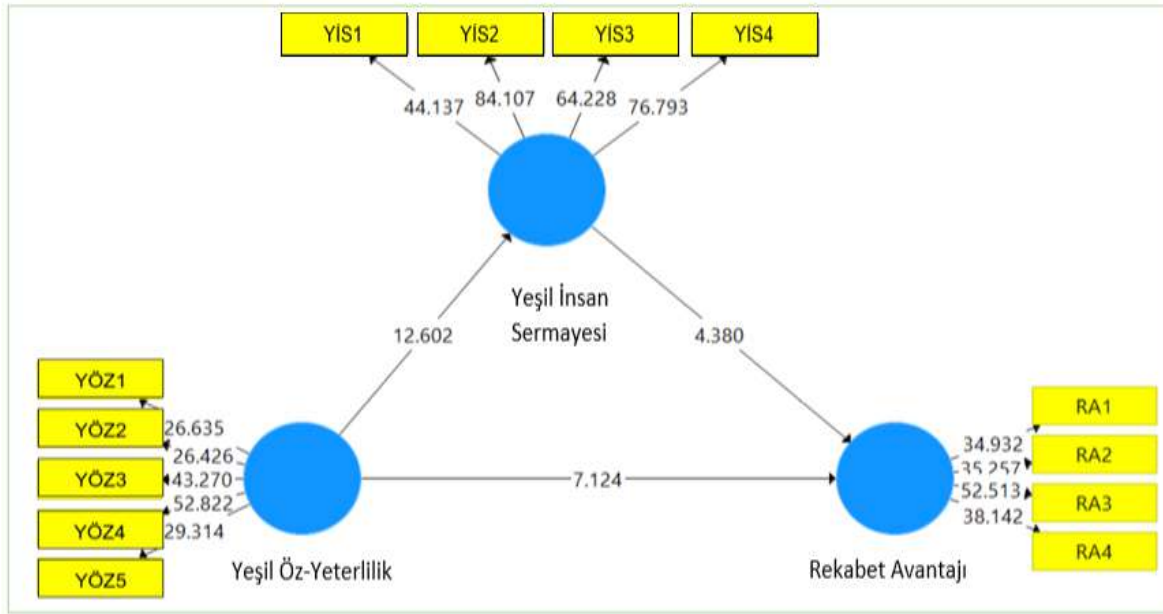

Göstergeler	YÖZ	RA	YİS
YÖZ1	0,780	0,368	0,385
YÖZ2	0,767	0,386	0,410
YÖZ3	0,835	0,410	0,460
YÖZ4	0,860	0,454	0,441
YÖZ5	0,780	0,441	0,431
RA1	0,438	0,825	0,390
RA2	0,414	0,835	0,370
RA3	0,472	0,865	0,407
RA4	0,401	0,845	0,354
YİS1	0,462	0,373	0,829

YİS3	0,484	0,421	0,893
YİS4	0,431	0,423	0,898

Ayrışma geçerliliği için son olarak Heterotrait-monotrait (HTMT) değeri incelenmiştir. Tablo 4'te HTMT değerine ait tüm sonuçlar $\leq 0,85$ 'dir. Böylece ayrışma geçerliliğinin sağlandığı söylenebilir.

Tablo 4: Heterotrait-Monotrait Oranı (HTMT)

Değişkenler	1	2	3
YÖZ			
RA	0.591		
YİS	0.599	0.511	

Son olarak faktör yüklerinin istatistiki anlamlılığı yeniden örnekleme tekniğiyle (5.000 yeniden örneklem) analiz edilmiştir. Şekil 2'teki T değerleri ve Tablo 1'deki p değerleri tüm faktör yüklerinin anlamlı olduğu doğrulamaktadır.

Şekil 2. Yapısal Ölçüm Modeli

3.2. Yapısal Model Analizi

Öncelikle doğrusallığı test etmek için Variance Inflation Factor (VIF) incelendiğinde (Tablo 5), bu değerlerin istenilen 3 eşik değerinin altında olduğu görülmektedir (Hair vd., 2019). Bu sonuçlar değişkenler arasında doğrusallık sorunu olmadığını göstermektedir. Açıklanan varyans (R^2) değerleri incelendiğinde YİS ve RA için sırasıyla % 28 ve % 30,9 olduğu görülmüştür. Her yordayıcı değişken için hesaplanan etki büyüklüğü değeri (f^2) 0,066 ile 0,390 arasında değişmektedir. Bu sonuçlara göre hem R^2 hem de f^2 değerleri iyi kabul edilebilir. The standardized root mean square (SRMR) 0.056'ya ve the normed fix index (NFI) 0.873'e eşittir ve bu değerler modelin uyumlu olduğunu göstermektedir.

İlişki katsayılarının istatistiki olarak anlamlı olup olmadığını test etmek için bir önyükleme tekniği (5.000 yeniden örnekleme) kullanılmıştır. Şekil 2 ve Tablo 5'te görüldüğü gibi, YÖZ'den RA'ya giden yol pozitif yönde anlamlıdır ($\beta = 0.381$, $t = 7.124$, $p < 0.001$) ve H1 desteklenmiştir. Ayrıca, YÖZ'den YİS'ya ($\beta = 0.530$, $t = 12.602$, $p < 0,001$) giden yol da pozitif yönlü ve anlamlıdır ve H2 desteklenmiştir. YİS'ya gelince RA'ya ($\beta = 0.251$, $t = 4.380$, $p < 0.001$) giden yol da pozitif yönlü anlamlı olduğu bulunmuştur ve böylece H3 desteklenmiştir.

Tablo 5: Değişkenler Arasındaki İlişkiler (Doğrudan Etki)

Yol Analizi	Coef (β)	S.D.	T-Değeri	P-Değeri	Adj. R^2	f^2	VIF	Confidence Interval (BC)		Sonuç
								LL	UL	
YÖZ→YİS	0.530***	0.042	12.602	0.000	0.280	0.151	1.000	0.441	0.607	H2 Desteklendi
YÖZ→RA	0.381***	0.053	7.124	0.000	0.309	0.390	1.390	0.273	0.480	H1 Desteklendi
YİS→RA	0.251***	0.057	4.380	0.000		0.066	1.390	0.137	0.358	H3 Desteklendi

Son olarak, mevcut çalışmada Zhao, Lynch & Chen (2010) tarafından önerilen aracı analiz prosedürü kullanılarak, H4 hipotezi test edilmiştir. $YÖZ \rightarrow YİS \rightarrow RA$ ($\beta = 0.133$, $t = 4.119$, $p < 0.001$) arasındaki ilişkinin pozitif olarak anlamlı olduğunu göstermiştir. Bu bulguya göre YİS'nin aracılık rolü oynadığı söylenebilir. Bu aracılığın türünü belirlemek için YÖZ ile RA arasındaki doğrudan ilişki ($\beta = 0.381$, $t = 7.124$, $p < 0.001$) değerlendirilmiş ve bunun sonucunda RA'nın tamamlayıcı kısmi aracılık rolü oynadığı ortaya çıkmıştır (bkz. Tablo 6). Bu doğrultuda H4 hipotezi desteklenmiştir.

Tablo 6: Değişkenler Arasındaki İlişkiler (Dolaylı Etki)

Yol Analizi	Coef (β)	S.D.	T-Değeri	P-Değeri	Confidence Interval (BC)		Sonuç
					LL	UL	
$YÖZ \rightarrow YİS \rightarrow RA$	0.133***	0.032	4.119	0.000	0.072	0198	H4 Desteklendi
$YÖZ \rightarrow RA$	0.381***	0.053	7.124	0.000	0.273	0.480	Tamamlayıcı Kısmi Aracı

SONUÇ VE TARTIŞMA

Çalışmanın sonuçları, üst yönetimin yeşil öz yeterlilik inancının, yeşil insan sermayesi ve rekabet avantajı için kritik bir faktör olduğunu doğrulamaktadır. Daha spesifik olarak, bu çalışma, mevcut alan yazına ve yöneticilere çeşitli katkılarda bulunmaktadır. İlk olarak, mevcut literatüre dayalı olarak öne sürülen kavramsal bir model aracılığıyla, üst yönetimin yeşil öz yeterliliği ve rekabet avantajı arasındaki ilişkiyi ele alan bu çalışma, yeşil yönetim ve yeşil örgütsel davranış alan yazınına katkılar sağlamaktadır. Örgütsel davranış yazını öz yeterlilik ile performans arasında pozitif yönlü bir ilişkili olduğunu göstermektedir (Rapp vd., 2015; Honicke & Broadbent, 2016). Ancak yeşil örgütsel davranış yazınında yeşil öz yeterlilik ve rekabet avantajı ilişkisi keşfedilmemiştir. İkincisi, sonuçlar, yeşil insan sermayesinin gelişimi için üst yönetimin yeşil öz yeterlilik inancının önemini göstererek, alan yazına ve uygulamaya yeni katkılar sunmaktadır. Bu sonuçlar sosyal bilişsel teorinin argümanlarını desteklemektedir. Yeşil insan sermayesini ve rekabet avantajını geliştirmek isteyen yöneticiler, yeşil öz yeterlilik inancının önemini düşünmelidirler. Üçüncüsü, sonuçlar, yeşil insan sermayesinin önemli bir rekabet avantajı kaynağı olduğunu göstermektedir. Bu bulgu alan yazını destekleyerek (Chen, 2008; Huang & Kung, 2011; Chaudhry vd., 2016; Rezaei vd., 2016; Cavicch & Vagnoni, 2017; Susandya vd., 2019; Yusliza vd., 2020; Wang & Juo, 2021; Astuti & Datrini, 2021), doğal kaynak temelli teoriyi geliştirmektedir. Doğal kaynak temelli teori değerlendirmeleri (Hart, 1995) bu bulgunun mantığını desteklemektedir. Hart (1995), göre, yeşil maddi olmayan kaynaklar, bir firmanın üstün bir rekabet avantajı elde etmesine ve sürdürmesine katkıda bulunmaktadır. Çalışanlarda yerleşik olan çevresel bilgi ve beceriler, firmaların rekabet avantajını geliştirmesi için önemli olduğundan, yöneticiler, üstün çevresel bilgiye sahip çalışanları işe almalıdırlar. Ek olarak yeşil insan sermayesinin gelişimini destekleyebilmek için eğitim programları ve seminerler düzenleyebilirler. Dördüncüsü, bu çalışma, doğal kaynak temelli teoriyi ve sosyal bilişsel teoriyi birleştirerek, üst yönetimin yeşil öz yeterliliği ile rekabet avantajı arasındaki ilişkide yeşil insan sermayesinin aracılık rolünü ortaya koyarak, hem pratiğe hem de teoriğe katkılar sağlamaktadır.

Firmalar, yöneticilerin çevresel farkındalıklarını, tutumlarını ve yeşil öz yeterliliklerini geliştirmeyi ve böylece atık yönetimi ve yeşil sürdürülebilir kalkınma uygulamalarının teşvik edilmesi gibi yeşil süreçleri kolaylaştırmayı amaçlayan eğitim programlarını gündemlerine almalıdır. Aynı zamanda, geleceğin yeşil öz yeterliliği güçlü yöneticilerini yetiştirmek için üniversitelerin lisans, yüksek lisans ve doktora programlarına yeşil öz yeterlilik inancının gelişimini destekleyen eğitim programları koymaları gerektiği söylenebilir. Böylece yeşil insan sermayesinin gelişimi desteklenebilir ve rekabet avantajı sağlanabilir. Ek olarak, güçlü liderlikle desteklenen eğitim programları, çalıştaylar ve bilinçlendirme seminerleri düzenlenerek, yöneticilerin yeşil öz yeterliliklerinin düzeyini sürekli olarak geliştirmeleri için hükümetler tarafından daha fazla çalışma yapılması gerektiği ifade edilebilir.

Bu çalışma Türkiye'deki enerji sektörüne odaklanmıştır, bu nedenle sonraki çalışmalar diğer sektörlerle odaklanabilir. Çalışmada hipotezler yalnızca kesitsel veriler sağlayan bir anket araştırması ile test edilmiştir. Bu nedenle, araştırmacılar, gelecekte boylamsal çalışmaya yönelik araştırmalar yapılabilirler. Son olarak, bu çalışma, yöneticilere, araştırmacılara ve hükümetlere faydalı olmayı ve ilgili çalışmalara ve gelecekteki araştırmalara referans olarak katkıda bulunmayı hedeflemiştir.

EKA

Yeşil Öz Yeterlilik

YÖZ1 Çevre korumada başarılı olabileceğimizi düşünüyorum.

YÖZ2 Çevre sorunuyla etkili bir şekilde başa çıkma yeteneğine sahip olduğumuzu düşünüyorum.

YÖZ3 Çevre sorunlarının üstesinden gelebileceğimizi düşünüyorum

YÖZ4 Yaptığımız işin aslında çevre koruma misyonunu yerine getirdiğini hissediyorum.

YÖZ 5 Çevre sorunlarına yaratıcı çözümler bulabileceğimizi düşünüyorum.

Yeşil İnsan Sermayesi

YİS1 Firmamızda çalışanların çevreyi korumaya katkısı rakiplerimizden daha iyidir.

YİS2 Firmamızda çevre korumaya ilişkin çalışan yetkinliği, rakiplerimizden daha iyidir.

YİS3 Bu firmanın çalışanları tarafından sağlanan çevre korumaya yönelik ürün ve/veya hizmet kaliteleri, rakiplerimizden daha iyidir.

YİS4 Firmamızda çevre korumaya yönelik işbirlikçi ekip çalışması miktarı, rakiplerimizden daha fazladır.

YİS5 Yöneticilerimiz, çalışanlarımızın çevre koruma ile ilgili hedeflerine ulaşmalarına tam destek vermektedirler.

Rekabet Avantajı

RA1 Firmamızın ürün veya hizmetlerinin kalitesi rakiplerimizden daha iyidir

RA2 Firmamız rakiplerinden daha fazla Ar-Ge yeteneğine sahiptir.

RA3 Firmamız rakiplerinden daha iyi yönetim kabiliyetine sahiptir.

RA4 Firmamız rakiplerine göre daha iyi kârlılığa sahiptir.

RA5 Firmanın kurumsal imajı rakiplerinden daha iyidir.

RA6 Rakiplerin firmamızın pazardaki yerini alması zordur.

Orcid: 0000-0001-5249-1911

ÖZET

Azerbaycan'ın tarihi zaferiyle sonuçlanan ikinci Karabağ Savaşı sonucunda, Güney Kafkasya bölgesinde yeni jeopolitik ve jeostratejik gerçeklikler meydana gelmiştir. Savaş sonucunda Azerbaycan uluslararası hukuk çerçevesinde sahip olduğu egemenliği bütün topraklarında sağlamıştır. Savaşın en önemli sonuçlarından biri de Azerbaycan'ın Güney Kafkasya'daki lider ülke konumunu pekiştirmesi olmuştur. Öteden beri sahip olduğu bölgesel ekonomik liderliğin, siyasi ve askeri liderlikle desteklenmesi Azerbaycan'a yeni fırsatlar sunmuştur. Bu çerçevede bölgesel ekonomik odaklı altyapı projelerinin hızlanması açısından olumlu bir jeopolitik atmosfer ortaya çıkmıştır. Zengezur Koridoru söz konusu projeler içerisindeki stratejik önemi sebebiyle özellikle önem arz etmektedir. Koridor aracılığıyla Avrupa ve Asya arasında ekonomik temelli bir iş birliği sağlanacaktır. Bu durumda Azerbaycan'ın jeo-stratejik önemi daha da güçlenecek ve istikrar inşa edici bir çerçeveye bürünecektir. Tek Kuşak Tek Yol küresel ulaşım projesinin doğal parçası olan Zengezur Koridoru vasıtasıyla, bölgesel ve uluslararası ticaret daha kapsamlı bir hale gelecektir. Böylece Güney Kafkasya artık çatışmalarla değil, ekonomik istikrarla anılacak bir duruma kavuşacaktır. Kısa ve orta vadede Orta Asya ülkeleri başta olmak üzere yakın coğrafyalar arasında ekonomik temelli bir iş birliği ortamı elde edilecektir. Aynı zamanda Azerbaycan'ın Türkiye ile ticaretinde kapsamlı bir artış gerçekleşecektir.

Çalışmamızda, Zengezur Koridoru'nun sağladığı ekonomik, ticari ve stratejik imkanların boyutları incelenmektedir. Söz konusu koridorun, bölgesel iş birliğini ve dolayısıyla bölgesel istikrarı doğrudan etkileme potansiyeli bulunmaktadır. Bu husus çalışmanın temelini teşkil etmektedir.

Anahtar Kelimeler: Bölgesel istikrar, Güney Kafkasya, Zengezur Koridoru

The Importance of the Zangezur Corridor in terms of Regional Cooperation and Stability

ABSTRACT

At the end of the Second Nagorno-Karabakh War, which resulted in the historic victory of Azerbaijan, new geopolitical and geostrategic realities emerged in the South Caucasus region. At the end of the war, Azerbaijan restored its sovereignty over all its territories within the framework of international law. The consolidation of Azerbaijan's position as a leading country in the South Caucasus was one of the most important consequences of the war. Azerbaijan has new prospects as a result of maintaining its long-standing regional economic leadership backed by political and military leadership. In this context, a favorable geopolitical atmosphere has emerged that will expedite regional infrastructure projects with an economic focus. The strategic importance of the Zangezur Corridor within these projects makes it extremely important. Through the corridor, Europe and Asia will be able to cooperate economically. In this case, the geostrategic importance of Azerbaijan will be further strengthened and it will take on a stability-building framework. The Zangezur Corridor, which is a natural part of the One Belt, One Road global transportation project, will make regional and international trade more comprehensive. Thus, the South Caucasus will no longer be associated with conflict, but with economic stability. In the short and medium term, an environment of economic cooperation will be created between the countries of Central Asia, especially between the neighboring regions. At the same time, there will be a comprehensive increase in Azerbaijan's trade with Turkey.

This study examines the economic, commercial, and strategic prospects of the Zangezur Corridor on several levels. This corridor has the potential to have a direct impact on regional stability and cooperation. The study is based on this issue.

Keywords: Regional stability, South Caucasus, Zangezur Corridor

GİRİŞ

Ulaşım yolları bölgesel ve küresel ticaretin en önemli araçlarından birisi olarak karşımıza çıkmaktadır. Küreselleşmenin getirdiği ekonomik olanaklardan faydalanmak için ulaşım koridorlarının çeşitlenmesi önem arz etmektedir. Bu çerçevede Güney Kafkasya bölgesi jeoekonomik olarak küresel ticareti oluşturan ulaşım ağlarının merkezinde bulunmaktadır. Bölgenin stratejik konumunun sunduğu fırsatların bu bağlamda ele alınmasında fayda vardır. Azerbaycan'ın Ermenistan üzerinde elde ettiği tarihi zaferin ardından, bölgesel ekonomik iş birliği faaliyetleri açısından yeni olanaklar meydana çıkmıştır. 9 Kasım 2020'de Rusya'nın arabuluculuğunda, Azerbaycan ve Ermenistan arasında savaşı sona erdiren anlaşma bu hususlar özellikle vurgulanmıştır. Bu bağlamda Zengezur Koridoru daha sonraki dönemde bölge gündeminin en önemli konusu haline gelmiştir. Bu koridorun bölgesel istikrara ve refaha büyük katkı sağlayacağı açıktır. Koridor sayesinde, bölge ülkeleri arasındaki ulaşım, ticaret ve iletişim önemli ölçüde artacaktır.

Çalışmamızda Zengezur Koridoru'nun kazanımları jeostratejik ve jeoekonomik boyutlarıyla irdelenmektedir. Çalışmamız üç bölümden oluşmaktadır. İlk bölümde, Karabağ zaferi sonrası Güney Kafkasya'da meydana çıkan yeni jeopolitik gerçekliğin ve bu gerçekliğin sağladığı koşullardan bahsedilmektedir. İkinci bölümde, Zengezur Koridoru'nun bölgesel jeostratejik ve jeoekonomik önemi anlatılmaktadır. Üçüncü bölümde bölgesel ve küresel aktörlerin projeye bakış açısı incelenmekte ve bu çerçevede ilgili aktörlerin tutumları analiz edilmektedir. Sonuç bölümünde ise konu genel yönleriyle ele alınmaktadır.

Karabağ Zaferi Sonrası Güney Kafkasya'da Ortaya Çıkan Yeni Jeopolitik Gerçeklik

Azerbaycan'ın 44 günlük İkinci Karabağ Savaşı'nda Ermenistan üzerinde elde ettiği tarihi zaferin ciddi ve kalıcı bölgesel sonuçları olmuştur. Ermenistan tarafından işgal edilen Karabağ'ın kurtarılmasıyla yeni bir bölgesel jeopolitik düzen ortaya çıkmıştır. Bu yeni jeopolitik düzen, Azerbaycan'ın Güney Kafkasya'daki bölgesel liderliğini tescil etmiş ve aynı zamanda yeni yapıcı iş birliği olanaklarını da meydana çıkarmıştır.

Azerbaycan savaşın galibi olarak yeni jeopolitik gerçekliğin sunduğu fırsatları değerlendirme yolunu tercih etmiş ve bu çerçevede özellikle ekonomik temelli alt yapı organizasyonlarına öncelik vermiştir. Azerbaycan Cumhurbaşkanı İlham Aliyev “ Karabağ zaferinin sonuçlarının uluslararası toplum tarafından tam anlamıyla artık kabul gördüğünü ve dünyanın Azerbaycan'ın haklı durumunu onaylandığını” ifade etmiş ve ayrıca “zafer sonrası elde edilen kazanımların pekiştirilmesinin önemini vurgulamıştır” (Aliyev, 2023). Yeni jeopolitik gerçekliğin getirdiği fırsatlar bölgesel iş birliğinin önünü açmıştır. Bu koşullarda Güney Kafkasya'da yeni iş birliği formatı geliştirme ihtiyacı doğmuştur. Bu çerçevede “ticaretin önündeki engellerin kaldırılması, ortak girişimler, dijital ekonominin gelişimi, ulaşım ve turizm alanındaki temasların artması bütün bölge ülkelerinin çıkarınadır” (Lavrina, 2020:1).

Azerbaycan lideri Aliyev, kazanılan askeri zaferin diplomatik yollarla pekiştirilmesini temel stratejisi haline getirilmiştir. Güney Kafkasya'da çıkarları bulunan Rusya, ABD ve Fransa gibi aktörlerin Ermenistan'la ilişkileri ortadayken, bu stratejiyi hayata geçirmek oldukça zordu. Ancak Azerbaycan özellikle Türkiye'nin siyasi-diplomatik desteğini de arkasına alarak, söz konusu stratejiyi büyük ölçüde hayata geçirmeyi başarmıştır. Türkiye'nin son yıllarda Rusya ile inşa ettiği yapıcı iş birliği mekanizması, Güney Kafkasya'da olumlu stratejik sonuçların meydana çıkmasına zemin hazırlamıştır. Diğer taraftan ise Azerbaycan'ın İsrail'le yakın ilişkileri, Amerika Birleşik Devletleri'nin (ABD) de süreçteki rolünü belirleyen bir konuma

sahip olmuştur. Kuşkusuz, bu durum ABD'nin kendi ulusal çıkarlarıyla da doğrudan bağlantılıydı. Çünkü Azerbaycan sahip olduğu coğrafi konum ve enerji kaynakları ile bağımsızlığından günümüze ABD politikaları açısından önemli bir ülke konumundaydı. Bu durum aynı zamanda bölgedeki ABD-Rusya rekabetinin de gelişim istikametine yön vermektedir.

Fransa veya genel anlamda Avrupa Birliği (AB) ise “kısıtlı jeopolitik araçlara” sahipti ve bu nedenle bölgesel dinamiklerde belirleyici bir statüye sahip değildi. Aynı zamanda Azerbaycan'ın sürekli üzerinde durduğu ekonomik alt yapı konusu, Çin'in de bölgesel çıkarlarıyla örtüşmekteydi. Dolayısıyla Azerbaycan Cumhurbaşkanı Aliyev'in savaş sonrası oluşturduğu diplomatik zemin, bölgeye ilgi duyan aktörlerin tutumlarını etkilemiştir. Türkiye'nin bu süreçte oynadığı rol ise hem belirleyici hem de tayin ediciydi.

Şubat 2022'de Rusya'nın Ukrayna'ya saldırmasıyla birlikte, Azerbaycan'ın stratejik önemi bir daha öne çıkmıştır. AB'nin enerjide bağımlı olduğu Rusya ile ilişkilerde yaşadığı sorunlar ve bu bağlamdaki yaptırımları, alternatif pazarların ön plana çıkmasına sebep olmuştur. Bu çerçevede Azerbaycan'ın sahip olduğu enerji kaynaklarının Avrupa'ya ulaşımı konusu gündeme gelmiş ve böylece Azerbaycan ve AB arasında temaslar yoğunlaşmıştır. Bu durum Azerbaycan'ın savaş sonrası inşa etmeye çalıştığı siyasi-diplomatik zeminin geçerliliğini ve etki alanını artıran bir faktör olmuştur. Bölgedeki yeni gerçeklikleri kabul etmeyen iki aktörün varlığını da burada ifade etmek gerekmektedir. Bunlar, Ermenistan içerisinde var olan rövanşist fraksiyonlar veya klanlar, diğeri ise Azerbaycan'ın güney komşusu İran olmuştur. Çalışmamızın ileriki bölümlerinde bu iki aktörün hem savaş sonrası ortaya çıkan yeni jeopolitik gerçekliğe, hem de Zengezur Koridoru bağlamındaki yapıcı olmayan tutumlarına etraflıca değinilecektir.

Zengezur Koridoru'nun Bölgesel Jeostratejik ve Jeoekonomik Önemi

8 Kasım 2020'de Azerbaycan'ın kültür başkenti ve Karabağ'ın sembolü olan Şuşa şehrinin kurtarılmasının ardından, Ermenistan yenildiğini ve teslim olduğunu açıklamış ve 9 Kasım 2020'de Rusya'nın arabuluculuğunda, Azerbaycan ve Ermenistan arasında savaşı sona erdiren anlaşma yapılmıştır. Anlaşma'nın 9. Maddesi savaş sonrası kurulacak olan ulaşım yollarıyla doğrudan bağlantılıydı. Buna göre, “bölgedeki bütün ekonomik ve ulaşım ağları restore edilecek ve Ermenistan Cumhuriyeti, vatandaşların, araçların ve yüklerin her iki yönde engelsiz hareketini organize etmek için Azerbaycan Cumhuriyeti'nin batı bölgeleri ile Nahcivan Özerk Cumhuriyeti arasındaki ulaşım bağlantılarının güvenliği garanti altına alınacaktı” (Prezident.az, 2020). Anlaşma, “Azerbaycan'ın bir Avrasya ulaşım merkezi olma hedefine yönelik önemli bir adım olan Zengezur Koridoru'nun önündeki engeli kaldırırken; bölgesel refaha da önemli katkıda bulunacaktı” (Khan, 2021). Anlaşma çerçevesinde taşıma kontrolü, Rusya Federal Güvenlik Servisi'nin (FSB) sınır servisi tarafından gerçekleştirilecekti. “Tarafların anlaşmasına dayanarak, Nahcivan Özerk Cumhuriyeti ile Azerbaycan'ın batı bölgelerini birbirine bağlayan yeni ulaşım ağlarının inşası sağlanacaktı” (Prezident.az, 2020). Anlaşma'nın 9. Maddesinden yer alan hususlar, Zengezur Koridoru'nun hayata geçirilmesinin hukuki dayanağını oluşturmaktaydı. Çünkü bu madde bölgedeki bütün ekonomik ve ulaşım hatlarının restorasyonunu öngörmekteydi. Bu bağlamda Ermenistan yönetimi bu koridoru açma taahhüdünü yerine getirmeliydi (Aliyeva, 2021).

Zengezur'un tarihsel konumuna bakıldığında, bölgenin kadim Türk yurdu olduğu görülmektedir. 30 Kasım 1920'de Ermenistan'a verilen bu topraklarda yüzyıllarca Türklerin yaşadığı muteber tarihsel kaynaklarda kendine yer edinmiştir (AzerTac, 2021). 1920'den

itibaren Azerbaycan'la Nahçıvan bölgesi arasındaki kara ulaşımı ortadan kalkmış ve aynı zamanda Azerbaycan'ın Türkiye ile de kara bağlantısı kesilmiştir.

Zengezur Koridorunun işlek hale gelmesi açısından Horadiz'den Nahçıvan'ın Ordubad iline uzanan 166 kilometrelik yeni demir yolu hattı inşa edilmesi oldukça önem ihtiva etmektedir.

“Hattın Ermenistan kısmından, Zengezur bölgesinden geçecek 43 kilometrelik bölümünün inşaatı için Azerbaycan ile Rusya görüşmeler yapması öngörülmekteydi. Ordubad'dan Nahçıvan'ın kuzeyinde bulunan; Türkiye, Ermenistan ve İran'a yakın Velidağ istasyonuna kadarki 158 kilometrelik hat ise kapsamlı olarak tamir edilecektir. Velidağ'da biten hat, Ermenistan sınırına kadar 14 kilometre uzatılacaktır” (TRT Avaz, 2023).

“Ermenistan, bölgedeki barış arayışlarına katkı sağlamaya karar verilmesi ve bu ulaşım projelerine katılması halinde, kendi demir yolu hattını Bakü'den Horadiz'e, Horadiz'den de Nahçıvan'ın kuzeyine kadar olan bu hatla birleştirebilecektir. Böylece Ermenistan, Rusya ve İran'a kesintisiz ulaşım elde edebilecektir” (TRT Avaz, 2023).

Azerbaycan kendi topraklarından geçen hattın büyük bir kısmını hayata geçirmek üzeredir. Azerbaycan bu istikamette iki projeyi gerçekleştirmektedir. Birinci proje Horadiz-Zengilan-Akbend demir yolu hattıdır. İkincisi ise Horadiz-Cebrayıl-Zengilan-Akbend kara yolu hattı projesidir (Bahşaliyev, 2022). Bu bağlamda Zengezur Koridoru aynı güzergahtaki bir kara yolu projesini de kapsayan mega bir içeriğe kavuşmaktadır. 110,4 kilometrelik ve 8 istasyondan (Horadiz, Mercanlı, Mahmutlu, Soltanlı, Kumlak, Mincivan, Bartaz ve Akbend) oluşan Horadiz-Zengilan-Akbend demir yolunun bu yıl içerisinde açılması öngörülmektedir. 26 Ekim 2021'de Azerbaycan Cumhurbaşkanı Aliyev ile Türkiye Cumhurbaşkanı Recep Tayyip Erdoğan'ın birlikte temelini attığı Horadiz-Cebrayıl-Zengilan-Akbend kara yolunun inşası da hızlı bir şekilde devam etmektedir. 123,6 kilometrelik yolun 2024'de bitirilmesi öngörülmektedir (Bahşaliyev, 2022).

Zengezur Koridoru bölgenin jeostratejik manzarasını derinden etkileyecek potansiyele sahiptir. Bölgedeki ulaşım koridorlarını tek merkeze toplayacak olması sebebiyle de ayrıca önemlidir. Kuşkusuz bölgesel refahı artıracak bu durum, aynı zamanda çatışmacı retoriğin yerine istikrar ve uzlaşma kavramlarının bölgedeki konumu güçlendirecektir. Proje, bölgesel ekonomik mekanizmaların gelişmesi yönünde ciddi fırsatlar ortaya çıkaracaktır. Koridor vasıtasıyla Türkiye-Rusya, Rusya-İran ve Rusya-Ermenistan arasında doğrudan demir yolu hattı inşa edilecektir. Bu durum bölgesel stratejik, ekonomik ve siyasi ilişkilerin gelişimine önemli katkı sağlayacaktır (Bahşaliyev, 2022).

Bölgesel ve Küresel Aktörlerin Zengezur Koridoruna Yaklaşımları

Nikol Paşinyan yönetimindeki Ermenistan ciddi bir yol ayırımındadır. Bu çerçevede Zengezur Koridoru'nun Ermenistan'a sağlayacağı sosyal ve ekonomik faydalardan hangi ölçüde yararlanacağı dikkat merkezindedir. Ermenistan içinde bulunduğu ağır ekonomik durumdan çıkmak için Azerbaycan ile uzlaşmak mecburiyetindedir. Bu bağlamda Zengezur Koridoru önemli fırsattır.

Bölge ülkelerinden Gürcistan'ın yaklaşımı temkinlidir. Bu koridor Gürcistan'ın savaşa kadar olan süreçteki stratejik rolünü azaltsa bile, bölgede yeni iş birliği modellerinin ortaya çıkması açısından önemli bir örnektir. Bu nedenle Gürcistan'ın bu gerçekliği göz ardı etmeyeceği ve yeni fırsatları değerlendireceği düşünülebilir. Çünkü koridorun temel hedefi ve amacı bölgesel refah ve istikrarın sağlanmasına yöneliktir.

Zengezur Koridoru, Türkiye ile Azerbaycan arasındaki stratejik iş birliğinin derinleşmesini hızlandıracaktır. Türkiye tarihsel ve kültürel bağları olan diğer Türk Dünyası ülkeleriyle de bu koridor vasıtasıyla buluşacaktır. Zengezur Koridoru, Türkiye'nin ulaştırma politikalarında

önemli bir yer tutan *Orta Koridor Girişimi*'nin doğal bir parçasıdır. Çin'den Türkiye'ye kadar uzanan Orta Koridor, bölgesel refahın ve istikrarın teminatı olarak ön plana çıkmaktadır. *Orta Koridor* güzergahında bulunan coğrafya, Türkiye'nin tarihsel ve kültürel ortakları olan Orta Asya ve Kafkasya'yı bir araya getirmektedir. Bu sebeple bu girişimin stratejik, sosyal, kültürel ve ekonomik anlamı oldukça ehemmiyetlidir.

Türkiye aynı zamanda Zengezur Koridoru'nun üzerinden Rusya ile olan ticari ve ekonomik ilişkilerini güçlendirecektir. Bu koridorla iki ülke demir ve karayoluyla çok boyutlu bir iletişim ağına sahip olacaklardır. Türkiye Karabağ zaferindeki belirleyici konumuyla, hem jeostratejik hem de jeoekonomik bağlamda bölgedeki ulaşım projelerinin hayata geçmesini öncelayan bir tutuma sahiptir. Bu durum Azerbaycan'ın da stratejik çıkarlarıyla uyumludur. Dolayısıyla Zengezur Koridoru'nun faaliyete geçmesi Türkiye ve Azerbaycan'ın Güney Kafkasya'daki rolünü daha da pekiştirecektir.

Koridorun faaliyete başlaması Rusya'nın da stratejik çıkarlarını karşılamaktadır. Rusya özellikle Ukrayna savaşı nedeniyle Avrupa Birliği ile ciddi sorunlar yaşamaktadır. Rusya'nın Avrupa ulaşım haritasına alternatif olarak yeni arayışlarda olduğu ortadadır. Bu çerçevede Zengezur Koridoru önemli bir alternatif güzergâhtır. Rusya mevcut koşullarda koridorun hayata geçmesi önünde herhangi bir engel görmemekte ve bu projenin bölgesel ekonomik istikrara olan katkısına vurgu yapmaktadır (Tass, 2023). Rusya-Azerbaycan sınırından başlayan ve Bakü üzerinden Alat kasabasına kadar mevcut olan E119 karayolu ile Saatli kentinden Horadiz'e uzanan E002 karayolu Zengezur Koridoru'na bağlanacaktır (Petrov, 2023). Horadiz kentinden E002 karayolu batıya, Azerbaycan'ın Ermenistan ve İran sınırlarının birleştiği noktaya kadar uzanacaktır. Oradan ise Ermenistan veya İran üzerinden Nahcivan'a ulaşacak ve Türkiye'ye bağlanacaktır. Buradan ise E99 karayoluyla güzergah sürdürülecektir (Petrov, 2023). Rusya için Zengezur Koridoru Türkiye ve Ermenistan'a önemli bir karayolu erişimi sağlayacaktır. Rusya Türkiye ve Ermenistan'a kötü hava koşulları nedeniyle sürekli kapatılan Gürcistan topraklarındaki askeri otoyolu aracılığıyla ulaşmaktadır. Zengezur Koridoru'nun açılmasıyla doğrudan ulaşım sorunu giderilecektir. (Petrov, 2023).

Zengezur Koridoru'na olumsuz bir yaklaşım sergileyen ülkelerin başında İran gelmektedir. İran hem Birinci Karabağ Savaşı'nda hem de Azerbaycan'ın zaferiyle sonuçlanan İkinci Karabağ Savaşı'nda Ermenistan'ı açık bir şekilde destekleyen ülke konumundadır. İran, İkinci Karabağ Savaşı sonrası yaptığı politik ve ekonomik eylemlerle Güney Kafkasya'daki kalıcı istikrarı ve refahı baltalayan bir görüntü çizmektedir. 30 milyona yakın Azerbaycan Türkü'nün yaşadığı bir ülke olan İran, bu politikasıyla bir tehdit unsuru olarak görülmektedir. Koridorun açılmasıyla birlikte İran'ın Avrupa'ya açılan en güvenilir kapısı olan Ermenistan rotasının tehlikeye girmesi düşünülmektedir. Gri bölge olarak da isimlendirilen söz konusu rotanın "İran tarafından yaptırımları delmek ve Avrupa'ya uyuşturucu kaçakçılığı yapmak üzere kullanıldığında dair iddialar bulunmaktadır" (Farzam, 2022).

İran ayrıca Azerbaycan ve Türkiye'nin bölgedeki oyun kurucu niteliğini kendisi açısından bir tehdit olarak görmektedir. Güney Azerbaycan'da yaşayan milyonlarca Türk'ün bu durumdan etkileneneğini varsaymaktadır. Ancak bu noktada hem Türkiye'nin hem de Azerbaycan'ın İran'ın toprak bütünlüğüne saygı duyduğunu söylemek mümkündür. Dolayısıyla bu tür bir tehdidin mevcudiyeti söz konusu değildir. Esasında ise İran elinde bulundurduğu "farklı tarihsel yöntemler ve araçlarla", Azerbaycan içerisinde istikrar bozucu bir fonksiyon yerine getirmekte ve bu ülkenin bağımsız bir dış politika izlemesini sindirememektedir. Türkiye ve Azerbaycan'ın bu koridoru bir refah koridoru olarak görmelerine ve bu süreçte İran'ı da dışlamayan yapıcı tutumlarına rağmen, İran farklı saiklerle hareket ederek günümüz itibarıyla Zengezur Koridoru'na oldukça mesafeli yaklaşmaktadır.

Zengezur Koridoru geniş anlamda *Tek Kuşak Tek Yol* girişiminin de doğal bir parçası halindedir. Bu nedenle Çin'in projeye bakış açısı olumludur. Bu koridorun hayata geçmesi Tek Kuşak Tek Yol girişiminin ivme kazanmasına zemin hazırlayacaktır. Çin'in bölgedeki varlığı giderek artmaktadır. Bu durumda Azerbaycan'ın özellikle alt yapı projelerinde bu ülkeyle iş birliğini derinleştirdiğini gözlemek mümkündür. Bütün bunlar göz önünde bulundurulduğunda, güncel uluslararası ilişkiler koşullar çerçevesinde Çin'in bu koridora olan yaklaşımının olumlu olduğunu vurgulamak mümkündür.

ABD'nin Zengezur Koridoru'na yaklaşımını etkileyen birkaç önemli neden mevcuttur. Ermenistan Başbakanı Paşinyan'ın ABD ile yakın iş birliğinde faaliyet gösterdiği bilinen bir husustur. Bu bağlamda ağır bir yenilgi alan Paşinyan'ın Ermenistan siyasetindeki konumu doğrudan ABD'yi ilgilendirmektedir.

İran'ın bölgesel etkisinin azaltılması ABD tarafından önemli hedeflerdendir. Küresel ölçekte ise Rusya'nın bölgedeki nüfuzunu azaltacak herhangi bir eylem Amerikan çıkarlarıyla uyumludur. ABD'nin Azerbaycan politikasında İsrail'in de azımsanmayacak bir rol oynadığının da altı çizilmelidir. İsrail'in İkinci Karabağ Savaşı'nda Azerbaycan'a verdiği destekte kuşkusuz İran meselesi belirleyici rol oynamıştır. Ancak ABD'nin kendi ulusal çıkarlarını açısından bakıldığında, Azerbaycan'ın Ermenistan üzerinde kurduğu üstünlükten hoşnut olmadığını söylemek mümkündür. Zengezur Koridoru uzun vadede Türkiye'nin bölgedeki etkinliğini daha da artıracak niteliktedir. Bu durum ABD'deki Ermeni diasporasının da varlığı göz önünde bulundurulduğunda, ABD'nin Güney Kafkasya politikasını temel gündem maddelerinden birisini teşkil etmektedir.

Ayrıca Türkiye'nin Rusya ile Güney Kafkasya'daki uyumlu iş birliği Amerikan çıkarlarıyla örtüşmemektedir. Zengezur Koridoru'nun Türkiye ve Rusya arasında ticari-ekonomik bir ivme kazandıracağı ortadayken, ABD'nin projeye müspet bir perspektiften bakması mümkün görünmemektedir. Yine küresel rekabet açısından Çin'in Tek Kuşak Tek Yol girişimi çerçevesinde Güney Kafkasya'daki etkin durumu ABD'nin çıkarlarını doğrudan etkilemektedir. ABD, Ermenistan'ın Türkiye ve Azerbaycan'la uyumlu ve yapıcı ilişki kurmasını bu koşullarda arzu etmemektedir. Karabağ zaferinden önceki konjonktürde ABD, Rusya'nın bölgesel nüfuzunu kırabilmek adına bu ilişkilerin gelişimini desteklemekteydi. Ancak yeni jeopolitik koşullarda ve farklı dinamiklerin var olduğu bir süreçte, bölgesel iş birliği Amerikan çıkarlarıyla zıtlık oluşturmaktadır.

ABD'den farklı olarak İngiltere, Pekin'den Londra'ya uzanacak ulaşım projelerine olumlu bir bakış sergilemektedir. Bu noktada ABD'nin "küresel rekabet zorunluluğu" gayesinden hareket ettiğini, İngiltere'nin ise "yeniden küresel rekabet düzlemine çıkma" mottosuyla motive olduğunu unutmamak gerekmektedir. Her ne kadar bu iki güç küresel Anglo-Amerikan hakimiyetinin taşıyıcı kolonlarını oluştursalar da, stratejilerinde ve yaklaşımlarında muhtelif düzeyli/nüans odaklı farklılıkların olması uluslararası ilişkilerin doğasına ve işleyiş biçimine aykırı değildir. Çünkü yeni uluslararası koşullarda, ABD'nin küresel üstünlüğünü koruma refleksinden hareket ederek ve çoğu zaman realist olmayan yaklaşımlar sergilediği göz ardı edilmemelidir. Diğer taraftan ise İngiltere'nin eski alışkanlıklarının günümüz uluslararası ilişkilerinde geçerli olmaması nedeniyle çıkmazda olduğu gerçektir. İngiltere'nin aynı zamanda ABD'nin sahip olduğu güç kapasitesine ulaşma zorluklarıyla karşı karşıya kaldığını gözlemek mümkündür. Bütün bu etkenler İngiltere'yi tarihsel çıkarımlarla hareket etmeye yönlendirmektedir. İngiltere'nin Zengezur Koridoru'na yaklaşımını bu açıdan ele almak faydalı olacaktır.

SONUÇ

Zengezur Koridoru bölgenin çehresini olumlu bir istikamette deęişecek imkanları ve potansiyelleri kendisinde ihtiva etmektedir. İstikrar ve refahın armasına büyük katkıda bulunması sebebiyle, özellikle Türkiye, Azerbaycan ve Rusya gibi bölge ülkelerinin dış politikalarında önemli bir konuma sahiptir. Bu yönüyle koridorun hem siyasi hem de ekonomik getirileri ön plana çıkmaktadır.

Teknik anlamda projenin gerçekleştirilmesi istikametinde Azerbaycan önemli bir mesafe katetmiştir. Bu noktada temel mesele siyasi anlamda ilerlemelerin kaydedilmesi olacaktır. Ermenistan'ın koridora yıkıcı deęil, yapıcı bir perspektifle yaklaşması bu bağlamda önem taşımaktadır. Ermenistan'ın içinde bulunduğu ekonomik sorunların aşılmasında Zengezur Koridoru'nun faaliyete başlaması kilit rol oynayacaktır. Ermenistan, Azerbaycan'ın toprak bütünlüğünü tanıyarak ikili ve çok yönlü bölgesel ekonomik projelerde yer alabilir.

Sonuç olarak, Güney Kafkasya'da bölgesel barış atmosferinin oluşmasında ulaşım, ticaret ve iletişim gibi araçların belirleyici bir role sahip olacağı aşıkardır. Zengezur Koridoru tam anlamıyla bölgesel istikrarın sağlanması bağlamında özel ve önemli bir projedir.

ÖZET

Son zamanlarda giderek artan bilgi ihtiyacı, fon akışları, risk yönetimi vb. gibi olayların gündeme gelmeye başlaması başta düzenleyici otoriteler olmak üzere işletmelerin birçoğunda kurumsal yönetim uygulamalarına olan ihtiyacı arttırmıştır. Bununla birlikte denetim faaliyetlerinin gerçekleştirilmesi ve risklerin önceden tespit edilmeye çalışılması ile ilgili işlemlerin de giderek önem kazandığı görülmektedir. Denetim ve risk komitesi etkinliğinin de işletmelerin kurumsal yönetimi açısından önem taşıdığı bir diğer önemli husus olmaktadır.

Bu çalışma BİST 100 endeksinde yer alan bankacılık sektöründeki şirketler üzerine gerçekleştirilmiştir. KAP üzerinden bankalara ilişkin veriler doğrultusunda çalışma hipotezleri test edilmiştir. Çalışma sonucunda hem denetim komitesi hem de risk komitelerinin etkinliği ile pay sahipleri ilkesi, kamuyu aydınlatma ve şeffaflık ilkesi, menfaat sahipleri ilkesi ve yönetim kurulu ilkesi uygulamaları arasında olumlu bir ilişki tespit edilmiştir. Ayrıca hem denetim komitesi hem de risk komitelerini etkinliği ile toplantı sayıları arasında anlamlı bir ilişki bulunmuştur. Kısaca bankalarda denetim komitesi ve risk komitelerinin etkinliği kurumsal yönetim ilkelerine olan bağlılığı artırmakla birlikte kurumsal yönetim raporlarının güvenilirliğini arttırmaktadır. Ayrıca bankalarda toplantı sayılarının artması denetim ve risk komitelerinin etkinliğini arttırdığı belirlenmiştir.

The Effect of Audit And Risk Committee Effectiveness on Corporate Governance Reports in Banks: An Application At BIST

ABSTRACT

In recent times, the ever-increasing need for information, fund flows, risk management, etc. The emergence of such incidents has increased the need for corporate governance practices in many enterprises, especially regulatory authorities. However, it is also seen that the procedures related to the realization of audit activities and trying to identify risks in advance are becoming increasingly important. The effectiveness of audit and risk committees is another important issue in terms of corporate governance.

This study was conducted on companies in the banking sector included in the BIST 100 index. The study hypotheses were tested in line with the data on banks via KAP. As a result of the study, a positive relationship was found between the effectiveness of both audit and risk committees and the implementation of the shareholders' principle, the public disclosure and transparency principle, the stakeholders' principle and the board of directors' principle. In addition, a significant relationship was found between the number of meetings and the effectiveness of both audit and risk committees. In short, the effectiveness of audit and risk committees in banks increases the commitment to corporate governance principles and increases the reliability of corporate governance reports. In addition, it has been determined that the increase in the number of meetings in banks increases the effectiveness of audit and risk committees.

Keywords: Risk Management, Audit, Audit Committee, Corporate Governance Reports

INTRODACTION

The occurrence of unethical behaviors such as problems encountered during the implementation of accounting and auditing standards in enterprises, preparation of erroneous audit reports, emergence of unexpected risks that threaten the existence of the enterprise, and the independence problem arising from the relationship with the consultancy firm cause great damage to both the corporate governance understanding and the audit and risk management of the enterprises. Scandals that are closely related to issues such as accounting, finance and auditing and have a high risk dimension (e.g; Enron, WorldCom, Adelphia and Parmalat) revealed the necessity of both corporate governance and a quality risk and audit management approach. This situation has accelerated the formation of audit committees as well as committees such as early detection of risk / risk committees.

The audit committee, which is among the basic elements of corporate governance, is a committee that is responsible for conducting both internal audit and independent external audit processes of enterprises, and impartially monitors internal control and financial reporting processes. In addition, audit committees contribute to the success of the financial reporting process of the enterprises by eliminating or reducing the errors and frauds that may arise, reducing the effects of management failures on all stakeholders, and protecting the interests of stakeholders. Another effective and equally important committee in corporate governance is the early detection of risk or risk committee. This committee, which is defined as the risk committee in some sources and as the early detection of risk committee in others, helps to identify all kinds of risks that may jeopardize the existence of the enterprises in advance. In summary, it contributes to the active management of risk.

The effective and successful operation of audit and risk committees established in enterprises, especially in enterprises whose shares are traded on stock exchanges, will be reflected positively on both the corporate governance understanding and the reporting to be created within the framework of the corporate governance understanding. It is an accepted fact that every business, regardless of its field of activity, needs an effective audit and risk committee. In particular, since financial events in banks have increased this need, banks have started to attach importance to studies such as effective independent audit and risk management. In this context, the study aims to investigate the effect of audit and risk committee effectiveness on corporate governance reports of banks, one of the important sectors traded on the stock exchange. In the first part of the study, concepts such as audit committee, early detection of risk committee/risk committee and corporate governance are mentioned. In the next section, the literature research on the subject is mentioned and in the last section, analysis and evaluations are included within the framework of the purpose of the study.

1. CONCEPTUAL FRAMEWORK

Audit committees are committees that contribute to the independence of the independent auditors and assist them in the audit. They are also defined as administrative commissions that are carefully selected to ensure that certain measures and financial reporting are carried out smoothly during the audit process. In addition to contributing to the internal control process within the enterprise, audit committees have an important place in the corporate governance elements of enterprises by acting as a bridge between the auditor and the enterprise. Therefore, it plays a major role in protecting the interests of both shareholders and stakeholders (Toksoy, 2015:77). Audit committees are an essential element of good corporate governance. It is also referred to as the commission responsible for monitoring internal control, financial reporting and risk management processes in both internal and external audits of companies. According to The American Institute of Certified Public Accountants (AICPA); "is a structure consisting of

independent external managers of publicly traded companies, who appoint auditors during the audit process and discuss together about the work to be performed by the auditors" (Celayir, 2017:8).

According to these definitions of audit committees, it is seen that the importance of audit committees in terms of strengthening the financial structures of enterprises operating in both the private and public sectors is increasing day by day. Audit committees have important duties. These tasks are as follows (Dağlı, 2000):

- In connection with the monitoring and auditing of financial reports, assisting the Board of Directors in the preparation of reports prepared for submission to third parties in an impartial, fair manner and in compliance with accounting standards,
- To contribute to the Board of Directors regarding the fees to be paid as a result of the audit services provided by the independent auditors,
- To make recommendations to the board of directors on matters such as the re-appointment or dismissal of the independent auditors, Yönetimle bağımsız denetçi arasında anlaşmaya varmak,
- To provide oversight on behalf of the board of directors on the adequacy and deficiencies of the internal control system of enterprises,
- To receive information from the head of the internal audit unit on issues that may pose a risk to the business,
- To provide assurance to the board on the scope and adequacy of the independent audit,
- To examine the internal audit plan within the framework of compliance and to provide information to those concerned on the details of the subject.

The success of corporate governance is closely related to the effective execution of audit committees. It is seen that the recent accounting scandals have increased the need for a corporate governance approach and that scandals have been brought under control with this corporate governance approach (Erol, 2005:230).

The concept of corporate governance, which brings important changes in the field of accounting and auditing, is a concept that triggers the improvement of the board of directors (Gökoğlan, 2022:286). A successful corporate governance approach in businesses is defined as a management that emphasizes ethical concepts such as responsibility, understandability, reliability and fairness (Öztürk & Demirgüneş, 2008:400). Another definition of corporate governance is that the company management acts with a sense of responsibility towards the parties in the company's activities; It is a system created in accordance with the laws and ethical values that aims to increase the value and efficiency of the enterprise within the framework of a purpose that respects the rights of all parties. The simplest definition according to the Organisation for Economic Co-Operation and Development (OECD) is the system by which companies are directed and controlled (Güngör & Güney, 2019: 38).

For businesses, the concept of risk is defined as the possible occurrence of events that may cause damage, loss and danger (Şahin, 2016: 289). The determination of risk in companies is based on agency theory. In this theory, there is an agent who delegates managerial powers to the principal through a contract to manage the company on his behalf (Töre, 2021: 147). The main objective of both sides is utility maximization and this objective paves the way for information asymmetry between the parties. Identifying and reporting risks is considered as one of the methods to be used to minimize information asymmetry.

TKK No. 6267, which entered into force in 1956, did not have any regulation on risk and early detection of risk in companies. However, in the TCC No. 6102, which entered into force in 2012 and was regulated based on corporate governance principles, Art. 378 began to use the term 'early detection and management of risk'. However, Art. 378 does not explicitly define the risk of companies. This concept was first defined in Article 4/1-c of the Principles Regarding the Auditor's Report on the Early Detection and Committee of Risk (to be briefly expressed as the Principles Regarding the Auditors' Report) issued by the Public Oversight Authority in 2014 as "The possibility of developments that may threaten the existence, development and continuity of the Company" (Töre, 2021:147).

The concept and management of risk is a new issue that has found its place in our legislation with TCC No. 6102. Early detection of the hazards that may be encountered in order to minimize the risks that endanger the continuity of the companies is an inevitable necessity in today's market conditions. For this reason, Article 378 of the TCC states that "In companies whose shares are traded on the stock exchange, the board of directors is obliged to establish an expert committee, to operate and develop the system in order to diagnose the reasons that endanger the existence, development and continuation of the company, to implement the necessary measures and remedies for this purpose and to manage the risk In other companies, this committee shall be established immediately upon the auditor deems it necessary and notifies the board of directors in writing, and shall submit its first report at the end of one month following its establishment. In its bimonthly report to the Board of Directors, the Committee assesses the situation, points out the dangers, if any, and suggests remedies. The report is also sent to the auditor." (Dal, 2013: 91). This article aims to inform the board of directors of all kinds of risks concerning the company and to make some recommendations to the board of directors of the company on taking the necessary measures against the identified risks and implementing the necessary measures according to the characteristics of the concrete events. This way, on the one hand, risk situations are identified in advance and the company is prevented from incurring major losses, and on the other hand, management is enabled to respond to risks in a timely manner. This contributes to the protection of both shareholders and stakeholders (Töre, 2021:151).

In order to detect risks early, it is useful to identify the elements that may pose risks for businesses in advance (Kloman, 1992: 299-301). This is possible through risk management. Businesses, which need committees to manage and monitor risk, strive to ensure that their committees, called early detection of risk or risk committees, which have recently emerged and started to gain importance, are active.

2. LITERATURE REVIEW

Concepts such as audit, risk management and corporate governance, which have recently gained importance in Turkey as in all countries of the world, have paved the way for enterprises to pay more attention to audit, risk committees, corporate governance and financial reporting process. Businesses have started to closely follow relevant developments to make the process more quality and efficient through active committee activities. Both in the business world and in the academic community, research has begun to be conducted due to the importance of the issue. Some of the academic studies on the subject that can be accepted within the scope of the theme of the study are given below.

Çalışkan and İçke (2010), in their study, which aims to reveal that corporate governance in the banking sector is different from the other sectors, provided information about the corporate governance practices of the banks whose stocks are traded on the ISE, examined the reports

prepared within the scope of corporate governance and revealed the factors affecting these reports. In addition, an assessment was made on the status of corporate governance practices in this sector. Yakar (2015), in his study to determine the effects of the audit committee on financial reporting, concluded that it is necessary for the audit committee to assess the reliability and accuracy of financial statement disclosures and footnotes in the financial statements before the reports are published. Thus, it has achieved results such as giving reasonable assurance to the parties that the audit mechanism and its committee are functioning effectively by building shareholder confidence. Yaşar (2016), in a study aimed at explaining the issues related to early detection and management of risk, which plays an effective role in preventing corporate bankruptcies and crises, revealed that there are two important problems. The first one is "Should a risk management system be established in a broad sense in accordance with the Turkish Commercial Code?" and the second one is "Is the obligation of boards of directors to establish an early detection and management of risk system only for listed companies?". As a result of the research, it was concluded that the 378. Although the article uses the expression "early detection and management of risk", it is not a "risk management system" in the broad sense. It is the "early detection of risks system" that should be established within the company. This system is not intended to prohibit companies from engaging in risky transactions. The aim is to ensure that joint stock companies are aware of risky transactions and are in a position to take necessary precautions.

Halim et al. (2017) analyzed the data of 299 firms in their study aiming to examine the impact of risk management committee on firm performance and the relationship between risk management committee, corporate governance, firm size, financial reporting risk and firm performance. The data analyzed using the SPSS 20.0 program were then interpreted. As a result of the research, they concluded that the risk management committee affects firm performance and that the risk management committee acts as a mediating variable in the relationship between corporate governance, governance, firm size and financial reporting risk on firm performance. Özer and Merter (2019) conducted an application in the BIST to investigate the effect of the characteristics of the audit committee on the level of firm prudence. Using the Basu model, known as the "Profit/Share Return" model, the researchers concluded that prudence is positively related to the audit committee and negatively related to the number of meetings. In addition, the study explained that if the number of audit committee members increases, the committees will become more effective and efficient, which will increase the firm's prudence and improve the quality of financial reporting. In their study, Kartal and Yılmaz (2019) examined the YK reporting of 48 companies included in the BIST QM index as of 09.08.2019. In the study, it was determined that erroneous/incorrect reporting was made in the principles within the scope of URF YK reporting. Considering this issue, it is recommended that the obligations related to URF and KYBF reporting are updated and the obligation to disclose details about all principles is introduced in order to make the subsequent QM compliance reporting more healthy, that assurance services are provided by the internal audit departments of the companies regarding the QM compliance reporting and that the senior management of the companies pay more attention to the issue.

Hamidah (2020) aims to investigate the effectiveness of the audit committee on the corporate governance mechanism and sustainability report. In his study, the reports of 35 companies listed on the Indonesia Stock Exchange for the period 2013-2017 and the impact of the audit committee on them were analyzed. As a result of the study, the audit committee increases the effectiveness of the audit process; board size, CEO duality and the relationship between the level of management. Nkak, (2020), aiming to examine the relationship between audit committee members and the publication period of financial reports, used the data of companies

traded on the Nigerian Stock Exchange between 2012-2019 in his study. The study concluded that the selection of audit committee members from among non-executive members with financial experience would significantly contribute to the timely delivery of audit-approved annual financial returns. Töre (2021), in its study examining the annual reports of the enterprises included in the BIST corporate governance index, tried to analyze the data of 2019. As a result of the research, it was necessary to determine risk management standards by the Public Oversight Board. In addition, in the study, the problems that may be encountered were identified and solutions were offered to eliminate these problems. Jallali and Zohglami (2022) wanted to examine the extent to which risk management will improve corporate governance and risk management effectiveness in this study where proxy and mediation theory is discussed. Panel regression and structural equation modeling were used in the research. The empirical findings obtained as a result of the study reveal that risk governance mechanisms play an important role in improving the effectiveness of both corporate governance and risk management, that risk management fully explains the relationship between corporate governance and bank performance, but that risk management partially explains the relationship between risk management and bank performance.

3. METHODOLOGY

A correlational research design was used in the creation of this study. The universe of the research consists of 12 companies in the banking sector included in the BIST 100 index. The dependent variable of this research is the reporting practices related to compliance with corporate governance principles made operational on the basis of the Corporate Governance Compliance Report (CGCR) indicators (shareholders, public disclosure and transparency, stakeholders and the board of directors). The research was carried out by taking into account the Corporate Governance Compliance Report 2019. Each item from CGCR 2019 is weighted by 1 point if the explanations are fully complied with in the report and 0 points if the explanations are partially or not complied with at all. In this way, the total score was determined by taking into account the CGCR 2019 framework. Then the percentage of the level of disclosure in any performance indicator was determined. According to CGCR 2019, the number of frames disclosed is divided by the total number of disclosures. Finally, the obtained percentage levels were classified according to the Likert scale of 5. Using previous studies, scoring was 0%–20%=1; 21%–40%=2; 41%–60%=3; It is classified as 61%–80%=4 and 81%–100%=5. This method has been used in various studies by academics such as Nalukenge et al., (2018), Tumwebaze et al., (2021) and Gökoğlan (2022).

Ten hypotheses developed by taking into account the scope of the research were formed as follows;

H1: There is a positive relationship between Audit Committee Effectiveness and Corporate Governance Principles Compliance Practices.

H2: There is a positive correlation between the effectiveness of the Audit Committee and the implementation of the Shareholder Policy.

H3: There is a positive relationship between the effectiveness of the Audit Committee and the implementation of the Public Disclosure and Transparency Principle.

H4: There is a positive relationship between the effectiveness of the Audit Committee and the implementation of the Stakeholders Policy.

H5: There is a positive relationship between Audit Committee Effectiveness and Board Policy practices.

H6: There is a positive relationship between Risk Committee Effectiveness and Corporate Governance Principles Compliance Practices.

H7: There is a positive relationship between Risk Committee Effectiveness and the implementation of the Shareholders' Policy.

H8: There is a positive relationship between the effectiveness of the Risk Committee and the implementation of the Public Disclosure and Transparency Principle.

H9: There is a positive relationship between the effectiveness of the Risk Committee and the implementation of the Stakeholders Principle.

H10: There is a positive relationship between Risk Committee Effectiveness and Board Principle implementation.

Table 1 contains descriptive information on the measurement of the independent variables of the study. CCA is concerned with reviewing corporate governance information and liaising with external auditors. Within the scope of the study, ACE consists of the number of personnel in the audit committees, the number of meetings of the audit committees and the reports submitted. RCE is concerned with the purpose of ensuring the reliability of corporate governance information. RCE consists of the number of personnel in the risk committees, the number of meetings of these committees and the reports submitted. The ways in which the variables within the scope of the study were measured are shown in Table 1.

Table 1: Measurement of Variables

Değişken	Abbreviation	Variable Description
<i>Dependent Variable</i>		
Corporate Governance Applications	CCA	Shareholders, Public Disclosure and Transparency are measured in the indicators of Stakeholders and the Board of Directors according to CGCR (2019).
<i>Independent Variable</i>		
Audit Committee Effectiveness	ACE	It consists of the number of personnel in the committees and the number of meetings of the committees. Number of members (NMEM) variable; It is a dummy variable coded as 0 if the number of audit committee members serving in companies is 3 and up, if the committee member is 2 and down is 1. Number of meetings (NMEE) variable; If the number of meetings of the committees in the company is 5 and below, it refers to the puppet variable coded as 0, and for 6 and above it is coded as 1. It consists of the number of personnel in the committees and the number of meetings of the committees.
Risk Committee Effectiveness	RCE	Number of members (NMEM) variable; It is a dummy variable coded as 0 if the number of audit committee members serving in companies is 3 and up, if the committee member is 2 and down is 1. Number of meetings (NMEE) variable; If the number of meetings of the committees in the company is 5 and below, it refers to the puppet variable coded as 0, and for 6 and above it is coded as 1.
<i>Control Variables</i>		
Auditor Type	AT	It refers to the dummy variable coded as 0 if the firm is audited by the big 4 audit firms [PwC, KPMG, Deloitte, EY], and 1 if the firm is audited by a national audit firm.
	β_0	Constant
	E_j	Error refers to the term.

Multiple regression model was used to determine the relationships between ACE and RCE and corporate governance reporting framework. In this study, the following regression models were established:

$$ACE = \beta_0 + \beta_1 \text{NMEM} + \beta_2 \text{TS} + \varepsilon_j$$

$$CCA = \beta_0 + \beta_1 \text{AT} + \beta_2 \text{ACE} + \varepsilon_j$$

$$RCE = \beta_0 + \beta_1 \text{NMEM} + \beta_2 \text{TS} + \varepsilon_j$$

$$CCA = \beta_0 + \beta_1 \text{AT} + \beta_2 \text{RCE} + \varepsilon_j$$

Where CCA has practices for complying with corporate governance principles, ACE is audit committee activity, NMEM stands for number of members, NMEE stands for number of meetings, AT stands for auditor type, β_0 stands for constant expression and ε refers to error terms. Where CCA has practices for complying with corporate governance principles, RCE is risk committee activity, NMEM stands for number of members, NMEE stands for number of meetings, AT stands for auditor type, β_0 stands for constant expression and ε refers to error terms.

3. FINDINGS

Descriptive statistics for the variables utilized in the study were performed. Table 2 presents descriptive statistics showing the means and standard deviations of the variables. In the research, according to the 1-5 Likert scale, it was determined that the enterprises operating in the banking sector (CGCR (2019)) pay attention to implement 90% ((4,5/5)*100%) of the indicator items.

Table 2: Descriptive Statistics

Variable	N	Min.	Max.	M.	Std. Dev.	Skewness		Kurtosis	
						v	Std. E.	v	Std. E.
<i>CCA</i>	12	3	5	4,750	0,522	-	,637	1,33	1,23
<i>P</i>	12	3	5	4,416	0,500	-1,38	,637	-1,32	1,23
<i>PDT</i>	12	4	5	4,833	0,452	-1,32	,637	-1,33	1,23
<i>S</i>	12	3	5	4,916	0,514	0,98	,637	-1,45	1,23
<i>BD</i>	12	3	5	4,166	0,577	-1,46	,637	-1,35	1,23
<i>NMEM</i>	12	0	1	0,750	0,288	-1,47	,637	1,02	1,23
<i>NMEE</i>	12	0	1	0,500	0,590	-1,560	,637	1,43	1,23
<i>AT</i>	12	0	1	0,500	0,389	1,05	,637	-1,25	1,23
<i>ACE</i>	12	0	1	0,500	0,452	-1,32	,637	-1,06	1,23
<i>RCE</i>	12	1	2	0,500	0,500	-	,637	1,25	1,23
<i>CCA</i>	12	1	2	0,450	0,548	-	,637	1,25	1,23

Skewness and Kurtosis values were taken into consideration to determine whether the data used in the study were normally distributed. All values were found to be within the range of -3.29 to +3.29 as determined by Field (2009). Therefore, it was determined that the data used in the research showed normal distribution characteristics.

Table 3: Descriptive Statistics and Pearson Correlation Coefficients

Variables	CCA	P	PDT	S	BD	NMEM	NMEE	AT	ACE	RCE
<i>CCA</i>	1									
<i>P</i>	,488*	1								
<i>PDT</i>	,522*	,255	1							
<i>S</i>	,522*	,255	-,091	1						

<i>BD</i>	,318*	,529	,135	,135	1					
<i>NMEM</i>	,111	,098	,522	-,174	-,258	1				
<i>NMEE</i>	,192	,507	-,302	,302	,447	-,192	1			
<i>AT</i>	-,192	,169	,302	-,302	,000	,577	,333	1		
<i>ACE</i>	,576*	,597	-,302	,502	,447	,116	,920**	,333	1	
<i>RCE</i>	,516*	,407	-,252	,653	,335	,252	,936**	,333	,880**	1

Note: *p<0.05; **p<0.01

Table 3 shows the relationship between the effectiveness of audit and risk committees and corporate governance practices. Pearson Correlation analysis was used to determine this relationship. The analysis reveals that there is a positive and significant correlation between the effectiveness of audit and risk committees and corporate governance frameworks ($r=0.576^*$ and $r=0.516^*$, $p<0.05$). Therefore, a positive change in the DCI and RCI implies a positive change in corporate governance compliance practices. However, there is no statistically significant relationship between the number of meetings and corporate governance principles compliance practices.

Table 4 presents the results of multiple regression analysis to measure the relationship between the effectiveness of audit committees and corporate governance practices. In order to examine the relationship between the model and corporate governance practices, the number of meetings is considered as a control variable. This is also consistent with the correlation analysis results in Table 3. However, audit committee effectiveness is found to have a significant relationship with efforts to comply with corporate governance principles.

Table 4: Regression Analysis Results of the Study (ACE)

<i>Variables</i>	<i>Model</i>
ACE	0,285*
NMEE	0,167
Constant	2,660
F-value	4,558*
Adj. R²	0,292
VIF	0.920
Tolerance	1,456

Note: *p<0.05

Given the existence of a positive relationship between the effectiveness of audit committees and corporate governance practices as a result of correlation and regression analyses, we decided to conduct additional analyses. The analysis and results are shown in Table 5.

Table 5: Regression results of audit committee effectiveness and corporate governance indicators

<i>Variables</i>	P	PDT	S	BD
ACE	0,467**	0,490**	0,200**	0,333**
Constant	3,913			
F-value	2,830			
Adj. R²	0,511			

Note: *p<0.05; **p<0.01

Table 5 shows that the effectiveness of audit committees is more related to the principles of public disclosure and transparency and shareholders. In general, the research results show that all of the hypotheses are accepted. In short, audit committee effectiveness is related to corporate governance compliance report practices.

Table 6: Regression Analysis Results of the Study (RCE)

<i>Variables</i>	<i>Model</i>
RCE	0,315*
NMEE	0,198
Constant	3,150
F-value	5,105*
Adj. R²	0,232
VIF	0.880
Tolerance	1,298

Note: *p<0.05

Table 6 presents the results of multiple regression analysis to measure the relationship between the effectiveness of risk committees and corporate governance practices. In order to examine the relationship between the model and corporate governance practices, the number of meetings is considered as a control variable. This is also consistent with the correlation analysis results in Table 3. However, it was also found that there is a significant relationship between risk committee effectiveness and efforts to comply with corporate governance principles.

Table 7: Regression results of risk committee effectiveness and corporate governance indicators

<i>Variables</i>	P	PDT	S	BD
RCE	0,334**	0,251**	0,501**	0,518**
Constant	3,395			
F-value	5,712*			
Adj. R²	0,398			

Note: *p<0.05; **p<0.01

Table 7 shows that the effectiveness of risk committees is more related to stakeholder principles and board principles. In general, the research results show that all of the hypotheses are accepted. In short, risk committee effectiveness is related to corporate governance compliance report practices.

CONCLUSION

Businesses have important objectives such as providing services to society, gradually increasing their activities, maximizing their profits and keeping up with technological developments. Determining the success they have achieved while carrying out their activities within the framework of these objectives, or investigating the causes of failures and conducting studies to prevent the risks, errors and frauds arising in the enterprise covers the audit process in the enterprises and this situation affects the corporate governance reports of the enterprises. The quality and efficiency of the audit and early detection of risk are as important for businesses as the audit process. It is an important element of corporate governance that risks are identified, managed, audited and shareholders are informed in detail. It is very difficult for businesses to completely eliminate the risks that may arise. Early identification and management of risks is very important for businesses to continue their existence. One of the important factors contributing to the early identification of risks, taking certain precautions and realization of business objectives despite the risks is the effective functioning of committees such as audit and early detection of risk/risk committees to maintain the continuity of the business.

As a result of the study, a positive relationship was found between the effectiveness of audit committees and the implementation of the shareholders' principle, the public disclosure and transparency principle, the stakeholders' principle and the board of directors' principle. However, a positive relationship was found between the effectiveness of risk committees and

the implementation of the shareholders' principle, the public disclosure and transparency principle, the stakeholders' principle and the board of directors' principle. It is found that there is a moderate relationship between the implementation of corporate governance principles in banks and the effectiveness of both audit committees and risk committees. In addition, a significant relationship was found between the number of meetings and the effectiveness of both audit and risk committees. There is a high degree of correlation between the number of meetings and the effectiveness of both audit committees and risk committees in banks. The increase in the number of meetings of the personnel in the audit and risk committees in banks is determined as a criterion that positively affects the effectiveness of these committees. Therefore, the frequency of meetings that banks will hold in various periods will have a positive impact on corporate governance practices. In short, the effectiveness of audit and risk committees in banks increases the commitment to corporate governance principles and enhances the reliability of corporate governance reports. In addition, it has been determined that the increase in the number of meetings in banks increases the effectiveness of audit and risk committees.

ÖZET

İnternet teknolojisinin web 2.0 özelliği kazanması sonucu birçok kavram hayatımıza entegre olmuştur. Bu kavramlardan sosyal medya platformlarının önemli bir yer tuttuğunu söylemek mümkündür. Günümüzde yediden yetmişe neredeyse her bireyin kullanıcısı olduğu sosyal medya platformları, zaman ve mekan kavramlarını ortadan kaldırarak etkileşim yapılabilme olanağı tanınması insanların birbirine daha fazla yakınlaşmalarını sağlamıştır. Bu yakınlaşmalar farklı mekanlarda yaşayan insanların sosyal medya sayesinde birbirleriyle sağladıkları iletişimle doğru orantılı olarak belli bir sınır olmadan herhangi bir konu hakkında da bilgi/iletişim kurabilmişlerdir. Özellikle Twitter gibi sosyal medya platformu kullanan bireylerin tanıdıkları/tanımadıkları pek çok kişiyle etkileşime geçmesi bireylerin geniş kitlelere ulaşabilmesini sağlamıştır. Günlük yaşamlarındaki kesitleri video, fotoğraf veya yazı formatında paylaşan kullanıcılar açısından sel, fırtına ve özellikle deprem gibi kriz anlarında iletişim/telefon hatlarının aksaması sonucu yapılan bilgi paylaşımları bakımından Twitter platformunun başat bir rol üstlendiği görülmektedir. Bu bağlamda, bu çalışmada 6 Şubat 2023 tarihinde meydana gelen depremde, depremedelere yardım amacıyla atılan tweetler incelenecektir. 6 Şubat- 22 Şubat 2023 tarihli seçilen 10 tweetin ekran görüntüleri alınarak içerik analizi yöntemiyle analiz edilecektir.

Anahtar Sözcükler: İletişim, Sosyal Medya, Deprem

Examination of Social Media in the Context of Crisis Periods: Analysis of 6 February 2023 Kahramanmaraş Earthquake Sharing

ABSTRACT

As a result of internet technology gaining web 2.0 feature, many concepts have been integrated into our lives. It is possible to say that social media platforms have an important place among these concepts. Today, social media platforms, which are used by almost every individual from seventy to seventy, have enabled people to get closer to each other by eliminating the concepts of time and space and allowing interaction. These convergences have allowed people living in different places to establish information/communication on any subject without a certain limit in direct proportion to the communication they provide with each other thanks to social media. In particular, the interaction of individuals using social media platforms such as Twitter with many people they know / do not know has enabled individuals to reach large masses. For users who share sections of their daily lives in video, photo or text format, it is seen that the Twitter platform plays a dominant role in information sharing as a result of disruption of communication/phone lines in times of crisis such as floods, storms and especially earthquakes. In this context, in this study, tweets sent to help earthquake victims in the earthquake that took place on February 6, 2023 will be examined. Screenshots of 10 selected tweets dated 6 February- 22 February 2023 will be taken and analyzed by content analysis method.

Keywords: Communication, Social Media, Earthquake

GİRİŞ

Düşünen bir varlık olarak insan, toplumsal etkileşimleri sonucunda geçmişten günümüze sürekli bir devinimle ilerleyen ve gelişen ender bir olgu olan enformasyon/bilgi ile karşılaşmaktadır. Bu enformasyon/bilgi, insanlığın ortaklaştığı noktaların başında gelmektedir. Bilginin sürekli gelişimi, geçmişin izlerinin günümüz yaşam alanlarında açık bir şekilde görülmesini sağlamaktadır. Özellikle kapitalist üretim toplumu gibi bir toplumsal düzende, enformasyonun gelişimi, üretim araçlarını elinde bulunduran ve buna müdahale eden aktörler ile birlikte toplumsal yapının tamamını etkilemektedir. Enformasyon ve kapitalizmin gelişimi, genişlemesi ve yayılması dönemleri birbirleriyle bağlantılıdır (Castells, 2008: 23). İnsanlık tarihinin büyük bir bölümünde, teknolojik gelişim karşımıza çıkmaktadır. İlk insanların birbirleriyle iletişim kurma yöntemlerinden, mağaralara çizilen resimlere veya Orta Doğu'da kullanılan hiyerogliflere kadar, insanlar iletişim kurma ve toplumsal yaşamı kolaylaştırma amacıyla çeşitli yöntemler geliştirmiştir. Bu nedenle, teknoloji ve teknolojik gelişmeler, tarihimizin başından itibaren belirleyici bir konumdadır (Yengin & Bayrak, 2022). İnsanlık, teknolojik gelişmeler sayesinde geçmişteki her ilerleme, gelişme ve genişleme sürecinde kaynak noktası olmuştur. Bu da teknolojik gelişmelerin sürekli birbirini takip ettiğini göstermektedir. İletişim yöntemlerinin gelişimiyle birlikte ortaya çıkan ve günümüzde önemli bir unsura dönüşen internet teknolojisi, birçok kavramı günlük yaşamımıza entegre etmiştir. Örneğin, bu makalenin ana konusu olan sosyal medya, internet ortamında insanlara paylaşım imkanı sunan platformlardan oluşmaktadır. Twitter gibi sosyal medya platformları, insanların kriz dönemlerinde nasıl davrandıklarına dair örnekler sunmuştur. İnsanlar, kriz dönemlerinde ortaya çıkan gecikmeleri ve sorunları bildirmek, ihtiyaç duyulan yardımlara ulaşmak için sosyal medya alanlarına yönelmişlerdir ve bu davranış büyük ölçüde diğer insanlar tarafından karşılık bulmuştur. Yirminci yüzyılın başından itibaren kısa mesafeli iletişim teknikleri, toplumun büyük bir kesimi tarafından yeni yeni keşfedilmeye başlanan bir iletişim aracı olarak ortaya çıkmış ve daha sonra, günümüzden 40-50 yıl öncesinde hızlı bir dönüşüm geçirerek uzun mesafeli iletişim tekniklerinin gelişimini sağlamıştır (McLuhan & Powers, 2001: 195). İnternet teknolojisi ise 1980'lerden günümüze kadar sürekli olarak gelişmiş ve son 20-25 yıl içinde yaygınlaşmış olan sosyal medya ortamları, birçok insan tarafından hayatın ayrılmaz bir parçası haline gelmiştir. Ancak sosyal medya platformlarında gezinti yapmak için kullanılan teknik araçlar sayesinde, bu sistemlere erişim sağlayan ve istediği gibi içeriklere erişen insanlar, teknik araçlara sahip olmadan bu imkanlardan faydalanamamaktadır (Ellul, 2003: 438).

İletişim süreçlerinin gelişmesiyle birlikte yaygınlaşan ve farklı amaçlar için kullanılan sosyal medya, önemli bir teknolojik ilerlemenin bir örneğini sunmaktadır. Sosyal medyanın kullanımı, iletişim amacıyla, haberleri takip etmek için, olayların gündemini izlemek için veya bilgi alışverişi için internet tabanlı forumlar aracılığıyla kullanılmaktadır. Ancak özellikle 6 Şubat 2023 tarihli Kahramanmaraş depremleri gibi durumlarda sosyal medya, alışılmadık bir amaçla kullanılmıştır. Bu amaç, depremlilerin çoğunluğunun yer aldığı bölgelerde yapılan paylaşımlardır. Yardım çağrıları ve acil durum bildirimlerinin paylaşılması, paylaşılan bilgilerin mümkün olduğunca çok kişi tarafından görülüp diğer sosyal medya platformlarında paylaşılması ve bu bilgilerin temelinde acil müdahalelerin yapılması amaçlanmaktadır.

Çalışmanın ana konusu, kriz dönemlerinde sosyal medyanın kullanımının ve buna bağlı olarak yapılan paylaşımların incelenmesidir. Bu bağlamda, çalışmada örneklem olarak Twitter üzerinden yapılan yemek yardımı çağrıları, ihtiyaç çağrıları ve destek çağrıları gibi farklı paylaşımlar ele alınmıştır. Bu paylaşımlar, kriz dönemlerinin yıkıcı etkilerini hala hisseden insanlar tarafından yapılmıştır. Bu paylaşımlar, çalışmada incelenerek kriz dönemlerinde sosyal medyanın acil durumlar için bir platform olarak kullanıldığı gösterilmiştir. Bireysel olarak

yapılan bu paylaşımlar, sosyal medya aracılığıyla binlerce insana aynı anda ulaşmıştır. Bu sayede, yardım bekleyen insanların ihtiyaçları sosyal medya aracılığıyla geniş bir kitleye ulaşmıştır. Sosyal medyanın bu özelliği, acil durumların yayılmasını hızlandırarak yardım çağrılarının daha geniş bir şekilde duyulmasını sağlamıştır. Bu durum, kriz dönemlerinde sosyal medyanın önemli bir rol oynadığını ortaya koymaktadır.

KRİZ İLETİŞİMİ OLGUSU

Kriz terimi, felaketler, başarısızlıklar, çöküşler gibi belirsiz durumları tanımlamak için kullanılmaktadır (Heide & Simmonson, 2014: 04). Söz konusu kavram birçok türde mevcut olmasından dolayı tek bir tanımla sınırlı kalmamaktadır. Genel olarak krizi beklenmeyen, rutin olmayan, belirsizlik seviyesini yükselten ve yüksek öncelikli hedefleri tehdit eden ya da tehdit ettiği algısı yaratan olay dizisi olarak ifade edilmektedir (Spence vd. 2007: 540). Dinamik ve tahmin edilemez olan kriz (Seeger, 2006: 234) dört aşamadan geçmektedir. Bu aşamalar sırasıyla Prodromal kriz aşaması, Akut kriz aşaması, Kronik kriz aşaması ve Kriz çözümü aşamasıdır. Prodromal kriz aşaması, krizin patlak vermeden önce belirtilerinin görüldüğü dönemi ifade eder. Akut kriz aşaması, krizin meydana geldiği ve yaşanan sorunlara hızlı müdahalenin gerektirdiği zaman dilimidir. Kronik kriz aşaması yaşanan sorunların sürdüğü ve birçok noktada etkisini bıraktığı aşamadır. Son olarak kriz çözümü aşaması ise krizin kontrol altına alındığı, krizin yaşattığı etkileri minimize edilmeye çalışıldığı ve normal işleyişe dönmeye çalışıldığı bir süreçtir (Kash & Darling, 1998; Darling, Seristo, & Gabrielsson, 2005 akt. Civelek vd. 2016: 113).

Krizin tüm aşamalarında iletişimin rolü oldukça önemlidir. Coombs 'un ifadesiyle iletişim, kriz yönetiminin özünü oluşturmaktadır (Coombs, 2012). Kriz dönemlerinde, bireylerin enformasyon ihtiyacı artar ve daha büyük bir etkiyi önlemek adına bilgiye erişim arayışına girmektedirler. Televizyon, sosyal medya mecraları, radyo gibi iletişim araçları bu süreçte değerli ve zamanında bilgi kaynakları olarak kabul edilmektedir (Wendling vd. 2013: 07). Bu platformlar, kriz sürecinde güncel bilgilerin paylaşıldığı ve halkın bilgilendirildiği kanallar olarak görülmektedir. (Heath vd. 1995). Bireyler, bu iletişim araçları aracılığıyla sürekli olarak bilgilerini güncelleyerek kriz hakkında bilgi edinir ve önlem alabilirler. Kriz veya olay sırasında etkin bir kriz iletişimi yürütmek, itibarın, güvenilirliğin ve moral gücünün korunmasında büyük öneme sahiptir. (Lukaszewski, 2013: 33).

Coombs kriz iletişimini iki ana kategoriye ayırmaktadır. Bunlardan ilki olan kriz bilgi yönetimi olarak adlandırılır ve kriz sürecinde bilgi toplamak, toplanan bilginin süzgeçten geçerek doğruluğa kavuşturulması, tüm paydaşlara iletilmesini ve karar verme süreçlerini içermektedir. Bu kategori krizin yaşattığı etkilerine karşı önlem alma konusunda hayati önem taşımaktadır. Öte yandan ikinci kategori olarak sınıflandırılan kriz paydaş tepki yönetimi ise kriz sürecindeki konuları herkesi etkilemek adına yapılan iletişimsel çabalar olarak söylenmektedir. Bu kategori stratejiye dayalı bir ilerleme sağlamaktadır. Güven sağlama, duygu dolu tepkileri yönetme ve itibarın zedelenmesini önlemeyi amaçlamaktadır (Coombs, 2012: 25).

Krizlerin karmaşık yapısı ve farklılık gösteren özellikleri, genel kabul görmüş bir kriz iletişim planının oluşturulmasını zorlaştırabilmektedir. Ancak ideal iletişim ortamının sağlanması için gerekli ilkeler söz konusudur. Bunlar şu şekilde sıralanabilir (Ticaret Bakanlığı, 2022: 63).

- Kriz zamanındaki dikkat dağınıklıklarına yol açabilecek unsurlar kaldırılmalıdır.
- Kriz yönetiminde büyük bir ihtiyaç olan iletişim sistemleri ve enformasyon teknolojileri esnek şekilde hazırlanmalıdır.
- Krize ait bilgilerin doğruluğunu ölçebilecek kontrol süzgeçleri geliştirilmelidir.

- Çözümüne daha hızlı ulaşabilmek için iletişim zincirinde daha az halka bulunmalıdır.
- Krizin her safhasında tüm çalışanlar sistemli bir şekilde bilgilendirilmelidir.
- Kriz yönetim planı, var olan kurumsal iletişim plan ve prosedürlerine mutabık olmalıdır.

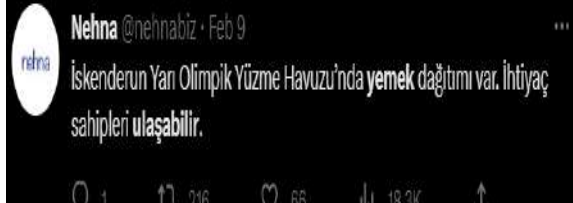

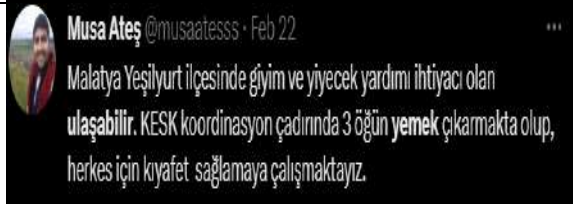

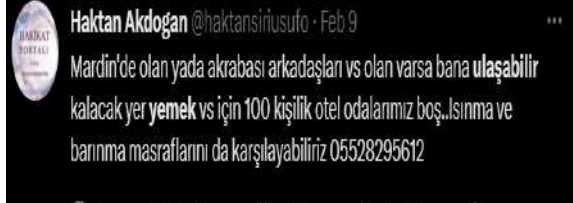

KRİZ DÖNEMLERİ EKSENİNDE SOSYAL MEDYA

Tarihçesine bakıldığında sosyal ağların, internetin ilk günlerine kadar uzanan bir geçmişi vardır. Ancak, günümüzde bildiğimiz modern sosyal ağlar, Jonathan Abrams tarafından başlatılan Friendster ile popüler hale gelmiştir. 2003 yılında, Intermix Media, Friendster'in temel işlevselliğini kopyalayan sosyal ağ MySpace'ı geliştirdi. İlk olarak Intermix Media'nın büyük posta listeleri tarafından desteklenen MySpace, sosyal ağ siteleri arasında bir lider haline geldi. Mark Zuckerberg, Ekim 2003'te, Harvard öğrencileri için özel bir site olarak başlayan Facebook'u yarattı. Sonunda, 2006 yılında, herhangi bir e-posta kimliği olan herkes kaydolabilirdi. 2008-2009 arasında, Facebook insanlar tarafından büyük ilgi gördü ve MySpace'i geride bıraktı. (Saravanakumar & SuganthaLakshmi, 2012: 446). Günümüzde ise Instagram, Twitter ve Tiktok gibi platformlar da söz konusu sosyal ağ siteleri arasında yer almaktadır.

Kuşkusuz sosyal medya platformları yaşanan dijital çağda önemli bir konumdadır. Bireylerin mevcut arkadaşlarıyla iletişimde kalma, görüşemedikleri eski arkadaşlarıyla bağlantı kurabilme, sosyal aktivitelerini paylaşma, gündemi takip etme, bir konu hakkında düşüncelerini belirtme gibi birçok amacı sağlayan iletişim yöntemlerinden biri durumdadır. We are Social'ın Temmuz 2022 yılı raporuna göre dünya nüfusunun yüzde 59'unun sosyal medya sitelerinden en az birini kullandığı belirtiliyor. Raporda ayrıca, dünya çapında toplam sosyal medya kullanıcısı sayısının 4,7 milyar olduğu, bu sayı bir önceki yıla kıyasla artış göstermiştir (URL 1). Dünya nüfusunun önemli bir bölümünün kullandığı sosyal medya, insanlı ya da doğal afet krizlerinde de önemli bir rolde olduğu görülmektedir. Kriz durumun başlangıcında, insanlar söz konusu sosyal medya platformlarını kullanarak yararlı bilgi aramak ve yardım istemek için kullandıkları görülmektedir. Özellikle Twitter'ın bu durumlarda başat bir rol oynadığını söylemek mümkündür. Twitter'da yaşanan kriz olayların farkındalık kazanmasına, etkilenen insanların acil ihtiyaçlarını, kritik altyapı hasarını ve tıbbi acil durumları öğrenmesine yardımcı olabilmektedir (Nguyen, 2016). Öte yandan yerel halkın Twitter gibi sosyal medya platformları aracılığıyla fotoğraflar ve konum bilgileri paylaşması, gazetecilerin sahneye gidemediği durumlarda olay durumu hakkında güncel bilgilerin paylaşılmasına yardımcı olabilmektedir. Diğer bir deyişle sosyal medya mecraları kriz haberlerini, gazetecilerin araya girmeden milyonlarca kişiye paylaşılabilir ve yeniden paylaşılabilir. Kulaktan kulağa haberler, bazı durumlarda ana akım medyadan daha güvenilir olarak algılanır ve sonuç olarak büyük bir etkiye sahiptir (Colley & Collier, 2009 akt. Veil vd. 2011: 111). Örneğin 2007 ve 2008 California orman yangınları, 2008 Mumbai katliamı, 2009 US Airways Flight 1549 kazası, 2010 Haiti depremi ve 2011 Tunus ayaklanması gibi kriz durumlarında hızlı bir şekilde başlangıç bilgilerini ve güncellemeleri paylaşmak için bu mecralar kullanılmıştır (Veil vd. 2011: 111). Kriz dönemlerde söz konusu mecraların daha hızlı sonuçlar getireceğini bundan dolayı bazı ülkelerin bu durumlara ait bir sistem kurdukları görülmektedir. Bunlardan biride Katar'ın kurduğu AIDR adlı sistemdir. AIDR (Artificial Intelligence for Disaster Response), doğal afetlerden kaynaklanan tweetlerden bilgi toplamak için bir sistemdir ve Katar Bilişim Araştırma Enstitüsü tarafından geliştirilmiştir. Bu sistem, afet yönetimi faaliyetlerini koordine etmeye yardımcı olmak için kullanılmaktadır. AIDR, yapay ve insan zekasının birleşimi ile çalışır ve söz konusu sistem 2015 Nepal Depremi, Typhoon Hagupit gibi birçok felakette UN OCHA ve UNICEF gibi birçok farklı insani yardım kuruluşu tarafından kullanılmıştır (Nguyen vd. 2017: 569).

SOSYAL AĞ OLARAK TWİTTER'DA DEPREM İÇERİKLİ TWEETLERİN İNCELENMESİ

Sosyal medya, dijital çağın önemli getirilerinden biri olarak kabul edilmektedir. Bu platformlar aracılığıyla bireyler, gönderi, hikaye, tweet gibi yöntemlerle yaşamlarının belirli kesitlerini paylaşabilir ve diğer insanlarla iletişim kurabilirler. Sosyal medya genellikle önemli bir konumda bulunmakta olup özellikle kriz dönemlerinde etkisi oldukça belirgin hale gelmektedir. Bu bağlamda, 6 Şubat 2023 tarihinde deprem yardımlarıyla ilgili tweetlerin incelendiği bir çalışma gerçekleştirilmiştir. Bu çalışmada, içerik analizi yöntemi kullanılarak 6 Şubat- 22 Şubat 2023 tarihlerine ait seçilen 10 tweet ayrıntılı olarak analiz edilmiştir. İçerik analizi, belirli bir konudaki kalıpları, temaları, önyargıları ve anlamları ortaya çıkarmak amacıyla sistemli bir veri analiz yöntemidir (Baltacı, 2019: 377). Çalışmanın bulguları, üç başlık altında tablolştırılmıştır. İlk başlık, incelenen tweetlerin ekran görüntülerini içermektedir. İkinci başlık, bu tweetlerin aldığı etkileşimleri göstermektedir. Üçüncü ve son başlık ise analiz bölümüdür. Bu başlık altında, depremden etkilenen kişilere yardım bilgisi içeren tweetlerin içerik analizi yöntemiyle ayrıntılı bir şekilde yorumlanmıştır.

TWEETLER	BEĞENİ/ RETWEET/ YORUM	ANALİZ
 <p>nisan hakan @nisanhakan · Feb 9 Adıyaman Kahıta'da 10.000 kişilik kalacak yer ve yemek ayarlandı. Köylere de araçla gidip dağıtım yapıyorlar.</p> <p>0530 069 1212</p> <p>Ali adı</p> <p>teyitli ve güncel.</p> <p>2 Retweet 92 Beğeni 5,884 Görüntü</p>	<p>76 Beğeni 92 Reweet 2 Yorum</p>	<p>Görüntüdeki Twitter kullanıcısının kriz döneminde yemek, kıyafet ve hijyen yardımlarıyla ilgili telefon numarası içeren bir paylaşım yaptığı ve paylaşımın birçok etkileşim aldığı görülmektedir.</p>
 <p>Şeyma @seymaacrm · Feb 11</p> <p>KAHRAMANMARAŞ ÇADIR BULUNAN YERLER GÜNCEL BİLGİDİR</p> <ul style="list-style-type: none"> - Belediye Önü - Devlet Su İşleri - 15 Temmuz Parkı - Avsar Kampusu - Atatürk Parkı - Kafun - 13 Stad stadyum <p>İLETİŞİM: 0541 612 23 01</p> <p>TEYİT EDİLMİŞTİR</p> <p>16 Retweet 11 Beğeni 642 Görüntü</p>	<p>11 Beğeni 16 Retweet 0 Yorum</p>	<p>Görüntüdeki Twitter kullanıcısı kriz döneminde çadır yardımıyla ilgili mekan ve telefon numarası içeren bir paylaşım yapmıştır ve paylaşımın birçok etkileşim aldığı görülmektedir.</p>

Yukarıda belirtilen paylaşımlara göre, Twitter kullanıcılarının deprem sonrası yardım etmek amacıyla attığı tweetler dikkat çekmektedir. Tweetlerden kullanıcıların sosyal sorumluluk bilincine sahip olduğu ve depremzedelere yardım etmek için aktif adımlar attıkları gözlemlenmektedir. Yardımlar arasında çadır, yemek, barınma, bebek maması, bebek bezi gibi ihtiyaçların paylaşıldığı tespit edilmiştir. Ayrıca, kullanıcılar iletişim bilgileri olarak mekan adresleri ve telefon numaralarını da tweetlerinde paylaşmışlardır. Etkileşim açısından en fazla retweet alan tweetin 4996 retweet, 2932 beğeni ve 72 yorum aldığı görülmektedir ve bu tweet nisahakan adlı kullanıcı tarafından paylaşılmıştır. Araştırmaya dahil olan hesapların 6'sının bireysel hesaplar olduğu ve diğer 4 hesabın ise fan ve eğlence odaklı profillere sahip olduğu belirlenmiştir. Bu durum, kriz dönemlerinde sosyal medyanın geniş kitlelere yardımlaşma imkanı sağlayabilmesinin önemini bir kez daha ortaya koymaktadır.

SONUÇ

Bu çalışma, 6 Şubat 2023 tarihinde Kahramanmaraş ilinin Elbistan ve Pazarcık ilçeleri merkezli olarak gerçekleşen ve "asrın depremi" olarak nitelendirilen 7.7 ve 7.6 büyüklüğündeki depremin ardından sosyal medya platformu Twitter üzerindeki insani yardım içerikli tweetlerin analizini içermektedir. Yapılan araştırmada yer alan paylaşımların çoğunluğunda hashtag kullanılmadan da etkileşim kurulduğu görülmektedir. Bu durum, her bir kullanıcının tercihlerine ve stratejilerine bağlı olduğu düşünülmektedir. Ancak konuyla alakalı diğer birçok paylaşımlarda, deprem sonrasında Twitter kullanıcıları, daha fazla etkileşim sağlamak ve daha geniş bir kitleye seslerini duyurmak amacıyla belirli hashtagleri kullanma eğiliminde olduğu görülmüştür. Bu kullanıcılar, hashtaglerin yardımıyla konuşmalarını ve paylaşımlarını belirli bir konu veya etiket altında toplamayı hedeflemişlerdir. O dönemde hashtaglar daha çok #deprem #afad #halukleventacil #hatay #kahramanmaraş #adıyaman #malatya #ıslahiye şeklindedir. Ele alınan paylaşımlara bakıldığında insani yardım olarak daha çok çadır, yemek, barınma, bebek maması, bebek bezi, ıslak mendil, gibi ihtiyaç tweetleri atılmıştır. Söz konusu atılan tweetlerden bazılarında telefon ve adres tarifi bilgilerinin yer aldığı görülmüştür. Ele alınan Tweetlerin etkileşim sayıları en fazla 4996 retweet, 2932 beğeni ve 72 yorum alırken en az olarak da 11 beğeni 0 yorum ve 16 retweet şeklindedir. Az etkileşim alan tweetlerin sebepleri retweet yapmadan aynı bilgilerin birçok kez paylaşılmasındandır. Analiz edilen 10 tweete bakıldığında kullanıcılarından 6'sı şahsi hesaplarından paylaşım yaptıkları görülürken diğer kalan 4 hesabın da fan ve eğlence hesapları oldukları görülmektedir.

Çalışma, çevrimiçi bilginin hızlı kriz yanıtı ve yönetimi için önemli bir araç olduğunu göstermektedir. Bu bağlamda, Facebook, Instagram, WhatsApp, Ekşi Sözlük ve özellikle Twitter gibi platformların kullanımı bu dönemlerde hayati bir öneme sahip olmuştur. Bu platformlar, bilgi toplama, bilgi yayma, koordinasyon ve bireysel örgütlenme gibi birçok unsur desteklemekte etkin bir rol oynamaktadır. Bu mecralar, sadece deprem gibi olaylarla sınırlı olmayıp orman yangınları, sel, çığ gibi acil durumlarda da insanların resmi kaynaklardan güncel bilgilere ulaşmasına yardımcı olarak olası kaos durumunu önleyebilme potansiyeline sahiptir.

Sosyal medyanın kriz dönemlerde önemli bir veri kaynağı olduğu aşikardır. Zaman kavramının çok önemli hale geldiği söz konusu dönemlerde Twitter'da milyonlarca tweet atıldığı görülmektedir. Bu durum yanlış bilginin ya da farklı konuların çokluğuna yol açarak yapılacak hızlı müdahalelerin önüne geçmektedir. Bu sorunun giderilmesi adına kriz zamana göre kodlanmış yapay zeka sistemlerinin sosyal medya mecralarında yer alması ve belirli kriterlere dayalı olarak önemli veya acil tweetlerin daha hızlı gün yüzüne çıkmasına ve kriz yönetim ekiplerinin belirlenen tweetlere daha hızlı müdahalelerin yapabilmesini sağlayacağı düşünülmektedir.

Ayrıca sosyal medya mecralarında bulunmak için internet bağlantısı zorunludur. Kriz dönemlerinde, telefon istasyonlarının etkisiz kalması ve iletişim altyapısındaki sorunlar nedeniyle internet ağını daha da kıymetli hale getirmektedir. Devletin bu durumlarda tüm yurt tarafından ücretsiz internet bağlantısı sağlanması oluşacak maddi ve manevi zararı en aza indirgeyeceği düşünülmektedir.

ÖZET

İletişim teknolojilerinin uzun yıllar içerisinde sergilediği gelişim serüveni, yalnızca bilgi üretme hızını etkilemekle kalmamış, üretim pratiklerinde yapay zekanın gelişmesine olanak sağlayarak pek çok unsuru değiştirmeye başlamıştır. Kısaca insan yapımı araçların, insan zekasını taklit etme amacı taşıyan sistemler olarak tanımlayabileceğimiz yapay zeka, yaşantımıza hızla dahil olmakta ve hayatımıza kolayca entegre edilmektedir. Yapay zekanın farklı sektörlerde kullanıldığı bilinmekte, habercilik perspektifinden de yapay zeka ekseninde yeni gelişmeler yaşandığı gözlemlenmektedir. Yeni medya kavramıyla dönüşmeye başlayan geleneksel gazeteciliğin çeşitlendiği görülmekte, farklı alanlara evrildiği söylenebilmektedir. Yeni medya ve yapay zekanın meydana getirdiği atmosfer sonucunda gelenekselden uzak, yepyeni gazetecilik türlerinin oluştuğu gözlemlenmekte, bunların arasında; drone gazeteciliği, sarmal gazetecilik, veri gazeteciliği, yurttaş gazetecilik, robot gazeteciliği örnek verilebilmektedir. Yapay zeka uygulamalarının daha aktif bir şekilde rol oynadığı robot gazeteciliği de son yıllarda en çok tartışılan konulardan biri haline dönüşerek mevcut medya sistemlerinin geleceğine dair teorilerin oluşmasına zemin hazırlamıştır. Çalışmada, yapay zeka uygulamalarından metin üretimi alanında en sık tercih edilen ChatGPT uygulaması seçilmiş, belirlenen bilgiler doğrultusunda yapay zekadan haber metni üretmesi istenmiştir. Nitel araştırma yöntemlerinden içerik analizinin kullanıldığı çalışmada yapay zeka ve insan üretimi haberler karşılaştırmalı bir şekilde incelenmiştir. Çalışmada 8 haber kategorisi oluşturulmuştur. Bu kategoriler; ekonomi, politika, eğitim, seyahat, kültür sanat, sağlık, spor ve 3. sayfa haberleri şeklindedir. Belirtilen kategoriler rastgele örneklem yöntemi ile seçilmiş her kategoriye ait 5 haber yapay zekaya yazdırılarak aradaki fark saptanmaya çalışılmıştır. Toplam 40 haberin karşılaştırmalı bir şekilde incelendiği çalışmada, basit metinlerin birbirine yakın olduğu gözlemlenmiş fakat sayısal verilerin, detaylı bilgilerin yer aldığı haberlerde yapay zeka algoritmasının yalnızca taslak eşdeğerinde içerik ürettiği tespit edilmiştir.

Anahtar Kelimeler: Yeni Medya, Robot Gazeteciliği, Yapay Zeka, ChatGPT

Examining Robot Journalism on the Axis of Artificial Intelligence: ChatGPT Example

ABSTRACT

The development adventure of communication technologies over many years has not only affected the speed of information production, but has also begun to change many elements by enabling the development of artificial intelligence in production practices. Artificial intelligence, which we can briefly define as systems that aim to imitate human intelligence, is quickly included in our lives and is easily integrated into our lives. It is known that artificial intelligence is used in different sectors, and it is observed that there are new developments in the axis of artificial intelligence from the perspective of journalism. It is seen that traditional journalism, which started to

6th International CEO Communication, Economics, Organization & Social Sciences Congress

transform with the concept of new media, has diversified and it can be said that it has evolved into different fields. As a result of the atmosphere created by the new media and artificial intelligence, it is observed that brand new types of journalism, far from traditional, have emerged. drone journalism, spiral journalism, data journalism, citizen journalism, robot journalism can be given as examples. Robot journalism, in which artificial intelligence applications play a more active role, has also become one of the most discussed topics in recent years, paving the way for the formation of theories about the future of existing media systems. In the study, ChatGPT application, which is the most preferred artificial intelligence application in the field of text production, was chosen and it was asked to produce news text from artificial intelligence in line with the determined information. In the research, in which content analysis, one of the qualitative research methods, was used, artificial intelligence and human-made news were examined in a comparative way. In the study, 8 news categories were created. These categories are; economy, politics, education, travel, culture and arts, health, sports and 3rd page news. The specified categories were selected by random sampling method, and the difference was tried to be determined by printing 5 news belonging to each category on artificial intelligence. In the study, in which 40 news stories were analyzed comparatively, it was observed that the simple texts were close to each other, but it was determined that the artificial intelligence algorithm only produced the content equivalent of the draft in the news containing numerical data and detailed information.

Keywords: New Media, Robot Journalism, Artificial Intelligence, ChatGPT

GİRİŞ

İnsanın varlığını sürdürebilmesi için en temel gereksinim olarak gördüğümüz iletişim kavramı, teknolojinin ve dijitalleşmenin etkisiyle sürekli olarak kendini yenilemektedir. Bu yenilikler kimi zaman haberleşme alanında kimi zaman da medya kapsamında çeşitli değişkenler yaratmaktadır. Yeni medya kavramıyla birlikte medyanın haber üretme faaliyetleri şekillenmiş, okuyucunun da tüketim alışkanlıklarında çeşitli farklılıklar oluşmuştur. Bu bağlamda teknoloji oldukça önemli bir rol üstlenmektedir. “*Teknolojik yapının belirleyici olduğunu vurgulayan McLuhan’a göre teknolojinin ciddi gücü bulunmakta ve bu güç beraberinde yeni toplumlar ve yeni yaşam koşulları da üretmektedir*” (Yengin & Bayrak, 2022). Teknolojik yapının yarattığı yeni yaşam koşulları arasında yeni nesil haberleşmenin de çeşitlendiği görülmektedir. Özellikle internetin ve dijitalleşmenin etkisi haber üretiminde de radikal değişikliklere sebep olmuştur. İnternetin insan hayatında aktif olarak kullanılması; ilk olarak haber üretiminde metin odaklı içerik tasarlanmasına, daha sonra ise yeni medyanın gelişimiyle birlikte metin odaklı habercilik anlayışından uzaklaşılarak daha efektif video ve görsel paylaşımına odaklanan bir yapı oluşturmuştur (Çakar & Can, 2022: 383). Günümüzde yapay zekanın şekillendirdiği sektörler arasına giren medya alanı da haber üretimi sürecinde daha önce görülmemiş habercilik anlayışlarını geliştirmiştir. Medya sektöründe şüphesiz en radikal değişikliklerin yaşandığı bu yıllarda, yapay zekanın gazeteciliğe entegre edilmesi robot gazeteciliği kavramının doğmasına zemin hazırlamıştır. Robot gazeteciliği, haber üretim süreçlerinde insan müdahalesi olmadan içerik sağlayabilecek teknolojik bir habercilik türü olarak tanımlanmaktadır. Hem bilimsel hem de sektörel anlamda pek çok soru işaretini beraberinde getiren robot gazetecilik, basın dünyasına sağlayacağı iyileştirmelerin yanı sıra oluşturacağı dezavantajlar nedeniyle merak uyandıran bir konu haline gelmiştir. Uzun bir geçmişe sahip olmayan robot gazeteciliği, endişeler ve yenilikler sebebiyle son yıllarda pek çok bilimsel çalışmanın da ana konusu olmuştur.

Yapay zekanın yaşantımıza dahil olmaya başlamasıyla artan endişeler basın ayağında da çeşitli teorilerin gündeme gelmesine neden olmuştur. Çünkü teknolojik yenilikler insanların meslek seçimlerini gelenekselden popüler alanlara yönlendirmeye başlamıştır. Bu bağlamda bazı meslek grupları yok oluyorken, bazıları ilgiyle takip edilmektedir (Yengin & Bayrak, 2022: 179). Gazetecilik mesleğinin de ilerleyen dönemlerde yok olacağı endişesi bilim dünyasının da her geçen gün dikkatini çekmektedir. Özellikle son zamanlarda sahada çalışan basın mensubu kişilerin azalması, uzman gazeteciliğin geri plana atılması, masa başı muhabirlerin çoğalması habercilik dünyasında daha az çalışana ihtiyaç duyulmasına yol açmıştır. Basın mensupları adına sektör her geçen gün daralmaya devam ederken metin üretimi yapabilen yeni teknolojilerin oluşması da akıllarda birçok korkunun oluşmasına neden olmaktadır. Yapay zeka tabanlı metin üretimi yapabilen ve küresel anlamda en çok tercih edilen uygulamalardan biri de şüphesiz OpenAI tarafından geliştirilen ChatGPT uygulamasıdır. ChatGPT, kullanıcıların yönelttiği sorular karşısında herhangi bir web taraması yapmadan ‘*makine öğrenimi*’ tekniğiyle geliştirilmiş yanıtlar verebilen bir uygulama olarak tanımlanabilmektedir (Karakoç Keskin, 2023: 116). Kısa sürede konuyla ilgili anlam bütünlüğünün sağlandığı cevaplar neticesinde pek çok kişi ChatGPT uygulamasını özel yaşantılarında, işlerinde, projelerinde ya da ödevlerinde kullanmaya başlamıştır. Eşsiz bir hızla küresel anlamda insanlar tarafından benimsenen bu uygulamanın ücretsiz oluşu dünyada bir ilk özelliği taşımaktadır (Rudolph, Tan & Tan, 2023). Bu doğrultuda haber üretiminde de yapay zeka destekli metin üretimi gerçekleştirebilen uygulamalar da gelişim göstermektedir.

Bu çalışmada yapay metin üretimi ve gerçek habercilik arasındaki farkları saptama amacıyla yapay zeka uygulamalarından ChatGPT uygulaması seçilmiş, belirlenen bilgiler doğrultusunda yapay zekadan haber metni üretmesi istenmiştir. Nitel araştırma yöntemlerinden içerik analizinin kullanıldığı çalışmada yapay zeka ve insan üretimi haberler karşılaştırmalı bir şekilde incelenmiş olup haberin ilkeleri kriterleri doğrultusunda analizler gerçekleştirilmiştir. Çalışmanın sonucunda ChatGPT gibi uygulamaların basın dünyasına nasıl katkı sunabileceğine ilişkin noktalara değinilmiş, haberciliğin insan müdahalesi olmadan yapılamayacağı fikrinin üzerinde durulmuştur. Robot gazeteciliği üzerine yapılan çalışmalar incelendiğinde 2014 yılında Clerwall tarafından yapılan çalışmada bilgisayar destekli üretilen metinler ile gerçek haber metinlerini karşılaştırmalı bir şekilde inceleyerek okuyucuların tercih şekillerini saptamaya çalışılmıştır. Ele alınan bu çalışmada okuyucular bilgisayar tabanlı metinleri gerçek haberlere göre daha sıkıcı bulduklarını belirtmiş fakat bilgilerin daha nesnel olduğuna dikkat çekmiştir. Basın mensuplarının odak noktasında yer aldığı başka bir çalışmada ise İngiltere'nin önemli basın kuruluşlarında görev yapan 10 gazetecinin, robot gazeteciliği hakkındaki fikirleri saptanmaya çalışılmıştır (Thurman, Doerr & Kunert, 2017: 15). Araştırma sonucunda ise robot gazeteciliği kapsamında üretilen haber içeriklerinde insani bir yaklaşım olmadığı saptanmış, insansı makinelerin haberin ruhunu hissedemeyeceği bu nedenle çeşitli etik sorunlar yaşanabileceği düşüncelerine ulaşılmıştır. Bir başka çalışmada habercilik adına insan varlığının önemi vurgulanmakta, yapay zekanın daha çok rutin işlerde devreye gireceği düşünülmektedir (Beckett, 2019). Rapor kapsamında 32 ülkeden 71 adet medya kurumunda görev alan basın mensuplarıyla gerçekleştirilen anket sonuçları değerlendirilmektedir. Küresel anlamda literatür taraması yapıldığında alana ilişkin önemli çalışmalardan birisi de Güney Kore'de alanında uzman 47 gazeteciyle robot gazeteciliği üzerine yapılan çalışmadır. Bu çalışma kapsamında gazetecilerin robot gazeteciliğine karşı 3 farklı tutum sergilediği saptanmış ve bu yaklaşımlar “Seçkinler”, “Yenilikçiler” ve “Frankenstein kompleksliler” şeklinde ifade edilmiştir (Kim & Kim, 2018). Bu çalışmada 47 kişiden Seçkinler grubuna yakın olan basın mensupları gazetecilik mesleğinin tamamen insana özgü bir meslek olduğu ve bu nedenle robotların gazetecilerin yerini asla alamayacaklarını savunuyorken, Yenilikçiler, robot gazeteciliği kavramına daha iyimser bakmaktadır. Frankenstein kompleksliler ise, robot gazeteciliğine karşı korku duymakta ve mesleğe ya da sektöre ilişkin herhangi bir fayda sağlamayacağını savunmaktadır. Bu doğrultuda robot gazeteciliği, ile ilgili hem iyimser hem de kötümser yaklaşımlar var olduğunu söylemek mümkündür.

Robot gazeteciliği ile ilgili Türkçe kaynaklar tarandığında; konunun uzmanlarıyla gerçekleştirilen derinlemesine görüşmeler ışığında robot gazeteciliği ele alan Narin, rutin haberlerde yapay zeka destekli uygulamalardan yararlanılabileceği fikrinin altı çizilse de sosyal farkındalık ve kültürel hafıza gerektiren röportaj, söyleşi, özel haber, araştırma haber gibi içerikler de yapay zekanın yeterli olmayacağı sonucuna ulaşmıştır (Narin, 2017). Ayrıca ele alınan çalışma kapsamında robot gazeteciliği kavramının analizi çıkarılarak; güçlü yönleri, zayıf yönleri, fırsatları ve tehditleri saptanmaya çalışılmıştır. Türkiye sınırları içerisinde alanında uzman kişilerin görüşlerine başvurularak robot gazeteciliği kavramının detaylandırıldığı bir diğer çalışmada altısı yerel gazetede çalışan gazeteciler olmak üzere toplam 9 kişi ile derinlemesine görüşmeler gerçekleştirilmiştir (Güz & Yeğen, 2018). Çalışmanın sonucunda ise Türkiye örneğinde yer alan gazetecilerin, robot gazetecilik kavramı konusunda şüpheli oldukları dikkatleri çekmektedir. Ayrıca görüşlerine başvuru alan gazetecilerin büyük bir çoğunluğu, insansı bir makine ile insanın kıyaslanamayacağı görüşünü savunmaktadır. Türkiye’de yapay zeka ve habercilik konulu bir diğer çalışmada ise robot gazeteciliğin basın dünyası ve toplum için neler getireceği, nasıl sonuçlar doğuracağı tespit

edilmeye çalışılmıştır (Umur, Ölçekçi & Koz, 2022). Araştırma kapsamında etik konuları tartışılmıştır. Ülkemiz genelinde ele alınan bir diğer çalışmada ise ChatGPT konulu haberler incelenmiştir (Karakoç Keskin, 2023). İçerik analiziyle ele alınan çalışma sonucunda ChatGPT ile ilgili Türkiye gündemine ilişkin saptamalar gerçekleştirilmiştir.

Yeni Medya Bağlamında Gazetecilik

İnsanlığın merak duygusu neticesinde gelişen haber alma ve haber üretme serüveni, tarih boyunca çeşitli yeniliklerle harmanlanarak dönemin teknolojik yeterliliği kapsamında gelişerek evrimleşmiştir. Bireyin merakını giderme arzusu sürekli olarak devam etmiş, teknolojiyle birlikte yeni iletişim alanları meydana gelmiş ve haberleşme kapsamında çeşitli değişiklikler yaşanmıştır (Uğurlu 2013: 3). Gazetecilik kavramı da teknolojinin insan yaşamına kazandırdığı değerli meslek grupları arasında yer almaktadır. Bu kapsamda bilginin aktarım sürecinde kitle iletişim araçları önemli bir rol üstlenmekte ve araç olarak televizyon, gazete, internet, sosyal medya gibi unsurlar tercih edilmektedir (Şahin & Bayrak, 2022: 169). İnsanların duygusal ya da konumsal yakınlık duyduğu kent veya bölgelerde meydana gelen olayları öğrenme isteği, dünyanın küreselleşmesiyle daha büyük çerçeveye yayılarak global anlamda merak duygusunu beslemiştir. Bu nedenle haber üretimi de dijitalleşme yolunda daha geniş bölgeye, daha fazla kişiye ulaşma amacı gütmeye başlamıştır. Mekansal olarak birbirinden uzak konumlarda bulunan insanları gazeteler yeni medya kanalıyla bir araya getirmektedir (Yengin, Bayrak & Harranoğlu, 2023: 75). Dijitalleşme her ne kadar haber üretim sıklığını, haber toplama alanını ve haberin alıcı sayısını arttırmış olsa da gazetecilik mesleğinde önem arz eden hız unsurunun da gelişmesine neden olmuştur. Haber tüketimi noktasında yeni bir bakış açısı getiren yeni medya uygulamaları, hem hız kavramını daha iyi yönetmekte hem de haber üretimini çeşitlendirmektedir. Bu bağlamda yeni medya kavramının gelişmeye başladığı andan itibaren haberciliğin de kendi perspektifinde farklı formlara büründüğü gözlemlenmektedir (Narin, 2017:25). Geleneksel medya ve yeni medya olarak ele alabileceğimiz konu başlıklarında; gelenekselin daha durağan, daha yavaş, daha eski olduğu; yeniliğin ise daha hareketli, daha ilginç, daha hızlı ve en önemlisi de daha güncel olduğu gözlemlenmektedir. Kağıda basılan haberlerin okuyucuya ulaşma sürecinde geçen zaman dilimi bilgilerin eskimesine yol açırken yeni medya olanakları, okuyucuya meydana gelen yeni gelişmeleri anında iletme gücünü taşımaktadır.

Fiziksel uzaklıkların aşıldığı, somut ürünlerin yerini sanala bıraktığı günümüz haberleşme standartlarında yeni medya yalnızca hızlı haber üretimini yaratmakla kalmamış, bireyi tüketici konumundan üretici konumuna da taşımıştır. Çakır'a göre haberin dijitalleşmesi, Okuyucuyu sürece dahil etmekte ve kişisel fikirlerini aktarabileceği bir ortam sunmaktadır (2007: 125). Yeni medya olanaklarının bir ürünü olarak ele alabileceğimiz sosyal medya uygulamaları, bireylerin bilgiyi takip etmesine olanak sağlarken, aynı kişilerin yorum yapabilmesine, bilgiyi paylaşabilmesine ve yeni içerik üretebilmesine de imkan sağlamıştır. Etkileşim kavramı yeni medya olanaklarıyla birlikte haberci ve okuyucu arasında geri bildirim sürecinin gerçekleşmesinde önemli bir rol oynamıştır (Geray, 2003; 17). Yeni medya olgusunun gazetecilik perspektifinde yeni ihtiyaçların karşılanması adına daha önce görülmemiş gazetecilik türlerini oluşturduğu görülmekte, veri gazeteciliği, yurttaş gazeteciliği, çevrim içi gazetecilik, drone gazeteciliği ve robot gazeteciliği bu konuya örnek olarak gösterilebilmektedir. Geleneksel medyanın aksine kişiyi haberin dışında bırakmayan yeni medya yapısı elbette meslek dışı habercilerin de oluşmasına neden olmuştur. Yeni medya bağlamında gazetecilik incelendiğinde, yurttaş habercilik kavramının geliştiği gözlemlenmekte ve bu tür gelişmelerin hem yerel basını hem de ulusal basını beslediği düşünülmektedir. Yurttaş

gazeteciliği, haber toplama mekanizması içerisinde basın mensubu olmayan kişilerin bireysel olarak elde ettiği içerikleri basına servis ederek sürece dahil olma durumu şeklinde tanımlanabilmektedir (Çetinkuş & Keleş, 2018: 200). Yeni medyanın basın sektörüne kazandırdığı yurttaş gazeteciliği, her ne kadar haber ağının genişlemesine olanak tanısa da mevcut personel sayılarında olumsuz etki oluşturmaktadır. Yeni teknolojiler haber çeşitliliğini arttırsa da şirketler kapsamında çalışan personel sayısında tersine etki yaratmakta ve her geçen gün sektör havuzu çalışanlar açısından daralmaktadır (Herman, Chomsky, 2012). Yeni medyanın haberciliğe kazandırdığı yurttaş gazetecilik, her bireyin yaşadığı bölgenin muhabiri olabilme yetisini sağlamış haber sürecinde aktif rol oynamasına olanak tanımış, haber üretiminde çeşitliliğin oluşmasına zemin hazırlamış ve yine hız kavramını bir adım öteye taşımıştır. Yurttaş gazeteciliğinin temel amacı ise yeni medya olanaklarının kullanılarak haber alıcısının sorunlarını, isteklerini ya da bölgesinde gerçekleşen önemli olayları gündeme taşıyarak kamuoyu oluşturmaktır.

Yeni medya bağlamında oluşan bir diğer habercilik türü ise veri gazeteciliğidir. Veri gazeteciliği, haber toplama ve yazma sürecinde elde edilen verilerin çeşitli temizleme, analiz etme, yorumlama gibi aşamalarından geçerek bilgiyi görselleştirme durumu olarak tanımlanabilmektedir. 2014 yılında literatüre kazandırılan veri gazeteciliği (Dağ, 2017: 282), basın kurumları tarafından sıkça kullanılmakta, çevrim içi raporlama sistemlerinden yararlanılarak gerçekleştirilmektedir. Yeni medya teknolojilerinin meydana getirdiği bir diğer gazetecilik çalışması da insansız hava araçlarının veya drone uygulamalarının kullanılmasıyla elde edilen içeriklerin işlenerek haberleştirildiği, drone haberciliğidir. Drone haberciliğinin yeni medya ortamlarında gelişmesinin en temel nedeni ise geleneksel medyanın kamera, fotoğraf makinesi gibi araçlar doğrultundan elde ettiği görüntüleri, daha teknolojik bir şekilde her açıdan görüntüleyebilecek sistemlerin aktif olarak haber üretim süreçlerinde kullanılmasıdır (Kavaklı, 2018, 163). Haberciliğe hız kazandırması, daha net ve farklı açılardan görüntülerin elde edilmesi, maliyetinin çok daha az olması drone gazeteciliğini günümüzde popüler bir hale getirmiştir. Çevrim içi gazetecilik ise yeni medya uygulamaları kapsamında gelişen habercilik türleri arasında yer almaktadır. Kullanıcıya hem üretme hem de tüketme imkanı sunan sosyal ağlar yalnızca kişilerin değil kurumların da ilgisini çekmiş (İlgin, Şahin & Çakar: 2023: 220), kurumların sosyal ağlarda yer alarak haber üretimine başlaması kaçınılmaz olmuştur. Çevrim içi gazetecilik, hem geleneksel medya kuruluşlarının ağ ortamlarında alıcısına haber servis etmesi hem de yalnızca internet ortamında yayın yapan basın kuruluşlarının dijital ortamdaki tüm faaliyetlerini kapsamaktadır. Çetinkuş ve Keleş'e göre çevrim içi gazetecilik, geleneksel medyanın yeniden üretilmesi olarak tanımlanmaktadır (2018: 201). Çevrim içi gazeteciliği geleneksel medyadan ayıran unsurlar arasında ise haber servisinde ağ ortamlarının kullanılması ve buna bağlı olarak etkileşim kavramının ön planda tutularak okuyucuya daha az detayın aktarılmasıdır. Okuyucunun her geçen gün habere duyduğu ilginin azalması, basın mensupları açısından haber tüketiminde devamlılığı olumsuz etkilemekte ve giderek okuyucunun ilgisi azalmaktadır (Gülle, 2022: 209). Bu bağlamda yeni medyayla birlikte haber tüketim alışkanlıkları değişmeye başlamıştır. Özellikle genç neslin ağırlıklı olarak geleneksel medya araçlarından ziyade yeni medya olanaklarını tercih ettiği yapılan araştırmalar neticesinde tespit edilmiştir (Yengin & Çakar, 2023: 401). Bu doğrultuda kullanıcısı oldukça fazla olan yeni medya, oluşturduğu yeni gazetecilik türleriyle hem avantajları hem de dezavantajları beraberinde getirmektedir. Arşivleme konusunda kolaylık sağlanması, istenilen habere link yardımıyla kolayca erişilmesi, hareketli videolara ve daha detaylı görsellere yer verilmesi, habere hızlı ulaşılması, etkileşimli yapının kurulmasıyla okuyucunun sürece dahil edilmesi, daha az bütçe ile daha büyük kitlelere ulaşılması, içeriklerde kolayca güncelleme yapılabilmesi

yeni medyanın haberciliğe sağladığı en büyük avantajlar arasında yer almaktadır. Geleneksel medyaya göre yeni medyanın daha ekonomik olması da ağ ortamlarında gelişen gazeteciliğin daha popüler olmasının nedenleri arasında gösterilebilmektedir (Civeleker, 2017: 484). Yeni medya ortamlarında gazeteciliğe karşı gelişen dezavantajlı durumlar arasında ise; hız unsuru neticesinde etik ihlallerin yaşanması, bilginin doğruluğu teyit edilmeden dolaşıma sokulması, tıklanma uğruna alakasız başlıkların atılması, arama motoru optimizasyonu uygulamalarının gereğinden fazla kullanılması gösterilebilmektedir. Bunun yanı sıra yeni medyanın her bireye üretebilme imkanı sağlaması da basın mensupları açısından sektörde çalışan sayısını olumsuz etkileyebilmektedir.

Robot Gazetecilik Kapsamında Haberin Seri Üretim Ürününe Dönüşmesi

Habercilik tarihi incelendiğinde şüphesiz en radikal değişikliklerin 21. yüzyıl içerisinde gerçekleştiği görülmektedir. Yeni medya olgusuyla birlikte dijitalleşen habercilik anlayışı, yeni teknolojik gelişmelere göre şekillenmeye, güncellenmeye ve değişmeye devam etmektedir. Bu değişime kayıtsız kalamayan geleneksel kitle iletişim araçları teknolojik gelişmelerle birlikte yeni medya üzerinde dönüşüm geçirmektedir (Güz ve Yeğen, 2018: 331). Güncel bilgiler ışığında yapay zeka uygulamalarının pazarlama, bankacılık, finans, bilgi teknolojileri, sağlık, otomotiv, tarım ve bakım onarım gibi farklı sektörlerde kullanıldığı bilinmekte, habercilik perspektifinden de yapay zeka ekseninde yeni gelişmeler yaşandığı gözlemlenmektedir. Son yıllarda yeni medya kavramıyla dönüşmeye başlayan geleneksel gazeteciliğin farklı alanlara evrildiği söylenebilmektedir. Yapay zeka, her sektörün ürettiği teknolojik imkanlar neticesinde yeni gelişmelerin yaşanmasına olanak sağlamakta ve haberciliği de gelenekselden güncel forma aktarmaktadır. Bu nedenle hem mesleki endişeleri hem de teknolojik heyecanları doğuran robot gazeteciliğinin gelişimi pek çok kişi tarafından merak edilmektedir. Gazetecilik mesleğinde sahada haber toplayan muhabir sayılarının giderek azalması, masa başı haberciliğin artması ve bu doğrultuda basının yeni medya temelli bir sürece entegre olması dönüşümün bir göstergesidir. Tarihi çok da eski olmayan robot gazeteciliği, son yıllarda bilim ve medya dünyasının odağı haline gelmiştir. İletişim tarihi incelendiğinde “robot gazetecilik” kavramının 2002 senesinde Google Haberler tarafından kullanıldığı ve haber toplama amacıyla çeşitli internet sitelerinden haber bulduğu bilgisine ulaşılmaktadır (Işık, Ölçekci & Koz, 2022: 1251). Bilim kurgu senaryolarında robotların insan ırkı üzerinde hakimiyet kurma düşüncesi uzun yıllardır tartışılmakta ve gazetecilik mesleği kapsamında bu tür senaryoların bir kısmının gerçekleşmeye başladığı söylenebilmektedir (Narin, 2017: 82). Yakın gelecekte günümüz mesleklerinin çoğunda insan gücü yerine robot teknolojilerinin yer alabileceği ihtimali, basın dünyasında da çeşitli teorilerin oluşmasına neden olmuştur.

Robotik sistemlerin iletişim teknolojilerinde aktif olarak kullanılmaya başladığı ortamlarda, yapay muhabir, yapay sunucu ve yapay metinlerle karşılaşmaktadır. Robot gazetecilik, hiçbir insan müdahalesi olmadan veri düzenleme, analiz etme ve görüntü toplama aşamalarının ardından insansı makinelerin yapay bir haber metni üretmesi olarak tanımlanabilmektedir (Carlson, 2015). Günümüzde oldukça popüler hale gelen robot gazeteciliği, yapay zeka sistemlerinin basın sektörüne entegre edilmesiyle oluşmuştur. Robot gazeteciliği kapsamında kullanılan sistemler, saniyeler içerisinde insansı makinelerin veri yığını içerisinde anlamlı haber metinleri oluşturabilmektedir (Latar, 2018: 29). Yapay zeka uygulamalarıyla geliştirilen bu yeni nesil gazetecilik türü yalnızca haber metni elde etmek için kullanılmamaktadır. Haber seçiminde, haber redaktesinde, haber kategorize etmede de yapay zeka sistemlerinden yararlanıldığı bilinmektedir. Bu doğrultuda en iyi örnek The Guardian gazetesi tarafından yapay zeka algoritmalarıyla seçilen haftalık en iyi haberlerin toplanarak The Long Good Read

isimli 24 sayfalık basılı yayını olarak gösterilebilmektedir (Ellis, 2013). Robot gazeteciliğin kilometre taşları 2002 yılından günümüze kadar atılmaya devam etmiştir. Yapay zekanın habercilikte kullanılmaya başlaması sürecinden önce yaşanan gelişmeler aşağıdaki tabloda yıl bazlı olarak gösterilmiştir.

Tablo 1. Robot gazeteciliği kapsamında yaşanan önemli gelişmeler

Yıl	Gelişmeler
2002	Google Haberler tarafından 'robot gazeteciliği' kavramının kullanılması
2006	Reuters'ın web sitesinde bulunan finans içeriklerini derlemek için algoritma sistemleri kullanacağını açıklaması
2010	Statsheet Şirketinin basketbol takımlarıyla ilgili haber metinlerini insan müdahalesi olmadan üretmesi
2013	Yapay zekanın derlediği haberlerin haftalık olarak The Long Good Read isimli yayının basılı olarak çıkartılması
2014	Los Angeles Times tarafından Los Angeles'da meydana gelen depremi 3 dakika içerisinde yapay zeka tarafından üretilen haber ile kamuoyuna duyurması
2015	Associated Press'in mali raporlarını yapay zekayla bildireceğini duyurması ve geleneksel yöntemle üretilen 300 adet haber sayısının yapay zekayla birlikte 4400 sayısına yükselmesi
2016	Çin'de üretilen insansı robot 'Jia Jia'nın canlı röportaj gerçekleştirmesi
2018	Çin'de üretilen dünyanın ilk yapay zeka spikerinin tanıtılması
2023	Hürriyet Gazetesi tarafından Türkiye'de ilk kez dijital haber sunucusu Alexa'nın tanıtılması

Kaynak: Yapay zeka ve habercilik konulu makalelerden derlenmiştir: (Narin, 2017: 85), (Güz & Yeğen, 2018: 332), (Fırat, 2018: 33), (Yeniceler, 2022: 706), (Işık, Ölçekçi & Koz, 2022: 1251), (Ay, 2022: 919-920).

Robot gazeteciliğinin gelişim sürecinde yaşanan yeniliklerin sıralandığı tablo incelendiğinde; 2002 yılında ilk kez kavramın kullanıldığı görülmektedir. 2006 yılında Reuters'ın finans içerikli haberleri derlemek için yapay zekadan yararlanacağını duyurması robot gazeteciliği açısından önemli mihenk taşları arasında yer almaktadır. 2010 yılında Statsheet Şirketinin insan müdahalesi olmadan yapay zeka odaklı haber üretimini gerçekleştirmesi oldukça önemlidir. Bu gelişmeleri 2013 yılında The Long Good Reed isimli basılı gazetede yer alan haberlerin yapay zeka tarafından seçilmesi takip etmiştir. 2014 yılında ise Los Angeles'ta meydana gelen 4,7 büyüklüğündeki depremin ardından 3 dakika gibi kısa bir süre içerisinde Los Angeles Times Gazetesinin yapay zeka sistemleriyle hazırladığı haberi kamuoyuna servis etmesi, robot gazeteciliği için milat kabul edilmektedir. Bu gelişmelerin ardından bir yıl sonra AP'in finansal raporlarını yapay zeka ile üreteceğini duyurması ve geleneksel biçimde üretilen 300 haberin yapay zeka kullanımıyla birlikte 4400 sayısına yükselmesi de alanda yaşanan önemli adımlardan biridir. 2016 yılında Çin'de üretilen insansı robot 'Jia Jia'nın canlı röportaj gerçekleştirmesi ve yine Çin'de 2018 yılında dünyanın ilk yapay zeka spikerinin tanıtılması da kritik başlıklar arasındadır. 2023 yılında Hürriyet Gazetesi tarafından Türkiye'de ilk kez dijital haber sunucusu Alexa'nın tanıtılması da ülkemiz için oldukça büyük bir önem arz etmektedir.

Tablo 2. İnsan ve yapay zekanın karşılaştırılması

İnsan Uzmanlığı	Yapay Uzmanlık
Çabuk etkilenebilir	Kalıcı
Aktarılması güç	Kolay aktarılabilir
Dokümantasyonu zor	Kolay belgelenebilir
Tahmini zor	Tutarlı

Pahalı	Satın alınabilir
Yeni fikirler üretebilir	Esinlenemez
Uyumludur	Uyum dışarıdan sağlanmalıdır
Hassas gözlem yapabilir	Sembolik verilerle çalışır
Geniş görüş açısına sahiptir	Dar açıdan bakış
Sosyal duyuma sahiptir	Teknik duyuma sahiptir

Kaynak: (Doğan, 2002: 63; akt. Fırat, 2018: 26)

İnsan ve yapay zekanın karşılaştırmalı olarak incelendiği tablodan hareketle yapay zekanın yalnızca insan yapımı araçların, insan zekasını taklit etme amacı taşıyan sistemler olduğu anlaşılmaktadır. Tablodan yola çıkarak robot gazeteciliği ve gazetecilik kavramları değerlendirilebilmektedir. Bu bağlamda robot gazetecilik sayısal verilere odaklanıyorken gazeteciliğin kültürel değerlere sahip çıktığı ve hassas gözlem yaparak kamuoyuna daha etkili içerikler sunduğu görülmektedir. Ayrıca gazetecilerin sosyal gücü de teknik karşısında daha anlamlı bir yapı oluşturmaktadır. *“Teknik; bir şey elde etmenin, üretmenin bilgisidir. Teknoloji ise bu bilginin toplumsallaşması, toplumsal yansımaları olması ve toplumsal anlam kazanması demektir. Teknolojik buluş, değişim geçiren üründe her zaman için belirgin bir ilerlemeye yol açar. Teknoloji alanındaki gelişmeler, maddi, toplumsal, kültürel ve manevi hayatlarımızın iyileşmesine doğrudan katkıda bulunurlar ve böylelikle uygarlığın bü- yümesine hız kazandırırılar”* (Yengin, 2022: 94). Her geçen gün iletişim teknolojilerinde yaşanan gelişmeler pek çok değişkeni beraberinde getirmektedir. Bahsi geçen değişkenler kimi zaman olumlu sonuçlar doğursa da kimi zaman tahmin edilemeyecek zorlukları meydana getirebilmektedir. Bu doğrultuda robot gazeteciliği de iyimser ve kötümser olarak ele alınmaktadır. Gazetecilerin işini kolaylaştırma açısından olumlu bir gelişme olarak ele alınsa da gazetecilik mesleğinde uyulması gereken etik unsurları çiğneyebilecek yapıdaki yapay zeka, aslında bir nevi robotun insan üzerinde hakim olma çabasını da göstermektedir.

Yapay Zekanın Sohbet Robotu ChatGPT

OpenAI tarafından üretilen ChatGPT, eğitilebilen bir dil modeli olarak karşımıza çıkmakta ve temel olarak metin üretimi amacıyla kullanılmaktadır. Yalnızca metin üretiminde kullanılmayan ChatGPT, aynı zamanda metin redaktesinde, metin birleştirmesinde, metin tamamlamasında, özetleme veya kısaltma işlemlerinde de sıkça başvurulan uygulamalar arasında yer almaktadır. Ayrıca ChatGPT, NLP ve NLU gibi kısımlarda da kullanılmaktadır. Yapay zeka teknolojilerinin kullanımıyla üretilen GPT modelleri, bireylerin ağ ortamında insanı bir makineye soru yöneltmesini ve karşılığında doğru cevaplar elde etmesine olanak tanımaktadır. ChatGPT'nin kullanıcılara sunduğu bilgileri; internet sayfaları, ilgili makaleleri, sosyal medya paylaşımlarını, blog içerikleri gibi ağ üzerinde üretilen her türlü paylaşımı tarayarak elde etmektedir (Sanmartin, 2023). Yeni bir oluşum olan ChatGPT tarafından üretilen metinler doğru bilgidен ziyade kullanıcının duymak istediğine yönelik içerikler hazırlamaktadır. Bu doğrultuda, ChatGPT'nin bilimsel bir kaynak niteliği taşımak yerine eğlence kavramına hitap ettiği söylenebilmektedir (Thorp, 2023: 313). İlk tanıtımının 2022 yılının Kasım ayında gerçekleştirildiği ChatGPT çok kısa bir sürede ve küresel anlamda yüksek kullanıcı sayısına erişmiştir. Bunun temel nedeni olarak metin üretebilen veya sohbet robotu olarak tanımlayabileceğimiz ChatGPT uygulamasının ücretsiz olmasıdır. Bu kapsamda ChatGPT tanıtımının üzerinden yalnızca 5 gün geçmesine rağmen 1 milyon kullanıcıya ulaşılmıştır.

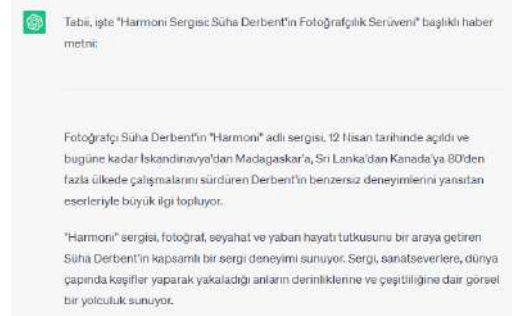

Metin üretebilen, redakte edebilen, metin birleştirebilen ya da özetleyebilen sohbet robotu ChatGPT, robot gazetecilik kapsamında metin oluşturma aşamasında kullanılan uygulamalardan sadece bir tanesidir. ChatGPT uygulamasının küresel anlamda hızla kabul edilmesi, kısa sürede yüksek kullanıcı sayılarına ulaşmasının en temelinde ilginç oluşu ve erişilebilirlik imkanı yer almaktadır (Hartmann, Schwenzow, & Witte: 2023). 2022 yılının Kasım ayında kullanıcılara sunulan ChatGPT uygulaması üzerine yapılan çalışmalar oldukça sınırlıdır. Bu kapsamda yapılan çalışmaların ağırlıklı olarak eğitim temelli olduğu görülmektedir. Ayrıca ChatGPT kullanıcılarının profillerini tespit etme amacıyla yapılan bir çalışmada, ChatGPT konulu 10.732 tweet derinlemesine incelenmiş ve ilk kullananların büyük çoğunluğunun yazılım uzmanı/ yazılım ile ilgilenen kişiler, eğlence amaçlı siteyi deneyenler, yaratıcılık kavramını test etmek isteyenlerden oluştuğu tespit edilmiştir (Haque, Dharmadasa, Sworna, Rajapakse & Ahmad: 2022). ChatGPT yapısı gereği diyalog şeklinde çalışan bir yapıya sahiptir. Bu nedenle kullanıcının sohbeti başlatabilmesi adına, yapay zekaya bir soru yöneltmesi gerekmektedir. Yöneltilen sorunun içerisinde yer alan bilgilerden yeni bir metin hazırlayarak kullanıcıya sunan ChatGPT ile ilgili, çığır açacağına dair görüşler bulunuyorken aynı zamanda metin üretiminde yalnızca tekrarlanan içeriklerin yer aldığını vurgulayanların sayısı da azımsanamayacak kadar azdır.

YAPAY ZEKA EKSENİNDE ROBOT GAZETECİLİĞİNİN İNCELENMESİ: CHATGPT ÖRNEĞİ

Yapay zeka ve insan tarafından üretilen haberlerin karşılaştırmalı incelenmesini amaçlayan çalışma kapsamında nitel araştırma yöntemlerinden içerik analizi benimsenmiştir. İçerik analizi “elde edilen verilerin önce kavramsallaştırılması daha sonra ortaya çıkan kavramlara göre mantıklı bir biçimde düzenlenmesi ve buna göre veriye açıklayan temaların saptanması” şeklinde tanımlanmaktadır (Yıldırım & Şimşek: 2008). Birbirinden bağımsız alanlarda üretilen haberler 8 farklı kategoriye ayrılmıştır. Bu kategoriler ise; ekonomi haberleri, politika haberleri, eğitim haberleri, seyahat haberleri, kültür sanat haberleri, sağlık haberleri, spor haberleri ve 3. sayfa haberleri şeklindedir. Belirtilen kategorilerin her biri için rastgele örneklem yöntemi ile seçilmiş 5 haber yapay zekaya yeniden yazdırılmıştır. Özellikle muhabirlerin kaleminden çıkan haberlerin yalnızca spot kısmı kullanılarak yapay zekadan alt metni oluşturması istenmiştir. Bu doğrultuda hazırlanan karşılaştırmalı inceleme çalışmasında 40 farklı haber incelenmiştir. Haber dili, anlatım şekli, yazım kuralları ve gerçeklik üzerinden her bir haber ayrı ayrı değerlendirilmiştir.

Çalışmada incelenecek 8 kategori; ekonomi, politika, eğitim, seyahat, kültür-sanat, sağlık, spor ve 3. sayfa haberleri şeklindedir. Bu doğrultuda seçilen 5 farklı haber ChatGPT üzerinden yeniden üretilerek karşılaştırmalı olarak incelenmiştir. Bu doğrultuda toplam 40 içerik, haberin unsurlarına göre analiz edilerek, yapay zekanın haber üretimindeki verimliliği saptanmaya çalışılmıştır. Kategoriler bazında örnek çalışma olarak haber metinleri verilmiştir.

Seyahat haberleri kategorisi: Seyahat haberi olarak alanında uzman gazeteciler tarafından üretilen 5 farklı haber, yapay zeka uygulamalarından ChatGPT tarafından yeniden üretilmiştir. Bu doğrultuda yapay zekanın ürettiği içerikler haberin unsurları doğrultusunda; doğruluk, ekililik, anlaşılabilirlik ve özgünlük ilkeleri üzerinden değerlendirilmiştir.

Yukarıda gösterildiği gibi, Görsel 1 alanında uzman gazeteciler tarafından üretilmiş bir haber metnidir. Görsel 2'de ise gerçek haberdeki bilgilerin verilmesi doğrultusunda ChatGPT tarafından üretilen içerik gösterilmektedir. Haberin unsurları doğrultusunda seyahat kategorisinde incelenen 5 farklı haber, aşağıdaki tablo üzerinde değerlendirilmiştir.

Tablo 3. ChatGPT'den üretilen içeriklerin gerçek seyahat haberleri ile uyumluluğunun haberin unsurlarına göre analiz edilmesi

Seyahat Haberleri					
Kaynak	İncelenen Haber Başlığı	Doğruluk	Etkililik	Anlaşılabilirlik	Özgünlük
URL-1	'Fotoğrafi, istediğim hayatı yaşamak için kullanmayı öğrendim'	✓		✓	✓
URL-2	Lavantalar arasında bir gün			✓	✓
URL-3	İstanbul'un tarihi apartmanları			✓	✓
URL-4	Ziyarete açık ünlü film setleri	✓	✓		✓
URL-5	Eğrigöl fotoğraf tutkunlarını ağırlıyor		✓	✓	✓

Çalışma kapsamında rastgele örneklem yöntemiyle belirlenen seyahat haberleri, yapay zekaya yeniden yazdırıldığında ve oluşturulan içerikler haberin ilkelerine göre incelendiğinde, yapay zeka ile üretilen tüm haberlerde dil, anlatım, imla kuralları gibi unsurlarda ağırlıklı olarak bir eksiklik yaşanmadığı tespit edilmiştir. İntihale bağlı içerikler araştırıldığında ise üretilen metinlerin özgün olduğu belirlenmiştir. Etkileycilik açısından üretilen içeriklerin tam anlamıyla başarıya ulaşamadıkları ve aynı durumun doğruluk ilkesi kapsamında da yaşandığı gözlemlenmiştir.

Eğitim haberleri kategorisi: Eğitim haberi olarak alanında uzman gazeteciler tarafından üretilen 5 farklı haber, ChatGPT tarafından yeniden üretilmiştir.

Görsel 3. Eğitim haberi

Görsel 4. ChatGPT tarafından üretilen metin

Yukarıda gösterildiği gibi, Görsel 3 alanında uzman gazeteciler tarafından üretilmiş bir haber metnidir. Görsel 4 ise gerçek haberdeki bilgilerin verilmesi doğrultusunda ChatGPT tarafından üretilen içerik gösterilmektedir. Haberin unsurları doğrultusunda eğitim kategorisinde incelenen 5 farklı haber, aşağıdaki tablo üzerinde değerlendirilmiştir.

Tablo 4. ChatGPT’den üretilen içeriklerin gerçek eğitim haberleri ile uyumluluğunun haberin unsurlarına göre analiz edilmesi

Eğitim Haberleri					
Kaynak	İncelenen Haber Başlığı	Doğruluk	Etkililik	Anlaşılabilirlik	Özgünlük
URL-6	Diyarbakırlı kızlar dünya şampiyonu			✓	✓
URL-7	Tonguç Eğitim Uygulamaları Ödülü, Nihat Korkmaz İlkokulu’na verildi			✓	✓
URL-8	Köy okulundan bilişim merkezine	✓			✓
URL-9	Terleyen robot ile Türkiye finalinde	✓	✓	✓	✓
URL-10	Yapay Zeka Uzmanı Yetiştirme Programı’ndan 140 genç yararlanacak	✓		✓	✓

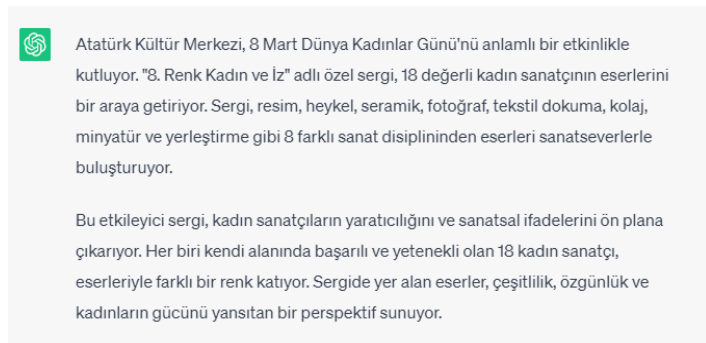

Çalışma kapsamında rastgele örneklem yöntemiyle belirlenen eğitim haberleri, yapay zeka ile yeniden üretildiğinde intihal açısından bir sorun oluşmadığı tespit edilmiştir. Aynı zamanda anlatım bozukluğu, anlaşılabilirlik ve akıcılık gibi unsurlarda da önemli bir başarı sağladığı saptanmıştır. Fakat demec kullanımının olmaması, açıklanan bilgilerin üretilen içeriklerde yer almaması içeriğin etkililik unsurunu olumsuz etkilemektedir. Bununla birlikte üretilen haberlerin bazılarında bilgi eksikliği yaşansa da eğitim kategorisi kapsamında doğruluğun daha baskın olduğu gözlemlenmektedir.

Kültür-Sanat haberleri kategorisi: Kültür- sanat haberi olarak alanında uzman gazeteciler tarafından üretilen 5 farklı haber, ChatGPT tarafından yeniden üretilmiştir.

Görsel 5. Kültür-Sanat haberi

Görsel 6. ChatGPT tarafından üretilen metin

Yukarıda gösterildiği gibi, Görsel 5 alanında uzman gazeteciler tarafından üretilmiş bir haber metnidir. Görsel 6 ise gerçek haberdeki bilgilerin verilmesi doğrultusunda ChatGPT tarafından üretilen içerik gösterilmektedir. Haberin unsurları doğrultusunda kültür-sanat kategorisinde incelenen 5 farklı haber, aşağıdaki tablo üzerinde değerlendirilmiştir.

Tablo 5. ChatGPT’den üretilen içeriklerin gerçek kültür-sanat haberleri ile uyumluluğunun haberin unsurlarına göre analiz edilmesi

Kültür- Sanat Haberleri					
-------------------------	--	--	--	--	--

URL-14	Yüzlerce yıllık kitapların şifahanesi	✓		✓	✓
URL-15	Atatürk Kültür Merkezi'nde bu hafta (15-21 Mayıs) hangi etkinlikler var				

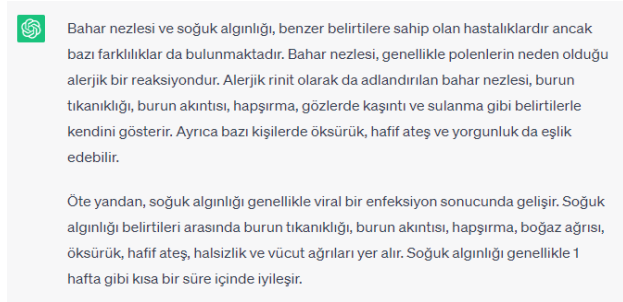

Çalışma kapsamında belirlenen kültür sanat haberlerinde özgünlük açısından bir sorun ile karşılaşılmasa da son habere ilişkin bir veri üretimi gerçekleştirilememiştir. Bu doğrultuda derleme haberlerde yapay zekanın eksikliği tespit edilmiştir. Kültür sanat haberlerinde anlaşılrlık unsuru yeterli olmasa da haberlerin çoğunluğunda doğruluk ilkesinin tutarlılığı tespit edilmiştir. Ayrıca kültür sanat haber üretiminde yapay zeka etkili anlatım doğrultusunda başarısız olduğu söylenebilmektedir.

Sağlık haberleri kategorisi: Sağlık haberi olarak alanında uzman gazeteciler tarafından üretilen 5 farklı haber, ChatGPT tarafından yeniden üretilmiştir.

Görsel 7. Sağlık haberi

Görsel 8. ChatGPT tarafından üretilen metin

Yukarıda gösterildiği gibi, Görsel 7 alanında uzman gazeteciler tarafından üretilmiş bir haber metni, Görsel 8 ise gerçek haberdeki bilgiler doğrultusunda ChatGPT tarafından üretilen içeriktir. Haberin unsurları doğrultusunda sağlık kategorisinde incelenen 5 farklı haber, aşağıdaki tablo üzerinde değerlendirilmiştir.

Tablo 6. ChatGPT'den üretilen içeriklerin gerçek sağlık haberleri ile uyumluluğunun haberin unsurlarına göre analiz edilmesi

Sağlık Haberleri

URL-19	Mentolün Alzheimer hastalarına faydaları keşfedildi	✓		✓	✓
URL-20	Bilim insanlarının "mutlaka için" dediği altın çay!	✓			✓

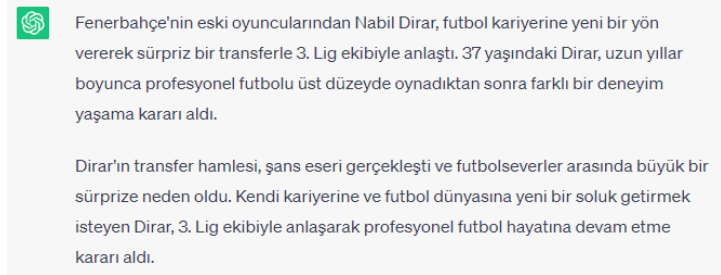

Çalışma belirlenen sağlık haberlerinde özgünlük açısından bir problem ile karşılaşılmamıştır. Fakat, yer konum, tarih gibi önemli bilgilerin üretilen içerikte yer almadığı gözlemlenmiştir. Bu doğrultuda içeriklerin büyük çoğunluğunda etkililik kavramı başarısız olarak saptanmıştır. Bunun haricinde içeriklerin büyük çoğunluğunda doğru bilgiler verildiği gözlemlenmiş fakat bilir kişi demeçlerine yer verilmediğinden yetersiz bulunmuştur. Sağlık haberlerinde anlaşılabilirlik unsuru yeterli olarak değerlendirilebilmektedir.

Spor haberleri kategorisi: Spor haberi olarak alanında uzman gazeteciler tarafından üretilen 5 farklı haber, ChatGPT tarafından yeniden üretilmiştir.

Görsel 9. Spor haberi

Görsel 10. ChatGPT tarafından üretilen metin

Yukarıda gösterildiği gibi, Görsel 9 alanında uzman gazeteciler tarafından üretilmiş bir haber metni, Görsel 10 ise ChatGPT tarafından üretilen içerik metnidir. Haberin unsurları doğrultusunda spor kategorisinde incelenen 5 farklı haber, aşağıdaki tablo üzerinde değerlendirilmiştir.

Tablo 7. ChatGPT'den üretilen içeriklerin gerçek spor haberleri ile uyumluluğunun haberin unsurlarına göre analiz edilmesi

Spor Haberleri					
Kaynak	İncelenen Haber Başlığı	Doğruluk	Etkililik	Anlaşılabilirlik	Özgünlük

URL-24	Cenk Tosun 3 yıl daha Beşiktaş'ta				
URL-25	Juventus'ta ayrılık listesi!				✓

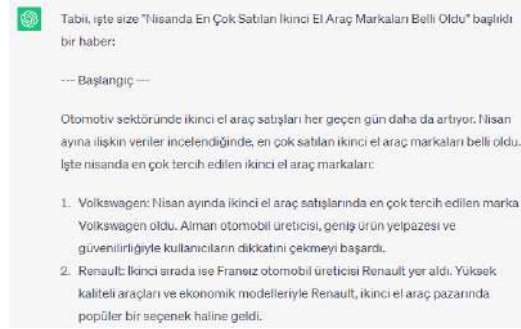

Çalışma belirlenen spor haberlerinde özgünlük açısından bir problem ile karşılaşılmamıştır. Ancak güncel bilgilerden ziyade çoğu haber metninde 2021 yılından önce kaydedilen verilere yönelik içerik ürettiği buna bağlı olarak doğruluk ilkesini yerine getiremediği saptanmıştır. Ayrıca detay bilgilerin yer almaması, kaynak belirtilmesi, açıklama yapılan içeriklerde demeçlere yer verilmemesi etkililik ilkesi açısından eksiklik yaratmaktadır. Cenk Tosun ve Beşiktaş'ın 3 yıllık anlaşmaya varması üzerine yapay zeka içerik üretmemiştir. Üretilen içeriklerin çoğunluğunda akıcı bir anlatım olduğundan anlaşılabilirlik ilkesi kısmen de olsa uygulanmıştır. Ayrıca yapay zeka tarafından üretilen spor içeriklerinde yaş, konum, isim ve açıklamalarda yanlış bilgiler kullanıldığı saptanmıştır.

Ekonomi haberleri kategorisi: Ekonomi haberi olarak alanında uzman gazeteciler tarafından üretilen 5 farklı haber, ChatGPT tarafından yeniden üretilmiştir.

Görsel 11. Ekonomi haberi

Görsel 12. ChatGPT tarafından üretilen metin

Yukarıda gösterildiği gibi, Görsel 11 alanında uzman gazeteciler tarafından üretilmiş bir haber metni, Görsel 12 ise ChatGPT tarafından üretilen içerik metnidir. Haberin unsurları doğrultusunda spor kategorisinde incelenen 5 farklı haber, aşağıdaki tablo üzerinde değerlendirilmiştir.

Tablo 8. ChatGPT'den üretilen içeriklerin gerçek ekonomi haberleri ile uyumluluğunun haberin unsurlarına göre analiz edilmesi

Ekonomi Haberleri					
Kaynak	İncelenen Haber Başlığı	Doğruluk	Etkililik	Anlaşılabilirlik	Özgünlük

URL-29	Okul öncesi eğitim ücretleri kaldırıldı	✓	✓	✓	✓
URL-30	Polonya'dan ilginç enflasyon çıkışı	✓		✓	✓

Çalışma belirlenen ekonomi haberlerinde özgünlük açısından bir problem ile karşılaşılmalıdır. Güncel bilgiler doğrultusunda içerik üretimi sağlayamayan yapay zekanın ilk haber için metin hazırlayamadığı tespit edilmiştir. Ayrıca ekonomi haberlerinde oldukça önemli olan sayısal verilerin kullanılması yerine daha düz metin üretimi gerçekleştirilmiştir. Bu da içeriğin etkisini olumsuz etkilemiştir. Üretilen metinler standart ekonomi haberine oranla daha anlaşılır bir şekilde ele alınmıştır. Ancak bazı içeriklerde güncel bilgilerden ziyade çoğu haber metninde 2021 yılından önce kaydedilen verilere yönelik içerik ürettiği ve buna bağlı olarak doğruluk ilkesini yerine getiremediği saptanmıştır. Bunların yanı sıra ekonomi içeriklerinde haber formatından ziyade daha farklı stiller kullanıldığı da tespit edilmiştir.

Politika haberleri kategorisi: Politika haberi olarak alanında uzman gazeteciler tarafından üretilen 5 farklı haber, ChatGPT tarafından yeniden üretilmiştir.

Görsel 13. Politika haberi

Görsel 14. ChatGPT tarafından üretilen metin

İYİ Parti, 24-25 Haziran tarihlerinde gerçekleştirecek olan "3. Olağan Kurultay"ını duyurdu. Parti yetkilileri, bu önemli etkinliğin İYİ Parti'nin geleceğine yön vereceği ve stratejik kararların alınacağı bir platform olacağını belirtti.

Kurultayın amacı, İYİ Parti'nin politikalarını gözden geçirerek güncellemek, parti içi demokrasinin en üst düzeyde işlediği bir ortamda üyelerin katılımını sağlamak ve partinin vizyonunu daha da güçlendirmektir. Delegeler, partinin geleceğiyle ilgili önemli kararları tartışacak, parti programında değişiklikler yapacak ve yeni yönetim kadrosunu belirleyecektir.

Yukarıda gösterildiği gibi, Görsel 13 alanında uzman gazeteciler tarafından üretilmiş bir haber metni, Görsel 14 ise ChatGPT tarafından üretilen içerik metnidir. Haberin unsurları doğrultusunda spor kategorisinde incelenen 5 farklı haber, aşağıdaki tablo üzerinde değerlendirilmiştir.

Tablo 9. ChatGPT'den üretilen içeriklerin gerçek politika haberleri ile uyumluluğunun haberin unsurlarına göre analiz edilmesi

Politika Haberleri

URL-34	Numan Kurtulmuş ve Ümit Özdağ'dan açıklama				
URL-35	TBMM Başkanı Şentop, Tekirdağ'da depremzedeleri ziyaret etti			✓	✓

Çalışma kapsamında incelenen politika haberlerinde özgünlük açısından bir problem ile karşılaşılmamıştır. Güncel bilgiler doğrultusunda içerik üretimi sağlayamayan yapay zekanın dördüncü haber için metin hazırlayamadığı tespit edilmiştir. Ayrıca politika haberlerinde oldukça önemli olan tarih, yer ve siyasal aktörlerin isimlerinin kullanılması yerine daha basit ve genelleyici kelimeler seçildiği gözlemlenmiştir. Bu bağlamda genelleyici ifadeler, içeriğin etkisini olumsuz etkilemiştir. Üretilen metinler anlaşılır bir şekilde ele alınmıştır. Ancak bazı içeriklerde yapay zekanın tam anlamıyla olay örgüsüne hakim olamadığı tespit edilmiş ve buna bağlı olarak doğruluk ilkesini yerine getiremediği saptanmıştır.

3. Sayfa haberleri kategorisi: 3. Sayfa haberi olarak alanında uzman gazeteciler tarafından üretilen 5 farklı haber, ChatGPT tarafından yeniden üretilmiştir.

Görsel 15. 3. Sayfa haberi

Depremde kayıtlara ölü olarak geçti, yaşadığını ispatlamaya çalışıyor

Görüntü: 22.05.2023 - 12:45
Güncelleme: 22.05.2023 - 14:08

Türkiye'yi sarsan Kahramanmaraş merkezli depremlerde, Osmaniye'de yaşayan Halil Yılmaz adlı kişinin kayıtlara ölü olarak geçtiği öğrenildi. E-devlet sistemine erişemediği için durumu öğrenen Yılmaz, "Nurdağı'nda benimle aynı isimde 10 kişi depremde ölmüş. Yanlışlığın muhtemel buradan kaynaklandığı üzerinde duruluyorum" dedi.

Görsel 16. ChatGPT tarafından üretilen metin

Kahramanmaraş merkezli depremlerde Türkiye'yi sarsarken, Osmaniye'de yaşayan Halil Yılmaz adlı bir kişinin kayıtlara ölü olarak geçtiği ortaya çıktı. E-devlet sistemine erişemediği için durumu öğrenen Yılmaz, "Nurdağı'nda benimle aynı isme sahip 10 kişi depremde hayatını kaybetmiş. Yanlışlığın muhtemel olarak buradan kaynaklandığını düşünüyorum" şeklinde açıklamalarda bulundu.

Kahramanmaraş merkezli depremler sonrasında yaşanan kayıt sorunu, Halil Yılmaz'ın kayıtlarda ölü olarak görünmesine sebep oldu. E-devlet sistemine erişim sağlayamayan Yılmaz, kaydının yanlışlıkla ölü olarak işlendiğini öğrendi. Aynı isme sahip olan başka kişilerin depremde hayatını kaybettiği bilgisi üzerine, bu yanlışlığın muhtemel olarak bu durumdan kaynaklandığı üzerinde duruluyor.

Yukarıda gösterildiği gibi, Görsel 15 alanında uzman gazeteciler tarafından üretilmiş bir haber metni, Görsel 16 ise ChatGPT tarafından üretilen içerik metnidir. Haberin unsurları doğrultusunda spor kategorisinde incelenen 5 farklı haber, aşağıdaki tablo üzerinde değerlendirilmiştir.

Tablo 10. ChatGPT'den üretilen içeriklerin gerçek 3. sayfa haberleri ile uyumluluğunun haberin unsurlarına göre analiz edilmesi

3. Sayfa Haberleri					
Kaynak	İncelenen Haber Başlığı	Doğruluk	Etkililik	Anlaşılrlık	Özgünlük

Çalışma kapsamında incelenen 3. sayfa haberlerinde özgünlük açısından bir problem ile karşılaşılmemiştir. Diğer kategorilere oranla yapay zekanın daha uygun bir şekilde içerik üretimi yaptığı tespit edilmiştir. Bu bağlamda üretilen içeriklerin büyük çoğunluğunda doğruluk ilkesi karşılanmış, anlaşılrlık ilkesi de başarıyla yerine getirilmiştir. Olay örgüsüne hakimiyetin az olduğu içeriklerde ise etkililik kavramının geri planda kaldığı gözlemlenmiştir.

SONUÇ

Yapay zeka, son yıllarda pek çok sektörde olduğu gibi medya ve basın alanında da önemli bir rol oynamaya başlamıştır. Yeni nesil habercilik türlerinin oluşmasında etkili olan yeni medya ve yapay zeka, daha önce ihtiyaç duyulmamış birçok gereksinimi doğurmuştur. Hız kavramından uzak tutamayacağımız robot gazetecilik kavramı da yeni gereksinimlerden sadece bir tanesidir. Robot gazetecilik kısaca, yapay zeka algoritmalarının haber üretiminde kullanılması anlamı taşımaktadır. İsminden ve uygulama biçiminden hem endişeleri hem de ümitleri beraberinde getiren robot gazetecilik pek çok kişinin merak ettiği konular arasında yer almaktadır. Literatüre yeni bir bakış açısı kazandırma sebebiyle üretilen bu çalışma, iletişim teknolojilerinin gelişimi ve yapay zekanın haber üretimindeki yeterliliğinin tespit edilmesi amacı taşımaktadır. Çalışma kapsamında, ChatGPT gibi bir yapay zeka uygulamasının metin üretimi alanında kullanılması ve insan üretimi haberlerle karşılaştırılması amaçlanmıştır. Bu bağlamda çalışmada 8 farklı haber kategorisi belirlenmiş ve her kategoriye ait 5 haber örneği kullanılarak karşılaştırma yapılmıştır.

Çalışma kapsamında belirlenen haber kategorileri; ekonomi, politika, eğitim, seyahat, kültür sanat, sağlık, spor ve 3. sayfa haberleri şeklindedir. Her bir kategoride rastgele örneklem yöntemiyle seçilmiş 5 haber, yapay zekadan yeniden üretilmiş ve haberin unsurlarına göre analiz edilmiştir. Bu kapsamda kategoriler arası farklı eksiklikler, değişik uyumlar tespit edilmiştir. Seyahat haberleri kategorisi incelendiğinde, haberin unsurlarına uyumlu bir şekilde içerik üretilebildiği tespit edilmiştir. Bunun yanı sıra özgünlük konusunda da intihale dayalı hiçbir sorun ile karşılaşılmemiştir. Fakat akıcı olması beklenen, okuyucuyu haberin içerisinde

hissettirmesi istenen seyahat haberleri için yapay zeka tarafından üretilen metinlerde etkileyciliğin fazla başarılı olmadığı saptanmıştır. Bununla beraber, okuyucuyu sıkabilecekteki tekrarlanan ifadelerle sıkça başvurulduğu saptanmış, konum, tarih, yer gibi bilgilerin eksikliği tespit edilmiştir. Ayrıca, seyahat haberleri kategorisi kapsamında, derleme haberler üretilmediği, tur, konaklama, fiyat bilgisi gibi içerikleri oluşturamadığı tespit edilmiştir. Bu bağlamda seyahat haberleri için robot gazetecilik taslak oluşturma ve hızlı çalışma için kullanılabilmesi düşünülmektedir. Spor haberleri kategorisi ele alındığında karşılaştırmalı olarak incelenen yapay zeka üretimi içerikler ile ilgili başarı sağlanamadığı görülmektedir. ChatGPT, bir haberi hiç üretememiş, diğerlerinde ise yüksek bir oranla doğruluk ilkesine uyulmadığı gözlemlenmiştir. Güncel bilgilerden ziyade 2021 yılı ve öncesine ilişkin bilgiler doğrultusunda içerik tasarladığı gözlemlenmiştir. İntihal açısından bir problem yaşanmamış, fakat haberin özneleri ile ilgili yaş bilgisi yanlış verilmiş, demeçler kullanılmamış ve eksik bilgilerin yer aldığı gözlemlenmiştir. Ayrıca üretilen içeriklerde bahsi geçen açıklamalarda da bilgi eksikliği tespit edilmiştir. Heyecanlı bir anlatım sunması beklenen spor haberleri kapsamında yapay zeka tarafından üretilen içeriklerde etki ve anlatımda eksiklikler tespit edilmiştir. Bu bağlamda spor haberleri için yapay zekanın yalnızca taslak üretimi ya da önceki yaşanan spor faaliyetlerini kısaca özetlemek için kullanılabilmesi düşünülmektedir. Sağlık haberlerinde ise özgünlük açısından bir problem ile karşılaşılmamıştır. Fakat, yer konum, tarih gibi önemli bilgilerin üretilen içerikte yer almadığı gözlemlenmiş, bilir kişi görüşlerinin yer alması gereken içeriklerde daha basit bir üretim anlayışı benimsenmiştir. Ayrıca bilginin kaynağı noktasında eksiklik olduğu da tespit edilmiştir. Bu doğrultuda içeriklerin büyük çoğunluğunda etkililik kavramı başarısız olarak saptanmıştır. İçeriklerin büyük çoğunluğunda doğru bilgiler verildiği gözlemlenmiş fakat bilir kişi söylemlerine yer verilmediğinden yetersiz bulunmuştur. Sağlık haberlerinde anlaşılabilirlik unsuru yeterli olarak değerlendirilebilmektedir. Sağlık haberleri kapsamında robot gazeteciliğin arama motoru optimizasyonu çalışmalarında rahatça kullanılabilmesi düşünülmektedir. Eğitim haberleri kategorisi incelendiğinde intihal açısından bir sorun oluşmadığı tespit edilmiştir. Aynı zamanda anlatım bozukluğu, anlaşılabilirlik ve akıcılık gibi unsurlarda da önemli bir başarı sağladığı saptanmıştır. Fakat demeç kullanımının olmaması, açıklanan bilgilerin üretilen içeriklerde yer almaması içeriğin etkililik unsurunu olumsuz etkilemektedir. Bununla birlikte üretilen haberlerin bazılarında bilgi eksikliği yaşansa da eğitim kategorisi kapsamında doğruluğun daha baskın olduğu gözlemlenmektedir. Kültür- sanat haberleri incelendiğinde özgünlük açısından bir sorun ile karşılaşılmasa da bir habere ilişkin veri üretimi gerçekleştirememiştir. Bu doğrultuda derleme haberlerde yapay zekanın eksikliği tespit edilmiştir. Kültür sanat haberlerinde anlaşılabilirlik unsuru yeterli olmasa da haberlerin çoğunluğunda doğruluk ilkesinin tutarlılığı tespit edilmiştir. Ayrıca kültür sanat haber üretiminde yapay zeka etkili anlatım doğrultusunda başarısız olduğu söylenebilmektedir. Ekonomi haberlerinde ise sayısal verilerin kullanılması gerekmektedir. Yapay zeka tarafından üretilen içeriklerde daha düz metin üretimi gerçekleştirilmiştir. Bu da içeriğin etkisini olumsuz etkilemektedir. Üretilen metinler standart ekonomi haberine oranla daha anlaşılır bir şekilde ele alınmıştır. Ancak bazı içeriklerde güncel bilgilerden ziyade çoğu haber metninde 2021 yılından önce kaydedilen verilere yönelik içerik ürettiği ve buna bağlı olarak doğruluk ilkesini yerine getiremediği saptanmıştır. Bunların yanı sıra ekonomi içeriklerinde haber formatından ziyade daha farklı stiller kullanıldığı da tespit edilmiştir. Robot gazeteciliğin ekonomi alanı için veri analiz etme işlemlerinde kullanılabilmesi düşünülmektedir. Politika haberleri kategorisi kapsamında yapay zekanın başarılı olduğunu söylemek mümkün değildir. Güncel olmayan bilgilerin verildiği, tarih, yer ve siyasal aktörlerin isimlerinin kullanılması yerine daha basit ve genelleyici kelimeler seçildiği gözlemlenmiştir. Bu bağlamda genelleyici ifadeler, içeriğin etkisini olumsuz etkilemiştir. 3. Sayfa haberleri

incelendiğindeyse diğer kategorilere oranla yapay zekanın daha uygun bir şekilde içerik üretimi yaptığı tespit edilmiştir. Bu bağlamda üretilen içeriklerin büyük çoğunluğunda doğruluk ilkesi karşılanmış, anlaşılabilirlik ilkesi de başarıyla yerine getirilmiştir. Olay örgüsüne hakimiyetin az olduğu içeriklerde ise etkililik kavramının geri planda kaldığı gözlemlenmiştir.

Elde edilen bulgular neticesinde, basit metinlerde yapay zekanın ürettiği haberlerin insan üretimi haberlerle benzerlik gösterdiği görülmüştür. Ancak sayısal verilerin, detaylı bilgilerin yer aldığı haberlerde yapay zeka algoritmasının sadece taslak düzeyinde içerik üretebildiği saptanmıştır. Bu bağlamda, yapay zeka uygulamalarının haber üretiminde belirli sınırlamaları olduğunu söylemek mümkündür. Ayrıca yapay zeka günümüz dünyasında insan gazetecilerin yerini tamamen alabilecek bir seviyede olmadığı ve daha karmaşık veya detaylı haberlerin üretiminde insan faktörünün önemini devam ettiği bilinmektedir. Bu çalışma, yapay zeka tabanlı haber üretiminin sınırlamalarını ortaya koyma bakımından önem taşımaktadır. Gelecekte, yapay zeka teknolojilerinin daha da gelişmesiyle birlikte haber üretimindeki rollerinin nasıl evrileceği ve insan gazetecilerle nasıl etkileşim içinde olacakları daha fazla araştırılmalıdır. Robot gazetecilik, tartışmalara yol açan bazı endişeleri de beraberinde getirmekte, haberlerin tarafsızlığı ve etik sorunları gibi konular üzerinde şüphe duygusunu tetiklemektedir. Yapay zeka algoritmalarının bilinçli bir şekilde tasarlanması ve insan gözetimi altında kullanılması, bu endişelerin giderilebileceğini düşündürmektedir. Robot gazetecilik, özellikle veri odaklı ve rutin haberlerin hızlı bir şekilde yayınlanması için tercih edilebilmektedir. Ayrıca kolayca haber taslağı oluşturabilmek için de kullanılabilir en hızlı yöntemler arasındadır. Yapay zeka tabanlı robot gazeteciliğin haber yazma sürecini hızlandırabileceği ve gazetecilerin daha karmaşık görevlere odaklanmasına olanak sağlayacağı düşünülmektedir. Bununla birlikte, gazetecilikte önemli olan duygusal anlayış, analitik düşünme ve araştırma becerileri gibi unsurlar robot gazetecilikte eksik kalmakta bu nedenle insansız bir medya alanı düşünülememektedir. Sonuç olarak, yapay zeka ekseninde robot gazetecilik, haber üretim sürecinde hız ve verimlilik sağlayabilmektedir. Ancak insan gazetecilerin duygusal zeka ve yaratıcılık gibi önemli özelliklerini tamamen yerine koyması oldukça zor görünmektedir. Dolayısıyla, gelecekte yapay zeka ve insan gazetecilerin işbirliğiyle daha etkili haber hizmetleri sunulması beklenmektedir.

Afetlerde Koordinasyon ve Kriz İletişiminin Rolü:6 Şubat Kahramanmaraş Depremleri Örneği

Dr. Öğr. Üyesi Mevlüde Canan CAN

Recep Tayyip Erdoğan Üniversitesi

mevlude.can@erdogan.edu.tr

Orcid: 0000-0002-0342-2714

ÖZET

Krizler hem örgütlerin hem de toplumların karşılaşılabileceği acil ve doğru müdahaleyi gerektiren durumlardır. Ekonomik ve sosyal olaylar, terör ve içsel çatışmalar, salgın hastalıklar, deprem vb. doğal afetler gibi farklı ve beklenmedik durumlar olarak ortaya çıkan krizler; eğer acil müdahale edilerek etkin bir şekilde yönetilemezler ise olumsuz sonuçlar doğururlar.

Pek çok olumsuzlukla birlikte bilgi bakımından da belirsizliğin, spekülasyonların ve söylentilerin yayıldığı kriz ortamlarında doğru ve gerçek anlamda enformasyona çok fazla ihtiyaç duyulur. Kriz iletişimi ile yaşanmakta olan kriz hakkında gerçek bilgilerin toplanıp paylaşılması, alınan önlemlerin doğru bir şekilde algılanması için enformasyon çalışmaları yürütülür.

6 Şubat'ta Türkiye'de Kahramanmaraş'ta meydana gelen ve 11 ili kapsayan geniş etki alanı ve sonuçları itibariyle de yüzyılın en büyük felaketi sayılan iki depremin acil müdahale süreçlerinde koordinasyon ve iletişim ile ilgili çok sayıda sorun yaşanılmıştır. Bu sorunların çoğu afete müdahale etmekle sorumlu kuruluşlara ilişkindir. Söz konusu koordinasyon sorunlarının çözümü bağlamında iletişim ile ilgili etkili bir sistemin yapılandırılması ve krizlerle ilgili çok daha kapsamlı ve planlı hazırlıkların yapılması gereği bu depremlerle bir kez daha ortaya çıkmıştır.

Anahtar Kelimeler: Kriz, Kriz İletişimi, Koordinasyon, Kahramanmaraş Depremleri

The Role of Coordination And Crisis Communication In Disasters: The Case of 6 February Kahramanmaraş Earthquakes

ABSTRACT

Crises are situations that both organizations and societies may face and require urgent and right intervention. Crises, which emerge as different and unexpected situations such as economic and social protests, terrorism and internal conflicts, epidemics, natural disasters (e.g., earthquakes), have negative consequences when they are not managed effectively through emergency response.

Accurate and truthful information is much needed in crisis environments, where uncertainty, speculation, and rumors spread, along with many other negative aspects. With crisis communication, information activities are carried out to collect and share truthful information about the ongoing crisis and to ensure that the measures taken are perceived correctly.

Many coordination and communication problems were encountered in the emergency response processes of the two earthquakes striking Turkey's Kahramanmaraş province on February 6, 2023 and considered as the biggest disaster of the century in terms of their wide impact area and consequences covering 11 provinces in total. Most of these problems are related to the organizations responsible for disaster response. In the context of solving such coordination problems, the earthquakes once again highlighted the need for an effective communication system and much more comprehensive and planned preparations for crises.

Keywords: Crisis, Crisis Communication, Coordination, Kahramanmaraş Earthquakes

GİRİŞ

Afetler çoğunlukla insanların kontrolü dışında gerçekleşen ve gerekli önlemler alınmadığında karmaşa ve olumsuzluklar yaratan, özellikle nüfusun yoğun olduğu ve kapsadığı alanın daha büyük olduğu durumlarda çok fazla can ve mal kaybına yol açan doğal olaylardır. Yaşanan olumsuzluklar ve oluşan kaotik durum nedeniyle afet dönemleri aynı zamanda koordinasyonun ve kriz iletişimi kavramlarının ön plana çıktığı bir kriz türü olarak ta ilgili yazında yer alır. Literatürde kriz kavramının; “beklenmeyen ve önceden sezilemeyen, acele cevap verilmesi gereken, örgütlerin önleme ve uyum mekanizmalarını etkisiz hale getirerek, mevcut değerlerini, amaçlarını ve işleyiş düzenini tehdit eden gerilim durumu”(Dinçer,1992,s.314), tehdit edici koşula müdahale edebilmede yetersiz durumda kalma(Christine ve Pearson,1993,s.225), “örgütü ve yöneticileri sıkıntıya sokan, doğru, tam ve güncel bilginin toplanamaması, sağlıklı iletişim kurulamaması, haberleşme engellerinin giderilememesi, nihayet yönetsel ve örgütsel faaliyetlerin, gereğince yerine getirilememesi”(Tutar,2000,s.17). şeklinde pek çok tanımla bulunmaktadır. “ABD’deki Kriz Yönetimi Enstitüsü krizleri:

1. Doğal afetler
2. Mekanik problemler
3. İnsan hataları
4. Yönetimsel kararlar/kararsızlıklar olarak dört bölüm altında (Ülger, 2003.s.283) incelemiştir. Diğer yandan kriz kavramı yerine afet kavramı yakın geçmişe kadar ülkemizde kullanılan bir terim olmuştur. Bu durumun kriz kavramı içerisinde insanların hatalarıyla oluşan ekonomik, sosyal ve teknolojik nedenlerin yanı sıra daha çok sel, deprem, yangın gibi insanların öngöremediği ve dolayısıyla önleyemediği doğal afetlerin sonucunda meydana gelen olumsuzluk ve gerilim yaratan olayların ağırlıklı olmasından kaynaklandığı söylenebilir. Kaldı ki afet kelimesinin tanımı da kavramın kriz ile yakından ilişkili bir içeriğe sahiptir. Afet; halkın bir kısmını ya da tamamını etkileyecek ekonomik, sosyal ve fiziki olarak altyapıların, çevrenin üzerinde yıkım derecesinde pek çok kayıplara yol açan, gündelik yaşamı sekteye uğratan, insanların mücadele etme gücünün yetersiz kaldığı doğa, teknoloji ya da insan kökenli olaylardır. Normalde birer “doğa olayı” olan deprem, sel, yangın gibi olaylar insanların, toplumların bulunduğu yerlerde meydana geldiklerinde yıkım gibi olumsuz sonuçlar doğurdıkları için “afet” olarak nitelendirilebilecek hale gelmektedir. Farklı kriz türleri arasında “afetler” her ne kadar doğal faktörlerden kaynaklandıkları için önlenmeleri imkansız olsa bile potansiyel anlamda afetlere ilişkin tedbirlerin alınması ve gerekli hazırlıkların önceden yapılması günümüz imkanlarıyla pekala mümkündür ve gereklidir.

İlgili yazında her ne kadar adına ister kriz denilsin ister afet denilsin söz konusu olayların önceden öngörülemediği ve beklenmedikleri yer alsalar bile örgütsel yönetimlerde krizler için önceden yapılması ilişkin hazırlıkları içeren planların oluşturulmasının gerekliliği, ülkemizde ve dünya genelinde yaşanan krizlerde pek çok kez ortaya çıkmıştır. Hatta yaşanan geçmiş krizler ile tecrübe edinilen bir başka tespit de kriz için sadece bir plan yapmanın yeterli olmayabileceğidir, ki krizin farklı versiyonları söz konusu olduğunda devreye sokulabilecek birden fazla planın da hazır olması olası belirsizlikleri ve karmaşayı önlemek bakımından işe yarayacak bir işlev görecektir.

Bu bağlamda krize müdahale edebilmek için örgütlerde hazırlıkların yapılmasında etkin olabilmek adına kriz yönetimlerine ihtiyaç duyulur. Kriz yönetimi “krize ve krizin olası etkilerine karşı yapılması gerekenlerin belirlenmesi, planlanması ve yerine getirme süreci”(Okumuş, 2003,s.204-205) olarak tanımlanabilir. Kriz yönetimi sayesinde örgütler krizlere karşı hazır tutularak kriz zamanında nasıl davranılacağına, işlerin nasıl koordine edileceğine dair belirsizliklerden ve oluşabilecek kargaşadan kaçınmak mümkün olabilir. Zira krizler yapısı gereği oluşan sorunlara hızlı ve doğru çözümler üretmeyi ve uygulamayı

zorunlu kılar. Ayrıca krizler; örgütsel yönetimlerin değerlerini, amaçlarını, iş yapma yöntemlerini değişime uğrattırırken, kamu yönetimleri için ise etkin olma, sorun çözebilme becerilerinin ve koordinasyon performanslarının test edildiği ve var olma nedenlerinin de duruma göre sorgulandığı bir süreci de gündeme getirir. Hatta kriz toplumun hemen her kesiminde bir çok söylentinin dolaştığı, dedikoduların yapıldığı, yanlış ve eksik enformasyonun neden olduğu kaotik bir iletişim sürecini de içerisinde barındırır. Örgütler bir yandan krizden en az zararla atlatabilmek için önlemler alırken diğer yandan da eksik ve yanlış enformasyonun işletmenin itibarını da korumaya yönelik çaba göstermeye çalışırlar. Bu bağlamda kriz yönetimi örgütleri krizlere karşı hazırlıklı tutan ve aynı zamanda paniğe kapılmadan olası bir krize kimin, nasıl, ne şekilde müdahale edeceğini gösteren planlardır. Diğer bir ifade ile kriz yönetimi, “örgütün işleyişini olumsuz etkileyen ve imajını sarsan krizlere yönelik plan yapabilme organizasyonudur” (Pheng ve Ho, 1999,s.17).

Bu çalışma 6 Şubat 2023’te Kahramanmaraş merkezli depremlerinin yarattığı kriz sürecinde kriz yönetiminde ortaya çıkan kriz iletişimi ve koordinasyon eksikliklerini analiz etmeyi amaçlamaktadır. Bu amaçla makalede 6 Şubat depremleri esnasında kriz sürecinde uygulamada karşılaşılan eksiklikler ampirik olarak ele alınmadan önce konuyla ilgili kuramsal çerçeve çizilerek kriz yönetiminin önemli bir parçası olan kriz iletişimi ve koordinasyonun önemi üzerinde durulmuştur. Bu bağlamda bu çalışmada kriz iletişiminin dört farklı uygulama odağı bakımından ülkemizde yaşanan 6 Şubat Kahramanmaraş Depremlerinin yarattığı kriz sürecinin kriz evresi ve sonrasında ortaya çıkan koordinasyon ve iletişim sorunları nitel araştırma yöntemlerinden durum çalışması (vaka analizi) ile değerlendirilmiştir.

1.KRİZLERDE KOORDİNASYON

Ekonomik, siyasi ya da deprem sel gibi doğal afetlerden kaynaklı krizlere müdahale etmekten sorumlu olan kişi ve kuruluşlar yasalar gereği kamu yönetimi ve kamu yöneticileridir. Bu nedenle kamu yönetimi ve kamu yöneticilerinin öncelikle krizlere yönelik olarak kriz önleme tedbirlerini almaları ve kriz döneminde neyin nasıl kimler tarafından yapılacağına dair süreci içeren kriz yönetimi planlarının hazır olması gerekir. Her ne kadar kriz yönetimi planları hazır olsa bile kamu yönetiminin ve yöneticilerinin karşılaşılabilecekleri deprem gibi afetlerde oluşan belirsizlik ve paniğin yarattığı kargaşa iletişim sorunları ve yoğun talep yapılan bütün hazırlıkları ve alınan önemleri yetersiz kılabilir. Hatta krizin yarattığı yıkım ve zararın boyutlarının büyük olması, kapsadığı alanın geniş olması ülke içindeki kişi ve kuruluşların yanı sıra başka ülkelerden de yardım ve müdahale ekiplerinin sürece katılmasını zorunlu hale getirebilir. Çok sayıda kişi ve kuruluşların karışık görev aldığı bir sürecin doğru ve etkin bir şekilde yürütülebilmesi esnasında iletişim ve koordinasyonunun sağlanmasında krize müdahale eden kişi ve kuruluşların sayıca fazla olması, bilgi, tecrübe, eğitim ve eylem anlayışlarının farklı özellikler taşıması ve daha önce hiç birlikte çalışma deneyimleri olmamasından kaynaklanan pek çok sorunlarla karşılaşılabilir. Oysa acil müdahaleyi gerektiren ve hata kaldırmayan kriz süreci ulaşılmak istenen amaçlar için söz konusu kişi ve kuruluşların ortak ve senkronize hareket etmesinin sağlanmasını, çok iyi bir koordinasyonu zorunlu kılar. Bu bağlamda koordinasyon krize müdahale sürecinde farklı kişi ve kuruluşların ortak bir amacı gerçekleştirmek üzere eş zamanlı ve eş yönde uyumlu ve düzenli hareket etmelerini sağlanması açısından hayati önem taşıyan bir yönetim işlevi olarak tanımlanabilir. Koordinasyonun başarısı aynı zamanda sürece katılan kişi ve kuruluşların aralarında sürekli ve doğrudan iletişim kurarak, karşılıklı etkileşim halinde ortak bir amacı gerçekleştirmek üzere hareket etmelerine bağlıdır. Ancak farklı yapı ve çalışma tarzına sahip çok sayıdaki farklı örgütlerin tecrübe ve hazırlık bakımından da değişiklik göstermeleri ve kuşkusuz daha önce işbirliği yapmamış olmaları gibi olumsuzluklar koordinasyon konusunda sıkıntılar doğurabilir. Bütün bu

olumsuzluklara afetin yaşandığı bölge koşulları hakkında yeterince bilgi sahibi olmamak ta durumu zorlaştırabilir. Ayrıca afet konusu ile ilgili gerek ulusal ve gerekse uluslararası kuruluşların aralarında işbirliğini nasıl kuracaklarına ve yürüteceklerine dair normal zamanlarda daha önceden bir çalışma yapmamaları bu durumu daha da karmaşık hale getirebilir.

Bu bağlamda daha önce 17 Ağustos'ta Marmara depreminde karşılaşılan koordinasyon ve iletişim sorunları ne yazık ki 6 Şubat'ta Kahramanmaraş depremleri esnasında da yaşanmıştır. Nitekim kriz sürecinde hızlı ve acil müdahalenin hayati önemine rağmen deprem bölgesine ulusal ve uluslararası pek çok yardım kuruluşunun hareket etmesinin karayollarında çok yoğun bir izdiham oluşturması, arama kurtarma ve yardım faaliyetlerinde gecikmelerin olması da bu süreçte koordinasyon eksikliklerinin olduğunu gösteren olaylar arasındadır.

6 Şubat depremlerinin yarattığı kriz sürecinde sel, deprem gibi afet durumlarında ülkede koordinasyon konusunda kanunen “tek yetkili kurumu” olan ve krizin önemli aktörlerinden AFAD'ın bu süreci iyi yönetemediği, yetersiz kaldığını gösteren bazı gelişmeler yaşandı. AFAD'ın yurt dışından gelen kurtarma ekiplerinin deprem bölgesine gönderilmesini koordine edemediği, enkazların kaldırılması için bölgeye gelen iş makinelerinin yönlendirilmesinde de yine koordinasyonu sağlayamadığı medyada yer aldı. AFAD depremde koordinasyon yetersizliği ile eleştirilirken; kuruluşun hazırladığı bir bölgede binaların yapımında dikkate alınan olası bir depremin yıkıcılığına ilişkin bilgi veren “Türkiye Deprem Tehlikeleri Haritası”ndaki yer alan olabilecek depremlerin ivme değerlerinin 6 Şubat'ta yine AFAD tarafından kayda geçen değerlerle arasında uçurum niteliğinde farklılık olduğu ortaya çıktı. Bu nedenle söz konusu haritanın özensiz hazırlandığı şeklinde kuruluş bir kez daha eleştiri aldı.

Öte yandan etki olarak 11 ili kapsayan 6 Şubat'ta meydana gelen depremler; büyüklüğü ve şiddeti ile en yıkıcı depremler olma özellikleri ile 1900'lerden bu yana Türkiye'de yaşanan en büyük depremler olarak tarihe geçerken, kamuoyunda özellikle ilk günlerde müdahalede koordinasyon ve iletişim eksikliğinden kaynaklı gecikmelerin yaşandığına dair tepkiler canlı yayınlarda medyada yer aldı. Nitekim Cumhurbaşkanı Erdoğan depremden etkilenen illeri ziyaretlerinde kamuoyuna açıklamada bulunarak “Sarsıntıların yıkıcı etkisi, olumsuz hava şartları, hasar gören altyapının getirdiği zorluklar gibi sebeplerle maalesef ilk birkaç gün Adıyaman'da arzu ettiğimiz etkinlikte çalışma yürütemedik. Bunun için sizden helallik istiyorum.” (“Erdoğan Adıyaman'da 'helallik' istedi”,2023) Erdoğan Hatay'da da helallik istedi: 'Böylesi bir felakette kimi aksaklıkların yaşanmaması mümkün değil' (“Erdoğan Hatay'da da helallik istedi”,2023)

Deprem gibi afetlerin oluşturduğu krizlerde çok sayıda farklı sivil ya da resmi kişi ve kuruluşların ortak amaçlar için beraber hareket etmeleri ve ortak sonuçlar elde etmeleri beklenir. Bu nedenle iletişim ve koordinasyon işlevlerinin profesyonelce yürütülmesinin mutlaka sağlanması gerektiğini 6 Şubat depremlerinde yaşananlar bir kez daha göstermiştir. Aksi daha fazla can kaybının yaşanması ve diğer istenmeyen sonuçların oluşması anlamına gelecektir.

2.KRİZ İLETİŞİMİ

İletişim insanın olduğu her yerde vardır ve farklı özelliklerdeki insanların oluşturduğu küçük ya da büyük topluluklar arasında etkileşimi ve her çeşit mesajların yayılmasını sağlayan bir süreç olmakla birlikte; bilgilendirme ve yönlendirme işlevleri ile toplumları ve bireyleri

şekillendiren hayati öneme sahip bir etkinliktir. İletişim yaşamın her alanında faaliyet gösteren özel yada kamu kuruluşu olan örgütler için de hayati önemdedir. Örgütler amaçlarını gerçekleştirmek için ihtiyaç duydukları bilgileri iç ve dış çevresinde bulunan kişi ve kuruluşlarla kurduğu iletişim sayesinde edinirken, faaliyetlerinin koordinasyonunu da iletişim ile sağlar. Bu bağlamda iletişim yönetim fonksiyonunun aşamalarının etkin bir şekilde gerçekleşmesinde kilit rol oynayan bir kavramdır. Nitekim Henry Fayol yönetim fonksiyonunu planlama, örgütleme, yönlendirme, koordinasyon, denetim şeklinde 5 aşamalı olarak tanımlarken; Gregg ise bu aşamaların yanına karar verme ve iletişimi de eklemiştir. Belirli amaçların gerçekleştirilmesi; bu amaçla bir araya gelen farklı kişi ve birimlerin faaliyetlerinin adeta bir armoni içerisinde birbiriyle uyumlu, ahenkli hareket etmesine bağlıdır. Bu uyumu, bu ahengi sağlayan ise iletişimdir. İletişim; sadece yönetim bakımından değil aynı zamanda işletmelerin (örgütlerin) yaşam dönemlerinde karşılaşılabilecekleri ve kendisine özgü özellikler taşıyan krizlere müdahale için hazırlanan kriz yönetimi açısından da son derece önemlidir. İletişim; toplumda belirsizlikler sonucu oluşan çok sayıda söylenti ve asılsız ideaların yarattığı bilgi kirliliğinin yaşandığı afet gibi yıkıcı kriz dönemlerinde çok daha önemli hale gelir. Nitekim kriz sürecinde uygulanan etkili bir kriz iletişimi kriz yönetiminin başarılı olması için kriz ekibinin koordinasyonu, bilgilerin ilgili paydaşlarla paylaşılması sonucu onların desteğinin alınması gibi pek çok olumlu katkılar sağlar. Aksi takdirde kriz yönetimi planı iyi hazırlanmış ve bu planı uygulayacak kriz yönetim ekibi ne kadar iyi olsa bile kriz iletişiminin yetersiz ve eksik kalması kriz yönetiminde sorunların yaşanmasına yol açacaktır. Bu nedenle kriz fark edildiği anda, krize yönelik iletişimin de başlatılması gerekir. Bu bağlamda kriz iletişimi kriz dönemlerinde iç ve dış paydaşlarla kurulan iletişimin ve krize ilişkin bilgilerin paylaşılmasının yönetilmesi şeklinde tanımlanabilir. Kriz döneminde özenli bir iletişim politikası ile krizle ilgili bilgi vererek hem ilgili örgütlerde ve toplumda oluşabilecek paniği ve endişeyi gidermek ve krizin daha fazla büyümesinin önüne geçmek mümkündür. Aksi takdirde kriz sürecinde belirsizliklerin ve kaygıların arttığı kaotik bir ortamda dedikodular ve asılsız iddialar toplumu etkisi altına alır. Bu nedenle kriz ortamında kriz iletişimi sürecini çok iyi yönetmeye özen göstermek gerekir.

Öte yandan ilgili literatürde kriz iletişiminde basın bültenleri, basın toplantıları gibi geleneksel yöntemlerin kullanımı etkinlik olarak kabul görse de günümüzde whatsapp, twitter, facebook ve bloglar gibi sosyal medya mecralarının kamuoyuyla iletişimde aktif olarak kullanılması daha önemli hale gelmiştir. İnternet ortamında bir olay, bir dedikodu ya da küçücük bir bilgi herhangi birinin paylaşımı ile aynı anda milyonlara ulaşabilmekte ve bu bazen istenmeyen sonuçlar doğurabilmektedir. İnternet mecralarının kriz dönemlerinde kötü amaçlarla kullanılması ise krizi daha da derinleştirmekte, ilgili çevreler üzerinde krizin etkisini daha da ağırlaştırmaktadır. Bu nedenle kriz iletişiminde geleneksel yöntemlerin yanı sıra sosyal medyaya ilişkin yapılması gerekenler de kriz iletişimi açısından kriz planlarında yer almalıdır.

Kriz iletişimi krize müdahale eden kamu ya da sivil gerek ulusal ya da uluslararası kişi ve kuruluşların, ekiplerin koordine edilebilmesi ve aralarında çok iyi işleyen bir iletişim ağının oluşturulması bakımından da ayrıca büyük önem taşır. Aksi takdirde krize acil ve isabetli müdahale yapılması mümkün olmaz. Görülüyor ki kriz iletişimi kriz yönetimi içerisinde yer alan önemli bir alt başlıktır. Nitekim kriz iletişimi konusunda ilgili yazında akademisyenlerin çalışmalarını dört temel kavramsal odak ile ayrıntılı bir şekilde ele aldıkları görülmüştür. Bunlar;

- I. Kişilerarası etkileşimde kriz iletişimi
- II. Medya ilişkileri olarak kriz iletişimi
- III. Teknoloji vitrini olarak kriz iletişimi,

IV.Örgütler arası bağ kurma/network olarak kriz iletişimi (Garnett ve Kouzmin 2007, s. 171-172)

I. Kişilerarası Etkileşimde Kriz İletişimi: İletişimin bu boyutunda kriz sürecinde yer alan kamu ve özel kuruluşların yöneticileri, valiler, yerel yönetim başkanları, sivil toplum örgütleri yetkilileri, sağlık kurumları birimleri, polis, jandarma, asker, itfaiye gibi kriz yönetiminin merkezinde yer alan kişi ve kuruluşların birbirleriyle etkileşimi ele alınmaktadır. Bu kişilerin aralarında iletişim kurarken medyanın günümüzde sunduğu geniş teknolojik olanaklara rağmen halen yüz yüze iletişimi tercih ettiği görülmektedir. Nitekim bu iletişim türünde teknoloji kullanımı düşük, yüz yüze iletişim esas, şeffaflık düzeyi ise yüksektir. Geçmişten bu yana literatürdeki pek çok araştırmaya konu olan kriz iletişiminin bu boyutunda krize ilişkin bilgi verilerek söz konusu kişi ve kuruluşların inisiyatif üstlenerek kriz yönetim merkezlerinde görev alarak krize müdahale etmeleri hedeflenir. Söz konusu bu kişi ve kuruluşlar faaliyetleriyle birlikte kamuoyunda tanınan, bilinen göz önünde yer alan kişi ve kuruluşlardır.

II. Medya İlişkileri Olarak Kriz İletişimi:Kriz iletişiminin bu boyutunda medyanın kriz sürecinde gösterdiği etkinliği ve kitle iletişim araçlarının kullanımı üzerinde durulmaktadır. Genelde kabul görüldüğü gibi her zaman ve her durumda kamuoyunu bilgilendiren, insanların algılarını yönlendiren ve şekillendiren medya; bu özellikleri ile toplum üzerinde güçlü bir konuma sahiptir. Hele teknolojinin sağladığı olanaklarla bir kriz anında yetkilileri ve kamuoyunu anında haberdar ederek harekete geçirmesi ile medya; günümüzde daha da önemli bir hale gelmiştir. Nitekim 17 Ağustos 1999 Depreminde dönemin Cumhurbaşkanı Demirel depremi resmi konutunda radyodan dinlediği haberlerden öğrenmiştir. Ama bu özelliklerinin yanı sıra aynı medya konuların, olayların duygusal, çarpıcı ve hatta biraz da sansasyonel bir şekilde medyatik yönlerini ön planda tutmaktan da geri kalmamaktadır. Özellikle kriz süreçlerinde yaşanan bir takım duygusal, üzücü olaylar bu bağlamda medyanın daha fazla ilgisini çekmekte ve bu tür olaylara medyada daha çok yer verilmektedir. Bu bağlamda medyanın olayların daha çok medyatik yönlerini haber yapması, olayları çarpıtması ve bakış açısının geniş perspektifli olmaması medya bakımından sınırlılık yaratan unsurlardır. Ancak medyanın her olayda olduğu gibi kriz sürecinde de olaylara herkesten ve her kuruluştan neredeyse önce yetişmeye çalışarak, her şeyi açık ve şeffaf bir biçimde sunduğu da medyanın yadsınamaz bir gerçeğidir. Medya aynı zamanda ; krizin hemen öncesinde, kriz anında ve kriz sonrasında olan bitenler hakkında bilgi veren, uyarıların ilgililere ulaşmasını sağlayan, işbirliğini ve dayanışmayı teşvik eden ve krize ilgiyi canlı tutan işlevleriyle kriz iletişiminde önemli bir konuma sahiptir. Kriz iletişiminin medya boyutunda kriz alanından gelişmeleri haber merkezlerine aktaran muhabirler, olayların ve durumların görüşleriyle çerçevesini takipçileri için ortaya koyan yorumcular, kamuoyunu dilediği gibi manipüle eden, çalıştığı kurum ya da kişi adına algı yönetimi yapan danışmanlar (Spin Doctors) ve medya kuruluşlarında yer alan diğer çalışanlar öne çıkan kişilerdir.

III. Teknoloji Vitriini Olarak Kriz İletişimi: İletişimin bu boyutunda kriz süreçlerinde iletişim teknolojileri kapsamında kullanılan kitle iletişim araçlarının yanı sıra son yıllarda sunduğu geniş imkanlar ile internet mecraları da ele alınmaktadır. Günümüz iletişim teknolojilerinin sunduğu imkanlar; krizlerin yarattığı felaketlerin boyutu ve dehşetine ilişkin bilgilerin ve görüntülerin aynı anda ve hızla tüm dünya ile paylaşılmasını ve bu sayede geniş kitlelerin dikkatinin çekilerek olaya dahil olmak, müdahale etmek için aktif hale gelmelerini sağlamaktadır. Üstelik kriz süreçleri kullanılan teknolojik yeniliklerin kamuoyunda tanıtımı için de fırsat yaratmaktadır. Ancak krizlerin yarattığı olumsuzluklar bu teknolojilerin kullanımında da çeşitli aksaklıklar ve kesintilerin oluşmasına da sebep olabilmektedir.

Teknoloji vitrininde ön plana çıkan kişilerin iletişim teknolojileri konusunda bilgi sahibi olan ve bunları kullanabilen teknik uzmanlar olduğu söylenebilir.

IV. Örgütler Arası Bağ Kurma (Network) Olarak Kriz İletişimi: İletişimin bu boyutunda kriz sürecinde farklı görev ve sorumlulukları olan kamu kuruluşları, polis ve askeri teşkilat, itfaiye gibi kamu ya da özel arama kurtarma birimleri gibi kişi ve kuruluşlar arasındaki iletişim ağı konu edilmektedir. Ve bu boyutun öne çıkan kişilerini bu kuruluşların temsilcileri oluşturmaktadır. Krizlerin hızlı ama doğru bir müdahaleyi gerektirmesi kriz sürecinde yer alan çok sayıda ve farklı yapıdaki bu örgütlerin faaliyetlerinin koordinasyon içerisinde gerçekleşmesi ile zorunlu kılar. Bu koordinasyon ise krizde görev alan örgütler arasında etkili bir iletişim ağının kurulması ile sağlanabilir. Böylece farklı yapılarda yerli ya da yabancı örgütler arasında ortaklaşa doğru kararların alınması, bilgilerin paylaşılabilmesi ve güvene dayalı ortak bir ifade dilinin geliştirildiği güçlü bir işbirliğinin sağlanması mümkün hale gelecektir.

3.AFETLERDE KOORDİNASYON VE İLETİŞİMİN ROLÜ: 6 ŞUBAT KAHRAMANMARAŞ DEPREMLERİ

6 Şubat 2023'te 04:17'de 7,7 büyüklüğünde derinliği ise 8.6km. Kahramanmaraş Pazarcık merkezli ilk; 13:24'de ise 7.6 şiddetinde 7 km. derinliğindeki Kahramanmaraş Elbistan merkezli 2. büyük depremler ve devamında 5-6 büyüklüklerinde meydana gelen çok sayıdaki artçı sarsıntılar bölgede 10 ilde büyük yıkıma sebep oldu. Depremler 51 bine yakın insanın hayatını kaybetmesine, ülke nüfusunun %16'sının yaşadığı Adana, Adıyaman, Diyarbakır, Gaziantep, Hatay, Kahramanmaraş, Kilis, Malatya, Osmaniye ve Şanlıurfa'yı kapsayan 10 ilde 1 milyonu aşkın insanı evsiz bırakarak barınma sorunları yaşamalarına neden oldu. Bu depremlerin hemen ardından Hatay Yayladağ merkezli 20 Şubat'ta 6.4 şiddetinde bir başka depremin meydana gelmesi ildeki zararın daha da artmasına yol açtı. Bölgede bu 3 büyük depremin ardından çok sayıda artçı depremler de yaşandı. 8 Şubat 2023'te 90 gün süreyle depremden etkilenen 10 ili kapsayan olağanüstü hal (OHAL) Cumhurbaşkanı tarafından ilan edildi. Depremin ardından ülke genelinde 7 günlük milli yas ilan edildi. Bu gelişmelerin ardından söz konusu 10 ilin yanı sıra depremlerden etkilenen Elazığ ili 11.il olarak afet bölgesine dahil edildi. 6 Şubat'ta Pazarcık merkezli 7.7 deprem 1939'da Erzincan'da yaşanan 7,9'luk 33 bin kişinin öldüğü depremin ardından son yüzyılın ikinci depremi olurken, Elbistan merkezli 7.6'lık deprem ise üçüncü büyük deprem olarak Türkiye'nin deprem tarihinde yerini aldı. Kahramanmaraş Depremleri, ülkede yaşanan önceki depremlerden daha yıkıcı ve etkilediği alan bakımından daha geniş olma özellikleri ile ayrılırken, dünyada bu yılın en büyük felaketi olarak kayıtlara geçti.

6 Şubat Kahramanmaraş depremleri 1999 Gölcük merkezli Marmara Depremini tekrar hatırlatırken Türkiye'nin bir deprem ülkesi olduğu gerçeğine ve özellikle İstanbul'da olması beklenen depreme ilişkin hazırlıkların önemine kamuoyunun dikkatini çekerken, aynı zamanda depremlerle ilgili riskli binalar, güçlendirme, kentsel dönüşüm ve eğitici programlar gibi konuları da ülke gündemine soktu.

6 Şubat Depremleri meydana geliş şekli ve yarattığı sonuçlar ile pek çok disiplin bakımından değerlendirilecek farklı boyutlara sahiptir. Nitekim AFAD Deprem ve Risk Azaltma Genel Müdürü Prof. Dr. Orhan Tatar, düzenlediği bir toplantıda "Bu depremler hiçbir hatayı affetmemiş durumda. Herkesin bir ders çıkartması gereken depremlerle karşı karşıyayız." (Bu depremler,2023) diye konuştu. Bu bağlamda söz konusu depremler aynı zamanda bu çalışmanın da konusu olan afetlerde (krizlerde) bir kez daha kriz iletişiminin ve krizlerde koordinasyonun

ne kadar önemli olduğunu göstermesi açısından da ders niteliğinde gelişmeleri barındırmaktadır. Aşağıda bu gelişmeler kriz iletişiminin dört kavramsal odak altında ele alınmıştır.

3.1. Kişilerarası Etkileşimde Kriz İletişimi

Krizi iletişiminin bu boyutunda; Cumhurbaşkanı, İçişleri- Ulaştırma-Milli Savunma- Sağlık Bakanlarının yanı sıra ülkede afet denilince ilk akla gelen AFAD, Kızılay gibi devlet kuruluşları, parti liderleri, illerin vali ve belediye başkanları, deprem uzmanları, Ahabap, Akut gibi sivil toplum örgütlerinin başkanlarının kriz yönetimine katılan ve ön planda yer alan kişilerin etkileşimi konu edilmektedir. Bu kişi ve kuruluş yöneticilerinin kriz sürecinde bazen deprem bölgesinden bazen de canlı yayınlara bağlanarak yüz yüze iletişimle krizle ilgili görüş ve bilgilerini kamuoyu ile paylaşmışlardır. Özellikle deprem uzmanlarının sürekli olarak görsel basında deprem ve fay hattı ile ilgili ayrıntılı bilgi verdikleri görülmüştür. Depremden etkilenen 11 ilden biri olan Adıyaman'da yakınları enkaz altında kalan depremedeler, Adıyaman Valiliği'ne giderek çalışmaların ve yardımların yetersiz olduğunu ifade ederek yardım istediklerinde Vali Mahmut Çuhadar'ın gülerek karşılık vermesi üzerine, Çuhadar'nın gülmesine öfkelenen bazı yurttaşlar da “Neye gülüyorsun sen” sözleriyle tepki gösterdi.(Depremzedelere gülen,2023)11Kriz yönetiminin önemli yöneticilerinden olan bir valinin yaptığı bu iletişim kazası denilebilecek davranışa kamuoyunun yoğun tepkilerinin basın yayın organlarında yer almasının ardından sağlık sorunlarını gerekçe göstererek istifa etmesine yol açtı.

Dönemin İçişleri Bakanı Süleyman Soylu Kahramanmaraş'ta Emniyet Müdürlüğü ziyaretinde “Şu deniyor, 'Artık malzeme göndermeyin'. Elinizde ne kadar malzeme varsa gönderin. Milyonlarca insanın aşı ihtiyacı var.”(Süleyman Soylu'dan çağrı,2023) ifadesinin, sivil toplum örgütü olan ve depremde başarılı faaliyetleri ile gündeme gelen Ahabap Derneği'nin başkanı ise sosyal medya hesabından “Lütfen valilik ve AFAD onayı almadan kamyonlara eşya yüklemeyin yollamayın! Buralar felaket...”(Buralar felaket, lütfen,2023) uyarısını içeren ifade ile çelişmesi kriz yönetiminde yer alan kişilerin aralarındaki iletişimin yetersiz olduğunu göstermesi açısından önemlidir.

155 Yıldır kâr amacı gütmeksizin, yardım ve hizmetleri karşılıksız olarak sağlayan ve kamu yararına çalışan aynı zamanda Uluslararası Kızıllaç ve Kızılay Hareketi'nin içinde yer alan Türkiye'deki insani yardım yapan en büyük gönüllü sosyal hizmet kuruluşu olarak ülkede ve literatürde böyle bilinmesine rağmen Türk Kızılay'ı deprem sürecinde en çok eleştirilen kurumlardan biri oldu. Kamuoyu; geçmişten bu yana söz konusu misyonu ve sorumluluğu gereği deprem gibi afetlerde yanında bulacağı, hızla ve acil olarak yiyecek, barınma gibi hizmetler sunması beklenen kâr amacı gütmeyen yardım kuruluşu Kızılay'ı deprem bölgesine ulaştırıp kurması gereken depolarındaki çadırları göndermeyip, Ahabap adlı sivil toplum kuruluşuna parayla satmasının ortaya çıkması ile büyük tepki gösterdi. Ahabap derneği aynı zamanda Kızılay'dan 30 bin adet 4 kişilik bir ailenin 3 öğünlük yemeğini karşılayan ve 1 yıl bozulmayan konserve gıda satın alıp depremedelere dağıttıklarını da kamuoyu ile paylaşması ise Kızılay'a kamuoyunda gösterilen bu tepkilerin artmasına neden oldu.

Bu eleştirilere karşılık kriz yönetiminin baş aktörlerinden Kızılay'dan makul bir açıklama beklenirken, Kızılay Başkanı Kerem Kınık yapılan işlemin yasal olduğunu dair açıklama yaptı, daha sonra ise yöneticilerin kendi inisiyatifleri ile satış yaptıklarını belirtmesi eleştirileri azaltacağına eleştirilerin artmasına neden oldu. Bu ifadeleri ile hayal kırıklığı yaratan ve Kızılay'ın varlığının kamuoyunda sorgulanmasına yol açan kriz yönetiminin önemli yöneticilerinden Kızılay Başkanı yaşananların ardından 96 gün sonra görevinden istifa etti.

Yukarıdaki gelişmeler 6 Şubat depremlerinin kriz yönetimi süreçlerinde yönetici olarak görünürlükleri en fazla olan kişilerin kriz iletişimi bağlamında birbirleriyle sürekli etkileşim halinde olmaları ve kamuoyu önünde sarf ettikleri sözlere dikkat etmeleri gerektiğini göstermektedir.

3.2. Medya İlişkileri Olarak Kriz İletişimi

İlk andan itibaren depremle ilgili bilgileri ve görüntüleri görsel ve işitsel medya kuruluşlarının gerek haber kanalları ve gerekse diğer kanallar bütün programlarını iptal ederek kamuoyuna an be an yansıtmıştır. Görsel ve işitsel medyada depremde enkaz altında kalanların nerede enkaz altında kaldıklarını bildiren mesajları canlı olarak paylaşması arama kurtarma ekiplerine yol gösterici olmuştur. Henüz arama kurtarma ekiplerinin ulaşmadığı enkazlarda insanların bulunduğu medya temsilcilerinin yaptığı canlı yayınlar ekiplerin bu enkazlara yönlendirilmesini sağlamıştır. Görsel ve işitsel medyanın yayınlarında deprem bölgesinde nerede, hangi ilde ve hangi ihtiyaçların olduğunu güncelleyerek yer vermesi ise yardımların daha bilinçli yapılmasında önemli katkısı olmuştur. Ayrıca deprem sürecinde sosyal medya mecralarında depremde enkaz altında canlı kalanlar ve onları kurtarmaya çalışan yakınlarının enkazdakilerin konumlarının gerek medya mensuplarıyla ve gerekse ünlü kişilerce paylaşılması arama kurtarma çalışmalarında yararlı olmuştur. Bu durum sosyal medyanın ne kadar etkili olarak kullanılabileceğini göstermesi açısından da önem taşımaktadır. Ancak bütün bu gerçeklere rağmen; deprem döneminin medya boyutunda sosyal medya bağlamında tepki çeken bir gelişme yaşandı. Depremlerin olduğu ilk günden itibaren ve sonrasında arama kurtarma ve yardımların koordinasyonunda yoğun olarak kullanılan sosyal medya ve özellikle Twitter'a, ardından Tik Tok'a ve Ekşi Sözlüğe 8 Şubat'ta erişim engeli getirildi. Ancak bu durum kamuoyunda çok büyük tepki çekince engelleme aynı günde sabaha karşı kaldırıldı.

Özellikle televizyonda depremin hemen ardından sığağı sığağına Atakaş Hatay spor futbol takımı teknik direktörü Volkan Demirel'in ağlayarak " Hatay'a yardım edin" çağrıları ve yardımcı antrenör Gökhan Zan'ın depremle ilgili paylaşımlarının yayınlanması ülke insanlarının deprem bölgesindeki yıkımın ve felaketin ne denli büyük olduğunu anlamalarını ve yardıma koşmalarını sağlamıştır. Medyada deprem bölgesinden enkazlar ve yıkımların arasından insanların kurtarılma görüntülerinin an be an yalın ve şeffaf bir şekilde 24 saat kesintisiz yayınlanması heyecan ve umutla izlenirken, felaketin boyutlarının ne kadar büyük olduğunu ilgili herkes tarafından daha iyi anlaşılmasını da sağlamıştır. Medyanın deprem bölgesinden yaptığı yayınlar ülke insanlarının çok kısa sürede organize olup deprem bölgelerine yardım kampanyaları ile ulaşan duyarlı bir kamuoyu oluşturmasını sağlamıştır.

Depremin ardından ülkedeki ulusal, bölgesel ve yerel kanallar ile radyo istasyonları da katılımı ile 15 Şubat'ta " Türkiye Tek Yürek kampanyası" düzenlenerek 115 milyar TL. bağış toplandı. Toplanan bağışlar AFAD ve Kızılay'a aktarıldı. Medyada yaptığı programda ve kendi sosyal medya hesaplarından " Vakit yardım Vakti" adıyla depremzedeler için bağış kampanyası düzenleyen sunucu Müge Anlı,280 tekerlekli sandalyeyi de depremzedelere gönderdi.

İzmir Büyükşehir Belediyesi'nin depremzedelere yönelik olarak medya üzerinden başlattığı 'Bir Kira Bir Yuva' kampanyası kapsamında Halk TV'de düzenlenen 'Halk Dayanışması' canlı yayınında ise 33 bin kişiye kira bağışı toplandı.

Türkiye Futbol Federasyonu (TFF) öncülüğünde birçok futbolcu, teknik direktör ve kulüp başkanının yer aldığı televizyon ve radyoların ortak yayını ile "Omuz Omuz" adı altında yardım kampanyasında 845,7 milyon TL. bağış toplandı.

Depremi ardından ilerleyen günlerde medyada kamu kuruluşlarının geç müdahale ile suçlandığına, bu derece büyük yıkımların devletin imar affi çıkarmasına ve yerel yönetimlerin denetimsizliğinden kaynaklandığına, AFAD ve Kızılay'ın depremde yetersizliklerine, askerlerin deprem bölgesine geç sevk edildiklerine dair çok sayıda programlar yapılırken, çok sayıda da köşe yazıları yazıldığı görüldü. Medya geçmişte yaşanan doğal afetlerden ne devletin ne de vatandaşların ders almadığını, müteahhitlerin ise deprem genelgelerine uymayan inşaatlarıyla insanlara mezar olan binalar yaptığı üzerinde duran eleştirel üslupla yaptığı yayınlarının yanı sıra Ahabap gibi sivil toplum örgütlerinin toplumda yarattığı güveni öne çıkaran yayınlar da yaptı.

Hatta medya afet bölgesinde yaşananlara haber akışlarında yer verirken kamuoyunu aydınlatan ilginç bilgileri de paylaştı. Bunlardan biri Habertürk muhabiri Mehmet Akif Ersoy'un kamera ışıklarını kapatılarak arama-kurtarma çalışmalarının karanlıkta yapıldığını izleyicilere gösterdiği yayın oldu. Söz konusu yayın medyanın sahip olduğu jeneratörden gücünü alan ekipmanlarını kurtarma ekiplerinin çalışmalarında tek ışık kaynağı olarak kullanmaları için paylaştığını gösterirken bölgedeki koordinasyon yetersizliğini gözler önüne sererken, medyanın sadece haber verme işlevi olmadığını da gösterdi.

Depremi yaşadığı ilk günden itibaren ülkedeki bütün görsel ve işitsel medya normal yayınlarını keserek deprem bölgesinden haber veren canlı yayınlar yaparken zaman zaman sınırlamalar ve sansürlerle de karşılaştı. Nitekim "Gazeteciler Sendikası OHÂL ilânıyla birlikte bazı bölgelerde gazeteciler enkazlardan uzaklaştırılıyor. TV yorumcuları ve sosyal medya kullanıcıları hakkında soruşturmalar açılıyor. İhmâllerden, yardım gelmeyen yerlerden bahsedenler sansürlenmek isteniyor"(Bazı bölgelerde,2023) mesajını twitter hesabından paylaştı. NTV'nin deprem bölgesinden canlı yayını esnasında ise deneyimli muhabir Yağız Şenkal, Kahramanmaraş'taki durumu aktarırken arka planda depremzedelerin öfkeli sesleri duyulunca yayın kesildi.(Yardım zayıf,2023)Medya kuruluşları depremin yarattığı kriz sürecinde 24 saat kesintisiz bölgeden haber aktarmayı sonlandırarak depremden 16 gün sonra normal akışlarına yavaş yavaş döndü. Ancak medya halen deprem bölgesinden haberler yaparak depremi gündemde tutmaya devam etmektedir.

Depremlerle ilgili olarak haberler ve yardımlar ilk andan itibaren uluslararası medyada da geniş yer buldu. Amerika'da CNN International, New York Post İngiltere'de BBC, Yunanistan'ın Ta Nea ve diğer ülkelerin pek çok yaygın kuruluşu depremle ilgili haberleri ilk sıralarda yer verdi.

III. Teknoloji Vitrini Olarak Kriz İletişimi

Daha önce yaşanan depremlerde olduğu gibi 6 Şubat depremlerinde de yine ülkenin medya kuruluşlarının kullandıkları ileri iletişim teknolojileri sayesinde canlı yayın araçları, uydu antenleri ve görüntülü cep telefonları ile bölgeden an be an 24 saat kesintisiz yayın yaptıkları, hatta arama kurtarma ekiplerine bölgede karanlıkta olan pek çok enkazda kurtarma çalışmalarında kamera ışıklarıyla da aydınlatarak yardımcı oldukları görüldü.

Depremlerin teknolojik anlamda bir başka önemli boyutu ise GSM operatörlerinin afet gibi her türlü kriz için "güncel ve uygulanabilir gerçek" afet(kriz) planlarının olmadığına dair şüpheleri doğrular nitelikte gelişmelerin meydana gelmesi oldu. Depremi ardından ilk 72 saatin arama-kurtarma bakımından hayati önemi olmasına karşın bölgede bulunan bazı istasyonlarının buldukları binaların yıkılması ile yüzde 30'unun tamamen devre dışı kalması, bölgenin önemli bir bölümünde elektrik kesintilerinin yaşanması ve fiber hatlarının kopması telefon ve internet bağlantılarında günlerce devam eden kesintilere neden oldu. Oysa "Afet ve Acil

Durum Müdahale Hizmetleri yönetmeliğine göre “Cep telefonu ve sabit telefon operatörleri kendilerine ulaşan talepleri yerine getirmek ve afet bölgesinde yeterli kapasitede mobil ve yedek haberleşme sistemlerinin ivedilikle kurulmasını sağlamakla sorumlu.”(Mevzuat,2023) Buna rağmen GSM operatörlerinin bu sorumluluklarını yerine getirmek üzere; sadece kriz dönemleri için değil, normal dönemlerde bile karşılaşılabilecek iletişim sorunları için hasar gören hatların onarımı yıkılan baz istasyonlarına alternatif çözüm olabilecek alternatif uydu bağlantılı mobil baz istasyonları gibi alt ve üst yapı teknolojileri konusunda bir hazırlıklarının ve kriz planlarının olmadığı, ilgili teknolojilere yatırım yapmadıkları gerekli tedbirleri almadıklarını da bu depremlerde bir kez daha görüldü. Zira bu ve buna benzer GSM operatörlerine ilişkin sorunlar yakın geçmişte Marmara depreminde de yaşanmıştı.

Depremin ilk günlerinde yaşanan iletişim sorunlarını aşmak için İstanbul Büyükşehir Belediyesi bölgeye 11 adet uydu bacağı olan mobil iletişim aracını yollayarak soruna az da olsa çözmeye yönelik katkı sağladığı medyada yer aldı.

3.4.Örgütler Arasında Network (Örgütler Arası Bağ Kurma) Olarak Kriz İletişimi

Diğer ülkelerde olduğu gibi Türkiye’de de afet ve diğer kriz durumlarında acil müdahale konusunda görev ve sorumlulukları yönetmelik ve kanunlarla belirlenmiş yerel ve ulusal düzeyde kamu ve özel kuruluşlar bulunmaktadır. Bunların başında 2009 yılında İçişleri Bakanlığı’na bağlı olarak kurulan Afet ve Acil Durum Yönetimi Başkanlığı (AFAD) gelmektedir. Ülkede afet ve acil durumlara ilişkin tek yetkili kurum olan AFAD, çeşitli bakanlıklar ve valiliklere bağlı müdürlükleri ile sivil toplum örgütleri ile de işbirliği yapan adeta bir çatı kurum olarak faaliyet göstermektedir. Bu kuruluşlardan bir diğeri ise kâr amacı olmaksızın yardımları ve hizmetleri karşılıksız olarak yürüten kamu yararına çalışan bir gönüllü ü sosyal hizmet kuruluşu olan Kızılay’dır. AHBAP Derneği ise 2017 yılında sanatçı Haluk Levent tarafından kurulan dayanışmaya ve yardımlaşmaya dayalı bir sivil toplum örgütüdür.(Vikipedi,2023) AKUT ise Türkiye’de kurulan ilk gönüllü arama kurtarma derneği olup, kamu yararına dernek statüsüne sahiptir. Gönüllülük esaslı hareket eden AKUT Arama Kurtarma Derneği’nin amacı dağ ve doğa kazalarında, doğal afetlerde ya da yardım gereken herhangi bir kazada insanlara yardım etmek şeklinde açıklanabilir. (Wikipedia,2023)

Ülkemizde bu kuruluşların dışında yerel belediyelere bağlı afet işlerinin yürütüldüğü merkez ve müdürlükler, valilik ve kaymakamlıklarda afet acil durum yönetim merkezleri ile özel ve kamu kuruluşlarının da afetlerle ilgili olarak sivil savunma birimleri bulunmaktadır. Bütün bu kişi ve kuruluşların varlığının yanı sıra afetlerle ilgili olarak gerekli düzenlemelerin yer aldığı başta yönetmelik ve kanunlara karşın 6 Şubat Kahramanmaraş Depremleri esnasında ve sonrasında afetlere (krizlere) müdahale sürecinde yaşanan koordinasyon ve iletişim sorunlarına ve eksikliklerine ilişkin kamuoyunda çok sayıda eleştiri yer almıştır. Afet koordinasyonunda tek yetkili konumdaki kuruluş olan AFAD’ın ulusal ve uluslar arası arama kurtarma ekiplerini bölgeye yönlendirme konusunda gecikmesi ve deprem bölgesine hızlı ve doğru bir şekilde ulaştırılması gereken iş makinelerinin ve vinçlerin gönderilmesinde koordinasyon zafiyeti göstermesi üzerine enkazlara müdahalede gecikmeler yaşanmasına neden oldu.Arama kurtarma çalışmaları için madencilerin bölgeye sevk edilmesi konusunda da AFAD’ın yetersiz kaldığı, madencilerin bölgeye kendi olanakları ile ulaşmaya çalıştıkları haberleri basında yer aldı.

Bu ve benzer eleştiriler Cumhurbaşkanlığı Strateji ve Bütçe Başkanlığı’nın hazırladığı 2023 Kahramanmaraş ve Hatay Depremleri Raporu’unda da yer buldu. Raporla merkezi yönetime ilişkin olarak, depremlerin 11 ili kapsamı nedeni ile tek bir yönetim merkezi yetkisi ve sorumluluğundan kaynaklı bazı aksaklıkların olabileceği; arama kurtarma ekiplerinin afet bölgesindeki illerde yetersiz kaldığı durumlarda en yakın Arama Kurtarma Birlik

Müdürlüğünden afet bölgesine birliklerin intikal etmesinde ise yollardaki hasarlar nedeni ile ulaşımda gecikmelerin olduğu belirtildi. Söz konusu raporun son kısmında ise AFAD yeniden yapılanmasına ilişkin ifadeler yer aldı. Raporda AFAD'ın personel sayısının yetersiz olduğu eleştirilerini de doğrular nitelikte koordinasyon birimi olarak bu misyonu ve sorumluluklarına uygun insan gücüyle koordinasyonu sağlaması ifade edildi.

Konuya ilişkin bir başka rapor ise Halk Sağlığı Uzmanları Derneği'nin (HASUDER) 6 Şubat Depremleri Hatay İli Saha Raporu'dur. Bu raporda ise AFAD'ın depremden sonra Hatay'da hızlı yanıt vermede geciktiği, koordinasyonu sağlamakta ise ilk günlerde yetersiz kaldığı ifadeleri kullanıldı. HASUDER'in raporuna göre arama- kurtarma ekiplerinin enkazlara yönlendirilmesinde koordinasyon sorunları yaşandığı, depremzedelerin bölgedeki binaların yüzde 90'ında arama, kurtarma çalışmasının yapılmadığına dair ifadeler yer aldı.

6 Şubat Kahramanmaraş Depremlerinde yarattığı kriz sürecinde yaşanan sorunlar medyada çok sayıda haber programında ve köşe yazılarında ele alınmıştır. Ancak 6 Şubat depremlerine ilişkin yaşanan iletişim ve koordinasyon eksiklikleri konusunda 9 Şubat 2023 tarihinde deprem bölgesinde çalışmalara katılıp, İskenderun, Antakya, Kırıkhan, Nurdağı ve Gaziantep il ve ilçelerinde yaptıkları inceleme, gözlem ve görüşmelerde edindikleri ilk bulguları içeren Halk Sağlığı Uzmanları Derneği'nin (HASUDER) 6 Şubat 2023 Depremleri Ön İnceleme Raporu'nda benzer sonuçlar çarpıcı bir şekilde ortaya konulmuştur. Söz konusu rapordaki ilk bulgular: ([HASUDER 2023,2-3)

- “En temel sorun, depremin büyüklüğüne karşı hükümetin, dolayısıyla AFAD'ın geç harekete geçmesi oldu. Bu nedenle arama kurtarma çalışmalarında son derece önemli olan ilk 1,5 gün kaybedildi. Deprem bölgelerinde, özellikle de ilçelerde ikinci gün öğleden itibaren kurtarma çalışmaları başlatıldı.
- Her türlü afet çalışmasında tek kamusal yetkili olan AFAD hem kapasite hem de zamanında ve etkin karar alma konusunda son derece yetersiz kaldı. Sivil toplumun çalışmalara katılımını engelleyerek vahametinin artmasına yol açtı. AFAD'ın bu başarısızlığına rağmen çeşitli organizasyonlar ve sivil toplum hem arama kurtarma çalışmalarında hem de gerekli yardımları temin etme konusunda önemli katkılar sağladı.
- Arama kurtarma çalışmalarında kullanılacak makine ve ekipman eksikliği, çalışmaların son derece yavaş yürütülmesine neden oldu. Depremin ilk dört gününde koordinasyon sorunu hâlâ çözülememiş olduğu gibi barınma ve iae sorunlarının da büyük ölçüde devam ettiği görüldü.
- Arama kurtarma faaliyetleri yürüten madenciler günde 20 saat, zaman zaman 50 saat aralıksız çalışarak büyük bir özveri gösterdiler. Ancak barınma ve ulaşım sorunları yaşadılar, araçları bulunmayan ekipler ne yazık ki otostop yapmak zorunda kaldılar. Bu sorunlar, arama-kurtarma çalışmalarına oldukça olumsuz yansıdı.
- Özverili çalışmaya rağmen makine ve ekipman yetersizliği nedeniyle çalışmalarda istenen sonuç elde edilemedi. Özellikle Antakya ve Kırıkhan'da mobil iletişimin sorunun beşinci günde giderilememiş olması, kurtarma ve yardım çalışmalarını etkiledi. Geçen bunca zamana karşın seyyar mobil yapı güçlendirilemedi, iletişim altyapısı geliştirilemedi.
- Madenciler, AFAD ve halk nezdinde başarılı arama-kurtarma çalışmaları yürüttüler. Buldukları yerlerde arama kurtarma faaliyeti madencilere devredildi, ancak kurtarma çalışmalarında enkaz altından canlı çıkartıldığı sırada AFAD ekiplerinin devreye girerek görüntü alıp sosyal medyada paylaştıkları görüldü.

- Kurtarma çalışmaları sırasında AFAD yetkililerinin yanlış tutum ve davranışları sonuç almada eksiklikler yaşanmasına neden oldu. AFAD'ın kontrolsüz ve kayıtsız faaliyetleri bazı yerlerde aynı enkazlarda çifte çalışmaya neden oldu.
- Madenci kurtarma ekipleri çalışmalarını tamamladıklarında ihtiyaç olan başka il ve ilçelere gitmek istediklerinde “talimat gelmeden olmaz” gerekçesiyle bekletildi, bu durum kurtarma çalışmalarını geciktirdi ve engelledi.
- AFAD'ın enkazın en üst tarafından delik delerek kişiye ulaşma yöntemi hem daha zor gerçekleşti hem de can kaybına neden oldu. Oysa madenciler enkaz içinde madencilik yöntemleriyle alt katlardan galeri açarak ilerledi, hedefe daha hızlı ve zarar vermeden ulaşabildi. Ancak bu farklı müdahale tarzı nedeniyle, AFAD, bazı yerlerde madencilerin arama kurtarma yöntemlerine müdahale etti, daha fazla yurttaşın kurtarılması mümkün olmadı.”

Görülüyor ki; Halk Sağlığı Uzmanları Derneği'nin (HASUDER) 6 Şubat 2023 Depremleri Ön İnceleme Raporu ve Cumhurbaşkanlığı Strateji ve Bütçe Başkanlığı'nın hazırladığı 2023 Kahramanmaraş ve Hatay Depremleri Raporu yer alan tespitler; bu çalışmada 6 Şubat Kahramanmaraş Depremlerinin yarattığı kriz döneminde yaşanan koordinasyon yetersizlikleri ve kriz iletişimi sorunlarına dair yapılan durum analizi ile de örtüşmektedir.

SONUÇ

Her koşulda ve her süreçte olduğu gibi kriz dönemlerinde de koordinasyon ve iletişimin etkin bir şekilde uygulanması krizlerin çözümünde büyük önem taşır. Hatta denilebilir ki özellikle kaotik bir süreç olan krizlerde doğru ve çözüm odaklı kararlar alıp bu kararların farklı özelliklere sahip kişi ve kuruluşların işbirliği ile gerçekleştirilmesini sağlamak; yapılanları, olan biteni hedef kitlelerle en kısa sürede doğru bir şekilde paylaşabilmek kriz yönetiminin başarılı olması için hayati önemdedir. Ancak kuşkusuz bu başarı bir kriz anında uygulamaya konulabilecek önceden en ince ayrıntısına kadar çok iyi hazırlanmış bir kriz yönetimi planının varlığı ile de yakından ilişkilidir. Ve bu başarı aynı zamanda bu planı hızla ve soğukkanlılıkla uygulamaya koyacak talimatları verecek ve yönlendirecek yöneticiler ve yetiştirilmiş, tecrübeli insan gücü potansiyeli, güçlü ve geniş makine parkı varlığını da bağlıdır. Ayrıca kriz planının uygulanması esnasında farklı yapılara sahip kişi ve kuruluşları, aynı amaçla aynı doğrultuda aynı anda harekete geçirmek, kriz ekibini oluşturan bu kişi ve kişiler arasında iletişimi sağlamak, gerekli araç gereci hızlı ve yerinde kullanabilmek diğer bir ifade ile eldeki beşeri ve maddi unsurları koordine edebilmek de büyük önem taşır. Aksi takdirde zaten kaosu yaşadığı ve acil müdahaleyi gerektiren kriz ortamında kriz yönetiminden hele başarılı olmaktan bahsetmek mümkün olamaz. Ne yazık ki bunlara ilişkin en acı örnekler hem 17 Ağustos Marmara Depremi'nde hem de 6 Şubat Kahramanmaraş Depremlerinde yaşanmıştır.

Öte yandan kriz dönemlerinde yaşanan belirsizlikler, dedikodu ve söylentilerin geleneksel medya ile birlikte günümüzde daha etkili olarak kullanılan dijital medya mecralarında hızla yayılıp paylaşılmasının iletişimin medya ilişkileri boyutu bağlamında sorunlar yaratması söz konusudur. Oysa kriz yönetiminin başarılı olması kriz iletişiminin etkin ve başarılı kullanımını gerekli kılar. Bu nedenle kriz yönetimi planları hazırlanırken etkili bir koordinasyonun yanı sıra kriz iletişimine özel önem vermek gerekir. Zira kriz iletişimi sadece kriz ile ilgili olarak kamuoyuna bilgi vermek amacı ile değil, kriz yönetiminin bütün paydaşları arasında güçlü bir koordinasyonun sağlanması için de gereklidir. Nitekim kriz iletişiminin bu işlevinin ne kadar önemli olduğu 6 Şubat Depremlerinde ve daha önceki depremlerde yaşanan koordinasyon eksiklikleri ve yetersizliklerde net bir şekilde görülmüştür.

6 Şubat Kahramanmaraş depremlerinin önemli sonuçlarından biri de kriz iletişiminin örgütler arası bağ kurma (network) boyutu bağlamında krize müdahale etme yetkisinin sadece bir merkezde AFAD'da toplanmasının yanlış olduğunu göstermesidir. Bütün yetkinin tek bir

merkeze (AFAD'a) ait olması; krize müdahale eden kuruluşlarla bağlantı kurmada yetersiz kalınmasına; gereksiz zaman kayıplarına ve ne yazık ki enkazlara geç müdahaleye; bölgeye ulaşması gereken kaynakların da dağıtımında eksikliklerin yaşanmasında etkili olmuştur. Nitekim, AFAD'ın başında bir yönetici bulunmasına rağmen; aynı zamanda Kızılay'ında başkanlığını yapmış olan eski AFAD Başkanı Mehmet Güllüoğlu'nun Tanzanya Büyükelçisi olduğu yurt dışındaki görevinden geri çağırılması ve Güllüoğlu'nun sosyal medya hesabından "Adana'dayız. Dışişleri göreve çağırdı, AFAD ve Adana Valiliği olarak yurtdışından gelen yardımları koordine ediyoruz." (Güllüoğlu göreve çağırıldı,2023) mesajını paylaşması AFAD'ın ve yönetiminin krizdeki yetersizliğinin bir başka göstergesi olarak değerlendirilebilir. Öte yandan kâr amacı taşımayan bir başka yardım kuruluşu olan Kızılay'ın depremzedelere ulaştırması gereken çadırları ve yiyecek konservelerini satması ise kamuoyunda eleştirilere neden olmuş; kuruluşu tartışılır hale getirmiştir. Nitekim Cumhurbaşkanı'nın televizyonda yayınlanan bir programda Kızılay ile ilgili sorulan bir soruya "üzüldüm" ifadesini kullanmasının ardından Kızılay başkanı görevinden istifa etmiştir.

6 Şubat Depremleri AFAD'ın deprem gibi her türlü afet durumlarında tek yetkili olmasının yaşattığı sıkıntılar ülkemizde bu konularda daha etkili ve daha kapsamlı müdahaleleri ve gerekli koordinasyonu sağlayacak bir afet ve kriz yönetimi bakanlığının ne kadar gerekli olduğunu göstermesi bakımından son derece değerlidir. Bu bağlamda Kızılay'ın yapısı ve yönetimi gözden geçirilerek kuruluşun amacına uygun olarak yeniden yapılandırılması gereğini de ortaya çıkarmıştır. Yaşanan depremler sivil savunma teşkilatlanmasının da ülke genelinde kamu ve özelde yaygın ve etkili bir şekilde oluşturulmasının önemini bir kez daha göstermiştir. Bu bağlamda çok sayıda insanımızı enkaz altından kurtaran madencilerimizin kurtarma çalışmalarında uyguladıkları başarılı tekniklerine kurtarma ekiplerinin eğitimlerinde mutlaka yer verilmelidir.

Depremlerin yarattığı kriz sürecinde medya; kurtarma çalışmalarında ekipleri aldığı ihbarla yönlendirerek, talepler doğrultusunda yardımların doğru yer ve kişilere ulaşmasını sağlayarak adeta bu konuda yaşanan koordinasyon ve iletişim sorunlarına çözüm bulmada başarılı bir performans sergilemiştir. Ülkemizin jeolojik yapısı deprem gibi doğa olaylarının her zaman yaşanabileceğini göstermekle birlikte, aynı zamanda bu tür doğa olaylarının en az zararlarla atlatılabilmesi, bu olayların bir afete dönüşmemesi için gerekli olan sağlam yapıların inşasına ve mevcut olanların sağlamlaştırılmasına ilişkin gerekli tedbirlerin bir an önce ivedilikle alınmasının önemi 6 Şubat depremleri ile bir kez daha anlaşılmıştır.

6 Şubat'ta yaşanan depremler ülke insanının ne kadar kısa sürede ve kendiliğinden koordine olabildiğini, sivil inisiyatif kullanabilme yeteneğini Kurtuluş Savaşı'ndan bu yana hiç kaybetmediğini hatta geliştirdiğini hem bu konuyla ilgili kişi ve kurumlara hem de tüm dünyaya bir kez daha göstermesi bakımından da örnek olmuştur.

Çağdaş Türk Sanatında Orta Asya Türk İmge ve Motiflerinin Kullanımında Hüsametttin Koçan'ın Yeri ve Önemi

Dr. Muhammet Mustafa ÜNLÜ

T.C. MEB

muhammetmmetmustafaunlu@gmail.com

Orcid: 0000-0002-3085-0327

ÖZET

Çağdaş ve geleneksel sanatı bir araya getirerek ortak bir dil oluşturan Hüsametttin Koçan, Çağdaş Türk Sanatı özelinde yöresel ve milli kültür değerlerini gelecek nesillere aktarılmasına önemli katkılarda bulunmuştur. Bir sanatçı olmanın yanında müzecilik faaliyeti içinde de yer alan Koçan, çeşitli eğitim-öğretim faaliyetlerinde, fuarlarda, bianellerde, sergilerde ve atölye çalışmalarında yer almış ve çeşitli ülkelerde araştırmalar yapmıştır. Hüsametttin Koçan Orta Asya Türk inanç sistemleri ve eski Türk toplumlarının ortaya çıkardığı sanat eserleri ile günlük eşyalar üzerindeki süslemelerden etkilenerek Çağdaş Türk Sanatına aktarımlar gerçekleştirmiştir. Ortaya çıkarmış olduğu yapıtlara bakıldığında Orta Asya Türk imge ve motiflerinin baskınlığı ciddi bir şekilde görülmektedir. Bunun yanında Koçan, Orta Asya'dan Anadolu'ya gelen Türkler aracılığı ile aktarılan kültürel kodları biçim ve üslup bakımından ustalıkla aktarım yapmıştır. Ayrıca Anadolu'nun kültürel mirasından da etkilenen sanatçı gelenekten yararlanarak Batı sanatı tekniklerini sentezleyerek sanatsal çalışmalar yapmıştır. Sembolik bir şekilde sanat çalışmaları yapan Koçan, bulunduğu toplumun kültürel yapısının yanında coğrafyanın etkisini de ele almıştır. Bunun yanında geleneksel estetiğin etkisini çağdaş bir şekilde yorumlayan sanatçı, birleştirici bir görev içinde sanat eserlerini ortaya koyarak insan sorgulamasını inanç, kültür ve sanat ekseninde yeniden yorumlamıştır. Bu yorumlamalar ile kendi toplumuna ait Türk Kültürünü insanlığa mal etmeye çalışmıştır.

Anahtar Kelimeler: Çağdaş Türk sanatı, Hüsametttin koçan, Orta asya imge ve motifleri.

The Place and Importance of Hüsametttin Koçan In The Use of Central Asian Turkis Images and Motifs In Contemporary Turkish Art

ABSTRACT

Hüsametttin Koçan, who created a common language by bringing together contemporary and traditional art, made significant contributions to transferring local and national cultural values to future generations, especially Contemporary Turkish Art. Koçan, who is involved in museology as well as being an artist, took part in various educational activities, fairs, biennials, exhibitions and workshops, and conducted research in various countries. Hüsametttin Koçan was influenced by the Central Asian Turkish belief systems and the artworks created by ancient Turkish societies and the decorations on daily items, and transferred them to Contemporary Turkish Art. When we look at the works he has created, the dominance of Central Asian Turkish images and motifs is seriously seen. In addition, Koçan skillfully transferred the cultural codes transmitted by the Turks who came from Central Asia to Anatolia in terms of form and style. In addition, the artist, who was influenced by the cultural heritage of Anatolia, made artistic works by synthesizing Western art techniques by making use of tradition.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

Koçan, who works on art in a symbolic way, also discussed the influence of geography as well as the cultural structure of the society in which he lived. In addition, the artist, who interpreted the effect of traditional aesthetics in a contemporary way, reinterpreted the human questioning in the axis of belief, culture and art by revealing works of art in a unifying task. With these interpretations, he tried to attribute the Turkish culture of his own society to humanity

Keywords: Contemporary Turkish art, Hüsamettin koçan, Central Asian images and motifs.

1. GİRİŞ

1.1 . Problem Durumu

İnsanlık tarihinde mühim keşiflerden olan sanat, dönemler boyunca yaşamın arkasından hep gelmiştir. Sanat, bu gelişleyle hem ümit olmuş hem de yaşamın devam etmesini sağlamıştır. Sanat diğer iletişim araçlarından farklı olarak başka bir iletişim meydana getirerek su yüzüne çıkmamış duygulara ve ifadelere aracılık yapmıştır. Güzel sanatlar alanında görsel sanatlar, uygulamasıyla, yapısıyla ve diliyle diğer alanlardan ayrılmaktadır. Bununla insan ruhunun bir ürünü olarak sanat, estetik ve kendine has bir çalışma ortaya çıkarma amacını taşır. Amaçlanan oluşum olarak sanat nesnesi hem kavramsal hem kuramsal hem teknik hem de estetik özellikleriyle yapıt özelliğine kavuşacak biçimde olmalıdır. Onu üreten sanatçı adayını entelektüel birikimi ile eserini açıklayabilmeli, gerektiğinde savunabilmelidir (Ocak Karakuş, 2016).

Tarihin akışı içinde sanat, çeşitli manalar elde etmiş ve zaman içinde varlık göstererek bir dili anlamlandırmaya çalışmıştır. Dolayısıyla sanat, bazen bir tabiatın yansıması, bazen bir topluluğun aynası, bazen duygu ve düşüncelerin ifade edilmesi bazen de forma yönelik ifade amacını taşır. Bu bağlamda farklı çağların veya dönemlerin bakış açılarının ve algılama tarzının sanatın anlamı üzerinde etkili olmuştur (Karaman Güvenç, 2019, s. 1).

Sanat, insanoğlunun bizatihi kendisini fark etmesi, değiştirmesi, dönüştürmesi ve tasarlaması açısından bir ifade sürecidir. Bu sürecin neticesinde insan, başkalarının vasıtasıyla kendini fark ettiği, varlığını ortaya koyarak kanıtladığı, engelleri aşarak kendi farkındalığına vardığına ifade edebiliriz. İnsan, kendisinin yarattığı bir “*imgeler ekolojisiyle*” sanatçı gerçekliği ve kendisinin içinde yer aldığı kendi dünyasını yeniden kurar (Bozkurt, 2014, s. 9-10).

1.2. Problem Cümlesi

- Çağdaş Türk Sanatı’nda Orta Asya Türk imge ve motif kullanımında Hüsamettin Koçan’ın yeri ve önemi var mıdır?

1.3. Alt Problemler

- Çağdaş Türk Sanatı’nda imge ve motif kullanımı var mıdır?
- Çağdaş Türk Sanatı’nda Hüsamettin Koçan Orta Asya Türk imge ve motiflerini kullanmış mıdır?

2. Çağdaş Türk Sanatı

İnsanın tarih sahnesinde yer alması kadar sanat da eskidir ve insanın güzeli arama duygusundan kaynaklanan bir olgudur. Duyu organları aracılığıyla anlamlamaya ve kavramaya yol açan her türlü konu sanata ait olabilir. Sanatı yapan kişinin ilgisini kazanan konu, sanatçı tarafından yorumlanarak dış dünyaya yansıtılır (Ballı, 2005, s. 13). Dolayısıyla sanat vasıtasıyla sosyal ve kültürel ortamların biçimlenmesinde ortaya çıkan ana normlar sentezlenerek meydana gelir. Ayrıca alışılmışın dışına çıkılarak ortaya koyma durumu kişiye farklı bakabilme becerisi kazandıracak temel birikim ve değerdir (Akbulak, 2006, s. 29).

Asya’nın coğrafi merkezinde başlayan, Selçuklu ve Osmanlı ile ilerleyip gelişerek aktarılan kültür hayatı, zamanla farklılaşarak Batı tesirine girmiş ve Türk kültürünün sanat dallarında da değişim meydana gelmeye başlamıştır (Kıyar, 2007, s. 1). Bir çok medeniyetin üzerinde var olan Türkler yaşam alanlarının şartlarında kültür hayatını meydana getirmiş ve bu yönde

çalışmalar meydana getirmiştir. Kendi hayat alanlarına güzellik katmaya çalışan Türk sanatçıları, sanatsal çalışmalarla Türk estetiğini meydana getirmiştir (Uz, 2012, s. 66).

Türk sanatı kültürel mirası ve varlığına dönük yaklaşımların kıymetli hale geldiği devir, Cumhuriyet'in ilk evreleridir. 1840'lı yıllardan itibaren Ahmet Fethi Paşa ile kültür mirası ve varlığı ile alakalı pozitif adımlar atılmış ve Cumhuriyet'in ilanı ile birlikte bir taraftan arkeolojide diğer taraftan sanatta ilerleme ve değişimler gerçekleşmiştir (Gögebakan, 2016, s. 95).

Cumhuriyet Dönemi ile Türk Sanatı değişimlere uğrayarak ulusal ve Batılı değerlerin sentezleme arayışı içinde çift amaçlılığın çelişkisi genel olarak form ve içerik ayrımında çözülmeye çalışılmıştır (Erzen, 2018, s. 30). Bu dönemde sosyolojik, ekonomik, eğitim, millet bilinciyle rollerde yaşanan değişim ve gelişim ile Türk kültür ve sanat strüktürünün esaslarını da meydana getirmeye başlamıştır (Akbulak, 2006, s. 28-29).

Bu süreçte devam eden kültüre ait zenginlik özellikle resim sanatında kullanılacak çok mühim imgeler olma niteliğini kazanmıştır. Cumhuriyet ile başlayan ve devam eden zamanda bir çok çağdaş Türk ressamı bu değerleri çalışmalarında resimsel bir imge olarak kullanılmıştır (Gögebakan, 2016, s. 96). Bu doğrultuda çağdaş Türk sanatında yer alan Türklere ait kültürel imge ve motiflerinde farklı ifade ve anlatım dillerinin kullanılmasıyla çağdaş Türk sanatında gelişim ve ilerleme sürecine girerek kimlik arayışına katkı sağlamıştır (Mercan, 2018, s. viii). Ayrıca kültür dikkate alınarak insana ait duygusal, zihinsel, dini faaliyetleri neticesinde meydana gelen değerler, yaratılar ve kuşaktan kuşağa aktarılan davranışlarla estetik seviyede yaratılan sanatı ortaya çıkarmıştır (Armağan, 1992, s. 195).

3. Hüsamettin Koçan (1946-)

Türkiye'nin Bayburt ilinde 1946'da hayata gözlerini açan Hüsamettin Koçan, Devlet Tatbiki Güzel Sanatlar Yüksek Okulu Resim Bölümü'nden mezun olmuştur. Sanat eğitimci olarak üniversitelerde görev alan Koçan, ülkemizde çeşitli sanatsal faaliyetler yer alarak fuarlara, bianellere, sergilere ve atölye çalışmalarına katkı sağlamıştır. Bunun yanında müzecilik çalışmalarına katılmış 2005 yılında Baksı Müzesi'nin oluşumuna büyük katkı sağlamıştır.

Görsel-1: Baksı Müzesi

Hüsamettin Koçan Anadolu'nun tarihindeki kültürel katmanları ve aralarındaki girişkenlikleri bir zenginlik olarak benimsemiştir. Sembolik öğeler ile eserlerine yansıtırsa da özellikle biçimleri kavramlarla kullanmaktaki ustalığı önemlidir. Sanatçının eserlerinde Şamanizm'e ait birçok görüntü zamansal olarak bizi o ana taşımakla kalmaz, aynı zamanda geleneğe ait birçok

kavrama referanslar vermemizi sağlar. Bu nedenle sanatçının işleri, sanatçının gelenekten yararlandığını göstermektedir (Abatay ve Atalay, 2021, s. 93).

Görsel-2: *Figüratif Kompozisyon*, Hüsamettin Koçan, T.Ü.K.T.

Hüsamettin Koçan erken dönem resimlerinde olduğu gibi bugün de sanatında, beden, insan sorgulanmasının önemli olduğu açıktır. Sanat anlayışı üzerinde yapılacak bir araştırmada, düşünce ifadesinde insana başvurduğu, yapıtların merkezinde insan bedeni veya bedene dair parçaların yer aldığı anlaşılabilir. Hüsamettin Koçan ilk dönem çalışmalarında, lokal ışık etkileriyle insan bedeninin anatomik öğelerini, soyut biçim anlayışı düzeyinde yer alır. Renkçi anlayış ön plana geçtiği, figür formunun giderek azaldığı resimlerinde, soyut formların temel motiflerinin benimsendiği yeni bir anlayış ortaya koyar (Öztütüncü, 2015, s. 170).

Ayrıca, resimlerindeki imgeler, biçimler, spontane renk lekeleri, çiçek ve yapraklar da Koçan'ın çalışmalarında yer alırlar. Resimlerinin çıkış noktası ne olursa olsun anlatmak istediği olgu yaşadığı toplumun geleneği, coğrafyası üzerine kurulu simgelerdir (Öztütüncü, 2015, s. 172). Koçan'ın "*Anadolu'nun Görsel Tarihi*" ismiyle adlandırılan bu kapsamlı projesi, Türk halk resimleri incelemelerinden kaynaklanmaktadır. Koçan, tarihi görselleştirmeye yönelik bu proje kapsamında araştırmalarını Anadolu'daki üç temel kaynak olan İslam, Orta Asya ve Anadolu kültürleri üzerinde yoğunlaştırmıştır (Rona, 1997, s. 1033).

Geçmiş kültürün mirasında olan bağların kültürel bozulma neticesinde yok olamayacağını ispatına çalışan Hüsamettin Koçan'ın güncel sanat dilini kullandığı görülmektedir. Genel olarak Koçan'ın sanatı güncel olandan hareketle geriye doğru baktığını ve kültür verilerinin temelindeki birleştirici öğeleri aradığını ve bu bağlamda bugünkü model ile kültürel veriler arasındaki ilişki çerçevesinde, modelin sorgulandığından söz edilmiştir (Tekin, 2007, s. 101).

Hüsamettin Koçan erken dönem resimlerinde olduğu gibi bugün de sanatında, beden, insan sorgulanmasının önemli olduğu görülmektedir. Sanat anlayışı üzerinde yapılacak bir araştırmada, düşünce ifadesinde insana başvurduğu, yapıtların merkezinde insan bedeni veya bedene dair parçaların yer aldığı fark edilebilir (Öztütüncü, 2015, s. 170).

Modern ile iç içe; ancak gelenekten kopmadan bu üretimin devam etmesinin gerekliliği üzerinde durmaktadır. Koçan'ın sergilerinde kullandığı geçmişe ve geleneğe olan bağlılığı dile getirmesini sağlayan imgeler ve nesnelere, bir anlamda geleneksel estetiğin etkileşimlidirler (Mercan, 2018, s. 70). Sanatçı, eserlerinde Şamanizm'e ait birçok kavramı ustaca yeniden yorumlamıştır. Şamanizm'in Anadolu ve Orta Asya Türk kültüründe önemli bir yere sahip

olduğu ve günümüzde bile bu inancın kültürel olarak devam ettirildiğini söyleyebiliriz. Bunu gözlemleyen sanatçı görsel bir takım nesne veya görüntüleri yeniden yorumlamıştır. Bu bağlamda el veya bedene ait parçalara dinsel, mitolojik anlamlar da yüklenerek çağdaş resimsel metafizik bir eser yaratır. Bu resimler alıntı yapılan birtakım görüntüleri alabildiği gibi, biçimsel açıdan da çeşitli referanslar yapmaktadırlar. Sanatçı geleneğe ait simgeleri dönüştürür, yorumlar ve kendi kültür birikiminden esere aktarır. Sanatçı için Türk kültürünün geçmişi, geleceği ve bugünü insanlığa aittir (Abatay ve Atalay, 2021, s. 90).

Görsel-3: *Çember Ay Sapan Serisinden*, Hüsamettin Koçan, T.Ü.K.T.

Bazı resimlerinde ise Koçan, sürdürmüş olduğu tanıdık resimleri yerine farklı biçim ve bağlamlarda kullandığı çember, ay ve sapan motifleri ile karşımıza çıkmaktadır. Ay, Çember ve Sapan serisinde çocukluğunun, çobanlığın bir gereci olan oyuncağı sabanı açıklar. Sapan lastiğinin gerildiği kısım “Y” biçiminde tasvir ederek hayat ağacı ile ilişkilendirir. Şaman’ın davuluna karşılık gelen çember ise insanın yazgısı döngüsü kavramlarıyla ilişkilendirilmiş olunan Ay ile bütünleştirilir... Genel anlamıyla Hüsamettin Koçan’ın resimlerinde kullandığı Şamanist inanca ait birçok imgenin, sanatçının eserlerinde resim düzleminde plastik öğeler olarak karşımıza çıktığı anlaşılmaktadır (Öztütüncü, 2015, s. 175- 176).

4. SONUÇ VE DEĞERLENDİRME

Geçmiş dönemlere ait kültürel ve sanatsal biçimler ile çağdaş sanatı bir araya getirerek ortak dil oluşturma sürecine giren Hüsamettin Koçan, Çağdaş Türk Sanatı’nda yöresel ve millî kültüre ait değerleri araştırmış, irdelemiş ve gelecek nesillere aktarımını sağlamıştır. Sanatçı kimliğinin yanında müzecilik faaliyetlerine katkı veren Koçan, çeşitli eğitim-öğretim faaliyetlerinde de yer almış fuarlara, bianellere, sergilere, atölye çalışmalarına katkı vererek çeşitli ülkelerde incelemeler ve araştırmalar yapmıştır.

Orta Asya Türk inanç sistemlerine ve eski Türk kavimlerinin ortaya çıkardığı sanat eserleri ile günlük yaşamda kullanılan eşyalardaki süslemeleri ele alarak Çağdaş Türk Sanatına aktarımlar yapan Hüsamettin Koçan, ortaya çıkardığı eserlerle ile Orta Asya Türk imge ve motiflerinin

baskınlığını ciddi bir şekilde hissettirmiştir. Ayrıca Koçan, Orta Asya'dan Anadolu'ya gelen Türkler vasıtasıyla aktarılan kültürel kodları biçimsel ve üslup yönünden araştırmış ve aktarım yapmıştır. Bunun yanında Anadolu'da var olmuş kültürel mirasından da aktarımlar yapan sanatçı gelenekten faydalanarak Batı Sanatı teknikleri ile sentezlemeler gerçekleştirmiş ve sanatsal çalışmalar ortaya koymuştur.

Çalışmalarında sembolik unsurlara yer veren Koçan, yer aldığı toplumun kültürel yapısına ilaveten coğrafyanın etkisini de ele almış ve geleneksel estetik anlayışın etkisini çağdaş bir yorumla ele alarak birleştirici bir görev üstlenmiştir. Sanat eserleriyle insanı ele almış ve inanç, kültür ve sanat ekseninden yeniden yorumlamıştır. Bu yorumlamalar ile kendi toplumuna ait Türk Kültürünü evrenselliğe yol alması için gayret göstermiştir.

Diplomasinin Dönüşümü Dijital Diploması: Türkiye ve Dünyadan Örnekler

Assoc. Prof. Dr. Fadime DİLBER

Karamanoğlu Mehmetbey Üniversitesi,
Uygulamalı Bilimler Yüksekokulu, Yeni Medya
fdilber@kmu.edu.tr
ORCID: 0000-0002-0935-2593

ÖZET

Diplomasi, dış politikada sorunların barışçıl yöntemlerle ve müzakereler yoluyla çözülmesini ifade etmektedir. İletişim teknolojisinin hızla gelişimi iletişimi de küreselleştirmiştir. Bu gelişmeler tüm alanlara sirayet ederek değişimi başlatmıştır. İletişim teknolojilerinin ilerlemesine bağlı olarak mekân ve zaman sınırları kaldırarak gruplar ve bireyler arasında anında iletişim kurulmasına imkân vermektedir. Bu bağlamda diplomasinin yaygınlaşmasına ve dijitalleşmesine neden olmuştur. Erişilebilir bir dijital dünyanın varlığıyla birey ve kurum arasındaki etkileşim de dijitalleşmiş, şeffaflaşmış ve iletkenliği artmıştır. Dış politika uygulayıcıları da bu dijital hızla ayak uydurmuş, sosyal medya ve interneti diplomaside de aktif olarak kullanmışlardır. Bu çalışma genel olarak teknolojiye ilişkin ilerlemenin diplomasiye olan etkilerinin incelenerek, bu ilerlemenin bir sonucu olan “dijital diplomasi” kavramına açıklık getirmektedir.

Anahtar Kelimeler: Diplomasisi, Dijital Diploması, Sosyal Medya

Transformation of Diplomacy Digital Diplomacy: Examples from Türkiye and the World

ABSTRACT

Diplomacy refers to the resolution of problems in foreign policy through peaceful methods and negotiations. The rapid development of communication technology has also globalized communication. These developments spread to all areas and started the change. It allows instant communication between groups and individuals by removing the time and space limits depending on the progress of communication technologies. In this context, it has led to the spread and digitalization of diplomacy. With the existence of an accessible digital world, the interaction between the individual and the institution has also become digitalized, transparent and its conductivity has increased. Foreign policy practitioners have also kept up with this digital speed, and social media and internet are actively used in diplomacy. This study aims to clarify the concept of "digital diplomacy", which is a result of this progress, by examining the effects of advances in technology on diplomacy in general.

Keywords: Diplomacy, Digital Diplomacy, Social Media

GİRİŞ

Günümüzde dijital teknolojilerin hızla gelişmesi ve internetin yaygınlaşmasıyla birlikte, birçok alanda büyük dönüşümler yaşanmaktadır. Bu dönüşümlerden biri de diplomasinin dijitalleşmesidir. Geleneksel diplomasinin yerini alan dijital diploması, ülkelerin uluslararası ilişkilerini yönetme ve iletişim kurma yöntemlerini değiştirmiştir.

Türkiye ve dünyadaki birçok ülke, dijital diplomasıyı kullanarak etkili bir şekilde iletişim kurmayı ve küresel düzeyde etkilerini artırmayı hedeflemektedir. Dijital diploması, sınırları aşarak, hızlı ve etkili iletişim sağlayarak, bilgiyi paylaşarak ve diğer ülkelerle etkileşimde bulunarak bir ülkenin politik, ekonomik ve sosyal hedeflerini desteklemektedir.

Türkiye'nin dijital diploması alanında önemli adımlar attığı görülmektedir. Özellikle Türkiye'nin Dışişleri Bakanlığı, dijital diploması stratejilerini benimsemiş ve sosyal medya gibi dijital platformları aktif bir şekilde kullanmaktadır. Dışişleri Bakanlığı, Twitter, Facebook, Instagram gibi sosyal medya hesapları üzerinden Türkiye'nin politikalarını, hedeflerini ve değerlerini uluslararası topluma duyurmayı amaçlamaktadır. Ayrıca Türkiye, dijital diplomasıyı kültürel diploması ile birleştirerek, Türk kültürünü ve sanatını uluslararası arenada tanıtmak için çeşitli dijital platformlar kullanmaktadır.

Dijital diploması, geleneksel diplomasıye dijital iletişim ve teknolojinin entegrasyonunu ifade eden bir kavramdır. Günümüzde, iletişim ve teknolojideki hızlı ilerlemeler, dijital diplomasıyı uluslararası ilişkilerde önemli bir faktör haline getirmiştir. Dijital diploması, devletlerin, diplomatik misyonların ve uluslararası aktörlerin dijital platformlarda etkili bir şekilde iletişim kurmalarını ve bilgi alışverişinde bulunmalarını sağlamaktadır.

Dijital diplomasının temel amacı, devletlerin ve uluslararası kuruluşların politikalarını ve çıkarlarını tanıtmak, diğer ülkelerle ilişkilerini güçlendirmek ve sürdürmek, uluslararası ittifakları ve işbirliklerini teşvik etmek ve ulusal çıkarlarını korumaktır. Bu amaçla, dijital diploması çeşitli araçları kullanır, bunlar arasında sosyal medya, web siteleri, bloglar, dijital yayınlar, e-posta bültenleri, video konferanslar ve çevrimiçi toplantılar yer almaktadır.

Dijital diploması, iletişim ve bilgi alışverişindeki hızı ve etkinliği artırarak diplomatik ilişkilerin geliştirilmesine olanak tanır. Sosyal medya platformları, devletlerin liderlerinin ve diplomatik misyonlarının doğrudan halklarla etkileşimde bulunmasına, politikalarını ve görüşlerini paylaşmasına ve geniş kitlelere ulaşmasına imkân sağlar. Bu sayede, devletler arasındaki iletişim ve anlayış artar, kültürel diplomasıye olanak sağlar ve sivil toplum kuruluşları ve diğer aktörlerle daha yakın ilişkiler kurulmasını sağlar.

Ancak dijital diploması aynı zamanda zorluklar da sunmaktadır. Bilgi güvenliği, siber saldırılar ve propaganda gibi konular, dijital diplomasıyı olumsuz etkileyebilir. Ayrıca, dijital diploması, kültürel farklılıklar, dil bariyerleri ve erişim engelleri gibi zorluklarla da karşılaşabilir. Bu nedenle, dijital diplomasıyı etkili bir şekilde kullanmak için teknolojik yeterlilik, kültürel duyarlılık ve iletişim becerileri gerekmektedir.

Dijital diplomasıyı geleneksel medyadan ayıran temel özellikler arasında anındalık, karşılıklı etkileşim ve çift yönlü iletişim sayesinde hedef kitle ile doğrudan temas kurabilme gibi faktörler yer almaktadır (Yıldırım, 2022:1) Sonuç olarak, dijital diploması, uluslararası ilişkilerde iletişim ve teknolojinin giderek daha önemli hale geldiği bir alandır. Dijital diploması, devletlerin ve uluslararası aktörlerin dijital platformlarda etkili bir şekilde iletişim kurmalarına ve ilişkilerini güçlendirmelerine olanak sağlar. Ancak, dijital diplomasıyı etkili bir şekilde kullanmak için güvenlik, kültürel duyarlılık ve iletişim becerileri gibi faktörlerin dikkate alınması önemlidir.

Sonuç olarak, dijital diploması giderek daha önemli hale gelmektedir. Türkiye ve dünyadaki birçok ülke, dijital diploması stratejileriyle uluslararası ilişkilerini yönetmeye ve etkilerini

artırmaya çalışmaktadır. Sosyal medya, dijital platformlar ve teknolojik araçlar, ülkelerin hedeflerini tanıtmak, politikalarını savunmak ve küresel düzeyde etkileşimde bulunmak için önemli bir rol oynamaktadır.

1. Diplomasi Kavramı

Literatürde diplomasinin kelime ve kavram olarak birçok tanımı vardır. Kökeni Eski Yunancadaki ‘diploma’ dan doğan ve ikiye katlamak anlamına gelen kelime, Eski Yunan ve Roma İmparatorluğu dönemlerinde devlete ait belgelerin katlanmış biçimlerinden ötürü bu adı almıştır. (Baştan, 2016: 18) Süreç içinde devlete ait belgeleri korumak, düzenlemek ve deşifre etmek için ehil kişilere gerek duyulmuş ve diplomasi kavramı bu şekilde 18. yüzyıla kadar “belgeleri inceleme bilimi” anlamında kullanılmıştır. (Tuncer, 2009: 13)

Diplomasiyi uluslararası ilişkilerin yürütülmesi anlamında ilk kez 1796 yılında İngiliz Devlet Adamı Edmund Burke kullanmıştır. Burke kavramı, devletlerarası ilişkilerin ve görüşmelerin yürütülmesinde uygulanan beceri ve taktik anlamında kullanmıştır. (Etzold, 1977: 125)

Zamanla da “geleneksel diplomasi” olarak adlandırılan diplomasi Türk Dil Kurumu(TDK) sözlüğünde Uluslararası ilişkileri düzenleyen anlaşmalar bütünü; yabancı bir ülkede ve uluslararası toplantılarda ülkesini temsil etme işi ve sanatı; bu işte çalışan kimsenin görevi, mesleği; bu görevlilerin oluşturduğu topluluk olarak tanımlanmaktadır. Oxford İngilizce sözlüğüne göre diplomasi “uluslararası ilişkilerin müzakerelerle yürütülmesi; bu ilişkilerin büyükelçi ve elçilerle yürütülmesi, diplomatların işi ve sanatıdır.

Encyclopedia Britannica ‘da diplomasi; uluslararası ilişkileri yönetme konusunda yerleşik yöntem veya uluslararası ilişkileri, başlıca müzakereler yoluyla yönetme sanatıdır. Diplomasi bir devletin veya uluslararası hukuk süjesinin dış politikasına ilişkin spesifik eylemler ve yöntemler bütünü şeklinde de tanımlanabilir. (Reçber, 2011: 3-4)

Gündelik ve akademik olarak bakıldığında diplomasi kavramının çerçevesi epey geniştir. Hemen hemen her siyasetçinin, teorisyenin, devlet başkanının, bakanın hatta her diplomatın buna kendince bir tanımı vardır.

Diplomasi kavramı; geleneksel şekilde “Birbirlerinin bağımsızlığını tanıyan siyasi varlıklar arasındaki müzakere süreci” olarak tanımlandığı gibi (Watson, 1984: 33) “Devlet kurumları arasındaki ilişkilerin dünya siyasetinde resmi ajanlar ve barışçıl yollarla sürdürüldüğü davranışlar” (Bull, 1997: 156) olarak da tanımlanmaktadır.

En genel tanımıyla diplomasi; en az iki devletin karşılıklı potansiyel sorun teşkil edebilecek konularda karşılıklı diyalog ve müzakere yöntemiyle bu sorunları çözmeye yönelik her türlü uğraşını ifade eder. Bu diyalog ve müzakere dili çoğu zaman devletlerin gücüne dayanmaktadır.

1.1. Diplomasi Türleri

1.1.1 Ad Hoc Diplomasi

Tarihte diplomasinin ortaya çıktığı ilk şekil bugün için “ad hoc diplomasi” olarak isimlendirilmektedir. Başka bir deyişle, henüz sürekli elçi olmayan diplomasi temsilcileri belirli görevleri yerine getirmek için seçilirler ve görevin bitmesiyle geri dönerlerdi. Diğer diplomasi türleri arasında en eski tarihe sahip olan bu diplomasi türü, ilk olarak eski Yunan kent-devletlerinde görülmüştür. Verilen emri unutmayacak güçlü bir belleğe ve haberi yüksek sesle olabildiğince geniş bir alana iletcek gür bir sese sahip olması beklenen bu dönemdeki diplomatlar, genelde haberci olarak tanımlanırlardı. Hatta “Tanrıların habercisi” olarak da bilinen antik dönemin diplomatlarının güçlü belleklerini ve gür seslerini Tanrı Hermes’ten aldıkları anlatılırdı. (Tören, 2014: 102).

Bu diplomasi türü, özellikleri nedeniyle akademik çevrede tek-tarafli ve geçici diplomasi olarak da bilinmektedir. Tarihteki bu ilk diplomasi örneğiyle birlikte zamanla bilhassa 1600'lü yıllarda İtalyan şehir devletlerinde birbirleri nezdinde sürekli diplomatik kurumlar bulundurmak anlamına gelen "sürekli diplomasi" ye geçiş görülmeye başlanmıştır (Tuncer, 1997: 18).

1.1.2. Konferans Diplomasisi

Avrupa ülkelerinin sorunlarını toplantılarla çözdüğü "konferans diplomasisi", 1815'te Viyana Kongresi sırasında ortaya çıkmış ve Avrupa ülkeleri sorunlarını çeşitli başkentlerde düzenlenen konferanslarda çözmeye çalışmıştır. Genelde devletlerarası diplomatik ilişkilerde başarılı bir yöntem olan konferans diplomasisi, ikiden fazla devlet temsilcisinin sorunlarını çözmek amacıyla bir araya gelmesiyle oluşmaktadır (Sancar, 2012: 12). Günümüzde bu diplomasi daha çok kendi tarzında uygulanmakta ve örtülü diplomasiye tepki olarak açık diplomasi yaygınlaşmaktadır. 20. yüzyılın başında, özellikle dönemin Amerikan başkanı Woodrow Wilson tarafından teşvik edilen bu tür diplomasi gelişimini etkileyen iki ana neden vardır. Birincisi, genel olarak katılımcı demokrasinin sınırlarının genişlemesiyle açık diplomasi, ikincisi ise konferans diplomasisi gibi gizli yapılmayan diplomasi türlerinin yaygınlaşmasıyla kaçınılmaz hale gelmiştir (Sönmezoğlu, 2010: 6).

1.1.3. Zirve Diplomasisi

Zirve diplomasisi, en bilinen zirvelerden biri olan Davos Zirvesi örneğinde görüldüğü gibi, ülkelerin fikir ve politikalarını yaymalarına olanak sağlayan, iyi planlanmış profesyonel forumlardır. Çünkü bu zirvelere ülkelerin en yetkili devlet adamları katılmakta ve tüm dünya izlemektedir. Bu ise geniş bir hedef kitesine yönelik olarak devlet adamlarına, kendi politikalarının propagandasını yapmak için büyük bir fırsat sunmaktadır (Tören, 2014). Örneğin; 2009'da "One Minute" çıkışı yerel seçimler öncesi AK Parti seçmenleri ve muhafazakâr-milliyetçi kesim üzerinde olumlu etki yaratsa da, dış politika açısından İsrail ile ilişkilerde gerilim yükseldi. Davos ve Mavi Marmara Baskını ile başlayan ve sonrasında diplomatik gerilimlerle devam eden Türkiye- İsrail ilişkilerinin kırılmasının başlangıç noktasını oluşturdu. Fakat aynı çıkış söz konusu dönemde Ortadoğu'daki Müslüman halklar nezdinde önemli bir Türkiye ve Erdoğan sempatisi oluşturmuştur. Geçmişte krallar ve imparatorlar tarafından uygulanan bu tür diplomasi örnekleri, günümüzde devlet başkanları ve başbakanlar gibi ülkelerin en güçlü isimleri tarafından uygulanmaya devam etmektedir. Günümüzde sahip olunan teknoloji ve ulaşım imkânları, bu türden diplomasi gerçekleştirilebilmesi açısından eskiye oranla oldukça uygun bir zemin hazırlamıştır (Sönmezoğlu, 2010:730). Zirve diplomasisinin belirli riskleri vardır, çünkü esas olarak iç ve dış kamuoyunun propagandasına hizmet eder ve diplomatik faaliyeti kısmen baltalayabilir. Bununla birlikte, özellikle düzenli zirveler, eğer önceden ve sistemli hazırlanırlarsa, genel olarak diplomasiye ve uluslararası ilişkilere önemli katkılar sağlayabilir. Her halükarda, günümüzde zirve toplantıları, televizyon ve her türlü geleneksel ve yeni medyanın, dijitalin gücü sayesinde politikacıların vazgeçemeyeceği bir uluslararası ilişkiler yöntemi olarak etkinliğini sürdürmektedir. (İskit, 2007: 342).

1.1.4. Mekik Diplomasisi

"Mekik diplomasisi", arabulucu bir ülkenin bölgesel sorunları azaltmak ve bu sorunların genel bir çatışmaya dönüşmesini önlemek için çatışma halindeki ülkeler arasında iletişim kurma girişimidir. (Dağ, 2009:198). Genellikle üçüncü bir kişinin iki taraf arasında bir sorunu çözmeye aracılık etmesi olarak değerlendirilen bu diplomasi çoğu zaman işe yaramadığı görülmektedir. (Erol ve Solak, 2013: 33). "Mekik diplomasi", genellikle kriz zamanlarında

uygulama alanı bulan, konu ile dolaylı olarak ilgili taraf ve aktörlerle yoğun ve birbirini izleyen diplomatik görüşmeler yoluyla kısa sürede sonuca ulaşmayı amaçlayan diplomasi'dir. Türk dış politikasında da benzer bir kullanım bulmuştur. Örnekler arasında, 2003 Irak Savaşı öncesinde Türkiye'nin savaşı önleme çabaları, savaş sırasında ve sonrasında Irak'ın komşularıyla yaptığı görüşmeler ve bu toplantılar düzenlemesi mekik diplomasisi sayılabilir. (Yeşiltaş ve Balcı, 2011: 20). Bu yöntem dünyada en çok eski ABD Dışişleri Bakanı Henry Kissinger tarafından kullanıldı. Ortadoğu sorunuyla ilgili olarak en çok ABD tarafından kullanılan bu diplomasi, özel temsilcileri aracılığıyla BM genel sekreteri tarafından sıklıkla kullanılmaktadır (Sönmezoğlu, 2010:474).

1.1.5. Parlamenter Diplomasi

"Parlamenter diplomasi" kavramı ilk kez eski ABD dışişleri bakanlarından Dean Rusk tarafından, BM Tüzüğü'nde yer alan bazı BM organlarının karar alma süreçleri ile uluslararası parlamentolardaki karar alma süreçleri arasında bir paralellik olduğu düşüncesiyle ortaya atılmış ve uluslararası parlamentolarda yapılan işlemleri ve bu kurumlarda gerçekleştirilen faaliyetleri anlatmak için kullanılmıştır. Parlamenter diplomasiyi "çok taraflı diplomasi" olarak değerlendiren Rusk; Parlamenter diplomasi'nin temel özelliklerini şu şekilde sıralıyor: "Sabit bir gündemi takip eden geleneksel uluslararası konferanslardan daha geniş ilgi ve sorumluluklara sahip kalıcı bir organizasyon. Düzenli olarak açık tartışmalarla yapılan toplantılar (ve dolayısıyla dünya kamuoyu ile iletişim). Tartışma sürecinde usul kuralları geçerlidir. Kararlar bir tür çoğunluk tarafından alınır. Ana aktörün devlet olduğu ve dış politikanın tek belirleyicisinin yürütme olduğu bir dönemde zaman içinde bir ülkenin egemenliğine farklı bölgeler ve parlamentolar gibi çeşitli faktör ve aktörler tarafından meydan okunmuştur. Ayrıca ekonomik gelişme, sivil toplum, uluslararası şirketler, uluslararası örgütler ve hatta yasa dışı terör örgütleri devletin egemenliğini tehdit eden yeni aktörler ve unsurlar olarak ortaya çıkmıştır (Stavridis, 2006: 1) Günümüzde parlamenter yapılar da kendi çapında birer uluslararası aktör olarak ortaya çıkmışlardır. Bu bağlamda, Parlamenterin birçok kurul ve komisyonunun dış faaliyetlere katıldığına dikkat çekmek önemlidir. Günümüzde ulusal ve uluslararası parlamenter yapılar, uluslararası siyasetteki aktif rolleri nedeniyle daha yaygın hale gelmiştir. Bu önemli olgu, parlamenter diplomasi adı verilen yeni bir kamu diplomasisi biçimini temsil etmektedir (Stavridis, 2006: 1). "parlamenter diplomasi" terimi ilk kez 1. Dünya Savaşı sonrası dönemde kullanılmıştır. O zamanlar parlamenter diplomasi, Milletler Cemiyeti Genel Kurulu'nda gerçekleştirilen müzakereleri anlatmak için kullanılırken, zamanla bu terim, hükümetler arası kuruluşların genel kurullarını veya uluslararası konuların tartışıldığı uluslararası toplantıları da kapsadı (Erzen, 2012: 36). Yıllar geçtikçe, parlamentolar uluslararası varlıklarını ekonomik ve mali araçlarla artırdılar. Bunu özellikle Avrupa Parlamentosu ve Avrupa Konseyi Parlamenterler Meclisi için söylemek mümkün görünüyor. Parlamenter diplomasi'nin ortaya çıkış nedeni, uluslararası ilişkilerin sadece geleneksel yollarla sürdürülmesinin artık haklı ve yeterli olmadığı yönündeki yaygın anlayıştır. (Erzen, 2012: 36-37). Parlamenter diplomasi'nin birçok resmi ve gayri resmi aracı vardır. Parlamenter organların kurumsallaşmasına ek olarak, arkadaşlık grupları olarak tanımlanan daha gevşek biçimler de vardır (Stavridis, 2006: 1). Parlamenter diplomaside taraflardan birinin parlamento olması yeterlidir. Bu kapsamda uluslararası komisyonlar, karma parlamento komisyonları, parlamentolar arası dostluk grupları ile başta Dışişleri Komisyonu, Avrupa Birliği Uyum Komisyonu olmak üzere ihtisas komisyonlarının dış ilişkileri, Genel Kurulda dış politikayla ilgili yapılan görüşmeler, başka ülkelerdeki parlamenter seçim izleme faaliyetleri parlamenter diplomasi'nin araçlarındandır. Sürekli diplomatik çalışmanın olmaması, parlamenter

diplomasinin güçlendirilmesinin önünde büyük bir engel olarak görülmektedir (Stavridis, 2006: 11-12).

1.1.6. Kamu Diplomasisi

Klasik diplomaside ana strateji liderleri ikna etmek iken, kamu diplomasisinde hedef halklarda sempati uyandırmak ve paydaşlar arasında kalıcı ilişkiler yaratmaktır. Ayrıca halka açık fikir ve değerler, ideoloji ve çıkarlardan daha önemli hale gelir (Erzen, 2012: 101-102).

Edmund Gullion “kamu diplomasisi” terimini ilk olarak 1965 yılında ortaya atmıştır.

Kamu diplomasisi devletlerin ulusal düşünce ve hedefleri, kurum ve kültürü aynı zamanda da ulusal amaç ve siyasaları hakkında anlayış geliştirmek için yabancı kamulara yönelik gerçekleştirdiği iletişim etkinliğidir (Tuch, 1990: 3). Kamu diplomasisi, “yurt dışındaki hedef kitlenin ‘duygu ve düşüncelerinde değişim yaratmak için yapılan kamusal iletişimidir” (Szondi 2008: 6) veya “devletlerin uluslararası kamuoyunu veya seçkinlerinin düşüncelerini ülkenin çıkarları doğrultusunda etkileme çabaları” (Manheim, 1990:4) şeklinde tanımlamalar mevcuttur. Kamu diplomasisine geleneksel bakışı açıklayan bu tanımlar kamu diplomasisi, devletlerin küresel kamuyla konuşması olarak değerlendirilmekte ve ulusal amaç ve dış politikayla ilgili destek sağlamak için bilgilendirme, etkileme ve ilgi çekmeye yönelik faaliyetleri içermektedir (Snow, 2009: 6).

Kamu diplomasisi ilk kez teorik olarak 1960’larda konuşulmaya başlansa da uygulaması birinci dünya savaşından beri görülmüştür. 1917 yılında Başkan W. Wilson “Halk Bilgilendirme Komitesi (Committee on Public Information)” adıyla bir kurum oluşturmuş ve bu kurumun başına George Creel adlı bir gazeteci getirilmiştir. Bundan sonra “Creel Komitesi” adıyla anılacak olan organizasyonun amacı, ABD’nin savaştaki amaçlarını uluslararası arenada bilinir ve tanınır hale getirmektir. (Tiedeman, 2004:6) Bugün birçok yazar, 1960’ların ortalarında Edmund Gullion tarafından ortaya atılan “kamu diplomasisi” teriminden söz etmektedir. Gullion, terimi ‘propaganda’ diye tanımlamayı sevdiğini kabul etmekte ve yapılan işin tanımına en yakın olarak onu görmektedir. Ancak bu ülkede propagandanın aşağılayıcı bir anlamı vardır, diyor Gullion, söz konusu olumsuz anlamdan kaçınmak için; “iletişim”, “bilgi” ve “propaganda”nın tüm alanlarını kapsayan “kamu diplomasisi” kavramına başvurduklarını ifade etmektedir. (Osgood ve Edheridge, 2010:12). Kalın objektif verilere ve gerçeklere dayalı stratejik iletişim kurmak ve bunu farklı kesimlerin hizmetine sunmaktır” ifadesi, günümüzde “propaganda” yerine “kamu diplomasisi” ifadesinin kullanılmasının daha gerçekçi olacağını teyit etmiştir. (Kalın, 2010: 56).

Kamu diplomasisi hem kamusal hem de diplomatiktir. Tüm kamusal çalışmalar hedef hükümetin tam bilgisi ile açıkça yapılır. Kamu diplomasisi, halkı anlamak, bilgilendirmek ve etkilemek için yapılan faaliyetlerin bütünüdür. Amacı yabancı milletler ve kurumlar ile kendi ülkesinin kişi ve kurumları arasındaki iletişimi sağlamaktır (Krause ve Ever, 2009: 109). "Kamu diplomasisi" bilgi ve etki çerçevesinde çalışır. 1953'ten 1999'a kadar faaliyet gösteren "Amerika Birleşik Devletleri Bilgilendirme Ajansı (USIA)", verdiği bilgi ve yayınlarla karar vericileri ve kamuoyunu çeşitli yollarla etkilemeyi amaçlayan "kamu diplomasisi" tarihinde bir modeldir. Yumuşak gücün bir aracı olarak kamu diplomasisi, yurtdışındaki halkla iletişim kurmayı amaçlayan bilinçli bir eylemdir (Seib, 2009: 12). Joseph Nye'nin "yumuşak gücü", günümüz diplomasi pratiğinde gücün ve kamu diplomasisinin önemli bir yönüdür. "Yumuşak güç", gücü zorlamadan kültürel çekicilik, diplomatik çeviklik ve ikna olarak gördüğümüzde gücün manevi boyutunun önemini vurgular. "Kamu diplomasisi" ve "yumuşak güç" üzerine kapsamlı araştırmaları bulunan Ekşi, kamu diplomasisinin "sivil toplum temelli, halka dönük yeni bir diplomasi tarzı olduğunu kaydetti. (Çıkış, 2014: 10). Konstrüktivist bir yaklaşımla

konuyu ele alan Ekşi, özneler arasındaki anlayış, güven ve ilişkileri inşa etmeye dayalı faaliyet ve yöntemlerin kamu diplomasisinin inşacı kapasitesine işaret ettiğini vurgulamıştır (Ekşi, 2014: 23).

“Klasik diplomatik uygulama, devletler arasındaki resmi ilişkileri içerir ve gizli olarak yürütülür; kamu diplomasisi gayri resmi olarak devletten topluma ve toplumdan topluma, kamu ve toplum nezdinde uygulanmaktadır. YeniDiplomasi.com kurucu ortağı Gökhan Yücel, Nye'nin yumuşak güç kavramının uluslararası ilişkilerde son dönemde öne çıkan kavramlardan biri olduğuna işaret ediyor. Kavramın “yeni medya” ve “dijital diplomasi” ile yakından ilişkili olduğunu belirtiyor. Medya teknolojisindeki gelişmeler, dünyanın internet adı verilen büyük bir ağ ile örülmesi, dijital teknolojinin iletişim araçlarında sağladığı hız, zenginlik ve çok boyutluluk “Yeni Medya” kavramına işaret etmektedir. “İnternet Gazeteciliği” ve “Sosyal Medya” başta olmak üzere “Yeni Medya” üzerinden bilgi artık dar bir kesimin elinden alınarak kitlelerin hizmetine sunulmuş, bilginin dolaşım hızı hiç olmadığı kadar artarken, bilgi yaygınlaşmıştır. Nye’ın “soft power (yumuşak güç)” kavramını yaratıcı bir tercihle başka şekilde adlandıran Yücel, dijital dikkat çeken- “soft poware” söylemini ortaya atmakta ve dünyada ilk defa kullanılan bu kavramın, kamu diplomasisi ve dış politika süreçlerinde, yumuşak güç maksimizasyonu elde etmek için dijital diplomasiyi kullanması olduğunu savunmaktadır (Yücel,2015).

“Kamu diplomasisi ilişki kurmak, diğer ülkelerin, kültürlerin, halkların ihtiyaçlarını kavramak, görüşleri iletmek, ortak bir ülkünün peşinden gidilecek alanları tarif etmektir” (Leonard vd., 2002: 8). Kamu diplomasisi uygulamalarıyla ülkeler kendi ulusal özelliklerini dünyaya örnek göstermeyi amaçlamakta bu yolla da ulusa politikalarına meşruiyet kazandırmayı, küresel kamuoyunun onayını almayı amaçlamaktadırlar.

Kamu diplomasisi bir halkla ilişkiler faaliyetidir, bu çerçevede de iletişim yönetimi etkinliğini içermektedir. Kamu diplomasisini iletişimin ele alınışı ve doğasına göre de iki perspektif çerçevesinde, bilgisel ve ilişkişel kamu diplomasisi yaklaşımları şeklinde gruplandırmak mümkündür.

1.1.7. Dijital Diplomasi

Diplomasi temel olarak uluslararası ilişkilerin makine odasıdır (Cohen, 1998). Diplomasi, devletlerin dış politika hedeflerini ifade ettikleri ve yabancı hükümetlerin ve halkların kararlarını ve davranışlarını diyalog, müzakereler, savaş ve şiddet hariç diğer önlemler yoluyla etkileme çabalarını koordine ettikleri yerleşik yöntem olarak kabul edilmiştir (Ceyhan, 2020). Hükümetler kendi halkından ziyade diğer ülkelerin halklarıyla pozitif yönde etkileşim kurmak için diplomasi araçlarını kullanmaktadırlar (Kıran & Açıklın, 2021). Bu araçların çeşitlenmesi sürecinde küreselleşme ve küreselleşmenin de gölgesinde diplomasi ve iletişim kavramları iç içe geçmiştir (Ceyhan, 2020). Teknoloji ve iletişim araçlarının günümüzde bireylerin hayatında her anlamda önemli bir etki yarattığı yadsınamaz bir gerçektir. Yumuşak güç kavramı temel olarak kamu diplomasisinin gelişimini sağlamış dış politikaların düzenlenmesi ve yürütülmesi üzerindeki kamu tutumlarının etkilenmesini hedeflemektedir (Cull, 2008). 2000’lerin başından itibaren ise bireylerin hedef kitle olarak benimsendiği Kamu Diplomasisi 2.0 kavramı artık dünyanın her bir köşesindeki insanları da diplomasiinin önemli bir parçası hâline getirmiştir (Ingenhoff vd, 2021). İletişimin en önemli ve etkili kaynağı olarak kabul edilen internet ve sosyal medya platformları ise diplomaside yeni bir sayfa açılmasını sağlamıştır. İstatistiki verilere göre, küresel mobil kullanıcı sayısı 5,22 milyara ulaşmış ve bu dünya toplam nüfusunun %67'sinin biraz altına denk gelmektedir (Kemp, 2021). Bu rakamlar diplomasi için de oldukça anlamlı hâle gelmiş ve dijital diplomasi kavramı ortaya çıkmıştır. Dijital diplomasi kavramının birçok farklı tanımı bulunmaktadır ve bu kavramın tarihçesi de oldukça

tartışmalıdır (Bjola & Holmes, 2015; Ritto, 2014; Bradshaw, 2015). Bu tartışmaların ortasında dijital diplomasi, temel olarak diplomasinin yürütülmesinde internet ve bilgi iletişim teknolojilerinin kullanılması olarak tanımlanabilir (Hanson, 2012). Bu tanımlara ek olarak dijital diplomasi kavramı sadece diplomatik ilişkilerin yürütülmesinde değil, sosyal medya mecraları üzerinden ülkelerin imaj çalışması yapmanın yanı sıra konsolosluk işlemlerinin dijitalleşmesini de kapsamaktadır (Kampf vd, 2015; Manor, 2016). Son yıllarda özellikle sosyal medya kullanımının artması nedeniyle dijital diplomasinin değişimli olarak kullanıldığı yeni kavramlar da ortaya çıkmıştır, bunlardan bazıları twitdiplomasi ve e-diplomasidir (Ovalı, 2020; Yücel, 2020).

1.1.7.1. Dijital Diplomasinin Adlandırılması

Dijital diplomasiyi anlamak için, geleneksel diplomasiden günümüz diplomasisine doğru diplomasiye başvurmak gerekir. İletişim teknolojisinin gelişmesiyle birlikte uluslararası ilişkiler alanında en önemli kavramlardan biri olan diplomasinin yöntem ve araçlarında da değişimler yaşanmıştır. Diplomasi ile yakından ilgili olan televizyon, radyo ve gazeteler ile sosyal ağlar ve internetin kitle iletişim araçlarında yer alması geleneksel diplomasi ile birlikte doğan dijital diplomasi uygulamalarıdır. İletişimsel diplomasinin modern diplomasiye dönüşmesinde Soğuk Savaş sonrası dönemde küreselleşmenin ve bilgi teknolojisinin yükselişinin büyük etkisi vardır. Potter diplomasideki değişimi şu şekilde ifade etmektedir: Hükümetler arası diplomasi, daha sonra dijital çağla birlikte hükümetler ve toplum arasında kalan toplumlar arası bir etkileşim haline gelmiştir. (Potter 2002: 180)

Türkiye'de dijital diplomasi alanında önemli araştırmalar yapan Yücel (2016: 748), dijital diplomasiyi dört bölüme ayırmaktadır. Klasik diplomasiye 1.0 adını verdi. Bahsettiğimiz bu diplomasi anlayışı, Henry Kissinger'ın "Diplomacy" kitabının anlayışı ile örtüşmektedir.

Bir başka sınıflandırma olarak; Kamu diplomasisine 2.0 adını verdi. II. İkinci Dünya Savaşı'ndan sonra, Nazilerin propaganda kavramını ortadan kaldırıp yerine başka bir şey koyma arzusu nedeniyle ortaya çıktı. Kamu diplomasisi, Soğuk Savaş döneminde sıklıkla kullanılan bir yöntemdir.

Dünyanın dijitalleşmesiyle birlikte diplomasi alanında da bazı gelişmeler oldu. Sert gücün kamu diplomasisine dönüşmesiyle diplomasi dijital ortamlarda yer almaya başladı. Buna Diplomasi 3.0 adını verdi. İlişkiler arasında aracısız gerçekleşen bir iletişim biçimi ortaya çıkmıştır. Son olarak Yücel (2016: 748-749) bir sonraki sanayi devrimini de diplomasi 4.0 olarak adlandırmakta ve şu anda üzerinde fazla durulmadığı halde bu konunun yakın gelecekte önem kazanması gerektiğini belirtmektedir.

Dijital diplomasinin geleneksel diplomasinin yerini alması amaçlanmamıştır. Dijital diplomasi, devletin hem yurt içinde hem de yurt dışında, diğer ülkelerde ve vatandaşlara kendisini daha kesin ve etkili bir şekilde ifade etmesini sağlar. Değişen dünya düzeninde eski ile yeni arasında köprü görevi gören bir kurumdur. Sotiriou'ya göre; Dijital diplomasinin genel kabul görmüş standartları ve teorik çerçevesi yoktur (2015: 33) Her ülke dijital diplomasiyi kendine göre anlar. Dijital diplomasi, araştırmacılar ve uygulayıcılar tarafından farklı şekillerde yorumlanmış, tanımlanmış ve anlaşılmıştır. Manor, I. ve E. Segev (2015: 89-108) dijital diplomasiyi, bir ülkenin imajını ve itibarını proaktif bir şekilde yönetmek ve dış politika hedeflerine ulaşmak için sosyal medya platformlarının artan kullanımı olarak adlandırmaktadır. Lewis (2014), dijital diplomasiyi, diplomatların birbirleriyle ve halkla iletişim kurmak için dijital iletişim araçlarını kullanmaları olarak tanımlamaktadır. Potter'a (2002: 180) göre, dijital diplomasi temelde internet, mobil cihazlar ve sosyal medya dahil olmak üzere çevrimiçi sistemler aracılığıyla yapılan diplomatik faaliyettir. Hanson (2012: 1-41), diplomatik hedeflere

ulaşmak için internetin ve yeni bilgi ve iletişim teknolojilerinin kullanılması olarak tanımlanmaktadır.

Holmes (2015: 15) dijital diplomasıyı, değişim; dijital araçlar ve sanal işbirliği yoluyla bir yönetim stratejisi olarak tanımlar. Dijital diplomasının kamu diplomasısının bir parçası olmadığını, dijitalleşmenin getirdiği sosyal ve politik değişiklikleri ve ülkelerin bununla nasıl başa çıktığını içerdiğini savunuyor. Dijital diploması kavramı, farklı terimlerle dönüşümlü olarak anılmaktadır. Bjola (2015: 89-108) tarafından da kullanılan dijital diploması kavramı, "e-diploması" (Hocking, B. J. Melissen, 2012: 9), "siber diploması" (Barston, 2014), "diploması 2.0" anlamlarına gelmektedir. " (Harris, 2013: 17) ve "twiploması" (Sandre, 2012: 8-9) de dijital diplomasının yerine anılır. ABD Dışişleri Bakanlığı "21. yüzyıl devlet idaresi (siyasi ustalık) olarak adlandırmış, İngiliz Dışişleri Bakanlığı buna "dijital diploması" ve Kanadalılar buna "açık politika" demiştir.

1.1.7.2. Dijital Diplomasının Aktörleri

Dijital diploması, geleneksel aktörlerin yanında yeni aktörlerin de sürece dahil olmasıyla yürütülmektedir. Bu yeni aktörler; birey ve toplum, diasporalar, üniversiteler ve okullar, kanaat önderleri, medya ve haber ajansları, özel sektör ve küresel işletmeler, uluslararası örgütler, baskı grupları, teknoloji şirketleridir. Dijital diploması süreçlerinde rol alan aktörlerin bu süreçlerdeki konumlarını örneklendirmek gerekirse; teknoloji şirketlerine sahip ülkeler sanal kamusal alanda özerk bölgelere sahiptir ve çevrimiçi kullanıcılara iletilen mesajı şekillendirmede söz sahibidir. Birey ve toplumun diplomatik süreçlerde rolü dijital alanda önemini arttırmaktadır. Her vatandaş, ülkesinin gönüllü bir elçisi konumunda özellikle kamu diploması hedeflerinde aktif rol oynamaktadır (Kurt, 2018: 45-108).

Kitle iletişim araçlarının yeni teknolojik buluşlar doğrultusunda çeşitlenmesi, daha fazla insan tarafından kullanılabilirliğinin mümkün kılınması ve iletişimin kurulma hızının artmasının etkisi siyasal iletişim alanında da kendini göstermektedir. Soğuk Savaş sonrası uluslararası ilişkilerin realist paradigmanın hâkimiyetinden çıktığı, küreselleşmenin ve Bilgi Çağı'nın ortaya çıkardığı yeni paradigmanın etkisiyle toplum temelinde siyaset yaklaşımına geçişi görülmektedir (Ekşi,2018:24).

Dijital diplomasının amaçlarından biri de diğer ülke vatandaşlarının dikkatini çekmektir (Yıldırım, 2019:152). İnternet her kesimden insanın, daha az bütçe harcanarak ve daha kısa sürede gündem konularından haberdar olmasına yardımcı olmaktadır. Geleneksel süreçlerdeki elçilik, basın açıklamaları, gazete haberleri gibi içerik ortamları yerine Twitter hesapları, YouTube kanalları, internet siteleri ve diplomat blogları gibi çevrimiçi ortamlarda verilen mesaj videolar, grafik ve animasyonlarla sunulur ve anlaşılır ve cezbedici hâle getirilebilmektedir. Uluslararası ilişkiler alanında, özellikle yumuşak güç açısından gündemde olma büyük önem taşımaktadır. Nye (2017:157) bu durumu "en iyi reklam dahi popüler olmayan bir ürünü satamaz" şeklinde yorumlamaktadır. Twitter diploması, hashtag çalışmaları YouTube viralleri gibi yöntemler uygulanmakta olan dış politikaların benimsetilebilmesi ve taraftar kazanması açısından önem taşımaktadır. Diplomasının resmî aktörleri, dijital alanı hız ve karşılıklı etkileşime olanak tanınması nedeniyle tercih etmektedir (Koyuncu ve Medin, 2017:1241). Göç, savaş, doğal afet, salgın gibi krizlerde, dijital alanda yürütülen diploması acil durumlarda kişi ve kurumlara ulaşılmasında ve hızlı müdahale edilmesinde yardımcı olmaktadır(Yıldırım, 2019:153).

Dijital diploması, güç devletten devlet dışı aktörlere akar. Birey ve toplum, dijital diplomasının en önemli aktörleridir. Kamu diplomasısının ana aktörleri kanaat önderleri, sivil

toplum kuruluşları, kitle iletişim araçları ve haber ajansları ile uluslar üstü kuruluşlardır; Bu dijital diploması uygulayıcılarına ek olarak, bir de dijital vatandaş veya birey vardır.

Dijital diplomasinin bireyi sadece vatandaşla yüzleşmez, aynı zamanda dış kamuoyu da dahil olur. Dil ve internet engeli olmadığına, sanal, kamusal alanda herkes iletişime eşit olarak katılabilir. Hali hazırda dil engelini aşmak için çeşitli programlar geliştirilmiştir ve internet kullanım oranının arttığı görülmektedir.

Dijital diplomasinin bir diğer aktörü de diasporadır. İnsanların ekonomik, sosyal, kültürel, siyasi gibi pek çok nedenle bir yerden başka bir yere taşınması anlamına gelen göç kavramı, diaspora ile ilgili önemli bir kavramdır. Dünyada BM tarafından tanımlandığı şekliyle yaklaşık 272 milyon göçmen bulunmakta ve modern diaspora yöntemleri ile birbirlerinden haberdar olabilmektedirler (UN DESA, 2019). Yeni kitle iletişim araçlarının yardımıyla, insanlar yerel sınırları aşan bir boyutta iletişim kurabilmektedir. Sadece menşe yerlerinde değil, dünyadaki herhangi bir siyasi ve kültürel tartışmaya da katılabilirler. Ülkesinden uzakta yaşayan göçmenleri tanımlayan diaspora kavramı, iletişim teknolojisinin gelişmesiyle dijital diaspora kavramı haline gelmiştir.

Dijital diplomasinin bir diğer aktörü kanaat önderleridir. Kanaat önderleri, bireylerin fikirlerinin oluşumunu etkileyebilir. Ayrıca güvenilir bir kanaat önderi, mesajları hedef kitleye iletmek için bir araç olarak kullanılabilir. Dijital çağın getirdiği avantajlar sayesinde sosyal medya platformlarını etkin bir şekilde kullanan kanaat önderleri toplumla iletişim kurmak için başka bir kanala sahip oluyor. Başbüyük (2014: 54) dijital medyayı kullanan kanaat önderlerini “sanal kanaat önderleri” olarak tanımlamaktadır. Özellikle kriz zamanlarında kanaat önderlerinin topluma verdikleri mesajlar önemli bir etki yaratabilmektedir.

Dijital diplomasinin bir diğer aktörü ise küresel şirketler ve özel sektördür. Ekonomi ve diploması iç içe geçmiş alanlardır. Dijital diploması ile küresel pazarlar arasında da önemli bir ilişki vardır. Teknolojinin sürekli geliştiği ve sınırların olmadığı küçülen bir dünyada, bir ülke ekonomik olarak ayakta kalabilmek için ihracat yapmak zorundadır. Diğer ülkeler tarafından tanınmak ve iyi bir itibar oluşturmak önemlidir. Bu nedenle ülkeler dijital diploması yoluyla kendilerini doğrudan tanıtmalı ve dünya pazarına açmalıdır. Ülkelerin birbirine bağımlılığı açısından ekonomik ilişkiler dış politika alanında önemini hissettirmektedir. Bu noktada devletin çıkarları ön plana çıkmaktadır. Uluslararası şirketlerin yatırımları, hem şirketin kendi çıkarlarını hem de şirketin bulunduğu ülkenin çıkarlarını etkiler.

Dijital diplomasinin bir diğer aktörü de baskı gruplarıdır. Ortak ilgi alanlarına sahip insanların bir araya gelmesiyle oluşan gruplara çıkar grupları denir. Çıkar gruplarının bir sonraki aşaması olan baskı grupları, aynı çıkarlar için bir araya gelen ve bunları uygulamak için siyasi kurumları etkilemeye çalışan gruplardır (Kapani, 1998: 193).

Dijital diploması, çeşitli aktörlerin katılımını gerektiren bir süreçtir. Bu aktörler, devletler, diplomatik misyonlar, uluslararası kuruluşlar, sivil toplum kuruluşları, medya, özel sektör ve bireyler gibi çeşitli paydaşlardan oluşur. Her bir aktör, dijital diplomasıyı etkileyen ve şekillendiren farklı roller üstlenir.

Devletler, dijital diplomasıyı resmi politikalar ve stratejiler geliştirerek uygulayan başlıca aktörlerdir. Devletler, sosyal medya hesapları, web siteleri ve diğer dijital platformlar aracılığıyla liderlerinin politikalarını tanıtabilir, ülkelerinin imajını şekillendirebilir ve diğer ülkelerle ilişkilerini geliştirebilir. Ayrıca, devletler dijital diplomatik iletişimi desteklemek için diplomatik misyonları ve diğer yetkilendirilmiş kurumları kullanır.

Sonuç olarak, dijital diploması çeşitli aktörlerin katılımını gerektiren bir süreçtir. Devletler, diplomatik misyonlar, uluslararası kuruluşlar, sivil toplum kuruluşları, medya, özel sektör ve bireyler, dijital diplomasıyı etkileyen ve şekillendiren rolleriyle önemli paydaşlardır. Bu

aktörler, dijital iletişim araçlarını kullanarak uluslararası ilişkilerde etkili bir iletişim sağlamak, anlayışı artırmak ve küresel işbirliğini teşvik etmek için çeşitli stratejiler geliştirirler.

1.1.7.3. Dijital Diplomasinin Gelişmesi

Yeni kamu diplomasisinin son hali ise dijital diplomasi kavramı üzerinden açıklanabilir. İnternet kullanımının çok daha geniş kitlelere ulaşması, bilginin daha hızlı dolaşımı ve daha çok kişiye ulaşmasıyla internet çağının diplomasiye olan etkisi de giderek artmıştır. Teknolojik gelişmelerin uluslararası ilişkileri her zaman etkilediği göz önünde bulundurulduğunda yeni dönemde sosyal medyanın yaygınlaşması hatta geleneksel medyanın yerini almasıyla dijital diplomasi kavramı öne çıkmış ve küresel etkisi giderek daha çok tartışılmaya başlanmıştır. Dijital diplomasinin gelişimi incelendiğinde özellikle iki faktörün bu gelişime etkisi ön plana çıkmaktadır. Dijital diplomasinin gelişimi sivil toplumun gelişimiyle ilişkilidir. Birçok ülkede vatandaşların sivil topluma katılım yoluyla seslerini duyurabileceklerini, alınan kararlarda faktör olabileceklerini keşfetmeleriyle sivil toplum giderek büyümüştür. Önceleri İngiltere ve ABD, sonrasında ise Avrupa ülkelerinde sivil toplum dijital diplomasi kavramıyla eş değer tutulmuştur. Dijital diplomasinin büyümesi sadece bilgi transferinin gelişiminde değil aynı zamanda bilgi üretimine katkı açısından da önem arz etmiştir. E-diplomasi ile internet kullanımının diplomasiye dâhil edilmesi 1992 Rio Konferansı üzerinden gelişmeye başlamıştır. Konferansa sivil toplumdan ulaştırılan e-postaların okunmasıyla lobi faaliyetleri gerçekleştirilmiş ve dijital diplomasinin ilk büyük gelişimi ortaya çıkmıştır (Rashica, 2018: 78). Dijital çağın eğilimlerinden biri olan dijital diplomasi, devletlerin yumuşak güç arayışında aktif bir araç olarak kabul edilmektedir. Dijital diplomasinin yumuşak güç potansiyelini tam olarak anlamak için dijital diplomasi ve yumuşak güç arasındaki bağlantıya değinmek gerekmektedir. Özellikle bir devletin dijital diplomasiyi yumuşak güç unsuru olarak diğer devletlerin ve vatandaşlarının tutum ve görüşlerini etkileme aracı olarak nasıl kullandığını analiz etmekte fayda vardır.

“Gelişen teknoloji ile diplomasi ve çeşitli diplomasi uygulamaları dijital bir bakış açısına ihtiyaç duyar. Kendisini dijital diplomasiye aday bir birim kuran Dış İşleri Bakanlığı, 2002 yılında e-diplomasi üzerine görev gücü oluşturan ABD Dışişleri Bakanlığı olmuştur. Bu görev gücü daha sonra “e-diplomasi ofisi” olarak yeniden adlandırılmış ve zamanla diğer ülke dışişleri bakanlıkları da e-diplomasiyi benimsemeye başlamıştır. Dijital diplomasinin son birkaç yıldır dünyanın önde gelen eğitim kurumlarında ders olarak okutulması bu, konunun artan öneminin altını çizen önemli bir gösterge olmuştur. “Dijital diplomasi” ülkemizde de (Bahçeşehir Üniversitesi) 30 kişinin katıldığı bir sertifika programı ile gündeme alınmış ve yine aynı üniversitede 2013-14 döneminde ilk kez yüksek lisans dersi olarak okutulmuştur.

Türkiye’de bir süredir, özellikle Dışişleri Bakanlığı’nda, Cumhurbaşkanlığı, TBMM ve daha birçok kamu kurum ve kuruluşu, dijital diplomasinin açtığı yeni kanaldan faydalanmak için yoğun mesai harcıyor. Devlet kurumlarının vatandaşlardan geri bildirim almasına olanak sağlayan çeşitli sosyal medya hesaplarının yanı sıra Cumhurbaşkanlığı İletişim Merkezi (CİMER) şikâyet ve itirazlar çevrimiçi başvurular yoluyla da iletilebilir. Aynı zamanda devlet televizyonu olan TRT’nin birçok yayıncısı ve TV kanalı bu kurumların radyo kanalları, yabancı dillerdeki siteleri, yüzlerce sosyal medyası, kendi hesabı ve birkaç alt bileşeni olan benzersiz bir dijital diplomatik ekosistemdir. Covid-19’un dünyayı etkisi altına aldığı 2020 yılı salgınından beri fiziksel toplantılar yerini çevrimiçi toplantılar ve temaların görüldüğü dijital bir alana bırakmıştır. TBMM’nin aktif uluslararası komisyonların Twitter’da faaliyetlerini duyurduğu, yabancı heyetleri takip ettiği ve sosyal ağlarda onlarla etkileşimde bulunduğu

görüldü. Salgın nedeniyle fiziki parlamenter konferanslar video konferanslara (webinar) dönüştürüldü ve uluslararası komisyon toplantıları çevrimiçi uygulamalarla gerçekleştirildi. Dünyanın dört bir yanından katılımcılar bu çevrimiçi toplantılara katıldı. Avrupa Konseyi Parlamenterler Meclisi'nin (AKPM) resmi sosyal medya paylaşımından da anlaşılacağı üzere kurulduğu günden bu yana dijital diplomasinin model kurumlarından biri olmuştur.” (Arpacioğlu, 2021: 13).

1.1.8. Dijital Diplomasinin Önemi

“ABD merkezli PEW raporuna göre dijitalleşen dünyada 2025 yılında ‘new nations’ yani yeni uluslar oluşacağı iddia edilmektedir. Şu anda dünyanın en kalabalık ülkesi hangisidir? diye sorulduğunda diplomatik olarak önce Facebook sonra Çin olarak cevaplanabilir. Sonraki sıralarda Whatsapp, ABD, LinkedIn, Instagram ve Twitter sıralanmıştır. Sosyal medya araçları olan Twitter ve Facebook dünya kamuoyunu etkilemektedir ve devlet gibi hareket etmektedir. Örneğin dünyanın yarısı Kosova'yı tanır yarısı tanımaz. Ülke vatandaşlarının sayısı yurt dışında daha fazladır. Facebook, 2008'de bağımsız olan Kosova devletini bir devlet gibi tanımıştır. Diploması bir anda doğar. Ülkeler Twitter, Facebook, Youtube, Whatsapp ve Periscope gibi sosyal medyada "trend topic" ve "hashtag" kullanılarak ülkeler dış politikasını yürütür. Bu konuda 1990'larda CNN etkisi, 21. yüzyılda YouTube etkisi olmuştur. Geleneksel televizyonu da Twitter devralmıştır. Bu kanallar üzerinden algısal kontrol gerçekleştirilmiştir. Kitleleri harekete geçirecek şekilde etkileşim sağlanmıştır. Dijital diplomaside ekibe, insanlara ve araçlara devamlı yatırım yapmak gerekmektedir. Aynı şekilde inovatif bir ekip ve araçlar ile dijital diploması stratejileri belirlenmesi gerekmektedir. Dijital diplomasinin önemini anlamamızı sağlayacak dünyada çok sayıda örnek mevcuttur.”

<https://daktulo1984.com/yazilar/diplomasi-3-0-teknoloji-caginda-dijital-diplomasi/>

2. DÜNYADAN DİJİTAL DİPLOMASİ ÖRNEKLERİ

Dijital diplomasinin önderleri Amerika Birleşik Devletleri ve İngiltere'dir. 2002'de ABD Dışişleri Bakanlığı 25 farklı ofiste 150'den fazla tam zamanlı çalışanı olan E-Diplomasi Görev Gücü Ofisi'ni kurdu. Bu ofis 11 Eylül 2001 saldırılarına katkıda bulunan bilgi engellerini aşmak ve Dışişleri Bakanlığı'nın iletişim ve bilgi paylaşım yeteneklerini geliştirmek için kurulmuştur (Olubukola, 2017: 9). Yine Amerika Birleşik Devletleri Dışişleri Bakanlığı başka ülkelerdeki halkına ve yurttaşlarına hitap edebilmek, onları etkilemek için “Trace Effects” isimli bir oyun geliştirmiştir. Geliştirilen bu oyun ile Amerikan İngilizcesini, İngiliz İngilizcesinin hâkim olduğu yerlerde ön plana çıkartmayı hedeflemiştir.

Amerika ve İngiltere'den sonra Hindistan, İsrail ve Fransa'da dijital diploması adına büyük yatırımlar yapmaya başlamıştır. Örneğin, İsrail "Hasbara" isimli kamu diploması bakanlığı tamamen dijital bir diplomatik yapıya dönüştürülmüştür. İsrail Hasbara aracılığıyla sanki Gazze'yle ilgili şiddetli bir saldırıya karşılık veriyormuş gibi bir algı oluşturmaya çalışmıştır. Bunun için Twitter üzerinden “gaza, PillarofDefense, Israelunderattack” isimleriyle hashtaglar oluşturmuşlardır (Kuntsman, A.R. Stein)

İsveç'te de dijital diploması alanında başarılı çalışmalar yapılmıştır. Mayıs 2007 Sanal platformda yaşam sunan Second Life için ilk sanal elçiliğin açılışı birçok gence ulaşmayı ve İsveç hakkında bilgi vermeyi amaçlamıştır. 2014 yılında bu konuda altyapı imkânlarına sahip olduğu için vatandaşları, organizasyon kuruluşlarını, diplomatları bir araya getiren “Diplohack” etkinliği düzenlemiştir. Dünya çapında dijital dönüşümün bir parçası olmayı hedefleyen İsveç, insan hakları ve özgürlük alanında uluslararası diplomatik çalışmalar yönetmektedir.

Bir diğer dijital diploması çalışması ise; "The Global Dialogue on the Future Iran" Mart 2013'te Kanada tarafından başlatılan bir dijital diploması projesidir. Dış İlişkiler, Ticaret ve Kalkınma

Bakanlığı ve Toronto Üniversitesi katkıları ile yapılmıştır. Projenin amacı, İran halkının ve diasporasının önem verdiği öncelikli toplumsal konuları sanal platformda kamuya açık bir şekilde tartışabilmektir. Dünyanın birçok yerinde etkisini gösteren virüs (COVID-19) ile mücadelede eğitimler, ekonomik, sosyal, kültürel ve diğer çalışmalar dijital sistem üzerinden yürütülmüştür. G-7, G20 gibi zirveler, Dünya Bankası ve Uluslararası Para Fonu görüşmeleri çevrimiçi toplantılarla yapılmıştır. Devlet adamları, dünya liderleri ile video konferans aracılığıyla görüşmüştür (Kalsın, 2020). <https://www.aa.com.tr/tr/analiz/kovid-19surecinde-dijital-diplomasi/1822867>.

Dünya Sağlık Örgütü ve Whatsapp işbirliği ile üretilen Seyahat tavsiyeleri İngilizce, İspanyolca, Fransızca ve Arapça dillerinde düzenlendi ve konsolosluk hizmetleri, salgın durum raporları hakkında bilgi veren mesajlaşma servisi etkinleştirildi. Hindistan, İngiltere, Avustralya da bu yaklaşımı yakından izlemiş, DigDiploRox'ın desteği ile Litvanya Dışişleri Bakanlığı da chatbot uygulamasını kullanmaya başlamıştır (www.uscpublicdiplomacy.org, 5.4.2020).

Kızılay, YTB (Yurtdışındaki Türkler ve akrabaları) Avrupa Birliği Başkanlığı) ve TİKA (Türk İşbirliği ve Koordinasyon Ajansı) Facebook ve Twitter hesapları gibi önemli kamu diplomasi kurumları da dijital platformları kullanmaya başladı. Bu üç kamu diplomasi aktörünün sosyal medya hesapları incelendiği zaman takipçilerinin hem Türk hem yabancı vatandaşlardan oluştuğu ve kişi sayısının birbirine yakın olduğu görülmektedir. Bu durum da dijital diplomasi için iç ve dış dinamikleri hakkında aydınlatıcı olmaktadır. 2018 Temmuz'da yayınlanan Twiplomasi raporuna göre, Laos, Moritanya, Nikaragua, Kuzey Kore, Svaziland ve Türkmenistan hükümetleri olmak üzere sadece altı ülkenin sosyal medya platformunda resmi bir varlığı yoktur. 193 BM üye devletinin yüzde doksan yedisinin platformda resmi bir varlığı mevcuttur. Dünya, gelişen bilgi iletişim teknolojilerine uyum sağlamaya başlamıştır. 193 ülkenin mevcut diplomasisi, dijitale adapte olmuş durumdadır.

Türkiye'de dijital diplomasi için ilk uygulamaları, 2007 yılında kurulan Yunus Emre Enstitüsü tarafından başlatılmıştır. . Kamu diplomasisinin kültürel boyutunu temsil eden enstitü, kültür diplomasisi faaliyetlerinin dijital platformlarda ilan etmek için 2010 yılında "@yeeorgtr" kullanıcı adlı Twitter hesabı açmış ve günümüz itibarıyla 14.7B tweet ile 108.2 B takipçiye ulaşmıştır.

- *Kamu Diplomasisi Koordinatörlüğü ve İletişim Başkanlığı*

Türk kamu diplomasisinin kurumsallaştırılması adına ilk olarak 2010 yılında "...kamu diplomasisi alanında yürütülecek çalışmalar ile stratejik iletişim ve tanıtım faaliyetleri konusunda kamu kurum ve kuruluşları ile sivil toplum örgütleri arasında iş birliği ve koordinasyonu sağlamak amacıyla..." (Resmî Gazete, 30 Ocak 2010) Kamu Diplomasisi Koordinatörlüğü kurulmuş ve önemli misyon üstlenmiştir. Bu kurumun tüm misyonu ve daha fazlası -ilerleyen yıllarda- Cumhurbaşkanlığı hükümet sistemine geçişin ardından 2018'de kurulan Türkiye Cumhuriyeti İletişim Başkanlığı'na devredilmiştir. Birincil hedefini 'Türkiye markasını güçlendirmek' olarak ortaya koyan bu kurumun temel faaliyet alanları; "...iletişimi gerçekçi, sürdürülebilir ve sağlıklı bir zeminde yürütme bilinciyle ulusal ve uluslararası kamuoyları ile her düzeyde anlama, anlatma, anlam ve değer katma çabaları..." şeklinde belirlenmiştir (T.C. İletişim Başkanlığı, 2018).

- *AFAD, TİKA, Kızılay ve STK'lar*

Kuruluş amacı, felsefesi ve temel ilkeleri gereği dil, din, ırk ayrımı gözetmeden çalışmalarını sürdüren, dünya genelinde çok farklı bölgelerde insani yardım çalışmaları yürüten ve kapasitesini her geçen gün artırarak insani yardım faaliyetleri konusunda etkinliği ve bilinirlik düzeyi sürekli yükselen Kızılay bu alanda küresel bir aktör haline gelmiştir. Türk Kızılay uluslararası düzeydeki bu performansı sayesinde kamu diplomasisi uygulamalarıyla hedeflenen

ulusal çıkarlara hizmet etme adına sürecin en önemli paydaşlarından biridir. Kızılay'ın eylem kapasitesinde ve bilinirliğinde görülen bu yükselme Türkiye'nin uluslararası toplum nezdindeki ulus marka değerini ve imajını da olumlu yönde etkilemektedir. Aynı şekilde yurt içinde ve yurt dışında insani yardım operasyonları gerçekleştirme ve koordine etme misyonu ile kurulan Afet ve Acil Durum Yönetimi Başkanlığı (AFAD) ile -Türk Cumhuriyetleri ve Balkanlar başta olmak üzere- Türkiye'nin tüm etkileşim alanlarında iş birliği, insani yardım ve tanıtım faaliyetleriyle varlık gösteren Türk İşbirliği ve Koordinasyon Ajansı (TİKA) gibi kurumlar da ülke imajı oluşturma sürecinde başı çeken kurumsal aktörler arasında yer almaktadır.

Dünya genelinde insani yardım faaliyetleri ve sağlık hizmet sunumu yürüten AFAD, Kızılay gibi kurumsal aktörler ile birlikte bu alanlarda aktif olan sivil toplum kuruluşları da son yıllarda güçlenmiş ve uluslararası ölçekte başarılı çalışmalar gerçekleştirmiştir. Buna paralel olarak Türkiye, gerek sivil toplum kuruluşlarına AFAD, TİKA ve Kızılay gibi kurumlar nezdinde destek olmak, çalışmalarını kolaylaştırmak gerekse doğrudan iş birliği içerisinde çalışmalar yürütmek suretiyle bölgesi ve etkileşim alanları başta olmak üzere, Haiti'den Endonezya'ya kadar dünyanın çok farklı bölgelerinde varlık göstermiş, bilinirliğini ve saygınlığını artırmıştır (Battır & Ateş, 2013: 41).

- *Yunus Emre Enstitüsü (YEE)*

Olumlu ülke imajı oluşturmada en etkili yollardan biri toplumlar arası kültürel etkileşimdir ve bunun en başta gelen aracı ise dil bariyerinin ortadan kaldırılmasıdır. Türkiye'yi, Türk dilini, tarihini, kültürünü ve sanatını tanıtmak; bununla ilgili bilgi ve belgeleri dünyanın istifadesine sunmak; Türk dili, kültürü ve sanatı alanlarında eğitim almak isteyenlere yurt dışında hizmet vermek; Türkiye'nin diğer ülkeler ile kültürel alışverişini arttırıp dostluğunu geliştirmek amacıyla 05.05.2007 tarihli ve 5653 sayılı kanunla kurulan Yunus Emre Vakfı ve sayılan amaçları gerçekleştirmek üzere bu vakfa bağlı olarak kurulan Yunus Emre Enstitüsü yurt dışında kurduğu merkezlerde yabancılara Türkçe öğretimi çalışmalarının yanı sıra ülkemizin tanıtımı amacıyla kültür ve sanat faaliyetleri yürütmekte, ayrıca bilimsel çalışmalara destek vermektedir. 2009 yılında faaliyetlerine başlayan Yunus Emre Enstitüsünün yurt dışında 60'dan fazla kültür merkezi bulunmaktadır. Bu merkezlerde verilen Türkçe eğitiminin yanı sıra, farklı ülkelerdeki eğitim kurumlarıyla yapılan iş birlikleri ile Türkoloji bölümleri ve Türkçe öğretimi desteklenmektedir. Kültür merkezleri aracılığıyla Türk kültür ve sanatını tanıtmak amacıyla birçok etkinlik düzenlenmekte, ulusal veya uluslararası etkinliklerde Türkiye temsil edilmektedir (YEE, t.y.). Dil öğretimi başta olmak üzere tüm bu faaliyetler doğrudan ülkenin bilinirliğini arttırmakta ve etkileşim alanlarını genişletmektedir.

- *Sağlık Diplomasisi*

Bir ülkenin güçlü olduğu yanlarını uluslararası toplumla ilişkilerinde ön plana çıkarması geniş bir kabule mazhar olabilmesi ve amaçlarına ulaşabilmesi için rasyonel bir tercihtir. Özellikle doğrudan insan hayatına dair konularda bu tercihin çok daha etkili olduğu söylenebilir. Sağlık alanında beşerî ve fiziki kapasite bakımından son yıllarda ciddi bir atılım gerçekleştiren Türkiye gerek insani yardımlar ve kalkınma yardımları çerçevesinde az gelişmiş ve gelişmekte olan ülkelere yönelik yatırım ve uygulamaları gerekse kaliteli hizmet sunumu sayesinde sağlık turizmindeki başarıları bağlamında giderek güçlenen bir küresel aktördür. Sadece sağlık hizmeti sunmaya dayalı insani yardım faaliyetleriyle değil yerel hükümetler ve uluslararası kuruluşlarla iş birliği içerisinde gerçekleştirdiği önemli yatırımlarla da beşerî ve mali sermaye transferi gerçekleştiren Türkiye, geline noktada sistem ihraç eden güçlü bir ülke konumundadır.

Son yıllarda büyük bir dönüşüm ve ilerleme kaydeden Türk sağlık sisteminin tecrübe aktarımı ve modelleme yoluyla ihraç edilmesi anlamına gelebilecek birtakım uygulamalar Türkiye'nin yürütmekte olduğu sağlık diplomasisi faaliyetleri ülke imajı inşa sürecinde stratejik hamleler

olarak değerlendirilebilir. İşletme ve eğitim faaliyetleri Türkiye Cumhuriyeti Sağlık Bakanlığı ve ilgili ülke Sağlık Bakanlıkları ile iş birliği halinde yürütülmek üzere, 2014 yılında Sudan’da açılan, Nyala Sudan Türkiye Eğitim ve Araştırma Hastanesi (T.C. Sağlık Bakanlığı, 2018) ile 2015 yılı başında resmi açılışı yapılan, Somali’deki Mogadişu Somali Türkiye Eğitim ve Araştırma Hastanesi Türk (T.C. Sağlık Bakanlığı, 2019) insani yardım sisteminin sağlık diplomasisi alanındaki faaliyetlerinin en önemli örneklerindedir.

Bunların dışında Covid-19 pandemi sürecinin ilk başlarında (henüz 2020 yılının ilk aylarında) gelişmiş Batılı ülkeler ve ABD dahil pek çok ülkede kişisel tıbbi koruma ekipmanları tedariki konusunda yaşanan sıkıntıların çözümünde Türkiye son derece aktif bir rol üstlenerek hem kendi ihtiyacını karşılamış hem de dünya genelinde onlarca farklı ülkeye yardım malzemeleri göndermiştir. Söz konusu yardımların uluslararası basında da geniş yer bulduğu görülmüştür (BBC, 2020a; DW, 2020; VOA, 2020) Türkiye’nin bu süreçte sergilediği aktif tutumun ve sağlık diplomasisi çerçevesinde ortaya koyduğu performansın uluslararası toplum nezdinde imajını ve saygınlığını yükselttiğinde şüphe yoktur.

- *Türkevi*

Bir ülkenin uluslararası imajı kendi toprakları dışında sahip olduğu işlevsel ve aynı zamanda sembol değeri olan yatırımlarla/eserlerle de yakından ilgilidir. Resmi ve sivil dış misyonların dayanışma adresleri olmanın yanında ülkenin gücünü ve siyasi etkinliğinin de göstergesi sayılabilecek kimi yatırımların kamu diplomasisindeki rolü yadsınamaz. Fikri temelleri 1970’lerin başına dayanan ve ilk olarak 3 Ekim 1977’de New York’ta açılan Türkevi (Forum USA, 2019) bu anlamda önemli bir örnektir. Zaman içerisinde fiziki şartları ve işlevselliği bakımından yetersiz hale gelen Türkevi, eski yerinde, tarihi Türk mimarisinden motifler taşıyan son derece modern bir bina inşa edilerek 2021 yılı Eylül ayında bir anlamda yeniden açılmış ve ülke imajı açısından önemli bir misyon yüklenmiştir. Türkiye’nin uluslararası politikada artan etkinliğinin ve başarı hikayesinin sembollerinden biri olarak lanse edilen (İletişim Başkanlığı, 2021) yeni Türkevi binası adeta somutlaşmış kamu diplomasisi abidesi gibidir.

- *Savunma Sanayi*

Türkiye’nin son yıllarda uluslararası toplumun dikkatini çeken başarı hikayelerinden biri de savunma sanayi alanında gerçekleştirdiği atılımlardır. Sınır ötesi terör operasyonları yanında 2020 Karabağ Savaşı’nda sergilediği performansla silahlı insansız hava aracı (SİHA) teknolojilerinde elde edilen başarı Türkiye’nin bu alanda öne çıkan güçlü bir küresel aktör olmasını beraberinde getirmiştir (BBC, 2020b). Uluslararası politikada sert gücün yeniden ön plana çıktığı ve bölgesel güç mücadelelerinin yaşandığı son yıllarda savunma sanayi atılımlarının Türkiye imajına olumlu katkı sağladığı tartışmasızdır.

- *Made in Türkiye*
