Ülke imajı ve ulus markalama adına son dönemde atılan önemli adımlardan biri de “Türkiye” markasının benimsenmesiyle ilgili Cumhurbaşkanlığı Genelgesidir. Marka Olarak “Türkiye” İbaresinin Kullanımı ile İlgili 2021/24 Sayılı Cumhurbaşkanlığı Genelgesinde; “Türkiye” markasının ulusal ve uluslararası mecrada ülkemizin çatı markası olarak kabul edildiği belirtilerek “Türkiye” ibaresinin Türk milletinin kültür, medeniyet ve değerlerini en iyi şekilde temsil ve ifade ettiği vurgulanmıştır. Genelgede “Bu kapsamda• ihraç ürünlerimizde “Made in Turkey” yerine “Made in Türkiye” ibaresi kullanılmaya başlanarak, ülkemizin uluslararası ticarete gururu olan ürünlerimiz “Türkiye” ibaresi ile tanıtılmış ve tüm dünya ile buluşturulmuştur. Bundan sonra da her alanda Devletimiz ve milletimizin binlerce yıllık birikiminin “-Türkiye” markası altında temsili hedeflenmektedir. Bu çerçevede, “Türkiye” markasını güçlendirme çalışmaları kapsamında; başta diğer devletler ve uluslararası kurum ve kuruluşlarla resmi ilişkilerde olmak üzere, her türlü faaliyet ve yazışmalarda “Turkey”,

“Turkei”, “Turquie” vb. ibareler yerine “Türkiye” ibaresinin kullanımı konusunda gerekli hassasiyet gösterilecektir.” ifadelerine yer verilmiştir (Resmî Gazete, 04 Aralık 2021).

SONUÇ

Dış politikada devletler, çıkarları ve hayatta kalabilme mücadelesi için diplomasi araçlarına başvurur. Diplomasi, uluslararası arenada devletlerin ilişkilerinin barışçıl yöntemlerle yönetilmesidir. Değişen dünya düzeninde diplomasi tanımı ve kullanımı da değişkenlik göstermektedir. Diplomasi dönüşümünü inceleyebilmek için tarihsel gelişmelere ve sürecin getirilerine bakmak gereklidir.

İletişim araçları artık dış politika amaç ve hedeflerini uygulamak için kullanılmaya başlanmış, etkisi ve önemi hızla artmıştır. Dijital diplomasi; uluslararası ekonomide klasik düzen, egemenlik, jeopolitik yapı gibi kavramları ortadan kaldırmaya başlamıştır. Dijital diplomasi en iyi tanımı; ülkenin dış politika hedeflerini, kamu diplomasisini gerçekleştirmek ve uygulamak için iletişim, teknoloji ve sosyal medya platformlarının giderek daha fazla kullanılmasıdır. Sivil toplum kuruluşları, kanaat önderleri, uluslararası kuruluşlar, haber ajansları diplomaside önemli oyuncular olmalarına rağmen; dijital diplomatik aktörler için dijital varlıklar birey ve toplum da aktif olarak katılmıştır. Dijital diplomasi illaki muhatabının devlet olmadığı, devletler arasındaki diplomatik ilişkilerin devlet- toplum, devlet-birey ve halklar arasında dijital varlıklar aracılığıyla yürütüldüğü; her yerde, her zaman, herkesin yapabildiği bir hale bürünmüştür.

Bir sosyal medya kanalı olan Twitter üzerinden elçilikler, takipçilerle iki yönlü iletişim kurabilmişlerdir. Diplomatlar sadece TV değil Facebook, Twitter gibi kanallar aracılığıyla halka seslenmiş, halkla iletişim kurabilmiştir. Bu, Kamu Diplomasisi monologunun yerini alabilecek Dijital Diplomasi sayesinde gerçekleşen bir diyalogdur.

Diplomasi alanındaki değişiklikleri şu şekilde sıralayabiliriz:

- Aktör sayısı ve çeşitliliği arttı.
- Diplomatik biçimler, türler, teknikler, araçlar ve mekanizmalar değişti.
- Diplomatik ilişkiler seviyeleri değişti.
- Whatsapp, SMS gibi dijital araçlarla insanlar seferber edildi.

Her değişiklik aslında yeni bir teknolojik aletin hayatımıza girmesiyle başlamıştır. Üçüncü sanayi devrimi diyebileceğimiz dijital dönüşüm, uluslararası sistemin değişmesinde önemli rol oynayan Sanayi Devrimi'nden farklı olarak, toplumsal sorunların tüm yönlerine nüfuz etti. Dijitalleşen dünyada bilgi edinmek, bilgileri kullanmak ve hatta doğrulamak devletlerde güç olarak sonuçlanmıştır. Bu güce ulaşmak için dijital dönüşüme uyum sağlamak ve yatırım yapmak gerekmektedir.

Sonuç olarak diplomasi kavramı ve etkilerinin incelendiği bu çalışmada sosyal medya ve dijital diplomasi kanallarının etkili ve verimli diplomatik iletişim sağlayabileceği kanısına varılmıştır. Araştırma göstermiştir ki; dijitalleşen dünyada, dijital ortamlar ve sosyal medya platformları aracılığıyla gerçekleştirilen stratejik temelli diplomatik iletişim süreçleri hem ülke politikalarının aktarımına hem de ülkelerin itibar ve imajlarına olumlu katkılar sağlamaktadır.

ÖZET

Demokratik ülkelerde siyasi seçim dönemlerinde siyasi partilerin, siyasal adayların seçim kampanya süreçlerinin vazgeçilmez uygulamalarından olan kamuoyu araştırmalarıdır. Siyasal kamuoyu araştırmaları siyasal iradeler ile toplum arasında bir iletişim ve etkileşim aracı işlevini yerine getirirler. Seçmenlerden siyasi partilere, siyasal iktidara siyasal bilgi akışını sağlama, hedef kitlenin tutumlarına ilişkin bilgi verme işlevi görmesi, seçmenlerden elde edilen verilere göre siyasal yapının uygulanacak politikaları biçimlendirme, seçim takvimlerinde zaman içinde fikir değişimini gösterme, kamuoyuna önem kazandırma ve azınlık görüşlerine yer verme gibi işlevlere sahiptir. Kamuoyu araştırmaları kavramı ele alınmış, bu faktörün tanımı, önemi, değişimi ve seçmen davranışlarına etkisine değinilmiştir. Çalışmanın kamuoyu araştırmalarına bakış açıları ve bu araştırmalardan etkilenip etkilenmediği ve siyasete katılım düzeylerini belirlemeye yönelik online anket çalışması yapılmıştır. Elde edilen bulgulardan bazıları; seçim dönemlerinde yapılan siyasi kamuoyu araştırma sonuçlarını takip ettikleri, siyasal kararlarını etkilemediği, kamuoyu araştırmalarına olan güven konusunda kesinlik olmadığı, seçmenlerin siyasal tercihlerini yönlendirmede kısmen bir etki olduğu ve siyasal kamuoyu araştırmalarında ortaya çıkan sonuçların seçmenin mensubu olduğu partiye olan bağlılığı konusunda asla vazgeçmeyeceklerini ifade etmektedirler

Anahtar Kelimeler: Seçmen Davranışları, Kamuoyu Araştırmaları, Siyasal Katılım

The Effect of Political Public Opinion Research on Voter Preferences: The Case of Karaman

ABSTRACT

Public opinion polls are one of the indispensable practices of the election campaign processes of political parties and political candidates during political election periods in democratic countries. Political opinion polls fulfill the function of a communication and interaction tool between political will and society. It has functions such as providing the flow of political information from the voters to the political parties, providing information about the attitudes of the target audience, shaping the policies to be implemented by the political structure according to the data obtained from the voters, showing the change of opinion in the election calendars, giving importance to the public opinion and giving place to minority views. The concept of public opinion surveys is discussed, the definition of this factor, its importance, change and its effect on voter behaviors are mentioned. An online survey was conducted to determine the viewpoints of the study on public opinion surveys and whether they were affected by these researches and their level of participation in politics. Some of the findings obtained; They state that they follow the results of the political opinion polls made during the election periods, that they do not affect their political decisions, that there is no certainty about the trust in the opinion polls, that the voters have a partial effect in directing their political preferences, and that the results of the political opinion polls will never give up on the loyalty of the voters to the party to which they belong.

Keywords: Voter Behaviors, Opinion Surveys, Political Participation

1.GİRİŞ

Siyasi kamuoyu arařtırmaları, bir ÷lkedeki seçmenlerin tercihlerini ölçmek ve analiz etmek için kullanılan önemli bir araçtır. Bu arařtırmalar, siyasi partilerin ve adayların seçim kampanyalarını planlamak, stratejilerini belirlemek ve mesajlarını şekillendirmek için kritik bilgiler sağlar. Ancak, bu arařtırmaların seçmen tercihleri üzerindeki etkisi, bazı tartışmalara neden olmuştur. Siyasi kamuoyu arařtırmaları, seçmen davranışlarını öngörmek ve genel eğilimleri belirlemek için anketler ve anketler kullanır. Bu arařtırmalar, seçmenlerin hangi partiye veya adaya oy vereceklerini veya hangi konularda öncelik verdiklerini anlamak için geniş bir demografik ve sosyal bilgi sağlar. Bunun yanı sıra, bu arařtırmalar siyasi partilere, kamuoyu algısı ve memnuniyeti hakkında geribildirim sağlayarak, politika ve mesajlarını şekillendirme fırsatı sunar. Ancak, siyasi kamuoyu arařtırmalarının seçmen tercihleri üzerindeki etkisi konusunda bazı eleştiriler bulunmaktadır. Birincisi, arařtırmaların sonuçları genellikle kamuoyunda bir etki yaratır ve seçmenlerin tercihlerini şekillendirebilir. Bu durum, seçmenlerin gerçek düşüncelerini ifade etmek yerine, popüler veya kazanan bir adaya oy verme eğilimine yol açabilir. Siyasi kamuoyu arařtırmaların sonuçları, medya tarafından geniş bir şekilde rapor edildiğinde, seçmenlerin tercihlerini daha da etkileyebilir. Medya, siyasi arařtırmaların sonuçlarını vurgulayarak, seçmenlerin tercihlerini etkileyen bir araç haline gelebilir. Bu durumda, seçmenlerin gerçek fikirlerini ifade etmek yerine, kamuoyu arařtırmalarındaki sonuçlara göre hareket etmeleri muhtemeldir. Siyasi kamuoyu arařtırmaları, seçmenlerin tercihlerini etkileyen bir döngüye neden olabilir. Yani, bir parti veya adayın popüler olduđu bir kamuoyu arařtırması sonucunda, seçmenler bu popülerliđi göz önünde bulundurarak oy verebilirler. Bu da, daha fazla popülerite ve daha yüksek bir seçim sonucuyla sonuçlanabilir. Dolayısıyla, kamuoyu arařtırmaları, seçmenlerin tercihlerini etkileyerek, gerçek demokratik süreçten uzaklaşmalara yol açabilir.

2. KAVRAMSAL-KURAMSAL ÇERÇEVE

2.1. SEÇMEN KAVRAMI

Seçmen, bir demokratik sistemdeki seçimlerde oy kullanan bireyleri ifade eden bir kavramdır. Seçmenler, vatandaşlık haklarına sahip olan ve belirli bir seçim bölgesinde ikamet eden kişilerdir. Seçmenler, genellikle yasal yaş sınırlamalarına ve diđer belirli gereksinimlere sahip olmalıdır. Seçmenler, demokratik bir süreçte temsilci demokrasinin işleyişini sağlar. Seçimlerde oy kullanarak, siyasi partilerin veya adayların seçimlere katılma hakkını elde ederler ve politik liderleri belirlerler. Seçmenlerin tercihleri, bir ÷lkenin politikalarının belirlenmesinde etkili olabilir ve halkın iradesinin yansıtılmasını sağlar.

Demokratik yönetimlerin en önemli unsurlarından biri seçmendir. Seçimlerde oy kullanmaya yetkili seçmenler bir yönetici sınıfı veya siyasi partiyi ve onların haklarını iktidara getirebilir, ya da onları yönetimden uzaklaştırma gücünü kullanabilme imkanına sahip vatandaş olarak tanımlanabilir (Kalender, 2005: 23). Seçmen, kendisine verilen oy haklarını kullanırken yöneticilere destek verme iradesine sahip olduđu gibi o da iktidara desteđini çekme hakkına da sahiptir. Seçmenler vermiş oldukları kararlar kendilerini yönetecek iktidarı seçmekle birlikte aslında o iktidarın alacağı kararlardan da bizzat etkilenen grubu temsil etmektedir. Demokratik gelişmeler neticesinde seçmen kavramı giderek önem kazanmaktadır. Önceleri mülkiyet, zenginlik, eğitim, cinsiyet, ırk gibi belirli özellikleri gibi kavramlar seçmen kısıtasyken demokratik gelişmeler ile vatandaş olmak, belirli bir yaşta olmak, kısıtlı ve hükümlü olmamak gibi genel oy anlayışının geçerli olduđu bir sisteme evrilmiştir (Teziç, 2014: 303-305)

Anayasanın 67. maddesine göre seçme hakkının demokratik ilkeleri; Eşitlik İlkesi Genel İlkesi Bireysellik İlkesi Gizlilik İlkesi Serbestlik İlkesine dayanmaktadır.

Seçmenlerin rolleri ve önemleri demokratik bir toplumun temelini oluşturur. Seçmenler, kendi çıkarlarını ve değerlerini temsil eden adayları destekleyerek, politikaların ve hükümetin şekillenmesine katkıda bulunurlar. Ayrıca, seçmenlerin oy kullanma hakkı, demokratik sürecin adaletli ve meşru bir şekilde işlenmesini sağlar. Seçmenler, politik süreçlere katılarak demokratik yönetimde aktif bir rol oynarlar. Oylarını kullanarak tercihlerini ifade ederler ve siyasi kararlarda söz sahibi olurlar. Seçmenlerin katılımı, toplumun farklı kesimlerinin temsil edilmesini sağlayarak demokratik kararların daha geniş bir tabana dayandığını gösterir. Sonuç olarak, seçmenler demokratik bir toplumun temel taşlarıdır. Oy kullanma hakkına sahip olan bu bireyler, seçimler aracılığıyla siyasi liderleri belirler ve politikaların şekillenmesine katkıda bulunurlar. Seçmenlerin tercihleri, demokratik sürecin meşruiyetini ve temsil gücünü sağlar.

2.2. SEÇMEN DAVRANIŞLARI VE SİYASAL KATILIM

Seçmen davranışları en genel tanımıyla, seçmenlerin güç sahibi olduğu değer, inanç, tutum ve davranışlarını siyasi tercihlerine yansıtması şeklinde ifade edilmektedir. Seçmen davranışı, bireylerin merkezi veya yerel teşkilatların yöneticilerini etkileyerek kamu politikalarının belirlenmesine yön veren tutum düşünce ve davranışlardır. Siyasi davranış herkes için farklıdır. Demokratik bilincin var olduğu toplumlarda siyasi davranış en basit ve en kolay şekilde oy verme davranışı olarak görülmektedir. Kalaycıoğlu, seçmen davranışında iki aşama olduğunu belirtmektedir. Seçmenler önce oy kullanıp kullanmayacaklarına karar verirler. Oylamaya katılımın iki boyutu vardır. Aktif katılım ile seçmenler sadece oy vermekle kalmaz, başkalarını da oy vermeye ikna ederek seçim sonucunu etkilemeye çalışır. Pasif katılım ise seçmenler sadece oy kullanır ve başkalarının kararlarını etkileme niyetinde değildir. (Kalaycıoğlu, 1983: 203). Seçimlerde oy kullanma kararı alan seçmenler için ikinci aşamada hangi siyasi partiyi tercih edecekleri önemlidir. Seçmenler bu aşamada kendi taleplerine cevap vereceğine inandığı siyasi partiler lehine oy tercihinde bulunmaktadır Bireylerin seçimlere katılma kararı almasında arkadaşlarının, ailesinin, meslektaşlarının ve çevresinin etkisinden söz etmek mümkündür. S. Martin Lipset bir gruptaki oy kullanma eğilimi ile ilgili olarak bazı genellemelerde bulunmuştur: Grubun menfaatleri hükümetin politikalarından ciddi şekilde etkileniyorsa seçimlere katılım yüksek düzeyde gerçekleşmektedir.

- Grubun, siyasi kararların kendi çıkarları ile olan ilişkisi hakkında bilgi edinme olanaklarına sahip olması durumunda seçimlere katılım yüksek olacaktır.
- Bireylerin oy kullanmaları için arkadaş, meslektaş veya sosyal çevresinden gelen baskılar, oy kullanma oranını artırabilmektedir (Lipset, 1986: 188).

Siyasal katılmanın bir başka tanımı ise; “Toplumun parçası olan bireylerin, siyasi davranış türü olarak alınan ya da alınacak her türlü siyasi, ekonomik ve toplumsal kararlar karşısında gösterdikleri tepkiler, eğilimler ve yaklaşımlar” biçiminde yapılabilmektedir. Bu bağlamda seçmenlerin siyasi sistem karşısında gösterdikleri davranışlar şunlardır:

- Oy kullanmak,
- Seçim propaganda ve kampanyalarında rol almak,
- Parti üyesi olmak,
- Bir baskı grubunun aktif üyesi olmak
- Siyasi gösteri ve grevlere katılarak kamu politikalarını yönlendirmek,
- Yerel veya merkezi iktidarların danışma birimlerinde yer almak
- Tüketici haklarını koruyan kurumlara üye olmak,
- Vergi ödemeyi kabul etmemek, zorunlu askerliğe itiraz etmek gibi sivil itaatsizlik faaliyetlerinde bulunmak (Birch, 1993; Aktaran: Turan ve Temizel, 2015: 9)

2.3. OY VERME DAVRANIŞINA YÖNELİK YAKLAŞIMLAR

Seçmenlerin siyasal tercihlerini yönlendiren durumların neler olduğu yönündeki bir tartışma alanı oluşturmaktadır. Bu sebeple siyaset, sosyoloji ve psikoloji gibi bilim dalları seçmenlerin tercihlerini etkileyen faktörlerin neler olduğu sorusuna yanıt aramaktadır. Seçmen davranışlar ile ilgili olarak çeşitli araştırmalar yapılmış olup bu araştırmalar sonucunda üç yaklaşımda söz edilmektedir. Bu yaklaşımlar,

- Sosyolojik Yaklaşım
- Psikolojik Yaklaşım
- Ekonomik ya da Rasyonel Yaklaşım olarak belirtilmiştir (Kalender, 2005: 39).

2.3.1. Sosyolojik yaklaşım

Oy verme davranışına sosyolojik açıdan yaklaşan bu yaklaşıma göre, ait olunan sosyal grup bu davranışın belirleyicisi durumundadır. Seçmenler, oy vermeye araçsal bir anlam yükledikleri için ait oldukları sosyal grubun çıkarlarını en iyi şekilde yansıtan partilere oy verirler. Aileden gelen psikolojik etki yerine toplum içindeki bölünmeler, davranışlar açısından belirleyici konumdadır. Sınıf, cinsiyet, etnisite, dini inançlar ve yaşanılan coğrafi bölge bu bölünmelerin en önemlilerini oluşturur (Heywood, 2007: 311).

İlk defa Columbia Üniversitesi'nde bulunan bazı sosyal bilimciler tarafından ortaya çıkarıldığı için "Columbia Ekolü" olarak da bilinmektedir. Bu yaklaşım, aile içindeki bireylerinin birbiriyle aynı siyasi tercihte bulunduğunu ve çocuklarının da anne babasına benzer siyasi davranışta bulunduğunu belirtmektedir. Aile dışında bireylerin içinde buldukları ekonomik statü, dini ilişkiler ve sosyal yaşam alanlarının da siyasal tercihlerin oluşmasında etkileri olmaktadır.

2.3.2. Psikolojik yaklaşım

Psikolojik yaklaşım, bireylerin geçmişine bakarak küçük yaşlardan itibaren içinde bulunduğu ailenin etkisiyle edindiği siyasi tavır ve davranışlar neticesinde bir siyasi partiye psikolojik bağlarla bağlanacağını ileri sürmüştür. Bu yaklaşım bireylerin, içinde yaşadıkları ailenin etkisiyle belli bir siyasi partiye erken yaşlardan başlayan bir aidiyet duygusuyla bağlanmasını temel dayanak olarak göstermektedir (Heywood, 2007; Ünal, 2016: 101)

2.3.3. Rasyonel yaklaşım

Ekonomik değişkenleri göz önünde bulundurduğu için "ekonomik yaklaşım" olarak da bilinen bu yaklaşımın temel düşüncesini bireylerin istek, arzu ve çıkarları doğrultusunda hareket ederek bu isteklerini yerine getirebileceğine inandığı siyasi 21 parti veya adayın lehine o kullanması oluşturmaktadır (Kalender, 1998: 53).

2.4 SEÇMEN DAVRANIŞLARINI ETKİLEYEN FAKTÖRLER

2.4.1. Seçmen Davranışını Etkileyen Siyasi Faktörler

2.4.1.1. Siyasi Partiler

Siyasi partinin seçmen davranışlarının etkilemeyebilmesi noktasında parti lideri, parti programı, partinin icraatları, toplumsal bellek, gelecek tahayyülü, politikaları, dine bakış açısı ve seçmenlerle ilgili faktörler yer almaktadır (Göker G., Doğan, A., 2013: 26- 28).

2.4.1.2. Aday/Lider

Günümüz demokrasi modelinin doğal bir sonucu olarak temsil faktörü partinin niteliklerini yanı sıra adayların da birtakım bireysel özelliklerinin önem kazanmasına katkı sağlamıştır. Bu durumda adayın dini, etnik kökeni, sosyal sınıfı, akrabalık durumu, cinsiyeti ya da ötekilerde ayırt edici herhangi bir özelliği bireyin siyasi tutumunu etkilemektedir.

2.4.1.3. Medya ve Propaganda

Siyaset alanını medya aracılığıyla takip eden bireylerin siyasal katılım artmakta ve siyasa katılımın yönü medya arzına göre şekillenmektedir. Siyasi partiler, sokak kampanyaları, parti

toplantıları, halkla bütünleşme çalışmaları ve araştırmalarıyla propagandalarını yürüterek seçmeni etkilemektedir. Propagandanın amacı: ‘‘Fertleri kabule zorunlu olmadıkları bir düşünceyi, istekleriyle kabule, yapmaya zorlanamayacakları bir hareketi istekleriyle yapmaya yöneltmektir’’ (Demirçi, 2012: 31)

2.4.1.4. Hizmetler

Bir siyaset kurumunun temel görevlerinden biri de vatandaşa hizmet etmektir. Ulusal ve yerel yönetimler tarafından sağlanan hizmetler seçmen davranışlarını büyük ölçüde etkiler. Ülkenin içinde bulunmuş olduğu konjonktür vatandaşın, hükümetin faaliyetlerini değerlendirme biçimini belirlemektedir. Seçmenler ülkenin gündemini, iktidar ve muhalefet partilerinin çalışmalarını hep geçmişle kıyaslayarak değerlendirmektedir.

2.4.2. Seçmen Davranışını Etkileyen Sosyolojik Faktörler

2.4.2.1. Kimlik/İdeoloji

Toplumdaki siyasal eğilimlerin analizi açısından bireyin sahip olduğu siyasal kimliklerin incelenmesi, siyasal saptamaların sağlıklı yapılabilmesine olanak sağlar. Toplumların kendine özgü tarihi, bireylerin siyasi anlayışlarını da etkiler. Bu nedenle toplumda çeşitli ideolojiler görülmektedir. Yani, siyasi kimlik söz konusu olduğunda, demokrat, liberal, muhafazakâr sağcı, solcu vb. tanımlayan kişiler akla gelmemelidir. Bireyin siyasi kimliği, sosyal çevrede oluşan daha spesifik bir biçimdir. (Güllüpunar, 2010: 41). Kalaycıoğlu, seçmenin tercihlerinde ideolojinin etkisinin büyük olduğunu belirtmiştir. (1999: 56) Ekonomik faktörler yerine ideolojik ve kültürel faktörlerin seçmenlerin tercihlerinde baskın unsur olduğu söylenebilir. Özellikle sosyal kutuplaşmanın zirve yaptığı dönemlerde seçmenlerin sosyopsikolojik motivasyon algısı ait olduğunu hissettiği siyasi akımın, seçmenlerin ideolojisinin oy verme davranışlarını etkilediğini göstermiştir.

2.4.2.2. Toplumsal Otorite ve Hiyerarşik Yapı

Otorite; politika, yönetim ve idare araştırmalarının temel kavramlarından biridir. Çünkü güç ve otorite hayatın temel fonksiyonu olarak görülür. Bu gücün yapının oluşmasında aile başta olmak üzere sosyal çevremizle olan bütün ilişkilerimiz birer faktördür. Bu bakımdan politik hayatın fonksiyonlarının gerçekleşmesinde temel unsur olan otorite, ilk sosyal deneyimlerin üretilmesini de sağlamaktadır (Güllüpunar, 2010: 58).

Birey yaşadığı yer, ilişki ağları veya mesleğine göre bir grubun üyesi olur. Bu ilişkiler kısmen de olsa bireysel özgürlükleri korur. Ancak, bunları birkaç hiyerarşik gruba eklemenize de zorlar. (Erol, 2003: 58). Bu gruplardaki bireyler otoriteyi kabul ettikleri gibi, sosyal düzen şekillendirmede diğer gruplarla ilişki kurarlar. Böylece bireyin siyasi tercihlerinin, ait olduğu gruba veya grubun ilişki ağı içinde bulunduğu diğer gruplardan etkilendiği söylenebilir.

2.4.2.3. Eğitim

Eğitim, seçmen davranışını iki şekilde etkiler. Öncelikle Eğitim olarak eğitim, bilgi düzeyi yükseltir ve dolayısıyla seçmenin siyasi olayları, bu olayların sebebinin ve sonuçlarını daha değerlendirmelerini sağlar. Diğer yünden ise eğitimle bireyin siyasi davranışlarını şekillendirilmesi ve pekiştirilmesi sağlanmaktadır.

2.4.2.4. Din

Siyasi alanda din faktörü bazen bölücü bazen de birleştiricidir. Siyasî alandaki bu etki hiç kuşkusuz toplumun dine verdiği önemin bir sonucudur. Türkiye gibi muhafazakâr toplumun kalabalık olduğu ülkelerde Din siyasi platformun önemli bir parçasıdır. Türkiye çoğu durumda siyasi kararlar alırken din anlayışından uzaklaşmamıştır. Siyasi taraflar da etkili olan din faktöründen konuşmaları ve faaliyetlerinde yararlanırlar. Bazı partiler ise dini bir ideoloji olarak görmekte ve vatandaşlarla iletişimde dini ön plana getirmektedir. Bu bağlamda dini tercihler insanların seçim kararlarında önemli rol oynamaktadır.

2.4.2.5. Kentsel/Kırsal Yaşam

Bireyin yaşadığı yer ile siyasal davranışı arasındaki ilişki birçok alanda net bir şekilde görülmektedir. Yaşam alanının genişliği ve büyüklüğü siyasi katılımını teşvik ederken bu yerin küçüklüğü katılımı seyrekletmektedir. Genel olarak köy ve kent ayrımında kentteki katılım oranı daha yüksektir. Modern dünyanın mekânsal sonucu olarak düşünülen şehirlerdeki demokrasi kültürü siyasal anlamdaki katılıma farklı bir özellik kazandırırken seçmen kesimde yönetimi belirleme içgüdüsünü artırmaktadır (Dursun, 2014: 244).

2.4.3. Seçmen Davranışını Etkileyen Ekonomik Faktörler

Birey siyasi bir tercih yapmadan önce toplumun sorunlarının çözülmesini ister ve tabii ki hangi taraf bu soruna çözüm üretebilirse seçmenler onu destekler. Dolayısıyla işsizlik, enflasyon, ekonomik parametreler, ekonomik değişimler ilgili faktörler ve bu konuda uygulanan politikalar seçmenin oy tercihini önemli ölçüde etkiler (Çaha, 2008: 44)

2.4.4. Kitle İletişim Araçlarının Seçmen Davranışlarına Etkisi

Kitle iletişim araçlarının insanların davranışlarını etkilemesi yeni bir olgu değildir. Özellikle günümüzde siyasi hayattan münferit pek çok olayın kitle iletişim yoluyla öğrenildiği düşünülmektedir. Kitle iletişim araçları günümüz teknolojisinin hızlı gelişimi sonucunda insanların birçok konuda bilgiye kolay, hızlı ve ucuz bir şekilde ulaşmasını sağlamaktadır. Teknolojinin gelişmesiyle birlikte sosyal medya da toplumların hayatına girmiştir böylece hızla geleneksel iletişim araçlarının yerini almaya başlamıştır. Siyasi partiler ve yöneticiler daha geniş bir kitleye ulaşmak için birçok iletişim aracını bir arada kullanmaya başlamıştır.

Kitle iletişim araçları teknolojilerinin özellikle günümüzde çok hızlı gelişmesi, insanların dünyanın her tarafındaki olaylardan anında haberdar olmasına, her türlü konu hakkında daha kolay ve çok düşük maliyetle bilgilenmesine sebep olmuştur. Bu durum, çoğu insanın günlük hayatındaki olaylara bakış açısını değiştirmekte ve karar verme sürecini de etkilemektedir (Kalender, 2005: 106).

İnternetin sosyal yaşam üzerindeki artan etkisinin bir sonucu olarak siyaset dünyasında da seçmene ulaşmak için ciddi anlamda bir araç olarak görülmektedir. Sosyal medyada iki yönlü bir ilişkiden bahsetmek mümkündür. Bireylerin politikacılarla iletişim kurmasını kolaylaştırır. Geleneksel medyada ise bireylerin bu tür imkânları yoktur. Sosyal Medya, geleneksel medyadan daha hızlı iletişim sağlar. Sosyal medya sayesinde siyasetçiler de daha geniş bir kitleye ulaşabilmektedir. Özellikle gençlerin sosyal medyada fazla zaman geçirmeleri ve bu kuşağın önemli bir oy potansiyeline sahip olması nedeniyle siyasi liderler bu kesime ulaşmak için sosyal medyayı kullanmaktadır. Sosyal medya daha özgür bir ortam yaratmıştır ve onu geleneksel medyadan ayıran temel özellik budur. Bireyler, sosyal medya platformları vasıtasıyla basında yer almayan gündeme dair haberleri takip etme imkânı yakalamaktadır. (Şener, 2015: 94). Seçmenlerin en fazla takip ettikleri kitle iletişim araçlarından birisi televizyondur. Konya’da yapılan bir çalışma, televizyon ve gazete yayınlarının, mitinglerin seçmenlerin daha fazla dikkatini çektiğini buna karşılık parti ve adaylara ait ilan ve broşürlerin, radyo yayınlarının ve internet sitelerinin önem seviyelerinin biraz daha düşük olduğu sonucuna ulaşmıştır (Kalender, 2003: 33). Kitle iletişim araçlarının seçmenlerin siyasal kararlarını verebilmelerinde önemli roller oynadıkları düşünülmektedir (Bektaş, 1996:115-117).

3. KAMUOYU ARAŞTIRMALARI

3.1. Kamuoyu Kavramının Tarihsel Gelişimi

Kamuoyunun güncel anlamının sade ve kolay bir biçimde anlaşılmasını sağlayan ünlü Latin atasözü “vox populi vox dei” (halkın sesi hakkın sesidir) siyaset bilimciler arasında yaygınlaşarak günümüze kadar ulaşmıştır. İngiltere’de bu kavram ilk kez 1741 yılında “halkın düşüncesi” anlamında kullanılırken Fransa’da 1744 yılında J. Rousseau tarafından “toplumun tavrı” şeklinde kullanılmıştır (Abadan, 1966: 4-5). Antik Yunan’da “site” devlet yapısı

içerisinde köle ve yabancılar haricinde diğer bireylerin oy kullanma hakkının olması (sınırlı da olsa) siyasi katılımın izlerini göstermiştir. Bu durum bireyleri siyasal olaylar karşısında etkin hale getirmiş ve “kamu” fikrinin oluşumuna katkı yapmıştır (Bektaş, 2018: 13-14). Aydınlanmanın doğuşunun, büyük şehirlerin doğuşu, Matbaanın icadı, eğitimin yaygınlaşması, ücretli çalışmanın ortaya çıkması gibi toplumsal, ekonomik ve siyasi gelişmeler ışığında gerçekleştiğini söylemek mümkündür. Paris ve Londra gibi büyük şehirlerin yükselişiyle birlikte basın ve tartışma kültürünün oluşması kamuoyunun oluşmasında etkili olmuştur. Bu dönemde ortaya çıkan kahvehane gibi mekânlar gazetelerin okunduğu, haberlerin toplandığı, siyasi ve edebi konularda fikir alışverişinin yapıldığı merkezler durumuna gelmişlerdi. İngiltere ve Fransa’daki bu yerlerdeki tartışmalar ve bilgi alışverişi kamuoyu fikrinin oluşumunu önemli ölçüde etkilemiştir (Sennet, 1996: 111).

3.2. Türkiye’de Kamuoyu Araştırmalarının Gelişimi Türkiye’de siyasi kamuoyu araştırmaları

1950’lerin ilk yarısında başlamıştır. İstanbul’un kalabalık yerlerinde gazeteler tarafından kurulan sandıklar vasıtasıyla vatandaşlardan hangi siyasi partiye oy vereceği sorusuna cevap aranmıştır. İlk araştırma şirketi 1961 yılında PEVA (Piyasa Etüd Müşavirlik Araştırma Limited Şirketi) olmuştur. Daha sonra PEVA’dan ayrılarak 1975’de PİAR (Piyasa Araştırma Ltd. Şirketi) ve 1983 yılında SİAR’ın (Sosyal ve İktisadi Araştırmalar Ltd. Şirketi) kurulmuştur. Türkiye siyasetinde önemli gelişmelerin kamuoyu araştırmalarının gelişimi açısından önemi büyüktür. Özellikle ordunun yönetime el koyduğu askeri darbelerin yaşandığı, askeri muhtıraların verildiği veya sıkıyönetim uygulamalarının yaşandığı baskıcı dönemlerde kamuoyu araştırmalarının sınırlı düzeyde kaldığı söylenebilir. 24 Ocak 1980 kararlarıyla birlikte liberal politikaların eşliğinde dış dünya ile yaşanan uyumun başlamasıyla birçok araştırma şirketi Türkiye’ye gelerek araştırmalar yapmış, bu araştırmalar ülkemizde de bir esin kaynağı olmuştur. 80’li yıllarla beraber Kamar, Konda, Sonar, Siar gibi araştırma şirketleri kurulmuştur. 2000’li yıllar kamuoyu araştırma şirketlerinin sayısının artmasıyla birlikte seçimlere yönelik olarak daha fazla araştırmanın kamuoyu ile paylaşıldığı bir sürecin başlangıcı olmuştur. Kamuoyu araştırma şirketlerinin sayısının özellikle 2010 yılından beri ciddi bir şekilde arttığı görülmektedir. 2010 yılından itibaren yapılan seçimlerde birçok araştırma şirketi seçimlerle ilgili farklı tahminler ortaya koymuştur.

3.3. Kamuoyu Araştırmalarının Tanımı ve Önemi

Seçmenlerin siyasi tercihlerini etkileyen faktörlerden birisi de kamuoyu araştırmalarıdır. Celinda Lake ve Callbeck Harper kamuoyu araştırmalarını, “Alt bir gruba veya daha büyük bir grubu genellemek için kullanılan örneklemeden veya örneklemin elde edildiği popülasyondan sistematik, bilimsel ve tarafsız bilgi toplama işlevi olarak tanımlamıştır” (Lake ve Harper, 1997: 4).

Genel olarak bakıldığında kamuoyu araştırması, halkın tümünün veya belirli bir bölümünün sosyal, kültürel, siyasi ve ekonomik faaliyetlerine bağlı olarak tutum, davranış, eğilim, düşünce ve ihtiyaçlarının genel yapısının saptanması amacıyla gerekli bilgilerin sistemli olarak toplanması, objektif biçimde kaydedilmesi, sınıflandırılması ve analiz edilerek sunulması olarak tanımlanır (Bakan, 2000: 37).

Diğer bir tanım da kamuoyunu temsil eden örnek bir grubun bireyleriyle görüşülüp, onların görüşlerini, eğilimlerini, tutum ve davranışlarını belirlemek amacıyla yapılan araştırmalardır. Kamuoyu araştırmaları toplumun bir bölümünü veya toplumun tamamını oluşturan bireylerin incelenmesi tutumlarını, davranışlarını, beklentilerini, eğilimlerini ve düşüncelerini öğrenmek amacıyla yapılmaktadır. Özellikle siyaset bilimi, sosyoloji, eğitim, tıp ve ekonomi alanlarında günümüzde birçok alanda kamuoyu yoklamaları yapılmaktadır. Bu çalışmada ise siyasi

kamuoyu çalışmalarına odaklanılmıştır(Mahmut Mert Aslan, kamuoyu arařtırmaları, https://scholar.google.com.tr/scholar?q=kamuoyu+ara%C5%9Ft%C4%B1rmalar%C4%B1+nedir&hl=tr&as_sdt=0&as_vis=1&oi=scholart)

Siyasi kamuoyu arařtırmaları hem siyasi partiler hem de seçmenler için çok önemlidir. Siyasi partiler ve adaylar stratejilerini seçimlerden önce kısmen bu arařtırma sonuçlarına göre belirlemektedir. Halkın gereksinimlerini ve ihtiyaçlarını öğrenmek için çok fazla fırsatları olmadığı için kamuoyu arařtırmalarını kullanmak onlara kolaylık sağlamaktadır. Ayrıca seçmenlerin siyasi tutum ve davranışları ve gündemdeki önemli konulardaki eğilimleri pozisyonları ve tutumları Kamuoyu arařtırmaları ile neler olup bittiğini göstermektedir.

Seçmenler ise kamuoyu arařtırmaları aracılığıyla ihtiyaçlarını, fikirlerini, sorunlarını siyasi parti ve adaylara ulařtırmaktadır (Balcı ve Ayhan, 2004: 139).

Kamuoyu arařtırmaları sonuçlarının seçmenlerin üzerinde etkisi tartışmalı birlikte gerek seçmenler gerekse de siyasi parti lider ya da adaylarının gözünde olumlu veya olumsuz yönde ciddi motivasyon etkilerinin olduğu söylenebilir. Özellikle seçim öncesi kamuoyu arařtırmaları önem kazanmakta ve tahminler yürütülmektedir. Kamuoyu arařtırmalarının topluma aktarılması konusunda medya araçları önemli bir yere sahiptir. Kitle iletişim araçlarının genişlemesi ve çoğalmasıyla birlikte kamuoyu olgusu ve kamuoyu arařtırmaları yeni bir ivme kazanmıştır. Ticari amaçla kamuoyu arařtırmaları yapan arařtırma şirketlerinin müşterilerini genellikle siyasi çevreler ve basın kuruluşları oluşturmaktadır. Siyasi partiler ve çevreler kampanyalarına yön vermek için kamuoyunun tutum, davranış ve eğilimlerini öğrenmek amacıyla kamuoyu arařtırmaları yaparken medyanın görevi toplumu bilgilendirmek ve ticari çıkarlarını göz önünde bulundurmaktır. Kamuoyu arařtırma sonuçlarının topluma duyurulması ve kamuoyunun bilgilendirilmesi sadece medya araçlarının kullanılmasıyla mümkündür. Böylece siyasal güçlerden kamuoyuna medya ve kamuoyu arařtırmaları aracılığıyla mesaj iletilmekte ve siyasal iletişim kavramı oluşmaktadır.

4. KAMUOYU ARAřTIRMALARININ SEÇMEN TERCİHLERİ ÜZERİNE ETKİSİ

Yapılan arařtırmalar sonucunda kamuoyu arařtırmalarının seçmen davranışları üzerinde etkileri řu şekilde açıklanmıştır:

- Gözde olana yönelme etkisi (Bandwagon effect)
- Zayıfa destek etkisi (underdog effect)
- Kamçılanma etkisi (lash effect)
- Toparlanma etkisi (momentum effect)
- Stratejik karar (tactical voting)
- Pasifleştirme Etkisi (Passivation Effect) (Özerkan ve İnceođlu, 1997: 33)

4.1. Gözde Olana Yönelme Etkisi (Bandwagon Effect)

Parti ya da adayın kazanma şansı az veya hiç olmadığı durumlarda, kararsız seçmenlerin kamuoyu arařtırması sonuçlarına göre önde gelen ve ideolojik konum veya nitelikleri açısından kendisine yakın bulduğu başka bir partiye yönelmesi şeklinde ortaya çıkan “gözde taraf etkisi” kitle iletişim araçlarıyla yayınlanan kamuoyu arařtırma sonuçlarının seçmene ulaşması durumunda söz konusu olabilmektedir (Güz, 2005: 151). Bu etkinin temelinde herkesin böyle bir davranışta bulunması ve insanların kaybeden tarafta yer almama eğilimi bulunmaktadır (Kalender, 2005:101). Kamuoyu arařtırma sonuçlarının daha çok gözde olana yönelme etkisi yaratacağı endişesinin olmasına karşın diğer ülkelerde yapılan çalışmaların bu etkinin o kadar güçlü olmadığını göstermiştir.

4.2. Zayıfa Destek (Yenilmişlik Etkisi) (Underdog Effect)

Yenilmişlik etkisi seçimlerde bir aday ya da partinin önde olduğunu gösteren kamuoyu araştırmalarının kararsız seçmenleri, bu aday veya partiye muhalif olarak diğer partilerin etrafında toplanmaya itmesini (Özkan, 2007: 186), yani seçilme şansı daha az olan parti ya da adaya yönelmesini ifade etmektedir. Bu etki sebebiyle kararsız seçmenlerin sonucu açıkça belli olan bir seçimde bir tarafın ezici bir çoğunlukla kazanmasını istememeleri (Ergin, 2009: 333). Onları seçimi ezici bir yenilgiyle kaybetmesi muhtemel görünen aday ya da partiye yönlendirmektedir (Güz, 2005: 153). Kalender (2005: 101) zayıfa destek etkisine örnek olarak İngiltere’de 1983 yılında yapılan Bermondsey ara seçimlerini göstermektedir.

4.3. Kamçılanma Etkisi (Blacklash Effect)

Kamuoyu araştırmaları sonucunda kazanma şansı düşük olan parti ya da aday taraftarları bu durumu değiştirmek için daha çok çalışmaya gere duymakta ve bu durum da kamçılanma etkisini ortaya çıkarmaktadır. Dolayısıyla kamuoyu araştırma sonuçlarının yayınlanmasıyla birlikte bu araştırma sonuçlarına göre zayıf görünen parti ya da adayın bu etki sebebiyle toparlanarak atağa geçmesi söz konusu olabilmektedir (Güz, 2005: 153). Oyu geride görünen parti seçmenlerinin bu partinin oy oranlarını artırmak için sandığa daha istekli bir şekilde gitmeleri şeklinde değerlendirilebilir.

4.4. Toparlanma Etkisi (Momentum Effect) Oy oranı düşük parti ya da adayın bu durumu taraftarlarını diğer parti ya da adaylara yönlendirebilir. Siyasal kampanya boyunca siyasi partilerin oy oranındaki değişimleri de ortaya koyan kamuoyu araştırmaları seçmenlerin kazanamayacağı düşüncesiyle oy vermemeyi düşündüğü parti ya da adayın oy oranlarının arttığını gösterdiğinde seçmenler kararlarını değiştirerek yeniden bu aday ya da partiye yönelebilmektedirler (Güz, 2005: 153-154). Yani seçmenlerin sempati duyduğu ancak kazanma ihtimalini düşük gördükleri aday ya da partilerin kamuoyu araştırmaları sonucunda oy oranının arttığını görmesiyle tekrar bu aday ya da partiye yönelmesidir. Bu da kamuoyu araştırmalarının “toparlanma etkisini” ifade etmektedir (Atabek, 1996: 869).

4.5. Stratejik karar (Tedbirli Oy Kullanma) Etkisi (Tactical Voting)

Seçmenler birden fazla aday ya da partinin seçime katılması durumunda sempati duydukları partilerden küçük olanı tercih etmek yerine büyük olan partiyi tercih edebilmektedir. Bu yönelimin olması için bu parti ya da adayların oy oranının birbirine yakın olması gerekir. Bu durum kamuoyu araştırmalarının seçmen üzerinde temkinli yaklaşma davranışı geliştirdiğini gösterir. Bu davranışın temel sebebi boşa gidecek oy kavramını ortadan kaldırmaktır.

4.6. Pasifleştirme Etkisi (Passivation Effect)

Bir parti ya da adayın seçim döneminde kazanma ihtimali çok yüksek ise seçmen kaybetme ihtimali olan kendi aday ya da partisine karşı pasifleşir ve sandığa gitmekten vazgeçer. Seçmenin seçim öncesi adayı bellidir ve diğerlerini alternatif olarak görmez. Kamuoyu araştırmaları sonuçlarına göre aktif seçmen sayısının düşmesi ve seçimin çekişmeli geçmesini önlemiş olur. Bu durum kamuoyu araştırmalarının bir sonucudur (<https://www.politikyol.com>).

5. ARAŞTIRMANIN AMACI VE ÖNEMİ

Kamuoyu araştırmaları günümüze kadar aday ve partilerin stratejilerini belirlemede ve seçim döneminin şekillenmesinde yardımcı olan faktördür. Aynı zamanda kendi taraftarlarını tutma ya da yeni taraftarlar edinmesinde de önemli rol oynar. Kamuoyu araştırmaları siyasal iletişimde stratejik araç olarak görev alır. Bu çalışmanın amacı şu sorulara cevap bulmaktır:

- Kamuoyu araştırmaları takip ediliyor mu?
- Kamuoyu araştırmaları seçmenin siyasal davranışını etkiliyor mu?

Çalışma seçmen davranışını etkileyen faktörler içerisinde kamuoyu araştırmalarının yeri ve önemi üzerinde durmuştur. Ayrıca konu literatüre katkı sağlaması açısından önemlidir.

6. ARAŞTIRMANIN KAPSAM VE SINIRLILIKLARI

Araştırma kapsamında değişik iller evren olarak belirlenmiştir. Elde edilen bilgiler ışığında genellemeler yapılmıştır. Araştırma kamuoyu araştırmalarının seçmenin oy verme davranışı üzerindeki etkisiyle sınırlandırılmış, örneklem olarak ise çeşitli il merkezlerinde yaşayan 18 ve üzeri yaş grubunda olan, oy kullanma hakkına sahip bireyler araştırma kapsamına alınmıştır. 4-12 Mayıs 2023 tarihleri arasında veriler toplanmıştır. Araştırmanın konu olarak sınırlandırılmasını nedeni kamuoyu araştırmalarının etkisinin çoğunlukla oy verme davranışı üzerinde ortaya çıktığının düşünülmesidir.

7. ARAŞTIRMANIN YÖNTEMİ

Betimleyici şekilde hazırlanmış olan bu çalışmada yöntem olarak veri toplamak için en yaygın teknik olarak kullanılan anket tekniği ile veriler elde edilmiştir. Anket uygulamasında cevaplar katılımcılarla online sistem üzerinden alınmıştır. Araştırma kapsamında örneklem kümesi içinde toplam 399 kişiyle görüşülmüş değerlendirmeye alınmıştır. Araştırma verilerinin toplanmasında 10 soru oluşturulmuştur. Elde edilen veriler SPSS istatistik program kullanılarak elektronik ortamda işlenmiştir. Bu veriler ışığında Karaman İli merkez seçmeni ile gerçekleştirilen anket uygulaması sonucunda veriler elde edilmiştir. Araştırmaya katılan vatandaşlara yönelik gerçekleştirilen anket çalışması sonucunda elde edilen verilerin analizinde sırasıyla; katılımcıların demografik özelliklerini belirlemek amacıyla frekans analizi, Ki-kare testi yapılmıştır. Bu çalışmada yapılan geçerlik ve güvenilirlik analizi sonucunda elde edilen Cronbach's Alpha değeri 0,693'dur¹. Alan araştırması kapsamında oluşturulan ölçek dört faktörden oluşmaktadır. Bu faktörler (parti bağlılığı, siyasal bilgilendirme, kamuoyu araştırmalarına güven durumu, siyasi kamuoyu araştırmalarının seçmen duruşuna etkisi) oluşmaktadır. Örneklem yeterliliğini ölçmek amacıyla uygulanan KMO testi sonucu 0,757 olarak hesaplanmıştır.

8. BULGULAR VE YORUM

Bu kısımda, araştırmaya dâhil olan seçmenlerin, sosyo-demografik özelliklerini (yaş, cinsiyet, eğitim durumu). İçeren bilgi ve bulgulara aşağıdaki tablolarda yer verilmektedir.

Tablo 1.Katılımcıların Cinsiyet Dağılımı

Cinsiyet	Sayı	Yüzde
Kadın	191	47,9
Erkek	208	52,1
Toplam	399	100,0

Katılımcıların cinsiyet dağılımına bakıldığında; %52,1'i erkek, %47,9'u kadın katılımcılardan oluşmaktadır.

Tablo 2. Katılımcıların Yaş Dağılımı

Yaş	Sayı	Yüzde
18-25	49	12,3
26-33	48	12,0
34-41	114	28,6
42-49	82	20,6
50-57	74	18,5
58 ve üstü	32	8,0
Toplam	399	100,0

¹Chronbach Alpha testine göre, güvenilirlik katsayısı 0,60-0,80 değerleri arasında ise ölçeğin oldukça güvenilir olduğu sonucu ortaya konulmaktadır (Özdamar, 1999: 520-522)

Katılımcıların yaş dağılımı incelendiğinde, %28,6'sı 34-41, %20,6'sı 42-49; %18,5'i 50-57; %12,3 18-25 yaş, %12,0'si 26-33 yaş ve %8,0'i 58 ve üstü yaş aralığındadır.

Tablo 3. Katılımcıların Eğitim Dağılımı

Eğitim	Sayı	Yüzde
İlköğretim	15	3,8
Lise	56	14,0
Lisans	202	50,6
Lisans üstü	82	20,6
Doktora	44	11,0
Toplam	399	100,0

Katılımcıların eğitim düzey dağılımı incelendiğinde, %50,6'sı lisans, %20,6'sı lisansüstü, %14,0'ü lise, %11,0'i doktora ve %3,8'i ilköğretim düzeyindedir.

Tablo 4. Katılımcıların Seçim Dönemlerinde Yapılan Siyasi Kamuoyu Araştırmalarını Takip Dağılımı

Seçim dönemlerinde yapılan siyasi kamuoyu araştırma sonuçlarını takip eder misiniz?

	Sayı	Yüzde
Evet	226	56,6
Hayır	59	14,8
Bazen	114	28,6
Toplam	399	100,0

Katılımcıların siyasi kamuoyu araştırmaları sonuçlarını takip etmelerine baktığımızda %56,6'sı takip ettiği, %14,8'nin takip etmediğini ve %28,6' ı farklı ilgi düzeyde aralıklı olarak takip ettiklerini söylemek mümkündür.

Tablo 5. Katılımcıların Siyasi Kamuoyu Araştırmaları Sonuçları Siyasal Karar Süreçlerine Etkisini Yönelik Dağılımı

	Sayı	Yüzde
Evet	38	9,5
Hayır	306	76,7
Bazen	55	13,8
Toplam	399	100,0

Katılımcıların siyasi kamuoyu araştırma sonuçlarının siyasal karar sürecinde etkili olup olmadığına bakıldığında %9,5'nin etkilendiğini, %76,7'si etkilenmediğini ve %13,8'i farklı düzeylerde etkilendiğini söylemek mümkündür. Bu bağlamda siyasi kamuoyu araştırma sonuçları parti bağlılığı yüksek olan seçmenlerde etkisiz olduğunu söylemek mümkündür.

Tablo 6. Katılımcıların Siyasi Kamuoyu Araştırmalarından Elde Edilen Sonuçlar Güvenilirliğine Yönelik Görüşlerin Dağılımı

	Sayı	Yüzde
Evet	25	6,3
Hayır	194	48,6
Bazen	180	45,1
Toplam	399	100,0

Katılımcıların siyasi kamuoyu araştırmalarından elde edilen siyasal sonuçlara güven duymalarına bakıldığında, % 6,3'ü güvendiğini, % 48,6'sı güvenmediği ve % 45,1'i ise bazen cevabıyla güven durumunda farklılık oluşturmaktadır. Bu bağlamda siyasi kamuoyu araştırmalarının ortaya koyduğu sonuçlara güvenmediği görülmektedir.

Tablo 7. Katılımcıların Siyasi Kamuoyu Araştırmalarının Seçmenlerin Siyasal Tercihlerini Yönlendirilmelerine Yönelik Dağılımı

	Sayı	Yüzde
Evet	107	26,8
Hayır	118	29,6
Bazen	174	43,6
Toplam	399	100,0

Katılımcılar siyasi kamuoyu araştırmalarının siyasal tercihleri yönlendirmelerine bakıldığında, %26,8'i yönlendirdiğini ifade ederken, %29,6'sı etkilenmediğini ve %43,6'sı bazen cevabıyla değişken bir düşünce sergilediğini söylemek mümkündür. Bu bağlamda kararsız seçmen davranışı sergilediğini söylemek mümkündür.

Tablo 8. Katılımcıların Siyasi Kamuoyu Araştırmalarının Seçmenlerin Mensubu Olduğunuz Partiye Karşı Tutumuna Yönelik Değişim Dağılımı

	Sayı	Yüzde
Partimden uzaklaşırım	29	7,3
Partime daha fazla yakınlaşırım	40	10,0
Partimin kaybetmesi beni pasif seçmen yapar	36	9,0
Partimin kazanması için aktif desteklerim	120	30,1
Kazanma ihtimali olan partiyi desteklerim	18	4,5
Partimden asla vazgeçmem	156	39,1
Toplam	399	100,0

Katılımcıların siyasi kamuoyu araştırmaları seçmenlerin mensubu olduğunuz partiye karşı tutumunda oluşabilecek değişime baktığımızda, seçmenlerin %39,1'nin partisinden asla vazgeçmeyeceği ifade ederken, % 30,1'i partisinin kazanması için aktif destekleyeceğini, % 10,0'u partisine yakınlığını artıracaklarını, % 9,0' u partisinin kaybetmesi karşısında pasifleşeceği görüşünde, %7,3'ü partisinden uzaklaşacağını ifade ederken, %4,5'i kazanma ihtimali olan partiye yönelerek oyunu bu yönde kullanacağını ifade etmektedirler. Bu bağlamda seçmenlerin büyük bir kısmı parti bağlılığı yüksek karalı seçmenler olduğu için partisinden vazgeçmemektedir.

Tablo 9. Yapılan Siyasi Kamuoyu Araştırmalarına Bu Seçim Sürecinde Katılmalarına Yönelik Dağılımları

	Sayı	Yüzde
Evet	79	19,8
Hayır	320	80,2
Toplam	399	100,0

Katılımcılar siyasi kamuoyu araştırmalarına seçim süreçlerinde ankete katılıp katılmadığına bakıldığında % 19,8'nin ankete katıldığı, % 80,2' nin katılmadığını söylemek mümkündür.

Tablo 10. 14 Mayıs 2023'te Yapılacak Seçimlerde Oy Kullanmalarına Yönelik Dağılımları

	Sayı	Yüzde
Evet	383	96,0
Hayır	16	4,0
Toplam	399	100,0

Katılımcıların 14 Mayıs 2023 seçimlerinde oy kullanmaları ile ilgili görüşlerine baktığımızda % 96,0' sı oy kullanacağını, %4,0'ü oy kullanmayacağını ifade etmişlerdir.

Tablo 11. Katılımcıların Yaş Durumları Ve Siyasi Kamuoyu Araştırmaları Mensubu Olduğunuz Partiye Karşı Tutumlarına Yönelik Algılarının Karşılaştırılması

							Toplam

Notlar= (i) n=399, (ii) Pearson $\chi^2=68,599^a$; $p<.003$, sonuçlar istatistiksel bakımdan anlamlıdır

Tablo 13 incelendiğinde araştırmaya katılan seçmenlerin Siyasi Kamuoyu araştırmalarından elde edilen sonuçlar sizce güvenilir midir? “nedir sorusu ile “eğitim değişkeni” arasında istatistikî olarak anlamlı bir ilişki olduğu dikkati çekmektedir ($p=0.003$). ilköğretim eğitilmişlerin %46,7’si güvendiğini, lise eğitilmişlerin %60,7’si güvenmemekte, doktora eğitilmişlerin %68,2’si farklı düzeylerde güvendiklerini söyleyebiliriz.

9. SONUÇ

Demokratikleşmenin giderek arttığı ve bu konuda önemli adımların atıldığı günümüz siyaset dünyasında kamuoyu kavramı siyasal kişi ve örgütler, ekonomik ve sosyal örgütler açısından vazgeçilmez bir öge haline gelmiştir. Bunun temel nedeni ise, yönetim kavramıyla birebir ilişkili olmasıdır. Demokratik toplumlarda özellikle seçimle iktidar olunması kamuoyunun önemini artırmaktadır. Çünkü seçilerek iktidar olmanın yolu iktidar adaylarının kendi lehlerine bir kamuoyu oluşturmasından geçmektedir. Kamuoyunda var olan eğilimler seçim günü sandığa doğrudan yansımaktadır. Kimin seçileceğini, hangi politika ve propagandanın etkili olduğunu kamuoyunun kararı belirlemektedir. Bu durum siyasal katılım kavramını öne çıkarmaktadır. Seçimlerin gerçekleşmesi ve iktidarın belirlenmesi için siyasal katılım sağlanmalıdır. Bu da en basit düzeyde oy verme yoluyla sağlanır. Kamuoyunu etkileme çabasının temeli de işte bu siyasal katılımı sağlama ve seçmen tercihini yönlendirme amaçlıdır. Çünkü kamuoyunun aday ya parti lehine olması yetmez bu taraftarlığın siyasal davranış olarak oy verme şeklinde de yansıtılması gereklidir. Siyasal parti ve adaylar ancak bu şekilde amaçlarına ulaşırlar. Oy verme davranışını etkileyen birçok unsur vardır. Kamuoyu araştırmaları da son zamanlarda bu unsurlar arasında önemle yerini almıştır. Peki kamuoyu araştırmaları oy verme davranışını yönlendirmede, dolayısıyla siyasal davranış üzerinde ne kadar etkilidir? Siyasal davranış araştırmaları oy verme üzerinde etkili olan faktörleri araştırırken bu soru üzerinde de durmaktadır. Bu araştırmaların Türkiye’deki örneklerine bakıldığında kamuoyu araştırmaları sonuçlarının siyasal tercihleri üzerinde etkili olmadığını göstermesine rağmen siyasal tercihlerini belirlerken bu araştırmalardan etkilendiklerini söyleyenlerin de bulunduğu görülmektedir (Kalender, 2005; Eke, 2008; Kaban,1995).

Bu çalışmanın verilerine bakıldığında;

- * kamuoyu araştırmalarının halkın büyük bir kesimi tarafından takip edildiğini,
- * siyasal karar süreçlerine siyasal kamuoyu araştırma sonuçlarının etkisiz olduğunu söylemek mümkündür.
- * Seçmenlerin Siyasal kamuoyu araştırmalarının ortaya koyduğu sonuçlara güvenmediği görülmektedir. Ancak bazı seçmenlerin yapılan siyasal kamuoyu araştırmalarına aralıklı olsa da güvendiğini de görülmektedir.
- *Siyasal Kamuoyu Araştırmalarının Seçmenlerin Siyasal Tercihlerini Yönlendirilmelerine bakıldığında kararsız seçmen davranışı sergilediğini ve bu yönlendirmelerden etkilendiğini söylemek mümkündür.
- * Katılımcıların Siyasal Kamuoyu Araştırmalarının Seçmenlerin mensubu olduğunuz partiye karşı tutumuna yönelik değişimlerine bakıldığında seçmenlerin büyük çoğunluğu partisinden

vazgeçmeyeceğini ve aktif bir destekleyeceğini ifade ederken parti bağımlılığı yüksek seçmenler olarak görülebilir.

* 14 Mayıs seçimlerine kadar yürütülen kamuoyu araştırmalarının anket çalışmalarına katıl göstermemişlerdir.

* Katılımcıların Yaş Durumları ve siyasi Kamuoyu araştırmalarının mensubu olduğu partiye karşı tutumlarında değişime bakıldığında; 57 ve üstü seçmenlerin partisinden asla vazgeçmediğini ifade ederken bu yaş grubunun kararlı ve parti bağımlılığı yüksek seçmenler olduğunu söylemek mümkündür. 18-25 yaş grubu ilk defa oy kullanan seçmen ve ikinci kez oy kullanan seçmenlerin partisinden uzaklaşabileceğini ifade ederken, bu grup seçmenlerin kararsız parti bağının zayıf seçmen olduğunu söylemek mümkündür.

* Katılımcıların Yaş Durumları Ve Siyasi Kamuoyu Araştırmalarının Seçmenlerin Siyasal Tercihlerini Yönlendirme durumu 18-25 yaş seçmenlerin %46,9'u siyasal tercihlerini yönlendirdiği kanaatinde, 50-57 yaş grubu siyasal tercihlerini etkilemediğini ifade ederken, 58 ve üstü yaş grubu seçmenlerin siyasal tercihlerini farklı düzeylerde etkilediğini görüşündedirler.

* Katılımcıların Yaş Durumları Ve Siyasi Kamuoyu Araştırmalardan elde edilen sonuçların güvenilir olmasına bakıldığında 58 ve üstü yaş grubu % 68,8'i siyasi kamuoyu araştırmalardan elde edilen sonuçlara farklı düzeylerde güvendiklerini söylemek mümkündür.

* Katılımcıların Eğitim Durumları Ve Siyasi Kamuoyu Araştırmalardan elde edilen sonuçların güvenilir olmasına bakıldığında ilköğretim eğitilmişlerin %46,7'si güvendiğini, lise eğitilmişlerin %60,7'si güvenmemekte, doktora eğitilmişlerin %68,2'si farklı düzeylerde güvendiklerini söyleyebiliriz.

Bu bağlamda bireylerin seçime katılmak için istekli olduğu ve siyasal katılımın önemini kabul ettikleri de görülmektedir. Bu çalışmanın verilerine bakıldığında siyasi kamuoyu araştırmalarının halkın büyük bir kesimi tarafından takip edildiğini ancak siyasal tercihler üzerinde etki etmediği görülmektedir. Siyasi kamuoyu araştırmalarına duyulan güvene ilişkin veriler incelendiğinde ise bireylerin büyük çoğunluğu bu araştırmaların önemli olduğunu düşünmekte fakat bu araştırmaların güvenilir olduğu düşüncesine katılmamaktadırlar. Siyasi kamuoyu araştırmaları bireylerin oy verme davranışlarını 18-25 yaş gruplarında siyasal davranış üzerinde etkili olduğu kabul edilmektedir. Ancak 42-49 yaş grubunun % 7,3'ü güvenilir olduğunu, 26-33 yaş grubu güven duymamakta ve 58 ve üstü yaş grubu % 68,8'i siyasi kamuoyu araştırmalardan elde edilen sonuçlara farklı düzeylerde güvendiklerini söylemek mümkündür. Bu bulgudan hareketle Türk seçmenin daha çok kendi ideolojisi çerçevesinde oy verme davranışında bulunduğu ileri sürülebilir. Sonuç olarak. Kamuoyu şirketleri ve kitle iletişim araçlarının güvenilirliği artırıldığında bireyin kamuoyu araştırmalarından etkilendiğini kabul edeceği öngörülmektedir. Bu çalışma sınırlılıkları içinde bir model oluşturmakta ve kamuoyu araştırmacıları ve siyasiler açısından yol gösterici olma niteliğinde olduğu söylenebilir.

Hedonik Tüketim Davranışının Hediye Alma Davranışına Etkisi

Asst. Prof. Dr. Cüneyd İkbâl Sarıoğlu

Kocaeli Üniversitesi

Hereke Ömer İsmet Uzunyol Meslek Yüksekokulu,

cuneyd.sarioglu@kocaeli.edu.tr

ORCID: 0000-0002-1610-8775

ÖZET

Hedonik tüketim, alışveriş deneyiminin tüketicilere verdiği haz ve zevki ön plana çıkarması yönüyle faydacı tüketimden ayrılmaktadır. Tüketicileri hedonik tüketime yönlendiren faktörlerin anlaşılması ile hediye alma davranışına ilişkin bazı ilişkiler de merak edilmektedir. Hediye alma davranışı bir tüketici davranışı olarak ele alındığında, tüketicilerin farklı alışveriş deneyimlerini ifade etmektedir. Bu çalışmada, hedonik tüketimin alt boyutlarının, tüketicilerin hediye alma davranışını nasıl etkilediği üzerinde durulmaktadır. Anket çalışmasıyla elde edilen verilerin analiz edilmesi sonucunda, 4 hipotez kabul edilmiş, 2 hipotez ise reddedilmiştir. Buna göre hedonik tüketimin alt boyutlarından sosyal amaçlı alışverişin, indirimleri kaçırmamak amaçlı alışverişin, fikir amaçlı alışverişin ve başkalarını mutlu etmek adına yapılan alışverişin hediye alma davranışı üzerinde pozitif etkisi olduğu ortaya çıkmıştır. Macera amaçlı alışveriş ve rahatlamak için alışverişin hediye alma davranışı üzerinde anlamlı bir etkisi olmadığı tespit edilmiştir.

The Effect of Hedonic Consumption Behaviour on Gift-Purchasing Behaviour

ABSTRACT

Hedonic consumption differs from utilitarian consumption in that it brings the pleasure and pleasure that the shopping experience gives consumers to the foreground Jun. Along with understanding the factors that lead consumers to hedonic consumption, some relationships related to gift-buying behaviour are also curious. When gift-buying behaviour is considered consumer behaviour, it refers to the different shopping experiences of consumers. This study is focused on how the sub-dimensions of hedonic consumption affect the gift-buying behaviour of consumers. As a result of analyzing the data obtained by the survey study, 4 hypotheses were accepted, and 2 hypotheses were rejected. According to this, it has been found that shopping for social purposes, shopping for not missing discounts, shopping for ideas, and shopping to make others happy from the sub-dimensions of hedonic consumption have a positive effect on gift-buying behaviour. It has been found that shopping for adventure purposes and shopping for relaxation does not have a significant effect on gift-receiving behaviour.

Keywords: Hedonic Consumption Behaviour, Gift-Purchasing Behaviour, Self-Gifting Shopping.

GİRİŞ

Pazarlama alanında ortaya çıkan yeni gelişmeler sonucu, tüketicilerin beklentileri, özellikleri ve satın alma davranışları değişmektedir. Bu değişim alanları arasında, tüketim sürecinde önceden faydacı eğilimler ön plandayken bugün daha çok hedonik (hazcı) değerler ve tüketim kalıpları dikkat çekmektedir (Longoni & Cian, 2022). Geleneksel anlayıştan farklı olarak, yeni dönemde tüketicilerin satın alma motivasyonunu sadece ihtiyaçlar değil kişisel zevk ve haz temelli düşünceler sağlamaktadır (Fettahlıoğlu vd., 2014). Toplumsal ve ekonomik gelişmelere paralel olarak kültürel değerler de değişmektedir.

Tüketici davranışlarında etkili olan iki ana faktörden birisi olan hedonik tüketim daha çok duygusal kaynaklı iken, faydacı tüketim daha rasyonel temellere oturmaktadır (Çakmak & Çubukçu, 2020). Tüketiciler sadece ihtiyaç duydukları ya da fayda bekledikleri ürünleri değil aynı zamanda kendilerini mutlu eden ürünleri satın almaktadırlar ve bu tüketim anlayışı, hedonik (hazcı) tüketim olarak adlandırılmaktadır. Hedonik tüketimde çoklu duygular (imgeler, sesler, tatlar, görsel imajlar) söz konusudur (Sarıtaş & Haşiloğlu, 2015). Hedonik alışveriş deneyimleri, sembolik ve öznel (Babin vd., 1994). Tercih, beklenti, öncelik ve değerleri farklılaşan tüketiciler, zevklerini ve estetik duygularını da tatmin etmek istemektedirler (Lissitsa & Kol, 2021).

Hediye verme davranışı, toplumda sosyal ve kültürel öneme sahiptir. Böylece, tüketiciler hem kendilerine hem de aile ve arkadaşlarına her zaman ve özellikle özel günlerde hediye vererek kendilerini iyi hissetmek isterler (Mortimer vd., 2015). Hediye alan tüketicilerin duyduğu haz ve hissettiği mutluluk, hedonik tüketimle ilişkilendirilse de buradaki haz sadece bireysel değil başkalarının mutluluğundan dolayı hissedilen bir duygudur (Birdir & Birdir, 2020). Önceden toplumsal ve kültürel bir süreç olan hediye alma davranışı, zamanla bir tüketim aracına dönüşmüştür. Tüketicilerin sadece kendilerini iyi hissetmek ve bazen kötü hissetmekten kurtulmak ve pişmanlık duyguları sonucunda başvurdukları hediye alma davranışı, ciddi bir tüketim ekonomisi oluşturmuş durumdadır (Yıldırım & Pirende, 2019).

Bu çalışmada, son yıllarda genel tüketimdeki oranı artan hedonik tüketimi oluşturan alt boyutların, hediye alma davranışı üzerindeki etkisi araştırılmaktadır. Bu bağlamda, hedonik tüketimin farklı gerekçeleri açıklanacak, daha sonra hediye alma davranışı, tüketici davranışları açısından ele alınacak ve literatürdeki bu alanda yapılan çalışmalar gözden geçirilecektir. Daha sonra, oluşturulan araştırma modeline uygun şekilde ortaya konulan hipotezler test edilecektir.

1. KAVRAMSAL ÇERÇEVE

Tüketiciler hem ihtiyaçlarını karşılamak için hem de zevk almak ve mutlu olmak için alışveriş yaparlar (Cheng vd., 2020). İnsan ihtiyaçları her zaman olsa da ihtiyaçlar ve sahip olduğunda mutlu olunan ürünlerin listesi giderek artmaktadır. Faydacı tüketime yönelen tüketicilerin rasyonel davranacağı varsayılır (Deniz ve Erciş, 2010). Bunun sebebi, faydacı tüketim eğiliminin temelde ihtiyaçları karşılamak için yapılan zorunlu bir alışveriş olmasıdır (Tanrısevdi & Baran, 2017). Faydacı tüketim eğiliminde satın alınan ürünlerin temel fonksiyonları ön plana çıkarılır ve süreci yöneten tüketicilerin fonksiyonel ihtiyaçlarıdır (Yang vd., 2022). Bu anlamda, tüketim davranışından beklenti anlamında faydacı tüketimin hedonik tüketimden tamamen farklı olduğu söylenebilir. Bununla birlikte, faydacı tüketim ve hedonik tüketimin birbirini tamamlayan iki alan olduğu ve gerçek hayatta tüketicilerin her iki alışveriş türünü tercih ettiği bilinmektedir. Bu çalışmada özellikle hedonik tüketim eğilimi boyutları ele alınacağı için faydacı tüketim üzerinde kısaca durmak yeterli olacaktır.

Tüketim eğilimleri arasında yer alan faydacı tüketimin fonksiyonel ve ihtiyaçları karşılama misyonuna karşılık, hedonik tüketim daha çok duygusal yönelimlidir (Ramírez-Correa vd., 2019). Hedonik tüketim sürecinde tüketiciler, zaruri olmayan ve kendilerini mutlu edecek

ürünleri satın almaya çalışırlar (Baştürk vd., 2014). Hedonik tüketim sürecinde yer alan farklı motivasyon kaynakları, farklı sonuçlara yol açmaktadır. Bu bağlamda satın alma davranışının hedonik tüketim ve alt boyutlarıyla ilişkili olarak analiz edilmesi önem arz etmektedir. Hediye alma davranışı, sadece işlemsel değil kültürel bir süreçtir ve hediye verme ve alma davranışları, sosyal mübadele amaçlı tüketici davranışları olarak ele alınmalıdır (Yang & Paladino, 2015).

1.1. Hedonik Tüketim Davranışı

Temelde tüketici davranışları, iki eğilim açısından ele alınmaktadır; faydacı tüketim ve hedonik tüketim eğilimleri (Babin vd., 1994; Kim & Hwang, 2012). Alışveriş süreçlerinde, tüketicilerin ulaşmayı beledikleri faydanın niteliği, satın alma davranışlarını tanımlamaktadır. Faydacı tüketimde ihtiyaçların karşılanması esastır (Ramírez-Correa vd., 2019). Hedonik tüketimde ise duygulardan çok duygular ön plandadır (Coşkun & Marangoz, 2019). Hedonik tüketim, tüketicilerin zevke ve hazzı kendilerini vermeleri ve bu önceliklerle alışveriş yapmaları olarak tanımlanabilir (Sarıtaş ve Haşiloğlu, 2015; Akbaba & Dal, 2019). Tüketici davranışlarında hem faydacı hem de hedonik tüketim eğilimlerinin bir karışımı söz konusudur (Choi, 2017).

Hedonik tüketim eğiliminde olan tüketiciler için zevk, eğlence ve estetik kaygılar ön plandadır ve tüketiciler, kendilerine göre özel bir ihtiyaç tanımlı yapmaktadırlar (Akgül & Varinli, 2017). Tüketicilerin faydacı ya da hedonik tüketim kararı vermelerinde kişilik özellikleri, sosyo-ekonomik faktörler ve kültürel faktörler rol oynamaktadır (Solunoğlu & İkiz Nalçacı, 2020). Hedonik tüketim sürecinde, tüketim denildiğinde kişinin kendisini iyi hissetmesi için olması gereken ürünler öncelikli olarak düşünülmektedir (Çavuşoğlu vd., 2021). Hedonik tüketimde, tüketiciler hem alışveriş hem de ürün kullanma sürecinde zevk almayı ve haz duymayı önemserler.

Hedonik tüketimin temelinde olan bireysel tatmin beklentileri, tüketimden beklenen faydaların gerçekleşmesiyle birlikte tüketimi beslemektedir. Hedonik tüketimde beklenen zevk, haz ve eğlence gibi duygular hem alışveriş sürecinde hem de ürünü kullanma sürecinde hissedilmektedir (Koroğlu ve Yıldız, 2019). Hedonik tüketimin görünmeyen yüzünde bireyin kendisini ödüllendirme isteği de yer almaktadır (Botti & McGill, 2011). Hedonik tüketimin tüketiciler üzerinde olumsuz bazı etkileri de söz konusu olabilir. Bunlardan en çok bilineni, tüketicilerin israf ettikleri düşüncesi sonucunda pişmanlık ve suçluluk duygusudur (Liu & Chou, 2022). Hedonik eğilimlerin satın alma davranışını etkilediği konusunda çok sayıda araştırma mevcuttur (Hirschman & Holbrook, 1982; Wang vd., 2000; Clarke & Mortimer, 2013; Akgül & Varinli, 2017; Açıkalin & Yaşar, 2017; Dang & Nielsen, 2018; Türk, 2018; Solunoğlu & İkiz Nalçacı, 2020; Yıldız, 2020).

Tüketicilerin hedonik tüketime yönelmesinde etkili olan faktörler arasında bireylerin kendini iyi hissetmesi, problemlerini unutmak istemesi, sevinçlerini kutlamak istemesi, kendini mutlu etmesi yanında başkalarını mutlu etme isteği de önemli rol oynamaktadır (Arnold ve Reynolds, 2003). Bu faktörler, Babin vd. (1994) ve daha sonra çok bilinen haliyle Arnold & Reynolds (2003) tarafından sınıflandırılmıştır. Bu faktörleri dikkate alarak yapılan çok sayıda çalışma sonucunda, hedonik tüketimi ortaya çıkararak motivasyon unsurları tartışılmaya başlanmıştır (Doğrul, 2012; Yıldız, 2020).

Arnold ve Reynolds (2003), hedonik tüketimin farklı motivasyon unsurlarından bahsetmektedir. Daha sonra farklı yazarlar tarafından geliştirilen bu türler, bizim çalışmamızda da 6 tür olarak alınmıştır: Maceracı alışveriş, sosyal amaçlı alışveriş, indirimleri kaçırmamak amaçlı alışveriş, fikir edinmek amaçlı alışveriş, başkalarını mutlu etmek için yapılan alışveriş ve rahatlamak için alışveriş. Hedonik tüketimin ortaya çıkmasını sağlayan farklı türleri aşağıda kısaca açıklanmıştır;

Maceracı alışveriş: Hedonik tüketimin ilk türü olan maceracı alışverişte, tüketiciler merak ettikleri ve deneyimlemek istedikleri ürünlere yönelmektedirler. Burada bilinmezliğin gizemini

ve heyecan yaşamak için alışveriş yapılmaktadır (Yurtsızoğlu, 2020). Bu tür alışverişlerle tüketiciler, kendilerini farklı görüntü, ses, kokuların olduğu bir dünyada hissetmek isterler (Fettahlıoğlu vd., 2014; Karaosmanoğlu & Taş, 2018; Solunoğlu & İkiz Nalçacı, 2020). Burada alışveriş süreci başlı başına bir motivasyon kaynağıdır ve tüketici, bir anlamda farklı bir dünyada kendini kaybetmekte ve böylece haz duymaktadır (Ünal & Ceylan, 2008; Çakmak & Çubukçu, 2020; Avcı, 2022).

Sosyal amaçlı alışveriş: Bu tüketim alt türünde, sosyalleşmek, aile ve arkadaşlarla birlikte alışveriş deneyimi ve zevkini yaşamak hedeflenmektedir. Burada sosyal ilişkiler geliştirilerek sosyal fayda elde edilmiş olur (Arnold ve Reynolds, 2003). Alışveriş sürecinde sosyal ilişkiler kurularak zevk alma ve etkileşim gibi yönleri olan bu alışveriş türü, genelde alışveriş merkezleri gibi mekânlarda gerçekleşir (Ünal & Ceylan, 2008). Burada alışveriş davranışı sadece satın almayla sonuçlanan bir pazarlama süreci olmaktan çıkmakta, sosyalleşme ve birlikte zaman geçirme aracına dönüşmektedir (Fettahlıoğlu vd., 2014; Çakmak & Çubukçu, 2020).

Rahatlamak için alışveriş: Hedonik tüketimde faydacılık dışında etkili olan faktörlerin birisi de stresten uzaklaşmak, moral kazanmak ve rahatlamak için alışveriş yapılmasıdır (Babin, vd., 1994). Burada alışveriş süreci, tüketicilerin sorunlarını unutmak için başvurdukları bir tür tedavi gibi algılanmaktadır (Solun & İkiz Nalçacı, 2020). Bu alışveriş türü giderek daha fazla yaygınlaşmaktadır ve tüketiciler, alışverişini bir kaçış ve dinlenme fırsatı olarak görmektedirler (Çakmak & Çubukçu, 2020).

Fikir edinmek amaçlı alışveriş: Tüketiciler yeni ortaya çıkan ürünleri merak ederek ve bilgi edinmek amacıyla da alışverişe çıkabilirler (Solun & İkiz Nalçacı, 2020). Burada daha çok ön plana çıkan husus, alışveriş sürecinin yeni trendleri ve yenilikleri görmek için yapılan bir boş vakit geçirme faaliyeti olmasıdır (Ünal & Ceylan, 2008). Bu tür alışveriş genelde modayla ilişkilendirilmektedir ve buna göre, tüketiciler ortaya çıkan son moda örneklerini ve trendleri takip etmek amacıyla da alışveriş yapmaktadırlar (Çakmak & Çubukçu, 2020).

İndirimleri kaçırmamak amaçlı alışveriş: Değer alışverişini de denilen bu alışveriş türünde indirimleri kaçırmamak için sürekli arayış içinde olmak söz konusudur. Tüketiciler genelde alışverişe kazanılması gereken bir oyun ve mücadele olarak bakmaktadırlar (Solun & İkiz Nalçacı, 2020). Sürekli ucuzlukları takip etmek ve indirim fırsatlarını değerlendirmek, bu alışveriş türünde ön plana çıkmaktadır (Köroğlu & Yıldız, 2019). Tüketiciler, indirimleri takip etmek, indirimli alışveriş yapmak ve bunları çevresiyle paylaşmaktan zevk duymaktadırlar (Ünal & Ceylan, 2008). Böylece akıllı tüketici olarak görülmek de bu alışverişte etkili olmaktadır (Özgül, 2011).

Başkalarını mutlu etmek için yapılan alışveriş: Tüketiciler sadece kendilerini değil başkalarını ve özellikle sevdiklerini mutlu etmek için de alışveriş yaparlar. Burada başkasının mutlu olmasından duyulan haz ön plana çıkmaktadır (Özgül, 2011). Tüketiciler arasında özellikle kadınlar, alışverişini başkalarını mutlu etmenin bir yolu olarak görmektedirler (Ünal & Ceylan, 2008). Tüketiciler, kendileri için özel öneme sahip sevdiklerine hediyeler olarak, kendilerini daha iyi hissetmektedirler (Yemez vd., 2018b; Solun & İkiz Nalçacı, 2020). Hedonik tüketimin alt boyutlarından olan bu alışveriş türü, hediye alma davranışıyla etkileşim alanını oluşturmaktadır.

Hedonik tüketim eğilim ve davranışları üzerine çok sayıda çalışma yapılmıştır (Çakır & Çakmak, 2012; Fettahlıoğlu vd., 2014; Birdir & Birdir, 2020; Yurtsızoğlu, 2020). Z kuşağının daha çok hedonik tüketimi eğilimine sahip olduğu birçok çalışmada ortaya konulmuştur (Can & Yiğit, 2018; Gümüş, 2019; Kitiroğlu & Yıldız, 2022).

1.2. Hediye Alma Davranışı

Sosyal hayatta hediye alma davranışı önemli bir yer tutmaktadır. Hediye alma davranışını farklı açılardan ele alan bir alan da pazarlama alanındaki tüketici davranışlarıdır. Buna göre, hediye

alma davranışı tüketiciler arasında önemli bir değişim ve iletişim aracıdır (Babin vd., 2007). Sosyal ve kültürel bir davranış olan hediye alma davranışı, bireylerin birbiriyle kaynaşmasını sağlamaktadır (Yang & Paladino, 2015; de Andrade & Barros, 2019). Günümüzde büyük bir sektör haline gelen satın alma davranışında hediye alma, hediye arama ve hediye sunumu gibi önemli aşamalar bulunmaktadır (Eggert vd., 2019). Hediye verilen kişi de karşılıklı olarak hediye alma davranışını sürdürmekte ve böylece karşılıklı etkileşim devam etmektedir.

Hediyeleşme sürecinde hem duygusal hem de kültürel faktörler rol oynamaktadır (Öztürk & Temizkan, 2018; Şeker, 2019). Hediye alma davranışının altında yatan sebepler de önemlidir. Her iki tarafın da mutlu olduğu bu süreçte, hediye veren kişinin görünen ya da görünmeyen bazı amaçları söz konusu olabilir (Demirağ & Çavuşoğlu, 2020). Hediye alma davranışının genelde pozitif etkileri üzerinde durulmaktadır (Polman & Lu, 2022). Satın almayı kolaylaştıran faktörler yanında, hediye alan kişinin mevcut moral durumu da hediye satın alma davranışını etkilemektedir (Kelemci vd., 2019).

Hediye alma davranışı sadece başkalarına hediye alma şeklinde ortaya çıkmaz, tüketiciler kendilerine de hediye alabilirler (Demirağ & Çavuşoğlu, 2020; Bozacı, 2021; Aydan & Şahin, 2021). Kendine hediye alma davranışında, bu davranışın sebeplerinin analiz edilmesi gerekir. Hediye alma davranışında iletişim, değişim ve özel hissetme/hissettirme boyutları yer almaktadır (Gupta vd., 2020). Hediye alma sürecinde, hediye alınan kişi ya da gruplarla olan duygusal bağ önemlidir (Akgül & Varinli, 2017). Bu süreçte öncelikle hediye verenin aldığı hediyeye yüklediği sembolik anlam, hediye sunum aşaması ve ritüeller ile hediye verilen kişinin tepkileri şeklinde üç aşama mevcuttur (Demirağ & Çavuşoğlu, 2020). Kadınlar hediyeleşme sürecinde daha duygusal davranırlar (Kılıçer vd., 2016).

Tüketici davranışları bağlamında hediye alma davranışı incelendiğinde, davranışın kökenleri, sebepleri ve etkileri üzerinde durulmalıdır (Polman & Lu, 2022). Hediye alma davranışının tüketim eğilimleriyle ilişkilendirilmesi gerekmektedir (Birdir & Birdir, 2020). Hedonik tüketim bağlamında ele alınan hediye alma davranışının ortaya çıkış süreci ortaya konulmalıdır.

1.3. Hedonik Tüketim ve Hediye Alma Davranışı İlişkisi

Tüketiciler satın alma karar süreçlerinde motivasyon unsurları, kişilik ve duygularından etkilenecek hareket ederler ve dolayısıyla işletmelerin de bu faktörleri dikkate alarak pazarlama stratejilerini belirlemeleri gerekmektedir. Bu sebeple işletmeler ürünlerini tasarlarırken, bu faktörleri dikkate alarak pazarlama karmaşı oluştururlar (Yıldız, 2020). Tüketiciler farklı motivasyonlarla satın alma sürecine girmektedirler. Bu faktörlerden birisi de tüketicinin kendini ödüllendirmek istemesi ve kendine hediye almasıdır (Soytürk & Fırat, 2023). Bu bağlamda ortaya çıkan hedonik tüketim davranışı sonucunda duygusal, sosyal ve bireysel olarak haz alma söz konusudur ve burada esas olan alışveriş deneyiminden ne kadar memnun kaldığıdır (Babin vd., 2007). Bir tüketicinin neden kendisine hediye aldığını, geleneksel pazarlama prensipleriyle açıklamak zor olabilir. Kendi kendine hediye almak, tüketicinin kendini farklı ve iyi hissetmesine yol açar (Kivetz & Zheng, 2017).

Hedonik etkilerle yapılan alışveriş davranışlarında zaman zaman rasyonellik arka plana atılabilir. Pazarlamacılar tüketicilerin bu zayıf noktasını zaman zaman gösterişi, lüks ya da anlık alışveriş gibi stratejilerle kullanmaya çalışırlar. Tüketim çılgınlığı ve hediyeleşme kültürü oluşturma, bu stratejiler arasında dikkat çeken bir yaklaşımdır (Yemez vd., 2018a). Belli özel zamanlarda yapılan tutundurma ve promosyon kampanyaları sonucu, bu hedefe belli ölçüde ulaşılmaktadır (Akgül & Varinli, 2017). Hedonik tüketimin gelişmesinde hediye alma davranışı ve hediyeleşme kültürü önemli yer tutmaktadır. Hedonik tüketimin arka planında, tüketicilerin belli imaja bürünmek istemesi bulunmaktadır (Ünal, 2009).

Hediye alma davranışında iki taraf arasındaki ilişki ve etkileşime bağlı olarak, hediye veren kişi hediye ile duygularını sembolize eder. Aradaki duygusal bağlar, alınacak hediyeleri etkilemektedir (Öztürk & Temizkan, 2018). Özel günleri kutlama amacıyla hediyeleşme kültürünün bilinçli olarak gündeme getirilmesi ve yaygınlaştırılması sonucu ciddi büyüklükte ortaya çıkan sektör hızla büyümektedir (Aydan & Şahin, 2021). Kendine hediye alma davranışının arkasında yatan faktörlerin ortaya çıkarılması ve hedonik tüketim bağlantısının kurulması önemlidir (Palazon & Delgado-Ballester, 2013). Tüketiciler benzer gerekçelerle hedonik tüketim ve aynı zamanda hediye alma davranışına yönelmektedirler (Mortimer vd., 2015). Kendine hediye alma davranışı ile ilgili çalışmalarda ön plana çıkan faktörler, terapi (sorunların aşılması) ve kutlama amacıyla alışveriş şeklinde ortaya çıkmaktadır (Babin vd., 1994). Hediye alma davranışında sürpriz olma faktörü, bu davranışın hedonik yönlerini ön plana çıkarmakta ve hediye alan ve hediye veren açısından mutluluk kaynağı olmaktadır (Gupta vd., 2020).

Tüketiciler, özel günlerde, farklı beklenti ve nedenlerle birbirlerine çeşitli hediyeler vermektedir (Yoldaş & Dilek, 2020). Hediye alma davranışı sürecinde, bireyler ve gruplar arası ilişkiler kurulur. Burada hediyein değerinden çok, insanlar arasındaki kişisel ilişkileri yansıtmaktadır. Verilen hediyein, hediyeyi verenlerin özelliklerini yansıtır ve aynı zamanda hediye verilen kişinin beklenti ve özelliklerine uygun olması beklenir. Yapılan çalışmalara göre, tüketici kendine aldığı hediyelerde daha çok hedonik değer üzerinde durmaktadır (Babin vd., 2007). Hediye alan tarafın kişilik özellikleri, hediye verenle ilişki düzeyi ve kültürel özelliklere göre hediye alma davranışı şekillenmektedir (Öztürk & Temizkan, 2018; Polman & Lu, 2022).

Hedonik tüketim ve hediye satın alma ilişkisi üzerine yapılan çok sayıda araştırma bulunmaktadır (Babin vd., 2007; Zheng & Kivetz, 2009; Akgün & Varinli, 2017; Türk, 2018; Gümüş, 2019; Zhu & Li, 2019; Şeker, 2019; Demirağ & Çavuşoğlu, 2020; Solunoğlu & İkiz Nalçacı, 2020; Şeker & Cömert, 2020). Hedonik tüketim davranışının hediye satın almada etkili olan faktörlerden birisi olduğu vurgulanmaktadır (Workman & Lee, 2011). Hedonizmin ve hediyeleşmenin içinde olan haz, mutluluk ve duygu yoğunluğu birbirine benzemektedir. Hedonik tüketim eğilimi yüksek olan tüketiciler, kendi kişisel kullanımları için yüksek değer ve lüks ürünleri talep ederken, hediye alma davranışında bu şekilde davranması gerekmemektedir (Şeker & Cömert, 2020). Bunun sebebi, hedonik tüketiciler için lüks ve pahalı ürünlerin hediye olarak satın alınması yeterli tatmin sağlamaması olabilir (Chen ve Kim, 2013). Genel olarak diğer ihtiyaçları satın almada olduğu gibi, hediye satın almada da hedonik tüketim eğilimi faktörlerinin ne kadar etkili olduğu bu çalışmada ampirik olarak test edilmiştir. Bu çerçevede araştırmanın yöntemle ilgili kısmı, oluşturulan araştırma modeli ve hipotezlerin test edilmesi sonucu bulgulara ulaşılmıştır.

2. YÖNTEM

Bu bölümde araştırmanın amacı, ana kütlesi, araştırmanın kısıtları, araştırmanın örnekleme, veri toplama araçları, araştırma etiği gibi hususlar açıklanacaktır. Daha sonra araştırma modeli ve araştırmanın hipotezlerine yer verilecektir.

2.1. Araştırmanın Amacı

Araştırmanın amacı, hedonik tüketim davranışının hediye alma davranışını nasıl etkilediğinin ortaya konulmasıdır.

2.2. Araştırma Yöntemi

Araştırmada veri toplamak için kullanılan anket formunda, demografik sorular yanında hedonik tüketim eğilimlerini ve hediye alma davranışını ölçmek üzere, 2 farklı ölçek yer almaktadır. Araştırmada kullanılan ölçekleri kısaca açıklamak gerekirse;

Hedonik tüketim tutum ölçeği; Babin ve diğerleri (1994) tarafından geliştirilmiş, Arnold ve Reynolds (2003) tarafından da kullanılmıştır. Ölçeğin Türkçeye uyarlaması ise Fettahlıoğlu vd. (2014) tarafından yapılmıştır. Ölçek yakın zamanda Solunoğlu ve İkiz Nalçacı (2020) tarafından da kullanılan geçerli ve güvenilir bir ölçektir. Ölçek 6 boyut ve 20 ifadeden oluşmaktadır.

Hediye alma davranışı: Jonason ve diğerleri (2012) tarafından geliştirilmiş ve daha sonra Yıldırım ve Pirende (2019) tarafından Türkçeye uyarlanmıştır. Ölçek 4 boyut ve 11 maddeden oluşmaktadır. Bu çalışmada hediye alma davranışı boyutlar bazında değil, tek boyutta ele alınmıştır.

2.3. Araştırma Örneklemi ve Araştırmanın Kısıtları

Araştırmaya 1519 kişi katılmış, son 1 yılda hediye almayan 194 kişi araştırmadan çıkartılmış ve analize 1325 kişi ile devam edilmiştir.

Marmara bölgesinde yürütülen bu çalışmanın anket verileri, Aralık 2022 ve Ocak 2023 dönemleri arasında toplanılmıştır. Zaman kısıtı ve teknoloji okuryazarlarının bu çalışmaya katıldığı belirtilmelidir. Genel veri toplama kısıtlarından olan, katılımcıların, ankette yer alan soruları doğru olarak algıladığı ve buna göre cevap verdikleri varsayılmaktadır.

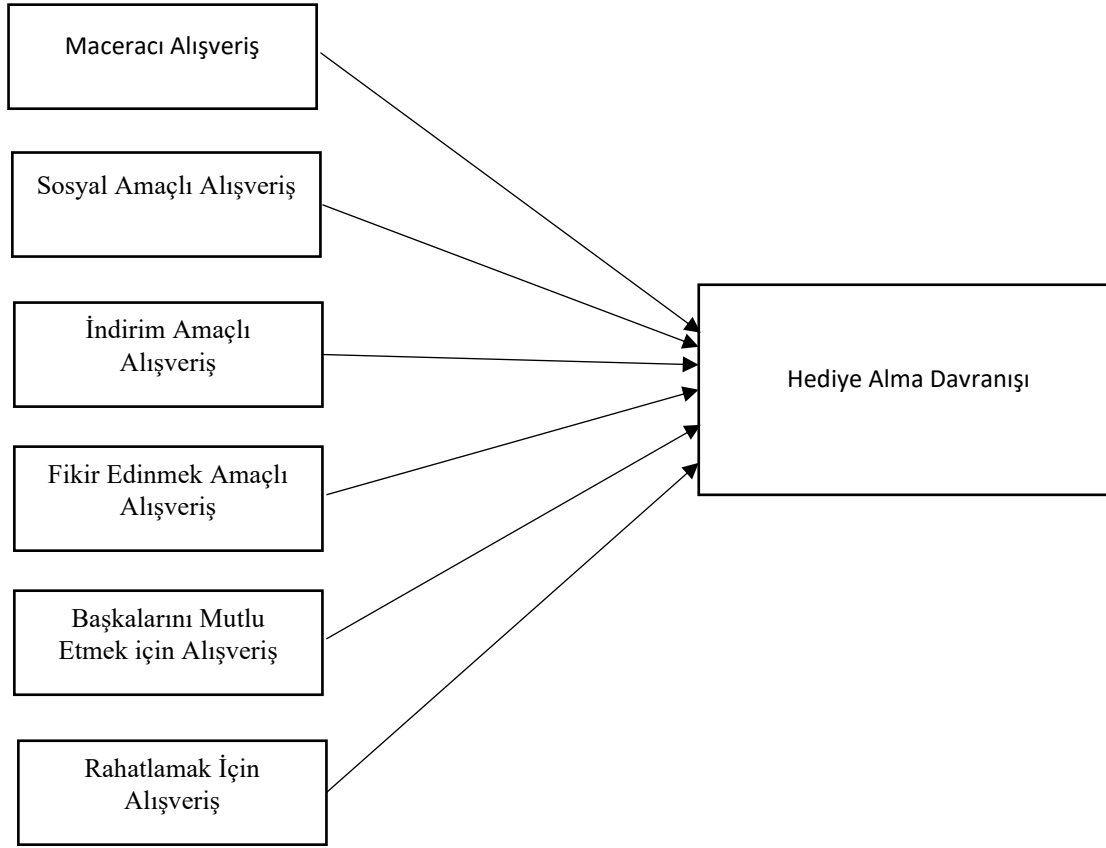

2.4. Araştırma Etiği

Çalışmada, araştırma ve yayın etiği standartlarına uygun şekilde davranılmıştır. Araştırma verilerinin toplanmasında kullanılan anket formu için etik onayı, Kocaeli Üniversitesi Sosyal ve Beşeri Bilimler Etik Kurulu, 27.12.2022 tarihli E-10017888-100-342270 sayılı kararına göre etik kurul izni alınmıştır.

2.5. Araştırma Modeli ve Hipotezler

Araştırma modeli ile hedonik tüketim davranışının hediye alma davranışını pozitif yönde etkileyeceği öngörülmektedir. Araştırmada kullanılan model, aşağıda sunulmuştur:

Şekil 1. Araştırma Modeli

Yapılan literatür taraması süreci sonunda, aşağıdaki hipotezler belirlenmiştir:

H1: Maceracı alışveriş hediye alma davranışını pozitif etkiler.

H2: Sosyal amaçlı alışveriş hediye alma davranışını pozitif etkiler.

H3: İndirimleri kaçırmamak amaçlı alışveriş hediye alma davranışını pozitif etkiler.

H4: Fikir edinmek amaçlı alışveriş hediye alma davranışını pozitif etkiler.

H5: Başkalarını mutlu etmek için yapılan alışveriş hediye alma davranışını pozitif etkiler.

H6: Rahatlamak için alışveriş hediye alma davranışını pozitif etkiler.

2.6. Analiz ve Bulgular

Katılımcıların demografik özellikleri aşağıda Tablo 1’de gösterilmektedir.

Tablo 1: Katılımcıların Demografik Özelliklerine İlişkin Dağılım

		N	%
Cinsiyet	Kadın	811	61,2
	Erkek	514	38,8
Medeni durum	Evli	500	37,7
	Bekâr	780	58,9
	Ayrılmış/Boşanmış	45	3,4
Eğitim durumu	İlköğretim	133	10,0
	Lise	384	29,0
	Önlisans	387	29,2
	Lisans	381	28,0
	Lisansüstü	50	3,8
	18-24	619	46,7

Yaş	25-34	329	24,8
	35-44	211	15,9
	45-54	122	9,2
	55 ve üzeri	44	3,3
Aylık gelir	2500-5000	520	39,2
	5001-7500	273	20,6
	7501-10000	197	14,9
	10001-12500	119	9,0
	12501-15000	102	7,7
	15001 ve üzeri	114	8,6
Çocuk sayısı	Çocuk yok	837	63,2
	1 çocuk	172	13,0
	2 çocuk	188	14,2
	3 çocuk	80	14,2
	4 çocuk	28	2,1
	5 çocuk ve üzeri	20	1,5
Mesleğiniz	Öğrenci	440	33,2
	Çalışmıyorum	201	15,2
	Kamu personeli	117	8,8
	Özel sektör çalışanı	402	30,3
	Kendi işim	127	9,6
	Emekli	38	2,9
Toplam		1325	100

Araştırmaya katılanların %61,2'si kadın, %38,8'i erkek; %58,9'ü bekâr, %37,7'si evli ve %3,4'ü boşanmıştır. Eğitim durumu olarak katılımcıların %29,2'si önlisans, %29'u lise, %28'i lisans, %10'u ilkökul ve %3,8'i lisansüstü eğitim mezunudur. Yaş olarak katılımcıların %46,7'si 18-24 yaş, %24,8'i 25-34 yaş, %15,9'u 35-44 yaş, %9,2'si 45-54 yaş ve %3,3'ü 55 ve üzeri yaş aralığındadır. Katılımcıların %39,2'si 2500-5000 tl, %20,6'sı 5001-7500 tl, %14,9'u 7501-10000 tl, %8,6'sı %15001 ve üzeri, %7,7'si ise 12501-15000 tl aylık ortalama gelire sahiptir. Katılımcıların %63,2'sinin hiç çocuğu yokken %14,2'sinin 2 çocuğu, %14,2'sinin 3 çocuğu, %13'ünün 1 çocuğu, %2,1'inin 4 çocuğu ve %1,5'inin ise 5 ve üzeri sayıda çocuğu vardır. Son olarak katılımcıların %33,2'si öğrenci, %30,3'ü özel sektör çalışanı, %8,8'i kamu sektörünü çalışandır.

Tablo 2: Güvenirlilik Analizi Sonuçları

Ölçek	Cronbach Alfa	İfade Sayısı
Hedonik Tüketim Ölçeği	,938	20
Hediye Alma Ölçeği	,840	11

Ölçeklerin güvenirliliği için cronbach alfa değerine bakılmıştır. Hedonik tüketim davranışı ölçeği için $\alpha=,938$ ve hediye alma davranışı ölçeği için $\alpha=,84$ bulunmuştur.

Tablo 3: Hedonik Tüketim Faktör Analizi

Faktör	Faktör yükü	Açıklanan Varyans	Güvenirlilik kat sayısı
..... alışveriş coşku verici bir olaydır	,820	16,497	,915
..... bana her zaman için ilgi çekici gelmiştir.	,821		
..... başka bir dünyada ve çok güçlü hissederim	,738		
Alışverişte zaman geçirmek haz vericidir	,731		
..... tanıdıklarla alışverişe çıkmak yeni paylaşımlar yaşamaktır.	,675	13,649	,854

..... tanıdıklarla alışverişe çıkmak onlarla eğlenceli vakit geçirmek için bir fırsattır	,749		
.....ailemle ya da arkadaşlarımla etkileşimde bulunmak, sosyalleşmek için giderim	,747		
..... diğer insanlarla etkileşime girmekten zevk alırım.	,657		
.....indirim zamanlarının avantajlarından faydalanmak için giderim	,777	14,289	,853
..... indirimli ürünleri arayıp bulmak hoşuma gider.	,756		
Alışverişe çoğunlukla indirim zamanlarında çıkarım.	,846		
..... çıktığımda indirimdeki ürünleri başkalarından önce yakalayıp bulmaktan çok zevk alırım	,664		
..... piyasadaki en son ürünleri görmek için çıkarım.	,756	11,462	,783
..... son modayı takip etmek için çıkarım.	,807		
..... markalı ürünleri almak beni mutlu eder.	,659

Toplam Açıklanan Varyans		75,393	,97

Hedonik tüketim davranışı ölçeğinin geçerliliği için faktör analizi yapılmıştır. Analiz sonucunda KMO değeri ,934 ve Barlett's Test of Sphericity değeri (p value; ,000, chi-square: 16689,200, df:190) veri setinin faktör analizine uygun olduğunu göstermektedir. Tablo 3'te faktör yükleri, faktörlerin açıklanan varyansları ve faktörlerin güvenilirlik kat sayıları belirtilmiştir. Hedonik tüketim ölçeği faktör analizi sonucunda, orijinal ölçekte olduğu gibi 6 boyut olarak ortaya çıkmıştır. Ölçekteki ifadelerin faktör yükleri 0,57 ile 0,846 arasındadır. Hediye alma davranışı, tek boyutlu analiz edildiği için faktör analizi yapılmamıştır.

Tablo 4: Korelasyon Analizi Sonuçları

	Ortalama	Std. Sapma	Hediye Alma
Macera amaçlı alışveriş	3,14	1,11	,388**
Sosyal amaçlı alışveriş	3,15	1,00	,422**
İndirimi yakalamak amaçlı alışveriş	3,32	1,01	,400**
Fikir edinmek amaçlı alışveriş	2,76	1,05	,427**
Başkalarını mutlu etmek amaçlı alışveriş	3,35	,98	,415**
Rahatlamak için alışveriş	3,07	1,25	,361**

** 0.01 seviyesinde anlamlı

Hedonik tüketim boyutları ile hediye alma arasındaki ilişkiyi tespit etmek amacıyla korelasyon analizi yapılmıştır. Analiz sonucuna göre macera amaçlı alışveriş ($r=,388$; $p<0,01$), sosyal amaçlı alışveriş ($r=,422$; $p<0,01$), indirim amaçlı alışveriş ($r=,400$; $p<0,01$), fikir edinmek amaçlı alışveriş ($r=,427$; $p<0,01$), başkalarını mutlu etmek amaçlı alışveriş ($r=,415$; $p<0,01$) ve rahatlamak amaçlı alışveriş ($r=,361$; $p<0,01$) ile hediye alma davranışı arasında pozitif ilişki olduğu tespit edilmiştir.

Tablo 5: Hedonik Tüketim Davranışının Hediye Alma Davranışına Etkisi

	B	Beta	t	p
Sabit	1,457		20,182	,000

Fikir edinmek amaçlı alışveriş	,148	,207	6,808	,000
Başkalarını mutlu etmek amaçlı alışveriş	,109	,143	4,401	,000
Rahatlamak için alışveriş	,013	,022	,668	,504
F= 82,733, R=,523, Adjusted R ² = ,270				

** 0.01 seviyesinde anlamlı

Hedonik tüketim davranışının hediye alma davranışına etkisini tespit için çoklu regresyon analizi yapılmıştır. Yapılan analiz sonucuna göre sosyal amaçlı alışveriş (B=,072, p<0,01), indirimli yakalamak amaçlı alışveriş (B=,110, p<0,01), fikir edinmek amaçlı alışveriş (B=,148, p<0,01), ve başkalarını mutlu etmek amaçlı alışveriş (B=,109, p<0,01) hediye alma davranışı üzerinde pozitif anlamlı bir etkiye sahiptir. Macera amaçlı alışveriş (B=,032, p>0,05) ve rahatlamak amaçlı alışveriş (B=,013, p>0,05) hediye alma davranışı üzerinde anlamlı bir etkiye sahip değildir.

Tablo 6: Hipotezlerin Kabul Durumunu Gösteren Tablo

H1: Maceracı alışveriş, hediye alma davranışını pozitif etkiler.	Ret
H2: Sosyal amaçlı alışveriş, hediye alma davranışını pozitif etkiler.	Kabul
H3: İndirimleri kaçırmamak amaçlı alışveriş, hediye alma davranışını pozitif etkiler.	Kabul
H4: Fikir edinmek amaçlı alışveriş, hediye alma davranışını pozitif etkiler.	Kabul
H5: Başkalarını mutlu etmek için yapılan alışveriş, hediye alma davranışını pozitif etkiler.	Kabul
H6: Rahatlamak için alışveriş, hediye alma davranışını pozitif etkiler.	Ret

TARTIŞMA

Bu çalışmada, tüketicilerin hedonik tüketim davranışına yönelten temel faktörlerin hediye alma davranışını nasıl etkilediği üzerinde durulmuştur. 4 hipotez kabul edilmiş, 2 hipotez ise reddedilmiştir. Buna göre hedonik tüketimin alt boyutlarından sosyal amaçlı alışverişin, indirimli yakalamak amaçlı alışverişin, fikir amaçlı alışverişin ve başkalarını mutlu etmek adına yapılan alışverişin hediye alma davranışı üzerinde pozitif etkisi olduğu ortaya çıkmıştır. Bu da literatürdeki bulgularla uyumludur (Ünal & Ceylan, 2008; Özgül, 2011; Bhatt vd., 2011; Çakır & Çakmak, 2012; Şengün & Karahan, 2013; Solunoğlu & İkiz Nalçacı, 2020; Yurtsızoğlu, 2020; Erdem & Yılmaz, 2021). Macera amaçlı alışveriş ve rahatlamak için alışverişin hediye alma davranışı üzerinde anlamlı bir etkisi olmadığı tespit edilmiştir. Öncelikle macera amaçlı alışverişi ve rahatlamak için alışveriş değişkenleri ve hediye alma davranışı arasındaki ilişkiye dair doğrudan çalışmaya rastlanmamıştır. Bu yönüyle çalışmanın literatüre mütevazı bir katkı yaptığı söylenebilir. Bu sonuçları anlamlandırmak gerekirse, hediye alma davranışının, bazen rahatlamak ve macera için yapıldığı düşüncesi ilk başta akla gelmektedir. Bu durumda, tüketicilerin maceracı alışveriş türünü bir tür risk alma olarak gördüğü ve bu sebeple kendileri için risk alacakları ama hediye alma davranışında risk almak istemedikleri düşünülebilir. Rahatlamak için alışveriş yaklaşımına göre tüketiciler, öncelikle kendilerine hediye alarak kendilerini sevindirmek isteyebilirler. Başkalarına hediye alma fikrinin rahatlatıcı olduğu düşüncesi ilk planda akla gelmeyebilir.

SONUÇ VE ÖNERİLER

Tüketiciler farklı saiklerle alışveriş davranışı sergilerler ve bu konuda farklı sınıflandırmalardan birisi de hedonik ve faydacı tüketim davranışları ayrımıdır. Modern tüketicilerin sadece faydacı değil, aynı zamanda hedonik güdülerle alışveriş yaptığı bilinmektedir. Buna karşılık işletmeler de hedonik tüketim eğiliminde olan tüketicilerin hediye alma davranışlarını yönlendirecek stratejiler geliştirmektedir. Tüketim toplumu ve tüketim toplumu oluşturma stratejileri sonucunda, tüketiciler hedonik duygularının etkisiyle daha fazla alışveriş yapmaktadırlar.

Bu çalışma sonucunda, hedonik tüketim eğiliminin bazı alt boyutlar bazında hediye alma davranışını pozitif yönde etkilediği ortaya çıkmıştır. Bu ilişkiyi tam anlamıyla analiz eden ilk çalışmalardan olma yönüyle, çalışmanın önemi ortaya çıkmaktadır. Bulgular kısmında tartışıldığı üzere, bu sonuçların olası sebepleri üzerinde durmak gerekmektedir. Bu çerçevede hedonik tüketim eğiliminin artmasıyla birlikte genel anlamda hediye alma davranışının artacağı ortaya çıkmaktadır.

Bu çalışma sonucunda, teorik ve pratik bazı önerilerde bulunulabilir. Teorik olarak, hedonik tüketim davranışının kendine hediye alma davranışı üzerindeki etkisi araştırılabilir. Mevcut araştırmadaki nicel araştırma kurgusu, daha derinliğine nitel araştırma yöntemleriyle yeniden ele alınabilir. İleride yapılacak çalışmalarda (cinsiyet, yaş ve ona bağlı kuşaklar arası) demografik karşılaştırmalar yapılabilir. Aynı zamanda kültürün mevcut araştırma kurgusuna etkisine bakılabilir.

Uygulama açısından bakıldığında, araştırma bulgularının tüketiciler ve işletmeler için yol gösterici olacağı düşünülmektedir. Tüketiciler, hedonik tüketim davranışlarında hediye alma sürecinde daha kontrollü davranmalıdırlar. Hedonik tüketimin, gereksiz, lüks ve gösterişçi tüketime dönüşmeksizin, hediye alma davranışına dönüşmesi gerekmektedir. İşletmelerin de hedonik tüketimin alt boyutlarını kullanarak tüketicileri satın alma ve hediye alma davranışına yönlendirmesi gerekmektedir. Bu bağlamda, işletmeler farklı ve yenilikçi tutundurma stratejileri geliştirmelidirler. İşletmeler, hedonik tüketim alt boyutlarını ve hediye alma davranışlarını dikkate alan pazar bölümlendirme, konumlandırma, hedef pazarı seçme gibi alt pazarlama stratejileri belirlemelidirler. Bu şekilde hangi tüketicilerin macera için, sosyal amaçlı, değer elde etmek için sosyalleşmek ve özellikle hediye alma davranışında olduğu gibi başkalarını mutlu etmek için alışveriş yaptıklarının net olarak ortaya konulması gerekmektedir. Bu bağlamda, yapılacak müşteri anketleri ve araştırmalarıyla müşteri profili detaylı olarak analiz edilmelidir. Böylece alışverişin sadece fonksiyonel bir eylem olmadığı, duygusal yönünün ağır bastığı unutulmamalıdır. İşletmeler, özel günlerde tüketicilere, kendilerini değerli hissettirecek kampanya ve stratejiler geliştirmelidirler.

Çalışmanın sınırlılıkları arasında öncelikle katılımcılara daha hızlı ulaşabilmek için anketlerin internet üzerinden uygulanması vurgulanmalıdır. Bu şekilde, mümkün olduğunca kısa sürede çok sayıda katılımcıya ulaşılmıştır.

ÖZET

Çalışma yaşamında işlerin planlanarak organize edilmesinden kontrolünün sağlanarak raporlanmasına kadar olan süreçte yöneticiler etkin rol oynamaktadır. Yöneticilerden, tüm bu işleri hatasız ve planlanan zamana göre yapması veya yaptırması beklenebilir. Yöneticiler de bu beklentiyi sağlamak için hatasız olma gayreti güderken aynı zamanda süreci kolayca yönetebilmek için yüksek psikolojik sağlamlığa ihtiyaç duyar. Bu durumda yöneticilerin kişilik yapıları devreye girer. Yöneticiler işleri gereği süreci en ideal şekilde yönetme ve yönlendirme görevini mükemmeliyetçi kişiliğin katı özellikleriyle sürdürürlerse hem kişinin kendisi hem de yakınındakiler için psikolojik zorluklar başlayabilir. Bu durum, mükemmeliyetçi kişilik özellikleriyle psikolojik sağlamlık kavramı “birbirleriyle ilişkili midir?” ve “aralarında bir ilişki var ise bu ilişkinin yönü nedir?” sorularını akla getirmektedir. Yukarıda belirtilen sorulardan yola çıkarak bu çalışmanın temel amacı yöneticilerin mükemmeliyetçi kişilik özellikleriyle psikolojik sağlamlık düzeyleri arasındaki ilişkiyi incelemektir. Araştırmanın örneklemini İstanbul’da özel sektörde çalışan yöneticiler oluşturmaktadır. Bu nedenle yapılan çalışmada toplam 144 kişi üzerinde araştırma yapılmıştır. SPSS 20.0 programı ile yapılan faktör analizine göre 60 maddeden ve 7 boyuttan oluşan modelin (KMO=0,489; X²= 831,192; p=0,000.) faktör yükleri 51,92 ile 14,08 arasındadır. Ölçek varyansın %66,09’unu açıklamaktadır. Ölçeğin Cronbach Alfa değeri 0,804 olarak ölçülmüştür. Analiz sonucunda mükemmeliyetçi kişilik tipiyle psikolojik sağlamlık arasında negatif yönlü bir ilişki tespit edilmiştir.

Anahtar Kelimeler: Psikolojik Sağlamlık, Psikolojik Dayanıklılık, Yönetici, Mükemmeliyetçi Kişilik Tipi

A Study on the Relationship between Perfectionist Personality Traits and Psychological Resilience Levels of Managers

ABSTRACT

In working life, managers play an active role in the process from planning and organizing the work to controlling and reporting it. Managers can be expected to perform all these tasks without errors and according to the planned time. While managers strive to be error-free to meet this expectation, they also need high psychological resilience to manage the process easily. In this case, the personality structures of managers come into play. If managers carry out the task of managing and directing the process in the most ideal way due to their jobs with the rigid characteristics of perfectionist personality, psychological difficulties may begin for both the person himself/herself and those close to him/her. This situation raises the questions "are perfectionist personality traits and the concept of psychological resilience related to each other?" and "if there is a relationship between them, what is the direction of this relationship?". Based on the questions mentioned above, the main purpose of this study is to examine the relationship between perfectionist personality traits and psychological resilience levels of managers. The sample

6th International CEO Communication, Economics, Organization & Social Sciences Congress

of the study consists of managers working in the private sector in Istanbul. For this reason, the study was conducted on a total of 144 people. According to the factor analysis performed with SPSS 20.0 program, the factor loads of the model consisting of 60 items and 7 dimensions (KMO=0,489; X²= 831,192; p=0,000.) are between 51,92 and 14,08. The scale explains 66.09% of the variance. Cronbach's alpha value of the scale was 0.804. As a result of the analysis, a negative relationship was found between perfectionist personality type and psychological resilience.

Keywords: Psychological Resilience, Manager, Perfectionist Personality Type

Giriş

Bireyin yaşam olayları karşısında esnek ve çok seçenekli düşünebilme becerisi psikolojik açıdan sağlamlık oluşturmaya yardımcı olur. Esnek düşünebilen bireyler yaşamsal krizleri, zorlukları daha kısa sürede atlatabilmekte ve daha sağlıklı baş etme yöntemleri kullanarak çözebilmektedir. Bu sebeple esnek düşünebilmek, akademik veya iş hayatının sebep olduğu stresi de indirgeyebilmektedir. Bunların aksine, kişide yaşama dair katı görüşler varsa psikolojik sağlamlığın gelişimi kısıtlanmakta ve yaşamla baş etme gücü azalmaktadır.

Fredrickson'ın (2003) olumlu duyguları oluştur ve çoğalt teorisine göre, olumlu duygular kişinin düşünce veya eyleme yönelik davranışlarının çeşitliliğini genişletir. Bu genişleyen düşünceler bir bireyin fiziksel, psikolojik, entelektüel ve sosyal kaynaklardan oluşan kişiliğine de etkide bulunur (Fredrickson, 1998, 2001).

Stewart vd. (1997) psikolojik sağlamlığın tanımını yaparken, kişinin hayatında meydana gelen ve kişinin yaşamında önemli değişikliklere sebep olan, istenmeyen ya da riskli durumların üstesinden gelebilme yeterliliğine veya kapasitesine sahip olma şeklinde açıklamıştır. Psikolojik sağlamlığın düzeyinin artması veya azalmasında etken olan en önemli unsurlardan biri de zihinsel esnekliktir diğer bir deyişle adaptasyon becerisidir. Williams (2001) psikolojik dayanıklılığı kişinin ruh halinin strese girebilecek olaylar karşısında bile sağlıklı kalma olarak tanımlarken, Kobasa (1979) psikolojik sağlamlık kavramını olumsuzlar karşısında kişinin sahip olduğu direnç olarak açıklamaktadır.

Araştırmanın diğer bir değişkeni olan mükemmeliyetçilik, kişinin ulaşılması zor hedefleri belirleyerek bu hedeflere ulaşmak için yoğun bir çaba sarf etmesi olarak tanımlanabilir (Burns, 1980). Bu durumda, profesyonel iş yaşamında yoğun strese maruz kalan yöneticilerin mükemmeliyetçi kişilik özelliklerine bağlı olarak psikolojik sağlamlık düzeylerinin de etkilendiği düşünülebilir. Araştırmanın dayanağını, “yöneticilerin sahip olduğu mükemmeliyetçi kişilik tipinin psikolojik sağlamlıklarını etkilemekte midir?” sorusuna dayanmaktadır. Bu düşünceden yola çıkarak, yöneticilerin sahip olduğu mükemmeliyetçilik kişilik tipinin iş yaşamlarında kendilerini olumsuz yönde etkilediğine inanmaktayız. Bu çalışma sonunda elde edilen bulgulardan yola çıkarak hem mükemmeliyetçi kişilik tipinin yöneticiler üzerinde nasıl ve ne yönde bir etkisi olduğu hem de mükemmeliyetçi kişilik tiplerine sahip yöneticilerin psikolojik sağlamlıklarını etkileyen unsurların neler olabileceği konusunda yol gösterici bir çalışma olacağını düşünmekteyiz.

1. TEORİK ÇERÇEVE

1.1. Psikolojik Sağlamlık

Latince esnekliği ifade eden “resilire” kelimesi psikolojik sağlamlık kavramına denk gelmektedir (Greene, 2002). Suzanne C. Kobasa, psikolojik sağlamlık kavramı üzerine çalışan ilk kişidir. Garmezy (1991) psikolojik sağlamlığı, kişilerin zorlu yaşam koşullarında karşılaştıkları durumlar karşısında günlük yaşantısını daha az etkileyerek devam ettirmesi olarak açıklamıştır.

Psikolojik sağlamlık, yaşanan olumsuz duygusal deneyimlerden geride bırakabilme ve stresli bir ortamda yaşanan deneyimlere bağlı olarak sürekli değişiklik gösteren istekleri karşılarken, sıkıntıyı aşabilme ve bu sürece uyum gösterme olarak açıklanmaktadır. (Block ve Kremen, 1996; Lazarus, 1993; Jackson vd., 2007).

Psikolojik sağlamlık, iş stresi dışında farklı sebeplerle meydana gelen stres türlerini de hafifletebilir (Chou vd., 2016). Sonuç olarak, psikolojik sağlamlık, bireyin psikolojik varlığını koruyan ve stresli durumlarla baş etmede olumlu yönde değişime sebep olur ve stresle baş etmede de önemli bir rol oynar.

1.2. Mükemmeliyetçi Kişilik Tipi

Hewitt ve Flett (1991), mükemmeliyetçiliği kişinin kendisine beklenenin üstünde standartlar oluşturması, belirlediği bu standartlara ulaşmak için üstün bir performans göstermesi, öz eleştiri yaparken esnek olmayan kuralların belirlenmesi, sadece mutlak başarı veya başarısızlığa duyulan inanç diğer bir bakış açısıyla kısmen başarılı olmayı kabullenmeme şeklindeki düşünce biçimi olarak ifade etmişlerdir.

Mükemmeliyetçilik kavramı ilk kez Hollander (1965) tanımını yapmıştır. Hollander mükemmeliyetçiliği, kişinin kendisinden veya çevresindeki kişilerden yaşanan durum karşısında istenilenden daha yüksek düzeyde bir performans beklentisi içerisine girmesi olarak tanımlanmaktadır. Mükemmeliyetçi insanlar gerçekte beklentinin üstünde standartlara sahip olan kişilerdir. Frost ve arkadaşları (1990) da mükemmeliyetçiliği performans kavramıyla açıklamış ve kişinin yaptığı işte yüksek standartlar belirleyerek o işi gerçekleştirme çabası olarak tanımlamıştır (Frost, Marten, Lahart ve Rosenblate, 1990).

Hollander (1965), Hamacheck (1978), Burns (1980) ve Patch (1984), mükemmeliyetçiliği uyumsuz bir özellik olduğunu söyleyerek, mükemmeliyetçiliği benimseyen kişilerin kendilerine ulaşılması zor hedefler belirlediklerini ortaya koymuşlardır. Frost ve arkadaşlarının (1990) geliştirdikleri ölçeğe göre mükemmeliyetçiliğin altı boyutu vardır. Hata yapma endişesi, kişisel standartlar, ebeveyn beklentisi, eylemlerinden şüphe duyma, organizasyon ve ebeveynlerin eleştiriciliği mükemmeliyetçiliğin altı boyutunu oluşturmaktadır.

Hata Yapma Endişesi (HE): Mükemmeliyetçi kişilerin hata yapma endişesiyle birlikte hatalara karşı tolerans gösterip göstermediğini ölçen boyuttur.

Kişisel Standartlar (KS): Kişinin kendisi için ulaşılması zor standartlar belirleyip belirlemediğini ele alan boyuttur.

Ebeveyn Beklentileri (EB): Mükemmeliyetçiliğin öğrenilebilir ve kişisel gelişime bağlı olarak açıklayan Frost, kişinin ebeveynlerini çok eleştiri yapan, beklentisi gerçekleşmesi beklenenden daha fazla olan kişiler olarak düşünebilir. Bu düşünceye bağlı olarak kişi mükemmeliyetçi davranışlar sergileyebilir. Bu boyut kişinin ebeveyn beklentilerine bağlı olarak mükemmeliyetçi davranışlar gösterip göstermediğini ölçen boyuttur.

Eylemlerinden Şüphe Duyma (EŞ): Kişinin kendi davranışından veya sergilediği performansından tam anlamıyla emin olup olmadığını tespit eden boyuttur.

Organizasyon (OR): Düzenli olmayı, düzene aşırı önem verip vermediğini değerlendiren boyuttur.

Ebeveynlerin Eleştiriciliği (EE): Kişinin ebeveynlerini beklenenden daha fazlasını talep edebilecek bireyler olarak algılayıp algılamadığını ölçen boyuttur.

Hewitt ve Flett (1991) ise mükemmeliyetçiliği Frost ve arkadaşlarının geliştirdiği boyutlardan farklı olarak ele almışlardır. Hewitt ve Flett'inin yaklaşımına göre mükemmeliyetçiliğin boyutları, kendine yönelik mükemmeliyetçilik, diğer insanlara yönelik mükemmeliyetçilik ve toplumun zorlaması sonucu oluşan mükemmeliyetçilik olmak üzere üç farklı boyuttan oluşmaktadır.

Kendine Yönelen Mükemmeliyetçilik: Kişinin kendi standartlarına ve performansına ilişkin boyutu içerir. Bu kişilerin düşüncelerinin temelinde "ya hep ya hiç" vardır.

Diğer İnsanlara Yönelen Mükemmeliyetçilik: Kişinin yakın çevresinde bulunan kişilerin sahip oldukları yeteneklerine yönelik beklentileri ve inançları içeren boyuttur.

Toplum Tarafından Dayatılan Mükemmeliyetçilik: Kişinin önemli gördüğü kişilerden kendisi hakkında gerçekçi beklentiler içerisine girdiğini varsaydığımız ve mükemmel olmaları için çevreden baskı geldiğini hissettiği ve buna bağlı olarak çevrenin beklentilerini ve standartlarını karşılaması gerektiğini düşündüğü boyuttur.

Böylece farklı kişilerin mükemmeliyetçiliği ele alış biçimleriyle birlikte kavram daha geniş bir perspektifte değerlendirmeye olanak sağlamıştır. Elde edilen yaklaşımlar doğrultusunda, mükemmeliyetçilik kişinin kendini engelleyen, başarısızlığa zemin hazırlayan olumsuz bir davranış olduğu düşünülmüştür. Bu açıdan değerlendirildiğinde kişinin hiçbir zaman performansından memnun olmadığı varsayılmıştır (Owens ve Slade, 1998). Mükemmeliyetçilik kavramının değerlendirildiği çalışmalara bakıldığında mükemmeliyetçilik akademik başarı (Başer, 2007), anne baba tutumları (Yıldız, 2007), kişilerarası ilişkiler (Hill, Zruli ve Turlington, 1997) sorumluluk tutumları ve obsesif kompulsif tutumlar (Yorulmaz, 2002), psikolojik belirtiler (Benk, 2006), depresif semptomlar ve duygu durumları (Dinç, 2001; Oral, 1999) ile ilişkilendirilerek açıklanmaya çalışılmıştır. Yapılan çeşitli çalışmalar doğrultusunda bu araştırmayla mükemmeliyetçilik ile psikolojik esneklik ve psikolojik sağlık arasında da bir ilişki olabileceği düşünülmüştür. Bu düşünceye bağlı olarak aşağıdaki hipotez geliştirilmiştir:

H₁: *Psikolojik Sağlık Düzeyi ile Mükemmeliyetçi Kişilik Özellikleri arasında negatif yönde anlamlı bir ilişki vardır.*

2. YÖNTEM

2.1. Araştırmanın Modeli

Bu çalışmanın temel amacı, işletmelerdeki yöneticilerin sahip oldukları mükemmeliyetçi kişilik tipi ile psikolojik sağlamlık arasındaki ilişkinin var olup olmadığının tespit edilmesidir. Aynı zamanda, bu çalışma ilişki tarama modeli bir araştırmadır.

2.2. Araştırmanın Örnekleme

Bu araştırmanın evrenini İstanbul’da özel sektörde çalışan alt, orta ve üst düzey yöneticilerden oluşturmaktadır. Araştırmanın örnekleme tesadüfi olmayan örnekleme yöntemlerinden amaçlı örnekleme yöntemi ile seçilmiştir. Bu amaçla İstanbul’da özel sektörde faaliyet gösteren 100 işletmeden veri toplanmıştır.

2.3. Veri Toplama Araçları

Araştırmada kullanılan veri toplama araçlarıyla ilgili ayrıntılı bilgiler aşağıda yer almaktadır.

2.3.1. Yetişkinler için Psikolojik Sağlık Ölçeği (YPDÖ)

Bu ölçek, Smith vd. (2008) tarafından geliştirilmiştir. Türkçe’ye Doğan (2015) tarafından uyarlanmıştır. 5’li likert tipinde olan ölçek toplam altı boyuttan oluşmaktadır. Ölçekteki boyutlar, “yapısal stil” (3,9,15,21) ve “gelecek algısı” (2,8,14,20) 4 madde; “aile uyumu” (5,11,17,23,26,32), “kendilik algısı” (1,7,13,19,28,31) ve “sosyal yeterlilik” (4,10,16,22,25,29) 6 madde ve “sosyal kaynaklar” (6,12,18,24,27,30,33) ise 7 madde ile ölçülmektedir. Ölçekteki otuz üç maddenin on altısı ters puanlanmaktadır. 1-3-4-8-11-12-13-14-15-16-23-24-25-27-31-33 numaralı sorular ters puanlanmaktadır. Ölçekten alınan puan minimum 33 maksimum 165 olabilmektedir. Puanlar arttıkça psikolojik sağlamlığın arttığı varsayılmıştır. Ölçeğin yapısal stil boyutunda yer alan “Kişisel konuları hiç kimseyle tartışmam.”, “Kişisel problemlerimi çözemem.”, “Benim için sosyal ortamlarda rahat/esnek olmak önemli değildir.” ve “Yargılarıma ve kararlarıma çok fazla güvenmem.” ifadeleri güvenilirliği düşürdüğü için ölçekten çıkarılmış, analize dâhil edilmemiştir. Araştırmanın ölçek güvenilirliği (Cronbach’s Alfa değeri) 0,87’dir. Alt boyutların güvenilirliği ise 0,81 ile 0,77 arasında değişmektedir. İnceleme türüne giren araştırmalarda güvenilirlik için hesaplanan Cronbach’s alfa değeri 0,50’e kadar geçerli kabul edilmektedir (Altunışık, Coşkun, Bayraktaroğlu ve Yıldırım, 2004, s. 115).

2.3.2. Çoklu Mükemmeliyetçilik Testi

Araştırmaya katılanlardaki mükemmeliyetçiliğin değerlendirmesini yapabilmek için Çok Boyutlu Mükemmeliyetçilik Ölçeği (Multidimensional Perfectionism Scale (MPS)) kullanılmıştır. Özbay ve Taşdemir (2003) tarafından Türkçe'ye uyarlanan ölçek Frost ve arkadaşları (1990) tarafından geliştirilmiştir. Ölçekte toplamda 35 madde bulunmaktadır. 5'li Likert tipi ile maddelere cevap verilmektedir (1=kesinlikle katılıyorum ve 5=kesinlikle katılmıyorum). Güvenirliliği düşüren “Anne-babam benim için çok yüksek ölçütler belirler.”, “Çocukken mükemmel yapmadığım şeyler için cezalandırılmışımdır.”, “Yapığım her şeyde tam anlamıyla yeterli olmak benim için önemlidir.” ve “Çabalarımı bir hedefe ulaşmak için yoğunlaştırmakta çok iyiyimdir.” güvenirliliği düşürdüğü için ölçekten çıkarılmış, analize dâhil edilmemiştir. Çok Boyutlu Mükemmeliyetçilik Ölçeğinin bu araştırmadaki güvenirliliği (Cronbach's alfa değeri) 0,89'dur. Ölçekten alınan toplam puanın yüksekliği katılımcının mükemmeliyetçilik düzeyinin fazla olduğunu göstermektedir.

2.4. Verilerin Analizi

Araştırmadaki verilerin incelenmesi için SPSS 20.0 programı kullanılmıştır. Verilerin değerlendirilmesinde t-testi ve Pearson Korelasyon analizlerinden yararlanılmıştır.

3. Bulgular

Bu bölümde ilk önce katılımcıların demografik bilgilerine yer verilmiştir. İkinci olarak çalışmanın değişkenleri olan mükemmeliyetçilik ile psikolojik sağlamlık arasındaki ilişkiyi gösteren bulguya yer verilmiştir.

Katılımcılara ait tanımlayıcı bilgiler Tablo 1'de sunulmuştur. Bu tanımlayıcı özellikler incelendiğinde; Tablo 1'e göre araştırmaya katılanların % 20,1'i kadın (n=29), % 79,9'u (n=115) erkektir. Yöneticilerin % 5,6'sı (n=8) ilköğretim ve lise, % 59,7'si (n=86) önlisans ve lisans, % 34,7'si (n= 50) de lisansüstü eğitim derecesine sahiptir. Örneklemin, % 6,3'ü (n=9) 25 yaşından küçük, % 6,3'ü (n=9) 25-30 yaş, %13,2'si (n=19) 31-35 yaş, % 22,2'si (n=32) 36-40 yaş, % 25,7'si (n=37) 41-45 yaş ve % 26,4'ü (n=38) de 46 ve yukarı yaşlar arasındadır. % 9,7'si (n=14) 1 yıldan az, % 22,9'u (n=33) 1-3 yıl arası, % 17,4'ü (n=25) 3-6 yıl arası, % 50'si (n=72) aynı iş yerinde çalışma süresine sahiptir. Katılımcıların % 64, 6'sı (n=93) evli, % 27,1'i (n=39) bekâr ve % 8,3'ü de (n=12) boşanmıştır. Araştırmaya katılanların % 29,9'u (n=43) alt düzey, %36,1'i (n=52) orta düzey, %34'ü de (n=49) üst düzey yöneticidir.

Tablo 1. Katılımcılara ait demografik bilgiler

	<i>n</i>	%
CİNSİYET		
Erkek	115	79,9
Kadın	29	20,1
EĞİTİM DÜZEYİ

46 >	38	26,4
ÇALIŞMA SÜRESİ		
<1 yıl	14	9,7
1-3 yıla kadar	33	22,9
3-6 yıla kadar	25	17,4
6 >	72	50
KURUM İÇİ STATÜ		
Alt Düzey Yönetici	43	29,9
Orta Düzey Yönetici	52	36,1
Üst Düzey Yönetici	49	34

Araştırmanın hipotez kısmında yer almamasına rağmen, psikolojik sağlamlığın ve mükemmeliyetçiliğin, demografik özellikler açısından bir farklılık yaratıp yaratmadığına da bakılmıştır. Yapılan testler sonucunda tanımlayıcı özelliklerin hiçbirinin anlamlı bir farklılık sergilemedikleri tespit edilmiştir.

Katılımcılar için psikolojik sağlamlık ölçeği alt boyutlarının puan ortalaması; yapısal stil 15.30 ± 8.03 , gelecek algısı 15.47 ± 7.39 , aile uyumu 20.87 ± 9.02 , kendilik algısı 15.87 ± 6.14 , sosyal yeterlilik 19.07 ± 8.58 , sosyal kaynaklar 15.65 ± 7.69 'dur (Tablo 2).

Tablo 2. YPDÖ ve Mükemmeliyetçilik Puan Ortalamaları

Ölçek Maddeleri	Min.	Max.	Ort. \pm SS
Mükemmeliyetçilik Toplam Puan	58	139	88.04 ± 4.97
YPDÖ Toplam Puan	62	144	109.78 ± 5.7

Yapısal Stil	4	20	15.30 ± 8.03
Gelecek Algısı	9	20	15.47 ± 7.39
Aile Uyumu	6	30	20.87 ± 9.02
Kendilik Algısı	4	20	15.87 ± 6.14

Sosyal Yeterlilik	6	25	19.07 ± 8.58
Sosyal Kaynaklar	10	26	15.65 ± 7.69

* YPDÖ: Yetişkinler için Psikolojik Sağlık Ölçeği

Hipotezi test etmek amacıyla, mükemmeliyetçilik ile psikolojik sağlık ve psikolojik sağlık alt boyut puan ortalamaları karşılaştırılmıştır. Karşılaştırma neticesinde psikolojik sağlık ile mükemmeliyetçilik arasında ters yönlü bir ilişki olduğu belirlenmiştir. Psikolojik sağlamlığın alt boyutlarına baktığımızda yapısal stil ve gelecek algısı ile mükemmeliyetçilik arasında bir ilişki tespit edilememiştir. Buna rağmen aile uyumu, kendilik algısı, sosyal yeterlilik ve sosyal kaynaklar ile mükemmeliyetçilik arasında da negatif yönde ilişki olduğu belirlenmiştir. Sonuç olarak, mükemmeliyetçilik arttıkça psikolojik dayanıklılığın azaldığı belirlenmiştir ($p<0.01$) (Tablo 3). Bu anlamda hipotezin doğrulandığı söylenebilir.

Tablo 3. YPDÖ ve YPDÖ Alt Boyutları Puan Ortalaması ile Mükemmeliyetçilik Puan Ortalaması Arasındaki İlişki

4. Tartışma ve Yorum

Literatür incelemesi sonucuna göre kişilerin psikolojik sağlık düzeyleri ile mükemmeliyetçi kişilik özellikleri arasında negatif yönde ilişkili olduğunu ifade eden çalışmalar mevcuttur. Bu çalışmaların sonuçlarıyla araştırmadan elde ettiğimiz sonuçlar birbiriyle örtüşmektedir (Flett ve

Hewitt, 2014; Klibert, Lamis, Collins, Smalley, Warren, Yancey ve Winterowd, 2014). Yapılan t-testi sonucunda yönetici kadınların ve erkeklerin genel psikolojik sağlamlık düzeylerine ($X_{(erkek)}=3.84$; $X_{(kadın)}=3.62$), mükemmeliyetçilik boyutuna ($X_{(erkek)}=2.84$; $X_{(kadın)}=3.05$), ilişkin puan ortalamaları bakımından anlamlı bir farklılık sergilemedikleri görülmüştür ($p>0.05$). Yapılan araştırmada erkek yöneticilerin kadın yöneticilere oranla psikolojik sağlamlık puanının biraz daha yüksek olduğu görülmektedir. Aynı zamanda psikolojik sağlamlık, stres ve hayat şartları ile başa çıkabilmelerini kolaylaştıran bir etmen olarak düşünülmektedir (Allen, 2016; Calvete vd., 2014). Buna göre, iş yaşamında karşılaşılan ve yaşanan olaylara karşı erkek yöneticilerin kadın yöneticilere oranla iç dengesini daha rahat sağladığı, korku, stres gibi etmenlerle daha kolay başa çıkabildiği söylenebilir. Aynı zamanda erkek yöneticilerin kadın yöneticilere oranla daha esnek bakış açısına sahip oldukları, olumsuzlukları daha kısa sürede atlatabildikleri görülmektedir.

Mükemmeliyetçilik açısından ele aldığımızda ise kadın yöneticilerin erkek yöneticilere göre puan ortalamaları biraz daha yüksek olduğu görülmektedir. Bu bilgi ışığında, kadın yöneticilerin daha detaycı, planlamada daha hassas olduğu, ayrıntılara daha fazla önem verdiği, sonuç odaklılıktan çok süreç yönetimine erkek yöneticilere oranla daha fazla önem verdiği söylenebilir.

Mükemmeliyetçi kişiliklerin kusursuz görünme, hata yapmama ve son derece yüksek standartlara sahip olma gayreti onların yaşamla barışçıl, dingin bir ilişki kurmalarının önünde engel oluşturmaktadır. Genellikle ya hep ya hiç düşüncesiyle hareket ederler ve yapılacak şey kusursuz olmayacaksa başlamaya değer değildir. Bu durum onların daha gergin, katı, stresli ve endişeli olmalarına yol açar. Aynı zamanda diğer iş arkadaşlarından da benzer yaklaşımı talep ettikleri için insani ilişkileri de zarar görebilir. Psikolojik sağlamlık düzeyi yüksek olan kişiler ise yaşamda daha dingin ve sakin bir özelliğe sahiptirler.

Mükemmeliyetçi kişilik özelliklerinin, iş yaşamına duyulan kaygıyı arttırdığı ve iş hayatından özel hayata adaptasyonu zorlaştırdığı görülmektedir. Mükemmeliyetçi kişilik özelliklerinin işten sonra dinlenme ve yenilenme sürecini, işle özel hayat arasındaki denge kurmayı güçleştirdiği ve bu nedenle kişilerin fizyolojik ve psikolojik iyilik halini olumsuz etkilediği görülmektedir. Bu da kişilerin yaşamla baş etme gücünü düşürmektedir. İş yaşamında iyi bir özellik olarak bilinen mükemmeliyetçilik, zamanla kişilerin stres ve endişe düzeylerini arttırdığından ve bununla beraber psikolojik sağlamlık düzeylerini düşürdüğünden dolayı iş performansını olumsuz yönde etkilemektedir.

Psikolojik sağlamlık ve psikolojik sağlamlık alt boyut puan ortalaması ile mükemmeliyetçilik puan ortalaması arasında negatif yönde ilişki olduğu belirlenmiştir. Mükemmeliyetçilik arttıkça psikolojik sağlamlığın azaldığı görülmüştür ($p<0.01$). Buna göre, olağandan daha fazla mükemmeliyetçilik kişilik tipine sahip yöneticilerin daha az benlik saygısına sahip olduğu, olumsuz öz değerlendirmeyi daha sık yaptığı ve olayları çözme becerisinde kendilerine yönelik olumlu algılarının yetersiz olduğu; olumsuz olaylarda mükemmeliyetçiliklerinin bir dezavantajı olarak çabuk ve kolay strese girdikleri ve bu stresle olayları değerlendirdikleri, dolayısıyla da problemlerle başa çıkma konusunda mükemmeliyetçi kişilik tipi puanları düşük olanlara göre daha çok sorun yaşayabilecekleri söylenebilir.

5.ÖNERİLER

Mükemmeliyetçilik ve psikolojik sağlamlık düzeylerinin birbiri ile anlamlı düzeyde ilişkili bulunması neticesinde işletmeler yönetici pozisyonu için işe alım veya kariyer yönetimini uygularken kişilerin mükemmeliyetçi özelliklerinin hangi düzeyde olduğuna dikkat edilmelidir.

Bunun yanı sıra, psikolojik dayanıklılığın önem kazandığı pozisyonlar için de aday profilleri derinlemesine incelenmelidir.

Mükemmeliyetçi kişilik özelliklerini taşıyan çalışanların kendini gerçekleştirme konusunda koydukları yüksek standartlar ve işe dair duydukları yoğun endişe, işe yönelik başarısızlık ve hata yapma kaygısıyla birleştiğinde iş performansı olumsuz yönde etkilenecektir. Mükemmeliyetçi kişilerin yaşamla daha esnek ilişki kurabilmelerine katkıda bulunmak, psikolojik iyi oluşlarını desteklemek amacıyla çalışma ortamının hoşgörülü, barışçıl olması önemlidir. Çalışanların, streslerini azaltacak aktivitelere katılmalarının sağlanması, sosyalleşeceği ortamların olması, gerekirse psikoterapi sürecine yönlendirilmesi sürece olumlu katkı sağlayacaktır.

ABSTRACT

In this century, it is evident that traditional leadership theories did not have a positive effect on employees. In this context, organizations' perspective on leadership has increased with each passing day with a further understanding of the importance of contemporary leadership approaches from the past to the present. One of these contemporary leadership theories is the self-leadership approach. The self-leadership approach is about directing and motivating employees toward their goals. There are many different ways of attitudes, behaviors, and perceptions created by this type of leadership on employees. One of these perceptions is organizational learning. Accordingly, this study aims to determine the effect of self-leadership on organizational learning. In the study, analysis was carried on the data obtained from 311 white-collar employees working in general aviation companies in Turkey and determined by purposive sampling method. In the study, face-to-face data were collected using the survey technique. In addition, SPSS 25.0 and AMOS 24.0 programs were used while testing the data. As a result of the study, it was found that there is a positive and significant relationship between self-leadership and organizational learning. It was concluded that behavior-focused strategies and natural reward strategies have a significant and positive effect on the commitment to learning, natural reward strategies and constructive thought pattern strategies on the shared vision, behavior-focused strategies and constructive thought pattern strategies on open-mindedness, behavior-focused strategies, natural reward strategies, and constructive thought pattern strategies on intra-organizational knowledge sharing. As a result of these analyses, it can be expected that organizational managers, researchers, and the business environment will have a quantitative and qualitative perspective on the subject as a result of evaluating the effects of these variables on each other.

Keywords: Leadership, Self-Leadership, Organizational Learning, Aviation, General Aviation Companies.

Genel Havacılık İşletmelerinde Kendi Kendine Liderliğin Örgütsel Öğrenme Üzerindeki Etkisine İlişkin Bir Araştırma

ÖZET

Bu yüzyılda geleneksel liderlik kuramlarının çalışanlar üzerinde olumlu bir etkisi olmadığı aşikardır. Bu kapsamda geçmişten günümüze çağdaş liderlik yaklaşımlarının öneminin daha da anlaşılması ile birlikte örgütlerin liderliğe bakış açısı gün geçtikçe daha da artmıştır. Bu çağdaş liderlik kuramlarından birisi de kendi kendine liderlik yaklaşımıdır. Kendi kendine liderlik yaklaşımı çalışanların kendilerini hedefleri doğrultusunda yönlendirmesi ve güdülemesi ile ilgilidir. Çalışanlar üzerinde bu liderlik türünün yarattığı çok farklı tutum, davranış ve algı biçimleri vardır. Bu algılardan birisi de örgütsel öğrenmedir. Bu doğrultuda, bu çalışmanın amacı kendi kendine liderliğin örgütsel öğrenme üzerindeki etkisini saptamaktır. Araştırmada Türkiye’de yer alan genel havacılık işletmelerinde görevini sürdüren ve amaçlı örnekleme yöntemi ile belirlenmiş 311 beyaz yakalı çalışandan elde edilmiş veriler üzerinden analiz yapılmıştır. Araştırmada anket tekniği ile yüz yüze veri toplanmıştır. Ayrıca, veriler test edilirken SPSS 25.0 ve AMOS 24.0 programları kullanılmıştır. Araştırmanın sonucunda kendi kendine liderlik ile örgütsel öğrenme arasında olumlu yönde anlamlı bir ilişkinin varlığı tespit edilmiştir. Ayrıca, davranış odaklı stratejilerin ve doğal ödül stratejilerinin öğrenmeye olan bağlılık üzerinde; doğal ödül stratejilerinin ve yapıcı düşünce modeli stratejilerinin paylaşılan vizyon üzerinde; davranış odaklı stratejilerin ve yapıcı düşünce modeli stratejilerinin açık fikirlilik üzerinde; davranış odaklı stratejilerin, doğal ödül stratejilerinin ve yapıcı düşünce modeli stratejilerinin örgüt içi bilgi paylaşımının üzerinde anlamlı ve olumlu bir etkisi olduğu sonucuna ulaşılmıştır. Bu analizler sonucunda örgüt yöneticilerinin, araştırmacıların ve iş çevresinin bu değişkenlerin birbirleri üzerindeki etkilerini değerlendirmeleri sonucunda, konu ile ilgili niceliksel ve niteliksel bir bakış açısına sahip olmaları umulabilir.

Anahtar Kelimeler: Liderlik, Kendi Kendine Liderlik, Örgütsel Öğrenme, Havacılık, Genel Havacılık İşletmeleri.

1. INTRODUCTION

Unlike traditional leadership theories on employee management, different leadership theories have emerged with the rapid development of businesses and their environment. In addition, leadership has become a phenomenon that is discussed and researched not only in organizations but also under different academic disciplines, within the framework of some factors such as social environment and even family life (Çetin, 2013; as cited in Çetin, 2021: 145). Accordingly, organizations becoming more compatible with internal and external factors may be due to the self-leadership of the employees first and then influencing other factors. Employees actually need self-management and self-leadership so that they can realize their abilities and skills while performing their duties. The concept of self-leadership is important as it is the root of employee empowerment (Doğan & Şahin, 2008a: 83). This type of leadership is an influencing process that takes place by fulfilling the self-motivation to be successful and manage oneself (Neck, 1996: 203; Manz, 1986: 589). This process may further increase organizational learning, expressed as the learning process that occurs through social interactions created by groups and organizations (Argyris, 1999; cited in Demirel, 2021: 373). Essentially, learning is to create a behavioral change in individuals as a result of transferring knowledge and experiences (Güney, 2020: 387). In organizations where self-leadership is dominant, the desire and perception of organizational learning may increase depending on the self-focus and self-worth of the employees.

Self-leadership is based on Bandura's (1986, 1991) social cognitive theory and self-regulation theory (Neck & Houghton, 2006: 279; as cited in Türköz et al., 2012: 311). Social cognitive theory can be clarified as human behavior being influenced by the behavior of other individuals in parallel with internal and external effects and learning new things by observing them (Bandura, 1989: 1176). In other words, this theory is about the change in human behavior and the complex situations created by the cognitive process influenced by this change. The social cognitive theory also focuses on personal satisfaction and self-efficacy (Neck & Houghton, 2006: 279; as cited in Türköz et al., 2012: 311; Bandura, 1986; Bandura, 1989: 1176). Self-regulation theory, on the other hand, is the individual's self-awareness of his own goals and cognitive self-motivation in line with his working principles with the feelings and thoughts he has acquired in this situation (Schunk & Ertmer, 2000: 633; Çiltaş, 2011: 3). In other words, this theory is about regulating one's internal standards (Neck & Houghton, 2006: 279; cited in Türköz et al., 2012: 311).

Organizational learning has been influenced by different approaches. Among these, experience-oriented organizational learning approaches are based on the study of March and Olsen (1975). According to this approach, organizations learn from their experiences. In this direction, they take lessons and infer from their works and can apply them within the organization (March & Olsen, 1975: 148). The interpretive perspective of organizational learning approaches emerged with the studies of Argyris and Schön (Argyris & Schön, 1997; Daft & Huber, 1987: 11). According to this approach, the organizational learning process is not based on trial and error, but on the basis of the organization's perception and interpretation of the environment and correcting its mistakes accordingly (Avcı, 2005: 64). Knowledge-oriented perspective of organizational learning approaches was first discussed by Duncan and Weis in 1979. According to this approach, organizations are a theory that aims to increase the knowledge of employees and increase their effects on organizational actions (Duncan & Weis, 1979: 84; as cited in Avcı, 2005: 60). Finally, the information-oriented perspective of organizational learning approaches was first based on the study of Daft and Huber (1987). In this approach, learning is expressed as the dissemination of information within the organization. In this approach, the process

operates in the form of obtaining, disseminating, and finally interpreting knowledge (Daft & Huber, 1987: 10; cited in Avci, 2005: 64).

In the literature, the relationship between self-leadership and organizational variables has been examined limitedly with certain organizational behaviors. In this direction, the interaction of self-leadership with organizational learning, a subject that was underemphasized in previous studies, has been examined. Accordingly, it is aimed to investigate the effect of self-leadership on organizational learning in general aviation companies that have never been studied in the literature. It is assumed through this study that the effect of self-leadership on organizational learning will strengthen the positive thoughts of employees about learning in the organization and that important outcomes will be obtained with the reflection of these thoughts on the organization. In this direction, the other parts of the study were formed with specific content: In the second part, the concepts of self-leadership and organizational learning and the relations between these concepts were emphasized. In the third part, the methodology is evaluated. In the fourth part, the results were analyzed. In the fifth part, the conclusions were evaluated and suggestions were made.

2. THEORETICAL FRAMEWORK

2.1. Self-Leadership

The concept of self-leadership was first mentioned academically by Manz (1986) (D'Intino et al., 2007: 105). In the self-leadership approach, the roles of leader and follower are concentrated on the person himself. There is no distinction between leader and employee in this approach. Everyone is their own leader (Pearce & Manz, 2011: 565). Accordingly, self-leadership is the self-influence process, and it is related to guiding and motivating oneself to perform an intended action, attitude, behavior, or task (Manz, 1986: 586; Neck & Manz, 1999; Manz & Sims, 1999). 1991; as cited in Cetin, 2021: 146). This type of leadership can be expressed as a process in which the individual can be able to influence and guide himself using certain cognitive and behavioral strategies and control his own behavior (Manz & Sims, 1980: 362; Manz, 1986: 586). In short, self-leadership is an influencing process that takes place by fulfilling the self-motivation essential for success and guiding oneself (Neck, 1996: 203; Manz, 1986: 589).

There are several characteristics of self-leadership. These are as follows (Duran, 2022: 51-52): (a) self-management related to the individual's determination and power to manage himself to achieve success in the direction of his goals (Norris, 2008: 43-44), (b) Self-control is the individual's constant cognitive and behavioral self-control. This situation guides the individual's next attitudes and actions (Khan et al., 2015: 4), (c) Self-influence is the individual's process of influencing himself in terms of emotional and physiological states, imaginary experience, performance experience, vicarious experience, and verbal persuasion. (Proios et al., 2020: 531), (d) self-regulation is related to the regulation of the individual's cognitive structure and behaviors (Proios et al., 2020: 531), (e) intrinsic regulation is related to the necessity of completing the achievement of the individual in the internal process first and then transforming this feeling into action by reflecting it to the outside in order to achieve his goals. It can only be achieved by establishing an internal order (Afridi et al., 2021: 1).

Self-leadership is divided into three sub-dimensions. Behavior-focused strategies, which are the first of these dimensions, are related to the strategies created to stop the negative attitudes and behaviors of individuals that lead to their failure and to support and strengthen their positive behaviors (Pearce & Manz, 2011; D'Intino et al., 2007; as cited in Çetin, 2021: 151). Natural reward strategies are the internal rewarding of the individual by seeing and doing the positive aspects of the job or duty. Individual self-control is essential in this strategy. Mental motivation sources underlie this reward (Houghton & Neck, 2002: 673). Constructive thought pattern

strategies are related to the individual's ability to think constructively in the organization and in his natural life and to focus on the positive aspects of the job mentally. In this strategy, it is important for the individual to control his mental processes (Houghton & Neck, 2002: 674).

2.2. Organizational Learning

The concept of organizational learning, which is included in the field of organizational behavior, was first suggested by Argyris and Schon (1978) (Argyris & Schon, 1978: 78). Learning, which underlies this concept, includes acquiring, sharing, using knowledge and being successful through this knowledge (Gilaninia et al., 2013: 45; as cited in Demirel, 2021: 372). In other words, learning is the process of changing the value judgments, beliefs, attitudes, and behaviors of individuals through the knowledge obtained from organizational thoughts, practices, and experiences (Güney, 2020: 387). Organizational learning includes the change in organizational knowledge, making several additions to organizational knowledge, transforming organizational knowledge, or reducing the excess of this knowledge (Başol, 2005; Soft & Yıldız, 2011: 387; as cited in Ayyıldız, 2017: 103). Organizational learning is defined as the process or capacity within the organization that provides the opportunity to access and correct organizational memory, thus attaching importance to organizational activity. (Hussein et al., 2014; as cited in Ayyıldız, 2017: 103). This type of learning can be expressed as the continuity of change based on the organizational experience (Argote & Miron-Spektor, 2011; as cited in Bianchi et al., 2022: 104). Organizational learning is the learning process that occurs by means of social interactions created by groups and organizations. All organizations and their components adapt to changing environments by producing and assimilating organizational routines through organizational learning (Argyris, 1999; as cited in Demirel, 2021: 373).

A process has been formed within the scope of the organizational learning process to realize learning at the organizational level. This process is as follows (Huber, 1991; Dixon, 1992): (a) Knowledge Acquisition is related to the organization's internalization of information obtained from internal and external sources in several ways (Kalkan, 2004). (b) Knowledge Dissemination is the formal and informal sharing process of knowledge and information obtained from different sources (Kalkan, 2004). (c) Knowledge Interpretation is the process of giving meaning to knowledge through cognitive capacities and experiences. It is the process of giving meaning to knowledge, developing common understanding and conceptual plans, and translating events (Daft & Weick 1984; as cited in Alanoğlu, 2014). (d) Knowledge Storage and Re-evaluation is the stage of hiding the knowledge and re-evaluating it through organizational memory when required (Kalkan, 2004; as cited in Işık, 2017: 21).

Organizational learning consists of four sub-dimensions. Commitment to learning, the first of these dimensions, is related to the increase in the commitment of its employees as the organization attaches importance to learning and, as a result, adds value and cooperates with and motivates its employees (Sinkula, 1997: 318). In this case, it can be argued that the increase in organizational commitment occurs as a result of learning (Naktiyok & İşcan, 2014: 25; as cited in Durmaz & Doğan, 2019: 33). Shared vision is a dimension that is related to a common perspective on the future and the ability of employees to create value, thus pushing and motivating employees to find a common topic for learning (Senge, 2018: 28). Open-mindedness is related to the freedom of employees to express their opinions about the organization and its functioning (Sinkula et al., 1997: 318). Finally, intra-organizational knowledge sharing is related to the clear and rapid dissemination of knowledge to employees and necessary units (Arslantaş, 2006; as cited in Durmaz & Doğan, 2019: 33).

2.3. The Relationship between Self-Leadership and Organizational Learning

Leadership is a process of influencing. Leadership definitions are often based on influencing employees. However, it is difficult for an employee to influence others without being positively

guided and motivated. Accordingly, the self-leadership concept, which is included in modern leadership theories, becomes important at this point. There is no distinction between leader and employee in the self-leadership approach. The leader is the person himself (Pearce & Manz, 2011: 565). Basically, it is important for organizations to be in continuous interaction with knowledge and to make employees open to learning to continue their life course and get a better level in a rapidly changing world and an intensely competitive environment. In this direction, employees with high self-leadership will be aware of their shortcomings as they know themselves better and will place more importance on learning. This plays a significant role in the organizational learning levels and perceptions of the employees.

Self-leaders are people who have goals, can reward themselves, think about their own beliefs, ideas, and assumptions, can evaluate themselves with their good and bad aspects, have dreams and create a vision, motivate themselves, evaluate their successes and failures, work towards their goals, enjoy their work, follow their development, and find their personal way while doing their tasks. It requires individuals with a high level of self-leadership to be open to learning. In this direction, employee perceptions, such as understanding the importance of learning in organizations, establishing a common purpose, adopting vision and values, exchanging communication and experience between managers and employees, and being an organization where knowledge is shared in a process brought about by organizational learning, can be kept alive. Accordingly, organizational learning can be supported.

In an organization with self-leadership, increasing the organizational learning levels and perceptions of the employees can provide significant advantages for the organization. In this direction, employees' perceptions and thoughts about organizational learning can also increase, thanks to the high level of self-leadership skills of employees. Especially, the perception of organizational learning, defined as the process or capacity that provides the opportunity to access and correct organizational memory within the organization and thus attaches importance to organizational activity, can be supported, together with the self-influence of employees who have self-leadership behavior and by guiding and motivating them to perform an intended action, attitude, behavior or task (Manz, 1986: 586; Neck & Manz, 1999; Manz & Sims, 1991; as cited by Çetin, 2021: 146; Hussein et al., 2014; as cited by Ayyıldız, 2017: 103). In this direction, the dominance of self-leadership in the organization may be effective in the good use of knowledge in an organization. Organizational learning is actually about the motivation to work together. In this case, those having a good level of self-leadership can guide other individuals to be more productive (Usanmaz, 2022). In addition, when examining the literature, there is a different study about the effect of self-leadership on organizational learning. In this respect, Ergin (2014) stated in his study that self-leadership positively affects organizational learning.

3. METHODOLOGY

3.1. Purpose and Hypotheses of the Research

This study aimed to determine the effect of self-leadership on organizational learning in general aviation companies. It also tried to inferentially prove how self-leadership behaviors of employees will increase their organizational learning levels. Since there are few studies on this subject, the research findings are expected to contribute to the literature. The data used in the study were obtained from white-collar employees working in general aviation companies in Turkey.

In the study, several hypotheses were created to test the relationship and effect of self-leadership and organizational learning. The research hypotheses are listed below:

H1: There is a positive and significant relationship between self-leadership and organizational learning.

H2: The sub-dimensions of self-leadership positively and significantly affect the commitment to learning.

H3: The sub-dimensions of self-leadership positively and significantly affect the shared vision.

H4: The sub-dimensions of self-leadership positively and significantly affect open-mindedness.

H5: The sub-dimensions of self-leadership positively and significantly affect intra-organizational knowledge sharing.

3.2. Research Method

3.2.1. Data Collection Tools of the Research

Face-to-face data were collected using the survey technique in the study. The ethics review committee's approval was obtained with the decision of the Scientific Ethics Review Committee of the Faculty of Economics and Administrative Sciences, Selçuk University, dated 04.03.2023, and numbered 19/220. Questionnaires were applied with a purposive sampling method. Data from five questionnaires out of 316 questionnaires were considered invalid, and analyses were performed on 311 questionnaires. In the first part of the questionnaire, there are six questions about demographic characteristics. "Self-Leadership Scale" developed by Houghton and Neck (2002) and adapted into Turkish by Doğan and Şahin (2008b) was used in the second part of the questionnaire. "Organizational Learning Scale" developed by Calantone et al. (2002) and adapted into Turkish by Biçkes (2011) was used in the third part of the questionnaire. Data used in the study were also analyzed through SPSS 25 and Amos 24 programs.

3.2.2. Research Population and Sample

The research population consists of approximately 600 white-collar employees working in general aviation companies operating throughout Turkey. In the research, 311 white-collar employees in the organizations that can be accessed were included in the sample. This sample was obtained by the purposive sampling method. In the study, it is confirmed that the appropriateness of the sample size was confirmed by taking into account a 5% margin of error within the 95% confidence limit (Coşkun et al., 2019).

4. FINDINGS

4.1. Demographic Characteristic

This section focuses on the specific demographic characteristics of the participants and the results are shown in Table 1.

Table 1: Demographical Characteristics

	N	%		N	%
GENDER			MARITAL STATUS		
Male	246	79.10	Married	198	63.67
Female	65	20.90	Single	113	36.33
AGE			EDUCATIONAL STATUS		
18-24 years old	34	10.94	High School	40	12.87
25-30 years old	58	18.65	College	95	30.54
31-35 years old	91	29.26	Bachelor's Degree	158	50.80
36-40 years old	64	20.58	Master's Degree	14	4.50
41-45 years old	45	14.46	PhD.	4	1.29
46 years and above	19	6.11	TOTAL WORKING PERIOD		
WORKING PERIOD IN ORG.			Less than 1 year	25	8.04
Less than 1 year	27	8.68	1-5 years old	61	19.61
1-5 years old	59	18.98	6-10 years old	91	29.26

6-10 years old	88	28.30	11-15 years old	75	24.12
11-15 years old	81	26.04	16-20 years old	38	12.22
16-20 years old	31	9.97	21 years and above	21	6.75
21 years and above	25	8.03			

According to Table 1, 20.90% (65) of the participants were female, and 79.10% (246) were male. 63.67% (198) of the participants were married and 36.33% (113) were single. 10.94% (34) of the participants were between 18 and 24 years old, 18.65% (58) were between 25 and 30 years old, 29.26% (91) were between 31 and 35 years old, 20.58% (64) were between 36 and 40 years old, 14.46% (45) were between 41 and 45 years old and 6.11% (19) were 46 years or above. 12.87% (40) of the participants were high school graduates, 30.54% (95) were associate graduates, 50.80% (158) were bachelors, 4.50% (14) were Master’s graduates and 1.29% (4) were Ph.D. graduates. Participants have been working in the same organization as follows: 8.68% (27) less than one year, 18.98% (59) between 1 and 5 years, 28.30% (88) between 6 and 10 years, 26.04% (81) between 11 and 15 years, 9.97% (31) between 16 and 20 years, and 8.03% (25) 21 years and above. The total employment period of the participants is as follows: 8.04% (25) less than one year, 19.61% (61) between 1 and 5 years, 29.26% (91) between 6 and 10 years, 24.12% (75) between 11 and 15 years, 12.22% (38) between 16 and 20 years, and 6.75% (21) 21 years and above.

4.2. Validity Analysis

In the study, exploratory (EFA) and confirmatory (CFA) factor analyses were used for the validity analysis of the variables. First of all, the varimax rotation method and principal components method were applied within the scope of exploratory factor analysis. Then, confirmatory factor analysis was performed with the maximum likelihood technique. In addition, the goodness of fit values was analyzed to verify the factor structure (Albright & Park, 2009). First, confirmatory factor analysis values were tested because the SL25 item, included in the self-leadership scale as a result of exploratory factor analysis, had a factor loading of less than 0.30 and was loaded on more than one factor (Pallant, 2020: 201). As a result of the confirmatory factor analysis, it was concluded that the standard regression coefficient values of the SL25 item were low and decreased the goodness of fit values (Gürbüz, 2019: 34). The validity analysis of the variables is shown in Table 2.

Table 2: The Validity Analysis for Variables

Scales	Factors	Factor Loading	Eigenvalue	Factor Explained (%)
Self-Leadership	Behavior-Focused St.	.443-.681	1.648	18.824
	Natural Reward St.	.362-.589	1.547	14.847
	Const. Tht. Pattern St.	.419-.616	2.041	16.743
Organizational Learning	Com. to Learning	.416-.714	1.795	16.741
	Shared Vision	.411-.689	1.926	12.858
	Open-Mindedness	.398-.702	1.853	12.653
	Int. Knowledge Sharing	.385-.684	1.749	12.350
Self-Leadership (Ex. Tot. Var.= %50.426; p=0.000; KMO = 0.728; Bartlet’s Sph. χ^2 = 294.157)				
Organizational Learning (Ex. Tot. Var.= %54.711; p=0.000; KMO = 0.817;				

Bartlett's Sph. $\chi^2=277.947$)

According to Table 2, the factors of the self-leadership scale have a loading distribution between 0.362 and 0.681, while the factors of the organizational learning scale have a loading distribution between 0.385 and 0.714. Factor loadings of 0.30 and above are acceptable for scales (Şencan, 2005). The KMO value for self-leadership is 0.728, and the Bartlett test is at ($p=.000<.05$) level, and the KMO value for organizational learning is 0.817, and the Bartlett test is at ($p=.000<.05$) level and significant (Büyüköztürk, 2002: 481). The self-leadership eigenvalue is also grouped under three dimensions with an eigenvalue greater than one and four dimensions with an organizational learning eigenvalue greater than one (Büyüköztürk, 2002: 479). In addition to this, the total variance explained was 50.426% for self-leadership and 54.711% for organizational learning. It is a significant criterion of factor analysis since the total variance explained exceeds 0.50 (Yaşlıoğlu, 2017: 77). Finally, confirmatory factor analysis was used to reanalyze the validity of the factor structure related to self-leadership and organizational learning (Yaşlıoğlu, 2017: 78). Accordingly, it was found that SL30-SL31 items in self-leadership fit indices increased the Chi-square value too much. In this context, correction ways for modification were created between some items in the direction of the modification indices to achieve a good model fit. It was observed that the factor loadings of items related to self-leadership varied between 0.54 and 0.79. In addition, it was observed that the factor loadings of the items related to organizational learning varied between 0.51 and 0.82. Factor loading values greater than 0.40 are acceptable (Yaşlıoğlu, 2017: 78). Table 3 shows the goodness of fit values related to self-leadership and organizational learning.

Table 3: Goodness of Fit Values for Variables

Scales	$\Delta X^2/df$	GFI	CFI	NFI	RMSEA
Self-Leadership	3.539	0.865	0.937	0.927	0.071
Organizational Learning	3.295	0.921	0.873	0.886	0.077
Good Fit	$0 \leq \Delta X^2/df \leq 3$	$0.90 \leq GFI \leq 1.00$	$0.90 \leq CFI \leq 1.00$	$0.95 \leq NFI \leq 1.00$	$0 < RMSEA < 0.05$
Acceptable Fit	$3 < \Delta X^2/df \leq 5$	$0.80 \leq GFI < 0.90$	$0.85 \leq CFI \leq 0.90$	$0.80 \leq NFI < 0.95$	$0.05 < RMSEA < 0.08$

Resource: Schumacker & Lomax, 2004: 74.

Table 3 shows that the goodness-of-fit values related to self-leadership were acceptable for $\Delta X^2/df$ (3.539), GFI (.865), NFI (.927), and RMSEA (.071) and had a good fit for the CFI (937). It was found that the goodness of fit values related to organizational learning was acceptable for $\Delta X^2/df$ (3.295), CFI (.873), NFI (.886), and RMSEA (.077), and had a good fit for GFI (.921). Accordingly, it is seen that the values of all variables are within the acceptable range of fit (Joreskog, 1996: 310; Byrne, 2016: 239).

Cronbach's Alpha values were used to measure the reliability of the variables. CR (Composite Reliability) and AVE (Average Variance Extracted) values, which measure the divergence and convergence validity of the model, were calculated as a result of confirmatory factor analysis. Table 1 shows Cronbach's Alpha, CR, and AVE values for self-leadership and organizational learning.

Table 4: Reliability and CR and AVE Values of Variables

Scales	Factors	Cronbach's Alpha	CR	AVE
Self-Leadership	Behavior-Focused St.	.714	.716	.614

	Natural Reward St.	.733	.725	.547
	Const. Tht. Pattern St.	.826	.807	.554
Organizational Learning	Com. to Learning	.715	.698	.685
	Shared Vision	.718	.689	.545
	Open-Mindedness	.813	.811	.603
	Int. Knowledge Sharing	.712	.704	.633

According to Table 4, the highest Cronbach's Alpha value for self-leadership is 0.826. This value for organizational learning is 0.813. In cases where Cronbach's Alpha value is 0.70 and above, the scale is considered to be reliable (Şencan, 2005). While the highest CR value for self-leadership is 0.807, this value is 0.811 for organizational learning. The highest AVE value for self-leadership is 0.614, while it is 0.685 for organizational learning. A CR value above 0.60 and an AVE value above 0.50 is an acceptable level (Fornell & Larcker, 1981:46). It can also be mentioned that CR>AVE values for all dimensions, hence the existence of convergent validity of the dimensions (Byrne, 2016).

4.3. Descriptive Statistics and Correlation Analysis

In this part, descriptive statistics were created, and correlation analysis was performed to reveal the relationship between self-leadership and organizational learning (Durmuş et al., 2018: 143). Descriptive statistics and correlation analysis related to the variables are presented in Table 5.

Table 5: Descriptive Statistics and Correlation Analysis

	Mean	S.D.	1	2	3	4	5	6	7	8	9
1. Emp. Leadership (G)	6.23	.685	1.000								
2. Behavior-Focused St.	5.87	.646	.518**	1.000							
3. Natural Reward St.	5.99	.647	.532**	.386**	1.000						
4. Const. Tht. Pattern St.	6.12	.646	.543*	.434**	.245**	1.000					
5. Organizational Learning (G)	6.19	.463	.474**	.432**	.414*	.412**	1.000				
6. Com. to Learning	6.26	.523	.346**	.538**	.547**	.154	.532**	1.000			
7. Shared Vision	6.24	.574	.438**	.146	.453**	.388**	.425**	.373**	1.000		
8. Open-Mindedness	6.25	.536	.362**	.459**	.131	.433**	.354**	.449**	.428*	1.000	
9. Int. Knowledge Sharing	6.28	.643	.352**	.367**	.462**	.352**	.387**	.431**	.342**	.455*	1.000

* p< .05 **p< .01
 Self-Leadership and its Sub Dimensions (Min.-Max.): Skewness= -.536; -.612 ; Kurtosis= .532; .635
 Organizational Learning and its Sub Dimensions (Min.-Max.): Skewness= -.468; -.525; Kurtosis= .526; .638

In Table 5, the mean of intra-organizational knowledge sharing (6.28), commitment to learning (6.26), and shared vision (6.24) is the highest. In addition, skewness values range between -.536 and -.612 for self-leadership and sub-dimensions and are skewed to the left. In addition, kurtosis values ranged between +.532 and +.635 for self-leadership and sub-dimensions. Skewness values range between -.468 and -.525 for organizational learning and its sub-dimensions and are skewed to the left. Kurtosis values also range between +.526 and +.638 for

organizational learning and its sub-dimensions. Accordingly, when the skewness and kurtosis values of the variables were examined, it was found that all values ranged between -1.5 and +1.5 (Awang, 2015).

According to Table 5, it is seen that there is a positive, significant, and moderate relationship between self-leadership and organizational learning ($r=.474$; $p<.05$) in the correlation analysis. In this case, the H1 hypothesis was accepted. In addition, it is seen that there is a positive, significant and moderate relationship between behavior-focused strategies and commitment to learning ($r=.538$; $p<.05$). It is seen that there is a positive, significant and moderate relationship between behavior-focused strategies and open-mindedness ($r=.459$; $p<.05$). It is seen that there is a positive, significant and moderate relationship between behavior-focused strategies and intra-organizational knowledge sharing ($r=.367$; $p<.05$). In addition, it is seen that there is a positive, significant and moderate relationship between natural reward strategies and commitment to learning ($r=.547$; $p<.05$). It is seen that there is a positive, significant and moderate relationship between natural reward strategies and shared vision ($r=.453$; $p<.01$). In addition, it is seen that there is a positive, significant and moderate relationship between natural reward strategies and intra-organizational knowledge sharing ($r=.462$; $p<.05$). It is seen that there is a positive, significant and moderate relationship between constructive thought pattern strategies and shared vision ($r=.388$; $p<.05$). It is seen that there is a positive, significant and moderate relationship between constructive thought pattern strategies and open-mindedness ($r=.433$; $p<.05$). Finally, it is seen that there is a positive, significant and moderate relationship between constructive thought pattern strategies and intra-organizational knowledge sharing ($r=.352$; $p<.01$). In this case, the highest correlation value was found between natural reward strategies and commitment to learning ($r=.547$; $p<.05$).

4.4. Regression Analysis of Variables

In this section, the effect of self-leadership on organizational learning will be examined by regression analysis (Durmuş et al., 2018: 154). The regression analysis values are presented in Table 6.

Table 6: Regression Analysis of Variables

Model	Dependent Variable	Independent Variable	β	T	P	F	Sig.	R	R ²	Adj. R ²
1	Com. to Learning	Const.	3.629	5.352	.000	48.547	.000	.624	.578	.517
		Behavior-Focused St.	.184	2.468	.002					
		Natural Reward St.	.225	2.562	.001					
		Const. Tht. Pattern St.	.044	.546	.422					
2	Shared Vision	Independent Variable				45.965	.000	.532	.487	.464
		Const.	3.262	4.574	.000					
		Behavior-Focused St.	.152	.453	.436					
		Natural Reward St.	.357	1.659	.002					
		Const. Tht. Pattern St.	.435	2.584	.000					
3	Open-Mindedness	Independent Variable				43.862	.000	.518	.493	.475
		Const.	3.434	3.843	.000					
		Behavior-Focused St.	.248	1.647	.002					
		Natural Reward St.	.032	.475	.369					

		Const. Tht. Pattern St.	.253	2.869	.000					
4	Int. Knowledge Sharing	<i>Independent Variable</i>				51.244	.000	.604	.534	.522
		<i>Const.</i>	4.538	3.039	.000					
		Behavior-Focused St.	.194	2.571	.002					
		Natural Reward St.	.183	2.646	.001					
		Const. Tht. Pattern St	.259	1.702	.001					

According to Table 6, behavior-focused strategies ($\beta = .184$, $p = .002$) and natural reward strategies ($\beta = .225$, $p = .001$) have a significant and positive effect on commitment to learning. Self-leadership sub-dimensions explain 51.7% of the commitment to learning. In addition, $F = 48.547$ and $sig = .000$ indicate that the relationship between the variables is significant. In this case, hypothesis H2 was partially accepted. Natural reward strategies ($\beta = .357$, $p = .002$) and constructive thought pattern strategies ($\beta = .435$, $p = .000$) have a significant and positive effect on the shared vision. Self-leadership sub-dimensions explain 46.4% of the shared vision. In addition, $F = 45.965$ and $sig = .000$ indicate that the relationship between the variables is significant. In this case, hypothesis H3 was partially accepted. Behavior-focused strategies ($\beta = .248$, $p = .002$) and constructive thought pattern strategies ($\beta = .253$, $p = .000$) have a significant and positive effect on open-mindedness. Self-leadership sub-dimensions explain 47.5% of open-mindedness. In addition, $F = 43,862$ and $sig = .000$ indicate that the relationship between the variables is significant. In this case, hypothesis H4 was partially accepted. Behavior-focused strategies ($\beta = .194$, $p = .002$), natural reward strategies ($\beta = .183$, $p = .001$), and constructive thought pattern strategies ($\beta = .259$, $p = .001$) have a significant and positive effect on intra-organizational knowledge-sharing. Self-leadership sub-dimensions explain 52.2% of intra-organizational knowledge sharing. In addition, $F = 51,244$ and $sig = .000$ indicate that the relationship between the variables is significant. In this case, hypothesis H5 was accepted.

5. CONCLUSION AND RECOMMENDATIONS

Faster, more flexible, and more responsive employee and organizational behaviors have emerged in the business environment as a necessity of the modern age due to the continuous change in environmental conditions. This has led to the emergence of different leadership styles. Self-leadership, which is one of them, is to enable the self-leadership behavior that exists in every person to emerge (Manz & Sims, 1989: 3; Manz & Sims, 1991: 18; as cited in Doğan Şahin, 2008b: 140). Organizational learning perceptions, which play a role in the learning potential of employees, may increase positively with the emergence of this leadership behavior. First of all, a positive and significant relationship was found between self-leadership and organizational learning regarding the hypotheses analyzed in the study. It was also found that self-leadership had a positive and significant partial effect on organizational learning. This may be because employees focus on self-development and attach importance to learning within the organization when they act to be successful and guide themselves. Behavior-focused strategies, one of the sub-dimensions, have a significant and positive effect on the commitment to learning. This may be because the employee is more open to learning and thinks that the organization attaches importance to learning as a result of having goals and evaluating himself in this direction while doing his duty well or poorly. Natural reward strategies have a significant and positive effect on commitment to learning. This may be because the employee enjoys his job, feels that the workplace attaches importance to learning, and tries to improve his job more. Natural reward strategies have a significant and positive effect on the shared vision. This may be because the employee focusing on the enjoyable part of his job and uniquely performing his

duties will lead him to love his job, and he will endeavor to achieve the goals of the organization in this direction. Constructive thought pattern strategies have a significant and positive effect on the shared vision. This may be because the organization will display constructive thought and endeavor to achieve its goals, as a result of having constructive thoughts against positive or negative situations and getting strength from himself. Behavior-focused strategies have a significant and positive effect on open-mindedness. This may be because the employee has goals and has a belief about his or her performance, causing him to question decisions and actions. Constructive thought pattern strategies have a significant and positive effect on open-mindedness. This may be related to the employee's constructive thoughts against various events and situations that cause him to question his decisions and actions. Behavior-focused strategies have a significant and positive effect on intra-organizational knowledge sharing. This may result in the employee's desire to share his knowledge and experience with other employees as a result of having goals in the organization and having a belief about his performance. Natural reward strategies have a significant and positive effect on intra-organizational knowledge sharing. This may be due to the desire to share knowledge, experience, and thoughts with the employees of the organization as a result of focusing on the enjoyable part of his job and uniquely fulfilling his duty. Constructive thought pattern strategies have a significant and positive effect on intra-organizational knowledge sharing. This may be because the employee has goals and evaluates himself in this direction while doing his duty well or poorly, and this creates the desire to share his personal experience, knowledge, and thoughts with the employees of the organization.

The study on the effect of self-leadership on organizational learning in the literature is as follows. In this context, in the study titled “*In terms of quality and efficiency the effect of self-leadership on competencies of academics and organizational learning capacities of universities at higher education system in Turkey*” conducted by Ergin (2014) with 365 faculty members working at foundation universities, it was found that self-leadership positively affects organizational learning. It was also found that various sub-dimensions of self-leadership have a significant effect on organizational learning. In this context, partially similar results emerged with this study.

Although many studies have been done on the concept of self-leadership, the existence of few studies that determine the effect of the concept on organizational learning makes this research important in terms of contributing to the literature. In addition, another important aspect of the research is to perform a study on the employees of general aviation organizations in the service sector. Another significance of the study is that the results regarding the effect of self-leadership on the perception of organizational learning may be useful for general aviation companies that have never been studied. However, it can be said that there are some limitations due to reasons such as time and cost limitations, and the answers are based on the personal perceptions of the employees since the study was carried out only at accessible aviation companies. As result of the research, it is a contributing factor to find out how self-leadership affects employees' thoughts and perceptions about organizational learning. Accordingly, significant findings were found for organizations within the framework of the results of the study. This can help organizations improve their relationships with their employees. From a different viewpoint, the high self-leadership behavior of the employees of the organization may cause them to have a positive view of organizational learning. In this case, employees who attach importance to their feelings and thoughts and try to do their jobs with better performance will be open to learning and care about the organizational learning level in the organization. Employees' thinking that there is a positive organizational learning level in the organization may lead them to make more efforts for the organization. In this case, it may be effective in increasing the efficiency and performance of the organization. Accordingly, this research is expected to be beneficial to

organizational managers, researchers, and the business environment. Also, the research has only been applied to the aviation sector. Therefore, it can be suggested that future studies on the subject should be carried out in other sectors and that different sectors should be compared in this matter. The effect of different types of leadership on organizational learning can also be found in future studies.

ÖZET

Covid - 19 salgını iki bin on dokuz yılında ortaya çıkmış ve tüm küresel çabalara rağmen kısa sürede tüm dünyayı etkisi altına almıştır. Sadece sosyal anlamda değil ekonomik anlamda da küresel düzeyde etkilerini göstermiştir. Salgınla birlikte hem kültürel hem de ekonomik anlamda yeni bir dünya düzeni tanımlanmış, geri dönülemez şekilde bir yeni normal kavramı ortaya çıkmıştır. Bu süreçte de küresel ekonomideki dengeler de sarsılmış ve yeniden tanımlanmıştır. Bu çalışmada amaç Covid-19 salgınının küresel ekonomiye olan etkilerini ortaya koymaktır. Bu nedenle krizin büyüme, istihdam, ve dış ticaret üzerine etkileri incelenmiştir. Bunlara ek olarak krizin dünya nüfusunun yüzde doksanın barındıran küresel harcanabilir bütçenin yarısına sahip, az gelişmiş ve gelişmekte olan ülkelere etkileri ayrı bir başlık altında incelenmiştir. Covid-19 salgını küresel ekonomiyi ciddi anlamda etkilemiş ve ülkelerin büyüme, dış ticaret, istihdam üzerine ciddi negatif etkileri olduğunu söyleyebiliriz.

Anahtar Kelimeler: Covid-19, Pandemi, Küresel Ekonomi

Effects of the Covid-19 Pandemic on the Global Economy

ABSTRACT

The Covid - 19 epidemic emerged in two thousand and nineteen, and despite all global efforts, it affected the whole world in a short time. It has shown its effects not only in the social sense but also in the economic sense at the global level. With the epidemic, a new world order has been defined, both culturally and economically, and a new normal concept has emerged irreversibly. In this process, the balances in the global economy were shaken and redefined. The aim of this study is to reveal the effects of the Covid-19 epidemic on the global economy. For this reason, the effects of the crisis on growth, employment and foreign trade were examined. In addition, the effects of the crisis on underdeveloped and developing countries, which have half of the global disposable budget, which is home to ninety percent of the world's population, are examined under a separate heading. The Covid-19 epidemic has seriously affected the global economy and we can say that countries have serious negative effects on growth, foreign trade and employment.

Keywords: Covid-19, Pandemic, Global Economy

GİRİŞ

2019 yılının sonunda Çin Halk Cumhuriyeti'nin Wuhan eyaletinde resmi olarak kabul edilen, kaynağı ve yapısı bilinmeyen akut solunum yolu hastalığı şeklinde tanımlanan bir hastalık ortaya çıkmıştır. 30 Ocak 2020'de Dünya Sağlık Örgütü tarafından uluslararası öneme sahip halk sağlığı tehdidi olarak tanımlanmıştır. 11 Şubat 2020'de resmi olarak önce COVID-19 ve daha sonra SARS-CoV2 olarak adlandırılan virüsün, 11 Mart 2020'de 114 ülkede bulaşı teyit edilmiş ve Dünya Sağlık Örgütü tarafından küresel bir salgın olarak adlandırılmıştır (Dünya Sağlık Örgütü 2020 Covid-19 Raporu).

05.05.2023 tarihinde Dünya Sağlık Örgütü Covid-19 küresel acil durumunun sona erdiğini ilan etse de, günümüzde halen etkileri süren Covid-19 salgını, küresel ölçekte sosyal ve ekonomik hayatı derinden etkileyerek toplum üzerinde geri dönülemez etkiler yaratmıştır. Hükümetlerin uyguladığı sınır kapılarını bireysel ve ticari olarak kapatma uygulamaları, sokağa çıkma yasakları, sosyal mesafe kuralları, maske kullanım zorunlulukları gibi uygulamalar hem bireylerin hem de işletmelerin uyum sağlamasını gerektiren yeni bir normal yaratmıştır.

Küresel bir kriz olarak Covid-19, küresel ekonomiyi derinden etkilemiştir. Salgın dönemi ve sonrasında yaşanan istihdam piyasasındaki hareketlilik, ürün ve hizmetlere dair taleplerin düşmesi, müşteri taleplerinde değişikliklerin yaşanması, ithalat ve ihracat kanallarının tıkanması nedeniyle küresel çapta büyümenin ve gelirlerin azalması, küresel işsizlik dalgasının yaşanması, sanayinin yavaşlaması nedeniyle üretim emtiaları ihtiyacının azalarak fiyatının düşmesi ve daha sonrasında ise üretim kıtlığı nedeniyle emtia fiyatlarında yaşanan hızlı yükselme gibi etkiler küresel çapta ekonomik şokların yaşanmasına neden olmuştur.

Bu çalışmanın amacı, Covid-19'un küresel ekonomi üzerindeki etkilerini büyüme, işsizlik, dış ticaret ve küresel tüketimin yarısına küresel nüfusun ise yüzde doksanına ev sahipliği yapan az gelişmiş ve gelişmekte olan ülkelere etkileri bağlamında değerlendirmektir. Covid-19 salgını gerek ekonomik etkileri ile gerekse sosyal alandaki etkileri ile küresel anlamda bir krize ve durgunluğa neden olmuştur. Bu krizden ve durgunluktan her ülke aynı derece etkilenmediği gibi çıkış yolu ve süreci de aynı değildir.

1. Ekonomik Kriz ve Durgunluk Kavramları ve Kapsamı

Ekonomik krizler; krizlerin baş gösterdiği sektörlere göre ikiye ayrılabilir. Bunların ilki mal ve hizmet üretim piyasalarında ortaya çıkan krizlerdir ve bu krizlerin ilk etkileri işgücü piyasalarında kendini gösterir. Reel sektör krizleri olarak adlandırılan bu krizler enflasyon ve durgunluk krizleri olarak değerlendirilebilirler. İkinci grup krizler ise finans sektöründe gerçekleşen krizler olup bankacılık, borsa veya döviz krizi olarak gruplara ayrılabilirler. Finansal krizlerin sonuçlarını ödemeler dengesinin ve fiyat istikrarının bozulmasıdır. Eğilmez (2014) krizlerin kaynağının reel sektör ya da finans sektörü olmasından bağımsız olarak diğer sektörlerde de kriz başlattığını belirtmektedir.

Enflasyon piyasanın denge halinde uzaklaşarak talebin arzdan daha hızlı bir şekilde artarak ürün veya hizmet fiyatlarının reel olarak yükselmesi olarak ifade edilebilir. Berberoğlu (1994: 213) ise klasik iktisat bakış açısıyla enflasyonu; dolaşımda yer alan varlıkların ilgili ekonomik ihtiyaçlardan daha hızlı şekilde artarak, varlık kıymetlerinin değer kaybetmesi ve sonuç olarak da ürün veya hizmet değerlerinin artması olarak ifade eder. Enflasyon talep tarafındaki oynaklık sebebiyle olabileceği gibi maliyet unsurlarındaki oynaklıklardan da kaynaklanabilir. Talep kaynaklı enflasyon artan talebin üretim kapasitesi ile karşılanamamasından dolayı yaşanan fiyat artışı olarak ifade edilirken, maliyet kaynaklı enflasyon hammadde veya işgücü maliyetleri gibi girdi maliyetlerin yükselmesi ve ya emeğe ait marjinal verimliliğin düşmesi gibi sebeplerden kaynaklanan fiyat artışlarıdır.

Mal, hizmet, işgücü, hammadde gibi kaynaklara yönelik talebin azalması durgunluk olarak ifade edilir. Talebin azalması ekonomik faaliyet hızını düşmesine bu da ekonomik daralmaya neden olur. İktisadi tanımla durgunluk; GSMH en az iki çeyrek boyunca büyümemesi olarak ifade edilir. Durgunluk; işsizlikte artış, kazanç ve gelirlere azalma olarak kendini gösterir. Enflasyon ve durgunluğun aynı zaman diliminde yaşanması da stagflasyon olarak tanımlanır. Stagflasyon dönemleri ürün ve hizmet fiyatlarının yükselmesine rağmen, üretim faktörlerinin kullanımının kapasitelerinin altında olduğu, dolaşımda olan mal ve hizmetler bütününe artmadığı ve ekonomik büyümenin sürdürülemediği dönemlerdir. Covid-19 salgını ile dünya hem krizi hem de durgunluğu yaşamıştır.

2. Ekonomik Kriz ve Covid-19 Pandemisi

İlk defa İngiliz İktisatçı Foter (1833) tarafından ortaya atılan küreselleşme kavramı; mal, hizmet veya sermayenin sınırlar arasında karşılıklılık ilkesine dayalı bir şekilde yer değiştirmesi ile ulusal ekonomilerin dünya piyasalarına dahil olma süreci olarak tanımlanabilir (Kıvılcım 2013). Artan hareketlilik küreselleşmenin ayrılmaz bir parçasıdır. Lakin küreselleşmeyi salt ekonomik bir kavram olarak görmek, küreselleşmenin kültürel, politik ve sosyal yönlerini değerlendirmemek, Covid-19 salgınının hareket ve etki mekanizmalarını anlamada yetersiz kalmaya neden olacaktır.

Dünya Sağlık Örgütü (2020) raporunda da belirtildiği üzere bir hastalığı salgın olarak tanımlamak için üç kistas temel aldığı belirtilmektedir. Bunlar;

- Tanımlanan virüsün dünya üzerinde farklı ülkelerde veya kıtalarda görülerek geniş alanlara yayılması,
- İnsanlar üzerinde yüksek bulaşıcılık seviyesine sahip olması ve
- Yaşamsal anlamda risk yaratmasıdır.

Bu bağlamda salgın ve küreselleşme kavramlarının etkileşimini göz önünde bulundurmamak, ekonomik krizi ve etkilerini de anlamakta yararlı olacaktır.

1929 Büyük Buhranı Amerika Birleşik Devletleri'nde menkul kıymetler piyasasının aşırı değer kaybetmesi ile başlayarak, işsizlik rakamlarının yükselmesine sebep olurken para piyasalarındaki dengesizlik küresel çapta ithalat ihracat dengesini bozarak tüm dünyaya yayılmış küresel bir cari açık krizi yaratmıştır. 1973 Petrol Krizi Arap-İsrail savaşı neticesinde petrol ihracatına konulan ambargo, emtia fiyatlarının sert bir şekilde dalgalanmasına ve küresel ekonomik istikrarsızlığa neden olmuştur. 2008 küresel kriz ise yine Amerika Birleşik Devletleri'nde emlak piyasasında sert dalgalanmalar ve yükselen varlık balonlarının normalleşmesi ile başlayarak küresel bir batık kredi krizini tetiklemiştir. Görülmektedir ki çıkış nedenleri farklı olsa da, krizler benzer mekanizmalar ile benzer etkiler göstermiş ekonomilerin istikrarlı bir şekilde işleyişini engellemiştir.

Covid-19 salgın krizi temelde halk sağlığı krizi olarak ortaya çıksa da ekonomik aktivitelerde şoklara neden olarak bir ekonomik krizi de tetiklemiştir. Canuto (2020b) salgının, hem talepte hem de arzda aşırı dalgalanmalar yaratarak ekonomik istikrarı etkilediğini belirtmektedir. Yazar ayrıca, talebi artan ürünlerde arz sıkıntısı yaşanırken, talep edilmeyen ürünlerde arz fazlası yaşandığını, bunun ekonomik dengesizlik yarattığını, finansal gücü olmasına rağmen nakit dengesinde yaşanan sıkışıklıklar nedeniyle işletmelerin zarar görebileceğini, artan işsizlik ve azalan talep karşısında ticari olarak yok olma tehlikesi yaşayan küçük işletmelerin ekonomiyi durgunluğa sürükleyeceğini belirtmektedir.

Bu risklere karşılık ülkeler ise ekonomik istikrarı sağlamak için mali politika araçlarını kullanmış bu da kısa vadede ekonomik bir rahatlama yaratmış olsa da, uzun vadede ekonomik istikrarın tekrar dengelenmesi için sıkı mali politika araçlarının kullanımının gerekliliğini kaçınılmaz kılmıştır. Eryüzlü (2020)'de benzer bir şekilde salgın zamanında uygulanan para

politikalarının salgın sonrası için talebi azdırırken, arzın yeteri kadar artamayacağını, dolayısıyla da bunun da enflasyon olarak ortaya çıkacağını belirtmiştir. Hoekstra ve Leeftang (2020), azalan tüketici güveni, düşük gelirler, tüketici kredilerinin temerrüde düşme riski ve düşen hisse fiyatları nedeniyle azalan finansal olanakların sonucunda, tüketimde düşüşün yanı sıra, ürün kategorileri arasında kaymalar yaşanacağını belirtmektedir. Eroğlu (2020) ise, salgın sonrası işsizlik ve yoksulluğun artmış olacağını belirtmektedir. Benzer şekilde Pat vd. (2020)'de salgın sonrası gelir eşitsizliğini artacağını belirtirken, artacak işsizliğe de vurgu yapmıştır. Torun (2020), salgın nedeniyle ülke ekonomilerinin daralmalarının kaçınılmaz olduğunu ve mali önlemler olmadan ekonomilerinin toparlanmalarının mümkün olmadığını belirtmektedir.

Dünya krizlerinin başlangıç noktaları farklı olsa da krizlerin gelişme sürecinde yaşananlar ve yarattığı sonuçlar anlamında benzerlikler sergilediği göz önüne alınırsa Covid-19 salgınının mali etkilerinin de toplam harcamalarda azalma, tüketim alışkanlıklarında değişim, tasarruf oranlarında artış, işsizlik oranında artış ve bunların neticesinde ülke ekonomilerinde durgunluk ve artan yoksulluk olacağı söylenebilir.

2.1 Covid-19'un Ekonomik Büyümeye Etkisi

Küreselleşmenin hem ekonomik hem de sağlıksal rahatsızlıkların uluslararası bulaşıcılığını attırdığı aşikârdır (Eğilmez 2014). Covid-19 krizinde de ülkeler makro ve mikro koruyucu önlemler almış, sınır kapılarını hızla kapatmış olsalar da bulaş hızını ve etkisini yavaşlatmaları mümkün olmamıştır. Şekil 1'de de görüldüğü üzere dünya Covid-19 krizine, 2008 krizinin etkilerini daha atlatamamışken yakalanmıştır. Dünya büyüme oranı Covid-19 krizinin başlaması ile %2,8'den hızla -%3 gerilemiş, aşuların uygulanmaya başlamasına paralel olarak kontrollü serbestleşmenin yürürlüğe konması ile de toparlanarak %6'ya kadar yükselmiştir. Gelişmiş ekonomiler ise Covid-19 öncesi %1,7 olan büyüme hızı, Covid-19 krizi ile -%4,5'a kadar düşse de aşılmanın artması ile %5,2'ye kadar çıkmıştır. Benzer şekilde gelişmekte olan ülkeler için de %3,6 olan büyüme oranı krizle birlikte -%1,9'a kadar gerilemiş, daha sonraki yıl ise %6,6'ya kadar yükselmiştir (Imf Datamapper 2022).

Şekil 1: Ekonomik Gelişmiş Düzeyine Göre Büyüme Oranları.

Kırmızı: gelişmekte olan ülkeler. Mavi: gelişmiş ülkeler. Turuncu: dünya ortalaması

Kaynak: IMF Datamapper, 2022.

Gelişmiş ekonomilerin, gelişmekte olan ekonomilerden daha fazla etkilendiği ve ekonomik toparlanma aşamasında da gelişmekte olan ülkelerin daha yüksek bir performans sergilediği şekil 1 de de görülmektedir. Ünüvar ve Aktaş (2022), bu ayrışmayla ilgili olarak gelişmiş ülkelerde kapanma oranlarının %70'leri, işyerlerinin kapalı kalma süresinin ise

%94'leri bulmasına rağmen gelişmekte olan ülkelerde daha az katı kapanma önlemleri alınmasına bağlar. Bu verilerden hareketle gelişmiş ve gelişmemiş ülkeler arasında işsizlik ve mal ihracat/ithalat oranlarında paralel bir farklılık görülmesi beklenebilir.

2.2 Covid-19'un İstidam Üzerine Etkisi

Hem gelişmiş hem de gelişmekte olan ülkelerde yaşanan ekonomik daralma işgücü piyasasını da olumsuz şekilde etkilemiştir. ILO'nun Dünya İşsizlik Raporunda (Dünya Çalışma Örgütü 2022) yer alan şekil-2 incelendiğinde Covid-19 krizinin tetiklediği keskin işsizlik artışının 2008 krizi ile karşılaştırıldığı taktirde ne kadar yüksek olduğu görülmektedir. 2008 krizinde küresel ölçekte büyüme %5,6 dan sıfıra gerilerken işsizlik oranları %5,4'den % 6'ya yükselmiştir. Fakat Covid-19 krizinde ise büyüme oranları %2,8'den %-3'e gerilerken işsizlik oranı ise keskin bir şekilde %5,4'den %6,6'ya yükselmiştir.

Şekil 2: Dünya Çalışma Örgütü Küresel İşsizlik Verileri

Kaynak: Dünya Çalışma Örgütü, 2022.

Şekil 3'de yer alan grafikte ise, Covid-19 salgının işsizlik konusunda en fazla G7 ülkelerini (Almanya, Amerika Birleşik Devletleri, Birleşik Krallık, İtalya, Fransa, Japonya ve Kanada) etkilediği (%4,3'den %6,5'a) görülmektedir. Daha sonra gelişmiş ülkeler (%4,8'den %6,6'ya) etkilenirken, gelişmekte olan ülkelerin etkilenme oranlarının ise daha düşük olduğu görülmektedir.

Şekil 3: Gelişmişlik Düzeyine Göre Ekonomilerin Covid-19 Salgınından İşsizlik Bağlamında Etkilenme Oranları.

2.3 Covid-19'un Dış Ticaret Üzerine Etkisi

Küreselleşen dünyada ithalat ve ihracat ülkeler için önemli birer imkân haline gelmiştir. İhracat ülkelerin istihdam piyasası imkânlarını genişleterek milli gelire katkı yaparken, ithalat ise ülkeler için kıt ve ulaşılmaz kaynakları daha kolay ve rekabetçi şekilde elde etmesine imkanı vermektedir. Fakat ithalat ve ihracat dengesinin olağan dışı bir şekilde ithalat lehine değişmesi ülkelerin cari açıklarının büyümesine sebep olarak ekonomik kırılma riskinin artmasına neden olmaktadır. İhracatın artması ise ülke içinde ilgili ürünle ilgili tedarik zincirinin zarar görmesi ve olası enflasyon riski ile birlikte ekonomik dengenin bozulmasını birlikte getirebilir (Soğancılar vd. 2022).

IMF World Economic Outlook (2021) verilerinden elde edilen Tablo 1 incelendiğinde küresel bazda, gelişmiş ve gelişmekte olan ülkeler bazında ithalat ve ihracat rakamlarındaki değişimler görülmektedir.

	İhracat Değişim Oranları		İthalat Değişim Oranları	
	2019-2020	2020-2021	2019-2020	2020-2021
Küresel	-7,66%	21,25%	-8,47%	21,17%
Gelişmiş Ekonomiler	-7,06%	19,71%	-8,37%	19,00%
Euro Bölgesi	-8,82%	21,78%	-8,17%	18,51%
Gelişen Ülkeler	-8,29%	23,68%	-8,75%	23,75%
Asya'daki Gelişen Ülkeler	-6,19%	24,51%	-3,09%	22,16%
Avrupa Gelişen Ülkeler	-3,20%	21,11%	-9,98%	25,40%
Orta Doğu Ve Asya Merkez Ülkeleri	-13,03%	18,87%	-32,86%	31,17%

Tablo 1: Gelişmişlik Bakımından Ülke Gruplarının Dış Ticaretteki Değişim Oranları

Kaynak: IMF World Economic Outlook; 2021.

Hem gelişmekte olan hem de gelişmiş ekonomilerden 2019-2020 yılları ithalat ve ihracat karşılama oranları incelendiğinde, cari açığı kapatıcı yönde ithalatın aleyhine bir gelişme olmuştur. Aşılma oranlarının artması ile küresel kısıtlamaların kaldırıldığı süreçte ise gelişmekte olan ülkelerin cari açıklarına negatif yönde etki eden bir dengesizlik oluşmuştur. Avrupa ve Asya'daki gelişmekte olan ülkeler karşılaştırıldığında ise Asya'daki ülkelerin ihracat rakamlarının Avrupa'daki ülkelere göre daha fazla düştüğü gözlemlenebilir. Bunun sebebinin de küresel tedarik zincirinde yaşanan aksamalar olması ve özellikle gelişmiş Avrupa pazarı için gelişmekte olan Avrupa üretim pazarının daha yakın bir tedarikçi haline gelerek avantaj kazanması olabilir.

2.4 Covid-19'un Az Gelişmiş ve Gelişmekte Olan Ülkelere Etkileri

Covid-19 salgını tüm dünyayı etkilemiş olsa da dünya nüfusunun %90'ından fazlasını barındıran harcanabilir küresel gelirin yarısına sahip (Dünya Eşitsizlik raporu 2021) az gelişmiş ve gelişmekte olan ülkeler için gelişmiş ülkelere göre daha farklı sorunları da beraberinde getirmiştir. Salgının yayılımı sürerken gelişmemiş ve gelişmekte olan ülkelere sosyal ve ekonomik olarak şoklara da karşı daha kırılma riski taşıyan hale gelirler. OECD Covid-19 (2022) verilerine göre her bin yetişkine düşen hastane yatağı sayısının yüksek olduğu gelişmiş ülkelerdeki

(Japonya (12,6), Almanya (7,8), Fransa (5,7)) nüfus başına ölüm sayısı, gelişmemiş veya gelişmekte olan ülkelerde (Meksika (1), Costarica (1,2), Kolombia (1,9)) daha düşük olarak rapor edilmiştir. Bu da gelişmekte olan ve ya gelişmemiş ülkelerdeki kaygı ve depresyonun daha derin yaşanarak, bu ülkelerde ruhsal yıkım oranlarını artmasına sebep olmuştur. Ayrıca gelişmemiş ve gelişmekte olan ülkeler açısından hastanelerin aşırı yüklenilmesinin önüne geçebilmek için bulaşın engellenmesini önleyen en etkin araç olan sokağa çıkma yasaklarının ve sosyal mesafe kurallarının daha katı uygulanması gerekliliğini ortaya koymaktadır. Fakat nüfusun büyük kısmının yoksulluk içinde yaşadığı ülkelerde sosyal izolasyon kurallarının uygulanması da o oranda zor olmaktadır.

Gelişmemiş ve gelişmekte olan ülke nüfusları için bir diğer sorun da işgücünün kayıt dışı çalışan oranıdır. Kayıt dışı çalışma; iş güvenliği, sağlık hizmetleri, işsizlik sigortası gibi sosyal haklardan yararlanamamayı da beraberinde getirdiğinden dolayı insanların sosyal mesafe ve izolasyon kurallarına da uymalarını zorlaştırmaktadır.

Gelişmemiş ve gelişmekte olan ülkeler için bir diğer zorluk da ülke ekonomilerinin vatandaşlarını ekonomik olarak desteklemek için daha az alana sahip olmasıdır. Bu ülke ekonomileri cari açıklarının büyümemesi için kur dengesine ve cari açıklarını finanse edebilmek amacıyla borç alabilmek için kredi notun iyiliğine bel bağlamaktayken, salgınla birlikte ekonomik kaynakların güvenli limanlara kaçışı dışsal şok olarak da ilgili ekonomilere zarar vermiştir. IMF 2021 raporuna göre salgının basında 83 milyar dolar riskli varlıklardan güvenli limanlara transfer olmuş bu da tarihteki en büyük finansal kaçış olarak tarihe geçmiştir.

Canuto (2020a) de benzer şekilde Afrika ve Latin Amerika gibi bölgelerdeki gelişmemiş ülkelerin salgınla birlikte ithalat kaynaklı arz sıkıntısı, turizm ve emtia fiyatlarındaki dalgalanmalardan kaynaklanan mali şoklara maruz kaldığını belirtir. Köse (2021) 2010 ve 2018 yılları arasında küresel çapta gerçekleşen borçlanmanın 55 trilyon doları bulunduğunu, bunun da gelişmemiş ve gelişmekte olan ülkeler için kuraklık ve salgın ile birleşince krizin ve durgunluğun kaçınılmaz olduğunu belirtmektedir.

IOM 2020 Göç Raporunda gelişmemiş ve gelişmekte olan ülkeler için bir ekonomik daralmanın da gelişmiş ülkelerde çalışarak ailelerine para yollayan göçmenlerden kaynaklanacağını vurgulamaktadır. Rapor, dünya genelinde 272 milyon kişinin çalışmak amacıyla göç ettiğini ve bu kişilerin ülkelerine gönderdiği para büyüklüğünün 554 milyar dolar olduğunu belirtmektedir. Bu rakamın bu ülkeler için cari açıklarında önemli bir denge unsuru yaratmasına rağmen (fakir ülkeler için bu miktarın cari açıklarının oranı %8,9 olarak ifade edilmiştir) göçmen çalışanların işlerini ilk kaybedecek kişiler olmasına vurgu yapmaktadır.

Canuto (2020a) salgın nedeniyle bu transferlerde yaşanan %20 lik düşüşe vurgu yaparken, düşük ve orta gelirli ülkeler için 1990 lardan bu güne ilk defa direk yabancı para girişinin %35 oranında, özel tahvil ve hisse senedi piyasasının %80 oranında daralarak her ikisinin de yurt dışı çalışanlardan gelen tutarların altına kadar gerilediğini belirtmiştir. Yazar ayrıca bu durumun sadece Somali, Haiti, Sudan, Tonga gibi ülkeler için değil Hindistan, Pakistan, Mısır, Meksika Filipinler gibi daha büyük nüfusa ve alım gücüne sahip ülkeler için de geçerli olduğunu belirtmektedir.

Birleşmiş Milletler Dünya Turizm Organizasyonu (2020) ülkelerin turizm gelirlerinde de yaşanan bir gerilemeyi bildirmektedir. 2019 yılında 1,4 milyar turist ve 1,7 trilyon USD'lik bir sektör büyüklüğüne sahipken, 2020 yılında ise 381 milyon turist seyahat etmiş ve sektör büyüklüğü 0,4 trilyon USD ye düşmüştür. Birleşmiş Milletler Dünya Turizm Organizasyonu, 2019 rakamları temel alındığında turizm sektörünün, küresel gayri safi yurtiçi hasılasının %10 una denk gelirken işgücü piyasasının da %10 oranında desteklediğini belirtmektedir. Örgüt 2003 SARS krizinin küresel turizmi %0,3, 2008 ekonomik krizinin ise %4 oranında düşüşe sebep olurken Covid19 salgınının %74,9 oranında bir gerilemeye sebep olduğunu, 100-120

milyon kişinin işsiz kaldığı ve yeni normale birlikte sektörün eski büyüklüğüne dönmesinin 4 yıla varabileceği belirtilmektedir.

Dünya Bankası 2020 raporunda küresel ekonomik şok etkisiyle emtia fiyatlarındaki dalgalanmaların da emtiaya bağımlı ekonomiler için bir risk oluşturduğunu bildirmektedir. IMF emtia fiyat endeksine göre petrol salgının ile ilk 4 ay içerisinde yaklaşık %80 değer kaybederken, sonraki 12 ay içerisinde %200 oranında değer kazanmıştır. Benzer şekilde doğalgazda da ilk 4 aydaki gevşeme %30 olurken sonraki 12 ay içerisinde ise %87 oranında değer kazanmıştır. Bakır emtiası ise ilk 4 ay içerisinde %25 kadar düşerken ilerleyen 12 ayda ise %100 den fazla değer kazanmıştır. Gıda emtiası olan mısır fiyatlarında ise Covid-19 salgınıyla ilgili geri çekilme %20 olmuş fakat emtia sonraki 12 ay içerisinde %130 a yakın primlenmiştir. Benzer şekilde pamuk emtiası da salgın ile ilk 4 ayda %30 a yakın değer kaybederken sonraki 12 ay içerisinde %80 değer kazanmıştır. Şekil 4 de enerji metal ve gıda emtialarındaki dalgalanmalar görülebilir.

Şekil 4: Emtia Fiyatlarındaki Dalgalanmalar

Kaynak: Dünya Bankası Emtia Fiyat Raporu, 2022 Nisan.

Sonuç ve Değerlendirme

Kovid-19 salgını, pazar, müşteri davranışları ve firmaların stratejileri üzerinde ciddi değişimlere neden olmuştur. Sosyal ve ekonomik belirsizliğin ve bunun yarattığı korkunun en büyük etken olduğu Covid-19 krizinde, dünya ekonomik dengesi oldukça sert bir şekilde sarsılmıştır. Bu çalışmada amaç, Covid-19 salgını ile ilişkilendirilen günümüz ekonomik ve sosyal krizinin dünya ekonomisini ne şekilde etkilediğini ana hatlarıyla ortaya koymaktır.

Tüm dünyada izolasyon kavramı ile birlikte anılacak olan Covid-19 krizi bireylerin sağlıkla ilgili kaygısının yükseldiği, belirsizliğin arttığı, tüketicilerin ihtiyaçlarının sorguladığı bir dönem olarak ifade edilebilir. Tüketimin sorgulanması ve alınan izolasyon önlemlerine paralel olarak tüketim ve sonuç olarak da üretim miktarları düşmüştür. Bu da beraberinde yükselen işsizliği getirmiş, bireylerin ekonomik gelecek kaygıları tetiklenmiştir. Bu kaygılarla birlikte küresel tedarik ağlarının da sekteye uğraması dış ticareti engellemiş, ülkeler özelinde azalan iç pazar talebiyle de birleşince küresel bir ekonomik küçülme yaşanmıştır. Fakat üretim miktarlarındaki sert düşüş, sekteye uğrayan tedarik ağları, ülkelerin durgunluğu önlemek için aldığı makroekonomik tedbirler, emtia fiyatlarında sert düşüşleri takip eden çok daha sert yükselişlere neden olmuş bu da küresel çata bir fiyat artışlarının tetiklemiştir.

Bu süreç tüm dünya ülkelerini etkilemiş olsa da dünya nüfusunun yüzde doksanını oluşturan gelişmekte olan ve gelişmemiş ülkelerde artçı sarsıntılar çok daha sarsıcı şekilde hissedilmiştir. Bu da ekonomik toparlanmanın yavaşlamasına neden olmaktadır.

Covid-19 krizinin etkileri henüz atlatılmadan Rusya Ukrayna savaşının başlaması Covid-19 krizinin küresel ekonomiye etkilerinin savaşın etkilerinden ayrılarak izole edilmesini ve ekonomik krizin sonuçlarının tam olarak tanımlanmasını imkansız kılmaktadır.

Daha sonraki çalışmalarda Covid-19 krizinin makro ekonomik etkilerinden yola çıkarak mikro ekonomik etkilerinin incelenmesi daha sonraki yıllarda yaşanabilecek başka salgınların ekonomik etkilerinin giderilmesi için bir yol haritası olarak kullanılabilir.

ÖZET

Kurumsal yönetim, şirket yönetimi, hissedarları ve menfaat sahipleri arasındaki ilişkileri düzenleyen kurallar bütünüdür. Ekonomik kalkınmanın sağlanmasında ve iş dünyasında güvenin yeniden tesis edilmesinde önemli rol oynayan kurumsal yönetimin önemi finansal kriz, rekabet ve küreselleşme nedeniyle ortaya çıkmıştır. Kurumsal yönetim, idari faaliyetlerde etkinliğin, raporlamada güvenilirliğin artırılmasını, menfaat sahiplerinin haklarının korunmasını ve şirket yönetiminin sorumluluk ve yükümlülüklerinin açıklanmasını amaçlar. Bilgiler mevcut olmasına rağmen, raporların çokluğu nedeniyle birçok paydaş açıklanan bilgileri uygun şekilde kullanamamaktadır. Böylece entegre raporlama, şirketin performansının finansal, idari, sosyal ve çevresel boyutlarını raporun bir bölümünde kapsadığı için, "entegre raporlama" kuruluşun performansının kapsamlı bir resmini sunmayı amaçlayan yeni bir kurumsal raporlama biçimi haline gelmiştir. Raporlamanın kalitesi entegre raporlamanın önemli bir yönü olduğundan, araştırma bu kavramları tanımlamanın yanı sıra aralarındaki ilişkiyi incelemeyi ve kurumsal yönetimin entegre raporlamanın kalitesi üzerindeki etkisini anlamayı amaçlamaktadır. Çalışmanın amaçları doğrultusunda, kurumsal yönetimin entegre raporların kalite düzeyini artırmaya nasıl katkıda bulunduğu dair teorik bir temel oluşturmak için analitik Betimsel yaklaşım kullanılmıştır. Sonuçlar, kurumsal yönetimin entegre raporlamanın kalitesi üzerinde bir ilişkisi ve olumlu bir etkisi olduğunu göstermektedir.

Anahtar Kelimeler: Kurumsal Yönetim, Entegre Raporlama (ER), Entegre Raporlamanın Kalitesi, Yönetişimin Entegre Raporlama Üzerindeki Etkisi.

The Impact Of Corporate Governance On The Quality Of Integrated Reporting

ABSTRACT

Corporate governance is a set of rules that regulate the relations between the company's management, shareholders and stakeholders. The importance of corporate governance has emerged due to the financial crisis, competition and globalization, as it plays an important role in achieving economic development and restoring confidence in the business world. Corporate governance aims to raise efficiency in administrative activities, reliability in reporting, protect stakeholder rights and disclose the responsibilities and obligations of company management. Although the information is available, many stakeholders cannot make appropriate use of the disclosed information due to the multiplicity of reports. Thus, integrated reporting has become a new form of corporate reporting that aims to provide a comprehensive picture of the organization's performance, since "integrated reporting" covers the financial, administrative, social and environmental dimensions of the company's performance in one part of the report. And because the quality of reporting is an important aspect of integrated reporting, the research aims to describe these concepts as well as examine the relationship between them and understand the impact of corporate governance on the quality of integrated reporting. For the purposes of the study, the analytical descriptive approach was used to come out with a theoretical basis on how corporate governance contributes to increasing the level of quality of integrated reports. The results indicate that there is a relationship and a positive impact of corporate governance on the quality of integrated reporting.

Keywords: Corporate Governance, Integrated Reporting (IR), Integrated Reporting Quality, Impact Of Governance On Integrated Reporting.

1. Giriş

Kurumsal yönetim, bu yüzyılın ilk on yılının başında meydana gelen çok sayıdaki çöküşler ve finansal krizler nedeniyle özellikle 21. yüzyılın başlarında tüm örgütlerde yaygınlaşan önemli modern yönetim konularından biridir. 2008 yılında dünyayı ekonomik durgunluğa sürükleyen küresel mali kriz dahil Ekonomik ve yaşanan bu çöküşler ve mali krizler, başta finansal konular olmak üzere tüm işlerin planlanması, örgütlenmesi, denetlenmesi ve denetlenmemesinden kaynaklanan idari bir aksaklıktan kaynaklanmaktadır (Al-Harbi, 2021). Kusur, muhasebe bilgilerinin şeffaflığının ve kalitesinin olmaması ve doğru muhasebe ilkeleri ve standartlarının uygulanmasına yönelik taahhüdün yerine getirilmemesidir. Kurumsal yönetim, son on yılda yönetimde daha fazla şeffaflık sağlamak ve paydaşlar ile şirket arasındaki ilişkiyi düzenlenmesinde kritik rol üstlendi. Şirketler ve kuruluşlar tarafından yayınlanan finansal raporların içerdiği bilgilere daha fazla güven vermeye yönelik bu raporlarda yüksek kalite elde etmek amacıyla yönelik olarak hazırlanmaması ve finansal rapor kullanıcılarının ekonomik karar almalarında yanıltıcı veya yanlış bilgi içermemesi genel kabul gören bir ilke oldu (Al-Layth vd, 2013). Günümüzde küreselleşme ve finansal olmayan düzenlemelerin büyümesi nedeniyle kurumsal bakış açısı genişlemiş ve genişlemeye devam etmektedir. Küresel mali krizlere neden olan muhasebe skandalları (Enron, Wordcom, Xerox ve Parmalat vb.) ve tırmanan çevre felaketlerinin ardından, paydaşların geleneksel raporlamaya olan inançlarını kaybetmeleri sonrasında şirketler, sorumluluk almaları gerektiğini fark ettiler. Geleneksel raporlamanın, sınırlı geçmiş performansını yansıtması, gelecekteki kritik hedefleri finansal ve finansal olmayan bilgiler birbiriyle ilişkilendirmeden ayrı ayrı raporlaması, riskleri göz ardı etmesi, rasyonel karar verme sürecini desteklememesi."Geçmişe dönük" muhasebe perspektifini kullanmak yerine, verilerin ekonomik değerini belirleme "geleceğe dönük", öngörücü bir perspektif de ele alınması gerekliliğini beraberinde getirdi. Bu bağlamda, Uluslararası Muhasebe Standartları Kurulu (International Accounting Standards Board), BM Çevre Programı (UNEP), Uluslararası Denetmen ve Sigortacılar Kurumu (International Auditing and Assurance Board), Dünya Borsaları Federasyonu, İş Dünyası ve Sürdürülebilir Kalkınma Derneği (The World Business Council for Sustainable Development – WBCSD) gibi önemli organizasyonlar Entegre raporlamanın temelleri atıldı. Uluslararası Maliyeciler Federasyonu'nun (IFAC) başını çektiği bir dizi toplantı sonrası kurulan Uluslararası Entegre Raporlama Konseyi IIRC'in (International Integretad Reporting Council) entegre raporlama rehberinin yayınlaması ise 2013 yılında gerçekleşti (Elmacı, Sevim, 2017, s.21).

Uluslararası Entegre Raporlama Komitesi'ne (IIRC) göre entegre rapor, bir kuruluşun stratejisinin, yönetişiminin, performansının ve dış çevresi bağlamındaki beklentilerinin kısa, orta ve uzun vadede nasıl değer yarattığının kısa ve öz bir iletişimidir. Entegre raporlama (ER), finansal ve finansal olmayan raporların tek bir raporda birleştirilmesini içerir ve paydaşlar için yüksek kaliteli bilgiler içerir. Böylece şirketin karar alma sürecini iyileştirmek için paydaşların beklentilerini daha iyi anlamasına yardımcı olur. Yatırımcılar şirketin işi, değer yaratma ve risk yönetimi hakkında güvenilir entegre bilgilere ihtiyaç duyarlar, dolayısıyla entegre finansal ve finansal olmayan bilgilerin açıklanması kurumsal raporlama standartları olmadan zor olduğundan, entegre raporlama ve yönetim uygulamalarının standartlaştırılmasına yönelik bir eğilim vardır. Bu nedenle, Uluslararası Entegre Raporlama Komitesi (IIRC), 2013 yılında entegre raporlama için kavramsal bir çerçeve olan Uluslararası Entegre Raporlama Çerçevesini (IIRF) yayınlamıştır. Entegre raporların kalitesi, kullanılan muhasebe sistemlerinin etkinliğinin bir yansıması olup, finansal tablolara eklenen açıklamalar kurumsal yönetim sistemlerinin varlığını gerektirmektedir.

Araştırma problemi: Farklı şirketler arasındaki şiddetli rekabet, küresel krizler, işletmeleri etkileyen birçok değişiklik ve bu şirketlerin raporlarıyla ilgilenenlerin çokluğu ve

genişlemesi nedeniyle, tüm karar vericilere hizmet eden entegre bilgilerin sağlanması gerekli hale gelmiştir. Bu nedenle, kurumsal yönetim rolünün etkinleştirilmesi ve yüksek kalitede entegre raporların hazırlanması gerekiyordu. Dolayısıyla çalışmanın problemi aşağıdaki sorulara cevap bulmak olmuştur:

- i. İlk soru: Kurumsal yönetim ile entegre raporlama arasında bir ilişki var mı?
- ii. İkinci soru: Kurumsal yönetimin entegre raporların kalitesi üzerinde bir etkisi var mı?

Amaç: Bu çalışma, bu yeni kavramları tanımlamanın yanı sıra aralarındaki ilişkiyi incelemeyi ve kurumsal yönetimin entegre raporlamanın kalitesi üzerindeki etkisini anlamayı amaçlamaktadır.

Araştırmanın önemi: kurumsal yönetimin tüm şirket ve kurumlarda uygulanması gerekliliğinin vurgulanması ve kurumsal yönetimin entegre raporlama bilgilerinin kalitesinin ve paydaş kararlarına yansımalarının artırılmasındaki faydasını ortaya koymasından kaynaklanmaktadır.

Araştırma hipotezi: (Kurumsal yönetim ile entegre raporlar arasında bir bütünleşme ilişkisi vardır. Bu, söz konusu raporların ve içerdikleri bilgilerin kalitesinin artırılmasına ve karar vericilere yol göstermesi için açıklanmasına yansımaktadır) dayanmaktadır.

Araştırma yöntemi: Bu çalışma da betimsel (nitel) analiz ve tümevarım yöntemi esas alınmıştır.

Araştırma değişkenleri:

Araştırma bağımlı ve bağımsız olmak üzere iki değişkene ayrılmıştır; Birincisi: kurumsal yönetimde ve onun iç ve dış mekanizmalarında temsil edilen bağımsız bir değişken. İkincisi, entegre raporların kalitesini temsil eden bağımlı değişkendir.

Araştırma Sonucu: Çalışmada, kurumsal yönetim ile entegre raporlar arasında bir ilişki olduğu ve bunun bu raporların kalitesi üzerinde olumlu bir etkisi olduğu sonucuna varılmıştır.

Literatür taraması:

Mawardani ve Harymawan (2021) tarafından Endonezya Menkul Kıymetler Borsası'nda (IDX) işlem gören şirketler üzerinde yaptıkları çalışmada, daha fazla bağımsız yönetim kurulu üyesine ve daha büyük yönetim kurulu boyutuna sahip şirketlerin daha yüksek düzeyde entegre raporlama bilgisi ortaya koyduğunu bulmuşlardır. Patelli ve Principe (2007), yönetim kurulundaki bağımsız yöneticilerin yüzdesi ile finansal olmayan şirketlerin yıllık raporlarındaki gönüllü açıklamaların hacmi arasında da pozitif bir ilişki bulmuşlardır. Al-Sharabi ve Al-Dabbagh (2019) tarafından yürütülen araştırmanın amacı, Irak İslami bankalarındaki yönetim mekanizmalarını ve bunların risk açıklama düzeyi üzerindeki etkilerini incelemektir. Araştırma örnekleme olan Irak İslami bankalarında yönetim mekanizmalarının risk açıklama düzeyi üzerinde olumlu etkisinin yanı sıra İslami bankalardaki yönetim mekanizmaları ile risk açıklama arasında bir ilişki olduğu sonucuna varılmıştır. Abir Hichri'nin (2022) çalışması, 2016-2019 döneminde SBF 120 endeksini oluşturan 120 borsaya kayıtlı Fransız şirketi örneğinde kurumsal yönetim ve entegre raporlama arasındaki ilişkiyi incelemek için vekalet teorisini kullanmayı amaçlamaktadır. Bu çalışma, bilgi çeşitliliği ve denetim komitelerinin entegre raporların hazırlanmasında olumlu ve önemli bir etkiye sahip olduğu sonucuna varmıştır. Ancak, yürütme başkanı ikililiği ve yönetim kurulu büyüklüğü entegre raporlama üzerinde olumlu ve anlamsız bir etkiye sahiptir. Ramanayake ve Karunarathne'ye (2021) göre, Güney Afrika'da Johannesburg Menkul Kıymetler Borsası'nda (JSE) işlem gören şirketlerle ilgili yaptıkları çalışmada, yönetim kurulunun etkinliğinin ve dış denetimin kalitesinin, entegre raporlamanın kalitesinin önemli belirleyicileri olduğu sonucuna varmışlardır. Yüksel'in (2018) çalışmasında kurumsal yönetim ilkeleri ile entegre raporlama ilkeleri arasındaki ilişki regresyon analizi ile test edilmiştir. Entegre rapor puanı ile kurumsal yönetim derecelendirmesi, paydaş

derecelendirmesi, kamuyu aydınlatma notu ve yönetim kurulu derecelendirmesi arasında pozitif bir ilişki bulunmuştur. Ali Hadi, çalışmasında (2022), kurumsal yönetim mekanizmalarının muhasebe açıklamalarının kalitesi üzerindeki etkisini inceledi. Araştırmanın örneklemini Irak şirketlerinde görev yapan 81 muhasebeci ve denetçi oluşturmaktadır. Bağımsız değişkenin (kurumsal yönetim mekanizmaları) bağımlı değişken (muhasebe açıklama kalitesi) üzerindeki anlamlı etkisini ölçmek için regresyon analizi yöntemi kullanılmış ve sonuçlar kurumsal yönetim mekanizmalarının muhasebe açıklamalarının kalite üzerinde güçlü ve anlamlı bir etkisinin olduğunu göstermiştir. Garcia-Meca ve Sanchez-Ballesta (2010) tarafından yapılan araştırma, yönetim kurulu bağımsızlığı ile gönüllü açıklama arasında pozitif bir ilişki olduğunu gösterdi, ancak bu yalnızca yatırımcı korumasının yüksek olduğu ülkelerde meydana geldi. Cooray, Gunarathne ve Senaratne (2020) yaptıkları çalışmada, entegre raporların kalitesini değerlendirmek için bir endeks geliştirdiler ve Sri Lankalı halka açık şirketlerin 132 entegre raporunun içeriğini analiz ettiler. Sonuçlar, yönetim kurulunun büyüklüğüne ve ayrı bir risk yönetimi komitesinin varlığına bakılmaksızın, entegre raporlar yoluyla paydaşlara değer yaratma süreci hakkında kaliteli bilgi sağlamak için kurumsal yönetim sisteminin sınırlı desteğin olduğunu göstermiştir. Suttipun ve Bomlai (2019) tarafından Tayland Menkul Kıymetler Borsasında işlem gören şirketler üzerinde yapılan araştırma, yönetim kurulu büyüklüğü, KSS ödülü alan şirketler ve entegre raporlama düzeyi arasında önemli bir pozitif ilişki bulmuş.

2. Kurumsal Yönetim Kavramı

Yönetişim, hükümete ait olan veya olmayan çeşitli kurumlardaki işlemleri ve kararları yöneten bir dizi uygulama ve prosedürdür. Yönetişim, kurumsal yönetim, ekonomik yönetişim, politik yönetişim, çevresel yönetişim ve sosyal yönetişim dahil olmak üzere bir dizi alanı kapsar (Abdul Samad, 2011). Yönetişim, işletmelerin nasıl organize edileceğini, hedeflerin nasıl belirleneceğini ve kararların nasıl alınacağını belirlediği ve planlama, uygulama, izleme ve değerlendirme sürecini etkilediği için her kuruluşun üzerinde anlaşmaya varması gereken temel kavramlardan biridir. Son yıllarda ekonomiler ve toplumlar üzerindeki büyük etkisi nedeniyle yönetişime olan ilgi artmış ve dünyadaki birçok finansal skandal, yolsuzluk ve kurumsal başarısızlıklar bu ilgiye itici güç olmuştur (Elshandidy, 2022). Kurumsal yönetim, bir şirketin yönlendirildiği ve kontrol edildiği kurallar, süreçler ve uygulamalar sistemidir. Hissedarlar, yönetim, müşteriler, tedarikçiler, finansörler, hükümet ve toplum gibi bir şirketin birçok paydaşının çıkarlarının dengelenmesini içerir. Kurumsal yönetimin temel amacı, bir şirketin performans, karlılık ve sürdürülebilirlik gibi hedeflerine ulaşması için bir çerçeve oluştururken aynı zamanda şirket yönetiminde hesap verebilirliği, adaleti ve şeffaflığı sağlamaktır (Abdel Samad, 2011).

Ekonomik İşbirliği ve Kalkınma Örgütü (OECD), kurumsal yönetimi bu şekilde tanımlar: *"Kurumsal yönetim, bir şirketin yönetimi, yönetim kurulu, hissedarları ve diğer menfaat sahipleri arasındaki bir dizi ilişkiyi kapsar... Kurumsal yönetim, makro ekonomik politikalarından, ürün ve faktör piyasalarındaki rekabet düzeyine kadar firmaların faaliyetlerini biçimlendiren bir dizi unsurdan oluşan daha geniş bir ekonomik çerçevenin içinde yer almaktadır. Kurumsal yönetimin çerçevesi, aynı zamanda yasal, düzenleyici ve kurumsal faktörlere dayanır."* (OECD, 2004). Türk literatüründe kurumsal yönetimin tanımı TÜSİAD tarafından yapılmıştır *"Birçok farklı şekilde tanımlanabilecek kurumsal yönetim (corporate governance), en geniş anlamda modern yaşamda insanların bir amaca ulaşmak için oluşturduğu herhangi bir kurumun yönetiminin düzenlenmesidir. Daha dar anlamda ise, bir kurumun beşerî ve mali sermayeyi çekmesine, etkin çalışmasına ve böylece ait olduğu toplumun değerlerine saygı gösterirken uzun dönemde ortaklarına ekonomik değer yaratmasına imkân tanıyan her türlü kanun, yönetmelik, kod ve uygulamaları ifade etmektedir."* (TÜSİAD, 2002.).

Bu çalışma için kurumsal yönetim, yönetim kurulu, hissedarlar, üst düzey yönetim ve diğer paydaşlar arasındaki yapı ve süreçler olarak tanımlanmakta ve yönetim sürecinin ve stratejik liderliğin uygulanmasının rollerini ve hedefleri içermektedir. İyi yönetişimin amacı, işletmelerin tüm paydaşların (hissedarlar, çalışanlar, tedarikçiler, müşteriler ve toplum) çıkarlarının dengeli olmasını sağlamak için uygun karar alma süreçlerine ve kontrollere sahip olmasını sağlamaktır.

2.1.Etkili kurumsal yönetişim tipik olarak aşağıdaki unsurları içerir (Al-Harbi, 2021):

- i. Yönetim Kurulu: Yönetim kurulu, şirket yönetiminin gözetiminden ve şirketin pay sahipleri ve diğer menfaat sahiplerinin menfaatleri doğrultusunda yönetilmesinden sorumludur.
- ii. Hissedar Hakları: Hissedarlar, yöneticileri seçme, birleşme veya devralmaları onaylama ve şirketi etkileyen diğer önemli konularda oy kullanma hakkına sahiptir.
- iii. Etik Davranış: Şirketler, faaliyetlerinin tüm yönlerinde etik davranışı ve dürüstlüğü teşvik etmelidir.
- iv. Risk Yönetimi: Şirketler, şirket operasyonları ve paydaşlarına yönelik riskleri belirlemek, değerlendirmek ve yönetmek için etkin sistemlere sahip olmalıdır.
- v. Sosyal Sorumluluk: Şirketler, toplum ve çevre üzerindeki etkilerinin farkında olmalı ve sosyal açıdan sorumlu bir şekilde faaliyet göstermeye çalışmalıdır.

2.2.Kurumsal yönetişim ilkeleri

Kurumsal yönetişim, bir şirketin davranışını, karar vermesini ve uygulamasını bilgilendiren politikalar ve yönergeler çerçevesini ifade eder. Bu altyapı dört temel ilke üzerine kurulmuştur (Yılmaz ve Murat, 2014):

- i. **Hesap verebilirlik:** *"kendilerine kaynak tahsis edilenlerin ya da yetki verilenlerin bu kaynakları ve yetkileri ne kadar iyi kullandıklarını sergileme sorumluluğunu ifade eder."* (Gülen,2012). Hem hissedarlara hem de hissedar olmayanlara karşı yasal, sözleşmeden doğan ve sosyal yükümlülükler yerine getirilmelidir. Kuruluşlar, yönetim kurulu üyeleri için bir davranış kuralları tanımlamalıdır; denetim komitesi ve ücret komitesi gibi kurul komiteleri: ve üst düzey yöneticiler. Bu saflara katılan yeni bireyler, bu yerleşik standartları karşılamalıdır.
- ii. **Şeffaflık:** Tüm kurumsal yönetim politikaları ve prosedürleri ilgili paydaşlara açıklanmalıdır. Bu, ilgili bilgilerin çalışanlara, müşterilere, yatırımcılara, satıcılara ve topluluk üyelerine düzenli ve tutarlı bir şekilde iletilmesini içerir.
- iii. **Adil ve eşit davranma:** Tüm hissedarlara, müşterilere, çalışanlara ve diğer menfaat sahiplerine eşit ve adil davranılmalıdır. Bunun bir kısmı, hissedarların haklarının ve bunları nasıl kullanacaklarının farkında olmalarını sağlamaktır.
- iv. **Sorumluluk:** İşin pek çok unsurunun kontrolünü yöneten yetkili ses olarak, yönetim kurulunun güçlerini sorumlu bir şekilde kullanması önemlidir. Yöneticiler her zaman etik davranmalı ve işten etkilenen herkesin çıkarlarını en iyi şekilde korumalıdır. Uygulamadaki iyi kurumsal sorumluluk örnekleri, etik davranışa yukarıdan aşağıya bir yaklaşım benimsemeyi ve şirketin uzun vadeli değer yaratmasını etkileyen sorunlar ve endişeler hakkında uzun vadeli hissedarlarla ilişki kurmayı içerir.

2.1.Kurumsal yönetimi desteklemek ve geliştirmek için çalışan kamu ve özel kurumlar, kuruluşlar ve organlar:

Kurumsal yönetimi desteklemek ve geliştirmek için çalışan birçok kamu ve özel kurum, kuruluş ve ajans bulunmaktadır. Bunlardan bazıları şunlardır:

- i. **Uluslararası Kurumsal Yönetim Ağı (ICGN):** yatırımcılar, şirketler ve diğer paydaşlar için eğitim, araştırma ve ağ oluşturma fırsatları sağlayarak etkili kurumsal yönetim uygulamalarını destekleyen küresel bir kuruluştur (ICGN, t.y.).

- ii. **Ekonomik İşbirliği ve Kalkınma Teşkilatı (OECD):** dünya çapında hükümetler, şirketler ve yatırımcılar tarafından yaygın olarak kullanılan OECD Kurumsal Yönetim İlkeleri dahil olmak üzere kurumsal yönetim uygulamalarına yönelik yönergeler ve tavsiyeler sağlar (OECD, 2015).
- iii. **Menkul Kıymetler ve Borsa Komisyonu (SEC):** Amerika Birleşik Devletleri'ndeki menkul kıymetler piyasalarının birincil düzenleyicisidir ve kurumsal yönetim uygulamalarının teşvik edilmesinde kilit bir rol oynar. SEC, halka açık şirketlerin kurumsal yönetim uygulamaları hakkında bilgi vermelerini zorunlu kılar ve kurumsal yönetim kurullarının bağımsızlığını ve etkinliğini artırmak için kurallar geliştirmiştir. (SEC, t.y.)
- iv. **Yönetim Enstitüsü (IoD):** IoD, İngiltere ve İrlanda'daki yöneticiler ve üst düzey yöneticiler için profesyonel bir organizasyondur. IoD, etkili kurumsal yönetim uygulamalarını desteklemek için eğitim, öğretim ve ağ oluşturma fırsatları sunar (IoD, t.y.).
- v. **Türkiye Kurumsal Yönetim Derneği (TKYD):** TKYD, Türkiye'de etkin kurumsal yönetim uygulamalarını destekleyen, kâr amacı gütmeyen bir kuruluştur. TKYD, kurumsal yönetim uygulamalarını iyileştirmek, araştırma yapmak ve düzenleyici ve politika değişikliklerini savunmak için eğitim ve öğretim programları sağlar (TKYD, n.y.).
- vi. **Küresel Raporlama Girişimi (GRI):** GRI, şirketlerin ESG uygulamaları hakkındaki bilgileri paydaşlara açıklamalarına yardımcı olabilecek sürdürülebilirlik raporları hazırlamak için yönergeler sağlar. GRI yönergeleri, dünya çapındaki şirketler tarafından yaygın olarak kullanılmaktadır. (GRI, 2016)

Bu kurum, kuruluş ve ajanslar, paydaşların çıkarlarını korurken kurumsal performansı, itibarı ve sürdürülebilirliği artırmaya yardımcı olabilecek etkin kurumsal yönetim uygulamalarını teşvik eder.

3. Entegre Raporlama Kavramı

Entegre raporlama, finansal ve finansal olmayan bilgileri tek bir entegre raporda birleştiren kapsamlı bir raporlama yaklaşımıdır. Entegre raporlamanın amacı, bir kuruluşun performansının ve beklentilerinin daha eksiksiz bir resmini sunmak ve yatırımcıların ve diğer paydaşların daha bilinçli kararlar vermesini sağlamaktır. Entegre raporlama, bir kuruluşun değerinin yalnızca finansal performansının değil, aynı zamanda paydaş ilişkilerinin kalitesi, iş uygulamalarının sürdürülebilirliği ve faaliyet gösterdiği sosyal ve çevresel ortam üzerindeki etkisinin de belirlendiği fikrine dayanmaktadır. Entegre raporlamayı IIRC tarafından “Bir kuruluşun stratejisinin, kurumsal yönetiminin, performansının ve beklentilerinin kuruluş dış çevresi bağlamında kısa, orta ve uzun vadede değer yaratmayı nasıl sağlayacağını kısa ve öz bir şekilde bildirilmesidir” şeklinde tanımlanmaktadır Entegre raporlamanın ortaya çıkmasının temelini oluşturan entegre düşünce, iş birimleri ile kuruluşun çeşitli fonksiyonları arasındaki bağlantıya ve bunları etkin bir şekilde kullanan veya etkileyen sermaye unsurlarına öncelik vermektedir (IIRC 2013, s7). Entegre düşünce, işletmedeki faktörlerin birbirine bağımlılığı yoluyla paydaşlar için değer yaratarak uzun vadeli iş sürdürülebilirliğini sağlamayı amaçlar (Köse ve Çetinel, 2017). King III raporu ise entegre raporlamayı “bir işletmenin finansal performansına ve sürdürülebilirliğine ilişkin kapsamlı ve bütünlük bir bakış açısı” olarak tanımlamaktadır (Köse ve Çetinel, 2017). Entegre raporlar tipik olarak finansal ve finansal olmayan performans verileri, yönetim ve risk yönetimi uygulamaları hakkında ayrıntılar ve bunların çevresel ve sosyal etkileri hakkında bilgiler gibi bir dizi bilgiyi içerir (Eccles & Saltzman, 2011). Uluslararası Entegre Raporlama Konseyi (IIRC), kuruluşlara entegre raporlar üretme konusunda rehberlik edecek bir çerçeve geliştirmiştir. Çerçeve, raporlama için bir dizi yönerge, içerik ögesi ve önerilen en iyi uygulamaları içerir. Entegre raporlama, yalnızca kısa vadeli finansal sonuçlara odaklanmak yerine, bir kuruluşun zaman içinde yarattığı değere ilişkin kapsamlı bir görüş sağlamayı amaçlar. Entegre raporlama hem finansal hem de finansal

olmayan bilgileri entegre ederek kuruluşların performanslarının, risklerinin ve fırsatlarının ve bunların birbiriyle nasıl ilişkili olduğunun daha eksiksiz bir resmini iletmelerini sağlar. (IIRC; 2013)'e göre entegre raporlamanın amaçları aşağıdaki kategorilerde sınıflandırılabilir:

- i. **Kurumsal Değerin Artırılması:** Entegre raporlama, finansal performansın ötesinde, bir kurumun değer yaratmasına ilişkin kapsamlı bir görüş sağlamayı amaçlar. Paydaşların kuruluşun stratejisini anlamalarına yardımcı olur ve bilinçli kararlar almalarını sağlar.
- ii. **Entegre düşüncüyü teşvik etmek:** kuruluşların kısa vadeli finansal sonuçların ötesinde düşündüğü ve sosyal, çevresel ve yönetim yönlerini dikkate aldığı, daha iyi karar almaya yol açan bütüncül bir yaklaşımı teşvik eder.
- iii. **Hesap verebilirlik ve gözetimin güçlendirilmesi:** Entegre raporlama, bir kuruluşun performansı, etkileri ve kaynak kullanımına ilişkin kapsamlı bir açıklama sağlayarak şeffaflığı artırır.
- iv. **Etkili karar vermeyi kolaylaştırma:** Entegre raporlama, çeşitli paydaşların karar vermeleriyle ilgili geniş bir bilgi yelpazesi sağlar.
- v. **Güven artırma:** Entegre raporlar, kuruluşlarda güven oluşturmayı amaçlar. Yönetişim, strateji ve risk yönetimi hakkında açık ve güvenilir bilgiler sağlayarak, paydaşların kuruluşun güvenilirliğini, bütünlüğünü ve uzun vadeli sürdürülebilirliğini değerlendirmesine yardımcı olur.

Bu nedenle sürdürülebilirlik raporları ile birlikte finansal tabloların sunulmasının yanı sıra şirketin geleceğe bakışını ve iş yapış şeklini yansıtan raporların hazırlanmasına ihtiyaç duyulmuştur. Entegre raporlamanın ortaya çıkış nedenleri şu şekilde ifade edilebilir (Kaya, 2015; Suttipun ve Bomlai, 2019).

- vi. Bilgi kullanıcılarının mali ve sosyal sorumluluklarını daha geniş anlamak için işletmeyi birden fazla standartla değerlendirmek istemesi,
- vii. Gönderilen raporların bölümleri arasında tutarsızlıklar var, çok uzun olmaları ve eksik bilgi vermeleri nedeniyle anlaşılmıyor.
- viii. Geleneksel raporlar, tesisin finansal performans bilgilerini geriye dönük olarak gösterir ve bu, geleceğe yönelik bir bakış açısı sağlamaz. Sürdürülebilirlik raporları geleceğe yöneliktir ve gerekli finansal bilgileri sağlamaz.
- ix. Paydaşların tek bir rapordan finansal ve finansal olmayan bilgilere ihtiyacı vardır.

Entegre raporlama, bir kuruluşun performansına, risklerine ve fırsatlarına ilişkin daha eksiksiz ve şeffaf bir görünüm sağladığından, kurumsal raporlamada giderek daha iyi bir uygulama olarak kabul edilmektedir. Birçok kuruluş gönüllü olarak entegre raporlamayı benimserken, diğerlerinin düzenleyici gerekliliklerin bir parçası olarak sürdürülebilirlik performansı hakkında rapor vermesi gerekir.

3.1. Entegre Raporlama İlkeleri

Entegre Raporlama İlkeleri, kuruluşların entegre raporlar geliştirmesi ve sunması için bir çerçeve sağlar. Uluslararası Entegre Raporlama Konseyi (IIRC) tarafından tanımlanan bu ilkeler, bir entegre rapor hazırlanırken göz önünde bulundurulması gereken temel unsurlara odaklanır. İlkeler aşağıdaki gibidir (IIRC, 2013):

- i. **Stratejik Odak ve Geleceğe Yönelim:** Entegre rapor, kısa, orta ve uzun vadede nasıl değer yarattığı da dahil olmak üzere kuruluşun stratejisine ilişkin iç görü sağlamalıdır.
- ii. **Bilgiler Arası Bağlantı:** Bir entegre rapor, kuruluşun değer yaratma yeteneğini etkileyen çeşitli faktörler arasındaki ilişkileri göstermelidir.
- iii. **Paydaşlarla İlişkiler:** Bir entegre rapor, kuruluşun yatırımcılar, müşteriler, çalışanlar, tedarikçiler, topluluklar ve düzenleyiciler dahil olmak üzere paydaşlarıyla nasıl etkileşim kurduğuna dair net bir anlayış sağlamalıdır.

- iv. **Önemlilik:** Bir entegre rapor, kuruluşun zaman içinde değer yaratma yeteneğini anlamak için önemli bilgilere odaklanmalıdır.
- v. **Kısa ve Öz Olma Bir:** Entegre rapor özlü olmalı ve gereksiz tekrarlardan kaçınmalıdır. Okuyucuları aşırı bilgi yüküyle boğmadan dengeli ve kapsamlı bir görüş sağlamalıdır.
- vi. **Güvenilirlik ve Eksiksizlik:** Bir entegre rapor, eksiksiz, doğru ve tarafsız, güvenilir ve dengeli bilgiler sağlamalıdır. Güvenilirliği ve şeffaflığı sağlamak için uygun raporlama standartlarını ve çerçevelerini takip etmelidir.
- vii. **Tutarlılık ve Karşılaştırabilirlik:** Entegre raporlama, paydaşların performans ve ilerlemeyi karşılaştırmasına izin verecek şekilde zaman içinde tutarlı bir şekilde üretilmelidir. Anlamli karşılaştırmaları kolaylaştırmak için tutarlı ölçüm ve raporlama yöntemleri kullanılmalıdır.
- viii. **Yönetişim ve tazminatın açıklanması:** Entegre rapor, kuruluşun yönetim yapısı, uygulamaları ve ücretlendirme politikaları hakkında açık ve şeffaf bilgiler sağlamalıdır. Yönetişimin kuruluşun stratejisini ve uzun vadeli değer yaratmayı nasıl desteklediğini açıklamalıdır.

3.2. Entegre Raporlama Kalitesi

Entegre raporların kalitesi, şirketin entegre raporunun şirketin finansal ve finansal olmayan performansının, risklerinin ve fırsatlarının yanı sıra stratejisinin, yönetişiminin ve kısa, orta ve uzun vadede değer yaratmasının kapsamlı ve doğru bir resmini sunma derecesidir. Entegre raporlama kalitesi kavramı, sürdürülebilirlik raporlama kalitesi ve ESG raporlama kalitesi gibi diğer kavramlarla yakından ilişkilidir, çünkü bu tür raporlama aynı zamanda bir şirketin finansal sonuçlarının ötesinde daha kapsamlı ve bütünlük bir performans görünümünü sunmayı amaçlar. Entegre raporlamanın kalitesi, veri kalitesi, raporların şeffaflığı, raporların şirketin genel stratejisi ve iş modeli ile uyumlu hale getirilmesi ve raporlama sürecine paydaş katılımı gibi bir dizi faktörden etkilenebilir (Eccles & Krzus, 2010). Şirketler, entegre raporlamadaki en iyi uygulamaları benimseyerek, öncelikli konuları belirlemek için paydaşlarla ilişki kurarak ve raporlamalarını IIRC tarafından geliştirilen uluslararası entegre raporlama çerçevesiyle uyumlu hale getirerek entegre raporlamalarının kalitesini artırabilir. Entegre raporların kalitesi çeşitli faktörlere göre değerlendirilebilir (Sofian ve Dumitru, 2017):

- i. **Açıklık ve ilgililik:** Rapor, kuruluşun stratejisini, risklerini, fırsatlarını ve performansını açık ve doğru bir şekilde aktarmalı ve tüm paydaşların bilgi gereksinimleriyle ilgili olmalıdır.
- ii. **Denge ve Bütünlük:** sosyal, çevresel ve yönetim etkileri de dahil olmak üzere, kuruluşun mali ve mali olmayan performansına ilişkin dengeli ve kapsamlı bir görüş sağlamalıdır.
- iii. **İletişim ve tutarlılık:** kuruluşun finansal ve finansal olmayan performansı arasındaki bağlantıları ve karşılıklı bağımlılıkları ve ayrıca stratejisi, yönetişimi ve performansı arasındaki uyumu göstermelidir.
- iv. **Güncellik ve güvenilirlik:** Rapor zamanında olmalı, kuruluşun performansını etkileyebilecek son gelişmeleri ve olayları yansıtmalı, güvenilir ve doğrulanabilir veri ve bilgilere dayanmalıdır.
- v. **Karşılaştırılabilirlik ve tutarlılık:** Rapor, kuruluşun sektörü ve bağlamıyla ilgili standart ölçütler ve göstergeler kullanarak zaman içinde ve kuruluşlar arasında anlamlı karşılaştırmalar yapmalıdır.

Genel olarak, entegre raporlamanın kalitesi bir kuruluşun itibarını artırabilir, paydaşlar arasında güven oluşturabilir ve uzun vadede sürdürülebilir değer yaratımını destekleyebilir.

4. Kurumsal Yönetimin Entegre Raporlamanın Kalitesine Etkisi

Kurumsal yönetim, bir şirketin faaliyetlerine rehberlik eden ve faaliyetlerinde hesap verebilirliği, adaleti ve şeffaflığı sağlayan kurallar, uygulamalar ve süreçler bütünüdür. Öte yandan entegre raporlama, çevresel, sosyal ve yönetim (ESG) etkileri de dahil olmak

üzere bir şirketin performansının kapsamlı bir görünümünü sağlayan finansal ve finansal olmayan bilgilerin tek bir raporda birleştirilmesi uygulamasına atıfta bulunur. Kurumsal yönetim ile entegre raporlamanın kalitesi arasında güçlü bir ilişki vardır (Al-Laith vd., 2013). Etkili kurumsal yönetim uygulamaları, entegre raporda yer alan bilgilerin doğruluğunu, eksiksizliğini ve ihtiyaca uygunluğunu sağlamak için esastır. Bunun nedeni, iyi kurumsal yönetimin, şirketin ÇSY bilgilerini doğru ve şeffaf bir şekilde toplaması, ölçmesi ve raporlaması için uygun sistemlere ve kontrollere sahip olmasını sağlamasıdır (Roxana-Ioana & Petru, 2017). Ayrıca, etkin kurumsal yönetim uygulamaları, bir entegre raporda sunulan bilgilerin inanılabilirliğini ve güvenilirliğini sağlamak için esastır. Güçlü yönetim uygulamalarına sahip bir şirketin güvenilir ve güvenilir olarak görülme olasılığı daha yüksektir ve bu da entegre raporda sunulan bilgilere yönelik paydaş güvenini artırabilir. Bu da daha iyi karar verme ve artan hesap verebilirliğe yol açarak, paydaşlar için bilginin alaka düzeyini artırabilir. Ek olarak, iyi kurumsal yönetim uygulamaları, bir şirketin entegre raporlamanın şirketin genel stratejisi ve değerleriyle uyumlu olmasını sağlamaya yardımcı olabilir. Bu uyum, entegre raporlamanın başarısı için çok önemlidir çünkü bir şirketin ÇSY etkilerini yatırımcılar, müşteriler, çalışanlar ve topluluklar dahil üzere paydaşlara anlamlı bir şekilde iletmesini sağlar (Abdel Fattah, 2019) Kurumsal yönetim, entegre raporlamanın kalitesinde hayati bir rol oynamaktadır. İyi yönetim uygulamalarına öncelik veren şirketlerin doğru, güvenilir ve paydaşlarla ilgili entegre raporlar üretme olasılığı daha yüksektir. Bu şirketler, artan paydaş güveninden yararlanabilir, bu da daha iyi karar verme ve artan hesap verebilirliğe yol açar. Kurumsal yönetimin entegre raporlamanın kalitesi üzerindeki etkisini daha fazla araştırmak için, özellikle entegre raporlamayla ilgili bazı belirli yönetim uygulamalarını dikkate almak faydalı olacaktır. Böyle bir uygulama, açık ve şeffaf bir raporlama çerçevesinin oluşturulmasıdır. Bu çerçeve, bir entegre rapora dahil edilmesi gereken bilgi türleri ve bilgilerin doğru ve eksiksiz olmasını sağlamak için izlenmesi gereken süreçler hakkında rehberlik sağlamalıdır (Eccles, & Serafeim, 2013). İyi tasarlanmış bir raporlama çerçevesi, entegre raporlamanın tutarlı, güvenilir ve paydaşlarla ilgili olmasını sağlamaya yardımcı olabilir. Bir diğer önemli yönetim uygulaması, etkili iç kontrollerin oluşturulmasıdır. İç kontroller, finansal ve finansal olmayan bilgilerin doğruluğunu ve eksiksizliğini sağlamak için uygulanan sistem ve süreçlerdir. Bu kontroller, veri toplama ve doğrulama sistemlerini, hesaplamaların doğruluğunu sağlamaya yönelik prosedürleri ve entegre rapora dahil edilmeden önce bilgilerin gözden geçirilmesi ve onaylanmasına yönelik mekanizmaları içerebilir. Etkili iç kontroller, entegre raporlamanın hatalardan, eksikliklerden ve yanlış beyanlardan arınmış olmasını sağlamaya yardımcı olabilir. Üçüncü önemli yönetim alışırması, üst yönetimi entegre raporun hazırlanmasına ve gözden geçirilmesine dahil etmektir. Üst yönetim, entegre raporda sağlanan bilgilerin şirketin performansını doğru bir şekilde yansıtmalarını ve şirketin genel stratejisi ve değerleri ile uyumlu olmasını sağlamada kritik bir rol oynar. Bu katılım, entegre raporun ilgili, güvenilir ve paydaşlar için yararlı olmasını sağlamaya yardımcı olabilir (Al-Harbi, 2021). Son olarak, iyi kurumsal yönetim uygulamaları paydaş katılımını ve istişareyi de içerebilir. Paydaşların katılımını sağlamak, bir entegre raporun paydaşlar için en önemli konuları ve endişeleri ele almasını sağlamaya yardımcı olabilir. Bu, raporun alaka düzeyini ve yararlılığını artırabilir ve şirketin ÇSY konularına olan bağlılığına ilişkin paydaş güvenini artırabilir. Kısacası, entegre raporlamanın kalitesini etkileyebilecek bir dizi kurumsal yönetim uygulaması vardır. Bu uygulamalar, net bir raporlama çerçevesinin oluşturulmasını, etkili iç kontrolleri, üst yönetimin katılımını ve paydaş katılımını içerir. Şirketler, bu uygulamalara öncelik vererek entegre raporlamalarının doğru, güvenilir, ilgili ve paydaşlar için inandırıcı olmasını sağlayabilir.

5. Sonuç

Kurumsal yönetim ve entegre raporlama, her ikisi de kuruluşlarda şeffaflık, hesap verebilirlik ve sorumlu yönetim uygulamalarını sağlamayı amaçladığından yakından ilişkilidir. Kurumsal yönetim ve entegre raporlama arasındaki ilişki, iyi kurumsal yönetim uygulamalarının entegre raporlamanın geliştirilmesini ve uygulanmasını destekleyebilmesidir. Güçlü kurumsal yönetim uygulamalarına sahip bir kuruluş, entegre raporun temel bileşenleri olan iş modeli, risk yönetimi süreçleri ve sürdürülebilirlik uygulamaları hakkında net bir anlayışa sahip olabilir. Benzer şekilde, entegre raporlamayı benimseyen bir kuruluşun iyi kurumsal yönetim uygulamalarına öncelik vermesi daha muhtemel olabilir, çünkü bu uygulamalar, entegre raporlamanın teşvik etmeyi amaçladığı şeffaf ve hesap verebilir yönetimi sağlamak için elzemdir. Kısacası, kurumsal yönetim ve entegre raporlama, sorumlu ve sürdürülebilir iş uygulamalarını teşvik etmede birbirini destekleyebilen tamamlayıcı çerçevelerdir. Hem kurumsal yönetime hem de entegre raporlamaya öncelik veren kuruluşlar muhtemelen daha şeffaf, hesap verebilir ve iyi yönetilir, bu da performansın artmasına ve paydaş güveninin artmasına yol açabilir. En önemli tavsiyeler şunlardır:

- iii. Entegre kurumsal raporlama, kapsamlı, şeffaf olmalı ve Küresel Raporlama Girişimi (GRI) veya Uluslararası Entegre Raporlama Konseyi (IIRC) çerçevesi gibi uluslararası raporlama çerçeveleriyle uyumlu olmalıdır.
- iv. Şirketler, raporlarının kalitesini ve ilgililiğini sürekli iyileştirmek için paydaşlarla iletişim kurmalı ve entegre raporları hakkında geri bildirim toplamalıdır.
- v. Şirketler, geniş bir paydaş yelpazesinin ihtiyaçlarını karşılayan yüksek kaliteli entegre raporlar üretmek için şeffaflık, hesap verebilirlik ve paydaş katılımı gibi etkili kurumsal yönetim uygulamalarına öncelik vermelidir.
- vi. Düzenleyiciler ve standart belirleyiciler, şirketler ve bölgeler arasında tutarlılığı ve karşılaştırılabilirliği artırmak için entegre raporlamaya yönelik net yönergeler ve standartlar sağlamalıdır.
- vii. Yatırımcılar ve diğer menfaat sahipleri, yatırım kararları alırken veya şirket performansını değerlendirirken entegre raporlamanın kalitesine çok dikkat etmelidir.
- viii. Ulusal ve uluslararası standartlara uyum: Şirketler, kurumsal yönetim ve entegre raporlamanın kalitesi ile ilgili ulusal ve uluslararası standartlara bağlı kalmalıdır. Örneğin, Entegre Raporlama Girişimi'nin Entegre Raporlama İlkeleri, raporlama kalitesini iyileştirmek ve uygulamaları standart hale getirmek için kullanılabilir.

ÖZET

Küresel boyutlarda yaşanan rekabet ortamı içerisinde işletmelerin sergilemiş oldukları performanslarının sonucunda ortaya çıkan kazanım veya kayıpların sadece finansal veriler ile açıklanması işletmelerin gerçek değerlerini doğru bir şekilde yansıtmamaktadır. Bu durum işletmelerin mevcut veya potansiyel yatırımcılarını, kredi verenleri, toplumu kısaca tüm paydaşların alacakları kararlarını etkileyebilmektedir. İşletmelerin performanslarının daha doğru bir şekilde ortaya çıkarılabilmesi için işletme performansının maddi ve maddi olmayan varlıkların tümü ile açıklanması gerekmektedir. Bu işletmeye kurumsallık kazandırma ile beraber rekabet üstünlüğü sağlayabilecek ve şeffaflık açısından topluma yararlı olacaktır. Entelektüel sermaye; işletmenin bilançosunda yer almayan ve işletmenin faaliyetlerini sürdürebilmesini sağlayan maddi olmayan varlıkların tümünü kapsamaktadır. Bu çalışmada amaç entelektüel sermaye ve firma performansı arasındaki ilişkiyi incelemektir. BİST Sürdürülebilirlik endeksi içerisindeki 53 işletmenin 2021 yılı verileri incelenmiş ve entelektüel sermaye ölçümünde Ante PULIC'in Entelektüel Katma Değer katsayısı yönteminden yararlanılmıştır. Çalışma içerisinde firma performans ölçütleri olarak; karlılık, verimlilik ve piyasa değeri kullanılmıştır. Bu yapılan çalışmanın sonuçları ile ilgili korelasyon ve regresyon analizinde ortaya çıkan durumlar yorumlanacaktır.

Anahtar Kelimeler: Entelektüel Sermaye, Entelektüel Katma Değer Katsayısı, Firma Değeri, Korelasyon Analizi, Regresyon Analizi.

The Impact Of Intellectual Capital On Company Performance

ABSTRACT

In the global competitive environment, the gains or losses resulting from the performance displayed by businesses cannot be accurately reflected solely by financial data. This can affect the decisions of current or potential investors, lenders, society, and all stakeholders. In order to accurately reflect business performance, it is necessary to explain it with all tangible and intangible assets. This would help to add corporate governance to businesses and gain a competitive advantage, as well as being beneficial to society in terms of transparency. Intellectual capital encompasses all intangible assets that do not appear on a company's balance sheet, but are essential for the company to operate. The aim of this study is to examine the relationship between intellectual capital and company performance. The data of 53 businesses within the BIST Sustainability Index in 2021 were examined, and Ante Pulic's Intellectual Value-Added Coefficient method was used to measure intellectual capital. Profitability, efficiency, and market value were used as performance metrics for the study. The results of this study will be interpreted based on the correlations and regression analysis that were observed.

Keywords: Intellectual Capital, Intellectual Value Added Coefficient, Company Value, Correlation Analysis, Regression Analysis.

GİRİŞ

Yaşanan teknolojik gelişmeler ve sürekli artan insan ihtiyaçları beraberinde işletmeler açısından küresel boyutlara ulaşan bir rekabet ortamı yaratmıştır. Rekabet ortamında ayakta kalmak ve stratejik açıdan rekabet üstünlüğü sağlamak isteyen işletmeler maddi varlıkların yanında maddi olmayan varlıklara da önem vermişlerdir. Maddi olmayan varlıklar entelektüel sermaye olarak anılmış ve önemi her geçen gün artmıştır. Özellikle işletmelerin gerçek değerinin hesaplanması için işletmenin finansal varlıklarıyla beraber finansal olmayan varlıklarının da değerlendirilmesi yani bütüncül bir bakış açısıyla incelenmesi gerekmektedir. İşte bu noktada entelektüel sermaye faktörleri ön plana çıkmıştır.

Entelektüel sermaye kavramının önem kazanmasıyla beraber ekonomide bilginin önemi de artmıştır. Özellikle bilgiye dayalı ürünler üreten işletmelerin piyasa değerlerinde büyük oranda artışlar ortaya çıkmıştır. Bu tür işletmeler incelendiğinde piyasa değeri ve defter değeri arasında ciddi farklar olduğu görülmektedir. Bu farkların oluşmasındaki başlıca sebepler arasında entelektüel sermaye faktörleri bulunmaktadır. Entelektüel sermayenin, nasıl yönetileceği ve nasıl ölçüleceği ile ilgili bir standart bulunmamasına rağmen bazı araştırmacılar farklı teknikler ile ölçmeye çalışmışlardır. Bunlardan öne çıkanlar arasında Ante PULIC'in 1998 yılında geliştirdiği entelektüel katma değer katsayısı yöntemidir. Yapılan çalışmalar sonucunda entelektüel sermaye ile firma performansı arasında anlamlı ve genel olarak pozitif yönlü ilişkiler bulunmuştur.

Bu çalışmada BIST Sürdürülebilirlik endeksi içerisinde bulunan işletmelerin entelektüel katma değer katsayıları hesaplanmış ve entelektüel sermaye ile firma performansları arasındaki ilişki SPSS 27 programı ile korelasyon ve çoklu regresyon analizleri ile incelenmiştir.

1. TEORİK ÇERÇEVE

1.1 Entelektüel Sermaye

Günümüzde yaşanan rekabet yerel boyutları aşarak küresel boyutlara taşınmıştır. Kendilerine rekabet avantajı sağlamak isteyen işletmeler için entelektüel sermaye önemli bir yer tutar. Entelektüel sermaye kavramı, ilk olarak 1991 senesinde Thomas Stewart 'ın yazmış olduğu "Beyin Gücü" adlı makale sayesinde gündemde yerini almış ve daha sonraki zamanlarda önem kazanmıştır (Karacan ve Ergin, 2011: 75).

Entelektüel Sermaye, işletmelerin sunmuş oldukları finansal raporlarda açık bir şekilde belirtilmeyen ancak işletmelere değer katan bilgiye dayalı bir kaynak olarak görülmektedir. Bir kuruluş için değerli ve finansal olmayan tüm faktörler entelektüel sermaye içerisindedir (Jurczak, 2008: 38). Entelektüel sermaye işletmeler açısından müşteri ilişkilerini pay sahipleri ile olan ilişkiler, personellerin beceri ve yaratıcılıkları gibi önemli kavramları içerisinde barındırır (Özdemir & Balkan, 2010).

İşletmeler bir ağaca benzer nasıl ki bir ağacın kaliteli meyve verimi ve sağlıklı dalları ağacın toprak altında bulunan köküne yani dışardan görünmeyen kısmana bağlı ise, bir işletmenin başarısı da aynı şekilde görünmeyen varlıklara yani entelektüel sermaye diye tabir edilen varlıklara bağlıdır (Edvinsson & Malone, 1997).

Entelektüel sermaye, Bir işletmenin içerisinde bulunan maddi bilgi içermeyen bütün varlıklardır (Neo, 2009: 13).

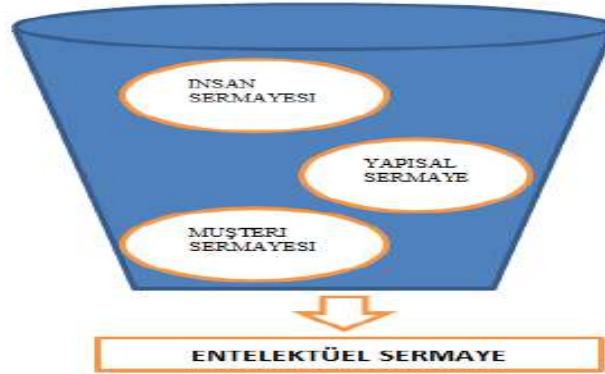

ROOS ve Diğerlerine göre Entelektüel sermayenin başlıca özellikleri aşağıda gösterilmiştir;

- İşletmenin sunmuş olduğu finansalar tablolar içerisinde bulunmayan saklı varlıkların tümü entelektüel sermaye içeriğidir. Bu sebeple organizasyonu oluşturan tüm paydaşların bilgileri ile beraber personellerin işten ayrılmaları halinde işletmede kalan bilgilerde entelektüel sermayeye dahil edilir.

- Entelektüel sermaye, Stratejik açıdan sürdürülebilir bir rekabet ve büyümenin sağlanmasında önemli yere sahiptir.
- Entelektüel sermaye açısından gerçekleşen artış ve azalışlar entelektüel performans olarak adlandırılır. (Roos, vd., 1997, s. 15).

Zaman içerisinde yapılan birçok araştırma sonucunda entelektüel sermayenin üç ana bileşenden oluştuğu ile ilgili genel bir tanı oluşmuştur. Bu bileşenler, müşteri sermayesi, insan sermayesi ve yapısal sermaye'dir. (Bontis, 2001: 437).

Şekil 5: Entelektüel Sermaye Oluşumu

Kaynak: Genç, 2018, S. 37.

1.2 İnsan Sermayesi

İşletmelerin insan sermayesi, müşterilerin başka bir işletme yerine bu işletmeyi tercih etmelerine neden olan ürün ve hizmetlerin işletmenin personellerinin bilgi, birikim ve yetenekleri ile şekillendirilerek yüksek katma değer oluşturulmasıyla sağlanır. İnsan sermayesinin temelinde işletmenin cansız bir varlık olmasından dolayı düşünemediği, kararlar alamadığı veya elinde bulunan kaynakları kontrol edemediği bunları ancak insanlar sayesinde gerçekleştirebileceği düşüncesi yatar (Reed, 2000: 16, Özdemir & Balkan'dan, 2010).

Hermanson (1962), insanların varlıklarının ölçülebileceğini ve değerlendirilebileceğini savunmuştur. İnsanların performanslarının sadece bedensel çalışmalarına bakılarak değerlendirilmesinin yanlış olacağını, insanların bedensel performanslarından çok daha kıymetli başka etkinliklerinin olduğunu ve insanların gerçek değerlerinin ölçülerek işletmenin hazırlayacağı finansal tablolarda sunulması gerektiğine vurgu yapmıştır (aktaran Güney, 2011, s. 5).

İnsan sermayesi, entelektüel sermayenin içerisindeki diğer sermaye türlerine değer katan ve entelektüel sermaye performansını yükselten veya azaltan önemli bir sermaye türüdür. Özellikle soyut varlıklara etkinlik kazandıran finansal varlıkların uygulanabilirliğine olumlu etki eden işletmeyi tümüyle harekete geçiren önemli bir kavramdır. (Odabaşoğlu, 2019).

1.3. Yapısal Sermaye

Bir işletmenin temel yapı taşı olan yapısal sermaye, işletmenin rekabet açısından diğer işletmelere üstünlük kurmasını sağlayan en önemli etmenlerden birisidir. Yapısal sermaye, personellerin işyerinden ayrıldıklarında işletmede bıraktıklarının tamamı olarak tanımlanmıştır (Eren ve Akpınar, 2004, s. 10) . Yani insan sermayesi dışında kalan işletmeyi ilgilendiren tüm etmenler diyebiliriz.

Yapısal sermaye, kuruluşun süreklilik sağlayabilmesi için gerekli yöntemler, teknolojiler ve süreçlerdir (Alagöz ve Özpeynirci, 2007: 172).

Yapısal sermayenin başlıca iki hedefi vardır. Bunlar, bilgi kaybının önüne geçmek için bir takım tedbirler almak ve gerekli olan bilgi aktarımını sistemsal bir şekilde yönlendirmek diğeri ise çalışanların girdilere ve bilginin tümüne zamanında doğru bir şekilde erişebilmesini sağlamaktır (Stewart, 1997: 15).

1.4 İlişkisel Sermaye (Müşteri Sermayesi)

İşletmelerin faaliyette bulunduğu sırada etkileşim içinde olduğu insanlar ile olan ilişkilerinin değeri ilişkisel sermaye olarak adlandırılır. Müşteri sermayesi, insan ve yapısal sermayeye bağlı entelektüel varlıklara göre daha kolay ölçülebilir ve sayılabilir (Stewart, 2000, s.123).

İlişkisel Sermaye, organizasyon ile çevresindekiler arasındaki ilişkiyi inceleyen, düzenleyen ve yöneten tüm varlıkları kapsar. Resmi kuruluşlar, alıcılar, satıcılar ve pay sahipleri arasındaki ilişkilerin hepsini kapsayan sermaye türüdür (Bozbura ve Toraman, 2004, s. 57). Bu sermaye türünün gelişmesine etki eden önemli faktörler, kuruluşun müşteri tabanı, müşteriler ile arasındaki ilişkiler, müşteri gücü, marka seçkinliği gibi önemli unsurlardır (Duffy, 2000).

Bu sermaye türü geçmiş zamanda sadece müşteriler ile sınırlı tutulmuştur. Ancak ilerleyen zamanlarda müşteriler dışında pay sahipleri ile ilişkiler, satıcılar ile ilişkiler, yatırım yapacak kişiler ile ilişkiler gibi bileşenler ile anılarak iç ve dış yapının birleşimi olan ilişkisel sermaye kavramı ön plana çıkmıştır. (Roos & Roos, 2013).

1.5 Ante Pulic Modeli

Entelektüel sermaye kavramının sık sık gündeme gelmesi ile beraber bu varlıkların nasıl değerlendirileceği ile ilgili çeşitli yapılmıştır. Bu varlıkların değerlendirilmesi aşamasında Ante PULİC insan sermayesi, yapısal sermaye ve fiziksel sermaye kavramlarını kapsayan ‘Entelektüel Katma Değer Katsayısı’ modelini geliştirmiştir. Ante PULİC’in temel amacı bir organizasyon içerisinde bulunan entelektüel sermaye potansiyelinin etkinlik oranının önemini ortaya çıkarılmasını sağlamaktır.

Entelektüel Katma değer katsayısının hesaplanma formülleri aşağıda gösterilmiştir; (Kayalı ve diğerleri 2007; Yörük ve Erdem 2008; Dönmez ve Erol 2016):

$$VA=I+DP+D+T+M+R+WS$$

İşletmenin Yarattığı Toplam Katma Değer = Faiz Giderleri + Amortisman Giderleri + Dağıtılmayan Karlar + Toplam Maaş ve Ücret Giderleri

$$CEE=VA / Yatırım Tutarı$$

Kullanılan Sermaye Etkinliği = İşletmenin Yarattığı Toplam Katma Değer / Yatırım Tutarı

$$HCE = VA / HC$$

İnsan Sermayesi Etkinliği = İşletmenin Yarattığı Toplam Katma Değer / İnsan Sermayesi

$$SCE = SC / VA$$

Yapısal Sermaye Etkinliği = Yapısal Sermaye / İşletmenin Yarattığı Toplam Katma Değer

Yapısal Sermaye = İşletmenin Yarattığı Toplam Katma Değer - İnsan Sermayesi

$$VAIC = CEE + HCE + SCE$$

Entelektüel Katma Değer Katsayısı = Kullanılan Sermaye Etkinliği + İnsan Sermayesi Etkinliği + Yapısal Sermaye Etkinliği

1.6 Entelektüel Sermaye ile Firma Değeri Arasında İlişki

Literatürde entelektüel sermaye ve firma değeri arasındaki ilişkinin ortaya çıkarılması adına bir çok çalışma yapılmıştır. Örneğin, Riahi-Belkaoui (2003) merkezleri ABD’de bulunan ve birçok ülkede faaliyet gösteren işletmelerin entelektüel sermaye ile performansı arasındaki ilişkinin ortaya çıkarılması için yaptıkları çalışmada bu iki değer arasında pozitif ilişkinin olduğunu ortaya çıkarmışlardır.

Chen vd. (2005) Tayvan’da işletmelerin piyasa değeri ve finansal performansı ile değer yaratma kabiliyeti arasındaki ilişkiyi incelemişlerdir. Araştırmada, entelektüel sermayenin etkinlik ölçüsü olarak Entelektüel Katma Değer katsayısı formülü kullanılmış ve kurumsal değer yaratma etkinliği ile firmaların PD/DD oranları arasındaki ilişkiyi ortaya çıkarabilmek için farklı regresyon analizlerinden yararlanılmıştır. Sonuç olarak entelektüel sermayenin piyasa değeri ve firma performansı üzerinde pozitif etkisi olduğunu ortaya çıkarmışlardır.

Bozbura (2004) yılında yaptığı çalışmada ise merkezi Türkiye’de bulunan işletmelerin entelektüel sermayenin ölçümü ve işletmelerin piyasa değerleri ile ilişkileri incelemiştir. Çalışmasında BİST’te işlem gören 280 işletmenin üst düzey yöneticilerine anket uygulayarak diğer araştırmacılardan farklı bir yol izlemiştir. Bu çalışma neticesinde insan sermayeleri ve ilişkisel sermayeleri ile piyasa değeri/defter değeri oranları arasında pozitif ilişkinin olduğu ve yapısal sermayeleri ile insan sermayeleri ve ilişkisel sermayeleri arasında da anlamlı bir korelasyon olduğu anlaşılmıştır.

Yörük ve Erdem (2008) BİST’te işlem gören Türk Otomotiv işletmeleri içerisinde 12 adet işletmenin performansını yine entelektüel katma değer katsayısı modelini kullanarak incelemişlerdir. Yapılan araştırma sonucunda bu işletmelerin entelektüel sermaye varlıklarının önemli bir unsur olması ve entelektüel sermaye kavramına değer göstermelerine rağmen, bu çalışmadaki işletmelerin performanslarının yüksek oranda fiziksel varlıklarına bağlı olduğu ortaya çıkmıştır.

Li ve Zhao (2018), 2003-2015 arasındaki dönemi kapsayan Çin’de faaliyet gösteren 1850 işletme üzerinde yaptıkları uzun soluklu çalışmalar neticesinde firma değeri ile entelektüel sermaye arasında herhangi bir ilişki tespit edememişlerdir, ancak organizasyonel sermaye ve entelektüel sermaye arasında ise pozitif ilişki tespit etmişlerdir.

2.YÖNTEM

Bu çalışmanın amacı olan entelektüel sermaye ve firma performansı arasındaki ilişkinin analiz edilebilmesi için araştırmanın evreni içerisinde BIST Sürdürülebilirlik endeksinde bulunan 64 işletme bulunmaktadır. İşletmeler arasından Banka ve Sigorta şirketleri çıkarılarak 53 işletme örneklem kapsamına alınmıştır. 53 işletmenin entelektüel sermayeleri Ante PULİC modeli olan entelektüel katma değer katsayısı ile hesaplanmıştır. Amprik analizlerde entelektüel sermayeyi oluşturan kullanılabilen sermaye etkinlik katsayısı, insan sermayesi etkinlik katsayısı ve yapısal sermaye etkinlik katsayısı bağımsız değişkenler olarak ele alınmıştır. Karlılık oranı (ROA), Verimlilik oranı (ATO), Piyasa Değeri (PD/DD) ve Tobin Q değeri ise bağımlı değişkenler olarak incelenmiştir. Ayrıca çalışmada Kaldıraç Oranı (LEV) ve Öz sermaye Getirisi (ROE) kontrol değişkeni olarak incelemelerde yer almıştır.

- 4 adet Bağımlı değişken

Karlılık - (ROA-Return On Assets)= Net kar / Toplam Varlıklar

Verimlilik - (ATO- Assets Turn-Over) = Net Satışlar / Toplam Varlıklar

Piyasa Değeri – (MB- Market to Book) = Piyasa Değeri / Defter Değeri

TobinQ Oranı – (TOBQ - The Q Ratio) = (Piyasa Değeri +Toplam Y.Kaynak) / Toplam Varlıklar

- 3 adet Bağımsız Değişkenler

Entelektüel Sermayenin Hesaplanmasında Kullanılan Entelektüel katma Değer katsayısının 3 faktörü bağımsız değişkenlerdir. İnsan Sermayesi katsayısı, Yapısal Sermaye Katsayısı ve İlişkisel Sermaye Katsayısı.

- 2 adet Kontrol Değişkeni;

Kaldıraç Oranı -(LEV - Leverage) = Toplam Borçlar/ Toplam Varlıklar

Özsermaye Getirisi – (ROE – Return On Equity) = Net kar / Özsermaye

- Hipotezler;

H 0 : Entelektüel Sermaye Unsurlarının, Firma Performansı üzerinde etkisi yoktur.

H 1 : Entelektüel Sermaye Unsurlarının, Firma Performansı üzerinde etkisi vardır.

- Modeller;

Model 1: $MB = \beta_0 + \beta_1CEE + \beta_2HCE + \beta_3SCE + \beta_4ROE + \beta_5LEV + \epsilon$

Model 2: $TOBQ = \beta_0 + \beta_1CEE + \beta_2HCE + \beta_3SCE + \beta_4ROE + \beta_5LEV + \epsilon$

Model 3: $ROA = \beta_0 + \beta_1CEE + \beta_2HCE + \beta_3SCE + \beta_4ROE + \beta_5LEV + \epsilon$

Model 4: $ATO = \beta_0 + \beta_1CEE + \beta_2HCE + \beta_3SCE + \beta_4ROE + \beta_5LEV + \epsilon$

3.BULGULAR VE TARTIŞMA

Tablo 2: Pearson Korelasyon Analizi

		Pearson Korelasyon Tablosu								
		CEE	HCE	SCE	PDDD	TOBQ	ROA	ATO	LEV	ROE

- Araştırmamızın 2.modeli olan entelektüel sermaye ile Tobin Q işletme performansı değeri arasındaki ilişkinin analizinde bulunan değerlerden anlamlı olmayan bir ilişki olduğu anlaşılmıştır. Entelektüel sermaye unsurlarının Tobin Q modeli ile ölçülen işletme performanslarına çok küçük oranda etki ettiği ve kullanılan sermaye etkinlik katsayısı dışında negatif yönlü bir ilişki olduğu gözlenmiştir.

- Araştırmamızın 4.modeli olan Verimlilik (ATO) değerleri ile entelektüel sermaye arasında istatistiksel olarak yüksek derece anlamlı bir ilişki tespit edilmiştir. İnsan sermayesi etkinlik katsayısı ve yapısal sermaye etkinlik katsayısı ile negatif yönlü ilişki tespit edilirken diğer değerler ile pozitif yönlü ilişki tespit edilmiştir.

SONUÇ VE ÖNERİLER

Entelektüel sermaye son zamanlarda işletme değerlemeleri açısından en çok konuşulan konular arasında yer almaktadır. Birçok araştırmacı entelektüel sermayenin işletmelere rekabet avantajı sağladığı konusunda hemfikirdirler. Günümüz koşullarında firmaların sadece finansal performanslarına bakmak onların değerini net olarak sergilememektedir. Bu yüzden işletmelerin maddi olmayan varlıklarıyla beraber değerlendirilmesi hissedarlar, müşteriler, ortak olabilecekler kısaca tüm paydaşlar açısından önemlidir.

Bu çalışmanın temel amacı entelektüel sermayenin ve firma performansı üzerindeki etkisini araştırmaktır. BIST Sürdürülebilirlik Endeksi içerisinde bulunan 53 işletmenin 2021 yılı raporlarından yararlanılarak entelektüel katma değer katsayıları hesaplanmıştır. BIST Sürdürülebilirlik endeksinin seçilmesinde amaç endekse girmek için işletmelerin taşınması gereken bazı kriterlerin entelektüel sermaye faktörleri ile ilişkili olabileceği düşüncesi ve sürdürülebilirlik raporları sunan işletmelerin entelektüel sermayeye daha çok önem verebileceği düşüncesindedir. 53 işletmenin entelektüel katma değer katsayıları ile firma performansı arasında ilişkinin analiz edildiği çalışmamızda firma performansı ölçütleri olarak karlılık, verimlilik, Tobinç ve Piyasa değeri oranları ele alınmıştır. Amprik analizlerde korelasyon ve çoklu regresyon analizlerinden faydalanılmıştır. Yapılan analizler sonucunda entelektüel firma performansı ve entelektüel sermaye unsurları arasında anlamlı ilişkiler tespit edilmiştir. Bu anlamlı ilişkilerin yanı sıra kısmen pozitif yönlü ilişki bulunmuştur. İşletmelerin piyasa değerleri ile defter değerleri arasında oluşan farkın nedenleri arasında entelektüel sermayenin önemli bir yeri olduğu aşikardır. İşletmelerin bilgiye daha fazla önem vererek hem rekabet üstünlüğü sağlayabilecekleri hem de daha fazla katma değer yaratabilecekleri ve işletmelerin öncelikli hedefleri arasında bulunan süreklilik sağlayarak karı maksimize etme konusunda daha başarılı olabilecekleri aşikardır.

Bu araştırmaya ek olarak aşağıda belirtilen faktörler eklenerek araştırmaya genişletilebilir;

- İşletme sayısının daha fazla olduğu araştırmalar yapılabilir,
- Daha uzun yılları kapsayan çalışmalar yapılabilir,
- Farklı performans değerlendirme ölçütleri eklenerek araştırma yapılabilir.

ÖZET

Bu çalışmanın amacı sürdürülebilir kalkınma hedefleri bağlamında Endüstri 4.0 ve Toplum 5.0 kavramlarının fiili gelişim yönleri hakkında genel bilgiler sunmak ve teorik bir çerçeve çizmektir. Bu bağlamda Endüstri 4.0 ve Toplum 5.0 literatürü ele alınarak, alanda yapılan çalışmalar değerlendirilmiştir ve sürdürülebilir kalkınma hedeflerine katkısını incelenmiştir. Ayrıca sürdürülebilirlik ve Toplum 5.0 arasındaki ilişkiyi incelemek ve literatürde yapılan çalışmaları ortaya çıkarabilmek için bibliyometrik bir analizden de faydalanılmıştır. Bu sayede Toplum 5.0'in sürdürülebilir kalkınma hedefleri ve amaçları ile toplumların refahı üzerinde önemli bir etkisi olup olmadığı ortaya çıkartılması amaçlanmıştır.

Anahtar Kelimeler: Toplum 5.0, Endüstri 4.0, Sürdürülebilirlik, SKH

Sustainability From Society 5.0 Perspective

ABSTRACT

The aim of this study is to provide general information about the actual development aspects of the concepts of Industry 4.0 and Society 5.0 in the context of sustainable development goals and to draw a theoretical framework. In this context, the Industry 4.0 and Society 5.0 literature has been discussed, the studies in the field have been evaluated and its contribution to the sustainable development goals has been examined. In addition, a bibliometric analysis was also used to examine the relationship between sustainability and Society 5.0 and to reveal the studies in the literature. In this way, it is aimed to reveal whether Society 5.0 has a significant impact on the sustainable development goals and objectives and the welfare of societies.

Keywords: Society 5.0, Industry 4.0, Sustainability, SDG

1. GİRİŞ

Sanayi devrimi ile birlikte yaşamımızı değiştirmeye başlayan endüstrileşme, radikal değişimlerle beraber gelişimini hızla devam ettirmektedir. Endüstrileşme ile birlikte süreci yakalayan toplumlar ve örgütler refah seviyelerini artırmış, rekabetçi bir yapı elde etmişlerdir. Bilimsel ve teknolojik ilerleme, bir yanda toplumların ve örgütlerin gelişmesine olanak sağlarken diğer yandan dünya çapında çevresel koşulların ağırlaşmasına ve sosyo-ekonomik gerilimlere yol açmıştır. Nitekim Endüstrileşme çabaları ile ortaya çıkan olumsuz çevre koşulları, sürdürülebilir kalkınma görevini de zorlaştırmaktadır. Çoğu ülkede sosyal ve ekonomik programların temel görevlerinin yerine getirilmesi, nüfusun refahını artırmakta, ancak gerekli yaşam kalitesini sağlayamamaktadır. Böyle bir durum, ekonomik kalkınma alanında teknolojik ilerlemeyi sağlama süreci olarak modernleşmesinin özünü ve yönünü belirlerken, bir yandan da emisyon ve kaynak kullanımı, işsizlik ve yeni sosyal zorlukları da beraberinde getirmektedir (Salimova vd., 2020: 48). Modern dünyanın problemi olarak ortaya çıkan bu durumun post modern dünyadaki yaklaşımlarla sürdürülebilir bir yapıya sahip olan Toplum 5.0 kavramı ile giderilmesi hedeflenmektedir.

Bu çalışmada, Toplum 5.0 ile sürdürülebilirlik arasındaki ilişkiyi belirlemek için sürdürülebilir kalkınma hedeflerinden (SKH) faydalanarak bir değerlendirme yapılmaktadır. Bu sayede teknolojinin yıkıcı tarafının Toplum 5.0 ile nasıl tersine çevrildiği ve toplum için dijitalleşmenin nasıl mümkün olacağı ele alınmaktadır. Çalışma kapsamında Toplum 5.0'in daha iyi anlaşılabilmesi için ilk olarak Endüstri 4.0 kavramı ele alınmıştır. Bu sayede Toplum 5.0'in ortaya çıkışının arkasında yatan nedenler ortaya koyulmaya çalışılmıştır. Sonrasında Toplum 5.0 kavramı ve Toplum 5.0'in sürdürülebilir kalkınma hedefleri arasındaki bağlantı ele alınmıştır. Toplum 5.0 ve sürdürülebilirlik arasındaki ilişkiyi ortaya çıkartabilmek için Web of Science veri tabanından elde edilen verilen ışığında Vosviewer yazılım programı kullanılarak anahtar kelime analizi gerçekleştirilmiştir. Yine çalışma kapsamında ikincil verilerden faydalanarak Toplum 5.0 ve sürdürülebilir kalkınma hedefleri karşılaştırılmıştır. Bu sayede Toplum 5.0'in sürdürülebilir kalkınma hedeflerine (SKH) hizmet ettiği ve iki yapının da aynı amaç doğrultusunda çalıştığı ortaya çıkartılarak farkındalık oluşturulmak istenmiştir.

2. TEORİK ÇERÇEVE

2.1.ENDÜSTRİ 4.0

İlk sanayi devrimi (1.0), 18. yüzyılda daha yüksek derecede makineleşmeyi mümkün kılan su buharı enerjisi ile başlamıştır. 19. yüzyılda buhar enerjisinin yerini elektrik almış ve 1870 yılında Cincinnati'de ilk mekanize mezbahanın inşa edilmesi ikinci sanayi devriminin (2.0) başlangıcı olarak kabul edilmiştir. Üçüncü sanayi devrimi (3.0), elektronik ve bilgi-iletişim sistemlerinin kullanımı ve bunlara dayalı olarak üretim süreçlerinde otomasyonun tam olarak uygulanmasıyla damgasını vurmuş ve 1969'da PLC'nin (Programmable Logic Controller) icadı üçüncü sanayi devrimini başlatmıştır (Drljaca vd., 2020).

Endüstri 4.0 ise diğer üç sanayi devriminin devamı olarak, Nesnelerin İnterneti (IoT) teknolojilerinin, üreticilerin tamamen dijitalleştirilmiş, bağlantılı, akıllı ve merkezi olmayan değer zincirlerinden yararlanmasını sağlayan endüstriyel değer yaratma entegrasyonunu ifade etmektedir (Kiel, 2017). İmalat endüstrilerinin hızlı dijital dönüşümünü ifade eden Endüstri 4.0, 2011 yılında Almanya tarafından başlatılmıştır. Endüstri 4.0, Siber-Fiziksel Sistem (CPS) olarak bilinen tüm modern üretim araçlarını kullanarak otomasyon üretimi yoluyla endüstri gelişimi için bir teşviki temsil etmektedir (Drljaca vd., 2020).

Teknoloji odaklı bir sanayi devrimi olan Endüstri 4.0, son yıllarda teknoloji, endüstriler ve toplumsal kalıplar ve süreçlerdeki hızlı değişimi kavramsallaştırmaktadır. Endüstri 4.0, büyük veri analitiği, yapay zeka ve dijital ikizin ortaya çıkması ve gelişmesiyle üretim verimliliğini ve kalitesini daha yüksek bir düzeye çıkarmaktadır (Huang vd., 2022: 424). Endüstri 4.0

paradigması, fiziksel unsurların birbirine ve internete bağlanması olarak ele alınmaktadır. Bu paradigmada, bilgi iletişim teknolojisi sistemleri ve sensörleri tarafından toplanan ve üretilen veriler, üretim sürecinin hızlanması için olası sorunlara ve eksikliklere anında müdahale edecek şekilde sunulmaktadır (İrge ve Yazıcı, 2020: 5).

Akıllı fabrika ve Endüstri 4.0 kavramlarının temeli, siber-fiziksel sistemlerin üretime yoğun bir şekilde girmesine ve üretim sürecinde makineler arasındaki etkileşim hacminin yapay zeka ile donatılarak artırılmasına dayanmaktadır. Bu değişiklikler, üretimde bir artışa, ürün kalitesinin iyileştirilmesine ve üretim maliyetlerinin düşürülmesine olanak tanımaktadır. Tüm bu faktörler, işletmelerin rekabet gücünü de büyük ölçüde artırmaktadır (Salimova vd., 2020: 49).

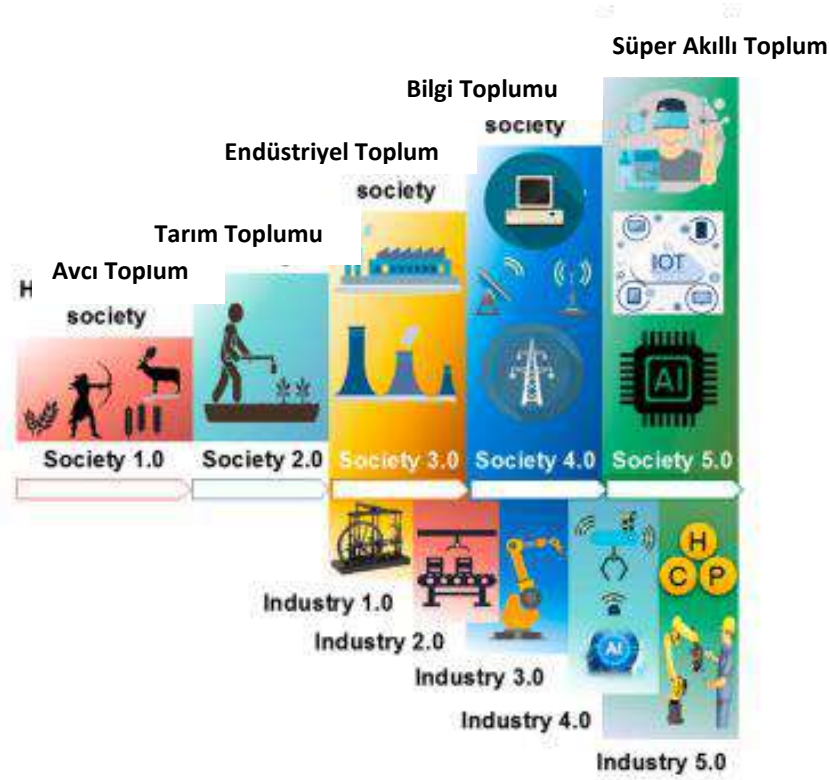

Maliyetlerin düşürülmesi, yapay zekaya bağlı makinelerle sıfır hata, müşteriye özel ürünlerin zamanında tedarik edilmesi gibi pek çok avantaj Endüstri 4.0 sayesinde iş hayatına girmiştir. Bununla birlikte, endüstriyel üretimin robotlaşması otomatik olarak olumsuz sosyal sonuçlara, yani işlerin azalmasına da yol açmaya başlamıştır. Bu sorunun çözümü akıllı fabrikalar ve Endüstri 4.0 kavramının kapsamı dışında yer almaktadır. Böyle bir yapı içerisinde insanlar çalışıp para kazanamıyorsa, akıllı fabrikaların ürettiği o ürünlerin kimler tarafından ve nasıl satın alınacağı ile ilgili büyük bir endişe ortaya çıkmaktadır. Japonya'nın kabul ettiği ve önceliğini bilim, teknoloji, inovasyon ve Birleşmiş Milletler Sürdürülebilir Kalkınma Hedefleri doğrultusunda planlayan Toplum 5.0 ile bu sorunun çözülmesi planlanmaktadır. Toplum 5.0, işsizlik, yoksulluk, hava kirliliği başta olmak üzere birçok sorunun yapay zekanın önderliğinde çözüleceğini öne süren bir kavram olarak karşımıza çıkmaktadır (Zengin vd., 2021: 3; Salimova vd., 2020: 49).

2.2.TOPLUM 5.0

Toplum 5.0, teknolojik ilerlemelerle farklılaşan ihtiyaçlara ve sosyal sorunlara sürdürülebilir çözümler üreten, süper akıllı, insan merkezli, bilgi yoğun bir toplum vizyonu olarak ele alınmaktadır (Smuts ve Van de Merwe, 2022: 3). Toplum 5.0, Ocak 2016 yılında Japon Hükümeti tarafından Beşinci Bilim ve Teknoloji Planı (2016-2020)'nda sürdürülebilir bir toplum oluşturmayı hedeflemek ve belirli bir siber fiziksel sisteme dayalı olarak bireylerin güvenlik ve konforlarına katkıda bulunmak üzere ortaya çıkmış bir kavramdır. Toplum 5.0 kavramı, Japonya'da ekonomik ilerlemeyi sosyal sorunların (örneğin yaşlılık eğilimi, düşük doğum oranları, rekabet eksikliği, karbon emisyonlarının azaltılması) çözümü ile dengelemek için önerilmiştir (Huang vd., 2022: 425; Narvaez Rojas vd., 2021; Shiroishi vd., 2018: 92).

Endüstri 4.0'dan Toplum 5.0'e nasıl geçildiği ele alındığında, dönüşüm süreci genel itibarıyla dört evreden meydana gelmektedir. Bir toplumdaki diğerine geçiş sırasında tüm toplumsal düzeylerde değişimler meydana gelmektedir. Şekil 1.'de gösterildiği gibi, toplumsal değişim genellikle sanayi devrimlerini takip etmektedir.

Şekil 1. Toplum Dönüşümü ve Endüstri Evrimi

Kaynak: Huang vd., 2022: 425.

Şekil 1.'e göre insan toplumu dört dönüşümden geçmektedir. Bunlar, avcı-toplayıcı toplum (Toplum 1.0), tarım toplumu (Toplum 2.0), endüstriyel toplum (Toplum 3.0), bilgi toplumu (Toplum 4.0) ve şu anda süper akıllı ve insan merkezli bir topluma (Toplum 5.0) doğru bu dönüşüm sıçramaktadır. Sanayi devrimi, sanayi toplumundan başladı ve ileri teknolojilerle desteklenen nispeten kısa bir zaman diliminde dört devrim yaşadı ve şu anda Şekil 1'in alt kısmında gösterildiği gibi bir sonraki sanayi devrimine, yani endüstri 5.0'a geçiş yapıldığı görülmektedir (Huang vd., 2022: 425). Bu sanayileşme dönemleri yalnızca büyük bir ekonomik etki oluşturmakla kalmamış, aynı zamanda feodalizme dayalı sınıflı bir toplumun yerini maddi mallar tarafından belirlenen sınıflı bir toplumun alması nedeniyle muazzam toplumsal dönüşümler oluşturmuştur. Sanayileşmenin farklı aşamaları, küresel kentleşmeyi pekiştirmiş ve sanayileşmenin bir sonucu olarak girişimcilik sektörü, ürünlerini satarak ve işgücüne düşük fiyatlar ödeyerek büyük bir zenginlik elde etmiştir. Bu şekilde, sanayi devrimlerinin her biri, Toplum 5.0 kavramı tarafından tasavvur edilen beş toplumun sınıflandırılmasında önemli bir etkiyi temsil etmektedir (Narvaez Rojas vd., 2021).

Toplum 5.0, insan yaşam kalitesini iyileştirme hedefiyle daha verimli ve dengeli bir toplum oluşturmayı hedefleyen bir girişimdir (Şekil 2). Bu amaca ulaşmak için sosyal teknolojik yeniliği kullanan reform, yüksek oranda beklenen zorunluluktur. Toplum 5.0'ın temel ilkesi, sosyal sorunları siber alan ve fiziksel alanın entegre bir platformu aracılığıyla çözerek ekonomik kalkınmayı dengeleyen insan merkezli bir toplumu vurgulamaktır (Roring ve How, 2022: 74).

Şekil 2. Toplum 5.0'ın Hayatla Etkileşimi

Kaynak: BTK, 2022: 17.

Süper Akıllı Toplum, insan toplumunda avcı/toplayıcı, kırsal/tarımsal, endüstriyel ve bilgidan sonra beşinci gelişim aşaması olarak konumlandırılmakta ve bu toplumun çeşitli ihtiyaçlarına ayrıntılı olarak katılan dijital teknolojilerle bağlantılı sürdürülebilir bir toplumu temsil etmektedir. Buna göre yaş, cinsiyet, bölge, dil vb. ayrımı yapılmadan ihtiyaç duyan kişilere, ihtiyaç duydukları anda, ihtiyaç duydukları miktarda, gerekli mal veya hizmetlerin sağlanması amaçlanmaktadır (Shiroishi vd., 2018: 92). Toplum 5.0'ın ilkesi, toplumun en yoksulundan en zenginine kadar tüm katmanları için akıllı teknolojilerin kullanımına dayanarak, sürdürülebilir kalkınma hedefleri göz önünde bulundurularak toplumun siber alan ve fiziksel alan arasında daha yüksek bir örtüşme düzeyine ulaşmasını sağlamaktır (Roring ve How, 2022: 74).

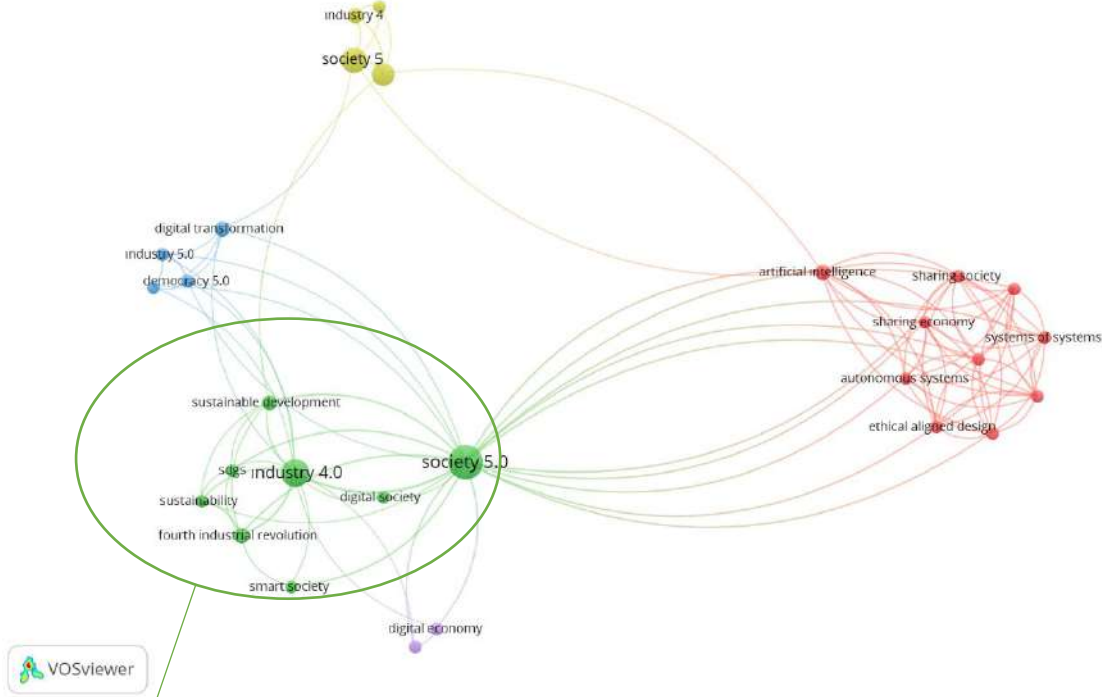

3. TOPLUM 5.0 VE SÜRDÜRÜLEBİLİRLİK

Brundtland Komisyonu sürdürülebilirliği: “Sürdürülebilir kalkınma, gelecek nesillerin kendi ihtiyaçlarını karşılama yeteneğinden ödün vermeden bugünün ihtiyaçlarını karşılayan kalkınma” olarak tanımlamaktadır. Bu tanım, gelişmekte olan veya gelişmiş tüm ülkelerde sürdürülebilirlikle ilgili oldukları için hem ekonomik hem de sosyal kalkınmaya odaklanmaktadır (Smuts ve Van de Merwe, 2022: 4). Sürdürülebilir Kalkınma Hedefleri ise (SDG'ler-SKH), çevresel, sosyal ve insani gelişme hedeflerinden oluşan entegre bir gündem olarak değerlendirilmektedir. Bu çerçeve 17 amaç ve 169 hedef içeren bir yapıdan oluşmaktadır (Kasinathan vd., 2022). Toplum 5.0, Japonya'nın kalkınma sistemi olsa da, hedefleri UNDP (Birleşmiş Milletler Kalkınma Programı) Sürdürülebilir Kalkınma Hedefleri (SDG'ler-SKH) ile eşdeğer olduğundan Japonya ile sınırlı değildir. Düzenlemeler, ülkenin veya bölgenin mali durumuna veya sosyal temeline bağlı olarak değişiklik gösterecek olsa da, SKH'ler genel iyileştirme hedefleri olarak ele alınmaktadır. Toplum 5.0, Japonya'nın SKH ile karakterize edilen hedeflerin bir bölümünü anlamakla başa çıkma yöntemidir. Bu arada, Japonya'nın karşı karşıya olduğu toplumsal zorluklar, örneğin olgunlaşan bir nüfus, azalan doğum oranı, azalan nüfus gibi birçok sorun farklı ülkelerin de sorunu olarak ele alınmaktadır. Bu açıdan Japonya, bu zorluklarla karşılaşan ülkelerin başında gelmektedir. Toplum 5.0 aracılığıyla bu zorlukların ilk hedefleri aracılığıyla ve dünya için bu cevapları sunarak Japonya, dünya çapındaki karşılaştırmalı zorlukların çözümüne ve SKH'lerin gerçekleştirilmesine katkıda bulunabilir (Onday, 2019).

Toplum 5.0 kavramının hangi konularla birlikte ele alındığını ve sürdürülebilirlik arasındaki ilişkiyi ortaya çıkarabilmek için WOS (Web of Science) üzerinden elde edilen veriler

Vosviewer yazılım programı ile anahtar kelime analizi yapıldığında karşımıza aşağıdaki görsel çıkmaktadır (Şekil 3):

Şekil 3. Toplum 5.0 ve Sürdürülebilirlik Arasındaki İlişkiyi Gösteren Bibliyometrik Anahtar Kelime Analiz Haritası

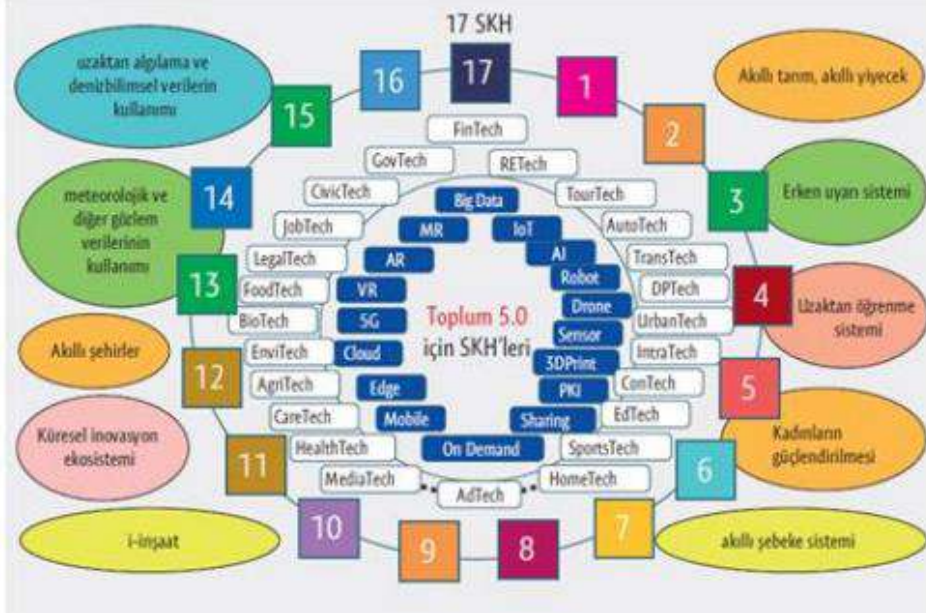

Toplum 5.0 ve Sürdürülebilirlik

Şekil 3 Toplum 5.0'in hangi konularla çalışıldığını belirlemek adına Web of Science veri tabanından elde edilen veriler ışığında Vosviewer yazılım programı kullanılarak yapılan anahtar kelime analizini göstermektedir. Analiz sonucunda yeşil kümede yer alan çalışmaların genel itibariyle Toplum 5.0 ile sürdürülebilirlik arasındaki ilişkiyi inceleyen çalışmalardan oluştuğu görülmektedir. Buna göre Toplum 5.0 ile, tüm vatandaşların dinamik olarak dahil olması, çeşitli sistemlerde dijital teknolojilerin tanıtılması ve bunların uygulanmasının hızlandırılması amaçlanmaktadır. Bu nedenle, sürdürülebilir kalkınma, sürdürülebilirlik sağlanabilmesi, geleceğin garanti altına alınması ve sorunlara acil çözüm üretebilmek için ve toplumun yaşam kalitelerinin yükseltilmesinde birey-teknoloji ilişkisi ve Toplum 5.0 kavramının ve potansiyelinin derinleştirilmesi gerekmektedir (Tavares ve Azevedo, 2021; Wahyuningtyas vd., 2022; Carayannis vd., 2023). Carayannis ve Morawska-Jancelewicz (2022) tarafından yapılan çalışmada ise Toplum 5.0, yaşam kalitesini, sosyal sorumluluğu ve sürdürülebilirliği iyileştirmek için teknolojinin ve Endüstri 4.0 sonuçlarının teknolojik entegrasyon ile etkilerinden yararlanarak insanı inovasyonun orta noktasına yerleştirmeyi amaçladığı belirtilmektedir. Yazarlara göre bu çığır açan bakış açısı, Birleşmiş Milletler Sürdürülebilir Kalkınma Hedefleri'ndeki hedeflerle ortak noktalara sahiptir.

Şekil 4, Toplum 5.0'in ekonomik büyümeyi, sosyal adaleti ve çevre korumayı teşvik etmeye yönelik 17 Sürdürülebilir Kalkınma Hedefini (1. Yoksulluğun ortadan kaldırılması, 2. Açlığın son bulması, 3. Sağlık ve bakım, 4. Nitelikli eğitim, 5. Cinsiyet eşitliği, 6. Temiz su ve hijyen, 7. Yenilebilir temiz enerji, 8. İnsana yakışır iş ve sürdürülebilirlik, 9. Sürdürülebilir inovasyon, 10. Atıkların azaltılması, 11. Sürdürülebilir şehirler ve toplumlar, 12. Sürdürülebilir tüketim ve

üretim, 13. İklim koruma, 14. Sürdürülebilir kalkınma için deniz ve okyanusları koruma, 15. Doğal yaşamı koruma, 16. Barış, adalet ve güçlü kurumsallaşma, 17. Amaçlarda birlik ve işbirliği) göstermektedir (Roring ve How, 2022: 75; <https://sdgs.un.org/goals>).

Şekil 4. Toplum 5.0 ve Sürdürülebilir Kalkınma Hedefleri

Kaynak: BTK, 2022.

Toplum 5.0'in amacı, tüm insanların kendi mutluluklarını ve yaşam tarzlarını takip etmelerini sağlamak ve sosyal sorunların çözümü yoluyla doğa ile uyum içinde sürdürülebilir kalkınmayı sağlamak için hayal gücünü ve yaratıcılığı serbest bırakarak üzerlerine düşeni yapmalarını sağlamaktır. Şekil 4 incelendiğinde, Toplum 5.0'in küresel sorunları çözmek ve sürdürülebilir toplumlar oluşturmak için Birleşmiş Milletler tarafından benimsenen SKH'lerle uyumlu olduğu görülmektedir (Keidanren, 2018). Buna göre yeni nesil girişimcilerin, yenilikçi ve akıllı teknolojileri kullanarak işlerini başlatma olasılıklarının daha yüksek olması beklenmektedir. Bu yenilikler, amaca ulaşma yolunda zeka, yetkinlik, gelir, cinsiyet, sosyo-ekonomik durum veya başka herhangi bir sınırlama olmaksızın toplum tarafından kullanılacaktır (Roring ve How, 2022: 75).

Toplum 5.0'in SKH'lerin gerçekleştirilmesine yönelik katkılar da dahil olmak üzere hangi sektöre odaklanması gerektiği ve sektöre özgü hangi reformları oluşturması gerektiği aşağıdaki tabloda gösterilmiştir. Yine tabloda Toplum 5.0'in önem verdiği sektöre yönelik amaçlarının hangi sürdürülebilir kalkınma hedefleri maddelerine karşılık geldiği de belirtilmiştir (Keidanren, 2018: 14-20):

Tablo 1. Sürdürülebilir Kalkınma Hedefleri Doğrultusunda Toplum 5.0'in Odaklanması Gereken Sektörler

Sektörler	17 SKH'den İlgili Madde	Sektöre Özgü Reformlar
Şehirler ve Bölgeler	3., 4., 5., 6., 8., 11., 12., 13.	Farklı yaşam tarzlarını ve iş başarısını kolaylaştırmak için kentsel (yüksek yoğunluklu) ve taşra (düşük yoğunluklu) yaşam biçimleri çeşitlendirmek ve bu seçeneklerin sunduğu cazibe ve yaşam kalitesi artırmak. Kentsel alanlarda enerji, ulaşım, insan akışları, lojistik, atık vb. verileri daha akıllı çözümlere olanak sağlamak için paylaşmak.

Enerji	7., 9., 13.	Akıllı şehirler ve merkezi olmayan topluluklar da dahil olmak üzere her yerde sürdürülebilir yaşamları gerçekleştirmek için enerji karışıklığını değiştirmek ve verimli enerji ağları oluşturmak için veriler kullanmak. Geleneksel enerji ağlarına bağlı olmayan şebeke dışı sistemleri, enerji kullanımı için bir seçenek haline getirmek. Uygun maliyetli, güvenilir enerjiyi herkes tarafından kullanılabilir hale getirmek.
Afet Önleme ve Hafifletme	3., 6., 11., 13.	Toplum 5.0 ile afetlere açık, savunmasız altyapıya sahip bölgelerde yaşam standartlarını ve dayanıklılığı iyileştirmeye yardımcı olmak ve dijital teknolojilerden faydalanmak.
Sağlık (sağlık, tıp ve hemşirelik)	3.	Sağlık, tıp ve hemşirelik dahil olmak üzere yaşam boyu sağlık hizmetlerini dönüştürmek. Bireysel fiziksel özelliklerin ve faaliyetlerin dijitalleştirilmesi ve yaşam mekanizmalarının biyoteknolojik araştırmasındaki ilerleme gibi teknolojik eğilimleri, bakıma ihtiyacı olan herkese uygun zamanlarda gerekli ilgiyi sağlamak için kullanmak. Kaliteli sağlık hizmetlerine erişim artırmak yeni nesil yüksek hızlı iletişim ağları, yapay zeka tabanlı tıp ve sağlıklı yaşam destek hizmetleri ve teletıp teşvik etmek ve bireylerin kendi yaşam aşaması verilerini aktif olarak kullanmaları ve yönetmeleri için sistemler kurmak. Bu şekilde herkes için sağlıklı bir yaşam sağlamak.
Tarım ve Gıda	2., 12., 14., 15.,	Uzaktan izleme ve kontrol, tarım robotları ve sahadaki tarımsal işler için otonom dronlar gibi en son teknolojilerden tam olarak yararlanmak. Aynı zamanda, özel şirketler, gençlik ve tarım teknolojisi girişimleri dahil olmak üzere çeşitli aktörlerin katılımıyla çalışma saatlerini azalacak, iş verimliliği önemli ölçüde artacak ve üretkenlik katlanarak artacaktır. Karada ve suda zengin biyoçeşitliliği korumak için biyoçeşitliliği artırma ve çevresel etkiyi en aza indirme yollarını teşvik etmek. Üretim, işleme, lojistik, satış ve ihracatı kapsayan gıda değer zincirini (FVC) optimize etmek için veri ve teknolojilerini de kullanmak. Üretim, lojistik ve ihracat verilerinin entegrasyonu ile stok ve satış bilgilerinin gerçek zamanlı paylaşımı sağlanacak, stok, teslimat süreleri ve hacimleri ile nakliye yollarının koordinasyonu ile gıda kayıpları en aza indirilecektir. Ayrıca, sağlık, ilaç ve hemşirelik gibi farklı sektörlerle işbirliğinden yararlanmak ve üretim üslerini geliştirmek, şirketlerin tarım ürünleri ihracatının ötesine geçerek, teknoloji platformları ve hizmetleri de dahil olmak üzere deniz aşırı ticarete geçmesini ve tüm tarımsal gıda işinde karlılığı artırmasını sağlayacaktır.
Lojistik	11., 12.	E-ticaretin hızlı büyümesi ve tedarik zincirlerinin küreselleşmesi, Toplum 5.0'da daha da çeşitli ve sofistike lojistik gerektirmektedir. Örneğin, gerçek zamanlı lojistik izleme ve kontrol sağlamak için RFID gibi teknolojiler kullanılarak kargolar ve ulaşım araçları ağlara bağlanacaktır. Arz ve talebi tahmin etmek için yapay zekayı kullanmak tüm tedarik zincirlerini koordine edecek ve optimize edecektir. İnsan gücünü serbest bırakmak için, otonom sürüş, dronlar ve robotlarla ikame edilebilecek çoğu işi otomatikleştirmek.
İmalat ve Hizmetler	5., 8., 9.	Yeteneklerin yapay zeka aracılığıyla dağıtılması, üretim ve hizmet sunumu için güçlü araçlar sağlamaktadır. Dijital dönüşüm sayesinde, bu yetenekler dağıtılacak ve yapay zeka modülleri ve hizmetleri olarak kullanıma sunulacak.
Finans	1., 5., 8., 9., 15.	Tüketiciler geleneksel üretim süreçlerinden bağımsız olarak 3D yazıcıları kullanarak kendi zevklerine uygun tasarım, malzeme, renk, desen ve boyutta kişiselleştirilmiş ürünler sipariş edebilecek.
Kamu Hizmetleri	1., 3., 4., 10.	Kamu hizmetleri de yukarıda belirtilen farklı yaşamları ve sektörleri destekleyecek şekilde dönüştürülmelidir. Merkezi ve yerel yönetimler, sistemlerini dijitalleşmeye dayalı olarak yeniden inşa ederek işe başlayacaktır.

Ortaklık	17.	Toplum 5.0, herkesin mevcut çerçevelerden ve kısıtlamalardan bağımsız olarak çeşitli değerleri takip etmek için yenilikçiliğini kullanabileceği bir toplum olacaktır. Toplum 5.0'ın kurucusu olan Japonya, konsepti dünyanın her yerinden oyuncularla ortaklaşa hayata geçirmek istemektedir. Bu süreçte kazanılan problem çözme bilgi birikimini paylaşarak sürdürülebilir küresel kalkınmaya katkıda bulunması hedeflenmektedir.
-----------------	-----	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Tabloya göre Toplum 5.0 kavramının sürdürülebilir kalkınma hedefleri (SKH) ile yakından ilişkili olduğu ve doğrudan desteklediği görülmektedir. Toplum 5.0'ın sürdürülebilir kalkınma modeli olabileceği de bu tablo sonucunda ortaya çıkmaktadır. Toplum 5.0 yaşamları ve endüstrileri dönüştürmeyi hedefleyen bir yapı olarak ele alınmaktadır. Buna göre sosyal sorunları doğayla uyum içinde çözmeyi amaçlayan Toplum 5.0, Birleşmiş Milletler SKH'lerinin gerçekleştirilmesine katkıda bulunmakta ve iki reform da ortak bir yönü ve amacı paylaşmaktadır (Keidanren, 2018: 14). Birleşmiş Milletler devletleri ve üyeleri tarafından 2015 yılında kabul edilen 2030 Gündemi, mevcut en acil küresel zorluğun yoksulluğun ortadan kaldırılması olduğunu kabul etmektedir. Bu nedenle, sürdürülebilir kalkınma hedefleri doğrultusunda birkaç kategorinin ekonomik, sosyal ve çevresel değişiklikleri ima ettiğini göz önünde bulundurarak 169 temel hedefle 17 hedef önerilmektedir. Japonya, diğer birçok ülkenin aynı sorunlarla karşı karşıya kalacağını düşünerek, Toplum 5.0'ın tüm ülkelerde uygulanmasının teşvik edilmesini önermektedir. Bu bağlamda Toplum 5.0, 2030 Gündemi'nin SKH'lerinin uygulanmasına katkıda bulunmaktadır. Toplum 5.0 kapsamındaki bu kalkınma hedeflerine ulaşmak için, her bölgenin süreçlerine bu yeni yaklaşımlara dayalı olarak yeniden odaklanması gerekmektedir (Narvaez Rojas vd., 2021).

4. SONUÇ

Toplum 5.0, Japonya'da ortaya çıkan fakat bütün dünyayı etkisi altına alan sosyal ve insani ilerleme fikriyle hareket eden bir önerme olarak karşımıza çıkmaktadır. Temel hedefi küresel dünyanın temel sorunlarını çevreyle uyumlu bir şekilde çözebilmek, sürdürülebilirliği sağlamak adına toplumun gelişimi için dijital teknolojileri etkili ve verimli kullanmak ve bu teknolojilerden faydalanmaktır. Bu sayede dijital üretimden dijital bir topluma geçiş yapmayı amaçlamaktadır.

Toplum 5.0, ekonomik büyüme, teknolojik gelişme ve sürdürülebilirlik ile birlikte dönüşümlerin merkezinde insanı merkeze almaktadır. Bu yeni toplum modeli, insanlığın beşinci sosyal devrime eriştiği gerçeğine dayanmaktadır (Narvaez Rojas vd., 2021). Bu bağlamda bu çalışma Toplum 5.0'ın sürdürülebilirlik yaklaşımıyla nasıl ele alındığını anlamak ve etkisini ortaya çıkartabilmek için yapılmıştır. Araştırma sonucunda elde edilen bulgular doğrultusunda Toplum 5.0'ın modern dünyanın zorlukları ve problemleri ile başa çıkabilmek için Sürdürülebilirlik Kalkınma Hedefleri doğrultusunda insan ve toplum yaşamında kaliteyi artırmayı hedeflediği ortaya çıkmıştır. Buna göre Toplum 5.0, dijital teknolojilerin toplumun refahı ve sektörlerin sürdürülebilirliğini sağlamak üzere sosyal ve etik sorumlulukları yerine getirmek için kullanılması hedefine dayanmaktadır. Sürdürülebilir Kalkınma Hedefleri doğrultusunda Toplum 5.0'ın odaklanması gereken sektörler; şehir ve bölgeler, enerji, sağlık, lojistik, finans, tarım, afet önleme, imalat ve ortaklıklar olduğu ortaya çıkmıştır. Bu sektörlerde dijital teknolojilerin, toplum refahı ve sürdürülebilir bir gelecek kapsamında ele alınması gerektiği vurgulanmaktadır.

Toplum 5.0 ile uyumlu sektörler oluşturabilmek için devletlerin bu alanda yatırım yapması beklenmektedir. Bu kapsamda Toplum 5.0'ın uygulanabilmesi ve sürdürülebilirliğe katkı sağlayabilmesi için bu dönüşümün bir devlet politikası kapsamında ele alınması gerekmektedir. Toplum 5.0'ın ortaya koyduğu amaçlar doğrultusunda sektörlerin yeniden revize edilmesi ve

bu yapıya uygun nitelikli insan kaynaklarının da yetiştirilmesi önemli bir husus olarak karşımıza çıkmaktadır. Daha çevreci, daha yaşanabilir, işsizlik ve sosyal sorunların en aza indiği bir dijital dönüşüm için eğitimden, insan kaynaklarına, lojistikten şehir planlamasına kadar hayatın bütün alanlarında Toplum 5.0 hedefleri çerçevesinde bir politika belirlenmesi gerekmektedir.

Sonuç olarak dijital dönüşümle birlikte ortaya çıkan Toplum 5.0 daha yaşanabilir ve sürdürülebilir bir dünya için merkezine insanı ve toplumu alan bir yapıdır. Bu yeni toplumsal yapı, sürdürülebilirliği sağlayabilmek için verimli enerji ağları oluşturmada, arz ve talebi tahmin etmek için yapay zekayı kullanmakta, iş modellerine ve imalat süreçlerine yapay zekayı ve sanal sistemleri dahil etmekte ve işbirliği içinde hareket ederek sürdürülebilir kalkınmaya hizmet etmektedir. Buna göre Toplum 5.0'ın dünya ekonomisinde, dijital ve sosyo-ekonomik dönüşümünün daha fazla başarısı, doğrudan hükümet yapılarının, iş dünyasının ve sosyal kurumların ulusal ekonominin sürdürülebilir kalkınmasının zorluklarını ele alma konusundaki ortak çabalarının etkinliğine ve tutarlılığına bağlı olacağı gözükmektedir (Salimova vd., 2020: 52).

Bulut Muhasebesi: Finansal Yönetimde Dijital Dönüşümün Anahtarı

Dr. Öğr. Üyesi Ömer Burak PAKSOY

Alanya Alaaddin Keykubat Üniversitesi

omer.paksoy@alanya.edu.tr

Orcid: 0000-0002-1273-5915

ÖZET

Bu çalışmanın amacı, bulut muhasebesi konusunda okuyuculara bilgi sağlamak ve işletmelerin bulut tabanlı muhasebe sistemlerini kullanmasının avantajlarını anlatmaktır. Çalışmada, bulut muhasebesinin ne olduğu, nasıl çalıştığı, faydaları, kullanım alanları, önemli unsurları ve gelecekteki potansiyeli hakkında genel bir anlatım sunulmuştur. Amaç doğrultusunda, işletmelerin bulut muhasebesine geçiş yapma kararını desteklemek ve bu teknolojiyi kullanarak finansal yönetim süreçlerini geliştirmelerine yardımcı olmak hedeflenmektedir. Bununla birlikte, çalışmada bulut muhasebesinin zorlukları ve endişeleri de ele alınarak okuyucuların bilinçli bir şekilde karar vermelerine katkıda bulunulması hedeflenmiştir. Çalışmada ayrıca, bulut muhasebesinin işletmeler için rekabet avantajı sağladığı ve dijital dönüşüm sürecinin bir parçası olarak önemli bir rol oynadığı vurgulanmıştır. İşletmelerin bulut muhasebesini nasıl kullanabilecekleri, nelere dikkat etmeleri gerektiği ve gelecekteki gelişmelerle ilgili beklentileri hakkında bilgilendirme yapılmıştır.

Anahtar Kelimeler: Bulut Muhasebesi, Finansal Yönetim, Dijital Dönüşüm

Cloud Accounting: The Key to Digital Transformation in Financial Management

ABSTRACT

The purpose of this study is to provide readers with information about cloud accounting and to explain the advantages of businesses using cloud-based accounting systems. The study provides an overview of what cloud accounting is, how it works, its benefits, uses, important elements and future potential. The aim is to support businesses in their decision to adopt cloud accounting and to help them improve their financial management processes using this technology. However, the study also addresses the challenges and concerns of cloud accounting to help readers make an informed decision. The study also emphasizes that cloud accounting provides a competitive advantage for businesses and plays an important role as part of the digital transformation process. Information is provided on how businesses can use cloud accounting, what they should pay attention to and their expectations about future developments.

Keywords: Cloud Accounting, Financial Management, Digital Transformation

GİRİŞ

1950'lerin sonlarında başlayan muhasebe verilerinin otomasyon süreci günümüze kadar hızla gelişmeye devam ederek işletmelerin dijitalleşmesinin önünü açmıştır. Muhasebe yazılımının ortaya çıkışı, muhasebe işlemlerini büyük ölçüde geliştirmiştir. Büyük hacimli bilgi ve bu bilginin işlenmesi için gereken süre göz önüne alındığında, muhasebe yazılımı, muhasebecilerin işlerini daha hızlı ve daha verimli yapmaları için yararlı bir araç haline gelmiştir. Muhasebe yazılımları birçok yıldır var olmasına rağmen, yıllar içinde potansiyelini geliştirmeye devam etmiş ve oldukça sofistike hale gelmiştir (Dimitriu & Matei, 2015).

Günümüzde işletmeler, geleneksel muhasebe yöntemlerinin sınırlamalarıyla karşı karşıya kalmakta ve daha hızlı, esnek ve verimli bir muhasebe süreci arayışı içerisinde girmektedir. İşte bu noktada, muhasebe mesleğini yeniden şekillendirme potansiyeline sahip nispeten yeni bir teknoloji olan bulut muhasebesi devreye girmektedir. Bulut muhasebesi, kullanıcılar için online hizmetler sunarken sunucular üzerinde muhasebe işlemlerini gerçekleştiren yazılım veya uygulamaların kullanımını ifade etmektedir (Khanom, 2017).

Bulut muhasebesi, muhasebe süreçlerini dijitalleştirerek verileri güvenli bir şekilde bulutta depolama, paylaşma ve işleme imkânı sağlayan bir yöntemdir. Bu teknoloji, işletmelere daha fazla esneklik, verimlilik ve maliyet tasarrufu sunarken, aynı zamanda veri güvenliği ve işbirliği gibi avantajları da sağlamaktadır. Geleneksel muhasebe yöntemlerine kıyasla bulut muhasebesi, işletmelerin rekabetçiliklerini artırmalarına ve dijital dönüşüm yolculuğunda önemli bir adım atmalarına yardımcı olmaktadır (Dimitriu & Matei, 2015; Saha et al., 2020). Bu çalışmada, bulut muhasebesinin tanımı, özellikleri, uygulama adımları ve işletmeler için sağladığı avantajları daha ayrıntılı bir şekilde ele alınacaktır. Ayrıca, bulut muhasebesinin yaygın olarak kullanıldığı alanlara, geleneksel muhasebe ile arasındaki temel farklara ve gelecekteki eğilimlere de göz atılacaktır. Bu sayede, bulut muhasebesinin işletmelere sunabileceği potansiyel daha iyi anlaşılabilir ve iş süreçlerinin iyileştirilebilmesi adına doğru kararlar alınabilmesine katkı sunması düşünülmektedir.

1- BULUT MUHASEBESİNİN TANIMI VE ÖZELLİKLERİ

Bulut muhasebesi, finansal işlemlerin geleneksel yerel sunuculardan ziyade internet tabanlı hizmetler üzerinde depolandığı ve işlendiği bir muhasebe yaklaşımıdır (Walakumbura, 2021). Bulut tabanlı muhasebe yazılımları, işletmelere finansal verilere istenildiği zaman ve herhangi bir yerden erişim imkânı sağlar. Esneklik, ölçeklenebilirlik ve veri güvenliği gibi özellikleriyle bilinen bu teknoloji, finansal yönetimi daha kolay, hızlı ve verimli hale getirmektedir (Modi, 2018).

Bulut muhasebe, çevrimiçi (online) muhasebe, web tabanlı muhasebe veya hizmet olarak yazılım (SaaS) muhasebesi olarak da bilinir. Bulut muhasebesi, bir ön uç arayüzü, bir arka uç veritabanı ve bir bulut sunucusu içeren temel bir mimariye sahiptir (Khanom, 2017). Ön uç arayüzü, kullanıcıların bulut muhasebe yazılımı ile etkileşime girmesini sağlayan kullanıcı arayüzüdür. Arka uç veritabanı tüm verilerin depolandığı yerdir ve bulut sunucusu yazılımın barındırıldığı yerdir. Bulut muhasebesinin çalışma mekanizması, bulut sunucusunda depolanan yazılım ve verilere erişmek için internetin kullanılmasını içerir (Meng, 2022; Huang, 2016).

2- BULUT MUHASEBESİNİN AVANTAJLARI

Bulut muhasebesinin en büyük avantajlarından biri, işletmelere esneklik ve ölçeklenebilirlik sağlamasıdır. Geleneksel muhasebe sistemleri genellikle yerel sunuculara veya bilgisayarlara bağlı olduğundan, kaynaklar sınırlıdır ve işletme ihtiyaçları değiştikçe ölçeklendirme zorlukları ortaya çıkmaktadır. Ancak bulut tabanlı muhasebe yazılımları, işletmelere ihtiyaçlarına uygun olarak kaynakları artırma veya azaltma esnekliği sağlamakta ve bu da, işletmelerin büyüdükçe veya küçüldükçe, kolayca sistemlerini ayarlamalarına olanak tanımaktadır (Khanom, 2017; Zhang, 2014).

Bulut tabanlı muhasebe sistemleri, işletmelere mobil erişim imkânı sağlamaktadır. Bu teknoloji bir bilgisayar ağına bağlı olması gerektiğinden, muhasebe süreci mekân ve zamandan etkilenmeyecek, kullanıcılar zamanında ve hızlı bir şekilde çalışabilecek ve böylece iş, daha pratik ve esnek hale gelebilecektir. Aynı zamanda, işletme sahipleri ve yöneticileri de işlerini takip etmek, finansal durumu kontrol etmek ve kararlarını vermek için güncel ve gerçek zamanlı bilgilere erişebileceklerdir (Saha et al., 2020).

Bulut muhasebesi sistemleri, diğer işletme uygulamaları ve sistemleriyle kolayca entegre olabilmektedir. Banka hesapları, ödeme ağ geçitleri, faturalandırma yazılımları gibi uygulamalarla entegrasyon, veri akışını otomatikleştirmekte ve iş süreçlerini iyileştirmektedir. Bu entegrasyonlar, veri uyumluluğunu ve doğruluğunu da artırmaktadır (Dimitriu & Matei, 2014).

Bulut muhasebesi, işletmelere maliyet tasarrufu da sağlamaktadır. Çevrimiçi bir muhasebe çözümü benimsendiğinde, bakımı gereken herhangi bir donanım (sabit diskler, sunucular veya harici bellek vs.) yoktur. Bulut modelini benimseyen birçok şirket, yazılımları internet üzerinden sunulduğu ve yerel bir bilgisayara yüklenmediği için maliyetleri önemli ölçüde azaltmayı başarmışlardır. Bu teknoloji sayesinde işletme için bir muhasebe uygulaması satın alınmamakta, sadece kullanım hakkı satın alınmaktadır. Ayrıca, bulut tabanlı sistemlerde güncelleme ve yedekleme gibi süreçler otomatik olarak gerçekleştirildiği için IT ekipleri açısından zaman ve kaynak tasarrufu sağlanabilir (Dimitriu & Matei, 2014).

Bulut muhasebesi aynı zamanda veri güvenliği ve güvenilirlik açısından da önemli avantajlar sunmaktadır. Bulut tabanlı sağlayıcılar, verilerin güvende tutulması için güvenlik önlemleri ve güçlü veri şifreleme yöntemleri kullanmaktadır. Ayrıca, verilerin yedeklenmesi ve acil durumlara karşı koruma da sağlanmaktadır. Böylece, işletmelerin veri kaybı veya güvenlik ihlalleri gibi risklerle karşılaşma olasılığı da azaltılmaktadır (Akdoğan & Akdoğan, 2018).

Bulut muhasebesi, işletmelere daha detaylı finansal analiz yapabilme ve özelleştirilebilir raporlamalar oluşturabilme imkânı da sunmaktadır. İşletmeler, gerçek zamanlı verilere dayalı kararlar verebilir ve iş performansını daha iyi geliştirebilirler. Ayrıca, analitik veri işleme ve raporlama yetenekleri, işletmelere finansal yönetimi iyileştirmek için önemli bir araç sağlamaktadır (Akdoğan & Akdoğan, 2018).

Bulut tabanlı muhasebe çözümleri, işletmelerin müşterilere daha iyi hizmet sunmalarını sağlamaktadır. Hızlı ve doğru finansal veriler, müşteri taleplerine anında yanıt verme imkânı sunmakta ve ayrıca, online fatura ödemeleri ve elektronik belge paylaşımı gibi özellikler, müşteri deneyimini geliştirmektedir (Akdoğan & Akdoğan, 2018).

3- BULUT MUHASEBESİNİN UYGULANMASI

Bulut muhasebesinin işletmelerde uygulanması, belirli adımlar ve süreçler gerektirir. Bulut muhasebesinin işletmelerde uygulanması için genel bir yol haritasını aşağıdaki şekilde oluşturmak mümkündür (Buyruk Akbaba, 2019; Huang, 2016):

- 1- **İhtiyaç Analizi:** Bulut muhasebesinin uygulanmasındaki ilk adım, işletmenin muhasebe süreçlerini ve ihtiyaçlarını analiz etmektir. Öncelikle, mevcut muhasebe sistemlerinin eksiklikleri ve iyileştirme alanları belirlenmelidir. Bu adımda ayrıca, bulut muhasebesinin getireceği avantajlar ve beklentiler göz önünde bulundurulmalıdır.
- 2- **Sağlayıcı Seçimi:** İkinci adım, uygun bir bulut muhasebe sağlayıcısı seçmektir. Sağlayıcının güvenilirlik, güvenlik, ölçeklenebilirlik, uyumluluk ve müşteri desteği gibi faktörler de göz önünde bulundurulmalıdır. Sağlayıcının mutlaka işletmenin ihtiyaçlarına uygun bulut muhasebe çözümleri sunması beklenmektedir.
- 3- **Veri Taşıma ve Entegrasyon:** Bulut muhasebesine geçiş sürecinde, mevcut muhasebe verileri bulut ortamına aktarılmalı ve entegrasyon sağlanmalıdır. Bu aşamada, verilerin doğru ve güvenli bir şekilde aktarılması ve entegrasyonun sağlıklı bir şekilde sağlanması için veri dönüşümü, veri aktarımı ve veri uyumu gereklidir.
- 4- **Eğitim ve Uyum Sağlama:** Bulut muhasebesi kullanımına geçişte, çalışanlar eğitilmeli ve sistemle uyum sağlamaları sağlanmalıdır. Çalışanlar, bulut tabanlı muhasebe uygulamalarını etkin bir şekilde kullanabilmeli ve yeni iş süreçlerine adapte olabilmelidir. Eğitim ve değişim yönetimi süreçleri bu yüzden çok önemlidir.
- 5- **Sürekli İyileştirme:** Bulut muhasebesi uygulaması bir süreç olup sürekli iyileştirme gerektirir. İşletme, bulut tabanlı muhasebe çözümünü kullanarak süreçleri ve verimliliği gözlemlemeli, geri bildirimleri değerlendirmeli ve iyileştirme alanlarını belirlemelidir. Böylece, işletmenin bulut muhasebesi kullanımından en iyi şekilde faydalanması sağlanabilir.
- 6- **Veri Güvenliği ve İzleme:** Bulut muhasebesi kullanırken veri güvenliği büyük önem taşımaktadır. İşletmeler, veri güvenliği önlemlerini sıkı bir şekilde uygulamalı ve izlemelidir. Bu süreç; güçlü şifreleme, erişim kontrolü, güvenlik yedeklemeleri ve güvenlik politikalarını içerir. Ayrıca, veri izleme ve denetimleri yapılmalı ve herhangi bir güvenlik ihlali veya sorun tespit edilirse hızlı müdahale yapılmalıdır.

Bulut muhasebesinin işletmelerde uygulanması, belirli işletme ihtiyaçlarına ve süreçlere bağlı olarak değişiklik gösterebilir. Bu nedenle, profesyonel bir danışmanlık hizmeti almak ve sağlayıcıyla işbirliği yapmak önemlidir. İşletme, doğru planlama, dikkatli uygulama ve sürekli izleme ile bulut muhasebesinden en iyi şekilde faydalanabilir (Zhang & Gu, 2013).

4- BULUT MUHASEBE VE MASAÜSTÜ MUHASEBE YAZILIMI ARASINDAKİ TEMEL FARKLAR

Bulut muhasebesi ile masaüstü muhasebe yazılımları arasında bazı temel noktalarda farklılıklar bulunmaktadır. Bu farkları aşağıdaki tablo ile özetlemek mümkündür (Buyruk Akbaba, 2019; Allahverdi, 2017; Öz, 2016):

Tablo-1: Bulut Muhasebe ve Masaüstü Muhasebe Yazılımı Arasındaki Farklar

Karşılaştırma Kriteri	Bulut Muhasebe Yazılımı	Masaüstü Muhasebe Yazılımı
Ödeme Modeli	Kullanıcı sayısına ve gereken özelliklere göre aylık abonelik.	Bir ön lisans maliyeti ve ayrıca yükseltmeler için ek bir maliyet.
Kurulum ve güncellemeler	Yüklenecek yazılım bulunmamaktadır. İşletmeler her zaman yazılımın en güncel sürümünü kullanmaktadır. Tedarikçi, özellikler eklemek için yazılımı güncellediğinde yeni sürüm hemen tüm kullanıcılar tarafından kullanılabilir.	İşletmeler, yazılımı, tüm yükseltmeleri ve düzeltmeleri manuel olarak yüklemelidir.
Güvenlik	Tedarikçiler, kurumsal düzeyde yazılım güvenliği ve erişim denetimlerini sağlar.	Şirketler, bir ihlali önlemek için verilerini, yazılımlarını ve kimlik bilgilerini dikkatli bir şekilde korumalıdır.
Erişilebilirlik	İnternet bağlantısı olan herhangi bir cihazdan herhangi bir kullanıcı için her zaman, her yerden erişim sağlanabilir.	Yazılım, belirli bilgisayarlara kurulur. Bu nedenle, çalışanların uzaktan çalışırken finansal verilere erişmek için bilgisayarlarını yanlarında götürmeleri gerekir.
Yedekleme ve Kurtarma	Bulut tedarikçisi, verileri 7/24 otomatik olarak yedekler. Finans uzmanları, bilgisayarlarını kaybetse bile yazılıma ve finansal verilere erişebilirler.	Yedeklemeler manuel olarak yapılır. Kullanıcılar, bilgisayarlarının bozulması veya kaybolması veya çalınması durumunda şirketin değerli bilgilerini kaybetmemesini sağlamak için düzenli olarak yedekleme yapmalıdır.
Verileri Harici Taraflarla Paylaşma	Veriler, erişim hakları üzerinde merkezi denetimle bulutta bulunduğundan, şirketler harici muhasebecilere veya diğer taraflara ilgili verilere sınırlı veya salt okunur erişim sağlayabilir.	Paylaşım, manuel ve zaman alıcıdır. Kullanıcılar, harici taraflarla paylaşmak için genellikle verileri manuel olarak dışa aktarmalıdır.
Otomasyon	Bulut muhasebe yazılımı, özel raporlama ve mutabakat dahil olmak üzere birçok zaman alan manuel işlemi otomatik hale getirir.	Az veya hiç otomasyon yoktur.
Özelleştirilmiş Raporlama	Yazılıma bağlı olarak belirli iş gereksinimlerini ve muhasebe düzenlemelerini desteklemek için kapsamlı, özelleştirilmiş, gerçek zamanlı raporlama mevcuttur.	Çok az özelleştirme ile sınırlı finansal rapor seçimi bulunmaktadır. Özel raporlama ve analiz için genellikle verileri elektronik tablolara aktarmak gerekir.
Uyumluluk	Birden fazla muhasebe standardı (GAAP ve IFRS) devlet düzenlemeleri ve vergi kanunları ile uyumluluk. Otomatik gelir	Yerel gereksinimler için destek ve şirketten ek modüller satın alma ihtiyacı.

	tanıma ile birden fazla iş modeli desteği.	
Çok Varlıklı ve Uluslararası Muhasebe	Bağlı kuruluşları ve uluslararası operasyonları olan şirketler de dahil olmak üzere çok varlıklı iş yapılarına yönelik destek.	Tek bir işletme için tasarlanmıştır. Ek işlevsellik satın almadan şirketler arası muhasebe veya diğer çok varlıklı iş gereksinimleri için destek yoktur.
Diğer Uygulamalarla Entegrasyon	İşletme genelinde gerçek zamanlı veri görünümü sağlayan diğer bulut tabanlı uygulamalarla sorunsuz entegrasyon	Sınırlı yetenek veya diğer uygulamalarla entegre edilmesi zor. Manuel veri aktarımı gerekli olabilir.

5- BULUT MUHASEBESİNİN DEZAVANTAJLARI

Bulut muhasebesinin birçok avantajına rağmen birkaç dezavantajı da bulunmaktadır ve işletmelerin bunları da göz önünde bulundurması hayati bir öneme sahiptir. Bulut muhasebesi, internet bağlantısına bağımlı olmasından dolayı internet kesintileri veya hızlı olmayan bir internet bağlantısı, işletmelerin veri erişimi ve iş sürekliliği konusunda sorunlar yaşamasına neden olabilir (Huang, 2016).

Bulut muhasebesinde, işletmelerin verilerini üçüncü taraf sağlayıcılara teslim etmesi gerekmektedir. Bu nedenle, veri güvenliği endişeleri ortaya çıkabilir. Veri güvenliğini sağlayan güçlü şifreleme ve güvenlik önlemleri olmasına rağmen, işletmelerin veri güvenliği politikalarını ve sağlayıcının güvenlik önlemlerini dikkatlice değerlendirmesi gerekmektedir (Wali et al., 2022). Bu durum, işletmelerin veri sahipliği ve kontrolü konusunda bazı endişeleri de beraberinde getirebilir. Veri yönetimi ve veri sahipliği konularının sözleşmelerde açıkça belirtilmesi önemlidir (Öz, 2016).

Bulut muhasebesi sağlayıcısıyla yapılan sözleşmelerde, belirtilen hizmet düzeyi taahhütlerine bağlı olunması gerekmektedir. İşletmeler, sağlayıcının hizmetlerini sunamaması durumunda sorun yaşayabilirler. Bu nedenle, işletmelerin sağlayıcının güvenilirliği ve performansı hakkında detaylı bir değerlendirme yapması önemlidir (Elitaş & Özdemir, 2014).

Bulut muhasebesine geçiş yaparken, mevcut verilerin uyumlu bir şekilde aktarılması ve entegrasyon süreci bazı zorluklar içerebilir. Veri taşıma sürecinin doğru ve sorunsuz bir şekilde yönetilmesi için dikkatli planlama ve testler gerekmektedir (Aksu, 2017).

Bulut muhasebesi genellikle abonelik tabanlı bir modeldir. İşletmeler, sürekli bir abonelik maliyetiyle karşı karşıya kalabilirler. Bu durum, uzun vadeli maliyetleri etkileyebilir ve işletmelerin bütçelerini etkileyebilir (Öz, 2016).

Bulut tabanlı muhasebe yazılımları, genellikle standart bir yapıya sahip olup özelleştirme ve esneklik sınırlamaları içerebilir. İşletmelerin özel ihtiyaçları için tam olarak uyarlanabilir olmayabilirler (Aytekin, Erdoğan & Kavalcı, 2016).

6- BULUT MUHASEBESİNİN GELECEĞİ

Bulut muhasebesinin geleceği oldukça parlak görünmektedir. İşletmeler, bulut teknolojisinin sunduğu avantajları keşfettikçe ve teknolojideki gelişmelerle birlikte, bulut muhasebesine olan ilgi artmaktadır. İşletmelerin bulut muhasebesini benimsemeleri ve kullanmaları beklenen bazı önemli trendler şunlardır:

-Yapay Zekâ ve Otomasyon: Yapay zekâ ve otomasyon, bulut muhasebesinin geleceğinde önemli bir rol oynayacaktır. Yapay zekâ ve otomasyon teknolojileri, muhasebe süreçlerini daha verimli ve hızlı hale getirecek, rutin işleri otomatikleştirerek insan hatalarını azaltacak ve analitik becerileri geliştirerek daha değerli bilgiler elde edilmesini sağlayacaktır. Örneğin, faturalama, tahsilat, maliyet analizi gibi süreçlerde yapay zekâ ve otomasyon kullanımı artacaktır. Otomasyon, tekrarlayan görevleri düzene koymaya ve hataları azaltmaya yardımcı olabilirken yapay zekâ, işletmelerin veri analizine dayalı olarak daha bilinçli kararlar almasını sağlayabilecektir (Akdoğan & Akdoğan, 2018).

-Veri Analitiği ve Karar Destek: Bulut muhasebesi, işletmelere büyük miktarda veriye erişim sağlar. Gelecekte, bu verilerin analizi ve işlenmesi daha da önem kazanacaktır. Veri analitiği, işletmelerin finansal performanslarını daha iyi anlamalarına ve gelecekteki trendleri tahmin etmelerine yardımcı olacaktır. Ayrıca, yapay zekâ ve makine öğrenmesi tekniklerinin veri analitiğiyle birleşmesiyle daha sofistike karar destek sistemleri geliştirilecektir (Elitaş & Özdemir, 2014).

-Mobil Uygulamalar ve Erişilebilirlik: Mobil teknolojilerin yaygınlaşmasıyla birlikte, bulut tabanlı muhasebe uygulamalarının mobil erişilebilirlikleri de artacak. İşletmeler, muhasebe verilerine herhangi bir mobil cihazdan ulaşabilecek, iş süreçlerini yönetebilecek ve kararlar alabileceklerdir. Mobil uygulamalar, muhasebe personelinin ofis dışında çalışmasını kolaylaştıracak ve işbirliğini artıracaktır (Modi, 2018; Aksu, 2017).

-Veri Güvenliği ve Gizlilik: Veri güvenliği ve gizliliği, bulut muhasebesinin geleceğinde de önemli bir trend olacaktır. İşletmeler, veri güvenliği konusunda daha fazla önlem alacak ve siber saldırılara karşı daha sıkı önlemler alacaklardır. Veri şifreleme, kimlik doğrulama teknikleri ve güvenlik yedeklemeleri gibi güvenlik önlemleri yaygınlaşacaktır (Allahverdi, 2017).

-Entegrasyon ve Ekosistem: Bulut muhasebesi, diğer işletme uygulamaları ve sistemleriyle entegre çalışabilme yeteneği sunmaktadır. Gelecekte, bulut muhasebe çözümlerinin diğer iş uygulamaları ve sistemleriyle daha derin entegrasyonu ve bir ekosistem oluşturulması beklenmektedir. Bu da veri paylaşımını kolaylaştırmakta, iş süreçlerini daha verimli hale getirmekte ve işletmelere daha fazla değer sağlamaktadır (Wali et al., 2022).

-Blockchain Entegrasyonu: Blockchain teknolojisi, güvenli ve şeffaf işlem kaydı sağlamaktadır. Blockchain, finansal işlemleri depolamak, verilerin gerçekliğini doğrulamak ve dolandırıcılığı azaltmak için kullanılabilir güvenli, merkezi olmayan bir şekilde kaydedilmesine imkân sağlayabilecektir. Bu sayede muhasebe verilerinin daha güvenilir ve takip edilebilir olması sağlanabilecektir (Wali et al., 2022; Dimitriu & Matei, 2014).

-İnovasyon ve Gelişim: Bulut muhasebesi alanında sürekli olarak yeni teknolojik inovasyonlar ve gelişmeler gerçekleşmektedir. Bu sayede işletmelere daha iyi iş süreçleri, daha gelişmiş analitik yetenekler ve daha kullanıcı dostu arayüzler sunma potansiyeli sağlanmaktadır. İnovasyon ve gelişim, bulut muhasebesinin gelecekteki önemli bir trendi olarak öngörülmektedir (Wali et al., 2022).

Bu trendler, bulut muhasebesinin gelecekteki yönünü şekillendirecektir. İşletmelerin bu trendlere uyum sağlaması ve gelişmeleri takip etmesi, rekabet avantajı elde etmelerini de sağlayacaktır.

SONUÇ

Bulut muhasebesi, işletmelere geleceğe yönelik bir finansal yönetim yaklaşımı sunmaktadır. İşletmelerin verimliliği artırmak, maliyetleri düşürmek, iş süreçlerini iyileştirmek ve rekabet avantajı elde etmek için bu teknolojiye dayanarak faydalanması önemlidir. Ancak, her işletmenin ihtiyaçları farklı olduğundan, bulut muhasebesine geçiş yaparken dikkatli bir planlama ve uyum süreci gereklidir. Ayrıca, bulut muhasebesinin kullanımında dikkate alınması gereken bazı zorluklar ve endişeler de bulunmaktadır. Veri güvenliği, veri sahipliği ve kontrolü, bağımlılık, veri göçü ve entegrasyon zorlukları gibi konular işletmelerin dikkat etmesi gereken noktalar. ABD’de yapılan bir araştırmaya göre, 2020 yılında küresel bulut muhasebesi pazarı büyüklüğü yaklaşık 4.25 milyar dolar olarak gerçekleştiği tahmin edilmektedir. 2026 yılına kadar ise bu pazarın yaklaşık 11.8 milyar dolara ulaşması beklenmektedir. 2020 yılında işletmelerin yaklaşık %67’si bulut tabanlı muhasebe yazılımını kullanmakta iken KOBİ’lerin %46’sı bulut muhasebesine geçiş yapmıştır. Bulut muhasebesini kullanan işletmelerin %82’si maliyet tasarrufu sağladıklarını ve işletmelerin %89’u bulut muhasebesinin verimliliği artırdığını ifade etmektedir. Bulut muhasebesini kullanan işletmelerin %85’i daha iyi işbirliği imkânı bulunduğunu düşünmektedir. Öte yandan, 2020 yılında veri güvenliği endişesi nedeniyle bulut muhasebesine geçmeyen işletmelerin oranı ise %67 olarak belirlenmiştir. Bulut muhasebesini kullanan işletmelerin %94’ü veri güvenliğini sağlamak için çeşitli güvenlik önlemleri aldıklarını belirtmektedir. Sektörel dağılım olarak bakıldığında ise; perakende sektöründe bulut muhasebesini kullanan işletmelerin oranı %73’tür. Finans sektöründe bu oran %68 ve üretim sektöründe ise %57’dir. Bu istatistikler, bulut muhasebesinin küresel olarak benimsenme oranını, avantajlarını, veri güvenliği endişelerini ve sektörel kullanımını yansıtmaktadır. Bu istatistikler zamanla değişmekte ve güncel araştırmalarla birlikte daha spesifik veriler ortaya çıkabilmektedir (FinancesOnline, 2023).

Bulut muhasebesi, gelişen teknolojilerle birlikte sürekli olarak ilerlemekte ve yeni fırsatlar sunmaktadır. Yapay zekâ, makine öğrenimi ve büyük veri analitiği gibi alanlarda yapılan inovasyonlar, bulut muhasebesinin gelecekteki potansiyelini artırmaktadır. Ayrıca, sürdürülebilirlik, veri güvenliği ve gizliliği, sektörel uyum ve regülasyonlar gibi konular da bulut muhasebesinin gelecekteki gelişimini etkileyecek önemli faktörlerdir. İşletmelerin bulut muhasebesini benimsemesi, dijital dönüşüm sürecinin bir parçasıdır. Bu süreçte, doğru sağlayıcıyı seçmek, veri güvenliği önlemlerini almak, personelin eğitimini sağlamak ve sürekli gelişen teknolojilere adapte olmak önemlidir. Bulut muhasebesinin getirdiği avantajlar ve gelecekteki potansiyel, işletmelere rekabetçi bir avantaj sağlamak ve sürdürülebilir bir büyüme sağlamak için değerlendirilmesi gereken önemli bir araçtır. İşletmeler, bulut muhasebesini benimseyerek finansal yönetimlerini güçlendirebilir ve iş süreçlerinde önemli bir dönüşüm sağlayabilirler.

Bununla birlikte, muhasebe araçları sağlamanın geleneksel yolunu yeniden şekillendiren en göze çarpan kavram bulut bilişim teknolojisidir. Muhasebe dünyası çevrimiçi ürünlere doğru kaymaktadır. Bulut hizmetlerinin sayısız faydası, şirketlerin muhasebe departmanı için şüphesiz teknolojik bir devrimin gerekli olduğunu kanıtlamıştır. Bir bulut muhasebe çözümü kullanmanın faydaları oldukça fazladır ve işletmeler tüm fırsatları keşfetmek ve sürekli değişen pazardan bir şeyler öğrenmek için ellerinden geleni yapmalıdır. Buluta geçiş çoğu işletme için kaçınılmaz görünmektedir.

ABSTRACT

Airport emergency planning involves the processes structured to enable an airport to cope with an emergency situation occurring within or in the vicinity of the airport boundaries. The goals aimed to be achieved with this planning can be summarized as minimizing property damage and losses, ensuring that air operations return to normal as quickly as possible, and especially, preventing loss of life. To ensure the effective execution of airport emergency plans, it is important to consider the rules set by international regulators for airport emergency management in aviation and the training materials developed to apply these rules, as well as to examine aviation safety incidents that occur within these requirements for situation assessment and process improvements. After conducting a review covering the past 15 years within the scope of work in the aforementioned fields, the requirements that stand out for achieving success in emergency management are identified as harmonizing the operations of the institutions and organizations called upon to function in emergency situations, taking into account local practices and regulations; clearly identifying all information sources to be used in emergency planning; designing emergency plans with consideration given to all possible scenarios; conducting timely and regular drills; meticulously documenting the process for the purpose of continuous improvement; planning for emergency situations before, during, and after the event, taking into account the respective categories.

Key Words: Keywords: Airport, Emergency, Management

Havalimanı Acil Durum Yönetimi Eğitim Materyallerinin Uluslararası Kuruluşların Öneri ve İhtiyaçlarına Göre Değerlendirilmesi

ÖZET

Havaalanı acil durum planlamaları, havaalanının, havaalanı sınırları içinde ya da çevresinde gerçekleşen bir acil durumla başa çıkabilmesi için yapılandırılan süreçleri içerir. Bu planlamayla ulaşılmak istenen hedefler, can kaybının önlenmesi başta olmak üzere, maddi hasar ve kayıpların en aza indirgenebilmesi, hava operasyonlarının olabilecek en kısa sürede normale döndürülebilmesi olarak özetlenebilir. Havaalanı acil durum planlarının sağlıklı bir şekilde yürütülebilmesi için havacılık alanında uluslararası kural koyucuların havaalanı acil durum yönetimine dair koydukları kuralların ve bu kuralları uygulayabilmek için geliştirdikleri eğitim materyallerinin, ne gibi tavsiyeler içerdiği ve sektör temsilcilerinden ne gibi gereklilikler beklediği sorusu ile bu gereklilikler kapsamında meydana gelen havacılık emniyeti olaylarının incelenmesi, durum tespiti ve süreç iyileştirmeleri açısından önem taşıyan unsurlardır. Sayılan alanlarda çalışma kapsamında son 15 yılı içerecek şekilde yapılan incelemeler sonucunda acil durum yönetiminde başarılı olunabilmesi için öne çıkan gereklilikler, acil durumun yönetilebilmesi için işleyişe çağırılan kurum ve kuruluşlara dair yerel uygulama ve yönetmeliklerin dikkate alınarak

6th International CEO Communication, Economics, Organization & Social Sciences Congress

uyumlařtırmaların yapılması, acil durum planlamasında kullanılacak tüm bilgi kaynaklarının net olarak belirlenmesi, acil durumların olabilecek tüm kořullar dikkate alınarak kurgulanması, tatbikatların zamanında ve düzenli yapılması, süreç sonrasında belgelendirmelerin süreç iyileřtirmesi açısından titizlikle yürütülmesi, acil durumların, öncesi, olay esnası ve sonrası kategorileri dikkate alınarak planlanması olarak belirlenmiřtir.

Anahtar Kelimeler: Havaalanı, Acil Durum, Yönetim

INTRODUCTION

Airport emergency planning entails the structured preparatory process undertaken by an airport to effectively handle an emergency situation occurring within or around its premises. The primary objective of airport emergency procedures is to save human lives. Additionally, maintaining continuity of aviation operations and mitigating the impact of emergencies can be considered as secondary goals (ICAO, 2016).

An airport emergency plan establishes coordination procedures among different airport organizations or service units and organizations that can provide assistance in emergency response. Examining the historical trend of the emergency response capability index reveals a rapid improvement from 0.29 in 2000 to 0.71 in 2015, transitioning from a low level to a high level of capability. The period from 2000 to 2006 witnessed a medium to low emergency response capability, which evolved into a medium to high emergency response capability from 2007 to 2015 (Bao & Zhang, 2018).

Each airport emergency plan encompasses a coordinated program for the airport and its surroundings, aiming to ensure that the responsible individuals have a clear understanding of the procedures to competently manage these emergencies. In order to effectively manage emergencies such as aircraft accidents, natural disasters, fires, and storms, which have a significant impact on the community, it is crucial to have well-defined roles for airports serving as transportation hubs. Although it is inevitable to address different needs and characteristics for each distinct event, the fundamental requirements and concepts of emergency planning remain the same. These include commanding the emergency response, establishing effective communication, and ensuring coordination, which can be identified as the key problem areas within the context of emergency planning.

The development of the Human Factors Analysis and Classification System has led to studies that have shed light on the prevalence of human error in the overall analysis of aviation accidents. Data indicates that in general aviation accidents, 79.2% of errors are skill-based, 29.7% are decision-based, 13.7% are violations, and 5.7% are perceptual errors (FAA, 2005, p. 6) (Wiegmann, D. & Faaborg, T., 2005).

An airport emergency plan should include a set of instructions to ensure the presence of adequate intervention from all parties involved, such as rescue and firefighting, legal enforcement, police/security, and medical service units, both within and outside the airport, as well as other authorized, trained, and expert personnel (ICAO 1991).

LITERATURE REVIEW

Burian et al. (2003) emphasized that the most important objective in airport emergency situations is to access operational situational awareness during real-world emergencies and abnormal conditions. They further highlighted the significance of developing procedures and checklists based on human performance limitations, capabilities, and cognitive vulnerabilities in terms of emergency situations. Hence, the study emphasized the criticality of developing guidance for documentation, training, team coordination, and situation management (Burian, Dismukes, & Barshi, 2003).

Malakis and Kontogiannis conducted a study on emergency situations at airports, focusing on aviation operations personnel and air traffic controllers. They examined the skills and theoretical knowledge required to successfully manage operational demands that may arise during emergency and abnormal situations. The study specifically addressed annual refresher courses, which minimally considered non-technical competencies and team skills. Instructors assessed the trainees' training effectiveness using high-quality simulators and requested them to create an inventory of their technical skills during emergency training. Additionally, trainees

were expected to recall procedural knowledge related to emergency situations. Consequently, a series of simulated emergency scenarios were employed to indirectly mature competencies through the application of technical skills (Malakis & Kontogiannis, 2012).

Joseph Pfeifer, the Chief of Emergency Preparedness at the New York Fire Department, points out that each functional component should encompass situations and assumptions, highlighting the presence of several fundamental situations and assumptions related to most incidents. Firstly, it should be acknowledged that all emergencies are unpredictable. Pfeifer emphasizes that crises are inherently random, unexpected, and novel. Additionally, leaders must be prepared for a wide range of emergencies that require rapid response. Regardless of whether the incident is considered ordinary or extraordinary, emergency interventions are necessary. For instance, even extraordinary events that fall outside the parameters familiar to a police officer, firefighter, or Airport Operations Officer may require intervention. Leaders may also face challenges to their decision-making process due to the nature of the incident itself (Pfeifer, 2013).

Lu, Wetmore, and Przetak (2006) state in their study, conducted in 2006, that the majority of accidents related to turbulence result in injuries to flight crew members. The factors leading to these injuries or fatalities are as follows (Lu, Wetmore & Przetak, 2006):

- Lack of situational awareness (weak discipline in assessing weather conditions by pilots or dispatchers).
- Inadequate training of cabin crews when encountering turbulence (incorrect cabin reaction procedures).
- Insufficient team communication.
- Inability of passengers to cooperate with cabin crews during emergencies

Midkiff, etc. (2009) emphasize that the human element is the fundamental component of flight operations in their study. This fundamental component includes both cabin and cockpit crews. In large carriers, this element reaches a significant number of individuals. The personnel complement for cabin and cockpit crews can exceed 20,000 and 10,000 employees, respectively. In most cases, this implies that crew members may not have worked together before a specific flight. While this is an important factor to consider, another prominent factor is the need for airlines and regulators to develop highly detailed procedures that leave very little room for improvisation by crew members in order to maintain a safe and smooth operation. These procedures, including normal, abnormal, and emergency situations, are detailed in crew members' reference manuals. These details are backed up by a cross-checked checklist system among flight crew members. Assessing the competency and currency of a crew member is the responsibility of the training or flight standards department. However, it should not be overlooked that the ultimate responsibility for the safe and efficient conduct of the flight always rests with the captain as the authorized commander (Midkiff, Hansman, & Reynolds, 2009).

METHODOLOGY

International data from the last 15 years was analyzed using qualitative research methods in this study. Within qualitative research methods, a literature review was conducted to examine the recommendations and requirements of international aviation organizations regarding aviation emergency training. The training documents provided in flight schools and airlines for aviation emergency training were subjected to another qualitative research method, content analysis.

Content analysis is a research tool used to determine the presence of specific words, themes, or concepts within qualitative data. It is a method used to measure and analyze the presence, meanings, and relationships of words, themes, or concepts found in qualitative data. Researchers can make inferences about the messages in the texts, the authors, the audience, and

even the culture and time surrounding the text based on the data obtained. (Zaltman, 2003) (Şukayiri, 2021) Data sources in this research method can be interviews, open-ended questions, field research notes, speeches, or any form of communicative language (books, essays, discussions, newspaper headlines, speeches, media, historical documents, etc.). Various forms of text analysis can be used within the same study (Açiler, 2020).

The research was conducted based on international regulatory profiles of aviation organizations (ICAO, EASA, IATA, UK CAA, JAA, etc.) and aviation companies regarding emergency plans and training in aviation. In this context, guidebooks and training documents uploaded to the websites of international aviation organizations in the last 15 years were examined, while information was also gathered from articles, theses, and other writings written by authorized individuals and trainers in the field of aviation in the last 15 years.

Data regarding each airport department's emergency entry and emergency plans, including Emergency Rescue Pre-Plans, were obtained from internal airport reports. While compiling data from reliable international aviation organization publications and written documents related to education, the relevance and validity of the information were evaluated to ensure their inclusion in the data set.

The study aimed to answer the following research questions:

- What elements are included in the training materials for emergencies according to the recommendations and requirements of international aviation organizations?
- What are the prominent elements in emergency management training and aviation business examples in the context of changing societal conditions?
- How can these elements be categorized in subheadings?

FINDINGS AND ANALYSIS

This study relied on the guidebooks and training documents utilized by international aviation organizations (ICAO, EASA, IATA, UK CAA, JAA, etc.) in the past 15 years, which were made available on their websites. Operational data primarily came from the published reports of international aviation organizations and airports, specifically the Monitoring Rating reports (2005–2020). Following the literature review, the emergency plans developed by each institution were summarized and evaluated under three main headings:

- Precautions and training measures to be implemented before an emergency.
- Correct and effective response strategies to be employed during an emergency.
- Post-emergency situation assessment and the lessons learned from this evaluation.

The effectiveness and proficiency of training programs related to airport emergency action plans, particularly in responding to emergencies and fire incidents at airports, were evaluated within the scope of this research. The assessments of international aviation organizations and the practices and outcomes of emergency situations at international airports were determined. Based on this information, data pertaining to the implementation conditions of necessary pre-emergency training and the effective execution of emergency training refresher courses were compiled by international aviation authorities and organized in the table provided below.

Table-1: Categories of Training Materials on Emergency Management Training of International Aviation Organizations

Institutions / Rules	ICAO	EASA	FAA
SMS Training	+	+	-
CRS Training	+	-	+
Emergency Training	+	+	+
Aviation Safety Training	+	+	+
First aid training	+	+	+
Practical Training	+	+	-

Reference: ICAO, EASA, FAA

The most comprehensive content regarding Emergency Planning is recommended by ICAO in Table 1. Therefore, in this section, ICAO recommendations have been categorized. The International Civil Aviation Organization (ICAO), with its capacity to develop Standards and Recommended Practices (SARPs) for the safety, efficiency, and regularity of international civil aviation, has published specific Standards and Recommended Practices to address the necessity and importance of emergency response planning and coordination (ICAO, 2022). You can see these publications categorized in Table 2.

Table-2: ICAO Annexes and Contents

Annex	Section / Chapter	Relevant Text
Annex 1	Personnel Licensing	No specific section
		Different sections of the Annex explain the necessity for personnel to have knowledge and/or experience regarding emergency procedures primarily related to technical and operational emergencies.
Annex 9	Facilitation	Chapter 8
		Provisions on specific subjects related to facilitation
Annex 11	Air Traffic Services	Appendix C
		Material related to emergency planning
		The purpose of the guidelines is to assist in maintaining the safe and orderly flow of international air traffic and the presence of major international airlines within the air transportation system in the event of interruptions to air traffic services and related supporting services.
		Sections:
		- Introduction
		- Responsibility for developing, publishing, and implementing emergency plans
		- Preparedness actions
		- Coordination
		- Development, publication, and implementation of emergency plans
Annex 14	Volume I - Aerodromes	Chapter 9
		Aerodrome operational services, equipment, and installations
		9.1.1 An aerodrome emergency plan shall be established in proportion to aircraft operations and other activities conducted at the aerodrome.

Annex	Section / Chapter	Relevant Text
		9.1.2 The aerodrome emergency plan shall facilitate the coordination of actions to be taken in the event of an emergency occurring at an aerodrome or in its vicinity.
		9.1.3 The plan shall coordinate the response or participation of all relevant authorities capable of assisting in responding to an emergency, as determined by the appropriate authority.
		Chapter 9.1 subsequently summarizes a series of nine (9) recommendations for the design and preparation of an aerodrome emergency plan.
Annex 14	Volume II - Heliports	Chapter 6
		Heliport emergency response
		6.1 Heliport Emergency Planning
		6.1.1 A heliport emergency plan shall be established in proportion to helicopter operations and other activities conducted at the heliport.
		6.1.2 The plan shall identify the organizations capable of assisting in responding to an emergency at or in the vicinity of the heliport.
		Chapter 6.1 then outlines, in broad strokes, a series of seven (7) recommendations for the design and preparation of a heliport emergency plan.
Annex 17	Security	Chapter 5
		Management of response to unlawful interference
		5.1 (Prevention)
		5.1.4 Each Contracting State shall ensure the development and provision of emergency plans to protect civil aviation against acts of unlawful interference. Emergency plans shall be regularly tested.
Annex 19	Safety Management	Appendix 2
		Framework for Safety Management Systems (SMS)
		1.4. Coordination of emergency planning
		The service provider, required to establish and maintain an emergency response plan for accidents and incidents occurring in aircraft operations and other aviation emergencies, shall ensure appropriate coordination with the emergency response plans of organizations with which communication is required during the provision of their services.

Reference: ICAO 2022

When the approach to Raleigh Durham Airport in North Carolina, a BAE Jetstream 32 lost control and crashed on December 13, 1994. During the final approach correction, descending 2,100 ft. (640 meters) with the power levers at flight idle, a burning ignition light caused the captain to believe that the left engine was on fire (Flight Safety Foundation, 1996). The captain, during the go-around procedure, failed to feather the propeller, secure the engine, or follow any abnormal or emergency procedures related to an engine failure, resulting in the loss of control and a collision with the terrain, causing fatalities. Only three passengers survived the accident (Burian, Dismukes, & Barshi, 2003).

The burning ignition light in this accident was actually described as a "minor transient anomaly" (Flight Safety Foundation, 1996), and it was later determined that both engines were operating normally throughout the flight until the collision. However, during the accident investigation, it was discovered that the company had improperly trained flight crews to always associate a burning ignition light with an engine failure. The investigation

found that the training provided by the company did not adequately address the recognition of a low-power engine failure and that the company records did not provide sufficient evidence of properly monitoring and managing training performance (Burian, Dismukes, & Barshi, 2003).

There have been many accidents where problems with emergency equipment hindered the response of a flight or cabin crew to an emergency situation. One such accident occurred on April 28, 1988, in Maui, Hawaii, when a section of the fuselage measuring 18 ft detached from a B727-200 aircraft at an altitude of 24,000 ft (7315.2 meters), causing an explosive decompression (NTSB, 1989). Although the crew was able to land in Maui 13 minutes after the incident, the captain had to manually hold the oxygen mask to his head and face with his hand due to its large size, which made it difficult to prevent it from slipping. Furthermore, he had significant difficulty communicating through the microphone due to the mask (Burian, Dismukes, & Barshi, 2003).

An incident that may serve as an example of communication issues between cabin and flight crews occurred on March 26, 2003, affecting the evacuation of a flight in Flushing, New York (NTSB, 2003; preliminary report). While on final approach, the warning screen (EAD) of a B717-200 indicated a failure in the left generator. The display units and standby devices went dark and then started randomly flashing. Subsequently, the flight crew detected a burning smell in the cockpit. The lead flight attendants also noticed a burning smell in the cabin and determined that the handset used to make announcements and communicate with the cockpit was not working. After landing, the lead flight attendant tried to get the attention of the flight crew by banging on the cockpit door and speaking loudly. However, the flight crew reported that they did not hear any noise or loud speaking from the door (Burian, Dismukes, & Barshi, 2003).

Elements of emergency management and training in aviation operations can be categorized under relevant themes, including training-related topics, aircraft-related topics, and equipment and evacuation-related topics. The training received by flight and cabin crews regarding emergency and abnormal situations is an important area examined in this research. The prominent elements in the training on this subject are listed below:

- The scope of the training received by flight and cabin crews regarding emergency and abnormal situations
- Various training technologies and approaches used to deal with emergency situations during initial and recurrent training
- Procedures
- Skill acquisition training
- Long-term retention of skills
- Preparedness to handle non-standard or ambiguous situations
- Ability to respond appropriately when multiple problems arise simultaneously

The aircraft-related topics that affect the outcome of abnormal situations have also been examined within the scope of this study. The findings of this examination are evaluated under the following categories:

- In a category called Critical Aircraft Systems, the role that systems with flight protection envelopes can play in handling these situations.
- How cockpit warnings and alert systems can either facilitate or impede crew intervention.
- The conditions, levels, and types of automation that should be implemented, the potential consequences of uncritical acceptance of automation, comparing

procedures for emergency and abnormal situations among highly automated aircraft, and returning to less automated flight and developing manual flying skills.

The prominent topics regarding emergency equipment and evacuations have been examined within the scope of this study. The findings of this examination can be listed as follows:

- The usage issues of certain equipment provided to flight and cabin crews for emergency or abnormal situations.
- Competence of personnel in using emergency equipment.
- Potential confusion and vulnerability to errors among personnel in different aircraft configurations.
- Evaluation of whether crews receive adequate training and practice.
- Appropriateness of evacuation decisions.
- The effectiveness of communication between the cabin and cockpit.

The accidents we have examined in our research are rare in severity in airline operations. However, emergency and abnormal situations occur daily in flights worldwide. These situations are inherently challenging and require high-skilled performance from flight crews and close coordination among everyone assisting them. In this vast field, there are numerous topics that cannot be definitively addressed by any single project. It is important to identify safety gaps and describe problems to establish best practices in aviation projects. In this way, we hope to contribute to preventing emergency and abnormal situations from turning into accidents.

Our contribution to the theory may involve evaluating the information used by international aviation organizations (ICAO, EASA, IATA, UK CAA, JAA, etc.) and identifying different or potentially improvable resources and elements that can be utilized in our country. Considering the limitations of the research, it would be beneficial to include interviews with personnel in future studies to gather their perspectives. This would allow for an assessment of whether our research meets the requirements and can be further evaluated.

CONCLUSION

The research findings indicate that the literature review initially yielded elements categorized into stages of airport emergency management, including pre-emergency precautions and training, effective and timely intervention during emergencies, post-emergency assessment, and drawing conclusions from the assessment. In this study, information regarding the effective implementation of necessary training and training refreshers prior to emergency interventions was also evaluated within these categories. The pre-emergency concept involves planning for the management of all situations that can interact with effective emergency response. Pre-planning should include clear definitions of operational authority and responsibilities for the development, testing, and implementation of emergency plans. Issues that arise during emergencies depend on the phase, structure, and location of the emergency. The context of an emergency can change as rescue operations progress. For example, the airport fire chief or personnel are typically the first individuals responsible for emergency forces, but they should be aware that they fall under the jurisdiction of the designated and assigned "incident commander" at the incident site as determined by the emergency command center. Recommendations for emergencies should take into account all weather conditions, such as extreme heat and cold, snow, rain, wind, or low visibility. Additionally, potential accident areas in the rugged terrain surrounding the

airport, such as water puddles, roads, sinkholes, and other problematic areas, should be considered.

The recommendations provided in the International Civil Aviation Organization (ICAO) manual are based on the fundamental need for the survival of aircraft occupants and other injured individuals resulting from aircraft accidents/incidents. Stabilizing and providing medical treatment during emergencies is equally important. In life-threatening situations, the speed and quality of such treatment are of vital importance. Effective rescue operations require adequate pre-planning of emergencies and regular implementation exercises (International Civil Aviation Organization, 1991).

The need to notify support organizations (hospitals, ambulances, etc.) of the termination of the emergency should also be considered for them to resume normal operations. Documenting different operations during emergencies helps collect data for various accident and incident reports and facilitates their organization. It also establishes a structure for emergency critique and can serve as a resource for improving procedures and regulations in emergency plans. Reporting and documentation processes following the termination of an emergency are crucial for process improvements and feedback.

The regulations of international aviation organizations such as the FAA, ICAO, and EASA were evaluated within the context of their recommended training and requirements. The findings were tabulated to compare the approaches of these organizations regarding SMS Training, CRS Training, Emergency Training, Aviation Security Training, First Aid Training, and Practical Training. Since our study encompasses all of these training categories, ICAO documents were also examined, and their requirements were summarized in a table in this study.

Through the analysis of case studies from aviation companies, prominent elements have been identified in the areas of emergency training, emergency equipment and evacuations, and aircraft-related matters. Under these headings, subheadings were determined, highlighting factors that should be taken into account during training and planning. The systematic categorization obtained from our study will facilitate improvements in aviation emergency management training by providing a summary that addresses which areas need to be focused on.

Another notable aspect in emergency management plans is that the information provided by the International Civil Aviation Organization (ICAO) should not contradict local or state regulations. The primary purpose of this document is to warn participating units and organizations that conflicts may arise due to overlapping or non-existent local regulations in the event of an aircraft emergency. It is expected that this information will be useful in resolving problems arising from real emergencies (International Civil Aviation Organization, 1991).

An important aspect of the plan is identifying all available sources of information that can be utilized in managing emergencies as defined in the airport emergency plan. The most effective method for obtaining and timely delivering these resources should be included in the planning process.

Based on the categories obtained from our research, it is believed that a step-by-step improvement can be achieved by examining all these results. By checking the relevant categorical improvements and requirements, this process will serve as a facilitator in the improvement and restructuring of the process. In future studies, it is expected that the categories can be enriched by closely examining the current situation through case studies and considering new factors that may arise due to changing living conditions, which were not mentioned in our study.

ÖZET

Eşitlik ve adalet prensipleri etrafında şekillenen yurttaşlık anlayışının gerek vatandaşların hakları gerekse sorumlulukları açısından kavramsal düzeyde geçirdiği evrim, esasen toplumların evrimine karşılık gelmektedir. Toplumsal sınıflar ölçeğinde tartışılan yurttaşlık kavramı, küreselleşme, çok kültürlülük, ulus devlet, milliyetçilik tartışmalarıyla ilişkilendirildiğinde bu evrim daha anlaşılır hale gelmektedir. Kavramsal temelleri Antik Yunana kadar uzanan, en genel yaklaşımla birey-devlet ilişkisini ifade etmek üzere kullanılan “yurttaşlık”, küreselleşme ile birlikte bireylerin artan özgürlük beklentileri, kimlik farkındalıkları ile “kozmpolitan yurttaşlık”tan “dijital yurttaşlık”a uzanan tartışmaları da gündeme getirmektedir. Bu çalışmada, özellikle küreselleşme, teknolojik gelişmeler ve yeni medya kullanımı ile farklı bir form kazanan yurttaşlık tartışmaları “kozmpolitan yurttaşlık” etrafında ele alınmıştır. Bu amaçla öncelikle yurttaşlık kavramının tarihsel arka planı bir süreç olarak ele alınmış ardından kozmpolitan yurttaşlık kavramına değinilerek yurttaşlık kavramının ne yönde evrildiğine mevcut literatür bağlamında ışık tutmaya çalışılmıştır. Her ne kadar dünya yurttaşlığı ya da kozmpolitan yurttaşlık pek çok tartışmayı beraberinde getirirse de bu tartışmaların nirengi noktaları ile literatüre katkı sağlamak amaçlanmıştır.

Anahtar Kelimeler: Yurttaşlık, Kozmpolitan Yurttaşlık, Küreselleşme

Discussions On “Cosmopolitan Citizenship” In Conceptual Perspective

ABSTRACT

The evolution of the concept of citizenship, which is shaped around the principles of equality and justice, at the conceptual level, in terms of both the rights and responsibilities of citizens, essentially corresponds to the evolution of societies. This evolution becomes more understandable when the concept of citizenship, which is discussed with social classes, is associated with the discussions of globalization, multiculturalism, nation-state and nationalism. The foundations of the concept of “citizenship” date back to Ancient Greece. It is used to express the individual-state relationship with the most general approach. The increasing expectations of freedom and identity

6th International CEO Communication, Economics, Organization & Social Sciences Congress

awareness of individuals with globalization also bring up debates ranging from "cosmopolitan citizenship" to "digital citizenship". In this study, citizenship debates, which have gained a different form especially with globalization, technological developments and the use of new media, are discussed around "cosmopolitan citizenship". For this purpose, first of all, the historical background of the concept of citizenship is discussed as a process. Then, by referring to the concept of cosmopolitan citizenship, it has been tried to shed light on how the concept of citizenship has evolved in the context of the existing literature. Although world citizenship or cosmopolitan citizenship brings with it many discussions, it is aimed to contribute to the literature with the triangulation points of these discussions.

Key words: Citizenship, Cosmopolitan Citizenship, Globalization

GİRİŞ

Yurttaşlık, bir ülkenin yasal sistemine bağlı bir kişinin, o ülkenin vatandaşı olması durumudur. Vatandaşlar için anayasal haklar, seçme ve seçilme hakkı, iş bulma hakkı, sağlık hizmetleri alma hakkı vb. gibi pek çok hak ve fırsatlar sunulmaktadır. Felsefi açıdan yurttaşlık, bir bireyin o topluma uyum sağlamak ve onun gelişimine katkıda bulunmak için sorumluluk almış olması durumudur. Bu anlayışta yurttaşlık, onuru ve sorumluluğu içeren bir kavramdır. Sosyolojik açıdan bakıldığında yurttaşlık, bireylerin birbirleriyle ve toplumla olan ilişkilerinin bir yansımasıdır. Yurttaşlık, her bir bireyin diğer bireylerle etkileşimlerinde belirgin hale gelir. Bu anlamda, yurttaşlık toplumsal bir anlaşma niteliğinde olup üyelerin birbirlerine karşı sorumluluklarını ve haklarını belirler. Yasal olarak yurttaşlık, bir ülke tarafından tanınan bir kişisel hak olmakla birlikte, uluslararası yasal çerçeveler altında da düzenlenmiştir. Yurttaşlık birçok ülkede mevcut olan, nitelik ve yasal haklar bakımından başka tür haklardan ayrılan tek kişilik bir durumdur. Birçok farklı açıdan tanımlanabilecek olan yurttaşlık, genellikle anayasal, felsefi ve toplumsal anlaşma niteliğinde olan bir kavramdır. Bu kavramsal yaklaşımlarda yurttaşlığın, yasal, toplumsal ve kişisel haklar açısından belirleyici olduğu görülmektedir. Yurttaşlık, belirli bir siyasi topluluk içindeki bireylere belirli haklar, ayrıcalıklar ve sorumluluklar veren bir statüdür. Yurttaşlık kavramı, devletin vatandaşlarını koruma ve sağlama görevi olduğu ve vatandaşların siyasi sürece katılma ve topluluklarına katkıda bulunma görevi olduğu fikrine dayanmaktadır.

Yurttaşlık temel hakları açısından; ifade özgürlüğü hakkı, oy kullanma hakkı ve sosyal refah hakkı gibi medeni, siyasi ve sosyal hakları içerir. Yurttaşlık ayrıca vergi ödemek, yasalara uymak ve siyasi süreçlere katılmak gibi belirli sorumlulukları da içerir. Yurttaşlık doğum, soy, yurttaşlık veya evlilik yoluyla elde edilebilir ve farklı ülkelerin yasalarına bağlı olarak çeşitli şekillerde elde edilebilir. Yurttaşlık durağan veya sabit bir kavram değildir, zamanla değişebilir ve farklı toplumlar vatandaş olmanın ne anlama geldiğine dair farklı anlayışlara sahiptir. Örneğin, bazı toplumlar bireysel hak ve özgürlüklerin önemini vurgularken, diğerleri toplumsal sorumluluk ve yükümlülükler daha fazla vurgu yapmaktadır. Ayrıca küreselleşme, küresel yurttaşlık fikrine dayanan ve bir bütün olarak küresel toplumun refahı için sorumluluk almanın önemini vurgulayan ulusötesi yurttaşlık gibi yeni yurttaşlık biçimlerinin ortaya çıkmasına neden olmuştur. Her ne kadar küreselleşme kavramı gerek ekonomik gerek siyasi ve gerekse sosyal yapı açısından farklı şekillerde tartışılmış olsa da bu çalışmada literatürde yer alan “kozmopolitan yurttaşlık” kavramı ile ilintisi sebebiyle ele alınmıştır.

1. Küreselleşme ve Yurttaşlık Kavramının Dönüşümü

Yurttaşlık, belirli bir siyasi topluluk içinde bir dizi hak, ayrıcalık ve sorumluluk içeren karmaşık bir kavramdır. Zaman içinde değişebilir ve farklı toplumlar ve kültürler arasında farklılık gösterir. Özellikle küreselleşme ile birlikte düşünüldüğünde Dünyanın daha akışkan hale gelmesi ve ulus-devletin geleneksel sınırlarının gözenekli hale gelmesi, yurttaşlığın doğasında derin değişikliklere yol açmıştır. Küreselleşme, ekonomik, politik, kültürel ve teknolojik alanlar dahil olmak üzere dünyanın farklı bölgeleri arasındaki artan karşılıklı bağlantı ile karakterize edilmiştir. Yurttaşlık artık durağan, sınırlı ve ayrıcalıklı bir kategori olarak değil, esnek, dinamik ve gelişen bir forma bürünmüştür veya bürünmektedir. Vatandaşlar artık küresel bir topluluğun üyeleri olarak görülmekte, hakları ve sorumlulukları yalnızca devlete değil, bir bütün olarak küresel topluluğa bağlı olarak şekillenmektedir. Küreselleşme, ulusal sınırları aşan kozmopolit yurttaşlık anlayışını vurgulayan ulusötesi yurttaşlık veya küresel yurttaşlık gibi yeni yurttaşlık biçimleri yaratmıştır. Bu tür yurttaşlık, sivil katılımın önemini ve iklim değişikliği, insan hakları ve yoksulluğun azaltılması gibi küresel konulara karşı sorumluluk duygusunu vurgular.

Habermas küreselleşmenin egemenlik üzerindeki etkilerini, devletin kontrol kabiliyeti ve gücünü yitirmesi, karar mekanizmasında meydana gelen meşruiyet eksikliği ve devletin meşruiyet temin edici idari ve düzenleme hizmetleri sunmadaki yetersizliği şeklinde sınıflandırmaktadır. Habermas'ın belirttiği gibi "Küreselleşme tarihi bir terkihi köklü bir değişime uğratmaktadır. Bu terkihi, kendini devlet, toplum ve iktisadın aynı milli sınırlar dahilinde bir arada gelişmesi olarak göstermiştir. Milletler-arası iktisat sisteminde, ticari münasebetleri iç ve dış ticaret diye ayıran sınırları devletler tespit ederlerdi. Pazarların küreselleşmesi ile birlikte bu milletler-arası iktisadi sistem, artık milletler-üstü iktisada dönüşmeye başlamıştır. Bu değişimde görülen belirgin özellikler şunlardır: İlk etapta sermaye hareketleri bütün dünya sathında hızlanmış, ayrıca milli iktisadi mevziler küresel bağlantı içinde olan mali piyasalara bağımlı hale gelmiş bu mevziler, mali piyasaların icaplarına gösterdikleri uygunluk derecesine göre değer ve önem kazanmaya başlamıştır. Bütün bu gelişme ve olgular devletlerin niçin münasebetlerin kavşak noktası olma özelliğini kaybettiğini izah etmektedir. Artık devletler ve milletler-arası münasebetlerin esas yapısını, küresel münasebetler oluşturmaktadır. Geçmişte milli iktisatlar, devlet sınırları içinde yer açılırken şimdi artık devletler pazarların içine yerleştirilmiş durumdadır. Sınırların böylesine muğlaklaşması ve bilinmesi tabii ki sadece iktisat ile sınırlı kalmamaktadır" (Habermas, 2008: 24-25).

Diğer yandan küreselleşmenin, küresel yurttaşlık vizyonuna meydan okuyabilen ve farklı uluslar ve topluluklar arasındaki gerilimlerin kaynağı haline gelebilen küresel ekonomik eşitsizlik veya bölgesel çatışma gibi yeni eşitsizlik biçimlerinin ortaya çıkmasına da yol açtığı da belirtilmelidir. Küreselleşme yurttaşlığın doğasını derinden etkilemiş ve yurttaşlıkla ilgili daha kapsayıcı, dinamik ve küresel kapsamda yeni fikirlerin ortaya çıkmasına yol açmıştır, ancak bu aynı zamanda yurttaşlığın inşası için ele alınması gereken yeni zorluklar da ortaya çıkarmıştır. Küreselleşme, sınırların ortadan kalkması, iletişim teknolojilerinin gelişmesi ve ekonomik entegrasyonun artması gibi faktörlerle birlikte dünya çapında toplumsal, siyasi ve ekonomik değişimlere yol açtığından, yurttaşlık anlayışının değişmesine ve yeni yurttaşlık modelleri ortaya çıkmasına neden olmuştur. Küreselleşmenin ulus-devletler ve yurttaşlık üzerindeki etkileri ile bu modellerin ortaya çıkışı, yurttaşların kimliklerini ve yurttaşlıklarını daha karmaşık hale getirmiştir.

Küreselleşme ile birincil siyasi birim olarak ulus-devletin geleneksel rolü, vatandaşlık statik ve sınırlı bir kategoriden daha dinamik ve esnek bir kategoriye dönüşmüştür. küreselleşmenin artan hareketliliği ve kültürel etkileşimleri ele alabilen bu yurttaşlık modelleri, toplumsal uyum ve küresel dayanışmanın sağlanmasında önemli bir role sahip olabileceğinden önem arz etmektedir.

Yeni yurttaşlık modelleri, geleneksel yurttaşlık anlayışının ötesine geçen daha geniş bir anlam taşır. Örneğin, küreselleşmenin artan hareketliliği, transnasyonal yurttaşlık kavramının ortaya çıkmasına neden olmuştur. Transnasyonal yurttaşlık, ülke sınırları içinde sınırlı kalmayan, aynı zamanda farklı ülkeler, kültürler ve etnik kimlikler arasında hareketlilik gösteren bir yurttaşlık modelidir. Bu yurttaşlık modelinde, yurttaşlar bireysel, toplumsal ve küresel düzeyde birden fazla kimlik ve aidiyete sahip olabilirler. Ayrıca, küreselleşme, yurttaşların birbirleriyle daha sık iletişim kurmalarına ve birbirlerinin dünya görüşlerine ve kültürüne daha açık olmalarına neden olmuştur. Bu da çok kültürlü yurttaşlık kavramının yükselmesine yol açmıştır. Çok kültürlü yurttaşlık, yurttaşların birden fazla kültürel kimliği benimseme ve saygı gösterme yeteneğine sahip olmalarını gerektirir.

Küreselleşmenin ulus-devletler üzerindeki etkilerinden biri, onları daha az güçlü hale getirmesidir. Ulusal sınırlar boyunca artan mal, hizmet ve sermaye akışı, ulus-devletlerin ekonomilerini kontrol etme ve çok uluslu şirketlerin davranışlarını düzenleme yeteneklerini

azaltmıştır. Bu, gücün ulus-devletlerden Dünya Ticaret Örgütü ve Uluslararası Para Fonu gibi ulus-ötesi kurumlara kaymasına yol açmıştır. Öte yandan küreselleşmenin ulus-devletler ve yurttaşlık üzerindeki bir diğer etkisi de ulusal sınırların bulanıklaşmasına yol açmasıdır. Ulusötesi insan, mal ve kültür akışı, sabit ve istikrarlı bir varlık olarak geleneksel ulus-devlet anlayışına meydan okuyan daha büyük bir karşılıklı bağlılık duygusu yarattı. Bu, ulusötesi yurttaşlık veya küresel yurttaşlık gibi, sivil katılımın önemini ve küresel meselelere karşı sorumluluk duygusunu vurgulayan yeni yurttaşlık biçimlerinin ortaya çıkmasına yol açmıştır. Ek olarak, küreselleşme, küresel yurttaşlık vizyonuna meydan okuyabilen ve farklı uluslar ve topluluklar arasındaki gerilimlerin kaynağı haline gelebilen yeni eşitsizlik biçimlerinin ortaya çıkmasına yol açmıştır. Küreselleşme aynı zamanda küresel iş birliğini ve dayanışmayı baltalayabilen milliyetçilik ve popülizmde bir artışa yol açmıştır. Özetle, küreselleşmenin ulus-devletlerin rolü ve yurttaşlığın doğası üzerinde derin bir etkisi olmuş, ulusal sınırların bulanıklaşmasına, gücün ulus-devletlerden ulusötesi kurumlara kaymasına, yeni yurttaşlık biçimlerinin ortaya çıkmasına yol açmıştır. Bu bağlamda dünya yurttaşlığı tartışılır olmuştur.

Pratik karşılığı güç gibi görünse de ütopyik olarak tartışılabilir bile kozmopolitan yurttaşlık kavramının, özgürlükleri ve hakları genişletme açısından, sadece bir kavram olarak ele alınmasının dahi düşün dünyasına katkı sağlayacağı umulmaktadır. Günal'ın belirttiği gibi Nussbaum ulusal yurttaşlık yerine dünya yurttaşlığını merkeze alması için dört temel neden sıralamıştır. Bunlardan ilki, kozmopolitan eğitim ile kendimiz hakkında da daha çok şey öğreniriz; diğerlerinin gözleriyle kendimize bakarak, pratiklerimizde nelerin yerel ve sonradan edinilmiş ve nelerin daha genel anlamda paylaşılan şeyler olduğunu görürüz, ikincisi çevre kirliliği gibi uluslararası dayanışma gerektiren sorunlara çözüm üretilebiliriz Diğer yandan Dünyanın geri kalanına olan ahlâki yükümlülüklerimizi fark ederiz. Ve son olarak savunmaya hazır olduğumuz farklılıklara dair daha bütünlüklü ve tutarlı bir argüman geliştirebiliriz. Yine Nussbaum'a göre aidiyetleri bir kenara atmadan ve onların yüzeysel olduklarını düşünmeden de kozmopolit olunabilir ve sadece kozmopolitanlık aklın, ahlâki açıdan iyi olanın ve insanlık sevgisinin önünü açabilir. (Günal,1998,<https://birikimdergisi.com/dergiler/birikim/1/sayi-111-112-temmuz-agustos-1998/2306/kozmpolitanizm-ve-yurtseverlik/5227>, Erişim tarihi: 13.06.2023)

2. Bir Kavram Olarak Kozmopolitanizm ve Yurttaşlık

Kozmopolitanizm ideali; batı düşünce tarihinde ilk kez 2500 yıl önce belirdikten sonra, her ne kadar uzun tarihi boyunca önemli değişikliklere uğramışsa da, bir birey dünya vatandaşı olabilir ve olmalıdır şeklinde kısaca tarif etmek mümkündür. Kozmopolitanizmin bu tanımı kendi içinde tüm insanlık âlemi ile bir arada olabilme potansiyelini veya gereğini bir evrensel ilke olarak barındırır. Kozmopolitanizm kelimesinin ilk yarısını oluşturan kosmos bireyin sınırlı evreninin dışına çıkarak tüm dünyanın ve evrenin bir parçası olması gerekliliğini ifade ederken; kelimenin ikinci yarısını oluşturan polis ise bu bir parça olmanın tek başına bir şey ifade etmediğini bunun siyasal bir yurttaşlık ile tamamlanması gerektiğini belirtir (Odabaşı, 2010: 5). Bu bağlamda “Kosmos” ile “polis” arasındaki argümanın tekrar kurulmasına yönelik bir çaba olarak felsefe tarihinde yer alan “Kozmopolitanizm” düşüncesinin özünde karşıtlıkların dikatomik tarihini bozan yeni bir perspektifin yer aldığı söylenebilir. “Çünkü kosmopolis, kosmos ve polis karşıtlıkları üzerinden karşıtlıklar birliğinin bozulmasına işaret eder” (Alyağut, 2008: 3). Alyağut'un belirttiği gibi; kozmopolitanizm düşüncesi global dünyanın etik talepleri olarak sunulsa da, kozmopolitanizm düşüncesinin ne türden bir ortaklığa çağrı yaptığını anlamak için felsefe tarihindeki konumlanışını anlamak gerekir: “Kozmopolitanizm geleneğini bireyle ilişkilendirdiğimizde kozmopolitan, kentle ilişkilendirdiğimizde kozmopolit adı öne çıksa da, kozmopolitanizm düşüncesi felsefe tarihinde bir kosmopolis ideali üzerinden yol alır.

Her halükarda kozmopolitanizm, kendisine bütün bir dünyayı yurt ve insanlığı yurttaş olarak amaç edinen evrensel bir düşüncedir. Kosmopolis ideali asla bireyin dünya üzerinde her yerde kendini evinde hissetmesi ya da hiçbir yerde evinde hissetmemesi anlamına gelmez. Her bireyin kendini ilkin bir “dünya yurttaşı” olarak görmesini talep eden kozmopolitanizm düşüncesi kosmos’u ve polis’i ekonomik değil, ahlaki ilkeler üzerine kurmak ister.” (Alyağut, 2008:1). Bu kapsamda Bağbaşıoğlu’nun belirttiği gibi kozmopolitanizm ve kozmopolitan ilkeler insani müdahaleler ile daha somut bir kavram haline gelmektedir: “İnsani müdahalenin, egemenlik, karışmazlık ve kuvvet kullanmama ilkeleri üzerine inşa edilen uluslararası toplumun en güç sınavı olduğu” tespitinden hareket edildiğinde uluslararası hukukun ve bu hukukun ardında yatan moral motivasyonunun giderek kritikleşen insani müdahale sorunu karşısında nasıl bir tutum sergilediği/sergilemesi gerektiği tartışmaları mevcut duruma farklı yaklaşımlar getiren bakış açıları insani müdahale sorunu bağlamında egemenlik ve kozmopolitanizm ile de zenginleşmektedir. Bu tartışmalar arasında en öne çıkan ise kozmopolitanizmdir. Kozmopolitan düşünce, küresel çaptaki sorunların çözümü için küresel kurumların oluşturulmasını istemektedir. Ancak yukarıda da belirtildiği gibi normatif karakterli kozmopolitanizmin kendine özgü kurumsal yapıları henüz gelişmemiş bir görünümündedir. Bu durumda kozmopolitan ilkelerin kurumsallaşma süreci ya da varolan kurumlar eli ile gerçekleştirilmesi meselesi insani müdahale gibi bir örnekte daha somut hale gelmektedir” (Bağbaşıoğlu, 2017: 3047-3064).

Odabaşı’nın belirttiği gibi, tüm bireyleri, yerel ve ulusal dar görüşlülüğün sınırlarını aşarak dünyaya karşı etik bir duruşu beraberinde getiren kozmopolitanizm, ahlaki evrenimizi belirleyen sınırların, kimseyi dışarıda bırakmadan, ötekileri de kapsayarak genişlemesini sağlar (Odabaşı, 2010: 8). Kozmopolitan düşünce insanı, aile, soy, etnik köken, milliyet vs. gibi herhangi bir toplumsal ya da siyasal kategoriye müracaat etmeden daha büyük bir bütünün- “insanlığın”- parçası olarak kavrar. Kozmopolitan düşüncenin, -fiziki, siyasal ya da kültürel- hiçbir sınırı tanımayan karakteri yalnızca birçok düşünsel geleneği etkilemekle kalmamış aynı zamanda Roma İmparatorluğu ya da Ortaçağ Avrupa’sında görüldüğü gibi siyaseten de kuvvetli bir etkiye sahip olmasına yol açmıştır. (Bağbaşıoğlu, 2017: 3047-3064.)

Kozmopolitanizmin temelindeki tüm insanların “insanlık” topluluğuna bağlı olduğu yatar. Dünyaya ait olma biçimi olarak hiçbir ayırım yapılmadan, aynı ahlak kodlamasının herkes için geçerli olduğunu savunulmaktadır. Kant’ın yapıtlarında ahlaki kozmopolitanizm ve politik kozmopolitanizm şeklinde iki tip kozmopolitanizm karşımıza çıkar. Kant’ın ahlaki kozmopolitanizmine göre tüm insanlar aynı ahlaki topluluğun üyesi olup dil, din, kültür ve ırk ayırt etmeksizin tüm insanlar birbirlerine karşı ahlaki anlamda sorumluludurlar (Dağ, 2018: 677-682). Kozmopolitizmin kavramsal olarak Kant’la birlikte bir dönüşüm geçirerek, vatandaşlığı inkardan dünya vatandaşlığına dönüştüğü ve kozmopolit haklar şeklinde yeni bir insan hakları tasavvuruyla ilişkilendirildiği söylenebilir(Özveri, 2023: 34).

SONUÇ

Yurttaşlık, ifade özgürlüğü hakkı, oy kullanma hakkı ve sosyal refah hakkı gibi medeni, siyasi ve sosyal hakları içeren, zamanla değişebilen ve farklı toplumlarda farklı anlayışlar ile ifade edilen hukuki bir terimdir. Bazı toplumlar bireysel hak ve özgürlüklerin önemini vurgularken, diğerleri toplumsal sorumluluk ve yükümlülüklerle daha fazla vurgu yapmaktadır. Diğer yandan küreselleşme, küresel yurttaşlık fikrine dayanan ve bir bütün olarak küresel toplumun refahı için sorumluluk almanın önemini vurgulayan ulusötesi yurttaşlık gibi yeni yurttaşlık, kozmopolitan yurttaşlık, dijital yurttaşlık gibi biçimlerinin ortaya çıkmasına neden olmuştur.

Kozmopolitanizm, bireylerin insanlık adı verilen topluluğa aidiyeti düşüncesidir. Böyle bir düşüncede etik prensipler, herhangi bir devlet sınırları dahilinde değil, dünya-vatan kavramı çerçevesinde dünyadaki bütün insanlar için aynı derecede bağlılık ve aynı derecede ait olma düşüncesinde barındıracağı şekilde yorumlanabilir.

Kozmopolitanizmin, antik Yunan düşüncesinde özellikle Stoacı düşüncede karşımıza çıktığından beri farklı anlamlara büründüğü bazen etik, bazen siyasi bazen de hukuki yönleri ağır basan bir kavram olduğu, kullanıldığı çağa, fikre ve hangi krizlere çözüm olarak ele alındığına göre değerlendirilmesi gerektiği söylenebilir. Kozmopolitanizm terimi kriz ve buhran çağlarında sığınılacak bir teselliden ziyade yeryüzünü paylaşan, tüm insanlara diğerlerini de göz önüne alması gerektiğini hatırlatarak çözümler üreten bir kılavuz olarak görülebilir (Duva, 2022:290-291).

İnsanoğlunun eski çağlardan bu yana belirli bir coğrafya yahut etnik aidiyet ile kendisini sınırlamak istememe eğilimi sıkça vurgulanan bir husustur. Kişilerin vatan olarak yeryüzünü görmesi, gittiği her yerde karşılaşmış olduğu kültürlerle uyum sağlama ve beraberinde bu kültürlerle kaynaşarak bir parçası hâline gelme isteği kozmopolit bir toplum inşasını oluşturma arzusu yönünde belirleyici bir etken olmuştur. Bu bağlamda kozmopolitanizm özellikle insan hakları bağlamında da önem arz eden bir kavram olarak tartışmalarda kullanılabilecek elverişli bir araç olarak gözükmektedir. Özellikle farklı nedenlerle yaşanan göçlerin arttığı dönemlerde hem farklı kültürlerin karşılaşması hem de farklı düşünce biçimlerinin konuşulabilmesi açısından kozmopolitan yurttaşlık kavramının araçsallaştırılması işlevsel gözükmektedir.

ABSTRACT

Meme marketing and viral marketing share some similarities despite being different marketing strategies. Both are built upon shareable, interesting, and entertaining content. While viral marketing has been a popular marketing strategy for many years, meme marketing has emerged as a new and potentially more effective approach in the digital age. Although both strategies rely on shareable, entertaining content, meme marketing is more targeted and personalized than viral marketing, which tends to have a broader reach. Additionally, meme marketing aims to increase engagement and interaction with the audience, while viral marketing is often more passive in its approach. Thus, it can be argued that meme marketing offers a more tailored and engaging way to connect with consumers and promote brand messaging. The study will use the methodology of a case study to compare the effectiveness of meme marketing and viral marketing as marketing strategies. A case study is an appropriate methodology for this research because it allows for an in-depth analysis of specific cases, which can provide insights into the benefits and drawbacks of each marketing strategy in different contexts. The case study will involve analyzing the marketing campaigns of two companies, one using viral marketing and the other using meme marketing, to compare their respective outcomes in terms of brand awareness, engagement, and sales. By using a case study approach, this research aims to provide a more nuanced understanding of the differences between meme marketing and viral marketing, and their relative effectiveness as marketing strategies.

Keywords: Humor in Marketing Campaigns, Internet Memes, Meme Marketing, Viral Marketing.

İzahı Olmayan Şeylerin Mizahı: Mim Pazarlama ve Viral Pazarlama Arasında Nitel Bir Karşılaştırma

ÖZET

Mim pazarlama ve viral pazarlama, farklı pazarlama stratejileri olsa da; paylaşılabılır, ilginç ve eğlenceli içerikler üzerine kuruludur. Viral pazarlama uzun yıllardır popüler bir pazarlama stratejisi olmasına rağmen, mim pazarlama dijital çağda yeni ve potansiyel olarak daha etkili bir yaklaşım olarak ortaya çıkmıştır. Her iki strateji de paylaşılabılır, eğlenceli içeriklere dayandığından, mim pazarlama, daha kapsamlı bir kitleye sahip olan viral pazarlamadan daha hedefe yönelik ve kişiselleştirilmiştir. Ayrıca, mim pazarlama hedef kitle ile etkileşimi artırmayı amaçlarken, viral pazarlama genellikle daha pasiftir. Böylece, tüketicilerle bağlantı kurmak ve marka mesajlarını tanıtmak için daha özel ve etkileyici bir yol sunduğu düşünülebilir. Bu çalışma, pazarlama stratejileri olarak mim pazarlama ve viral pazarlamanın etkililiğini karşılaştırmak için durum çalışması metodolojisini kullanacaktır. Bir durum çalışması, her bir pazarlama stratejisinin farklı bağlamlarda avantaj ve dezavantajlarına dair anlayış sağlayabilecek özel vakaların derinlemesine analizine izin veren uygun bir metodolojidir. Bu durum çalışması, biri viral pazarlama diğeri ise mim pazarlama kullanan iki şirketin pazarlama kampanyalarının analizini içerecek ve marka bilinirliği, etkileşim ve satış gibi konulardaki sonuçlarını karşılaştıracaktır. Bir durum çalışması yaklaşımı kullanarak, bu araştırma mim pazarlaması ve viral pazarlama arasındaki farklılıkların ve pazarlama stratejilerinin göreceli etkililiğinin daha ayrıntılı bir anlayışını sunmayı amaçlamaktadır.

Anahtar Kelimeler: Pazarlama Çalışmalarında Mizah, İnternet Mimi, Mim Pazarlama, Viral Pazarlama

INTRODUCTION

Objectives of the Research

Examine the similarities and differences between meme marketing and viral marketing. Investigate the potential advantages and disadvantages of meme marketing compared to viral marketing. Provide insights into the benefits and drawbacks of meme marketing and viral marketing in different contexts through an in-depth case study analysis. Offer a more nuanced understanding of the differences between meme marketing and viral marketing as well as their relative effectiveness as marketing strategies.

Definitions of Meme Content and Viral Content

Memes; could be an image, video, piece of text, etc., typically humorous in nature, that is copied and spread rapidly by internet users, often with slight variations.[1][2]

Virals; are online content that achieves a high level of awareness due to shares and exposure on social media networks, news websites, aggregators, email newsletters and search engines.[6]

Figure 1 and 2 : Viral Content vs. Meme Content (Gangnam Style, Hide the Pain Harold)

Difference Between Viral Marketing and Meme Marketing

While viral content spread through sharing, meme content spread through imaginatively repurposing the original material. Existing research has studied the causes of these activities, and they are distinguishable [3]. Viral content is online content that achieves a high level of awareness due to shares and exposure on social media networks, news websites, aggregators, email newsletters and search engines [4].

Virals Are Temporary

Viral content in marketing is only usable for the short period of time when they become popular. They do not have any intention to convey a message or make people think, and there is no hidden message [5]. Viral content tends to have a temporary nature because its popularity and widespread sharing are often short-lived. It can quickly gain attention and generate a high level of engagement, but its impact may diminish as new trends and topics emerge.

Figure 3 and 4: Meme Contents Spreads with Slightly Different Variations. (Distracted Boyfriend)

Unlike viral content, memes propagate by being shared with slight modifications. These alterations can involve changing the written captions, adding or removing characters, or even completely transforming the scene. Consequently, memes have the ability to endure over time and reach larger audiences, transcending geographical boundaries. The "Distracted Boyfriend" meme, depicted in Figure 3, originated from a street photograph taken by Antonio Guillem and uploaded to a stock photo website in 2015. Over the years, people began sending the image to one another with different messages, as shown in Figure 5. This particular meme, which remains widely recognized today, serves as an example of how memes can be more impactful than viral content in marketing.

Figure 5: Variations of the Same Meme in Years. (Distracted Boyfriend)

Memes Remains Relevant Thanks to Their Versatility

In contrast, meme content possesses characteristics that contribute to its enduring presence and longevity. These characteristics include versatility and relatability, which enable memes to remain relevant, shared, and referenced even after the initial surge of virality subsides. Memes have the ability to adapt and evolve through small modifications, such as altering captions, adding or removing elements, or completely transforming the context [5]. This adaptability allows memes to resonate with a wide range of individuals and communities, transcending cultural, linguistic, and geographical boundaries. As a result, memes can maintain their appeal and continue to be circulated and engaged with by diverse audiences over an extended period. This sustained presence and ongoing dissemination of meme content exemplify its potential to endure and thrive beyond the temporary nature of viral content.

Dollar Shave Club Case

Dollar Shave Club, a mail-order subscription service for personal care products, was established in 2011 by Michael Dubin and Mark Levine [7]. Michael Dubin, a former digital marketing

executive, conceived the idea in response to the high prices of razor blades. In March 2012, the company made its official debut with a clever viral video that rapidly gained attention and helped establish its brand. Dollar Shave Club experienced swift success, thanks to its affordable pricing and innovative subscription model, offering customers a range of convenient and cost-effective options for razors and shaving products. On July 19, 2016, multinational consumer goods company Unilever acquired Dollar Shave Club for a reported \$1 billion in cash, recognizing the substantial value and potential of the subscription-based business model. The current worth of Dollar Shave Club is not publicly available [8].

Dollar Shave Club’s Video Gone Viral

The success of Dollar Shave Club can be attributed to their direct response marketing approach, which focused on rapidly building a paying user base. They achieved this through a highly successful short-form sales video that generated significant traffic and new subscribers. The video began by presenting their offer upfront, addressing potential objections, and highlighting the quality of their razors [9].

DollarShaveClub.com - Our Blades Are F***ing Great
 YouTube · Dollar Shave Club · 6 Mar 2012

Figure 6: “Our Blades are F***ing Great” Commercial

The use of humor throughout the video helped engage the audience. The speaker emphasizes the importance of effective calls to action and the use of logical reasoning to support the product's value. Overall, the video exemplifies successful short-form direct-response marketing with its combination of humor, strategic messaging, and clear calls to action.

Figure 6: DailyWire’s “Jeremy’s Razors” Commercial

The effects of DSC (Dollar Shave Club) emerged when Harry's entered the market. Later, due to political reasons, they removed their advertisement from DailyWire. In response, DW created a striking advertisement, similar to the initial launch of other's monthly razor subscription, and released a grooming set under the brand "Jeremys" as a promotional stunt [10]. This demonstrates the effectiveness of viral marketing in the past decade. However, meme marketing will dominate in the next 10 years.

Scrub Daddy Case

Scrub Daddy is a company that produces and sells innovative cleaning products, most notably its signature sponge. It was founded by Aaron Krause in 2006. The company gained significant attention after appearing on the television show "Shark Tank" in 2012, where it secured a deal (200,000 US Dollars for %20 of the company) with investor Lori Greiner.

Scrub Daddy's unique sponge, which changes texture based on water temperature, became a hit with consumers. Scrub Daddy's exact net worth is not publicly disclosed. However, it has experienced substantial growth and success, expanding its product line and gaining a strong presence in the cleaning market [11].

Figure 7: Scrub Daddy Logo

Early Success of Scrub Daddy

The Scrub Daddy sponge quickly gained popularity due to its distinctive design and versatile functionality. It features a patented FlexTexture® material that adjusts its texture based on water temperature, allowing it to provide different scrubbing options for various cleaning tasks. The sponge's smiley face shape adds a touch of fun to the cleaning experience.

After the Shark Tank [12], Scrub Daddy has appeared multiple times on the QVC tele-shopping program, where they have introduced several new products. Some of these products include Scrub Mommy and Scrub Daisy, among others.

Figure 8: CEO Aaron Krause giving a business pitch in Shark Tank TV Show in 2012

Scrub Daddy’s Meme Marketing Posts

Scrub Daddy employs meme marketing strategies by incorporating popular internet memes into their promotional content. One example of this is evident in their video titled "Giga Daddy," where they utilize the Giga Chad meme. By leveraging the existing popularity and recognition of the Giga Chad meme within online communities, Scrub Daddy taps into the meme's appeal and relevance to capture the attention of their target audience.

Figure 9: Giga Daddy Video gets 6.5 Million on Youtube and 28 Million on Tiktok in 4 months

The Giga Chad meme originated in 2017 and is linked to a nickname given to the subjects depicted in a series of edited photographs by Russian photographer Krista Sudmalis for her project Sleek'N'Tears. The term "Giga Chad" represents an exaggerated portrayal of Chad Thundercock, an internet archetype that symbolizes an extremely masculine and sexually attractive male figure. The meme has become popular in a range of online communities, including those associated with incels [13]

Figure 10: The Giga Chad Meme

One instance of the Giga Chad meme being utilized is in a video produced by Scrub Daddy, titled "Giga Daddy." The video showcases a cheerful sponge character with a prominent masculine jawline. In the background, the video features a sped-up and reverbed version of the track "Prolly my spookiest beat" by prodby668, playing on loop [14].

Figure 11: Some Other Meme Marketing Post on Scrub Daddy's Tiktok Account

METHODOLOGY

Case study approach used to compare meme marketing and viral marketing effectiveness. Two companies' content selected using simple random sampling due to irregular data sharing schedule. Analysis of marketing campaigns, focusing on brand awareness and engagement. Content analysis of marketing materials and social media posts. Quantitative data collected through companies social media accounts. Findings interpreted considering limitations of sampling method. Case study methodology provides detailed analysis of meme marketing and viral marketing.

FINDINGS

Meme marketing can foster a sense of closeness and relatability between the company and its customers by sharing the same humor and cultural references. Unlike viral videos, which may fade in popularity over time, successful memes have the potential for long-lasting impact and continued usage within online communities.

It is important to note that meme marketing should be approached with careful consideration, as inappropriate or offensive content can have negative consequences for a company's brand image. Viral videos have been highly effective over the past decade, but their production can be challenging, and there are no guarantees in viral marketing to achieving viral status even after investing a significant amount of money in advertising.

On the other hand, meme marketing requires minimal financial investment, as meme content can be created and shared without extensive production costs. Meme marketing allows for targeting a niche audience instead of attempting to reach all internet users worldwide, resulting in a more focused and potentially more engaged audience.

CONCLUSION

Theoretical Contributions

This research has made several theoretical contributions to the existing literature on marketing strategies, specifically focusing on meme marketing and viral marketing. By comparing these two approaches, the study has provided insights into their similarities, differences, and relative effectiveness. The findings contribute to a deeper understanding of these strategies and their implications in the digital age. The research highlights the importance of spreadable, interesting, and entertaining content in both meme marketing and viral marketing, while

emphasizing the targeted and personalized nature of meme marketing compared to the broader reach of viral marketing. Additionally, the study contributes to the literature by exploring the role of humor, popular culture, and internet memes in marketing campaigns, and their impact on audience engagement and interaction.

Managerial Contributions

The findings of this research have practical implications for marketers and offer valuable managerial contributions. By comparing meme marketing and viral marketing, the study provides insights into the advantages and drawbacks of each strategy, helping marketers make informed decisions in selecting the most appropriate approach for their specific objectives and target audience. The research emphasizes the importance of personalization and engagement in meme marketing, suggesting that it can offer a more tailored and engaging way to connect with consumers and promote brand messaging. On the other hand, viral marketing, with its broader reach, can still be an effective strategy for creating brand awareness. By understanding the differences and potential outcomes of these strategies, marketers can develop more effective marketing campaigns that resonate with their target audience and drive meaningful engagement.

This study aims to provide a preliminary exploration of meme marketing, a relatively new concept, with a focus on two companies: Scrub Daddy and Dollar Shave Club. These companies have experienced increased sales and have actively utilized viral or meme marketing in their strategies.

While it cannot be claimed that there is a direct causality between the use of meme marketing and the increase in sales, it is important to note that while the study reveals correlations between the implementation of meme marketing and viral marketing and positive outcomes such as brand awareness and engagement, it is crucial for marketers to consider various other factors and not solely rely on these strategies for achieving increased sales.

Future Research

Firstly, conducting extensive comparative studies across industries and contexts will provide a broader understanding of the effectiveness of these strategies.

Longitudinal studies can offer insights into the long-term impact and sustainability of meme marketing and viral marketing. Industry-specific research can shed light on the effectiveness of these strategies in different sectors.

Furthermore, exploring the effectiveness of meme marketing and viral marketing on emerging platforms and understanding consumer perceptions and responses through qualitative research methods are important avenues for further investigation.

Developing standardized measurement and evaluation metrics, conducting cross-cultural and cross-national studies, and incorporating artificial intelligence and machine learning techniques can enhance the understanding and optimization of these marketing strategies.

ABSTRACT

The main functional role of language is undoubtedly grasped by almost the whole human begins as being communicative in the society; thus , each person in a certain society entails a communicative tool “language” to convey various aspects or conduct multiple tasks for daily chores. Yet, it has been always controversial about the origin of language, and many linguistics have been struggled a lot in order to find the most proper explanation for the birth of language. While some regard it as a result of natural events, some others consider it as the occurrence of daily requirements; therefore, basic needs analysis for employment of language in communicative chores and conversations have always been put forward in investigations. The current paper mainly aims to seek the birth of language as a common aspects and basic needs analysis for language to be used efficiently among human beings. The study has obtained the data via descriptive analysis of linguistics studies, and the whole data have been analysed qualitatively. The results of the current study indicated that language holds a rather crucial place in humans’ lives in terms of communication, and the origin of language may differ as there are multiple claims such as being natural, artificial or sacred due to holy religious books.

Keywords: Language, Communication, Origin, Needs.

Introduction

From past to present, mankind has always needed a means of communication since its existence, and this means of communication is undoubtedly language, as known by many people. Language holds many things about mankind; for instance, communication can be made effective by using a system of unlimited combinations, or it plays a role in ensuring social and emotional communication; in fact, language is one of the most important units of emotional and social interaction; therefore, in this respect, it is too multifaceted, with different qualities that cannot be thought of at once, even today it is still an unsolved entity (Dağabakan & Dağabakan, 2007). In addition, language is the most important element that distinguishes human beings from all other kinds of beings, because language provides human beings with effective speaking skills and enables them to express their feelings, meanings and desires in the deepest way. Language holds an active role in the communication among people, in the dissemination and transmission of thoughts and feelings, as well as in the understanding and transmission of culture from generation to generation.

Many theories or ideas about the definition of language have been presented so far. Aksan (1988) defines language as a phenomenon that cannot be separated from human beings and society that is related to all fields such as science, art, technique and culture, and at the same time constitutes them. In addition, Aksan (2007) uses the following definition for language: *"Language is a versatile and highly developed system that enables thoughts, feelings and wishes to be conveyed to others by utilising elements and rules that are common to a society in terms of sound and meaning."* Onan's (2005) definition of language is as follows: *"language is an all-round systematic, human ability that is formed in the brain, which is an extremely complex system, and has the power to trigger the human mind towards everything that exists in the three dimensions of time through reading, writing, listening and speaking, accompanied by structural units made of sound, meaning and forms formed by the consensus of the individuals who use it."* Considering these definitions, it may be appropriate to assert that language holds various systematic elements including mind and sound system of human beings to facilitate various linguistics skills such as listening, reading, writing and speaking in a certain social circumstance.

The relationship between language and culture is also indispensable as they are holding a bridge to convey thoughts, traditions and mottos among human beings for many years. In order to understand this relationship, it may be better to deal with the definition of culture; to start with, Güvenç (1994) states that *"culture is a combination of variables such as society, human beings, educational process and cultural content, and is a function of the complex relationships among them"*, in addition, Gökalp (1975) claims that *"culture is a harmonious whole of the religious, moral, intellectual, aesthetic, linguistic, economic and scientific life of a nation"*. In this respect, it may be indicated that culture holds many functions of society such as economy, religion, tradition, thoughts etc... , and each of these is conveyed with the mediating role of language. Besides, culture is dynamic and changes over time within various developments in the society, and these changes are all transmitted via language. Göçer (2012) employs various smiles in order to explain the harmony between culture and language as the followings; *"Language is like a river flowing through a country. On the one hand, it gives life to that town and on the other hand, it reaches and contributes to the ocean of civilisation, which is the common product of all humanity, by feeding from the streams in the region. Just as the flowing water gives life to the town through which it flows and flows by multiplying by feeding from the resources of*

that region, language also benefits from the cultural treasures of the society in which it is located and at the same time functions as cement in the formation of the cultural fabric of the society. It is almost impossible to think of language and culture separately from each other. Culture without language is like a building without foundation. The language of a nation without culture is like a river whose source is about to dry up". Regarding these assertions, it may be claimed that language and culture hold mutual effect as they are rather functional in terms of establishing social values.

The current study focuses on the definition, the function, birth and roles of language globally; thus, the main objectives of the current study are to highlight the following aspects:

- to investigate the needs analysis of learning or acquiring a language,
- to examine the birth or existence of language from past to now,
- to indicate various sources about language in religious (holy) books.

Needs Analysis for Holding a Language

As the function and definition of language are regarded, it is obvious that learning or acquiring a language is primarily needed for efficient communication among human beings. Human beings has been living as a community since their existence and they have always entailed a common tool in order to convey their views; hence, language has become crucial. The overall needs analysis for languages are as the followings:

- to boost communication among human beings,
- to facilitate trading among colonies, countries, cities from past to now,
- to act as bridge to transfer traditions and culture among generations,
- to express feelings such as happiness, worries, anger etc.
- to conduct scientific works ,
- to convey thoughts on certain topics,
- to conduct subjective and objective chores (Richterich, 1972).

The birth of Language

The view on “the birth of language” cannot be acquainted with the general perspective of a living creature; in other words, it is not related to pregnancy, and it is actually related to a stage including various steps; however, no definite time about the birth of language can be asserted (Mufwene, 2004). The birth of language may be claimed via the relations having occurred during social communication or trading.

Besides, it is claimed that language has come to existence with the foundation of writing, and it is generally regarded that the Sumerians invented the cuneiform script in 5500 BC and provided history with the first written documents (Hüseyinli, 2021), thus beginning the age of the first written language. This can also be associated with the birth of language. Although pidgins and creoles are considered as basements for the birth of some languages in accordance with the settlement of colonies in Europe, some scholars such as Haugen (1953) and Clyne (2003) are on the idea that the dominant language has always been functional in terms of triggering the main language as it is able to indicate the new variables occurred due to social

and trade aspects. In addition, Leontev (1990) philosophically analysed the birth of language and reported that there are two theories. These theories are "Fusey Theory" (Natural Theory) and "Tesey Theory" (Situation and Position based). According to the Fusey theory, the idea that *"language has natural characteristics"* is defended, but this system of thought is generally rejected because the aim is to adopt artificial features, not natural situations. In addition, there is a common myth about the birth of language; one day, Egyptian administrators carried out an important experiment related to the birth of language in the 7th century BC. Herodotus (1973) describes this experiment as follows; in the 7th century BC, the Egyptian ruler Psammetikos tried to examine what language someone who was not exposed to any sensation or speech spoke, and in order to determine this, he randomly gave two new-born children to a shepherd, ordered them to be put in a corral and raised. The shepherd was to raise the children alone in this room, go to them at certain times to give them a drink of milk, and go about his normal daily work. One day the shepherd went to feed the children again, and the shepherd saw two children kneeling in front of him, holding out their hands and shouting "Bekos!", this happened many times that is why the shepherd took the children to the ruler to hear the children saying "Bekos". "Bekos" means "bread" in the Phrygian language, and the ruler of the period tried to obtain data on the birth of language by determining that language emerged in the context of needs and therefore the first language of someone who was not exposed to language.

Human beings have been employing a language in order to highlight the need to speak; hence, there have been multiple theories or facts about the birth of language.

The origin of Languages in Religious Sources

The concepts about the origin of languages are possible to be observed in the holy books such as the Quran and Bible.

As it is known and accepted by the whole humanity, the first human beings were Adam and Eve. The Bible says that God created Adam first and then Eve. There is no doubt that the first human beings needed language as a means of communication between them. Özdemir (1990) explains the parts of the Bible about how people initiated speaking as followings: *"And God brought to the man (Adam) all the beasts of the field and of the summer, and all the birds of the air, to see what he would call them. And they were to be called by whatever names he had named them. So the man named all the birds of the sky and all the beasts of the earth."* It is also indicated that all the human beings started to use a common language in the Bible as the followings: *"God does not allow the men who built the tower of Babel to boast and be proud of their power. He punishes them by mixing their languages and scattering them all over the world so that no one can understand each other's language. Thus, communities speaking different languages are formed"* (Özdemir, 1990). Regarding these sentences, it may be claimed that language has been utilized as a common tool since the birth of humanity.

Considering some of the verses in the Quran about language, it is indicated that there are some verses about the origin of language as the followings; *Surah Ibrahim, verse 4: "We have sent every prophet only in the language of his own people, so that he may explain (Allah's commands) to them"* and *Surah Rum, verse 22: "The creation of the heavens and the earth and the diversity of your languages and colours are among His signs (of His existence and power)"* Thus, it may be concluded that each society holds a unique language.

Conclusion

Language is a key part of human beings as it initiates, continues and finalizes any communicative aspects or tasks during the day. From past to now, there has been many theories or facts and even religious beliefs about the origin of language; although some of them may be sensible, some of the others sound rather weird. The common concept about the origin of language is that it occurs as a result of natural sources; for instance Yule (2022) claims that some sounds such as “*splash, bang, boom, rattle, buzz, hiss, screech*” are natural sounds available in all over the world as they are onomatopoeic and that is why they echo natural sounds and may be regarded as the basic component of the origin of language. Besides, there are many verses about the origin of language or the societies having employed languages in religious books. Concluding the whole claims about the origin and reasons for languages, it may be claimed that language has been available since the birth of human beings in order to conduct comprehensible and fruitful interactive manners in communication.

ABSTRACT

Learning English as foreign language has been a main issue globally, and many countries attempt to utilize the best techniques or methods in order to develop the language skills of EFL learners. In Turkey, most of learners come up with a great deal of difficulties though they start language classes at primary school, and they cannot hold a conversation successfully. Hence, the current study deals with possible solutions for boosting conversational aspects of high school EFL learners. Descriptive analysis of literature on the role of communicative and cultural topics about the conversational skills reveal that learners are feel more motivated to describe something in their culture. Thus, the current study was conducted with 18 prep school students aged between 17 and 19 to find out the efficacy of cultural topics on the development of conversational skills. The main data collection tool is an open-ended questionnaire interrogating participants' views for adopting cultural topics in the development of conversational skills. The results posited that almost all of the participants are on the idea that cultural topics are really affluent in improving speaking skills because they are able to hold the self-confidence to communicate in the target language and aware of what to claim.

Keywords: English, Cultural Topics, Communication, Conversation.

Introduction

Technology and science has been an integral part of our life currently, thus many individual attempt to do their best to catch them up; thus, they need to become internationalized and evoke awareness deeply for all the whole news in the world. In order to manage this, they entail to hold a significant degree in the target language.

Many people try to take parts in international relations and communicate in the target language successfully (Fishman, 2017) that is why they adopt various qualifications and competencies to hold a foreign language affluently (Lasagabaster, 2008). These competencies and qualifications may vary from political to economic ones; in other words, individual struggle to convey interactive communication and advancement in political, social, economic, and international relations (Fidrmuc and Fidrmuc, 2016) because people need to maintain a powerful communication to adopt international values (Kramsch and Thorne, 2002). It is frequently held that, despite the resources and efforts put forward, the optimum level of efficiency cannot be attained because English was recognized as a foreign language in Turkey. As a result, it is vital to look at each of these concerns separately and come up with fresh solutions. Some of the causes that have contributed to the current predicament include cultural issues, insufficient teacher certifications, outdated English teaching methods, and outdated textbooks. As a result, defining linguistic talents is crucial (Büyükkantarcioglu, 2004; Saricoban, 2012; Elaldi, 2016). Using the best techniques to teach English should be taken into consideration so that learners get the best.

In general, it may be claimed that language learning becomes essential from early years, and almost all of the institution employs a foreign language. Thus, the credential and effective materials are always required. The current study attempts to come up with the role of conversational topics in terms of boosting learners' communicative and cultural skills in accordance with the target language.

Method

In the current study, an open-ended questionnaire was employed in order to define the views of students about communicative and cultural topics in the target language. The main purpose of the current study is to define the impacts of cultural topics on boosting learners' language capacity.

The data for the study were collected via open-ended questionnaires which are efficient in identifying adequate categories (Lazarsfeld, 1944) and expressing views about some aspects freely (Foddy & Foddy, 1993). The open-ended questions are advantageous as they hold spontaneous responses of the participants and provide deep data for the researcher (Gonier, 1999; Kwak & Radler, 1999). Completing open-ended questions may be difficult and time taking for the participants but they yield distinctive data for the researcher (Reja, Manfreda, Hlebec, & Vehovar, 2003). The current study employed the following five items about communicative and cultural topics in the open-ended questionnaires:

1. *Speaking about traditional food in English makes me..... because.....*

2. *Considering our folks in English is because.....*
3. *I like reading poems in English*
4. *I always do my best to watch or listen to ballads of our culture in English*
5. *At home or in a social places, I prefer English conversation about daily chores*

In the study, the whole participants took roles voluntarily and they stated their consent in the questionnaires before the study; the following table indicates the demographic data about the participants:

Variables		Frequency (N)	Percent (%)
Gender	Male	5	27,8
	Female	13	72,2
Age	17	8	44,48
	18	4	22,24
	19	4	22,24
	19 and Above	2	11,04
Class	Prep	18	100
Nationality	Turkish	7	38,84
	Kurdish	10	55,6
	Other	1	5,56
	Total	18	100

Table 1. Demographic data

The demographic information of participants are indicated in Table 1. When the gender graph of the students participating in the research is examined, 5(27, 8 %) of the participants are male and 13 (72, 2 %) are female. Regarding the age graph of the participants, it is clear that most of them, 8 (44,48 %) are 17, and the least of them, 2 (11,04 %) are 19 years old. All of them are prep class students, and when the nationality of them are taken into consideration, 10 participants (55,6 %) are Kurdish, 7 participants (38,84 %) are Turkish, and one is holding a different nationality.

Research design of the current study is qualitative which includes the analyses of interviews, observation or documents in order to reveal the whole cases in real and natural context (Yıldırım & Şimşek, 2021). In the study, thematic analysis which investigates the pattern of the themes systematically (Braun & Clarke, 2012), and it lets the researcher examine the ideas, meanings,

concepts or issues about an overall definite topic in general rather than explicit analyses (Braun & Clarke, 2006). It enables the researcher to become more flexible thanks to legitimate analyses of a certain phenomenon among the entire data.

The whole data collection process took 4 weeks, and the data analysis was completed in one week; thus, the overall study was conducted in five weeks.

Findings

The items in the open-ended questionnaires were directed to the participants, and each of the participants were asked to define their thoughts freely. Then, the obtained data were categorised as a total and sub-themes. The following table illustrates the participants' views as themes:

Theme	Category	Sub-Themes (Sub-Category)	Frequency	%
Conversational Topics	Communicative	Motivation	8	44,40
		Anxiety	2	11,12
		Speaking Skills	2	11,12
		Interaction	1	5,56
		Turn Takings	1	5,56
		Success	1	5,56
		Uncomfortable	1	5,56
		Comfortable	2	11,12
	Cultural	Awareness	6	33,28
		Knowledge	4	22,24
		Self- Confidence	2	11,12
		Comfortable	1	5,56
		Wellness	1	5,56
		Success	1	5,56
		Easy-going	1	5,56
		Uncomfortable	1	5,56
Familiar	1	5,56		

Table 2. Views of the participants

When the table 2. is examined, students' views about the role of conversational topics in the target language are coded. The overall view has been into two general categorizations "conversational" and "cultural", then for each general categorization, some sub-themes are defined.

The findings for communicative category are as the followings; eight times "motivation", two times "anxiety", two times "speaking skills", once "interaction", once "turn takings", once "success", once "uncomfortable" and twice "comfortable" are pointed. On the other hand, the

6th International CEO Communication, Economics, Organization & Social Sciences Congress

findings for cultural category are as the followings; six times “awareness”, four times “knowledge”, twice “self-confidence”, once “comfortable”, once “wellness”, once “success”, once “easy going”, once “uncomfortable” and once “familiar” are pointed.

Some of the views of the participants about the role of conversational topics as communicative can be grasped in the following sentences:

P4. *“At home or in a social places, I prefer English conversation about daily chores because I fell a great deal of success in doing it.”*

P7. *“I like reading poems in English as I believe that it develops my interaction among my friends.”*

P12. *“Considering our folks in English is nice because I can boost my English speaking skills.”*

Some of the views of the participants about the role of conversational topics as cultural can be grasped in the following sentences:

P9. *“Speaking about traditional food in English makes me comfortable because I am familiar with what I am doing..”*

P11. *“I always do my best to watch or listen to ballads of our culture in English as they provides the knowledge in English context.”*

P17. *“Considering our folks in English is something comfortable for me because I know what I do or speak.”*

The views of the students about conversational and cultural topics pinpoints that they develop nice feelings about English as they become more familiarized and successful for the target language. Besides, they are able to boost the capacity and motivation for the language.

Conclusion

The current study was conducted with 18 prep class students who have been learning English more than 10 years. The participants’ ultimate goal was to come up with the best methodology to enhance their English capacity; hence, conversational items were defined to trigger their speaking skills; however, some of the participants may sometimes feel demotivated or unease to initiate a conversation in the target language, thus the questions were derived from their communicative and cultural topics. The participants claimed their views for each items, and the items were analysed qualitatively. The results showed that almost all of the participants held a great deal of motivation and awareness for the target language; on the other hand, some had feelings of being uncomfortable as they may have not been aware of the tasks. In all, most of them indicated positive results and developed deep enthusiasm to learn English as a foreign language.

ÖZET

Dijital girişimcilik, ekonomik büyümeyi, istihdam yaratmayı ve yaşam kalitesi iyileştirmelerini desteklerken inovasyonu ve sürdürülebilirliği teşvik etme potansiyeline sahiptir. Dijital girişimcilik üzerine mevcut literatür, güçlü teorik temellerden yoksun olduğu için eleştirilmiştir. Bu çalışma, alandaki en son gelişmeler hakkında bilgi edinmek için kapsamlı bir literatür taraması yaparak bu açığı kapatmayı amaçlamaktadır. Çalışma, Scopus ve Web of Science veritabanlarını kullanarak dijital girişimcilik üzerine makaleler bulunmuş ve incelenmiştir. 63 çalışmanın keşfinin ardından 20 çalışmanın konuyu kapsamlı bir şekilde inceleyen makaleler yer almıştır. Makale, geleneksel bir organizasyonun nasıl dijital bir işletmeye dönüştüğünü örnekleyen kavramsal bir model önermektedir. Genel olarak, gelecekteki araştırmalar için güçlü bir platform sunarak ve bu olgunun daha fazla araştırılmasını teşvik ederek, bu çalışma dijital girişimcilik anlayışımıza katkıda bulunmaktadır.

Anahtar Kelimeler: Dijital, Girişimcilik, Dijital Girişimcilik, Sistemik Literatür Taraması, Sürdürülebilirlik

Digitization of Entrepreneurship

ABSTRACT

Digital entrepreneurship has the potential to promote innovation and sustainability while boosting economic growth, job creation, and quality of life improvements. Strong theoretical underpinnings have been challenged as being absent from the extant literature on digital entrepreneurship. By conducting a comprehensive literature review to learn about the most recent advancements in the field, this study seeks to close this gap. The study found and examined papers on digital entrepreneurship using the Scopus and Web of Science databases. Following the discovery of 63 studies, from 20 studies that comprehensively examined the topic were located. The paper suggests a conceptual model that exemplifies how a conventional organization becomes a digital business. Overall, by offering a strong platform for future research and encouraging more investigation of this phenomenon, this study adds to our understanding of digital entrepreneurship.

Keywords: Digital, Entrepreneurship, Digital Entrepreneurship, Systematic Literature Review, Sustainability

GİRİŞ

Dijital girişimcilik, 21. yüzyılda ekonomik büyümenin, inovasyonun ve iş yaratmanın temel itici gücü olarak ortaya çıkmıştır. Dünya çapında giderek daha fazla insan internete ve dijital teknolojilere erişim kazandıkça, dijital girişimcilik fırsatları da artmaya devam etmektedir. Dijital girişimcilik, yeni ürünler, hizmetler ve iş modelleri geliştirmek için teknolojik gelişmelerden yararlanarak inovasyonu yönlendirir. Girişimcilerin pazardaki karşılanmamış ihtiyaçları belirlemelerine ve yerleşik endüstrilere ve geleneksel iş yapma yöntemlerine meydan okuyabilecek yıkıcı çözümler oluşturmalarına olanak tanır. Dijital dünya, girişimcilere küresel pazarlara benzeri görülmemiş erişim sağlar. İnternet ve çeşitli dijital platformlar aracılığıyla girişimciler coğrafi sınırların ötesindeki müşterilere, ortaklara ve tedarikçilere ulaşabilirler. Geleneksel fiziksel işletmelerle karşılaştırıldığında, dijital girişimciliğin giriş engelleri genellikle daha düşüktür. Çevrimiçi bir iş kurmak, fiziksel altyapı, envanter ve personel açısından daha az kaynak gerektirir. Dijital girişimcilik, benzersiz bir esneklik ve çeviklik sunar. Çevrimiçi işletmelerle, girişimciler her yerden çalışabilir ve pazar değişikliklerine hızla uyum sağlama ve dönüş yapma özgürlüğüne sahip olurlar. Ancak hızla gelişen bu alan hakkında öğrenilecek çok şey olduğu gözlemlenmektedir. Bu araştırmadan ortaya çıkan temel temaları ve eğilimleri özetleyerek, dijital girişimciliğin sistematik bir literatür taramasını sunulmuştur. Dijital girişimcilik küresel ekonomiyi dönüştürmeye devam ederken, politika yapımcılar, yatırımcılar ve girişimciler için başarının temel itici güçlerini ve dijital girişimlerin karşılaştığı zorlukları anlamak giderek daha önemli hale gelmiştir. Dijital girişimcilğe ilişkin sistematik bir literatür taraması, bu alandaki temel temalar ve eğilimler hakkında değerli bilgiler sağlayabilir ve girişimciler ve politika yapımcılar için umut verici fırsatların belirlenmesine yardımcı olabilir.

Bu çalışmanın ele aldığı temel sorulardan bazıları şunlardır:

- Dijital girişimler için temel başarı faktörleri nelerdir?
- Dijital girişimciler risk ve belirsizliği nasıl yönetir?
- Dijital işletmeleri pazarlamak ve ölçeklendirmek için en etkili stratejiler nelerdir?
- Sosyal ve çevresel zorlukların üstesinden gelmek için dijital girişimcilikten nasıl yararlanılabilir?

Bu soruları kapsayacak şekilde araştırmaları sentezleyerek, sistematik bir literatür taraması, daha fazla araştırmaya ihtiyaç duyulan alanları vurgulayarak dijital girişimcilik alanındaki bilgi durumuna kapsamlı bir genel bakış sağlayacağı öngörülmektedir.

Bu araştırmada, çeşitli akademik makalelerden yararlanarak dijital girişimcilikle ilgili sistematik bir literatür taramasının bulgularını sunulmuştur. Literatürden ortaya çıkan ana temaları ve eğilimleri tartışılmış ve bu bulguların girişimciler, politika yapımcılar ve yatırımcılar için çıkarımlarını vurgulanmıştır. Dijital girişimcilik alanına kapsamlı bir genel bakış sunarak, hızla gelişen bu alanın daha iyi anlaşılmasına katkıda bulunmayı ve dünya çapındaki dijital girişimlerin büyümesini ve başarısını desteklenmesi hedeflenmiştir.

LİTERATÜR TARAMASI

Dijital Girişimcilik

Dijital girişimcilik, internet, mobil cihazlar, sosyal medya ve e-ticaret platformları gibi dijital teknolojilere dayalı yeni bir iş girişimi oluşturma, geliştirme ve yönetme sürecini ifade eder. Bu tür girişimcilik, yeni iş modelleri oluşturmak ve küresel bir izleyici kitlesine ulaşmak için dijital araçlardan ve platformlardan yararlanması bakımından geleneksel girişimcilikten farklıdır (Sahut et.al. 2021). Son yıllarda, dijital girişimcilik yaygın bir ilgi görmekte ve inovasyon ve

ekonomik büyümenin önemli bir itici gücü haline gelmektedir (Schiavone et. al. 2020). Dijital teknolojilerin artan kullanılabilirliği ve benimsenmesiyle birlikte, dijital bir iş kurmanın önündeki engeller önemli ölçüde azalmıştır (Satalkina & Steiner, 2020). Bu azalma, özellikle geleneksel iş modellerinin daha az geçerli olabileceği gelişmekte olan pazarlarda, dünya çapında dijital girişimlerin sayısında bir artışa yol açmıştır. Dijital girişimcilik, paylaşım ekonomisi, platform tabanlı iş modelleri ve abonelik tabanlı hizmetler gibi yeni iş modellerinin de ortaya çıkmasına neden olmuştur. Bu modeller, geleneksel endüstrilerde bazı kökten değişikliklere sebebiyet vermiş ve girişimcilere, müşterilere yenilikçi ürün ve hizmetler sunmak için dijital teknolojilerden yararlanma konusunda yeni fırsatlar yaratmıştır (Ghezzi, 2019). Dijital girişimcilik, yoksulluk, eşitsizlik ve çevresel sürdürülebilirlik gibi toplumsal zorlukları ele alarak sosyal etki yaratma potansiyeline sahiptir (Soluk et.al. 2021). Örneğin, yetersiz hizmet alan topluluklara eğitim, sağlık ve finansal hizmetlere erişim sağlamak için dijital teknolojilerden yararlanılabilir. Dijital girişimciliğin artan önemi göz önüne alındığında, dijital girişimlerin başarısını etkileyen faktörleri, dijital girişimciliğin yerel ve küresel ekonomiler üzerindeki etkisini ve devlet politikalarının dijital girişimciliği desteklemedeki rolünü anlamak önemlidir (Leong, et. al.,2020). Sistematik bir literatür taraması, bu alandaki araştırmaların kapsamlı ve titiz bir analizini sağlayabilir, böylece araştırma boşluklarının belirlenmesine yardımcı olur ve gelecekteki araştırma yönleri hakkında bilgi verir.

YÖNTEM

Literatür taramasını yürüterek ilgili makaleleri belirlemek için sistematik bir arama süreci kullanılmıştır. "Dijital girişimcilik", "e-ticaret", "çevrimiçi işletme", "inovasyon" ve "startup" gibi anahtar kelimeler kullanarak SCOPUS ve Web of Science'ta akademik veritabanlarında arama yapılmıştır. Ek kaynakları belirlemek için bulduğumuz makalelerin referans listelerine de başvurulmuştur.

Toplamda, 2017 ile 2022 arasında yayınlanmış 63 makale belirlenmiştir. Daha sonra bu makaleleri araştırma sorularımızla alakalı düzeyine göre taranmış ve incelememize dahil edilmek üzere 20 makalelik son bir örnek oluşturulmuştur.

Tablo 1. Literatür Taraması

Yazar	Yıl	Başlık	Temalar ve Trendler

Zaheer et al.,	2019	Digital entrepreneurship: An interdisciplinary structured literature review and research agenda.	Dijital Girişimciliğin Etkenleri

Literatür taraması sonucunda dijital girişimcilikle ilgili çalışmaların 5 temel tema ve trendte ayrıldığı gözlemlenmiştir. Bu tema ve trendlerin inovasyon, zorluklar ve fırsatlar, ekosistemler ve ağlar, dijital iş modelleri, dijital girişimciliğin etkenleri olduğu tespit edilmiştir.

Şekil 1. Dergi Dağılımı

Şekil 1’de dijital girişimcilik makalelerinin dergi dağılımları verilmiştir. Buna göre en fazla dijital girişimcilik çalışmalarının yer aldığı derginin Technological Forecasting and Social Change dergisi olduğu tespit edilmiştir.

Şekil 2. Temalar ve Trendler

Tespit edilen tema ve trendlerin dağılımı Şekil 2’de gösterilmiştir. Buna göre çalışmaların en fazla yer aldığı tema ve trendin dijital girişimciliğin etkenleri teması olduğu tespit edilmiştir. Dijital girişimciliğin yeni ortaya çıkan bir kavram olması sebebiyle dijital girişimciliği etkileyen faktörlerin belirlenmesi önem kazanmıştır.

BULGULAR

Temel Temalar ve Trendler

Sistemik literatür taraması sonucu, dijital girişimcilik literatüründe birkaç temel tema ve eğilim belirlenmiştir. Bu temalar aşağıda özetlenmiştir.

Dijital Girişimciliğin Etkenleri: Literatür, teknolojik ilerlemeler, tüketici davranışındaki değişiklikler, küreselleşme ve yenilikçiliği ve girişimciliği destekleyen hükümet politikaları dahil olmak üzere çeşitli faktörlerin dijital girişimciliğin büyümesine katkıda bulunduğunu göstermektedir (Mancha, R. and Shankaranarayanan, 2021).

Zorluklar ve Fırsatlar: Dijital girişimcilik, sermaye, yetenek ve teknolojiye erişim ihtiyacının yanı sıra fikri mülkiyet, siber güvenlik ve yasal uyumlulukla ilgili sorunlar gibi çeşitli zorluklarla karşı karşıyadır. Bununla birlikte, küresel bir kitleye ulaşma yeteneği, hızlı büyüme potansiyeli ve iş kararlarını bilgilendirmek için veri ve analitiği kullanma yeteneği gibi dijital girişimcilik için birçok fırsat da vardır (Hsieh & Wu, 2019).

Dijital İş Modelleri: Literatür, e-ticaret, mobil uygulamalar ve çevrimiçi pazar yerleri gibi girişimciler tarafından yaygın olarak kullanılan çeşitli dijital iş modellerini vurgulamaktadır (Zaheer et al., 2019; Schiavone et. al., 2020). Bu modeller genellikle geleneksel iş modellerine kıyasla farklı beceriler, stratejiler ve kaynaklar gerektirir.

İnovasyon: Girişimciler yeni ürünler, hizmetler ve iş modelleri geliştirmek için dijital araçlardan ve platformlardan yararlandığından, dijital girişimcilik genellikle inovasyonla ilişkilendirilir (Bunduchi et. al., 2021). Literatür, dijital girişimciliğin karmaşık sorunlara yenilikçi çözümler geliştirerek ekonomik büyümeyi ve istihdam yaratma potansiyeline sahip olduğunu öne sürmektedir.

Ekosistemler ve Ağlar: Literatür, ekosistemlerin ve ağların dijital girişimciliği desteklemedeki önemini vurgulamaktadır (Du et al., 2018; Song, 2019; Elia et al., 2020). Bu ekosistemler, girişimcilere kaynaklara, uzmanlığa ve finansmana erişim sağlayan üniversiteleri, hızlandırıcıları, kuluçka merkezlerini, risk sermayesi şirketlerini ve devlet kurumlarını içerebilir.

SONUÇ

Dijital girişimcilik, günümüzün hızla gelişen iş ortamında çok önemli bir rol oynamaktadır. Yenilikçi iş girişimleri oluşturmak, geliştirmek ve yönetmek için dijital teknolojilerin ve platformların kullanımını ifade eder. Dijital girişimcilik, inovasyonu, ekonomik büyümeyi ve kapsayıcılığı yönlendirmede büyük önem taşımaktadır. Girişimciler, dijital teknolojilerin gücünden yararlanarak değer yaratabilir, sektörleri alt üst edebilir ve işin geleceğini şekillendirebilir. Dijital girişimcilik, önemli iş fırsatları yaratma ve ekonomik büyümeye katkıda bulunma potansiyeline sahiptir. Sonuç olarak, sistematik literatür incelemesi, dijital girişimciliğin ekonomik büyüme ve inovasyonun temel itici gücü olarak artan önemini vurgulamaktadır. İncelemede, dijital girişimciliğin itici güçleri, zorluklar ve fırsatlar, dijital iş modelleri, inovasyon ve ekosistemler ve ağlar dahil olmak üzere literatürdeki birkaç temel tema ve eğilimi belirlenmiştir.

İleriye dönük olarak dijital girişimcilik alanında gelecekte yapılacak araştırmalar için birkaç alan vardır. Örneğin, dijital girişimlerin başarısını etkileyen faktörleri, dijital girişimciliğin yerel ve küresel ekonomiler üzerindeki etkisini ve devlet politikalarının dijital girişimciliği desteklemedeki rolünü anlamak için daha fazla araştırmaya ihtiyaç vardır. Araştırmacılar, dijital girişimcilikle ilgili bu ve diğer konuları araştırmaya devam ederek, dünya çapında dijital girişimlerin büyümesini ve başarısını destekleyen politikalar ve uygulamalar hakkında bilgi edinilmesine yardımcı olabilir. Ayrıca araştırmacılar, eşitsizlik, çevresel sürdürülebilirlik ve sağlık hizmetlerine erişim gibi toplumsal zorlukları ele almak için dijital girişimciliğin nasıl kullanılabileceğini keşfedebilirler. Dijital girişimcilik anlayışımızı ilerleterek, herkes için daha müreffeh ve eşitlikçi bir gelecek yaratmak için dijital teknolojilerin tüm potansiyelini ortaya çıkarabiliriz.

ÖZET

İnsanlar sosyal yaşam içerisinde kendilerini başka kişiler ile kıyaslamaktadırlar. Festinger (1954)'in sosyal karşılaştırma teorisine dayanan yengeç sepeti sendromu kapsamında; kişi kendi eksikliklerini fark ederek, kendinde bulunan eksikliklerini giderebilmektedir. Ancak kişi kendinden daha başarılı kişilere yetişemeyeceğini anladığında ise bu kişilerin başarısız olması için çaba sarf etmeye başladığı noktada yengeç sepeti sendromu ortaya çıkmaktadır. Alan yazında çok fazla ele alınmayan "crab in barrel syndrome" olarak adlandırılan ve Türkçe'de yengeç sepeti sendromu olarak ifade edilen bu kavram, bir organizasyonda yardım ve destek amacıyla oluşturulmuş sosyal normların varlığına rağmen, başka üyelerin kariyer başarılarını engelleyen bireylerin, zihniyet ve davranışlarını tanımlamak için kullanılan bir metafordur (Miller, 2016). Bu olgu "eğer ben yapamıyorsam, sen de yapamazsın" anlayışına dayanan diğer insanları kötülemeyi ve aşağıya çekmeyi tercih eden insanların sahip oldukları zayıf kişilik olarak ifade edilmektedir (Soubhari ve Kumar, 2014). Yengeç sepeti sendromunun, bireye özgü ve genellikle bireyin varlığından kaynaklanan içten gelen bir duygu olduğunu söylemek mümkündür. Yengeç sepeti sendromu kavramının bireysel nedenleri olarak benlik, özgüven ve kıskançlığa dair olumsuzluklar, korku, narsisizm ve kaygı gibi insan psikolojisine dair kavramlardan bahsedilebilir. Örgütsel nedenleri ise bireyin örgüt içinde bu davranışları sergileyebilmesine olanak sağlayan örgütün kültürü, yapısı, yönetici davranış ve tutumlarıdır. Yengeç sepeti sendromu moral ve verim düşüklüğü, anlaşmazlıklar gibi örgütler için birçok olumsuzluklara neden olmaktadır. Yengeç sepeti sendromuna karşı alınabilecek önlemlerden bazıları ise liyakatin benimsenmesi, rol belirsizliğinin olmaması, eşit haklar sunan değerlerin benimsenmesi şeklinde sıralanabilir. Yengeç sepeti ile benzer sonuçları olan uzun gelincik sendromu, cam tavan sendromu, kraliçe arı sendromu, sosyal baltalama ve iş yeri nezaketsizliği gibi kavramlar ise küçük farklılıklarla yengeç sepeti kavramından ayrılmaktadırlar. Bu çalışma çerçevesinde yengeç sepeti sendromu kavramı ile alan yazında kısıtlı da olsa var olan çalışmalar incelenmiş ve teorik bir çalışma oluşturularak bu konuda alan yazınına katkıda bulunmak amaçlanmıştır.

Anahtar Kelimeler: Yengeç sepeti, Kıskançlık, Kişilik, Başarı

Crab Basket Syndrome: Envy and Undermining Tendencies Towards Success

ABSTRACT

People tend to compare themselves with others in social life. Within the context of the "crab basket syndrome" based on Festinger's (1954) social comparison theory, individuals can recognize their own shortcomings and strive to overcome them. However, when individuals realize that they cannot catch up with more successful individuals, the crab basket syndrome emerges, where they start making efforts to hinder the success of those individuals. This concept, referred to as the "crab in barrel syndrome" and commonly known as the "crab basket syndrome" in Turkish, is used as a metaphor to describe the mindset and behavior of individuals who hinder the career success of others despite the presence of social norms established for help and support in an organization (Miller, 2016). This phenomenon is attributed to individuals who prefer to denigrate and pull others down based on the understanding of "if I can't do it, neither can you" (Soubhari and Kumar, 2014). The crab basket syndrome can be considered as an intrinsic feeling specific to the individual, often stemming from negative aspects related to self-identity, self-confidence, jealousy, and concepts within human psychology such as fear, narcissism, and anxiety.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

Its organizational causes include the culture, structure, and managerial behaviors and attitudes of the organization that enable individuals to exhibit such behaviors within the organization. The crab basket syndrome leads to various negative consequences for organizations, such as low morale and productivity, and conflicts. Some measures that can be taken against the crab basket syndrome include embracing merit, minimizing role ambiguity, and adopting values that promote equal opportunities. Concepts such as long weasel syndrome, glass ceiling syndrome, queen bee syndrome, social undermining and workplace incivility, which have similar results with the crab basket, differ from the concept of the crab basket with minor differences. Within the framework of this study, the concept of the crab basket syndrome was examined by reviewing the limited existing studies in the literature, and a theoretical study was conducted to contribute to the literature in this regard.

Keywords: Crab basket syndrome, Envy, Personality, Success

GİRİŞ

Yaşamının her alanında yengeç zihniyetine sahip olan bireyler ile karşı karşıya gelinebilir. Bu kişiler; kendilerini seven, başkalarını küçümseyen, kendisi için olumlu başkaları için olumsuz duygular taşıyan merhamet duygusundan yoksun bireyler olarak tanımlanmaktadır (Abrugar, 2014). Örgütsel davranış açısından bakıldığında, yengeç zihniyetine sahip olan bireylerin kendisinden başkasının başarılı olmasını, yükselmesini, hedeflerine ulaşmasını istemeyen onları aşağıya çekmek için çaba gösterdiği durumu anlatmak için kullanılmaktadır. Hatta yengeç zihniyetine sahip kişiler etrafındaki kişileri engelleyerek onları başarısız olmaktan hayal kırıklığına uğramaktan kurtararak iyilik yaptıklarını dahi düşünürler. Yengeç sepeti sendromunun örgütte örgütün sağlığını bozan durumlara neden olduğu da söylenebilir.

Alan yazında yapılan inceleme sonucunda, yengeç sepeti sendromu kavramının yeni bir metafor olduğu ve yengeç sepeti sendromu ile ilgili olarak yapılan çalışmaların sayısının az olduğu ve bu çalışmaların çoğunluğunun kuramsal çalışmalardan oluştuğu tespit edilmiştir (Sampath, 1997; Duke, 1994; Kumar ve Soubhari, 2014; Perry, 2013; Spacey, 2015; Miller, 2019). Buradan hareketle bu çalışmanın teorik çerçeveyi genişleterek ortaya konması açısından alan yazına katkı sağlayacağı düşünülmektedir.

1. KAVRAMSAL ÇERÇEVE

1.1. Yengeç Sepeti Sendromu

Alan yazında yengeç sepeti sendromu Türkçe’de “yengeç sepeti”, “yengeç zihniyeti”, “yengeç sendromu”, “yengeç kovası”, “yengeç sepeti olgusu”, “yengeç davranışları” gibi kavramlarla İngilizce’de ise “crabs in a bucket”, “crabs in a bucket syndrome”, “crab mentality”, “crabs in a barrel”, “crabs in a barrel syndrome”, “crab behaviors”, “crab bucket”, “crabs syndrome” gibi kavramlarla ifade edilmektedir.

Yengeç sepeti sendromunun çıkış noktası Filipinler’de balıkçıların anlattığı bir hikâyedir. Bir adam kumsalda yürürken avlanan balıkçının kapağı açık bir kovaya yakaladığı yengeçleri koyduğunu görür. Balıkçıya kapağa açık bir kovaya konulan yengeçlerin kaçacağını söyler balıkçıda “*evet, tek bir yengeç olsaydı, kesinlikle kaçardı. Ancak, pek çok yengeç varsa, biri kaçmaya çalıştığında diğerleri onu yakalar ve kaçmayacağından emin olur. Geri kalanlar da aynı kaderi yaşarlar.*” şeklinde bir cevap alır. Çünkü yengeçler birbirlerini yukarı itmek yerine, aşağı çekerek engellerler ve kimse yukarı çıkamaz. Bu durum da “yengeç sepeti” olgusunun çıkış noktası olarak kabul edilmektedir (Çavuş ve Sarpkaya, 2021; Duke, 1994; Şahin, 2018; Vibes, 2015).

Bir metafor olan yengeç sepeti sendromu, kişilerin kendilerinden çok daha iyi performans gösteren kişileri aşağı çekmeye çalıştığı durumu açıklamaktadır (Soubhari ve Kumar, 2014; Spacey, 2015). Yengeç sepeti sendromu, “*bireyin başarısızlık yaşama korkusuna ait düşünce ve duygulardan hareketle, başkalarının kendinden daha başarılı olmasını engelleme davranışı sergilemesi ve bu tür davranışların başkaları tarafından da olağan karşılanarak, kabul görmüş bir davranış biçimi haline dönüşmesi ile ortaya çıkan sosyal bir eğilim*” olarak ifade edilmektedir (Fettahlıoğlu ve Dedeoğlu, 2021). Yengeç sepeti sendromu, “*ben sahip olamıyorsam, sen de sahip olma*” anlayışına dayanan bencilce bir düşünce olup; diğer insanların hayallerine ulaşmasını engelleyen onları kötüleyen ve aşağıya çekme güdüsüne dayanan zayıf bir kişilik özelliğidir. Yengeç sepeti sendromunun ortaya çıkmasının bireysel nedenleri, narsistlik, kaygı, korku, endişe, özgüvensizlik, düşük benlik algısı, değersiz hissetme iken;

örgütsel nedenleri ise bu sendromun örgütte ortaya çıkmasına izin veren örgüt kültürü, örgüt yapısı, yönetici davranış ve tutumları olarak sıralanabilir (Özdemir ve Üzüm, 2019; Soubhari ve Kumar, 2014).

Yengeç sendromu; “başarılı” olarak sayılan bireylerin tespit edilmesiyle başlar ve “Sosyal Karşılaştırma Teorisiyle (Social Comparison Theory)” temellendirilir. Sosyal karşılaştırma teorisine göre; birbirine benzeyen amaçlar ve yetenekler rekabet yaratmaktadır (Goethals ve Darley, 1987). Birey kendisiyle etrafındaki kişileri karşılaştırarak kendisinin hangi seviyede olduğunu anlamaya çalışır. Karşılaştırma yaptığı bireyden daha düşük seviyede olduğunu farkederse hissettiği başarısızlık duygusu özgüvende düşmeye yol açar (Gilbert vd., 1995; Goethals ve Darley, 1987) ve kendinden daha başarılı olduğunu düşündüğü bireyi aşağıya çekmek için çaba gösterir. Yengeç sepeti sendromu bu yönüyle örgütte sosyal ilişkileri bozan iş davranışları ortaya çıkarmaktadır (Duffy vd., 2002).

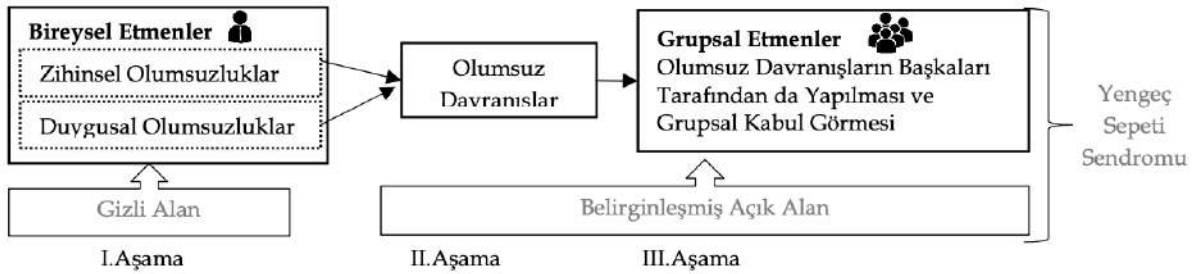

Yengeç sepeti sendromu, belirli bir gruba üye kişilerin kendi konumlarını koruyabilmek ya da daha iyi bir konuma gelebilmek için, gruptaki diğer kişilerin ilerleyişlerini kasıtlı olarak engellemeye çalışmasıdır. Ayrıca yengeç sepeti sendromunu örgütte işlevsizlik yaratan, kuralları ihlal eden düşük statülü kişilerin, iş ortamındaki diğer insanlara karşı olumsuz etki yaratan, onları küçük düşürmeye çalışan, onların moral ve motivasyonlarını bozmaya yönelik niyetler olarak tanımlamak da mümkündür (Pegues, 2018). Bu durumda kişiler birbirinin engeli durumuna geldiğinde kişilerarası rekabet ortaya çıkmakta ve bu durumda başarıya ulaşmak için çabalayan bireyler, birbirlerini desteklemek yerine sabote etme yolunu tercih etmektedir. Yengeç sepeti sendromu olgusu, bir örgütü ve örgütün saygı ve destek ile ilgili grup içi normlarını ihlal eden rekabetçi bir sosyal etkileşimdir ve örgütlerde eşitsizlik, düşük temsil oranı ve sınırlı yükselme fırsatlarının olduğu kapalı bir örgüt ikliminden kaynaklanmaktadır (Miller, 2019).

Yengeç sepeti sendromunu taşıyan kişiler, örgütteki diğer kişilerin kendilerini geliştirmesini, amaçlarına ulaşmasını, kariyerinde ilerlemesini ve başarı elde etmesini engellemek için çaba harcamaktadır (Miller, 2019; Soubhari ve Kumar, 2014). Ayrıca yengeç sepeti sendromunun örgütteki varlığı; kişilerin çabalarını ve ilerleyişini engelleyen, örgütteki destek ya da iş birliği gibi kuralları ihlal eden, örgüt içinde saygısız davranışların sergilenmesine zemin hazırlayarak olumlu örgüt kültürünü, takım çalışmasını, iş birliğini, motivasyonu ve verimliliği olumsuz yönde etkilemektedir (Aydın ve Oğuzhan, 2019; Miller, 2019; Özdemir ve Üzüm, 2019). İlerlemeye çalışan örgüt üyeleri diğerleri tarafından aşağıya çekilir ve bunun sonucunda hiçbir örgüt üyesi gelişemez ve ilerleyemez. Bu özelliği taşıyan kişilerin kendilerini yukarıya çıkmaya çalışan kişilerin zarar görmelerini engellemek ya da başarısız olmaktan koruduklarına hatta yardımsever kişiler olduklarına dahi inanırlar (Marques, 2009). Bu kişiler, diğer kişilerin ilerleyişini durdurabilmek için karşılarındaki kişilerin motivasyonunu düşürme, onları aşağılama, alay etme, eleştirme, yaptıkları işleri kötü gösterme, o kişilere olumsuz imaj oluşturma gibi olumsuz davranışlarda bulunmaktadırlar (Özdemir ve Üzüm, 2019; Pegues, 2018; Miller, 2016; Abrugar, 2014). Bu davranışlara maruz kalan kişiler öfke, hayal kırıklığı, üzüntü gibi olumsuz duygular hissetmekte ve bunun sonucunda kişiler stres yaşamakta bu da kişilerde ruhsal ve fiziksel problemlere yol açabilmektedir (Miller, 2019; Soubhari ve Kumar, 2014).

Yengeç zihniyeti taşıyan kişilerin ortak özelliklerinden bazıları şu şekildedir (Abrugar, 2014):

- Kendilerini çok önemli sanırlar ve diğer kişilere kendi çalışanları gibi davranırlar.
- Çevrelerindeki insanların mutlu olduklarını ve geliştiklerine şahitlik ettiklerinde paniklerler.
- Kıskançlık, kibir ve hoşnutsuzluk gibi kişilik özellikleri taşırlar.
- Temel felsefeleri “ben yapamıyorsam, sen de yapamazsın”dır.
- Kendilerini her zaman olumlu değerlendirirken çevrelerindeki olumsuz değerlendirirler.
- Çevrelerindeki kişiler başarısız olduklarında onlara yardımcı olmak yerine, onları suçlarlar.
- Herkesi rakip olarak görürler ve takım çalışması, iş birliği gibi kavramlara inanmazlar.
- Merhamet sahibi olmayıp; çevrelerindeki kişilerin duygularına karşı bencil ve ilgisizlerdir.
- Her şeyi bildiklerini düşündükleri için tartışmaya izin vermezler.
- Yengeç sepeti sendromu özelliği taşıyan kişiler asla bu özellikleri taşıdıklarını kabul etmezler.

Yengeç sepeti sendromu özelliği taşıyan kişiler başkalarının cesaretini kırma, sert sözler kullanma, kıskanma, başkalarını eleştirme ve küçümseme gibi olumsuz davranışlar çevresinde konumlanmaktadır (Miller, 2019). Örgütlerde çalışanların birbirlerine karşı saygısız davranışları, bilinçli ya da bilinçsiz saldırganlık göstermeleri, mobbing, zorbalık, dedikodu, mobbing, örgütsel dışlama gibi hareketlerin varlığı ve bunlar sonucunda örgütte meydana gelen psikolojik problemler örgütlerdeki yengeç sepeti sendromunun belirtileridir. Yengeç sepeti sendromunun gerçekleşmesine yönelik süreç aşağıda Şekil 1’de gösterilmiştir (Fettahioğlu ve Dedeoğlu, 2021).

Şekil 1. Yengeç Sepeti Sendromu Süreci
Kaynak: (Fettahioğlu ve Dedeoğlu, 2021).

I. Aşama: Sendromun başlangıç noktasını oluşturan bu aşamada başkaları tarafından görülemeyen gizli alan olan bireysel etkenleri oluşturan gizli zihinsel ve duygusal olumsuzluklar ön plandadır. Birey bu aşamada bazen olumsuz his ve düşüncelerinin sebebine kendisi bile anlam veremeyebilir. Örneğin; birey kıskanç olması sebebinin başarısız olma korkusu gibi duygu ve düşüncelerden kaynaklandığını anlayamayabilir. Bireyin böyle hissetmesine eğitim düzeyi, hedefleri, mizacı gibi pek çok etmen sebep olabilir. Bu duygu ve düşünceler her insanda olabilen insani ve olağandır. Hatta bu duygu ve düşüncelerin tetiklenmedikçe harekete geçmedikçe başkalarına zarar vermeyeceği söylenebilir.

II. Aşama: Bireysel etmenler olan duygusal ve zihinsel olumsuzların davranışlara dönüştüğü, aşamadır. Bu aşamada bu olumsuz düşünce ve duygular artık belirginleşmiş açık alan içinde yer almakta ve gözlemlenebilir davranışlar haline gelmektedir.

III. Aşama: Bu aşama ortaya çıkan gözlemlenebilen bu olumsuz davranışların diğer bireylerce de açıkça sergilenmeye başlandığı ve bu davranışların sosyal hayatta ve grup içinde kabul edilebilir hale dönüştüğü aşamadır. Bu noktada yengeç zihniyetine sahip kimsenin başkasının yükselmesine izin vermediği sürekli bireylerin birbirlerini aşağıya doğru çektiği durumları anlatmak için kullanılan kavram ortaya çıkmaktadır. Doğada yengeçlerin doğal iç güdülerini yüzünden gösterdikleri bu davranışın, sosyal yaşamda insanlar arasında da ortaya çıkabilmesi, tatlı rekabet ya da yıkıcı iş kanununun gibi genel olarak kabul görmüş informal normlara bağlıdır.

1.2.Yengeç Sepeti Sendromu ve Çözüm Önerileri

Örgüt içinde olumsuz davranışlara yol açan yengeç sepeti sendromu ile mücadele etme yöntemlerinden bazıları şu şekildedir (Özdemir ve Üzüm, 2019; Aydın ve Oğuzhan, 2019);

- Örgütte bireylerin stres yaşamalarının önüne geçebilmek için bireylerin hangi işi yapacakları, kime karşı sorumlu oldukları gibi rol belirsizliğine yol açan nedenler ortadan kaldırılarak; bireylerin görev ve sorumluluk tanımları net olmalıdır.
- Örgütlerin üyelere eşit ve adil haklar sunan değerleri benimsemesi gerekmektedir.
- Bireylerin motivasyonunun sağlanması için örgüt tarafından onlara değerli oldukları hissettirilmelidir.
- Örgütteki kişilere karşı geliştirilen politikalar yasal ve sürekli olmalıdır.
- Yöneticiler örgütsel faaliyetlere üyelerin katılımını sağlamalı ve örgüt içindeki takım çalışmasını güçlendirmelidir.
- Örgüt içi iletişim zamanında, net ve dürüst olmalıdır.
- Örgütün misyon ve vizyonu açık bir şekilde ortaya konulmalı ve bütün çalışanlarca benimsenmelidir.
- Örgütte liyakat benimsenmeli, doğru pozisyonlara bunu hak eden ve onun için gerekli yeterlilik, şartları sağlayan bireyler getirilmelidir.
- Örgüt içinde yemek, gezi gibi etkinlikler düzenlenerek üyeler bir araya getirilmeli örgütte birlik beraberlik duyguları geliştirilmelidir.
- Çalışanlara kendilerini geliştirebilmeleri için ortam sağlanmalı bu yönde çalışanlar desteklenmelidir
- Örgütte yengeç sepeti sendromundan kaynaklı sorunlar en kısa zamanda çözüme kavuşturulmalı bunun için de arabuluculuk hizmetlerinden faydalanılmalıdır.

1.3. Yengeç Sepeti Sendromu ile İlgili Kavramlar

Alan yazın incelendiğinde örgütte motivasyon ve performans kaybına neden olan yengeç sepeti sendromu ile benzer sonuçları olan kraliçe arı sendromu, cam tavan sendromu ve uzun gelincik sendromu gibi kavramlara rastlanmıştır. Bu kavramlar şu şekildedir;

1.3.1. Kraliçe Arı Sendromu

Kraliçe arı sendromu, arı kovanında bulunan kraliçe arıdan esinlenerek ortaya çıkmış bir metafor olup; kadın çalışanlara karşı farklı davranışlar geliştiren kadın yöneticiler için kullanılmaktadır. Bu kavram, Carol Tavris, Toby Epstein Jayaratne ve Graham Staines tarafından ilk kez 1973 yılında yürütülen çalışmalar sonucunda 1974 yılında 20.000'den fazla kadın çalışan üzerinde yürütülen çalışmaların bulgularının "Psychology Today"de yayımlanması ile alan yazına girmiştir. Dünya nüfusunun yarısını kadınlar oluştururken; çalışma yaşamında ise bu oran oldukça azdır. Kadın çalışanların çalışma yaşamında yaşadıkları sorunlar

yüzünden kadın yöneticilere yönelik görünmez engellerin hala devam ettiği görülmektedir (Miller 2019; Powell ve Butterfield, 2015; Pompper, 2011).

Çalışma yaşamında kadın yöneticilerinin azlığının nedenlerinden biri de kraliçe arı sendromudur. Kraliçe arı sendromuna sahip olan kadın yönetici çevresindeki kadınları tehdit olarak algılamakta ve bu kadınların gelişimini ve ilerlemesini engellemek için çaba harcamaktadır (Taşdelen, 2020). Kraliçe arı sendromu, çevrelerindeki kişileri aşağı çekmeye çalışma, ilerlemesine engel olma, kıskanma gibi özellikleri nedeniyle yengeç sepeti sendromu ile benzerlik göstermekte olup; yengeç sepeti sendromunda cinsiyet ayrımı gözetmeksizin herkese uygulanırken kraliçe arı sendromunda iki tarafta kadındır.

1.3.2. Cam Tavan Sendromu

1970'li yıllarda ABD de ortaya çıkan cam tavan sendromu, "*kadınların üst kademe yönetim pozisyonlarına ulaşmasını engelleyici davranışsal ve örgütsel önyargulardan görünmez yapay engelleri*" ifade etmek için kullanılmaktadır (Wirth, 2001). Bu sendrom, kadınların başarı, eğitim ve yeterliliklerine bakılmaksızın yönetici olmalarını engelleyen ama açık şekilde görülmeyen ve aşılamayan engelleri anlatan bir kavramdır (Karcıoğlu ve Leblebici, 2014). Örgüt içinde kadın çalışanların yönetici olmalarının sırf cinsiyetlerinden dolayı engellenmesi örgütte cam tavan sendromunun olduğunun göstergesidir (Yoğun Erçen, 2008).

Cam tavan sendromu ile karşı karşıya kalan kadın çalışanlarda gözlemlenen en büyük sıkıntı bir süre sonra bireylerin ilerlemeye dair motivasyonlarını kaybetmeleri, isteksizleşmeleri, bağlılıklarının düşmesi, işe karşı yabancılaşmaları ve iş tatminsizliklerinin artmasıdır. Böylelikle çalışan örgüte karşı güvenini kaybetmekte ve sessizliği tercih etmektedir (Naus, 2007). Örgütte ve bireyler üzerindeki olumsuz etkileri yönüyle cam tavan sendromu ve yengeç sepeti sendromunun benzer yönleri bulunmakta olup; aralarındaki fark ise yengeç sepeti sendromundan farklı olarak cam tavan sendromunda yükselmesi engellenmeye çalışan bireyin kadın olmasıdır.

1.3.2. Uzun gelincik sendromu (Tally Poppy Sendromu)

Uzun gelincik sendromu literatürde bazı durumlarda haset, kıskançlık kavramları ile ifade edilmektedir. Avusturya ve Yeni Zelanda' da ortaya çıkan uzun gelincik kavramı başarılı yetenekli insanları eleştirme sendromu olarak tanımlanmaktadır. Uzun gelincik sendromu; bireylerin statü, başarı, iyi görünüm veya başka özellikleri nedeniyle akranlarından daha yüksek seviyeye çıkan bireylere yönelik küçük düşürme (cut down) ve eleştirme eğilimlerinde olmalarını ifade etmektedir (Gressel, 2014; Shrand, 2013). Feather (1989) tarafından gerçekleştirilen başarılı insanlara karşı diğer insanların tutumlarının incelendiği bir dizi araştırmada; üstün başarılı öğrencilerin başarısızlığından diğer öğrencilerin memnun oldukları hatta bu öğrencilerin kopya çekerken yakalanmasından ise daha çok memnun olduklarına dair sonuçlar elde edilmiştir. Pierce vd. (2017) tarafından sporcular üzerine gerçekleştirilen bir araştırmada ise başarılı sporcuların diğerleri tarafından uzun gelincik olarak hedef alınarak küçük düşürülmek için girişimlerde bulunulduğu sonucuna ulaşılmıştır.

Yengeç Sepeti Sendromu ve uzun gelincik sendromu, sosyal yaşamda ya da grupların içinde ortaya çıkan iki farklı dinamiği ifade etmektedir. Her ikisi de sosyal psikoloji ve grup davranışları alanında incelenen konular olup; her ne kadar yengeç sepeti sendromu ve uzun gelincik sendromu benzer gibi görünse de, aralarında doğrudan bir ilişki yoktur. İkisi de başarılı veya öne çıkan bireyleri olumsuz etkileyen toplum ve grup dinamiklerini ifade etse de, Yengeç Sepeti Sendromu daha çok kişilerin birbirlerini aşağı çekme eğilimini vurgularken, uzun

gelincik sendromu ise başarılı bireyleri hedef alma veya aşağılama eğilimini vurgulamaktadır. Her iki kavram da farklı gruplarda veya toplumlarda gözlemlenebilir ve bireylerin davranışlarına, tutumlarına ve başarıya ulaşan bireylere olan tepkilerine odaklanmaktadır.

1.3.4. Sosyal Baltalama Kavramı

İlk kez Duffy vd. (2002) tarafından incelenen sosyal baltalama kavramı, örgütteki bir bireyin diğer bireylerin örgütteki diğer bireylerle iyi ilişkiler kurmasını, örgütte başarılı olup; iyi bir itibar kazanmasını ve bunu devam ettirmesini engellemek için bireyin gösterdiği davranışlardır (Ünalın, 2023). Bu davranışlar belli bir süreç boyunca yavaş ve kasıtlı olarak yapılmaktadır (Duffy vd., 2002). Yengeç sepeti sendromu ile ilişkili diğer bir kavram olan sosyal baltalama davranışı, kişilerin itibarının zarar görmesine, tükenmişlik yaşamasına, performansının düşmesine, kariyerlerinde ilerleme isteklerinin ortadan kalkmasına neden olmaktadır (Sayğan Tunçay ve Çıraklar, 2020; Ülbeği vd., 2019; Duffy vd., 2002).

1.3.5. İşyeri Nezaketsizliği

Yengeç sepeti sendromu; örgüt içinde rekabetin yoğun olduğu zamanlarda ortaya çıkan, örgütteki kuralları ihlal eden, örgüt için olumsuz sonuçlara yol açan bir diğer kavram olan işyeri nezaketsizliği ile benzer özellikler gösteren karmaşık bir kavramdır (Miller, 2016). İşyeri nezaketsizliği, örgüt üyeleri arasındaki saygıya dair kuralları ihlal eden, bozan amacı karşıdaki bireye zarar vermek olan nezaketten uzak, kaba ve saygısız davranışları ifade etmektedir (Andersson ve Pearson, 1999). Belirsiz ve dolaylı olarak düşük şiddette uygulanmasından dolayı işyeri nezaketsizliği, örgüt üyelerince kolayca fark edilememektedir; ancak uzun vadede örgütte iş tatmininin düşmesine ve işten ayrılmalara yol açabilmektedir (Işıkyay ve Taslak, 2021).

1.4. Yengeç Sepeti Sendromu Kavramı ile İlgili Araştırmalar

Alan yazın incelendiğinde yengeç sepeti sendromu ile ilgili olarak çok sayıda çalışmanın bulunmadığı gözlemlenmiştir. Bu çalışmalardan bazıları ise şunlardır;

Perry (2009) tarafından gerçekleştirilen çalışmada kötü hayat koşulları sonucu ortaya çıkan yengeç sepeti sendromu farklı olgularla birlikte incelenmiştir.

Soubhari ve Kumar (2014) akademisyenler üzerinde yürüttükleri araştırmalarında iş ortamında yaşadıkları stres ile yengeç sepeti sendromu arasındaki ilişkileri incelemişlerdir. Yengeç sepeti sendromu sonucunda iş ortamında ortaya çıkan kıskançlık, kural ihlali ve açgözlülük gibi duygulardan diğer çalışanların rahatsız olabileceğini vurgulamaktadır.

Spacey (2015) üniversite öğrencileri ile yürüttüğü çalışmada yengeç sepeti sendromu ve zorbalığın öğrencilerin performansı üzerindeki etkisini ölçmüştür ve bu kavramların performansı etkilediği sonucuna ulaşmıştır.

Miller (2019) blog yazarları ve Afro-Amerikalı kişiler üzerinde iki nitel araştırma yürütmüş ve çalışmasında örgütte ortaya çıkan yengeç sepeti sendromunun örgütlerdeki varlığını ve örgütsel dinamiklerini incelemeyi amaçlamıştır. Çalışma sonucunda katılımcıların yengeç sepeti sendromu yüzünden öfke, stres ve hayal kırıklığı gibi negatif duygular yaşadıkları sonucuna ulaşılmıştır.

Aydın ve Oğuzhan (2019), sağlık çalışanlarının katılımı ile yürüttükleri nitel çalışmalarında yengeç sepeti sendromunun işe devam etmeme, tatminsizlik ve motivasyon üzerindeki etkilerinin olduğuna dair bulgular elde etmişlerdir.

Çavuş (2021) öğretmenler üzerinde yürüttüğü çalışmasında yengeç sepeti sendromu özelliği taşıyan katılımcıların özelliklerini, özel liselerde yengeç sepeti sendromunun daha fazla görüldüğü ve 11-15 yıl arası mesleki kıdeme sahip olan öğretmenlerin örgütte yengeç davranışlarına daha fazla maruz kaldığına dair sonuçlara ulaşmıştır.

Dedeoğlu (2021) çalışma yaşamında yengeç sepeti sendromunun ölçülebilmesi amacıyla ölçek geliştirmek için bir çalışma yürütmüşlerdir. Araştırmanın bulguları sonucunda oluşturulan ölçeğin sonraki çalışmalarda kullanılabilmesi için sonuca ulaşmıştır.

Ünalın (2023) çalışmasında İstanbul ilindeki ortaokullarda görev yapan öğretmenlerin yengeç sepeti sendromuna dair görüşlerini incelemiştir. Araştırmanın bulgularına göre öğretmenlerin yengeç sepeti sendromuna ilişkin algılarının orta düzeyde olduğu ve bu sendromun bireylerin demografik özelliklerine göre farklılaştığı gözlemlenmiştir.

SONUÇ

İnsanlar doğaları gereği çalışma ya da sosyal hayatlarında kendilerinin yaşamlarını başkalarının yaşamları ile kıyaslarlar. Bu kıyaslama duygusu kişilerin sırf başkaları başarılı olmasın diye davranışlar sergilemelerine yol açabilir. Bu noktada başkalarının başarılı olmasını istememe olarak ifade edilen yengeç sepeti sendromu ortaya çıkmaktadır. Yengeç sepeti sendromu bireysel bir davranış olarak değerlendirilse de aslında bütün örgütü ilgilendiren ve etkileyen bir olgudur. Örgütte oluşan yengeç sepeti sendromu çalışma barışını, takım çalışmasını bozmakta, stresi artırmakta; örgütün performans ve verimliliğini düşürmektedir.

Örgütlerde ortaya çıkan yengeç sepeti sendromunu azaltmak ya da ortadan kaldırmak için bireyler bu sendromu taşıyan bireylerden uzaklaşmalı, sosyal açıdan destek almalı, yengeç sepeti sendromu taşıyan kişilerle yüzleşmeli bu bireylere karşı mücadele etmelidirler (Pegues, 2018). Yengeç sepeti sendromunun örgüt ve birey için olumsuz etkilerinin ortadan kaldırılması içinse örgüt içinde açık ve net kurallar konulması, örgüt üyelerinin kariyerlerinde ilerleyebilmeleri için olanaklar sağlanması ve teşvik edilmesi, üyeler arasında doğru iletişim kanalları kurulması, örgüt içindeki saldırganlığın önlenmesi bu tip davranışlara örgütte müsamaha gösterilmemesi, örgütte iş birlikçi, saygının ve demokrasinin hâkim olduğu bir örgüt ikliminin oluşturulması gerekmektedir. Yapılacak olan benzer çalışmalarda farklı sektörlerde çalışanların yengeç sepeti sendromu algıları nitel bir çalışmayla ölçülebilir.

ÖZET

Teknolojinin hızlı gelişimiyle birlikte ortaya çıkan dijitalleşme süreci, nesnelerin interneti, blok zincir, büyük veri ve yapay zeka gibi teknolojilerle birlikte iş süreçlerinde ve sosyal yapıda köklü değişikliklere neden olmakta ve toplumun ihtiyaçlarına uyum sağlayacak şekilde bütüncül bir dönüşümü gerektirmektedir. Dijitalleşme süreciyle kullanıcı odaklı hizmet sunumu artırılarak kamu yönetiminin etkinleştirilmesi ve E-Devlet üzerine taşınan hizmetlerin kullanım ve maliyet etkinliğinin önemi vurgulanmaktadır. Bununla birlikte, toplumsal kullanım için katma değeri yüksek hizmetler sunulması, kullanıcı dostu arayüzlerin hazırlanması ve kurumsal bilgi sistemlerinin sürdürülebilir bir yapıya kavuşturulması önemli olmaktadır. E-Devlet uygulamasının hızlı gelişimi ve yaygınlaşması, hizmet kullanımını kolaylaştırırken; yerli ve milli yenilikçi teknolojilerin üretilmesi ve alt yapıların oluşturulması yeterli olmamaktadır. Bu nedenle, bilgi güvenliğinin kilit faktör olduğu E-Devlet sisteminde, verimli ve etkili güvenlik yönetim planının hazırlanması ve uygulanma aşamalarının değerlendirilmesi önem arz etmektedir. Çalışma kapsamında, bilgi güvenliğinin risk değerlendirmesinin etkin bir şekilde modellenmesi için hiyerarşik yapıya sahip indeks sistemi oluşturularak risk faktörleri belirlenmektedir. Belirlenen yapı kapsamında, bulanık karar verme tekniğiyle kurgulanan değerlendirme modeli ortaya konmakta ve risk değerlendirmesinde en yüksek öneme sahip ana kriterin uygulama ve veri güvenliği olduğu tespit edilmektedir.

Anahtar Kelimeler: Bilgi Güvenliği, Risk Değerlendirmesi, Bulanık Analitik Hiyerarşi Prosesi

Risk Analysis of E-Government Information Security in Digital Transformation Process

ABSTRACT

The digitalization process that emerged with the rapid development of technology, together with technologies such as the internet of things, blockchain, big data and artificial intelligence, causes radical changes in business processes and social structure and requires a holistic transformation to adapt to the needs of society. It emphasizes the importance of increasing the user-oriented service delivery with the digitalization process, enabling the public administration and the use and cost-effectiveness of the services carried over to the E-Government. In addition, it is important to provide services with high added value for social use, to prepare user-friendly interfaces and to ensure a sustainable structure of corporate information systems. While the rapid development and spread of the e-Government application facilitates the use of the service; it is not enough to produce domestic and national innovative technologies and to create infrastructures. Therefore, it is important to evaluate the preparation and implementation stages of an efficient and effective security management plan in the E-Government system where information security is the key factor. Within the scope of the study, risk factors are determined by creating an index system with a hierarchical structure in order to effectively model the risk assessment of information security. Within the scope of the determined structure, the evaluation model constructed with the fuzzy decision-making technique is revealed and it is determined that the main criteria with the highest importance in risk assessment are application and data security.

Keywords: Information Security, Risk Assessment, Fuzzy Analytical Hierarchy Process

GİRİŞ

Bilgi güvenliği hem bireylerin hem de kurumların bilgi varlıklarını korumak, yetkisiz erişim, veri sızıntısı ve diğer tehditlere karşı önlemler almak amacıyla uyguladığı bir dizi önlem ve politikalar bütünüdür. Bilgi güvenliği, özellikle kamu hizmetlerinin elektronik ortamda sunulduğu, vatandaşların, işletmelerin ve kamu kurumlarının bu hizmetlere hızla erişim sağladığı dijital e-devlet platformları için önem kazanmaktadır.

E-devlet sistemleri: devletin, tüm bürokratik, ekonomik ve hukuksal işlemlerini iletişim ağları üzerinden doğrudan yapabilmesini sağlayan; vatandaşların ise istedikleri hizmetlerden düşük maliyetle ve hızlı bir şekilde yararlandıkları elektronik bir yapıdır (Efendioğlu ve Sezgin, 2007). E-devlet sistemleri, vatandaşlara kolaylık, hızlı erişim ve zaman tasarrufu sağlarken, kamu kurumlarının da daha etkin ve verimli bir şekilde işlem yapmasını sağlamaktadır. Bununla birlikte, hassas bilgilere erişim sağlayan ve büyük miktarda veriyi işleyen yapılar olan e-devlet sistemleri için bilgi güvenliği önem arz etmektedir. Hassas bilgileri içeren e-devlet sistemleri, kişisel bilgiler, sağlık verileri, mali bilgiler ve diğer hassas bilgiler gibi birçok farklı türde veriyi içerdiğinden bu sistemlerin güvenliği, sadece bireylerin değil, aynı zamanda devletin itibarı ve toplumun güvenliği açısından da önem taşıdığından bilgi güvenliğinin, e-devlet sistemlerinde birden fazla düzeyde uygulanması gerekmektedir. E-devlet sistemlerinin tasarlanırken ve uygulanırken, güvenli şifreleme yöntemleri, güçlü yetkilendirme ve kimlik doğrulama mekanizmaları, güvenlik duvarları ve zararlı yazılımlara karşı koruma önlemleri gibi teknik tedbirler alınmalı ve bilgi güvenliği politikaları, eğitimler ve farkındalık programlarıyla da kullanıcıların güvenlik konusunda bilinçlendirilmeleri gerekmektedir. Bununla birlikte, e-devlet sistemlerinde kullanılan yazılımların güvenliğinde, güvenlik açığı, kötü niyetli kişilerin sistemlere sızması, veri hırsızlığı veya hizmet kesintisi gibi sorunlar görülebilmektedir. E-devlet bilgi güvenliği kapsamında: fiziksel güvenlik önlemleri, veri merkezlerinin güvenliğini sağlamak için kullanılırken, ağ güvenliği ise veri iletimi sırasında verilerin gizliliğini ve bütünlüğünü koruyarak yetkisiz erişimlerin önüne geçilmesi amacıyla kullanılmaktadır. Güvenlik açıklarını en aza indirmek için gerekli incelemeler yapılarak korunma noktasında önceliğe sahip yapılar belirlenmeli ve yazılımlar test edilerek mevcut güvenlik prosedürlerinin güncellenmesi önem arz etmektedir.

Çalışma kapsamında, güvenlik açığı esasına dayalı olarak, e-devlet bilgi sistemi güvenliğinin risk değerlendirmesinin yapılabilmesi için hiyerarşik yapıya sahip indeks sisteminin kurulması ve e-devlet bilgi güvenliği yönetim modelinin geliştirilmesi amaçlanmaktadır. E-devlet bilgi güvenliğinin risk değerlendirmesi ile ilgili çalışmaların neredeyse yok denecek kadar az olması dolayısıyla elde edilen bulgular neticesinde, dijital devletin gelişimi için e-devlet bilgi güvenliği risklerinin değerlendirmesindeki eksikliklerin giderilmesine kaynak ve katkı sağlanması amaçlanmaktadır. Bununla birlikte, çalışma kapsamında ortaya konan tüm riskler için iyileştirmelerin maliyet-etkinlik değerlendirmesinin yapılarak iyileştirmenin maliyeti ile tehdidin gerçekleşmesi durumunda oluşacak kayıpların kıyaslanması ile kamu kurumlarında stratejik planlamaya katkı sunularak rekabet edebilirlik ve verimlilik açısından kamu değerine uygun süreçlerin geliştirilmesine katkı sağlanması amaçlanmaktadır.

1. KAVRAMSAL ÇERÇEVE

E-devlet ile ilgili literatürdeki çalışmalarının sorularının temelinde genellikle; e-devlet ile ekonomik ve demokratik kalkınma arasındaki bağlantı, e-yönetişim için e-devlet çerçevelerinin belirlenmesi, e-devlet politikalarına ilişkin stratejiler ve uygulamalar, katılım/e-demokrasi, vatandaşın e-devlete güvenmeme gibi nedenler sorgulanmaktadır.

West (2004), çalışmasında, e-devletin içeriğini inceleyerek, vatandaşların hükümet hakkındaki görüşlerini, demokratik yanıt verebilirliğini ve hizmet etkinliğine olan güvenlerinin hangi doğrultuda etkilediğini incelemektedir. Shackleton ve Dawson (2007), e-devletin, mevcut bilgi ve hizmetlerin elektronik bir kopyası olmaktan daha fazlası olduğunu belirtmekte ve devlet politikaları hazırlarken daha fazla katılımını sağlayarak daha iyi hizmet sunmak amacıyla halka yeni ve geliştirilmiş hizmetler sunması için önemli olduğunu ifade etmektedir. Bertot vd. (2010), bilgi ve BİT'lerin özellikle e-devlet ve sosyal medyanın şeffaflıkla ilgili kültürel tutumlar üzerindeki potansiyel etkilerini araştırmaktadır. Nabafu ve Maiga (2012) çalışmasında, yerel e-devlet sistemlerinin vatandaşlar için kolay ve elektronik olarak kamusal hizmetlerle etkileşimde bulunmalarını sağladığını ifade etmektedir. Temur (2013) 2003-2010 yılları arasındaki dönemi incelediği çalışmasında Türkiye'nin özellikle e-devlet hizmeti aracılığıyla sağladığı hizmetlerin sayısını ve niteliğini arttırması gerektiğini önermektedir. Çetinkaya ve Çetinkaya (2017), çalışmasında, e-devlet uygulamalarının beklenen seviyeye ulaşmamasını; uzman eleman eksikliği, eğitim sorunu, kullanıcıların ve kurum çalışanlarının e-devlet konusundaki bilinç düzeyinin eksik olması, maliyet, teknoloji yetersizliği, ağ yetersizliği, portal yetersizliği, kamu kurumlarının web sayfasından sunulan bilgilerin güvenilirlik düzeyinin düşüklüğü gibi nedenlerle ifade etmektedir. Can ve Eke (2020), Türkiye'de e-devlet hizmetlerinden yararlanan vatandaşların e-devlet uygulamaları hakkındaki bilgi düzeylerinin ve uygulamalara yönelik memnuniyet düzeylerinin belirlenmesini amaçladıkları çalışmalarında, e-devlete dair vatandaşların bilgi düzeyleri arttıkça memnuniyet düzeylerinin de arttığını tespit etmektedir.

Yapılan incelemeler çerçevesinde, e-devlet bilgi güvenliğinin risk değerlendirmesinin etkin bir şekilde modellenmesi için hiyerarşik yapıya sahip indeks sisteminin kurularak risk faktörlerinin belirlenmesi ve risk değerlendirme modelinin ortaya konulması ön plana çıkmaktadır.

2. YÖNTEM

2.1. Bulanık Analitik Hiyerarşi Prosesi

AHP, karmaşık karar verme süreçlerinde farklı kriterlerin ve alternatiflerin değerlendirilmesini olanak sağlarken bulanık AHP ise, bu değerlendirmelerde belirsizliğin veya belirsizlik derecesi bulunan bilgilerin kullanılmasına olanak tanımaktadır. Saaty'nin teorisinin bir uzantısı olan ve üçgen bulanık sayıların kullanıldığı bulanık AHP yönteminde, klasik yöntemlerine göre karar verme sürecinde ağırlıkların daha iyi tanımlanmasını sağlamaktadır.

Chang (1992), ikili karşılaştırmanın sentetik kapsam değeri için üçgen bulanık sayılara dayalı ikili karşılaştırma ölçeğini işlemek için yeni bir yaklaşım sunmaktadır. Bu yöntemde ilk

adım, Bulanık AHP ölçeği aracılığıyla ikili karşılaştırma için üçgen bulanık sayılar kullanılmakta ve daha sonra sentetik kapsam değerleri kullanılarak öncelik ağırlıklarının elde edilmesi için bir kapsam analizi gerçekleştirilmektedir.

Üçgen bulanık sayılarda karar vericilere ait değerlendirmeler, M genellikle (l, m, u) olarak temsil edilmekte olup l alt sınır, m orta sınır ve u üst sınır olmak üzere üyelik fonksiyonu,

$$\mu_M(x) = \begin{cases} \frac{x}{m-l} - \frac{l}{m-l}, & x \in [l, m] \\ \frac{x}{m-u} - \frac{u}{m-u}, & x \in [m, u] \\ 0, & \text{Diğer} \end{cases} \quad (1)$$

denklemlerle açıklanmaktadır. Karar vericiler için belirsizlikleri ortadan kaldırmak amacıyla geliştirilmiş olan bulanık AHP ölçeği Tablo 1'de gösterilmektedir.

Tablo 1. Dilsel Değişkenler

Nitel Ölçek	Üçgen Bulanık Ölçek	Üçgen Bulanık Ölçek Karşıt Değeri
Eşit Önem	$\tilde{1}$	(1, 1, 1)
Orta Önemi	$\tilde{3}$	(1, 3, 5)
Güçlü Önemi	$\tilde{5}$	(3, 5, 7)
Çok Güçlü Önemi	$\tilde{7}$	(5, 7, 9)
Aşırı Derecede Önemli Olması	$\tilde{9}$	(7, 9, 9)
Ters Karşılaştırma İçin Karşılıklar		$(\frac{1}{u_i}, \frac{1}{m_i}, \frac{1}{l_i})$

Kaynak: Kabir & Hasin (2011a)

Üçgen bulanık sayı matrisi $A = \tilde{a}_{ij}$ 'nin $i, j = 1, 2, \dots, n$ olmak üzere karar verici değerlendirmeleri (l_{ij}, m_{ij}, u_{ij}) olmaktadır. A karşılaştırma matrisini oluşturduktan sonra, A matrisinin öncelik vektörü oluşturulmaktadır. A matrisindeki her satır için bulanık sentetik derece değeri \tilde{S}_i ,

$$\sum_{j=1}^m \tilde{a}_{ij} = (\sum_{j=1}^m l_{ij}, \sum_{j=1}^m m_{ij}, \sum_{j=1}^m u_{ij}), \quad \forall i = 1, 2, \dots, n,$$

ve

$$[\sum_{i=1}^n \sum_{j=1}^m \tilde{a}_{ij}]^{-1} = (\frac{1}{\sum_{i=1}^n \sum_{j=1}^m u_{ij}}, \frac{1}{\sum_{i=1}^n \sum_{j=1}^m m_{ij}}, \frac{1}{\sum_{i=1}^n \sum_{j=1}^m l_{ij}})$$

olmak üzere,

$$\tilde{S}_i = \sum_{j=1}^m \tilde{a}_{ij} \otimes [\sum_{i=1}^n \sum_{j=1}^m \tilde{a}_{ij}]^{-1} \quad (2)$$

şeklinde hesaplanmaktadır. Sentetik değer belirlendikten sonra elde edilen bulanık sayı/sentetik değerlerin diğerinden daha büyük olma olasılığının derecesi belirlenmektedir. $\tilde{a}_1 = (l_1, m_1, u_1)$

ve $\tilde{a}_2 = (l_2, m_2, u_2)$ iki üçgen bulanık sayı olmak üzere \tilde{a}_1 ve \tilde{a}_2 arasındaki olasılık derecesi, $V(\tilde{a}_2 \geq \tilde{a}_1)$,

$$V(\tilde{a}_2 \geq \tilde{a}_1) = \begin{cases} 1 & m_2 \geq m_1 \\ 0 & l_1 \geq u_2 \\ \frac{l_1 - u_2}{m_2 - u_2 + m_1 - l_1} & \text{Diğer} \end{cases} \quad (3)$$

elde edilmekte ve dışbükey bulanık sayı için olasılık derecesi:

$$V(\tilde{a}_2 \geq \tilde{a}_1) = hgt(\tilde{a}_1 \cap \tilde{a}_2) = \left(\frac{l_1 - u_2}{m_2 - u_2 + m_1 - l_1} \right) = d \quad (4)$$

şeklinde hesaplanmaktadır. Burada d ; \tilde{a}_1 ve \tilde{a}_2 arasındaki en yüksek kesişim noktasının ordinatıdır. hgt terimi, \tilde{a}_1 ve \tilde{a}_2 'nin kesişimindeki bulanık sayıların yüksekliğini göstermektedir ve Şekil 1 'de gösterilmektedir.

Şekil 1. $\tilde{a}_2 \geq \tilde{a}_1$ için Olasılık Derecesi

Son olarak, aşağıdakiler varsayılarak kriterler için ağırlık vektörünü ölçülmektedir;

$$d'(A_i) = \min V(\tilde{S}_i \geq \tilde{S}_j), j = 1, 2, \dots, n, j \neq i \quad (5)$$

burada $A_i (i = 1, 2, \dots, m)$, m karar alternatifidir ve n kriter sayısı olmak üzere ağırlık vektörü

$$W'(A_i) = (d'(A_1), d'(A_2), \dots, d'(A_m))^T, A_i (i = 1, 2, \dots, m), \quad (6)$$

elde edilmekte ve denklem normalleştirilerek W , bulanık olmayan sayı ve alternatiflerin düzenini temsil etmek üzere,

$$W(A_i) = (d(A_1), d(A_2), \dots, d(A_m))^T \quad (7)$$

ağırlık vektörleri hesaplanmaktadır. Her kriter için normalleştirilmiş ağırlığı, normalleştirilmiş ağırlık vektörlerinin toplamına bölerek n kriter sayısı olmak üzere kriterlerin önem dereceleri W_{c_j} ,

$$W_{c_j} = \frac{W(A_i)}{\sum_{i=1}^n W(A_i)}, j = 1, \dots, n \quad (8)$$

hesaplanmaktadır.

3. BULGULAR VE TARTIŞMA

E- devlet bilgi güvenliğine ilişkin ana kriter ve alt kriterler uzman görüşleri kapsamında belirlenerek hiyerarşik yapı oluşturulmakta ve önerilen yapıya dayalı kriter çiftleri karşılaştırılmaktadır. İndeks ağırlıklarını hesaplamak için öncelikle alt kriterlerin karşılaştırılması yapılarak bir yargı matrisi oluşturulmaktadır. Risk değerlendirmesi sürecinde kullanılacak olan ana kriterler ve alt kriterlerin belirlenmesinin ardından ağırlıklandırma aşamasına geçilmekte ve bu aşamada üçgensel bulanık sayılar kullanılarak ana kriterler ve alt kriterler karşılaştırılmaktadır. Ana kriter ağırlıklarının belirlenmesinin ardından alt kriter ağırlıklarının belirlenmesine geçilmektedir. Alt kriter bulanık ağırlıkları da ana kriter ağırlıklarının belirlenmesine benzer şekilde belirlenmektedir.

Ana kriterlere ve alt kriterlere ilişkin bulanık ağırlıklar kullanılarak alt kriterlere ait küresel bulanık önem değerleri hesaplanmaktadır. Tablo 1’de ana kriterlere ait durulaştırılmış kriter değerleri ve normalleştirme işlemi sonrası sıralamaları yer almaktadır.

Tablo 1. Ana Kriterlerin Durulaştırılmış Kriter Öncelikleri ve Sıralaması

Durulaştırılmış Kriterler				
	Toplam Bulanık			Durulaştırılmış
<i>Ağ ve Sistem Güvenliği Kriteri için Durulaştırma;</i>	0,0003311	0,0049134	0,0779340	0,01632
<i>Uygulama ve Veri Güvenliği Kriteri için Durulaştırma</i>	0,0706259	0,4974825	3,4914445	0,92533
<i>Taşınabilir Cihaz ve Ortam Güvenliği Kriteri için Durulaştırma;</i>	0,0706259	0,4974825	3,4914445	0,92533
<i>Nesnelerin İnterneti (IoT) Cihazların Güvenliği Kriteri için Durulaştırma;</i>	0,0000002	0,0000016	0,0000277	0,00001
<i>Fiziksel Mekanların Güvenliği Kriteri için Durulaştırma;</i>	0,0000054	0,0000553	0,0007793	0,00017
<i>Personel Güvenliği Kriteri için Durulaştırma;</i>	0,0000094	0,0000648	0,0006158	0,00015
			Toplam	1,87
Normalleştirilmiş Kriter Öncelikleri				Sıralama
<i>Ağ ve Sistem Güvenliği Kriteri</i>		0,008740		3
<i>Uygulama ve Veri Güvenliği Kriteri</i>		0,495544		1
<i>Taşınabilir Cihaz ve Ortam Güvenliği Kriteri</i>		0,495544		1
<i>Nesnelerin İnterneti (IoT) Cihazların Güvenliği</i>		0,000003		6
<i>Fiziksel Mekanların Güvenliği Kriteri</i>		0,000090		4
<i>Personel Güvenliği Kriteri</i>		0,000079		5

Tablo 1’e göre, "Uygulama ve Veri Güvenliği Kriteri" ile "Taşınabilir Cihaz ve Ortam Güvenliği Kriteri" aynı önem değerine sahiptir ve en yüksek önem değerine sahip olan kriterlerdir. "Ağ ve Sistem Güvenliği Kriteri" ise üçüncü sıradadır. Diğer kriterler arasında "Fiziksel Mekanların Güvenliği Kriteri" dördüncü sırada, "Personel Güvenliği Kriteri" beşinci sırada ve "Nesnelerin İnterneti (IoT) Cihazların Güvenliği" ise altıncı sırada yer almaktadır.

Bulanık matematiksel notasyonlar kullanılarak yapılan hesaplamalar sonucunda elde edilen alt kriterlere ait küresel bulanık önem değerlerine ve sıralamalarına Tablo 2’de yer verilmektedir

Tablo 2. Alt Faktörlerin Grup İçi Küresel Bulanık Ağırlıkları ve Sıralamaları

Tablo 2.'de; Ağ ve Sistem Güvenliği kriterinde yer alan en önemli kriter “Kimlik Doğrulama ve Erişim Yönetimi” ; Uygulama ve Veri Güvenliği kriterinde yer alan en önemli kriter “Güvenli Kurulum ve Yapılandırma”; Taşınabilir Cihaz ve Ortam Güvenliği kriterinde yüksek öneme sahip kriter “Akıllı Telefon ve Tablet Güvenliği”; Nesnelerin İnterneti (Iot) Cihazların Güvenliği kriterindeki en önemli kriter ise “Diğer Güvenlik Tedbirleri”; Fiziksel Mekanların Güvenliği kriterinde en yüksek öneme sahip kriter “Sistem Odası/Veri Merkezine Yönelik Güvenlik Tedbirleri” ve son olarak Personel Güvenliği kriterine ait en yüksek öneme sahip kriterin ise “Eğitim ve Farkındalık Faaliyetleri” olduğu görülmektedir. Elde edilen bu sıralama, her kriterin belirli bir alandaki önemini yansıtmakta olup ilgili kurumun spesifik gereksinimleri farklı bir öncelik sıralamasına neden olabilmektedir.

SONUÇ

Bilgi güvenliği politikalarının büyük önem taşıdığı e-devlet sistemleri, vatandaşların ve işletmelerin güvenini sağlamak ve devletin kamu hizmetlerini etkili bir şekilde sunmasını desteklemek amacıyla güvenli ve toplum için güvenilir bir şekilde çalışması önem arz etmektedir. E-devlet sistemlerindeki güvenlik politikaları ile veri erişimi ve kullanımına ilişkin kurallar belirlenmekte, kullanıcıların güvenli parola kullanımı teşvik edilmekte ve olaylara müdahale ve yanıt süreçleri belirlenmektedir. Bununla birlikte kullanıcıların bilinçlenmesi için eğitim ve farkındalık programlarının düzenlenmesi de bilgi güvenliği için önemli olmaktadır. E-devlet sistemlerinin bilgi güvenliği yüksek öneme sahip olduğundan yeterli önlemler alınmadığında, bu sistemler hassas bilgilerin tehlikeye girmesine ve kötü niyetli saldırılara maruz kalmasına neden olabilmektedir. Bu nedenle, e-devlet sistemlerinin güvenliğinin sürekli olarak gözden geçirilmesi ve güncel tehditlere karşı korunması gerekmektedir.

Çalışma kapsamında: Uygulama ve Veri Güvenliği için güvenli yazılım geliştirme süreçleri takip edilmeli, veri şifreleme, yetkilendirme ve oturum yönetimi gibi tedbirler; Taşınabilir cihaz ve ortam güvenliği için güçlü parola politikaları, veri şifreleme, uzaktan silme ve uzaktan izleme gibi güvenlik önlemleri uygulanması gibi tedbirler önemli olmaktadır. Her organizasyonun güvenlik gereksinimleri farklı olduğundan elde edilen veriler genel bir rehberlik sağlamakta olup ilgili kurumların kendi önceliklerini ve ihtiyaçlarını dikkate almaları yapılan risk değerlendirme kapsamında önemli olmaktadır.

ÖZET

Hızlı teknolojik yenilikler ile birlikte dijitalleşen çağda; nesnelerin interneti, bulut bilişim, blok zinciri, büyük veri ve yapay zekâ gibi birçok teknolojiyi barındıran dönüşüm hem iş süreçlerinde hem de sosyal yapı üstünde köklü değişiklikleri neden olmaktadır. Devletlerin kamu politikalarının dijitalleşme odaklı olarak geliştirmeleri, özellikle pandemi döneminin de etkisiyle, dijital vatandaşlık kavramının önemini arttırmaktadır. Dijital vatandaşlığın önem kazanması ile dijital vatandaşlık ile ilgili pek çok araştırma yapılmakla birlikte, araştırmaların dijital vatandaşlık eğitiminin kurgulanma biçiminin belirlenmesi ile ilgili olduğu tespit edilmektedir. Diğer taraftan, dijital vatandaşlığın alanının genişlemesi ile yeni ve farklı ihtiyaçlar ortaya çıkmaktadır. “Dijital yaratıcılık, dijital girişimcilik, dijital empati ve dijital saldırganlık“ faktörlerinin dijital vatandaşlık araştırmaları içinde incelenmesi ve dijital farkındalığın dijital vatandaşlık ile bağının ortaya konulması gerekliliğinden ötürü, dijital vatandaşlık kavramının faktörleri dijital vatandaşlığın anlaşılması ve gelişimi için yeterli görülmemektedir. Bu çalışmada; dijital vatandaşlık yönetim modeli ortaya konulması için yeni bir dijital vatandaşlık ölçeğinin oluşturulması amaçlanmaktadır. Bu amaç doğrultusunda; dijital okuryazarlık, dijital hukuk, dijital haklar ve sorumluluk, dijital iletişim, dijital güvenlik, dijital ticaret, dijital katılım, dijital etik, dijital sağlık, dijital yaratıcılık, dijital girişimcilik, dijital empati ve dijital saldırganlık faktörlerinin dijital vatandaşlık boyutuna odaklanılmaktadır.

Digitization and Digital Citizenship

ABSTRACT

The transformation through rapid technological innovations, which includes various technologies such as internet of things, cloud computing, blockchain, big data and artificial intelligence, causes profound changes in both business processes and social structure in the digitalizing era. The development of public policies by governments with a focus on digitalization have increased the importance of the concept of digital citizenship, especially with the effect of the pandemic period. Since the concept of digital citizenship has gained prominence, a great amount of studies were implemented on this subject. When these studies were analyzed, it was detected that the researches were mostly related to the determination of the way of constructing digital citizenship education. On the other hand, with the expansion of the field of digital citizenship, new and different needs have emerged. The factors of the concept of digital citizenship are not considered sufficient for the understanding and development of digital citizenship, due to the necessity of examining the factors of "digital creativity, digital entrepreneurship, digital empathy and digital aggression" within digital citizenship studies and revealing the link between digital awareness and digital citizenship. In accordance with this purpose; digital literacy, digital law, digital rights and responsibilities, digital communication, digital security, digital commerce, digital participation, digital ethics, digital health, digital creativity, digital entrepreneurship, digital empathy and digital aggression factors are focused on within the framework of digital citizenship aspect

Anahtar Kelimeler: Digital Citizenship, Digitization, Scale Development

GİRİŞ

İnternet aracılığıyla söylenen/yapılan eylemler insan hayatına benzeri görülmemiş şekillerde doğrudan etkisi bulunmakta ve bu durum, dijital eşitsizliklere rağmen neredeyse tüm dünyada yaşanmaktadır. Hem şirketlerin hem de devletlerin, İnternet aracılığıyla söylenen/yapılan eylemler hakkında kar veya güvenlik için veri toplamaya, bir araya getirmeye ve depolamaya büyük yatırımlar yapması, bağlantılı dijital yaşamlarımıza verilen önemin pratikte en güçlü kanıtlar arasında yer almaktadır. İnternet aracılığıyla bir şeyler söylemek ve yapmak, tehlikeli olasılıklarla birlikte günlük bir deneyim haline gelmektedir. İnternete bağlı dijital yaşamın sosyal/ekonomik/kültürel sonuçlarına ilişkin dünya çapındaki tartışma, yaklaşık yirmi beş yıldır tüm hızıyla devam etmektedir. Dijital enstrümanların sivil katılım üzerindeki etkisi bulunmaktadır. Sürekli genişleyen bilgi ağlarına yayılma, yeni gruplarla bağlantı kurma, bir zamanlar günlük hayatın kapsamı dışında kalan çevrimiçi (ve çevrimdışı) yurttaşlık faaliyetlerine katılma becerileri, anlayışlar ve paylaşılan vatandaşlık tanımları için yeni olasılıkların araştırılmasını gerektirmektedir. Dijital enstrümanları sınırlı düzeyde erişim sağlayan kullanıcılara da yaptıkları eylem ve eylemler bütünüyle yer temelli bağlamların talep ve beklentilerini dengeleme yeteneğine sahip olmaktadır. İnternet ortamında elde edilen yeni yetenekler, bazılarının, gelişen bilgi çağının farklı bakış açıları ve dağıtılmış sorumluluklara sahip yeni bir vatandaş türü getirdiğini öne sürmesine yol açmaktadır (Hermes, 2006). Belirli bir yerin taleplerine ve kısıtlamalarına daha az bağlı olan bakış açıları -belki de küresel olarak daha bilinçli, daha eleştirel, acil olana meydan okumaya daha istekli bir vatandaş-dijital vatandaşlık kavramını ön plana çıkarmaktadır (Bennett vd., 2009). Bilgi ve İletişim Teknolojisi (BİT) insanları, ve içinde bulunduğumuz çağı tamamen değiştirmektedir. Bu değişimler ile bilgi arama, paylaşma, iletişim, erişim, hukuk, tüketim ve eğlence için dijital teknolojiler etkin bir şekilde kullanılmaktadır. Bilgi ve iletişim teknolojileri ile değişen çağ, bireylerin özelliklerinin ve buna bağlı olarak da toplumun özelliklerinin değiş tokuşuna yol açmaktadır. Dijital teknolojiler ile birlikte vatandaşlık kavramı genişlemektedir. Günlük hayatta dijital araçların kullanımının her geçen gün artmasıyla; bireyler gelişen bilgi ve iletişim teknolojilerini (BİT); bilgi, iletişim, hukuk, sağlık, eğitim, güvenlik, eğlence ve kamu hizmeti alımı için etkin bir şekilde kullanılmaktadır. Dijital vatandaş, teknoloji ile ilgili insani, kültürel ve toplumsal sorunları anlamak, yasal ve etik davranışlar uygulamak; bilgi ve teknolojinin güvenli, yasal ve sorumlu kullanımını savunmak ve uygulamak; iş birliğini, öğrenmeyi ve üretkenliği destekleyen teknolojiyi kullanmaya karşı olumlu bir tutum sergilemek; yaşam boyu öğrenme için kişisel sorumluluk göstermek ve dijital vatandaşlık için liderlik sergilemektir (Ribble ve Bailey, 2007). Çalışma kapsamında sunulan Dijital Vatandaşlık ve bileşenlerinin, İnternet davranışının ortaya çıkan psikolojik ve sosyolojik teorilerine dayalı olarak, çevrimiçi yaşarken bireyin daha karmaşık, etkileşimli bir portresini sunabilen bir kavramsal çerçeve geliştirilme amaçlanmaktadır. Çalışmanın ilk bölümünde, dijital vatandaşlık ve bileşenlerine ve konu ilgili literatürel değinilirken, sonraki bölümde, çalışma sonucunda elde edilen önerilere yer verilmektedir.

DİJİTAL VATANDAŞLIK ve TANIMI

Dijital vatandaşlık kendi geçmişi olan eski bir gelenekten ortaya çıkmaktadır. Vatandaşlık geleneksel olarak insanlar ve ulus devlet arasındaki ilişki olarak kavramsallaştırılmaktadır. Sorunlardan kitle iletişim araçları aracılığıyla haberdar olan ve seçim süreçlerine katılmakla yükümlü olan “hayırlı vatandaş” benzetmesine dayanmaktadır. Bireysel çıkarlar, siyasi partilere ve çıkar gruplarına üyelik yoluyla ifade edilmektedir. İnternetin yükselişiyle birlikte sivil, sosyal ve politik yaşama katılma fırsatları artmaktadır. Bu

nedenle dijital vatandaşlık basitçe “*çevrimiçi topluma katılma hakkı*” olarak tanımlanabilmektedir. Dijital vatandaşlığa ilk yaklaşımlar en çok dijital uçurumu kapatmakla ilgilidir: erişim, içerme ve iletişimsel haklar ve özgürlükler bir önceliktir. Bununla birlikte, sosyal medya platformları yaygınlaştıkça, Facebook ve Twitter sivil katılımın araçları haline geldikçe erişim sorununun önemi azalmaktadır. Dijital bağlamda, vatandaşlık neredeyse bir "verili"dir, ancak haber akışlarının şifresini çözmek veya dijital kimlikler oluşturmak gibi bir dizi görev veya eylem içermektedir. Isin ve Ruppert (2020), dönüm noktası niteliğindeki kitabı *Being Digital Citizens*'da dijital vatandaşların dijital eylemler yoluyla var olduğunu savunmaktadır. Bu basit gibi görünse de, dijital eylemler birden fazla yerel ve küresel bilgi akışını yorumlamayı ve verileştirme çağında bilinmeyen sonuçları tahmin etmeyi içermektedir. Ontolojik olarak vatandaşlık, topluluk, platform veya ulus devlet gibi bireyin ötesindeki bir şeyle olan ilişkimizi işaret etmektedir. Bu şekilde, dijital vatandaşlık sadece yurttaşlık sorumlulukları veya öz sorumlulukla ilgili değil, daha çok dijitalin yeni katılım biçimlerini nasıl kolaylaştırdığıyla ilgilidir. Dijital, farklı kolektivite türlerini açarken, dijital bağlamda bile katılım, marjinalleştirilmiş insanlar için hala bir mücadeledir. Bununla birlikte, dijital platformlar, demokratik siyaset üzerinde önemli bir etkiye sahip sivil katılım biçimlerini kolaylaştırabilir. Pek çok açıdan, bireylerin dijital vatandaşlar olarak nasıl inşa edildiğini teorileştirmek, değişen sivil davranışları ve toplumları yeniden tanımlamaya odaklanmıştır. Dijital, siyasi eylem ve katılım için yeni alanlar açmıştır. Yine de, kurumsallaşmış sosyal medya platformlarının dijital eylemler üzerindeki etkisi ve bu eylemlerin vatandaşlık üzerindeki etkileri karmaşıktır. Dijital altyapıların opaklığı ve algoritmik karar vermeye artan güven, bilgili, ilgili ve aktif bir vatandaş olmanın ne anlama geldiği konusunda kritik zorluklar ortaya çıkarmaktadır. Dijital vatandaşlar, demokratik ifadeleri için ulus devlete daha az güvenmektedir (Pangrazio ve Sefton-Green, 2021).

Günlük yaşamda büyük verinin hızla yaygınlaşmasıyla birlikte ortaya çıkan kritik sorular arasında, büyük miktarlarda kişisel verinin toplanması ve işlenmesi, yeni neoliberal yönetim ve gözetim biçimlerinin yükselişi arasındaki karmaşık ilişkinin anlaşılması yer almaktadır. Büyük veri kavramı ilk olarak, süper bilgisayarları ve dolayısıyla 'büyük' veriyi gerektiren büyük veri kümelerindeki bilgi konsantrasyonunu anlamlandırmaya başlamak için tanıtılırken, son dönemlerde ilgili terim kullanılmaktadır. Yapay zekâ ve biyoteknoloji teknolojilerindeki önemli gelişmelerle birleştiğinde metrik veri toplama, veri ve vatandaşlık arasındaki ilişki hakkında kritik soruları tetiklemektedir. Bu durum, veri teknolojilerinin vatandaşların gözetlendiği ve yönetildiği araçlar olduğunun giderek daha belirgin hale gelmesi nedeniyle ortaya çıkmaktadır. Veriye dayalı yaşamda vatandaşlar sürekli olarak uymak ve kişisel verilerini sağlamak zorunda kalmaktadır. Bazen bu zorunlu uyum fiziksel yollarla gerçekleşmektedir (örn. havaalanlarındaki yüz tanıma teknolojileri). Diğer zamanlarda, basitçe, otomatik karar vermeye dayanan veriye dayalı ortamlarda hayatlarının giderek daha fazla ortaya çıkması nedeniyle olmaktadır. Yurttaş katılımı için 'davetli alanlar'a ilişkin değerlendirmeler, sıklıkla, kapsayıcılık, müzakere ve halk kontrolü (bazen başka bir deyişle kullanılmaktadır) olmak üzere üç boyuta odaklanmaktadır. İlk boyut, vatandaşların katılmaya uygun olup olmadığı ve bu tür alanların daha önce haklarından mahrum bırakılmış vatandaş gruplarının tercihlerini ve görüşlerini harekete geçirip geçirmemesi olarak ifade edilmektedir. İkinci boyut, müzakeredir, katılımcıların bu alanlarda kendi aralarında nasıl tartışıp karar verdikleri, kendi iradelerini veya yargılarını oluşturup oluşturamayacakları veya yalnızca hükümet yetkilileri tarafından önceden tanımlanmış konularda tercihlerini ifade etmeye davet edilip edilmedikleri ile ilgilidir. Üçüncü boyut, halk kontrolüdür, bu alanlardaki katılımcıların hükümet tarafından alınan kararları etkilemesine ne ölçüde izin verildiği ve bu kararların

vatandaşların yaşamları üzerindeki önemi ile ilgilidir. Davet edilen alanların dijitalleşmesi kapsayıcılık boyutunu çeşitli şekillerde etkileyebilmektedir. Dijital katılımın öncüsü olan e-katılım teknolojileri, daha önce seçimler arasında bağlantısı kesilmiş vatandaşları, örneğin gençler veya küçük çocukları olan ebeveynleri harekete geçirebilmekte ve hükümetler tarafından çok sayıda vatandaşa ulaşmak için kullanılabilir. Bunun yanı sıra, geleneksel kanallardan daha ucuzdur ve daha az zaman gerektirmektedir. Cep telefonlarının ve internet bağlantısının yaygın olarak dağıtıldığı gelişmiş ülkelerdeki vatandaşlar için dijital katılım önünde çok az maddi/fiziki engel bulunmaktadır. Bununla birlikte çoğu araştırma, dijital katılım süreçlerinin genellikle dijitalde analog süreçlere göre çok daha genç olduğunu göstermektedir. Gelişmiş ülkelerde bu durum, bilgisayarlara veya internete eşit olmayan erişimin bir yansıması değil, insanları çevrimiçi süreçlere ilgi duymaya veya rahat etmeye iten dijital becerilerin eşit olmayan dağılımının bir yansıması olarak ortaya çıkmaktadır. E-katılım teknolojilerinin paradoksal bir etkisi, daha fazla vatandaşı harekete geçirebilmeleri, ancak aynı zamanda mevcut siyasi eşitsizlikleri pekiştirebilmesi olarak belirtilmektedir. Bu sorunların çözülmesi için, dijital ve analog katılım kanallarının birleştirilmesi gerekmektedir. Bu durum, bazen hem dezavantajlı hem de bağlantısız grupları katılımcı süreçlerde harekete geçirmenin faydasını göstermektedir. Çevrimiçi platformlardaki tartışmalar, müzakereci demokrasi teorisi tarafından belirlenen tüm kriterleri karşılamamasına rağmen, vatandaşlar arasındaki müzakereleri siyasi kurumlara bağlamada rol oynayabilmektedir (Legard ve Hovik, 2022).

Dijital iletişim, elektronik bilgi alışverişini ifade etmektedir. Bilginin BİT'ler aracılığı ile hızlı ve büyük kitlelere ulaşması devlet-vatandaş iletişiminin dijital ortama aktarılmasına ve sürdürülmesine neden olmaktadır. Dijital iletişim araçları; kısa mesaj gönderme, e-posta kullanma, anlık mesajlaşma, çevrimiçi oyunda yazılı sohbet, video sohbet, blog yazan ve yorum yapan, twitter ve diğer sosyal medya araçlarını kullanımı olarak sınıflandırılmaktadır. Sakallı ve Bahadıroğlu (2018), dijital iletişimde duygu ikonlarının da yerini aldığını ifade etmektedir. Budak (2022), dijital iletişimin ülke imajını şekillendirdiğini belirtmektedir. Örnek olarak, Belediye başkanına ya da belediyeye sosyal medya üzerinden mesaj atarak mahalledeki yolun bozuk olduğunu ve yapılmasını istemek ya da bir kamu görevlisinin sosyal medya üzerinden bazı olaylar ve durumlar ile ilgili görüş bildirmesi ve vatandaşların bu yoruma cevap verebilmesi söylenebilmektedir. Dijital okuryazarlık, sürekli öğrenmeyi gerekli kılan teknoloji ve teknoloji kullanımı hakkında öğretme ve öğrenme süreci olarak ifade edilmektedir. Teknoloji öğrenimi hiç bitmeyen bir süreçtir. Dijital okuryazarlık dijital vatandaşlık içinde belirtilen dokuz faktörün hepsi ile bağlantılıdır. Dijital okuryazarlık zayıf kalır ise dijital vatandaşlık gelişimi istenildiği doğrultuda gerçekleşmemektedir.

Dijital teknolojilerin yükselişi, güvenlik yönetişimini dönüştürmektedir. Dijital yeterlilik, bilgi toplumundaki çok sayıda sorunu ve zorluğu hafifletmeye yardımcı olan bilişsel, tutumsal ve teknik beceriler biçimini almaktadır. Dinamik ve çapraz, dijital yeterlilik, dijital bir vatandaşlık geliştirmede kilit bir yeterlilik ve yaşam boyu öğrenme süreçlerinde çok önemli bir unsur olarak kabul edilmektedir. Dijital yeterlilik, teknolojileri iş, boş zaman ve iletişim için eleştirel ve güvenli bir şekilde kullanma yeteneği olarak ifade edilmektedir. Bilgilerin kurtarılması, değerlendirilmesi, saklanması, üretilmesi, sunulması ve değiş tokuş edilmesinin yanı sıra internet aracılığıyla iletişim kurmak ve iş birliği ağlarına katılmak için bunların kullanılmasını içermektedir. Dijital yeterlilik, 21. yüzyılda öğrenme süreçleri ve katılım için temel olan teknolojinin eleştirel, sorumlu, yaratıcı kullanımını teşvik eden teknoloji, bilgi, multimedya ve iletişim ile ilgili konuları içermektedir. Çeşitli raporlar, çalışmalar ve stratejik planlar, güvenlik ve sorumlu internet kullanımı ile ilgili içeriklerin dahil edilmesi gibi eylemler

yoluyla, özellikle savunmasız gruplarda güvenlikle ilgili sorunların etkilerini azaltmak veya önlemek için bir güven ortamı oluşturmaya yardımcı olmaya çalışmaktadır (Gallego-Arrufat vd., 2019). Dijital güvenlik, güvenliği garanti altına almak için elektronik önlemler alınmasıdır. Dijital etiğinin ana konuları arasında fikri mülkiyet, mahremiyet, güvenlik, aşırı bilgi yüklemesi, dijital bölünme, cinsiyet ayrımcılığı ve sansür yer almaktadır. Bunlar yalnızca evrensel haklar ve ilkeler temelinde değil, aynı zamanda etik inceleme nesnelere olarak kabul edilmektedir. Ayrıca kültürel farklılıklar ve farklı türde teorik temellere ve pratik seçeneklere yol açan tarihsel ve coğrafi tekillikler açısından bu etik araştırma alanı ortaya çıkmaktadır. Dijital etiğin bir diğer önemli konusu, sözde dijital uçurumun sadece internete teknik erişim sorunu olarak değil, insanların kültürel sömürü, homojenleşme tehlikelerinden kaçınarak yeni etkileşimli dijital medyayı kullanarak hayatlarını nasıl daha iyi yönetebilecekleri sorunu olarak düşünülmesi gerektiği olarak ortaya çıkmaktadır. Dijital etik, bilgi ve veriler (üretim, kayıt, düzenleme, işleme, yayma, paylaşma ve kullanım dahil), algoritmalar (AI, yapay araçlar dahil) ile ilgili ahlaki sorunları inceleyen ve değerlendiren etiğin dalı olarak anlaşılmaktadır. Dijital etik, elektronik davranış veya prosedür standartlarını ifade etmektedir. Etik kavramının gelişimi toplum, kültür, yaşam tarzı ve kişilik özelliklerine göre farklılık göstermektedir. Genel kabul gören etik tanımları olsa da etik kavramı herkes için aynı şeyi ifade etmemektedir. Etik kavramının bu doğası etik davranış ilkelerinin tam olarak belirlenmesinde zorluğa neden olmaktadır. Etik kavramının davranış, düşünce ve muhakeme yeteneği olması dijital ortamda tanımlanmasını ve uygulanmasını zorlaştırmaktadır. Bayrak (2017), dijital etik kavramının çeşitli etkenlere göre değiştiğini fakat kavramı belirlemede çeşitli gözlem metodlarının belirleyici olduğunu ifade etmektedir. Çubukçu ve Bayzan (2013), dijital araçları etik kullanmanın doğru kullanmak kadar önemli olduğunu, başkalarının hak ve özgürlüklerine saygılı olunmasının dijital ortamda da önemli olduğunu, kışkırtıcı ve saldırgan yaklaşımlardan kaçınılması gerektiğini ifade etmektedir. Özcan (2021), dijital etiğin insan hayatının günlük yaşamının bir parçası haline geldiğini ve dijital ortamda iyi niyetin devamlılığı için dikkat edilmesi gereken davranış, düşünce biçimleri ve insani değerleri geliştirerek ilerletecek bir sistem olduğunu belirtmektedir.

Dijital haklar ve sorumluluklar, dijital dünyada herkese tanınan özgürlükleri ifade etmektedir. Dijital etik kavramı ile doğrudan ilişkili olan bu faktör kişilerin dijital ortamda birbirlerinin haklarına saygılı olarak sorumluluk sahibi olmaları ile gerçekleşebilmektedir. Günümüz teknolojileri ile bilgi, fotoğraf, video vb. kişisel verilerimiz dijital ortamda yer almakta, kötü niyetle ele geçirilerek kullanılabilir. Bunu engellemenin yollarından biri dijital ortamda hak ve sorumlulukların farkında olmaktır. Dijital haklar, bireylerin bilgisayar ve cep telefonu gibi cihazlarda, sanal ortamlarda ve topluluklarda dijital içeriğe erişmesine, bunları kullanmasına, oluşturmasına ve yayınlamasına olanak sağlayan insani ve yasal hakları belirtmektedir. Dijital vatandaşlık ve dijital okuryazarlıkla karşılaştırıldığında, dijital haklar, yazılım mimarileri ve dijital platformların temelini oluşturan iş modelleri dahil olmak üzere bağlamı keskin bir şekilde ortaya çıkarmaktadır. Dijital haklara odaklanmak, politika yapıcılar, bireylerin çevrimiçi ve çevrimdışı aynı haklara sahip olmasını sağlamak için teknolojik ve yasal çerçeveler geliştirmeye teşvik etmektedir. Hak taleplerinin konusu birey olmasına rağmen, dijital haklar dijital okuryazarlıklardan ve dijital vatandaşlıktan farklıdır, çünkü bireyin eylemini desteklemek için kurum ve kuruluşlara güçlü bir güven bulunmaktadır (Pangrazio ve Sefton-Green, 2021). Görmez (2016), dijital hak ve sorumlulukların dijital ortamdaki özgürlükler olduğunu ifade etmektedir. Dijital haklar yönetimi (DHY) terimi, genel olarak, dijital içeriğin uygun şekilde kullanılmasına rehberlik eden bir dizi politika, teknik ve aracı ifade etmektedir. İçerik oluşturucu, esas olarak içeriğe giren temel veriler/bilgiler ile

ilgilenmektedir. Bu durum, belirli formatlara bağlı kalma, farklı medya türlerinin uygun entegrasyonu, kalite geliştirme, olası özel efektlerin eklenmesi ve meta verilerin (bilgilerin) türetilmesi ve eklenmesi açısından daha fazla işlenmesi gereken ham içerik olarak görülebilmektedir.

Sağlık sistemleri, hizmetlerine olan talebin arttığı bir dönemde benzeri görülmemiş finansal kısıtlamalarla karşı karşıya kalmaktadır. Bu kısıtlamaların büyüklüğü, mevcut bakım modellerini geç hastalık yönetiminden önleyici kişiselleştirilmiş sağlığa kadar cesur bir şekilde değiştirmeyi son derece gerekli kılmakta ve her bir hasta ve hizmet kullanıcılarına bakım ve desteğin ne zaman, nerede ve nasıl sağlandığına dair büyük bir değişiklik içermektedir. Aslında, en yaygın hastalıkların kısmen insanların günlük yaşamlarında yaptıkları yaşam tarzı seçimlerinden kaynaklandığı veya ağırlaştırdığı genel olarak kabul edilmektedir. Bilgi ve iletişim teknolojisi, yeni sağlık çağının mihenk taşı olmaya çağrılmakta ve insanlara zamanında ve her yerde kişiselleştirilmiş bilgi, destek ve kontrol sağlayarak kendi sağlık ve zindeliklerinin sorumluluğunu üstlenmeleri için onları güçlendirmede çok önemli bir rol oynamaktadır. Dijital sağlık, dijital teknoloji dünyasında fiziksel ve psikolojik iyilik hali olarak ifade edilmektedir. Dijital ortamda bireylerin ifade ettikleri düşünceler ve paylaşımları sonucunda ortaya çıkacak etkiler bireyin sağlığını direk olarak etkileyebilmektedir. Bunun farkında olunması hak ve sorumlulukların bilinmesi ile mümkün olabilmekte. Dijital sağlığın korunması için dijital etik ve dijital hukuk kavramlarının gelişiminin sağlanması gerekmektedir. Dijital Ticaret, kalıcı ilişkiler kurmak, anlamlı değiş tokuşlar oluşturmak ve tekrar iş üretmek için sosyal medya ve mobil dahil olmak üzere çeşitli dijital kanallar aracılığıyla müşterilerle etkileşimin tam bant genişliğini içeren elektronik ticaretin Web 2.0 sürümü olarak ortaya çıkmaktadır. İnternet teknolojisine dayalı yeni iş modellerinin ilk kez ortaya çıktığı, ancak nihayetinde sürdürülemez bir pazar ortamı yarattığı 2000'lerin başında dot.com patlamasıyla doruğa ulaşan web tabanlı ticarete bir hızlanma yaşanmaktadır. Yeni teknolojiler, şirketlerin müşterileriyle yeni bir düzeyde ilişki kurma ve bağlantı kurma yeteneği sağlamaktadır (Riemer vd., 2013). Dijital ticaret, eşya alım satımının dijital ortamda yapılması olarak belirtilmektedir. Dijital ortamda ticaret hayatımıza e-ticaret olarak girmiştir. E-Ticaretin gelişimi dijital ortamda ürün/hizmet alma ya da satma yeterliliğini beraberinde getirmektedir. Dijital ticareti alım/satım ve tüketici hakları çerçevesinde değerlendirmek ve geliştirmek dijital hukukun gelişimine katkı sağlamaktadır.

Farklı tanımlamaları yapılan dijital girişimcilik kavramı, BİT kaynaklı fırsat arayışı, tüm ticaret faaliyetlerinin dijital ortamda yapılması, tüm iş faaliyetlerinin İnternet kullanılarak yapılması, ticaretin dijital dönüşümü veya dijital teknolojiler ile girişimciliğin bir araya gelmesi olarak tanımlanabilmektedir. Yaygın dijitalleşmenin, dijital teknolojinin mümkün kıldığı cihaz, ağ, hizmet ve içerik katmanlarını birleştirerek ürünlerin modüler mimarisini genişleten yeni bir fenomen olan katmanlı modüler mimariye yol açmaktadır. Bu yeni senaryo, işletmelerin gelecekteki yeniliklere nasıl hazırlanacağı konusunda değişiklikleri ortaya çıkarmaktadır. Bu nedenle, dijital bilginin üretimi, değişimi ve tüketimi, dijital yeniliği, yeni girişim yaratmayı ve süreçleri etkilemektedir. Nambisan (2017), yaygın dijitalleşme yarattığını ve ilgili yeni teorilerin bileşenlerinin ne olması gerektiğini ele almaktadır. Göz önünde bulundurulmuş araştırma yolları arasında, girişimcilik sonuçları ve süreçleri üzerindeki etki de yer almaktadır. Strateji literatürüne dayanan Nambisan (2017), araştırmanın, disiplinler arası fikirleri kucaklayarak ve dijital teknolojilerin organizasyonların yanı sıra sosyal ilişkileri dönüştürmedeki rolünü kabul ederek çoklu ve çapraz düzeyli analizleri içermesi gerektiğini önermektedir. Dijital yenilik üzerindeki etki yeni bilgi sistemi araştırma gündeminin bir parçası

olarak kabul edilirse, o zaman girişimcilik sonuçları ve süreçleri üzerindeki etki, girişimcilik alanında ortaya çıkan dijital teknolojilerin sorunlarından birisi olarak ortaya çıkmaktadır (Sahut vd., 2021). Dijital empati, dijital ortamda başkalarının duygu ve düşüncelerini anlayabilme bilinci ve yeteneğinde olmaktır. Okkay ve Bal (2021), teknoloji tasarımında empatinin temel ilkelerinin kullanılmasının dijital empati olduğunu ifade etmektedir. Dijital empati yapısının önemi, toplumsal iletişim eğilimleri ve teknoloji kullanımının sağlık hizmetleri sunumuyla kesişmesiyle zaman içinde gelişmiştir. Dijital iletişimin güçlü olduğuna ve genellikle başkaları üzerinde istenmeyen etkilere sahip olabileceğine dair hedeflenmiş bir farkındalık, dijital empati geliştirilmesinin önemli bir unsurudur. Dijital empatinin önemi konusunda farkındalık yaratmak, kursiyerleri uygun şekilde eğitmenin ve onları sürekli değişen teknolojik bir dünyada sağlık hizmetlerinin geleceğine yeterince hazırlamanın ilk adımıdır. Bununla birlikte, tek başına farkındalığı artırmak tüm sorunları çözmeyebilir. Empati eğitiminin özellikle çevrimiçi kısıtlamayı kaldırmanın bilinçaltı etkilerini ele alıp almadığı gibi birkaç soru hâlâ yanıtızdır. Bu bilinçaltı etkiler araçsaldır ve potansiyel olarak toplumun tamamında genel bir dijital empati eksikliğinin sergilenmesinin başlıca nedenleridir. Yalnızca dijital iletişime uygulanan geleneksel empati eğitiminin yeterli olup olmadığı bilinmemektedir. Başka bir soru da kişinin çevrimiçi disinhibisyonunun (bireylerin çevrimiçi iletişimde, yüz yüze iletişimde hissettikleri kısıtlamaları hissetmeksizin iletişim kurmaları) farkındalığının veya anlayışının bunun olmasını önlemek için yeterli olup olmadığı veya başka psikolojik müdahalelerin gerekli olup olmadığıdır (Terry ve Cain, 2016).

Dijital yaratıcılık, dijital teknolojiler tarafından yönlendirilen tüm biçimlerde ortaya çıkan yaratıcılık olarak tanımlanmaktadır. Yeniliği ve disiplinler arası doğası nedeniyle, dijital yaratıcılık perspektifi ve ana araştırma temaları bugüne kadar hala belirsizdir. Akıllı telefonlar ve gelişmiş dizüstü bilgisayarlar gibi her yerde bulunan iletişim cihazlarının günlük hayatımızın neredeyse her alanına hızla girmesiyle birlikte, dijital yaratıcılığın çeşitli biçimlerini anlama ihtiyacı dikkatleri üzerine çekmektedir. Dijital yaratıcılığın şu anki tanımı “tüm biçimler dijital teknolojilerin yönlendirdiği yaratıcılıktır”. Başka bir deyişle, dijital yaratıcılık, çeşitli yaratıcı faaliyetler için dijital cihazlar kullanıldığında ortaya çıkmaktadır. Dijital yaratıcılık, göreceli yeniliği ve hızlı büyümesi nedeniyle dinamik bir araştırma alanıdır. Dijital yaratıcılık, fikirlerin dijital ortamda görünür hale getirilmesi ya da dijital ortama aktarılması olarak ifade edilmektedir. Lee ve Chen (2015), dijital yaratıcılığı geniş anlamda dijital teknolojiler tarafından yönlendirilen tüm yaratıcılık biçimleri olarak tanımaktadır. Hoffmann vd., (2016) ise dijital yaratıcılığın teknik beceri ve bilgi gerektirdiğini belirtmektedir. Dijital yaratıcılığı genel olarak dijital teknolojilerin yönlendirdiği her türlü yaratıcılık olarak tanımlanmaktadır. Dijital yaratıcılık, iş fikirleri ve mevcut sorunlara yönelik çözümler konusunda çok sayıda olumlu sonuç getirebilmektedir. Bununla birlikte, şirketlerin yaratıcı süreçlerine ilişkin çeşitli zorluklar bulunmaktadır (Smailhodžić ve Berberović, 2021). Toplum teknolojik olarak daha gelişmiş hale geldikçe, okul duvarlarının ötesinde öğrencileri etkileyen yeni bir zorbalık türü olan siber zorbalık ortaya çıkmaktadır. Siber zorbalık, onu deneyimleyenler ve deneyimleyenler için kalıcı anılar yaratan benzersiz bir olguyu temsil etmektedir. Siber zorbalığın kanıtı, geleneksel olmayan metodolojiler (örneğin, kısa mesaj, sosyal Web siteleri) aracılığıyla ortaya çıkmakta ve sonuç olarak, bireyin benlik algısını bozabilmekte ve akranlarıyla olan ilişkilerini engelleyebilmektedir. Dijital saldırganlık, dijital ortamda bir kişi ya da kuruma ait fotoğraf, yorum, bilgi vb. bir paylaşımına karşı etik ve hukuk kurallarına aykırı hareket etmektir. Dijital saldırganlık dijital ortamda en sık nefret söylemi olarak ortaya çıkmaktadır. Belli bir kişi ya da grup hedef alınabileceği gibi bir kültür ya da ülke de hedef alınabilir. Dijital saldırganlık dijital

hak ve sorumlulukların farkında olduğu halde, dijital empati yapılmayarak dijital etik kurallara uyulmamasıdır.

LİTERATÜR

Dijital vatandaşlık ile ilgili literatür incelendiğinde çalışmaların Ribble, (2012) yöntemi temel alınarak yapıldığı gözlemlenmektedir. Bu yöntemde; dijital katılım, dijital ticaret, dijital iletişim, dijital okuryazarlık, dijital etik, dijital hukuk, dijital haklar, dijital sağlık ve dijital güvenlik faktörleri ele alınmaktadır. Teknoloji ve kullanımı hakkında bilgi sahibi olunmasını gösteren dijital okuryazarlık, dijital vatandaşların teknoloji kullanımı için ortaya koydukları davranış biçimlerinin şekillenmesinde etkisi olmaktadır. Teknoloji, bilgi yükleme-indirme-bulma ve bilgiye erişme sürecini kolaylaştırdığından, İnternet üzerinde bulunan bilgilerin yasal ve yasadışı kullanımının farkındalığının yanı sıra dijital hukuk; dijital vatandaşlar için teknoloji ile ilgili eylemler için elektronik sorumluluğu ifade etmekte ve şekillenmektedir. Dijital hak ve sorumluluklar, dijital dünyada dijital vatandaşlara/tüm kullanıcılara tanınan gereklilikler ve özgürlükleri ifade eden dijital haklar ve sorumluluklar; dijital vatandaşların buldukları ortam ve hayatları üzerinde etkili olmaktadır. Yanlış bilgi paylaşımı neticesinde yanlış yönlendirmelerden dolayı ortaya çıkabilecek yasadışı durumları önleyen dijital iletişim; dijital vatandaşlar arasında elektronik bilgi alışverişi ve öğrenme sürecini sağlamaktadır. Dijital vatandaşlara verileri, dosyaları ve yazılımları korumayı sağlayan dijital güvenlik; bulunulan ortamlarda güvenliği sağlanması ve elektronik önlemler alınması üzerinde etkili olmaktadır. Malların elektronik olarak alınıp satılmasını ve akıllı tüketimi ifade eden dijital ticaret; ekonominin canlandırılması üzerinde etkili olmaktadır. Toplumun tam elektronik katılımı ve iletişimi olarak ortaya çıkan dijital katılım ve elektronik davranış veya prosedür standartlarını gösteren dijital etik, dijital vatandaşların teknolojinin kullanım biçiminin uygunluğunu sorgulamaktadır. Dijital teknolojinin fiziksel ve psikolojik iyi oluşu olan dijital sağlık; İnternet bağımlılığı ve davranış biçimleri üzerinde etkili olmaktadır. Mossberger vd., (2008), dijital vatandaşların teknolojiyi sıklıkla kullanan, teknolojiyi vatandaşlık görevlerini yerine getirmek ve iş yerinde ekonomik kazanç sağlamak için kullanan kişiler olduklarını; Robles (2009), siyasal veya sosyal haklarının tamamını veya bir kısmını internet üzerinden, bağımsız olarak veya sanal bir topluluğa üyeliği yoluyla kullanan, başka bir topluluğa veya devlete ait olan veya olmayan kişiler, vatandaşlar olduklarını; Ohler (2011), ise dijital çağ için karakter eğitimi alan kişiler olduklarını ifade etmektedir. Richards (2010), dijital vatandaşlığın teknoloji ile öğrenmeye yönelik iyi bir tutumun sürdürülmesi olduğunu ifade ederken, 21. yüzyıl için dijital vatandaşlık hedeflerini; eğitmek, güçlendirmek ve korumak olarak açıklayan Avrupa Konseyi (2011), dijital vatandaşlığın teknolojiyi yetkin bir şekilde kullanma yeteneği olduğunu ifade etmektedir. Çubukçu ve Bayzan (2013), tüm dünyada dijital teknoloji kullanımının olması nedeniyle dijital vatandaşların eşit hak ve sorumluluklara sahip olabileceğini ifade etmektedir. İşman ve Güngören (2014), dijital vatandaşlık kavramını İnternetin düzenli ve etkin şekilde kullanılması olarak tanımlarken; Choi (2016), dijital vatandaşlığı “İnternetin güvenli ve sorumlu kullanımını gerektiren bir etik olarak; İnternete erişim imkânı, İnternet hizmetlerini kullanmak için gereken bilgi ve beceriler ve çevrim içi içeriğin güvenilirliği ve kalitesinin eleştirel değerlendirmesi ile ilgili dijital okuryazarlık olarak; mikro ve makro düzeylerde katılım olarak ve kritik bir direniş olarak” dört kavram altında tanımlamaktadır. Babović vd., (2017), birey ve topluluk arasında sanal/dijital alanda somutlaşan yeni bir bağlantı türü ve geleneksel vatandaşlık uygulamalarına bir ek ve bir uzantı olarak tanımlamaktadır. Hintz vd., (2017) dijital vatandaşlığın kısmen yasalarla kısmen de veri toplama ve analiz etme yoluyla inşa edildiğini belirterek, dijital vatandaşlığın teknolojik, politik ve sosyal bağlamlara bağlı

olduğunu ve vatandaşların İnternet'e güvenerek hareket edip etkileşimde bulduklarını bu yüzden altyapının dijital vatandaşlık fırsatlarını arttırabilir ya da azaltabilir bir unsur olduğunu ifade etmektedirler. Emejulu ve McGregor (2019), dijital vatandaşlığı, sosyal adalete bağlı bireylerin, grupların alternatif ve özgürleştirici teknolojiler ve teknolojik uygulamalar inşa etmek için bilinçli olarak harekete geçtiği bir süreç olarak tanımlamaktadırlar. Council of Europe (2022), dijital vatandaşın yaşam boyu öğrenme sürecine dahil olan, sürekli olarak insan haklarını ve onurunu savunmaya kararlı ve yaşam boyu öğrenen bireyler olduğunu ifade etmektedir. Konsey dijital vatandaşlığın, "erişim ve dahil etme, öğrenme ve yaratıcılık, medya ve bilgi okuryazarlığını kapsayan çevrimiçi alan", "etik ve empati, sağlık ve esenlik, e-varlık ve iletişimi kapsayan çevrimiçi refah" ve "dijital bağlamda karmaşık ve çeşitli toplumlardaki vatandaşların hakları ve sorumluluklarıyla ilgili dört yeterliliği ifade etmektedir: Aktif katılım, haklar ve sorumluluklar, gizlilik ve güvenlik, tüketici farkındalığını kapsayan çevrimiçi haklar" olmak üzere üç kümeye ayrılan toplamda "10 dijital alan"dan oluştuğunu ifade etmektedir. Metin ve Cin (2021), geleneksel vatandaşlık anlayışı ile dijital vatandaşlığı ayırmamak gerektiğini ifade ederek, sosyal bilgiler öğretmen adayları için bir yeterlilik ölçeği geliştirmektedir. Öztürk (2021), dijital vatandaşlık ile ilgili araştırmaların kavramsal ve yöntemsel eğilimlerinin eksik olduğunu belirtmektedir. Avcı vd., (2021), dijital vatandaşlık algısının belirlenmesi ile ilgili eksiklikleri ortaya koymaktadır. Koç ve Koç (2021), dijital vatandaşlığı dokuz unsur çerçevesinde değerlendirerek Türkiye'de dijital vatandaşlık ve dijital medya okuryazarlığının ön plana çıkartılması gerektiğini vurgulamaktadır. Çatlı ve Keskin (2021) ise, dijital vatandaşlık ile ilgili hukuki düzenlemelerin yapılmasını vurgulamaktadır. Boschele (2021), teknoloji tarafından yönetilecek dijital vatandaşlar ile politika ilişkisini ifade etmektedir. Karakuş ve Turan (2022), siber zorbalık ve dijital vatandaşlık arasında anlamlı bir ilişki tespit etmektedir.

SONUÇ VE ÖNERİLER

Modern toplumda yeni vatandaşlık biçimleri küreselleşme, çok kültürlülük ve dijitalleşme bağlamında şekillenmektedir. Toplumun ve kültürün dijitalleşmesi, yalnızca coğrafi bölgesel birimler içinde değil, vatandaşlar için aynı zamanda çok sayıda (dijital) topluluğu içeren dijital alanda da etkileşimi gerçekleştirmektedir. Dijital devlete geçişte, internet aracılığıyla aktif katılımı ifade eden dijital vatandaşlığın kavramsal olarak sınırlarının çizilmesi gerçekleştirilecek olan araştırmalara bağlı olmaktadır. Teknoloji kullanımına ilişkin uygun ve sorumlu davranış normlarını içinde barındıran dijital vatandaşlık; a) dijital katılım, b) dijital ticaret, c) dijital iletişim, d) dijital okuryazarlık, e) dijital etik, f) dijital hukuk, g) dijital haklar, h) dijital sağlık ve zindelik ve i) dijital güvenlik olmak üzere dokuz unsuru içinde barındırmakta ve bu tanımlama 2007 yılından günümüze kadar aynı şekilde ele alınmaktadır. Dijital vatandaşlık kavramı teknolojinin gelişmesine bağlı olarak kavramsal bir boşluğu içinde barındırdığından tanımı net olarak yapılamamaktadır. İnterneti günlük ve etkin bir şekilde kullanan kişi olarak kabul edilen dijital vatandaşlıkta eğitimin nasıl olması gerekliliği sorunsal ön plana çıkmaktadır. Fakat dijital vatandaşlık yönetim modeli olmaması ile birlikte yönetim ve organizasyon boyutunun ihmal edilmesi dijital vatandaşlık eğitimi ile ilgili sorunun da çözülmesini engellemektedir. Dijital vatandaşlığın dijital devlet için geliştirilmesi ve desteklenmesine yönelik araştırmalar devam etmektedir. Çalışma kapsamında, dijital vatandaşlık tutumlarının belirlenmesiyle literatürde daha önce değinilmeyen dijital yaratıcılık, dijital girişimcilik, dijital empati ve dijital saldırganlık faktörlerinin de dijital vatandaşlık kavramına dahil edilmesiyle dijital vatandaşlık ve bileşenlerinde kavramsal, bütüncül, kapsayıcı bir tanımlama yapılması amaçlanmaktadır. Dijital vatandaşlık, dijital kamu

hizmetlerine erişmek ve kamu kurumları ile iletişim kurmak, dijital içerik oluşturmak, kullanmak ve yaymak amacıyla dijital teknolojilerin etkin ve verimli bir şekilde kullanılması olarak ifade edilmektedir. İnternet güvenliği ve iletişimi, siber zorbalık ve etik kurallar, dijital okuryazarlık ve dijital ayak izi ile ilgili bireylere gelişim fırsatı sunan dijital vatandaşlık, dijital devlet için demokratik katılımın yüksek olduğu sürdürülebilir refah devleti olma yolundaki önemli adımlardan biri olmaktadır. Günümüzde, dijital vatandaşlık ile ilgili çalışmalarda sadece dijital vatandaşlık eğitimine yönelik içerik oluşturmaya odaklanılmaktadır. Bununla birlikte, dijital vatandaşlığın yönetim ve organizasyon yapısının belirlenmemiş olması kurgulanan eğitim modelinin hem eksik kalarak hem de ortaya çıkan zorlukların belirlenmesini engelleyerek başarıya ulaşmasını sektöre uğratmaktadır. Çalışmanın dijital vatandaşlık yönetim modeli nasıl kurgulanması ve algı ve yeterliliklerin doğru tespiti için dijital vatandaşlık ölçeğinin nasıl oluşturulması gerekliliğine yönelik sorulara cevap(lar) aranması durumunda, gelecekte yapılması muhtemel çalışmalara katkıda bulunacağı beklenmektedir.

ÖZET

Bu çalışma, liderlik tutkusu kavramına değinerek liderliğin doğasına ilişkin anlayışımızı geliştirmeye odaklanmıştır. Liderliğe yönelik takıntılı tutku liderlik faaliyetlerine dâhil olmaya yönelik katı, yoğun ve aralıksız bir ihtiyacı yansıtır. Buradan hareketle çalışma takıntılı tutkulu liderlik ve öz-yeterlik arasındaki ilişkiye odaklanarak bu ilişkide duygusal tükenmişliğin düzenleyici rolünü ortaya koymayı amaçlamıştır. İzmir Atatürk Organize Sanayi bölgesinde ana metal sanayi sektöründe faaliyet gösteren işletme üst düzey yöneticisi 321 kişiden elde edilen verilerin SmartPLS ile analizi sonucunda, takıntılı tutkulu liderliğin öz-yeterlik üzerindeki negatif etkisi belirlenerek bu ilişkide duygusal tükenmişliğin düzenleyici etkisi olduğu ortaya konmuştur. Çalışma, takıntılı tutkulu liderliğin önemli etkilerini doğrulamaktadır. Araştırma bulguları örgütsel ortamda faaliyet gösteren yöneticilerin İkili Tutku Modeli ile doğru orantılı şekilde liderlik davranışlarını sergilerken ayrıca takıntılı tutku boyutunun negatif kişilik özelliklerini sergilediklerini göstermektedir. Bu sonuç literatürde yeni olan takıntılı tutkulu liderlik kavramının örgütsel etkilerini ortaya koyarak negatif sonuçları doğrultusunda literatüre katkı sağlamaktadır. Mevcut bulgulara dayanarak, gelecekteki çalışmalar için takıntılı tutkulu liderlik kavramının örgüt yaşamındaki farklı kavramlarla ilişkisi üzerine tavsiyelerde bulunulmuştur.

Anahtar Kelimeler: Takıntılı tutkulu liderlik, Öz-yeterlik, Duygusal tükenmişlik.

The Role of Emotional Burnout in the Relationship between Obsessive Passionate Leadership and Self-Efficacy

ABSTRACT

This study focuses on improving our understanding of the nature of leadership by addressing the concept of leadership passion. An obsessive passion for leadership reflects a strict, intense, and unremitting need to be involved in leadership activities. From this point of view, the study aimed to reveal the moderator role of emotional burnout in this relationship by focusing on the relationship between obsessive passionate leadership and self-efficacy. As a result of the analysis of the data obtained from 321 business executives operating in the basic metal industry sector in İzmir Atatürk Organized Industrial Zone with SmartPLS, the negative effect of obsessive passionate leadership on self-efficacy was determined and it was revealed that emotional burnout had a moderating effect in this relationship. The study confirms the important effects of obsessive passionate leadership. Research findings show that managers operating in the organizational environment exhibit leadership behaviors in direct proportion to the Dual Passion Model, and that the obsessive passion dimension suggested by the model has negative personality traits. This result contributes to the literature in line with its negative results by revealing the organizational effects of the concept of obsessive passionate leadership, which is new in the literature. Based on the current findings, recommendations are made for future studies on the relationship of the concept of obsessive passionate leadership with different concepts in organizational life.

Keywords: Obsessive passionate leadership, Self-efficacy, Emotional burnout.

GİRİŞ

Liderlik doğası gereği zor durum ve koşullarla mücadele etmeyi gerektirir. Aynı zamanda liderler, hem takipçilerini hem de organizasyon içindeki örgütsel talepleri karşılamak için büyük bir enerji sarf ederler (Northouse, 2014). Liderler üzerinde itici bir güç olarak gösterilen ve liderler için motivasyon kaynağı olan tüm bu faaliyetlere yönelik duyulan tutku önem arz etmektedir. Vallerand ve diğerleri (2003) tarafından tanıtilan İkili Tutku Modeli son yıllarda gündemde olan bir kavram olarak ortaya çıkmaktadır. Bu kavram girişimcilik alanında (Cardon, 2005; Cardon vd., 2009) olduğu kadar iş odaklı alanlarda da (Chen vd., 2009; Baum ve Locke, 2004) ele alınmıştır. Aynı zamanda İkili Tutku Modeline (Vallerand vd., 2003) dayalı takıntılı ve uyumlu tutkulu liderlik literatürüne de uyarlanmıştır (Trivisonno, 2020).

Liderlik tutkusu, “kişinin sevdiği, değer verdiği, düzenli olarak zaman ve enerji harcadığı ve kimliğinin bir parçası olduğu liderliğe katılmaya yönelik güçlü bir eğilim” olarak tanımlanır (Trivisonno, 2020: 2). Bu kavram, Vallerand tarafından ikili yapısından dolayı takıntılı ve uyumlu tutku olmak üzere iki tür tutku olarak ortaya konmuştur (Vallerand vd., 2003; Vallerand vd., 2019). Tutku sadece bir duygu olarak değil aynı zamanda önemli bir motivasyon kaynağı olarak görülmektedir (Vallerand vd., 2003). Motivasyon, liderler için uzun vadeli başarıda kritik bir rol oynar. Liderler hem örgütsel amaçların gerçekleştirilmesinde hem de takipçilerinin ihtiyaçlarını karşılayarak örgütün etkin bir şekilde işlenmesini sağlamak için çok zaman harcarlar. Bu noktada tutku liderin ihtiyaç duyduğu itici güç ve motivasyon olarak devreye girmektedir.

Örgüt ortamında liderlerin davranışları ve bu davranışlara yol açan nedenler liderliğin doğasını anlamak açısından her zaman önemini korumuştur. Başarı ve başarısızlık serüvenlerindeki eksik parçaları anlamlaştırmak için yoğun ampirik çabalar sarf edilmektedir. Bu bağlamda, liderlik tutkusu bu boşluğu dolduracak yeni bilgiler sunmaktadır.

Tutku örgütsel ortamda yeni bir kavram olarak ortaya çıkarken özellikle liderlik literatüründe de yerini almıştır. Pek çok liderlik davranışını açıklamada ve yorumlamada bu kavram daha önce açıklanamayan pek çok davranışı yorumlamak için yol gösterici olacaktır. Bu bakımdan konunun önemli olduğuna inanılmaktadır. Bu amaçla bu çalışmada, tutku kavramına yer verilerek takıntılı tutkulu liderlik şekli üzerinde durulacak ve takıntılı tutku kavramının örgütsel yaşamda öz-yeterlik üzerindeki etkileri ortaya konulacaktır. Bu ilişkiler açıklanırken tükenmişliğin bu ilişki üzerindeki etkisi de ortaya konmaya çalışılacaktır.

1. TUTKU KAVRAMI

Tutkunun örgüt ortamındaki tanımları kavramın motive edici özelliğine odaklanmaktadır. Örneğin tutku kimlik (Frijda vd., 1991), yenilik katalizörü (Amabile, 2001), başarı (Frijda vd., 1991; Vallerand vd., 2007), ilgi (Gagne, 2007), çalışma sevgisi (Baum ve Locke, 2004) ve girişimcilik alanında bireyin kimliğine özgü içsel bir motivasyon (Cardon vd., 2005; Chen vd., 2015) özelliği olarak görülmektedir. Bu özellik bir kişilik özelliği olarak kabul edilirken (Cardon vd., 2005; Baum vd., 2001) aynı zamanda tüm bireylerde ortak bir başarı deneyimi olarak görülmektedir (Trivisonno, 2020: 10). Öte yandan, amaca özgü ve amaca yöneliktir (Vallerand vd., 2003; Cardon vd., 2005). Örneğin, girişimcilik üzerine yapılan araştırmalar, tutkunun bireyleri beklenen kapasitelerinin üzerinde performans göstermeye yönlendiren duygusal bir enerji olduğunu göstermektedir (Vallerand vd., 2003; Murnieks vd., 2014).

Vallerand (Vallerand vd., 2007) tutku üzerine yaptığı çalışmasında tutkunun iki farklı yönünü ortaya koyan İkili Tutku Modelini sunmuştur: takıntılı ve uyumlu tutku. Bu modele dayanarak liderlik bağlamında ikili bir liderlik modeli sunulmuştur. Uyumlu tutkulu liderlik liderlik faaliyetlerine yönelik güçlü, kontrol edilebilir bir arzuyu yansıtır ve aktivite katılımı esnek kabul edilir. Takıntılı tutkulu liderlik ise, liderliğe katılmak için güçlü ve katı bir ısrar durumunu ifade eder (Trivisonno, 2020: 11).

Örgüt ortamında tutkunun çıktıları üzerine yapılan çalışmalar oldukça ilgi çekmiştir. Örneğin, tutkunun karar verme üzerindeki etkileri (Chen vd., 2009), başarı (Lafrenière vd., 2011), performans (Bonneville-Roussy vd., 2011), tükenmişlik (Vallerand vd, 2010), motivasyon (Frijda vd., 1991) ve girişimcilik (Cardon vd, 2009) gibi pek çok alanda etkileri ortaya konmuştur. Ayrıca liderlerin işe yönelik tutkusunun doğrudan ve dönüşümcü liderlik aracılığıyla lider etkinliği üzerinde pozitif etkilerinin olduğu belirtilmiştir (Tan vd., 2011).

Takıntılı tutku olumsuz bireysel ve örgütsel çıktılarıyla ilişkilendirilmiştir: iş-aile çatışması ve düşük aile yaşam doyumu (Gillet vd., 2022), gerginlik ve sosyal yalnızlık (Bayraktar vd., 2022), negatif duygulanım, ruminasyon ve bazı pozitif sonuçlardan zindelik (Curran, vd., 2015), katı ısrar (Lalande vd., 2017), depresyon ve işten ayrılma niyeti (Houffort, 2013) gibi. Liderlikte tutku boyutlarının araştırıldığı çalışmalarda Trivisonno (2020) her iki tutku türünü içeren liderlik tutkusuna yönelik geliştirdiği ölçek ile liderliğe yönelik uyumlu tutkunun daha yüksek dönüşümcü liderlik seviyelerine yol açtığını belirtmiştir. Ayrıca liderlerin tutkusunun çalışanlara duygusal bulaşma yoluyla aktarıldığı ve çalışanların iş tutkusunu teşvik etmek için bir potansiyel oluşturduğu belirtilmektedir (Li vd., 2017).

Özetle tutku, bireyleri önemli buldukları ve değer verdikleri bir aktiviteyi başlatmaya, sürdürmeye veya bu aktivitede sebat etmeye iten ve bağlamlar genelinde çeşitli sonuçları etkileyen duygusal bir enerjiyi yansıtır. Örgütsel pek çok sonucu etkileyebileceği gibi bireysel ve özellikle liderlik literatüründe bazı etkileri ile varlığından söz ettirmiştir. Ancak liderlik kavramı ile ilgili araştırmalar henüz çok yenidir. Bu sebeple çalışmalar sınırlı bilgi sağlamakta ve kavramla ilgili daha fazla çalışmaya ihtiyaç duyulmaktadır.

2. İKİLİ TUTKU MODELİ VE TAKINTILI TUTKULU LİDERLİK

Vallerand ve diğerlerine (2003; Vallerand, 2015) göre tutku, kişinin sevdiği, anlamlı bulduğu, sürekli zaman ve enerji harcadığı ve kişinin kimliğinin merkezinde yer alan belirli bir faaliyete, nesneye, kişiye veya olaya yönelik güçlü bir duyguyu ifade eder. Tutku amaçlıdır ve motive edici bir güce sahiptir (Vallerand, 2015). Vallerand'ın (Vallerand vd., 2003; 2007) ortaya koyduğu İkili Tutku Modeli, Öz-Belirleme Teorisine (Deci ve Ryan, 1985) dayanır. Nesne ya da etkinliğe yönelik ilgi ise kişisel gelişim sürecine dayalıdır. Ryan ve Deci'nin (2000) öz belirleme teorisi, bireylerin temel psikolojik ihtiyaçları karşılama sürecinde bazı faaliyetlere yönelik tutku geliştirebileceğini ileri sürer. Bu teoriye dayanan İkili Tutku Modeli (Vallerand vd., 2003), tutkunun ilk gelişiminin aktivite seçimi, aktivite değerlendirilmesi ve aktivite temsilinin kişinin kimliğinde içselleştirilmesi süreci aracılığıyla gerçekleştiğini savunur. Öz-belirleme kuramının tanımladığı gibi, insanlar etkinliklerin temsillerini benliklerinde içselleştirme ve bunları kendi tanımlarına dahil etme eğiliminde olup, bu etkinliklerin oldukça anlamlı olduğunu öne sürmektedirler (Deci vd., 1994). Kişinin kimliği için etkinliğin anlamı ne kadar yüksekse, etkinlik o kadar içselleştirilecek ve tutku da o kadar gelişecektir. Bu nedenle aktivite değerlendirilmesi tutkunun büyümesini tetikleyen yoğunluk derecesini yansıtır (Vallerand, 2010). Böyle bir durumda, faaliyetle ilgili davranışa yönelik değerler, tutumlar ve düzenleyici yapılar bireyin kimliğinde içselleştirilecektir. Bu içselleştirme süreci kontrollü veya özerk bir şekilde gerçekleşebilir (Deci vd., 1994; Ryan ve Deci, 2000; Vallerand, 1997) ve bu gelişecek tutkunun doğasını belirlemektedir. Otonom bir içselleştirilme uyumlu tutkunun gelişimini teşvik ederken, kontrollü bir içselleştirmenin takıntılı tutkuyla sonuçlanacağı varsayılır. Buradaki

önemli nokta, uyumlu tutkunun sağlıklı uyum ve içselleştirme ile ilgili olduğu, Takıntılı tutkunun ise olumsuz duygulara ve katı ısrara neden olduğudur (Vallerand vd., 2003).

Uyumlu tutku (UT), daha olumlu bireysel ve örgütsel sonuçlarla ilişkilendirilirken, takıntılı tutku (TT) daha olumsuz sonuçlarla ilişkilendirilir. TT, aktiviteye katılma baskısı nedeniyle birey üzerinde psikolojik baskı ve gerilim yaratır ve aktiviteye katılım sürecinde birey aktiviteden ve hayattan zevk alamaz hale gelir ve algılanan stres ile pozitif olarak ilişkilidir (Tomkins vd., 2019). TTnin bireysel görev ve başarı için daha zor bir ortam yarattığı söylenebilir. Sonuca yönelik, stresin bireysel iyi-olma hali ve nihayetinde görev üzerinde olumsuz sonuçlara yol açması beklenir.

Liderlik bağlamında, her iki tutku türü de liderlik faaliyetleri içindir ve uyumlu liderlik tutkusu, güçlü ama kontrol edilebilir bir arzu ile ilgiliyken, takıntılı tutkulu liderlik, güçlü ve kontrol edilemez bir arzu ve dürtü ile ilgilidir (Trivisonno, 2020: 15). UT doğası gereği bireyi seçtiği aktiviteye katılmaya zorlamaz, bu nedenle birey gönüllü katılımı sağlar. Bu, liderlikle ilgili faaliyetlere katılmak için de gereklidir. Bireye liderlikle ilgili faaliyetin hangisinde ve ne zaman katılacağı konusunda esneklik sağlar (Trivisonno, 2020: 16). Ancak takıntılı tutkulu liderlik (TTL) için tam tersini söylemek mümkündür.

Uyumlu tutkulu liderler, hedeflerinde sevdikleri faaliyeti sürdürebilir ve sonunda etkinlik "kimliklerinin önemli ama ezici olmayan bir parçası" olduğu için onu terk edebilirler. Böylece UT, liderin faaliyetlerinin diğer yönlerine müdahale etmez ve liderlik faaliyetlerinin gerçekleştirilmesinde bir denge yaratır. Buna karşılık, takıntılı derecede tutkulu liderlerde benlik saygısı ve kimlik oluşumu, faaliyet performanslarına atfedilir (bağlantılıdır), böylece faaliyeti içselleştirmenin birçok sonucu oluşur. Lider, hedef faaliyetten ayrılma konusunda esnek olamaz ve bu durum hedef faaliyet dışındaki diğer faaliyetlerin kısıtlanması veya engellenmesi ile sonuçlanabilir. Böylece liderin hayatında ve faaliyetlerinde dengesizliğe ve bazı faaliyetlerde performansının düşmesi olasılığı artar.

Özetle, liderlik sürecinde takıntılı tutku İkili Tutku Modeli (Vallerand vd., 2003) doğrultusunda varlık gösterir ve faaliyetin kimlikte içselleştirilme derecesine göre sonuçlar ortaya koyar. Bu açıdan liderlik faaliyetleri bireyin tutku durumundaki duygusal durumu ve faaliyetin kontrol edilme olasılığından etkilenmektedir.

3. ÖZ YETERLİK

Öz-yeterlik, "*belirli alanda bir başarıları elde etmek için gerekli eylemleri organize etme ve yürütme konusunda kişinin yeteneklerine olan inançları*" olarak tanımlanmaktadır (Bandura, 1977). Öz yeterlik düzeyinin bir görevin başlatılıp başlatılmayacağını, harcanacak çaba miktarını ve engeller ve istenmeyen deneyimlerle karşılaşıldığında görevi tamamlamak için gerekli ısrar düzeyinin belirlenmesi için kullanılabilmesi belirtilmiştir. Düşük bir öz-yeterlik duygusuna sahip olan birey çabası karşılığında başarı olsa dahi bir işe başlamaktan kendisini alı koyabilmektedir. Diğer taraftan yüksek düzeyde öz-yeterlik inancını elde eden bireyin sonraki tüm girişimlerinde daha fazla çaba harcamak için motive olacağı belirtilmektedir. Bu çabanın altında yatan duygu ise bireyin durumu kontrol edebileceği hissidir (Conyers vd, 1988). Öz yeterlik çok boyutlu bir yapıdadır: alana özgü ve bağlama özgü. Birey belirli bir alanda yüksek yeterlik duygusuna sahip ise, başka bir alanda benzer bir düzeye sahip olmayacağı anlamına gelmektedir. Ya da aynı alan içinde çeşitli bağlamlarda ortaya çıkan farklı düzeylerde öz-yeterlik inançları olabilir. Öz-yeterlik teorisi, bireylerin kendi yeterliklerini değerlendirmek

için performans başarılarından, dolaylı deneyimlerden, ikna biçimlerinden ve fizyolojik göstergelerden bilgi edindiklerini varsayar. Burada geçmiş başarılar yeterliliği artırırken ve başarısızlık düşürmektedir. Ancak bir kez güçlü bir yeterlik duygusu geliştirildiğinde başarısızlığın fazla bir etkisi olmayabilir (Bandura, 1986). Yeterlik değerlendirmesi, kişilerin algılanan yetenekleri, görevin zorluğu, harcanan çaba miktarı, alınan dış yardım miktarı, başarı ve başarısızlıkların sayı ve şekli, bu durumlara yatkınlığı gibi kişisel ve durumsal faktörlerin katkılarını tarttı ve birleştirdiği çıkarımsal bir süreçtir (Schunk, 1989).

Bandura (1997), öz-yeterliğin davranış üzerinde güçlü bir etkisi olduğunu belirtmektedir. Bunun için yeterli beceri, olumlu sonuç beklentileri ve kişisel olarak değerli sonuçlar mevcudiyetinde öz yeterliliğin birçok insan davranışının seçimini ve yönünü etkilediği varsayılır (Bandura, 1989). Öz yeterliğin kaynağında bireyin kabiliyetine inancı, kendi performansı ile diğerlerini karşılaştırması sonucu çıkan tablo, güçlü kaynaklardan sözlü teşvikler ve son olarak da bireyin psikolojik ve fizyolojik durumu belirtilmektedir. Sonucunda ise bilişsel süreçleri, motivasyonel süreçleri, duygusal süreçleri ve faaliyetler arasında başarı gösterebilecekleri faaliyeti belirleme ve seçme sürecini etkileyebileceği belirtilmiştir (Bandura, 1997).

4. DUYGUSAL TÜKENMİŞLİK

Tükenmişlik, “*stres, düşük aktivite ve üretkenlik, düşük motivasyonun eşlik ettiği işle ilgili kalıcı negatif bir zihin durumu ve duygusal tükenme*”dir (Schaufeli ve Enzmann, 1998: 36). Tükenmişlik iş ortamında yaşanan bir stres türüdür. Bireyin iyilik hali üzerinde doğrudan etkileri olan ve hem psikolojik hem de fiziksel etkileri olan olumsuz bir durumdur (Schaufeli ve Buunk, 2004). Birey iş ortamında mücadele etmeyi gerektiren birçok olumsuz koşul ve şartlara karşı zihinsel bir savunma mekanizması geliştirir ve uzun süreli mücadeleler genellikle tükenmişlik sendromu ile sonuçlanır. Sürecin uzaması, bireyin esneklik kaynaklarının tükenmesine, yıpranmasına ve duygusal olarak savunmasız hale gelmesine neden olur. Böylece bireyin motivasyonu ve üretkenliği azalır (Schaufeli ve Enzmann, 1998). Maslach ve diğerleri (1996) tükenmişliğin 3 farklı boyutunu ortaya koymaktadır: duygusal tükenme, duyarsızlaşma ve kişisel başarı eksikliğidir.

Duygusal tükenmişlik tükenmişliği en net biçimde temsil eden boyuttur (Baba vd., 1998; Maslach ve Goldberg, 1998). Duygusal tükenme, aşırı iş, kişisel talepler ve stresin birikmesi ile meydana gelen duygusal yıpranma halinin kalıcı halidir (Wright ve Cropanzano, 1998). Bu durum kişilerarası ilişkilerin yoğun olması nedeni ile bireyde meydana gelen zihinsel ve duygusal tükenme olarak da ifade edilmektedir (Gemlik vd., 2010). Duygusal tükenme genellikle beraberinde fiziksel yorgunluğu getirir ve bireyde canlılık eksikliği, uyku sorunu, irrasyonel öfke, ilgisizlik, aile sorunları, korku duygusu, artan sinizm veya karamsarlık ve içki içmede artış gibi negatif duygusal ve davranışsal tepkiler görülmektedir (Cafasso, 2019; Lloyd ve King, 2004). Yaşanabilecek en kötü sonuç ise, duygusal tükenmişlik yüklü bireyin organizasyondan ayrılma hatta kaçma eğilimidir (Khan vd., 2014). İş tükenmişliği, kötü sonuçlar açısından yüksek maliyeti nedeniyle işletmeler için bir zorluk olmaya devam etmektedir (Halbesleben ve Buckley, 2004).

5. DEĞİŞKENLER ARASINDAKİ İLİŞKİLER

5.1. Takıntılı Tutkulu Liderlik ve Öz-Yeterlik İlişkisi

Murnieks ve diğerleri (2014), girişimciler üzerinde yaptığı çalışmada uyumlu tutkunun öz-yeterlik ile pozitif ilişkili olduğunu bulmuştur. Dalborg ve Wincent (2015) ise yine girişimciler üzerine yaptıkları çalışmada fırsat arayışındaki girişimcilerin öz-yeterlik aracılığıyla dolaylı olarak uyumlu tutkuyu beslediklerini belirtmişlerdir. Stroe ve diğerleri (2018), uyumlu tutkuya sahip girişimcilerin yüksek öz-yeterliğe sahip olduklarında veya çevrede yüksek risk algıladıklarında etkili kararlar aldıklarını ve TTYe sahip girişimcilerin, çevrede düşük risk algıladıklarında nedensel kararlar aldıklarını bulmuştur. Her ne kadar uyumlu tutku ile öz-yeterlik arasında pozitif bir ilişki varsa da TT ile öz-yeterlik arasında bu ilişkiyi gösteren çalışmaya rastlanılamamıştır (Lee ve Herrmann, 2021). Liderliğin doğasına özgü çalışmalarda İkili Liderlik Tutkusu Modeli geliştiren (Trivisonno, 2020) liderliğe yönelik TTnin yoğun, aralıksız bir liderlikle meşgul olma ihtiyacını yansıttığını ve faaliyet katılımına yönelik ısrarın uyumlu tutkulu katılımdaki esneklikten ziyade katı bir katılım biçiminde olduğunu ifade etmektedir. Bu verilere dayanarak şu hipotezi öneriyoruz:

H1. Takıntılı tutkulu liderlik ile öz-yeterlik arasında negatif bir ilişki vardır.

5. 2. Takıntılı Tutkulu Liderlik, Duygusal Tükenmişlik ve Öz Yeterlik İlişkisi

Takıntılı tutku kavramı kontrollü motivasyon olarak açıklanmakta ve duygusal tükenmişlik (Chen vd., 2019; Donahue vd., 2012) dahil olmak üzere çeşitli istenmeyen sonuçlarla ilişkilendirilmektedir. Bu nedenle, TTli bireyler tutkularını kontrol edemezler veya zor ve stresli durumda hatta devam edemeyeceği durumda dahi görevden ayrılamazlar (Vallerand ve Verner-Filion, 2013). TTnin baskın doğası nedeniyle, potansiyel kazançtan çok daha fazla kaynak kaybı hissi oluşturur ve bu da fazladan strese yol açar (Halbesleben, 2009; Vallerand ve Verner-Filion, 2013). Bu nedenle, TT duygusal tükenmişliği olumlu yönde etkilediği varsayılabilir. TT ile duygusal tükenmişlik arasındaki ilişkilerin incelendiği çalışmalarda bu varsayım desteklenmektedir. Sulistiawan ve diğerleri (2022) TT ile duygusal tükenmişlik arasında pozitif bir doğrudan ilişki elde etmiştir. Yine tutku türlerinin işten ayrılma niyeti ve duygusal tükenmişlik üzerine etkisinin incelendiği bir çalışmada TT ile duygusal tükenmişlik arasında pozitif ilişki bulunmuştur (Lee vd., 2022).

İşle ilgili aşırı ve uzun süreli stresin neden olduğu tükenmişlik (Maslach vd., 2001) işletme ile ilgili düşük performans, yüksek personel devir hızı ya da devamsızlık gibi olumsuz sonuçlara neden olabileceği gibi bitkinlik ve duygusal yorgunluk gibi olumsuz bireysel sonuçlara da neden olmaktadır (Wright ve Cropanzano, 1998; Grandey vd., 2004). Azalan performans seviyeleri ve zihinsel/fiziksel iyi-olma hali (Taris, 2006) düşük öz-yeterlik sorununu da ön plana çıkarmaktadır.

Hobfoll (1989), sınırlı kaynaklara sahipken iyi performans gösterme baskısının tükenmişliğe neden olduğunu ileri sürer. Ayrıca, sınırlı kaynaklarla çalışmanın mevcut kaynaklar üzerinde baskı oluşturarak yetersiz kullanımlara yol açtığı belirtilmektedir. Tükenmişlik riski, işle ilgili uzun süreli ve kronik stresin ardından katlanarak artar. Bu risk, kronik iş stresi, zayıf sosyal ilişki ve yıldırıcı üretkenlik taleplerinin bir kombinasyonunun varlığında artar (Zhou, 2022). Pek çok araştırma, işle ilgili tükenmişlikten sorumlu olan kişilik özellikleri ve kişisel deneyimler gibi belirli bireysel özellikleri tanımlamıştır (Brown, 2012; Lee vd., 2013). Bu noktada TTL üzerindeki baskı ve stres zamanla ve baskının artması ile duygusal tükenmişliğe neden olmakta, buradan da düşük öz yeterliğe yol açması beklenmektedir.

Duygusal tükenmişlik, destekleyici bir lider tarafından yönlendirilen ve insanların deneyimlerini karşılıklı fayda sağlayacak şekilde paylaşmayı rahat ve teşvik edici buldukları uyumlu bir çalışma ortamına sahip bir işyerinde azalırken (Freudenberger, 1975) zor görev başarımları, yoğun stres, düşük aile ve çevre ilişkileri ile tanımlanan TTL modelinde yükselecektir. Literatürde elde edilen veriler duygusal tükenmişlik ile öz-yeterlik arasındaki negatif ilişkiyi desteklemektedir (Mardani vd., 2015; Rubio vd., 2015). Buradan hareketle şu hipotezi öneriyoruz:

H2. Takıntılı tutkulu liderlik ile öz-yeterlik ilişkisinde duygusal tükenmişliğin düzenleyici rolü vardır.

6. ARAŞTIRMANIN YÖNTEMİ

Bu çalışma, liderlikte TTnin öz-yeterlik üzerindeki etkisinde duygusal tükenmişliğin düzenleyici rolünü araştırmıştır. Araştırmanın evrenini İzmir Atatürk Organize Sanayi bölgesinde ana metal sanayi sektöründe faaliyet gösteren işletme üst düzey yöneticileri oluşturmaktadır. Araştırma sürecinde toplam 8 işletme faaliyet göstermekteydi. Evrenin tamamına çevrimiçi anket yoluyla ulaşılmış ve 338 veri geri dönüşü elde edilmiştir. Toplamda 321 geçerli veriye ulaşılmıştır.

Etik kurul kararı alınarak gerçekleştirilen araştırmaya katılan katılımcılara gerekli bilgilendirme yapılarak, gönüllülük esasına göre temellendirilen araştırmaya dahil olmaları beklenmiştir. Anket formu üç bölümden oluşmaktadır. Ayrıca katılımcıların cinsiyet, medeni durum, yaş, eğitim düzeyi, işletmedeki statü, işletmenin çalışan sayısı ve görev süresi şeklinde yedi adet tanımlayıcı soru da eklenmiştir. Bununla birlikte veri güvenilirliğini güçlendirmek üzere anket formuna iki adet kontrol sorusu eklenmiştir.

6.1. Ölçüm Araçları

Takıntılı tutku ölçeği: Liderlikte TTYi ölçmek üzere Trivisonno (2020) tarafından geliştirilen Liderlik İçin Tutku Ölçeğinden TTYi ölçmek üzere kullanılan 10 madde kullanılmıştır. Ölçek maddelerine örnek olarak “Madde 7: Lider olmak beni hayatımdaki diğer faaliyetlerden uzaklaştırdı” verilebilir.

Öz-yeterlik ölçeği: Rigotti ve diğerleri (2008) tarafından geliştirilen Kısa Öz-Yeterlik Ölçeği kullanılmıştır. Ölçek 6 maddeden oluşmaktadır. Ölçek maddelerine örnek olarak “Madde 1. İşimde zorluklarla karşılaştığımda sakın kalabilirim çünkü yeteneklerime güvenebilirim” gösterilebilir.

Duygusal tükenmişlik ölçeği: Bu çalışmada kısaltılmış Maslach Tükenmişlik Envanteri'nin (aMBI) 3 maddeden oluşan duygusal tükenmişlik boyutu ölçeği kullanılmıştır (Riley vd., 2018). Ölçek maddelerine örnek olarak “Madde 4: Sabah kalktığımda ve yeni bir iş günüyle yüzleşmek zorunda kaldığımda kendimi yorgun hissediyorum” verilebilir.

Ölçeklerin puanlanmasında 1 (kesinlikle katılmıyorum) ile 5 (kesinlikle katılıyorum) arasında değişen 5'li Likert ölçeği kullanılmıştır.

Kontrol değişkenleri: Kontrol değişkenleri, sonuç değişkeni ile istatistiksel olarak ilişki taşımadığı için değerlendirilememişlerdir.

6.2. Verilerin Değerlendirilmesi

Araştırmanın analizleri, SPSS ve SmartPLS programları kullanılarak gerçekleştirilmiştir. Bu bölümde tanımlayıcı istatistikler, ölçüm modeli ve hipotez test sonuçları yer almaktadır.

6.3. Bulgular

Katılımcılara ait tanımlayıcı demografik veriler incelendiğinde; (n=321) %53.2'sinin erkek, %46.8'inin kadın olduğu, %38.9'unun bekar, %61.1'inin evli olduğu tespit edilmiştir. Katılımcıların yaş aralıklarının 18-25 yaş arası olanların oranı %14.0, 26-35 yaş arası olanların oranının %35.3, 36-45 yaş arası olanların oranının %28.8, 46 yaş ve üzeri olanların oranının %21.9 olduğu görülmektedir. Katılımcılardan %13.2'sinin lise mezunu, %27.3'ünün ön lisans, %35.6'sının lisans ve %23.9'unun lisansüstü mezunu olduğu görülmektedir. İşletmedeki statüsü girişimci olanların oranı %31.4, yönetici olanların oranı %68.6'dır. Katılımcıların %22.3'ünün 50-100 çalışan büyüklüğüne sahip işletmede görev yaptıkları, %31.2'sinin 100-200, %28.6'sının 200-300, %17.9'unun 300'den fazla çalışan sayısına sahip işletmelerde görev yaptığı görülmektedir. Katılımcıların işletmedeki görev süreleri incelendiğinde, 1-3 yıl olanların oranı %12.2, 4-6 yıl arası olanların oranı %15.0, 7-9 yıl arası olanların oranı %14.6, 10-15 yıl arası olanların oranı %19.2, 16 yıl ve üzeri olanların oranı %39'dur.

6.3.1. Tanımlayıcı İstatistikler ve Korelasyonlar

Tablo 1'de değişkenlere ait ortalama, standart sapma ve korelasyon değerleri yer almaktadır.

Tablo 1: Tanımlayıcı İstatistikler ve Değişkenler Arasındaki İlişkiler

Değişkenler	Mean	SD	1	2	3
1. Takıntılı tutkulu liderlik	3,79	0,93	1		
2. Öz-yeterlik	3,19	1,08	-,237**	1	
3. Duygusal tükenmişlik	2,85	1,28	,182**	-,749**	1

Sonuçlara göre, TTL ile öz-yeterlik arasında negatif yönlü bir ilişki bulunmaktadır ($r=-.24$; $p<.01$). Ayrıca duygusal tükenmişlik ile öz-yeterlik arasında negatif bir ilişki olduğu gözlenmiştir ($r=-.75$; $p<.01$).

6.3.2. Ölçüm Modeli

Araştırmada kullanılan ölçeklerin güvenirlik ile geçerlik analiz sonuçları Tablo 2'de sunulmuştur.

Tablo 2: Ölçüm modeli bulguları

Yapılar	Madde	Faktör Yüğü	α	CR > AVE
Duygusal tükenmişlik	DT1	0,904	0.87	0.92 > 0.80
	DT2	0,890		
	DT3	0,896		
Takıntılı tutkulu liderlik	OP1	0,746	0.92	0.93 > 0.60
	OP2	0,781		
	OP3	0,766		
	OP4	0,748		
	OP5	0,816		
	OP6	0,818		
	OP7	0,805		
	OP8	0,803		
	OP9	0,734		
	OP10	0,741		
Öz-yeterlik	SE1	0,795	0.89	0.91 > 0.65
	SE2	0,820		

	SE3	0,810		
	SE4	0,819		
	SE5	0,804		
	SE6	0,800		
Heterotrait-Monotrait Ratio Kriteri				
Yapılar	Duygusal tükenmişlik	Takıntılı tutkulu liderlik	Öz-yeterlik	
Duygusal tükenmişlik	-	-	-	
Takıntılı tutkulu liderlik	0,200	-	0,200	
Öz yeterlik	0,844	0,265	0,844	
Note. α = Cronbach's Alpha; CR = Composite Reliability; AVE = Average Variance Extracted				

Tablo 2'deki değerler incelendiğinde; Cronbach's α (>0.7), birleşik güvenirlik (>0.7), açıklanan ortalama varyans ($>.50$) ve faktör değerleri (.73/.90) bulguları, modelde iç tutarlılık güvenirliğinin ve birleşme geçerliğinin sağlandığını göstermektedir (Fornell ve Larcker, 1981). Heterotrait-Monotrait Ratio (HTMT) katsayılarının sınır değerinin altında ($<.85$) olması, ayrışma geçerliğinin sağlandığını ve yapıların birbirlerinden ayrı faktörler olduğunu göstermektedir (Henseler vd., 2015).

6.3.3. Hipotez Testi

Araştırmanın hipotezleri, Structural Equation Modeling (SEM) yöntemi ile test edilmiş ve sonuçları Tablo 3'te sunulmuştur.

Tablo 3: Yapısal model sonuçları

	R ²	f ²	VIF
Öz-yeterlik	0.59	-	-
Takıntılı tutkulu liderlik → Öz-yeterlik	-	0.06	1.30
Etkiler	Yol Katsayısı	t-değeri	p-değeri
Takıntılı tutkulu liderlik → Öz-yeterlik	-0.175	4.204	0.000***
Duygusal tükenmişlik * Takıntılı tutku → Öz yeterlik	-0.185	4.158	0.000***

VIF değerleri, eşik değerin (<5) altında olduğu için değişkenler arasında doğrusallık probleminin olmadığı anlaşılmaktadır. Modele ait elde edilen R² değerlerine bakıldığında, öz yeterliliğin %59 oranında TT tarafından açıklandığı görülmektedir (Hair vd., 2017).

Tablodaki sonuçlara göre, TTnin öz yeterlik üzerindeki etkisinin negatif ve anlamlı olduğu ($\beta=-0.175$; $p<.001$) gözlenmiştir. Bu sonuç, araştırmanın **H1 hipotezini desteklemektedir**. Düzenleyici role ilişkin sonuçlara göre etkileşimsel terimin (X^*W), öz yeterlik üzerindeki etkisinin anlamlı ve negatif yönlü olduğu ($\beta=-0.185$; $p<.001$) tespit edilmiştir. Yapılan eğim analizi neticesinde düzenleyici değişkenin etkisi grafiksel olarak Şekil 1'de gösterilmiştir. Bu bulguya göre **H2 hipotezi kabul** edilmektedir.

Şekil 1: Eğim Grafiği

TARTIŞMA ve SONUÇLAR

Bu çalışma, TTL ve öz-yeterlik arasındaki ilişkiye odaklanarak bu ilişkide duygusal tükenmişliğin düzenleyici rolünü ortaya koymuştur. TTL, liderlik faaliyetlerine yönelik bireyin TTli bir duygusal bağlılık ve davranış sergilemesidir. Tutku kavramı literatürde oldukça yenidir ve liderlik faaliyetlerindeki yansısı açısından oldukça önemli sonuçlar sunmaktadır. Bu açıdan bu kavramın örgütsel yansısını ortaya koymak literatüre bu konuda yeni bilgi sunmaktadır. Araştırma kapsamında veriler İzmir Atatürk Organize Sanayi bölgesinde ana metal sanayi sektöründe faaliyet gösteren işletme üst düzey yöneticilerinden oluşan örneklemeden elde edilmiştir.

Veri analizi neticesinde TTL ile öz-yeterlik arasında negatif bir ilişki olduğu ortaya çıkmıştır. TTnin örgütsel yansısı genellikle negatif sonuçlarla ilişkili olmuştur (Houfort, 2013; Curran, vd., 2015; Gillet vd., 2022). Liderlik literatüründe TT liderlerin tutkunun bu negatif doğasından etkilendiği ve öz-yeterlik gibi hayati motivasyon kaynaklarının bu negatif duygulanım sonucu kaybolduğu görülmektedir. Tutku ile ilgili çalışmaların çoğu, bireylerin tutkusunun kendi psikolojik durum ve davranışlarını etkilediğini vurgulamaktadır (Birkeland, 2014; Carbonneau vd., 2008). Yönetim uygulamaları perspektifinden, bulgular liderlerin yaptıkları işe karşı tutku beslediklerini ve takıntı düzeyindeki tutkunun liderlik sürecinde liderlerin öz-yeterliklerini negatif etkilediğini göstermiştir.

Bu noktada liderlerin aktivitelerine yönelik yoğun hislerini kontrol etmelerine olanak sağlayacak ve gerektiğinde ayrılmasına olanak sağlayacak kişisel ve çevresel müdahalelere ihtiyaç vardır. Başarı ve başarısızlığı tek bir aktiviteye atfetmek ya da kimlik oluşumunu faaliyet üzerinden tanımlamak liderlere zarar vermektedir. Öz-yeterlik seviyesindeki düşüş bireysel başarı ve iyi-olma hali üzerinde düşüşe neden olmaktadır. Yüksek düzeyde öz-yeterlik duygusu ise, yüksek performansın doğru bir göstergesi olarak kabul edilir (AL-Haddad ve Taleb, 2016).

Araştırmada ayrıca, duygusal tükenmişliğin bu ilişkide düzenleyici rolünün olduğu belirlenmiştir. Duygusal tükenmişlik ve duygusal tükenmişlik literatürü bireylerin yeterliklerine daha az güven duyduklarında, görevlerini yerine getirmek için daha az cesaretleri olduğunu ve kolayca tükenmişlik yaşadıklarını göstermektedir (Maryati ve Mustika, 2016). Diğer taraftan da, yüksek seviyedeki duygusal tükenmişliğin düşük öz-yeterlik sorununa neden

olduğu ortaya konmuştur (Mardani vd., 2015; Rubio vd., 2015). Literatürdeki duygusal tükenmişlik ile öz-yeterlik arasındaki karşılıklı sonuçlar açısından bakılacak olursa hedef yönelimi, güçlü bir öz-yeterlik duygusu ve değerler uyumunun bir kombinasyonunun tükenmişliğe karşı koruyucu bir etkiye sahip olduğunu öne sürülmekte ve kendilerini etkili olarak gören bireylerin daha düşük duygusal tükenme seviyeleri gösterdiği belirtilmektedir (Innstrand vd., 2011). Bu şekilde duygusal tükenmişliğin etkileri aza indirilebilir. Bu açıdan liderlerin öz-yeterlik duygusunu kaybetmemeleri adına duygusal tükenmişlik duygularını hafifletecek destekleyici faaliyetlerin güçlü bir öz-yeterliğe dönüşmesi kaçınılmaz.

Özetle, sonuçlar İkili Tutku Modeli doğrultusunda TTL'in olumsuz sonuçlarını ortaya koymuştur. Liderlik süreci bazen bir maraton gibidir ve liderler amaçları doğrultusunda takipçilerini etkileyerek performans sergilerler. Fakat bu süreç bazen mücadele gerektiren zor koşulları barındırır ve lider süreç başarımında faaliyete yönelik tutkusunu takıntı haline getirip kimlik tanımını bu faaliyet üzerinden gerçekleştirir. Bu noktada lider süreci/faaliyeti idare edemez süreç/faaliyet lideri idare etmeye başlar. Elbette bu durum liderin bireysel psikolojisini ve üyeler ile örgüt ilişkisini negatif etkileyecektir. Bu nedenle liderlerin pozitif duyguları tanıyarak sergilemesi ve bunu üye-örgüt süreçlerine dahil etmesi için eğitilmesi gerekir. Ayrıca, liderlerin takipçilerini etkileyebileceği göz önüne alındığında, liderler bireysel olumlu duyguları yöneterek ve ifade ederek grup etkinliğini artırabilir. Elbette liderler duygusal yaklaşımla astlarını motive etmek için daha fazla çaba sarf etmelidir.

Bununla birlikte, öz-yeterliğin üzerindeki etkileri göz önüne alındığında duygusal tükenmeyi azaltmaya odaklanan eğitim programları yeterli bir strateji olabilir. Bu eğitim programları, bireysel ve profesyonel öz-yeterliği geliştirmek için uygun bir strateji olabilir ve bu araştırmanın işaret ettiği gibi, öz-yeterlik zaman içinde değişebileceğinden, etkileri yalnızca koşullu olabileceğinden, eğitim faaliyetleri tekrarlı bir temelde sağlanmalıdır.

Bu çalışmanın bazı sınırlılıkları vardır. Öncelikle çalışmanın zaman kısıtı nedeniyle verilerin toplanması için harcanan sürenin kısıtlı olması ve diğer taraftan verilerin belirli bir bölgede belirli bir meslek grubu üzerinde yapılmış olması bu çalışmanın sınırlılıklarını oluşturmaktadır. Sonraki çalışmalar zamanlama ve sektör-kişi bağlamında farklı zaman ve bölgelerde ve farklı meslek grupları üzerinde yapılarak bu alandaki verilere katkı sağlayacaktır. Diğer önemli sınırlılık ise çalışmanın modelindeki değişkenler dışında kavramlar farklı model ve değişkenlerle incelenerek liderlik literatürüne etkisi tam olarak ortaya konulabilir. Buradan hareketle, mevcut bulgulara dayanarak, gelecekteki çalışmaların TTL kavramının örgüt yaşamındaki farklı kavramlarla ilişkisini ortaya koymalarını tavsiye ederiz.

ÖZET

Lily Pad Projesi, felakete dayanıklılık açısından mekansal düşünmeyi öğretmek amacıyla 2018 yazında geliştirilen ciddi bir coğrafi oyun olma özelliğine sahiptir. Oyun, Harvey Kasırgası'nın 30 Ağustos 2017'de varlığını sürdürdüğü Teksas, Dickinson şehrinde geçmektedir. Oyun, açık sokak haritasından navigasyon ve veri aktarımı ile elde edilen Coğrafi Bilgi Sistemlerini (CBS) entegre ederek geliştirilmiştir. Yükseklik modeli ve taşkın verileri şehri modellemek ve oyunu neredeyse gerçek hayatta doğrulukla yeniden tasarlamak için kullanılmıştır. Afet direncinin ve afet eğitiminin önemi günümüz koşullarında ülkemizde ve dünyada yaşanan doğal afetler, küresel iklim değişikliği felaketleri ile kendisini bir kez daha hissettirmektedir. Bu araştırmanın amacı 6. Sınıf sosyal bilgiler dersi öğretim programında yer alan kazanımların Project Lily Pad oyununa göre analiz edilmesidir. Bu kazanımların tespitinden sonraki aşama ise bu coğrafi oyuna entegre edilebilecek kazanımların öğrencilere bu yöntem ile öğretilmesidir. Araştırmanın doğasına uygun olması gerekçesiyle bu çalışmada nitel araştırma yöntemleri kullanılmıştır. Veri toplama aracı olarak doküman incelemesi yapılırken veri analizi ise doküman analizi ile desenlenmiştir. Sosyal Bilgiler dersi öğretim programına bakıldığında Kültür ve miras öğrenme alanından 1 kazanımın, İnsanlar, yerler ve çevreler öğrenme alanından 4 kazanımın v Üretim, dağıtım ve tüketim öğrenme alanından ise 1 kazanımın Project Lily Pad ile üst bilişsel düzeyde etkili bir biçimde öğretilmesi tespit edilmiştir.

Anahtar Kelimeler: Project Lily Pad, Coğrafi Oyunlar, Dijital Oyunlar, Sosyal Bilgiler Dersi Öğretim Programı

Analysis of the Achievements in the Classroom (6) Social Studies Course Curriculum According to the Project Lily Pad Game

ABSTRACT

The Lily Pad Project is a serious geographical game developed in the summer of 2018 with the aim of teaching spatial thinking in terms of disaster resistance. The game takes place in Dickinson, Texas, where Hurricane Harvey continued to exist on August 30, 2017. The game was developed by integrating Geographical Information Systems (GIS) obtained by navigation and data transfer from the open street map. The elevation model and flood data were used to model the city and redesign the game with almost real-life accuracy. The importance of disaster resilience and disaster education is once again made felt by the natural disasters experienced in our country and around the world, global climate change disasters in today's conditions. The aim of this research is 6. the classroom social studies course is the analysis of the achievements in the curriculum according to the Project Lily Pad game. The next stage after determining these achievements is to teach students about the achievements that can be integrated into this geographical game using this method. Qualitative research methods were used in this study on the grounds that they are appropriate to the nature of the research. While document analysis is performed as a data collection tool, data analysis is patterned with document analysis. When looking at the Social Studies course curriculum, it was determined that 1 acquisition from the field of culture and heritage learning, 4 acquisitions from the field of people, places and environments learning, and 1 acquisition from the field of production, distribution and consumption learning can be taught effectively at an upper cognitive level with Project Lily Pad.

Keywords: Project Lily Pad, Geographical Games, Digital Games, Social Studies Course Curriculum

GİRİŞ

Afet direnci, uzun vadeli gelişme potansiyelinden ödün vermeden bir bireye, topluluğa veya kurumlara, tehlikelere, rahatsızlıklara veya zorlamalara uyum sağlama ve bunlardan kurtulma becerisidir. Aslında afet yönetimine entegre bir yaklaşımdır. Yamori (2019) tarafından özetlendiği gibi, deneyimsel ve sosyal öğrenme bu yaklaşımın anahtarıdır. Ciddi doğal afetlerin sıklığı ve yoğunluğu mevcut önleyici eylemlerin kapasitesini aştığından, toplulukların refahının devam etmesi için eğitimin önemi büyüktür (Combaz, 2014).

Afet direnci aynı zamanda sürdürülebilir topluluklar oluşturmak, afet öncesi ve sonrası durumlarda ekonomik büyümeyi sağlamak için önemli bir araçtır; Afet direnci, afet yönetimi döngüsünün hem iyileşme hem de hazırlık aşamalarının anahtarıdır. Afetlerin doğası gereği mekansal doğası göz önüne alındığında, mekansal düşünme, afet direncinin kilit bir parçasıdır. İnsanların felaketlerin işlediği çoklu coğrafi ölçekleri anlamalarını sağlar ve mağdurların hızla değişen ve tehlikeli bir ortamda gezinmelerini, kalıpları gözlemlemelerini ve analiz etmelerini ve çevrelerinin yeni sınırlamalarını anlamalarını sağlamaktadır (Tomaszweski, 2017). Toplum direncini geliştirmek için kritik yöntemlerden birinin mekansal düşünme becerilerinin geliştirilmesi olduğu tespit edilmiştir.

KURAMSAL ÇERÇEVE

Coğrafi bilgi sistemleri (CBS) ve ilgili teknolojiler, hem kurumsal hem de yerel düzeylerde mekansal düşünme becerilerinin gelişimini kolaylaştırmak için çeşitli eğitim ortamlarında kullanılmaktadır (Lee ve Bednarz, 2009). Bu, toplumun iyileştirilmesi için büyüyen CBS kariyerleri alanında ve CBS'nin planlama ve politika çabalarında kullanılmasında görülmektedir. İlgili mekansal bilgiler, aksi takdirde fark edilmeyen coğrafi ilişkileri gözlemleyerek bu çabaları tamamlar; bazı toplulukları daha yüksek risk seviyelerine sokmak için çeşitli ekonomik, çevresel ve toplumsal kalıplar örtüşebilmektedir (Charsky, 2010). Bu kalıpları tanımlamak ve etkili afet müdahale rejimlerini bilgilendirmek için jeo-uzamsal veriler ve CBS teknolojileri kullanılmaktadır. Halka açık katılımcı CBS ve gönüllü coğrafi bilgi (GIS) gibi CBS'ye yönelik bazı yaklaşımlar, öğrencilerin veya bağımsız kullanıcıların "istilacı bir yabancı ot türünün kalıplarını analiz etme, suç kalıplarını haritalama" gibi gerçek dünyadaki sorunları ele almalarını sağlamaktadır (Kapp, 2012). Kentsel bir okul mahallesinde ve tehlikeleri haritalamak okul mahallesindeki terk edilmiş çöplükler tarafından sunulmuştur". Bu, programlardaki kişiler tarafından topluluklarından veya kasabalarından bilgi toplayarak ve aynı zamanda sakinleri çevreleri hakkında eğitmeye yardımcı olmak için "(kurumlar) ve yerel topluluklar arasındaki sınırları ve engelleri" yıkararak yapılabilir. Bu uygulamalar, deneyimli yerlileri kolaylaştırarak topluluklarının iyileştirilmesi için mekansal akıl yürütmeye katılmaya teşvik eder (Tversky, 1999).

CBS, kullanıcıların mekansal düşünmesini gerektirse de, CBS teknolojileri eğitim araçları olarak tartışılmaktadır. CBS yazılım araçları erişilebilirlik ve eğitim ile sınırlıdır, bu da eğitimsiz personelin sistemde rahatça gezinmesini ve çıktılarını anlamasını engeller (Golledge, 1999). Ek olarak, CBS programları, analiz, sunum ve iletişim dahil olmak üzere Ulusal Araştırma Konseyi (NRC) tarafından özetlendiği gibi "soruşturma sürecinin sonraki aşamalarına" odaklanmaktadır. Bu, kullanıcının felakete dayanıklılık için gerekli keşif,

tanımlama ve karar verme becerilerini içeren araştırmanın başlangıç ve ara aşamalarına katılmasını engeller.

Dahası, CBS yazılımı doğrusal bir kararlar dizisi olarak işlev görür; Birden fazla değişken değerlendirilemez veya aynı anda birden fazla eylem gerçekleştirilemez. Afetler çok sayıda düzeyde faaliyet gösterir ve yeterli yönetim, sürekli değişen bu unsurların kapsamlı bir şekilde anlaşılmasını gerektirir (Lindell, 2003).

BULGULAR VE TARTIŞMA

Afet direncinin ve afet eğitiminin önemi günümüz koşullarında ülkemizde ve dünyada yaşanan doğal afetler, küresel iklim değişikliği felaketleri ile kendisini bir kez daha hissettirmektedir. Bu araştırmanın amacı 6. Sınıf sosyal bilgiler dersi öğretim programında yer alan kazanımların Project Lily Pad oyununa göre analiz edilmesidir. Bu kazanımların tespitinden sonraki aşama ise bu coğrafi oyuna entegre edilebilecek kazanımların öğrencilere bu yöntem ile öğretilmesidir. Araştırmanın doğasına uygun olması gerekçesiyle bu çalışmada nitel araştırma yöntemleri kullanılmıştır. Veri toplama aracı olarak doküman incelemesi yapılırken veri analizi ise doküman analizi ile desenlenmiştir.

SONUÇ VE ÖNERİLER

Sosyal Bilgiler dersi öğretim programına bakıldığında Kültür ve miras öğrenme alanından 1 kazanımın, İnsanlar, yerler ve çevreler öğrenme alanından 4 kazanımın ve Üretim, dağıtım ve tüketim öğrenme alanından ise 1 kazanımın Project Lily Pad ile üst bilişsel düzeyde etkili bir biçimde öğretilmesi tespit edilmiştir.

ÖZET

21. yüzyılda bilgi teknolojilerinin hızla gelişmesi, internetin sosyal yaşamın ve iş yaşamının vazgeçilmez bir unsuru haline dönüşmesi birçok değişimi de beraberinde getirmiştir. Bugün birçok insan iş ve günlük yaşamda bilgisayar, akıllı telefon ve tablet gibi dijital araçları düzenli olarak kullanmaktadır. İnsanların mobil ve çevrim içi olmasının kolaylaştığı bu süreçte bireylerin özgürce iletişim kurduğu, paylaşım yaptığı ve tartıştığı bir dijital platform olarak sosyal medyanın kullanılmaya başlandığı görülmektedir. Yaşanan bu dijital gelişmeler; algılarımızı, fikirlerimizi, gündelik yaşamımızı yeniden şekillendirdiği gibi, çağın gereklerine uygun yeni dijital mesleklerin doğuşunu da hızlandırmıştır. Dijital dünyanın ihtiyaç duyduğu bu yeni iş alanları; yeni dijital yetkinlik ve becerileri de gerektirmektedir. Bu yeni iş alanlarının içinde sosyal medya mesleklerinin görünürlüğü biraz daha fazladır. Sosyal medyanın her yaştan kullanıcısının olması, özellikle çocukların ve gençlerin sosyal medyada yer alan aktörleri yakından takip etmeleri, sosyal medyadaki mesleklere olan ilgiyi artırmaktadır. Blogger, vlogger, youtuber, influencer vb. gibi isimlerle anılan sosyal medya fenomenlerinin paylaşımları ve sosyal medyadan elde ettikleri kazançla kurdukları yaşam kullanıcılar üzerinde bir algı yaratmakta ve bu meslekleri cazip meslekler haline getirmektedir. Dijital dönüşümün hızla devam ettiği ve bu dönüşümden mesleklerin de etkileneceği gerçeği kabul edilmelidir. Ancak bu süreçte özellikle yeni nesle dijital dünyanın gereklerine uygun olarak doğacak yeni mesleklerin öğretilmesi, bu mesleklere ilişkin becerilerin kazandırılması bu anlamda eğitim sisteminin yeniden dizayn edilmesi gerekmektedir. Bu anlamda gerek üniversite öncesi dönemde çocukların ve gençlerin eğitilmesi, gerekse üniversitelerde yeni bölümlerin açılarak bu becerilerin kazandırılması ve yeni meslekleri icra edecek neslin yetiştirilmesi önem taşımaktadır. Bu çalışmada, “Dijital dünyanın dijital meslekleri içerisinde daha çok görünürlüğe ve cazibeye sahip olan sosyal medyada var olan meslekler gelecek vadeli mi?”, “Sosyal medyadaki hangi meslekler gelecek vadeli?”, “Bu platformda yer alacak insanların yetiştirilmesi ve eğitilmesi yoluyla daha nitelikli hale gelmeleri sağlanabilir mi?”, “Daha kontrollü bir dijital platformda daha kaliteli içeriklerin üretilmesi mümkün hale getirilebilir mi?” sorularına cevap aranmaya çalışılmıştır.

Anahtar Kelimeler: Dijital Dönüşüm, Dijital Meslekler, Sosyal Medya, Sosyal Medya Meslekleri

The Place of Social Media Professions in the Digital Professions of the Digital World: Are Social Media Professions Promising Future?

ABSTRACT

In the 21st century, the rapid development of information technologies and the transformation of the internet into an indispensable element of social and business life have brought many changes. Today, many people regularly use digital tools such as computers, smartphones and tablets in business and daily life. In this process, where it becomes easier for people to be mobile and online, it is seen that social media has begun to be used as a digital

6th International CEO Communication, Economics, Organization & Social Sciences Congress

platform where individuals freely communicate, share and discuss. These digital developments; It has not only reshaped our perceptions, ideas, and our daily lives, but also accelerated the birth of new digital professions in line with the requirements of the age. These new business areas that the digital world needs; It also requires new digital competencies and skills. Social media professions are slightly more visible in these new business areas. The fact that social media has users of all ages, especially children and young people closely following the actors in the social media, increases the interest in the professions in the social media. Social media phenomena known as bloggers, vloggers, youtubers, influencers create a perception on users and make these professions attractive professions. The fact that digital transformation continues rapidly and professions will be affected by this transformation should be accepted. However, in this process, it is necessary to teach new generations that will be born in accordance with the requirements of the digital world, to gain skills related to these professions, and to redesign the education system in this sense. In this sense, it is important to educate children and young people in the pre-university period, to gain these skills by opening new departments in universities and to raise the generation that will practice new professions. In this study, it has been tried to find answers to the following questions. “Are the professions that exist in social media, which have more visibility and attraction among the digital professions of the digital world, promising future?”, “Which professions in social media are promising future?”, “Can the people who will take part in this platform be trained and trained to become more qualified?”, “Can it be made possible to produce higher quality content on a more controlled digital platform?”

Keywords: Digital Transformation, Digital Professions, Social Media, Social Media Professions

GİRİŞ

“Değişmeyen tek şey değişimin kendisidir”

Dijitalleşmenin hız kazandığı bu yeni çağda, bütün alışkanlıkların hızla değişmesiyle birlikte yeni dijital meslekler ortaya çıkmaya başlamıştır. Eski mesleklerin geleceğinin sorgulandığı, gelecekte var olması muhtemel olan yeni mesleklerin tartışıldığı bu dönemde, hem bugünü hem de yarını düşünerek yeni neslin eğitiminin yeniden şekillenmesi ve geleceğin şartlarına uygun olarak yetiştirilmesi gerekliliği önem arz etmektedir. Değişimin kaçınılmaz olduğu gerçeğinden hareketle bu değişime hızlı bir şekilde adapte olmak ve bu süreçte var olan kültürel, ahlaki değerleri koruyarak geleceğe hazırlanmak gerekmektedir. Dijital dünyanın dijital meslekleri diye adlandırılan yeni meslekler hızlı bir yükselme trendi göstermektedir.

Bu süreç bazı mesleklerin yok olmasına ve teknolojiye entegre olan yeni mesleklerin ortaya çıkmasına sebep olsa da, insanların bu yeni mesleklere adapte olabilmesi için ürün pazarlama, dijital pazarlama, yazılım geliştirme, şirket yönetimi, reklam, insan bilgisayar etkileşimi, veri depolama teknikleri, web geliştirme, yönetim danışmanlığı, girişimcilik, yapay zeka, veri bilimi, perakende satış, teknik destek, sosyal medya, grafik dizayn, bilgi yönetimi gibi dijital becerilere sahip olması gerekmektedir (Budak, 2021, 288-303).

Özellikle sosyal medyada kendini gösteren yeni meslekler çocuklar ve gençler için cazip meslekler olarak görülmektedir. Sosyal medyanın yarattığı fenomenler ve onların sosyal medyadan yansıyan görüntüleri bu meslekleri popüler hale getirmektedir. İçerik yöneticiliği, influencerlık, bloggerlık, vlogger, youtuberlık gibi meslekler sosyal medyada en çok karşılaşılan meslekler arasındadır. Bu mesleklerin şu an için birer profesyonel meslek olarak kabul edilmesi mümkün olmasa da, gelecekte bu tür mesleklerin yeni medyada farklı şekillerde yer bulabileceği de göz ardı edilmemelidir. Bu bağlamda bu mesleklerin profesyonelleşmesi için gerekli adımların atılması gerekmektedir.

1. DİJİTAL DÖNÜŞÜM

Yakın zamana kadar küreselleşme, bilgi toplumu gibi ifadeler üzerinde durulurken günümüzde ise Dijital çağ, Toplum 5.0, Süper akıllı toplum, Endüstri 5.0 gibi yeni ifadeler kullanılmaktadır. Tarihsel süreçte belirli zaman aralıklarında yaşanan yenilik ve dönüşüm hareketleri bu isimlendirmelerde etkin olmuştur (Koca, 2020: 4533).

Konuyla ilgili olarak Tofler, “Üçüncü Dalga” başlıklı kitabında bu dönüşümlere toplumsal ihtiyaçlar doğrultusunda yaşanan teknolojik gelişmelerin neden olduğuna vurgu yapmaktadır. Birinci dalganın tarıma geçiş ile ikinci dalganın endüstri devrimi ile üçüncü dalganın ise bilgi ve iletişim teknolojilerindeki gelişim neticesinde oluştuğunu ifade etmektedir (Tofler, 2008: 16). Aslında üçüncü dalga halen oluşmaya devam etmektedir. Her ülkenin gelişmişlik düzeyi farklı olduğundan bu dalganın geçerlilik düzeyi de farklılaşmaktadır. Her bir dalga dönemi işgücü nitelik ve niceliklerini doğrudan etkilemektedir.

2000’li yılların başıyla hız kazanan sayısallaştırma ve dijitalleştirme süreci tüm iş süreçlerinin köklü biçimde değişmesine yol açmıştır. Dijital teknolojilerin ürünü olan; robotlar, akıllı sistemler, e-ticaret, sosyal medya, e-devlet, mobil iletişim gibi uygulamalar üretim sektörünün yanı sıra hizmet sektörünün de radikal biçimde değişmesine yol açmıştır (Yankın, 2019:14).

Nitekim günümüz koşullarında bilişim teknolojilerinde yaşanan hızlı ve köklü değişimler dijital dönüşümü ortaya çıkarmıştır. Dijital dönüşüm, bilgi ve iletişim teknolojilerinin hızla gelişim göstermesi sonucunda tüm iş süreçlerinde etkinlik ve verimliliği sağlamak adına insan, robot ve makine üçlüsünün etkileşiminin sağlanmasıdır. Dijital dönüşüm ile ortaya çıkan muhteşem üçlü (insan-makine-robot) verimlilik, kalite, hız, esneklik, çeviklik sağlamaktadır. Gelişmiş

ülkelerde bu dönüşüm önemli fırsatlar sunmaktadır. Aksine gelişmekte olan ülkeler için ciddi bir tehdit oluşturmaktadır (Bonekamp & Sure, 2015).

1.1. Dijital Dönüşümle Değişen/Yeni Meslekler

Dijital dönüşüm beraberinde yeni meslekleri getirirken bazı mesleklerin de ömrünün bitmesine yol açmaktadır. İlâveten iş süreçlerinde robotların yer almaya başlaması sonucunda işsizliğin artacağı (niteliksiz çalışan oranı), sendikaların önemini kaybedeceği ve çalışma mevzuatında yeniliklerin yapılacağı savunulmaktadır (Yankın, 2019: 1).

Dijital dönüşüm beyaz yakalı çalışanların nitelik ve niceliklerinin yeniden ele alınmasını zorunlu kılmaktadır. Otomasyona dayalı bir dönem olduğu için mavi yakalıların işleri son bulmakta ve orta vasıflı beyaz yakalıların yeri beyaz yakalı rakipleri ile çok kolay doldurulabilmektedir (Eichhorst, 2017: 5).

Dijital dönüşümle önemini kaybetmeye başlayan mesleklerden bazıları: veri giriş yetkilileri, idari sekreterler, muhasebeciler, bordro görevlileri, denetçiler, genel ve operasyon yöneticileri, montaj işçileri, müşteri ilişkileri çalışanları, mekanik ve makine tamircileri, stok kontrol görevlileri, finansal analistler, posta hizmeti memurları, satış temsilcileri, banka gişe görevlileri, kapıdan kapıya satış yetkilileri, sokak satıcıları, elektronik ve telekom tesisatçıları ve tamircileri, inşaat işçileri, insan kaynakları uzmanları, eğitim ve gelişim uzmanlarıdır (Budak, 2021: 309).

Öte yandan dijital dönüşüm sayesinde ortaya çıkmış yeni meslekler arasında (Büyükyıldırım, 2023): Yapay zeka mimarı, bulut mimarı, web geliştirici, e-ticaret yöneticisi, dijital pazarlamacı, sosyal medya uzmanı, blog yazarı, vlogger (video blogger), SEO uzmanı, kullanıcı deneyimi tasarımcısı, insansız hava aracı operatörü yer almaktadır.

Başka bir çalışmada gelecek meslekleri listesinde şu meslekler sıralanmaktadır (Özdemir & Kılınç, 2019; akt. Çark, 2020:28): Akıllı ev tasarım yöneticisi, artırılmış gerçeklik seyahat oluşturucu, artık veri mühendisi, bireysel mikrobiyom yöneticisi, chatbot suç uzmanı, mülkiyet hakları sorumlusu, dijital terzi, dijital terapist, karbon mühendisliği, siber felaket tahmincisi, yapay zekâ tabanlı dijital stratejist, dikey çiftçilik danışmanı, etkileyici reklam denetçi, insan-robot ekip yöneticisi, kuantum makine öğrenme analisti, robo-psikolog, robo-sosyopsikolog, ses kullanıcı-deneyim (ux) tasarımcısı, trol yuvası tespit uzmanı, veri regülasyon uzmanı, yapay zekâ bias tespit uzmanı, yapay zekâ iş geliştirme yöneticisi, yapay zekâ destekli kullanıcı deneyim tasarımcısı, yapay zekâ tabanlı müşteri hizmetleri yöneticisi, yapay zekâ tabanlı sağlık teknisyeni, yapay zekâ tabanlı tedarik zinciri tasarımcısı, yapay zekâ mahremiyet uzmanı.

Yukarıda yer alan meslek adlarına bakıldığında dijital dönüşüm süreciyle birlikte bazı meslekler önemini kaybederken altın yakalı çalışanların öneminin giderek arttığı görülmektedir. Özetle, teknik nitelik ve becerileri bakımından bilişim teknolojileri, istatistik, insan-makine-robot etkileşiminde yer alabilecek bilgi ve becerilere sahip olunması zorunludur. Kişisel nitelik ve beceri bakımından ise özdenetim, zaman yönetimi, takım içinde yer alabilme, etkin iletişime sahip olunması gerekmektedir (Çark, 2020: 27). Ayrıca analitik düşünce ve inovasyon, dayanıklılık, stres toleransı ve esneklik, aktif öğrenme ve öğrenme stratejileri, karmaşık problem çözme ve fikir üretme, duygusal zekâ, eleştirel düşünme ve analiz, sorun giderme ve kullanıcı deneyimi, yaratıcılık, özgünlük ve girişim, servis oryantasyonu, liderlik ve sosyal etki, sistem analizi ve değerlendirmesi yer almaktadır (Budak, 2021: 309).

Gelişmiş ülkelerde bu mesleklere dair uzun bir yol alınmışken Türkiye için henüz yeni oluşan hatta oluşmakta olan mesleklerdir denilebilir. Geleceğin meslekleri adı ile ifade edilen konuya ülke yönetimi de önem vermekte ve bazı çalışmalar yürütmektedir. Nitekim “10 Temmuz 2018 tarihli ve 30474 sayılı Resmi Gazetede yayımlanarak yürürlüğe giren 1 Sayılı Cumhurbaşkanlığı Kararnamesi kapsamında T.C. Cumhurbaşkanlığı Dijital Dönüşüm Ofisi” kurulmuştur. Türkiye Cumhurbaşkanlığı Hükümet Sistemi'nin 2019 ile 2023 yılı arasına dair

ilk kalkınma planı dijital dönüşüme ve etkin insan kaynaklarına vurgu yapmaktadır. Akademi, sivil toplum kuruluşları, sanayi ve kamu birimlerinin kısacası tüm paydaşların dijital dönüşüme hazırlanmasına yönelik yapılması gerekenlere yer vermektedir (TCCDDO, 2023). Ayrıca BTK Akademi (2017), üniversite rektörlükleri bünyesinde uygulama ve araştırma merkezleri, Teknoparklar, TÜSİAD ve MÜSİAD kapsamında komiteler ve birimler oluşturulmuştur. Covid-19 salgın sürecinin dünya genelinde yaşanan bir pandemiye dönüşmesi, dijital dönüşümün hızlanmasında ve bununla birlikte yeni mesleklerin kabulünde etkili olmuştur.

2.SOSYAL MEDYA

Medyanın gelişimi, geleneksel medya ve interaktif medya olarak iki çağa ayrılmaktadır. Geleneksel medya, karasal televizyon yayıncılığı, radyo yayıncılığı ve basılı medyanın oluşturduğu tek yönlü iletişim kanallarını kapsayan bir medyadır. Dijital ve mobil teknolojilerin ortaya çıktığı yeni medya çağı ise etkileşim merkezlidir. Dijital iletişim imkânlarının etkisiyle geleneksel medya araçları köklü bir değişimle karşı karşıya kalmıştır. Geleneksel medyanın her aşaması bu süreçte bilgisayar ve internetin sunduğu imkânlarla yeniden yapılandırılmıştır. Teknolojik yeniliklere uyum sağlayanlar yayın hayatlarına devam ederken, uyum sağlayamayanların yayın hayatı sona ermiştir (Bostancı, 2019:18-19).

Bilişim teknolojilerindeki hızlı gelişmeler sonucunda ekonomik ilişkiler ve pazar dinamikleri radikal bir değişim geçirerek yeni iletişim biçimleri, yeni medya olgusunun yapılanmasında rol almıştır. Erken dönemde değişimin teknolojik unsurlarına vurgu yapılmış ve yeni medya, ‘internet ve telekomünikasyon ağları sayesinde enformasyon teknolojileri, medya ve bilgisayarların birbirine bağlanması’ olarak tanımlanmıştır. 2000’li yıllarda ise yeni medya, “bilginin serbestçe dolaşımını sağlayan, interaktif, kişilerarasından kitlesele doğru çeşitlenebilen, asenkronik teknolojiler” şeklinde tanımlanmıştır (Özdemir&Tellan, 2020: 384). 2000 yılı sonrasında iletişim teknolojilerinin gelişip değişmesi sonucunda sosyal medyanın üzerine inşa edildiği ağ platformları ortaya çıkmıştır. Analog iletişimin dijital iletişime dönüşmesi, veri akışını hızlandırarak yeni platformlarının ortaya çıkışını sağlamıştır (Özdemir&Tellan, 2020: 388-389).

Sosyal medya, “kullanıcılara enformasyon, düşünce, ilgi ve bilgi paylaşım imkânı tanıyarak karşılıklı etkileşim yaratan çevrimiçi araçlar ve web siteleri için ortak kullanılan bir terimdir” (Aslan, 2019: 40-41). Kişilere profil oluşturma biçimleri sunan (açık ve yarı açık) ve oluşturdukları profil ile başka kişilerin profilleriyle bağ kurma, bu bağ üzerinden dosya paylaşma imkânı veren web tabanlı hizmetler olarak tanımlanmaktadır (Oğuz, 2019: 72).

Günümüzde dünya genelinde olduğu gibi ülkemizde de büyük bir hızla sosyal medya kullanımı artmaktadır. Bu artışta dijital dönüşümün rolü büyüktür. Bunun temel nedeni toplumsal mekanların yerini dijital dönüşümle sanal mekâna bırakmasıdır. Sosyal medya sayesinde birçok kullanıcı paylaşımda bulunarak etkileşim sağlamaktadır (Özcan & Keskin, 2020). Sosyal medya kişilerin hem iş hem de özel yaşamlarına dair istedikleri bilgileri sunmada kolaylık, hız ve seçenek sunmaktadır. Böylece kişilere hem eğlenme hem de kendini ifade etme fırsatı vermektedir (Yurdağül & Elitaş, 2017).

Sosyal medyanın temel özellikleri arasında “katılım, açıklık, etkileşim, topluluk oluşturma, bağlantısallık ve multimedya, erişilebilirlik, kullanılabilirlik” yer almaktadır (Yıldırım Şen, 2023: 20). Hedef kitlelere ulaşmada hız ve kolaylık sağlamaktadır. Hangi ölçekte olursa olsun işletmelerin ürünlerini mevcut ve potansiyel müşterilere kolaylıkla ucuz biçimde ulaştırmaktadır. Ayrıca ünlülerin sosyal medya hesaplarından paylaştıkları ürünler çabucak talep görmektedir (Özcan & Keskin, 2020). Öte yandan bilgi kirliliği, bireyler arası iletişim kurmanın sanallığa taşınması, boşa zaman harcama gibi olumsuzlukları da mevcuttur (Çalışkan & Mencik, 2015: 264-265).

2.1.Sosyal Medyanın Getirdiği Meslekler

Sosyal medya, YouTube gibi platformların izlencesi üzerinden yeni mesleklerin ortaya çıkışında etkili olmaktadır. Bu durum geleneksel sistem anlayışını değiştirmektedir. Geleneksel sistemde işbölümü ve uzmanlaşmaya dayalı meslek ağlarıyla oluşmuş bir yapı söz konusudur. “Toplumun kurucu unsurları arasında yer alan uzmanlığa dayalı işbölümünün ve profesyonelliğin yıkımına işaret eden bu yeni kültür, mesleki mahrem boyutunda önemli bir sorunun varlığını hissettirmekte ve teşhircilik yoluyla ‘yanlış’ temsil edilen meslek gruplarının telafisi mümkün olmayan hasarlar aldığını net bir biçimde ortaya koymaktadır” (Yurdağül & Elitaş, 2017).

Sosyal medyanın gelişimiyle oluşmaya başlayan mesleklerin henüz tam anlamıyla profesyonelleşmediği gerçeğiyle birlikte, bu yeni medya ile gündeme gelen yeni meslekler arasında dijital reklamcılık, multimedya sistemleri geliştirme, sosyal medya danışmanlığı, basın ve medya danışmanlığı, internet gazeteciliği, sosyal medya uzmanı, medya yöneticisi, blogger, youtuber, sosyal medya editörü, influencerlık, içerik yöneticiliği sayılabilir (Güler & Akça 2021:114-115).

Gürbüz (2023) ise, sosyal medya mesleklerini şöyle sıralamıştır: Sosyal medya uzmanı, sosyal medya etkinlik uzmanı, e-ticaret uzmanı, dijital pazarlama uzmanı, marka temsilcisi, blogger, sosyal medya strateji uzmanı, içerik editörü, sosyal medya editörü, sosyal medya danışmanı, sosyal medya hukuk danışmanı, sosyal medya muhabiri. Gürbüz (2023), “Sosyal medya alanındaki mesleklerden birinde çalışmak için eğitilmiş olmanın gerekli olduğunu ve şu anda pek çok üniversitede sosyal medya ve yeni medyayla ilgili bölümlerin bulunduğunu belirtiyor ve bu alanda bir bölümü bitirmemiş olanlar için de sosyal medya meslekleriyle ilgili sertifika alınabilecek kurslara da katılmanın da bir alternatif olabileceğini vurguluyor.

LinkedIn, Kariyer.net gibi dijital platformların ve firmaların (e-ticaret firmalarının, dijital içerik üreten firmaların, danışmanlık ve yazılım firmalarının) web sitelerindeki iş ilanlarında sosyal medya uzmanı, sosyal medya içerik yöneticisi, SEO uzmanı aradıkları görülmektedir.

Sosyal medyada görünürlüğü olan dijital çağın ünlüleri olarak addedilen fenomenler, Youtube, Facebook, Instagram, Twitter gibi sosyal medya platformlarından yayınladıkları içeriklerle kullanıcıların dikkatini çeken, içeriklerin sosyal medyada geniş kitlelere yayılmasıyla popülerliğini artıran kişilerdir (Bostancı, 2019: 86). Bu anlamda her bir sosyal medya platformu kendi fenomenlerini yaratmakta ve bu kişiler yarattıkları çevrimiçi sanal kişiliklerinin beğenilmeleri, takip edilmeleri nedeniyle de gelir elde etmektedirler. Bu da pek çok kişiye paylaşım yapma konusunda cazip gelmekte, kolay yoldan ünlü olma, şöhret ve para kazanma, keşfedilme umudu ile kendisini özenle pazarlamasına neden olmaktadır. Bu alanda ünlü olanlar buldukları sosyal ağa göre “Youtuber”, “TikToker” gibi isimler almaktadır (Soygüder-Baturlar& Günay-Yavuz, 2021: 86). Bu bağlamda sosyal medya mesleklerinin bazıları aşağıda ayrıntılı olarak incelenmiştir.

2.1.1.Sosyal Medya Uzmanlığı

Sosyal medyanın ortaya çıkardığı mesleklerin başında yer alan sosyal medya uzmanlığı komplike bir meslektir. Sosyal medya üzerinden bilgilerin paylaşımına artan talep sonrasında markalarda ilgi duyarak reklam ve imaj politikalarında sosyal medyaya yer vermişlerdir. İşletmeler başta pazarlama, üretim gibi fonksiyonlarına dair iş süreçlerinde yeniden düzenlemeye gitmişlerdir. Bunun sonucunda ise sosyal medya uzmanlığı meslek olarak ortaya çıkmıştır. Facebook, Twitter, Youtube gibi sosyal medya platformlarından daha fazla müşteriye ulaşma çabası içine girmektedirler. Bu dijital ortamda markaların konumlandırılması, marka imajının artırılması, paylaşım stratejilerinin seçimi, rakiplerin analizi, mevcut ve potansiyel müşterilerin eğilimlerinin takibi gibi iş başlıklarını kapsamaktadır (Beliktay, 2012).

2.1.2. İçerik Yöneticisi

Web siteleri ve sosyal medya mecralarında paylaşılmak amacıyla hazırlanan içerikleri denetlemeyle görevli kişiye verilen addır. İçerik yöneticisi; içerik analizi ve paylaşımını denetlemekten, içerik yazarı ve editörünün oluşturduğu paylaşımları kontrol etmekten ve uygunluğunu denetlemekten sorumlu kişidir.

(<https://www.kariyer.net/pozisyonlar/icerik+yoneticisi/nedir>).

2.1.3. SEO Uzmanı (Arama Motoru Optimizasyonu Uzmanı)

SEO uzmanı, arama motoru optimizasyonu konusunda uzmanlaşmış kişidir. Bir web sitesinin iyileştirilmesinde yardımcı olacak teknikleri uygulayarak bu sitenin önemli arama motorlarında en üst sıralara yerleştirmesine yardımcı olan uzmandır (<https://www.albertsolino.com/blog/seo-uzmani/>).

2.1.4. Blogger

Blogger, web sitesi için orijinal içerik üreten kişiye verilen addır. Konuları araştırarak hedef kitlenin bu konulara dikkatini çekmek için doğru teknik ve yöntem bulan kişidir. Özellikle blog yazılarını tanıtmak için sosyal medya, e-posta pazarlama ve diğer araçları kullanırlar. Bloggerlar bir web sitesi açıp kaliteli içerikler oluşturarak web sitelerine çok sayıda ziyaretçi çektiklerinde reklam üzerinden gelir elde edebildikleri gibi freelance olarak içerik üretip, satabilirler. İçerik üretimi şirketlerinde, bilişim ve yazılım şirketlerinde ve web tasarım şirketlerinde iş bulabilirler (<https://www.iienstitu.com/blog/blogger-nedir-ne-is-yapar>).

2.1.5. Vlogger

Video-logger” kelimesinin kısaltılmış halidir. Bu kişiler video odaklı hareket ederler. Yani video üreten, kaydeden kişilerdir. Genellikle günlük konseptte içerik oluştururlar. Günlük yaşamlarından ya da özel bir başlıkla ilgili kesitler kaydederler. Aslında vlogger, blogger’ın video halidir (Güven, 2018).

2.1.6. Youtuber

Youtuberlar, farklı temalarla ilgili sosyal medyada video yayınlarlar. Oyun, teknoloji, moda, güzellik, eğitim, müzik, komedi gibi çeşitli temalarda videolar yayınlamak için Youtube kanalı açan kullanıcılarıdır. Youtuberlar, yayınladıkları videolarla youtube reklam ağına dahil olarak para kazanmaktadırlar. Takipçi ve izlenme sayılarıyla önemli gelir elde eden ve birer fenomene dönüşen Youtuber sayısı oldukça fazladır (Bostancı, 2019:38). Paylaştıkları videolar ile yüksek takipçi sayılarına ulaşan YouTuber’lar, oldukça geniş kitleleri, tavsiyeleri, düşünceleri, önerileri ile etkilemektedir (Eru vd., 2018:222).

2.1.7. Influencer

Influencerlık, “Sosyal medya aracılığıyla farklı ürün veya hizmetleri kullanarak takipçilerini etkileyen kişi” olarak tanımlanmaktadır (Demir, 2023:43). “Influencerlar, bireysel yaşamlarının ve hayat tarzlarının metinler ve görsel anlatımı vasıtasıyla bloglarda ve sosyal medyada nispeten büyük takipçi toplayan, “reklam vereni” blog ve sosyal medya paylaşımlarına dâhil ederek takiplerinden para kazanan sıradan internet kullanıcılarıdır” (Ünlü Dalaylı, 2021:23). Takipçi sayısı ve paylaşımlarının beğenilme oranı yüksek olan influencerlar hedef müşterilere ulaşma aracı olarak işletmelerin dikkatini çekmektedirler (<https://6harf.com/sosyal-medya-sayesinde-hayatimiza-giren-meslekler/>). Sosyal medya kanallarında yüksek takipçi sayılarına sahip Influencer’ların paylaşımlarıyla bir ürün ya da hizmet hakkındaki deneyimlerini takipçilerine aktarması ise influencer marketing olarak ifade edilebilir (Kıran vd., 2019:103).

2.1.8. TikToker

TikTok'ta içerik üreten kişilere TikToker denilmektedir (Tam, 2022: 149). Cep telefonuyla erişilebilen uygulama, kullanıcıların 3 ila 15 saniye veya 3 ila 60 saniye içinde kısa dudak senkronizasyonu, danslar, oyun oynama, kendin yap, yemek videoları vb. oluşturmasına olanak tanır. 60 saniyeye kadar video yayınlanmasına olanak tanıyan bu uygulama, kolaylıkla ses, efekt, müzik, dizi-film replikleri gibi eklemeler yapmaya da izin vermektedir. İçeriğin şirket yerine kullanıcılar tarafından üretildiği tipik bir kullanıcı tarafından oluşturulan içerik platformudur. Video üretimi dışında, kullanıcılar, diğer kullanıcılar tarafından oluşturulan videoları görüntüleyerek, paylaşarak ve bunlara yorum yaparak TikTok'a dahil olurlar. (Soygüder Baturlar& Günay Yavuz., 2021: 91; Yang, 2020:4).

2.2.Sosyal Medyadaki İşler Meslek Olarak Addedilebilir mi?

Bir şeyin iş ya da meslek olarak kabul edilebilmesi profesyonellik kriterine bağlıdır. Profesyonellik, bir işle ilgili görevlerin ifası için bir eğitim görme, bu eğitimde edinilen ve öğrenilen bilgi ve birikimlerin eyleme geçirilmesi sürecidir. Bu bağlamda profesyonellik, eğitim almış uzman kişilerce yürütülen meslekler şeklinde ifade edilebilir. Bir işi profesyonel bir meslek olarak değerlendirebilmek için ilk koşul; bir süreci kapsayan etkin bir eğitimin alınması gerekliliğidir. Yeni medyada varlık gösteren mesleklere bakıldığında, bu mecrada iş yapan bireylerin genellikle alaylı bir biçimde yetiştiği görülmektedir. Bireylerin kendi çabalarıyla elde ettiği bir meslek edinme sürecinden bahsedilebilir. Ancak bu yeni medya alanının doğru biçimde gelişmesi için, eğitimle desteklenmesi ve profesyonel anlamda işinin uzmanı olan bireylerin yetiştirilmesi gerekmektedir. (Güler&Akça, 2021: 115)

Şimşek & Çelik (2012:6) bu koşula ek olarak, toplumda bir uğraşın meslek sayılabilmesi için taşınması gereken diğer koşulları şu şekilde sıralamaktadır:

- Belli bir eğitimi tamamlama ve konusunda sistemli bir bilgi sahibi olma,
- Uzmanlaşmış bir uygulama,
- Mesleğe giriş ve mesleğin icrasında kesin standartlara sahip olma,
- Ahlak kurallarına uyma,
- Sosyal sorumluluk ve kendi kendini kontrol etme.

YÖK'ÜN 2023 Tercih atlası verilerine göre Türkiye'de lisans ve önlisans düzeyinde 'Yeni Medya', 'Yeni Medya ve İletişim', 'Yeni Medya Gazetecilik' ve 'Sosyal Medya Yöneticiliği' bölümlerinin olduğu görülmektedir. Yeni Medya bölümünün 3 Vakıf Üniversitesinde, 'Yeni Medya ve Gazetecilik' bölümünün Atatürk Üniversitesi Açıköğretim Fakültesinde Önlisans düzeyinde, 'Yeni Medya ve İletişim' bölümünün 20 üniversitede fakülteler bünyesinde (3'ü Devlet, 17'si Vakıf üniversitesi olmak üzere) ve 'Yeni Medya' bölümünün Karamanoğlu Mehmetbey Üniversitesinde Uygulamalı Bilimler Yüksekokulunda 4 yıllık bir bölüm şeklinde açılmış olduğu, 'Sosyal Medya Yöneticiliği'nin ise Anadolu Üniversitesi Açıköğretim Fakültesinde 2 yıllık ön lisans programı olarak açılmış olduğu görülmektedir (YÖK Tercih Atlası, 2023).

Bununla birlikte, 'Medya ve İletişim Yönetimi', 'Sosyal Medya ve İletişim', 'Dijital Medya ve Görsel İşitsel Tasarım', 'Yeni Medya ve İletişim', 'Yeni Medya ve İletişim Yönetimi', 'Yeni Medya ve Gazetecilik', 'Görsel İletişim Dijital Medya', 'Yeni Medya', 'Yeni Medya ve Gazetecilik', 'Yeni Medya İletişim ve Habercilik' isimli tezli ve tezsiz yüksek lisans bölümlerinin ise çoğunlukla İstanbul'daki üniversitelerde, Ankara ve İzmir'de açılmış olduğu görülmektedir (Özarslan, 2019:163).

Türkiye'de toplam 208 üniversite bulunmaktadır. Bu üniversitelerin 129'u devlet üniversitesi, 75'i Vakıf Üniversitesi ve 4'ü de Vakıf Meslek Yüksekokuludur (<https://tr.wikipedia.org>). Bu bağlamda bir değerlendirme yapıldığında devlet üniversitelerinde 'Yeni Medya ve Sosyal

Medya' bölümlerinin çok kısıtlı üniversitede açıldığı, bu bölümlerin daha çok vakıf üniversitelerinde bulunduğu, Türkiye'deki toplam üniversite sayısına bakıldığında henüz bu bölümlerin Türkiye geneline yayılmadığı ancak bu anlamda üniversitelerde bazı adımların atıldığı görülmektedir. Gelecek vadeden sosyal medya mesleklerinin uzmanları tarafından profesyonelce yürütülmeleri için ülke genelinde yaygın bir eğitimin sağlanması gerekmektedir. Sosyal medya meslekleri gelişme trendi gösterirken ve üniversitelerde eğitim veren bölümlerle birlikte bu meslekler profesyonelleşirken bu mesleklere ilişkin etik kuralların oluşturulması da gerekmektedir. Hem yeni medya üzerinden etik ihlalleriyle ilgili yapılan çalışmaların artırılması, gerekli yasaların çıkarılması, hem de mesleki anlamda etik standartların oluşturulması yeni medya alanlarının daha güvenli ve kontrollü bir şekilde gelişmesi ve bu mesleklerin saygınlığının artması bakımından önem arz etmektedir.

2.3.Sosyal Medya Meslekleri Yeni Nesil İçin Çekici Mi?

Sosyal medyanın özellikle yeni neslin meslek seçiminde etkili olduğu son zamanlarda çocukların ve ergenlerin meslek seçimlerinin youtuber, gamer veya influencer şeklinde olduğu ve daha kolay para kazanma, ünlü olma ve tanınmanın yeni nesil için daha çekici geldiği uzmanlar tarafından ifade edilmektedir (CNN Türk, 2023).

Ergen (2019) ilköğretim öğrencileri üzerinde yaptığı çalışmasında çocukların Youtuberları, kendilerine örnek alarak büyüyünce Youtuber olmak istedikleri sonucuna ulaşmış ve çalışmada çocuklar; tanınmak, bilinmek, popüler olmak ve herkes tarafından sevilme arzusuyla Youtuber olmak istediklerini belirtmişlerdir.

Kızılkaya (2021)'in önlisans öğrencileriyle gerçekleştirdiği nitel çalışmada TikTok kullanan gençler videoları beğenildikçe ve takipçi sayısı arttıkça özgüven kazandıklarını belirtmişlerdir. Çalışmada bir öğrenci, TikTok'taki video üretim kolaylığı üzerinden bir kariyer planı yaptığını ve bu sayede gelir edinme motivasyonu edindiğini ifade etmiştir.

Çocukların ve gençlerin doğru meslek tercihi yapabilmesi ve yeni medya alanından olumlu biçimde etkilenebilmesi için ebeveynlere de büyük görevler düşmektedir. Dijital çağın gereklilikleri konusunda zorlanan ebeveynlerin öncelikle teknolojiye ilgi duymaları, yeniliklere açık olmaları gerekmektedir. Dijital çağda başarılı bir ebeveyn olabilmek için, dijital çocukların ve gençlerin kullandığı teknolojileri yakından tanımak, onların iletişim ve sosyalleşme biçimlerine ayak uydurmak konusunda adım atılmalıdır. Yasaklayıcı yöntemler yerine gerektiğinde sınırlandırıcı ve özellikle teşvik edici yöntemler tercih edilmelidir (Bostancı, 2019:78).

SONUÇ

Dijital dünyanın dijital mesleklerinin ve bu meslekler içinde yer alan sosyal medya mesleklerinin gün geçtikçe daha fazla öne çıktığı görülmektedir. Sosyal medya mesleklerinin gelecekte var olması bugünden bu alanlara doğru yatırım yapılmasına bağlıdır. Sosyal medyada varlık gösteren influencerlar, youtuberlar, bloggerlar, tiktokerlar yani sosyal medyanın fenomenleri yeni neslin bugüne ve geleceğe dair algılarını yeniden şekillendirmektedir. Şu anda görünürlüğü en fazla olan bu meslekler çocuklar ve gençler için kolay para kazanmanın yolu olarak da görülebilmektedir. Ancak bu mesleklerin birçoğunun profesyonellikten uzak bir şekilde yürütüldüğü, yeni medya alanında üretilen içeriklerin bir kısmının etik kaygılardan uzak bir şekilde üretildiği ve paylaşıldığı görülmektedir. Hem toplumun ahlaki ve kültürel değerlerinin korunması hem de yeni neslin yeni medyanın yeni mesleklerini profesyonel bir şekilde yürütebilmesi için bu sürecin doğru bir şekilde yönetilmesi gerekliliği ortaya çıkmaktadır.

Sadece görünürlüğü olan bu mesleklerin değil görünürlüğü olmayan ancak daha fazla gelecek vadeden diğer sosyal medya ve yeni medya mesleklerinin de profesyonelleşmesi bağlamında

eğitim müfredatlarının yeniden güncellenmesi, ilkökul, ortaokul, lise, ön lisans, lisans ve lisansüstü düzeyde yeni derslerin/yeni bölümlerin açılması, yeni neslin dijital becerilerinin ve yetkinliklerinin geleceğin mesleklerine uygun biçimde yeniden dizayn edilmesi gerekmektedir. Ayrıca bu mesleklere ilişkin ahlaki etik kuralların oluşturulması, yeni medyanın sıkı bir denetime tabi olması, bu anlamda gerekli alt yapının tesisi de gerekmektedir. Şunu unutmamak gerekir ki ‘Kontrolsüz güç, güç değildir’. Bu bağlamda ailelere de büyük sorumluluklar düşmektedir. Dijital ebeveynlerin bilinçli yaklaşımları da gençlerin ve çocukların dijital meslek tercihlerinde bilinçli hareket etmelerinde yardımcı olacaktır.

Yönetim Alanında Metaverse

Assoc. Prof. Dr. Özgür ÇARK

Bolu Abant İzzet Baysal University

ozgurcark@ibu.edu.tr

Orcid: 0000-0002-4881-0542

ÖZET

Son yıllarda özellikle endüstri 4.0 bileşenleri olarak ifade edilen teknolojilerde yaşanan gelişmeler ile birlikte meta ve evren kelimelerinden müteşekkil olan “metaverse” kavramı pek çok disiplin tarafından ele alınmaktadır. Yönetim ve işletme sahasının da bu güncel eğilimden etkilendiği görülmektedir. Çok yakın bir geçmişi olan bu konu ile ilgili yönetim ve işletme alanında uluslararası alan yazının gelmiş olduğu nokta, çalışma konuları, farklı konularla olan ilişkileri ve konunun sınırları ile ilgili bilgi edinmek amacıyla bu çalışma yürütülmüştür. Bu maksatla WoS veri tabanında alan adı kısmında “metaverse” anahtar kelimesi ile yapılan arama sonucunda 1069 adet yayına ulaşılmıştır. Bu yayınlardan işletme ve yönetim alanında olanlar filtrelenmiş ve geriye kalan 69 yayın incelenmiştir. Yapılan incelemede son iki yılda konuya olan ilginin bir hayli yükseldiği görülmektedir. ABD, UK, Almanya ve Çin Halk Cumhuriyeti merkezli yayınlar başı çekerken özellikle pazarlama alanı ve turizm işletmesi alanında çalışmaların öne çıktığı görülmektedir.

Anahtar Kelimeler: Metaverse, İşletme, Yönetim, Literatür incelemesi

Metaverse in Management Discipline

ABSTRACT

In recent years, the concept of "metaverse", which consists of the words meta and universe, has been discussed by many disciplines, especially with the developments in technologies expressed as industry 4.0 components. It is seen that the field of management and business is also affected by this current trend. This study was carried out in order to obtain information about the point of the international literature in the field of management and business related to this subject, which has a very recent history, its working subjects, its relations with different subjects and the boundaries of the subject. For this purpose, 1069 publications were found as a result of the search made with the keyword "metaverse" in the domain name section of the WoS database. Among these publications, those in the field of business and management were filtered and the remaining 69 publications were examined. In the examination, it is seen that the interest in the subject has increased considerably in the last two years. While publications based in the USA, UK, Germany and the People's Republic of China take the lead, it is seen that studies in the field of marketing and tourism management stand out.

Keywords: Metaverse, Business, Management, Literature review

GİRİŞ

İnternet ve bilgi teknolojilerinde yaşanan gelişmeler doğrultusunda bu teknolojilerin kullanıcı sayılarının her geçen gün katlanarak arttığı görülmektedir. 2022 yılında 7,91 milyar dünyada yaşayan insanın 4,95 milyarı yani %62,5'i internet kullanıcısı iken 2023 yılında 8,01 milyar insanın 5,16 milyarı yani %64,4'ü internet kullanıcı olmuştur. 2022 yılında 5,31 milyar olan mobil telefon kullanıcı sayısı 2023 yılında 5,44 milyara yükselmiştir. Benzer artış sosyal medya kullanıcı sayılarında da görülmekte olup 2022 yılında dünya nüfusunun %58,4'ü yani 4,62 milyarı sosyal medya kullanıcısı iken 2023 yılında bu oran %59,4'e yani 4,76 milyara yükselmiştir. Farklı bir deyişle 2023 yılında 2022 yılına kıyasla dünya nüfusu %0,8 artarken internet kullanıcılarının %1,9, aktif sosyal medya kullanıcılarının oranı %3, mobil telefon kullanıcılarının oranı ise %3,2 artmıştır (We Are Social, 2023).

Türkiye'de durum dünyadakine benzer olup, 2022 yılında 85,30 milyon olan ülke nüfusu 2023 yılında 499 bin kişi ile %0,6'lık bir artış ile dünyada nüfus artış sıralamasında 18.sırada yer almaktadır. 2022 yılında nüfusun yaklaşık 78 milyonu yani yaklaşık %91,4'ü mobil telefon kullanıcısı iken bu rakam 2023 yılında %3,2 yani 2,6 milyonluk artışla 81,68 milyona yani nüfusun yaklaşık %95,4'üne yükselmiştir. Aynı şekilde 2022 yılında Türkiye'de internet kullanıcılarının 69,95 milyon ile %82 olan oranı, 2023 yılında %0,6'lık bir oran ve 416 bin kişilik artışla %83,4'lük bir oranla 71,38 milyona yükselmiştir (We Are Social, 2023).

Dünyadaki ve Türkiye'deki bu rakamlar bize internet kullanımını ve dijital teknolojilere olan alakanın her geçen gün giderek yükseldiğini göstermesi açısından oldukça manidardır. Bu teknolojilerin ve kullanım oranlarının artışı ile birlikte "metaverse, sanal evren, ikinci dünya, sanal dünya, sanal gerçeklik, artırılmış gerçeklik gibi kavramların" kavram dünyamıza dahil olduklarını gözlemlemekteyiz. Bu kavramın bugün genel geçer bir moda kavram mı yoksa bireysel, örgütsel ve toplumsal köklü değişimlere neden olacak devrimsel bir teknoloji olup olmadığının anlaşılabilmesi oldukça önemlidir. Özellikle bu tarz teknolojilerin yıkıcı etkilerinden korunabilmek ve yapıcı etkilerinden istifade edebilmek bu oldukça önemli bir ön alma olacaktır. Bugün gerek özel sektörde gerek akademik camiada bu teknolojinin artan bir ilgiye mazhar olduğu görülmektedir.

Özellikle endüstri 4.0, toplum 5.0 gibi dijital teknolojilerinin endüstriyel yaşamda ve sosyal yaşamda bileşenleri ile birlikte yaygınlaşması neticesinde bu yayılma hızının ivmesinin giderek arttığı görülmektedir. Nesnelerin interneti, bulut bilişim, yapay zekâ, siberetik fiziksel sistemler, robotik gibi teknoloji bileşenleri ve bu bileşenlerinin tesir ve etkilerinin artık sadece endüstriyel yaşamda değil gündelik yaşantının hemen hemen her noktasında görülmeye başladığı zamanların içinden geçilmektedir.

Özellikle bulut bilişim, yapay zekâ ve nesnelerin interneti alanında yaşanan gelişmeler nihai sonucu olarak giyilebilir teknolojiler alanında önemli teknolojik gelişmeler yaşandığı bugünün bir gerçeği olagelmıştır. Veri yakalayıcısı küçük sensörlerin bulut bilişim alt yapısının sunduğu imkanlar doğrultusunda topladıkları verileri yapay zekâ ile donatılmış veri tabanlarına iletmeleri, yapay zeka tarafından bu verilerin anlamlı enformasyona ve bilgiye dönüştürülmesi sonucunda kullanıcılara sözlü, görsel, işitsel ve dokunsal bildirimler ile geri bildiri yapılması şeklinde işleyen bir süreç artırılmış bir sanal gerçeklik ortamı sunmasının önünü açmıştır. Bu durum özellikle metaverse kavramını literatüre kazandırmış ve bugün hemen her disiplin

tarafından merak edilen ve incelenen bir konuma getirmiştir. Yönetim alanı da son yıllarda bu kavrama ve bu kavramın getirdiği yeniliklere ilgi duymaya başlamış olup halihazırda konuyla ilgili sınırların ne olduğu daha tam olarak netleşmemiştir.

Bu çalışmada metaverse kavramının yönetim disiplini açısından ne ifade ettiği, yönetim disiplini içerisinde konunun hangi boyutları ile hangi ülkeler, hangi araştırmacılar tarafından hangi yoğunluk ve kavramlar ile irtibatlı olarak çalışıldığının anlaşılabilmesi amaçlanmıştır. Bu doğrultuda uluslararası alan yazınına ihtiva eden WoS veri tabanlarında yönetim sahasında “metaverse” hakkında yürütülen çalışmalar bibliyometrik yöntem ile incelenmiştir. Ulaşılan bulgular doğrultusunda yönetim alan yazını içerisinde kavramın sınırları, sınırlılıkları ve çalışma yoğunluğu ile ilgili bilgiler değerlendirilmiştir.

1. META-VERSE

Uluslararası alan yazında ilk olarak “metaverse” kavramının yazar Neal Stephenson tarafından 1992 yılında yazdığı “Snow Crash” adlı eserinde kullanıldığı ifade edilmekte olup, ardından 2003 yılında etkileşime başlayan “second life” platformu kavramın yaygınlaşmasına neden olmuştur (Sparkes, 2021). Kavramın asıl ünü ve yaygınlaşmasında ise Mark Zuckerberg’in 2021 yılı Ekim ayında Facebook adlı sosyal medya platformunun ismini “meta” ismine dönüştüreceği ve metaverse teknolojisine ciddi yatırımlar yapacağını duyurmasının etkisi büyüktür (Damar, 2021, s. 1). Zuckerberg Facebook’un mevcut web ve uygulama sürümlerine ek olarak, artırılmış gerçeklik veya sanal gerçeklik evrenleri sunacağını bildirmesi neticesinde dünyanın metaverse kavramına ilgisi daha da artmıştır (Sparkes, 2021).

Metaverse ve platformlardaki yayınların sayısı hızla artmasına rağmen, metaverse kavramının yaygın olarak kabul edilen ve tutarlı bir tanımı yoktur (Peukert vd., 2022; Schobel & Leimeister, 2023). Bu konu hakkında çalışanlar kendi disiplinleri açısından çeşitli tanımlar geliştirmişlerdir.

Bilgisayar sihirbazları, sosyal medya ağları, sanal 3 boyutlu dünyalar, artırılmış gerçeklik uygulamaları ve karşılıklı ağ oyunları üzerinden gelişen ve tanımlanan bu yeni kavram veya teknoloji; gerçek dünyadaki gerçekliği veya alternatif olarak sanallığı algılama şeklimizi değiştirecek ve böylece gerçek dünyaya paralel olarak var olacak dijital dünya olarak tanımlanmaktadır (Panda, 2022, s. 3).

Bugün metaverse pek çok alanda görülmektedir. Özellikle oyun endüstrisinde adından sıklıkla söz ettiren metaverse çevrimiçi oyun sitelerinde “secondlife” gibi sitelerde gerçek hayat ile sanal hayatı birleştirerek metevren deneyimleri sunmaktadır (Papagiannidis vd., 2008, ss. 611-612).

2. YÖNETİM VE İŞLETME ALANINDA META-VERSE

Şu anda, alan yazında ve sektörlerde görebildiğimiz kadarıyla, herkes kendi metaverse tanımını yapıyor ve metaverse kavramından ne anladığını ifade etmeye çalışıyor, bu nedenle, konu hakkında mevcut uygulama alanlarının yanı sıra görüşler de oldukça çeşitlidir. Hemen hemen her büyük dijital oyuncu şu anda metaverse konseptini tartışıyor ve bunun işlerini nasıl etkileyebileceğini keşfetmeye çalışıyor. Hatta bazı şirketlerin, metaverse çatısı altında (örn. The

Sandbox) ürünlerinin ve platformlarının reklamlarını bile yapmaya başladığı görülmektedir (Peukert vd., 2022, s. 401).

Bugün metaverse dendiğinde hemen hemen geleneksel tüm sektörlerin bu dönüşüme dahil olduğu dikkat çekmektedir. Pazarlama ve satış sahasında da metaverse yoğun olarak tartışılmaktadır. Artırılmış gerçeklik pazarlaması çatısı altında stratejiler, potansiyel zorluk ve avantajlarını ele alan pek çok çalışma görülmektedir (Rauschnabel vd., 2022, s. 1140). Perakendecilik sektörü de bu alanlardan biridir. Geleneksel perakendeciliğin e-ticaret ile birlikte sanal alışveriş deneyimleri doğrultusunda metaverse perakendeciliği olarak ele alındığı görülmektedir (Bourlakis vd., 2009, s. 139; Gadalla vd., 2013; Hassouneh & Brengman, 2015a, 2015b; Swilley, 2016).

Turizm ve seyahat endüstrisinde de metaverse teknolojisine artan bir ilgi olduğu görülmektedir. Artan sanal gerçeklik ve artırılmış sanal deneyimler ile birlikte turizm yönetimi ve pazarlamasında da ciddi dönüşümler meydana gelmekte, müşteri deneyimleri ve yeniden değer yaratma konularında önemli yenilikler ortaya çıkarmaktadır (Buhalis, Leung, vd., 2023; Buhalis, Lin, vd., 2023; Buhalis, O'Connor, vd., 2023; Gursoy vd., 2022; Tsai, 2022). Lüks tüketim, lüks markalar ve marka sadakati gibi müşteri ve marka ilişkilerinde metaverse teknolojisinin etkileri de göz ardı edilemeyecek durumdadır (Belei vd., 2011; Jiang vd., 2023; J. Kim & Bae, 2023; Lee vd., 2023).

Metaverse kavramı ile birlikte para ve paranın dolaşımı ve finansal yönetim ile ilgili de birtakım farklılıklar görülmektedir. Özellikle dijital dönüşümün nihai bir sonucu olarak görülen kripto para ve “non-fungible tokens – takas edilemez jetonlar (NFT)” bu sürecin doğal bir sonucu olarak karşılanmaktadır (Belk vd., 2022; Hartwich vd., 2023; Lee vd., 2023; Smith, 2022). Bu kapsamda blockcahin gibi kripto para teknolojilerine de araştırmalar da yer verilmektedir (Tan & Salo, 2023; Tan & Saraniemi, 2022; Zhan vd., 2023).

Pek çok endüstride metaverse ile beraber sanal evrenlerin kişileri olan avatar ve avatar gerçekliği konusu da yine tartışılan konular arasında yer almakta. Sanal asistanlardan, oyun karakterlerine, hizmet sunucularından sosyal medya profillerine kadar çok geniş bir alanda ele alınmaktadır (D. Kim vd., 2023; Park & Kim, 2023; Sestino & D'Angelo, 2023). Hatta öyle ki yaşam memnuniyetini artırmaya yönelik ruh hali yönetimine kadar çok geniş bir sahayı kapsamaktadır (Choi vd., 2023).

3. YÖNTEM

Bu alan yazın incelemesinin başlıca amacı göreceli güncel bir kavram olan “meta-verse” kavramı ile ilgili yazını belli disiplinlerin sınırları içerisinde incelemek ve bu doğrultuda yönetim alanında kavramla ilgili mevcut durumun anlaşılması ve kavramla ilgili sınırların, sınırlılıkların, güncel değerlendirme ve çalışmaların geldiği aşama ve durum tespitinin yapılmasıdır. Bu maksatla WoS veri tabanlarında yer alan yönetim (management) ve işletme (business) sahasında çalışılmış metaverse kavramını barındıran yayınlar taranarak incelenmiştir. Alandaki mevcut ve genel yaklaşımların keşfi için bibliyometrik analiz yöntemi ile 29 Mayıs 2023 tarihinde Web of Science (WoS) temel kategorisinde yer alan çalışmalar konu adı kısmına “metaverse” yazarak, tüm zamanları kapsayacak şekilde filtrelenerek 1108

adet yayına ulaşılmıştır. Yönetim ve işletme alanındaki genel durumu görmek için “yönetim” ve “işletme” alanındaki çalışmalar süzülerek 73 adet yayına ulaşılmıştır.

WoS veri tabanlarından yönetim ve işletme sahasında yayınlanan metaverse konusunda yapılan 73 adet yayın, WoS veri tabanında sunulan temel analizler ve VOSviewer paket programı yardımıyla analiz edilmiştir. Ulaşılan 73 adet yayın; yayın türü, yayın yılı, yayınlandığı dergi, yayın sahibi ülke ile yazarlar ve ortak kelime analizi yöntemi seçeneğiyle performans analizi yapılmıştır. Ardından VOSviewer ile ortak anahtar kelimelerin kullanımından hareketle bilimsel haritalama yapılmıştır. Çalışmaların yayın yılları, hangi yazarların ne sıklıkta yayın yaptığı, hangi ülkelerde en çok yayın yapıldığı gibi analizler de yürütülmüştür.

3.1. Metaverse Yazınına İlişkin Bulgular

WoS veri tabanları üzerinden ulaşılan 73 yayından oluşan veri kümesinin bibliyometrik analizi neticesinde elde edilen bulgulara bu bölümde yer verilmiştir. Bu bölümde yayın türüne, yayın yılına, dergi adına, yayın sayısına, yayın yapılan ülkelere yer verilmiş. Böylece alan yazının halihazırda güncel durumunu yansıtmayı amaçlayan göstergeler yardımıyla *performans analizi* ve alanın bilişsel ve zihni yapısı ile eğilimleri tespit etmek için görsel bir yöntem olan *bilimsel alan haritalama* analizlerinden (Bağış, 2021; Öztürk, 2021) istifade edilmiştir. İlk başta “metaverse” kavramına ilişkin ilgili alanlarda kavramın performans analizi gerçekleştirilmiştir. Bu doğrultuda ulaşılan yayınların; yayın türü, yayınlan zamanı ve yayınların ülkesine yönelik bulgular analiz edilmiştir. WoS yazınında taramanın gerçekleştirildiği tarihe kadar yayınlanmış metaverse alanında ulaşılan 73 adet çalışmanın yayın türü ve tarandığı indeks bilgileri tablo 1’de gösterilmektedir.

Tablo-1: Çalışmaların Yayın Türü

Yayın Türü	Yayın Sayısı	73’ün %	WoS İndex	Yayın Sayısı	73’ün %
Araştırma Makalesi	58	79.452	SSCI	57	78,082
Erken Erişim	15	20.548	ESCI	11	15,068
Editörlü Çalışma	9	12.329	SCIE	9	12,329
Bildiri	5	6.849	CPCI-SSH	5	6,849
Derleme	1	1.370	CPCI-S	3	4,110

WoS indeksinde “metaverse” ile ilgili işletme ve yönetim sahasında yapılan çalışmalar türlerine göre incelendiğinde çalışmaların yaklaşık %80 gibi büyük çoğunluğu araştırma makalesi, yaklaşık %20’si ise kitap ve kitap bölümü, tebliğ ve derleme çalışmalarından oluşmaktadır. Mevcut ulaşılan 73 yayından 15’i erken erişim yayındır. Bu da konunun yeni bir çalışma sahası olduğunu göstermesi açısından anlamlıdır. Yayınların %78,082 gibi önemli bir çoğunluğu Social Science Citation Index - Sosyal Bilimler Atıf İndeksi (SSCI), %15,068’i Emerging Sources Citation Index – Gelişmekte Olan Kaynaklar Atıf Dizini (ESCI), %12,329’u Science Citation Index Expanded – Genişletilmiş Bilimsel Atıf Dizini (SCIE), yaklaşık %11’i ise Conference Proceedings Citation Index – Konferans Bildirileri Atıf Dizini (CPCI) içerisinde yer almaktadır.

WoS indeksinde yönetim ve işletme sahasında yayınlanan yayınların yayın tarihleri de konunun gelişimi hakkında önemli ipuçları sunmaktadır. Yayın yıllarına göre dağılım tablo 2’de sunulmaktadır.

Tablo-2: Çalışmaların Yayın Yılları

Yayın yılları	Yayın Sayısı	73'ün %
2022	34	46.575
2023	25	34.247
2008	2	2.740
2011	2	2.740
2013	2	2.740
2015	2	2.740
2021	2	2.740
2009	1	1.370
2010	1	1.370
2016	1	1.370
2018	1	1.370

Tablo 2 incelendiğinde en eski tarihli yayının 2008 yılında yayınlandığı görülmekle birlikte toplam yayın sayısı dikkate alındığında “metaverse” konusunda işletme ve yönetim alanında özellikle son 2 yılda yayın hızının arttığı görülmektedir. Öyle ki yayınların yaklaşık %80’i 2022 ve 2023 yılında yayınlanmıştır. 2022 yılına kadar yapılan çalışmaların sayısı ise sadece 14’tür. Bu analizin Mayıs 2023 itibariyle yapıldığı ve tablo 1’de verilen erken erişime sahip 15 yayın da göz önünde bulundurulduğunda yayın sayısının giderek yükselen bir ivme yakaladığı ortadadır. Bu da işletme ve yönetim sahasında metaverse konusunun giderek araştırmacıların dikkatini çektiğini göstermesi açısından oldukça manidardır.

İşletme ve Yönetim sahasında metaverse konusunda yayınlanan yayınların en çok yayınlandıkları dergiler ise tablo 3’de gösterilmektedir.

Tablo-3: Çalışmaların Yayınlandığı Yerler

Yayın Başlığı	Yayın Sayısı	73'ün %
TECHNOLOGICAL FORECASTING AND SOCIAL CHANGE	7	9.589
PSYCHOLOGY MARKETING	4	5.479
INTERNET RESEARCH	3	4.110
JOURNAL OF BUSINESS RESEARCH	3	4.110
JOURNAL OF THEORETICAL AND APPLIED ELECTRONIC COMMERCE RESEARCH	3	4.110

BUSINESS HORIZONS	2	2.740
HARVARD BUSINESS REVIEW	2	2.740
INTERNATIONAL JOURNAL OF ADVERTISING	2	2.740
INTERNATIONAL JOURNAL OF CONTEMPORARY HOSPITALITY MANAGEMENT	2	2.740
JOURNAL OF THE ACADEMY OF MARKETING SCIENCE	2	2.740
SERVICE INDUSTRIES JOURNAL	2	2.740
TECHNOVATION	2	2.740

Tablo 3 incelendiğinde en çok yayının 7 yayın ile Elsevier tarafından yılda 9 sayı yayınlanan, SSCI indeksinde bulunan ve 1969 yılından beri yayınlanan “Technological Forecasting And Social Change” dergisi ve 4 yayın ile Wiley tarafından yılda 12 sayı olarak yayınlanan SSCI indeksinde bulunan ve 1984 yılından beri yayınlanan “Psychology Marketing” dergisinde yayınlandığı görülmektedir. Daha sonra Emerald tarafından yılda 5 sayı yayınlanan, SCIE indeksinde bulunan ve 1991 yılından beri yayınlanan “Internet Research”, Elsevier tarafından yılda 12 sayı yayınlanan, SSCI indeksinde bulunan ve 1973 yılından beri yayınlanan “Journal of Business Research” ve MDPI tarafından yılda 4 sayı yayınlanan, SSCI indeksinde bulunan ve 2006 yılından beri yayınlanan “Journal of Theoretical And Applied Electronic Commerce Research” dergileri 3 yayın ile konu hakkında en çok yayın yapan dergiler olmuştur.

Yayımların yapıldığı ülkelere göre dağılım ise tablo 4’de sunulmaktadır.

Tablo-4: Yayınların Ülkelere Göre Dağılımı

Ülkeler/Bölgeler	Yayın Sayısı	73'ün %
USA	17	23.288
ENGLAND	15	20.548
GERMANY	12	16.438
PEOPLES R CHINA	10	13.699
AUSTRALIA	8	10.959
SOUTH KOREA	6	8.219
FINLAND	5	6.849
FRANCE	5	6.849

SPAIN	2	2.740
TAIWAN	2	2.740

Not: 39 kayıttan 24'ü gösteriliyor, 4 kayıt (%5,479) analiz edilen alanda veri içermiyor

Yayınların ülkelere göre dağılımı incelendiğinde en çok yayın sırasıyla Amerika Birleşik Devletleri, İngiltere, Almanya ve Çin Halk Cumhuriyeti merkezlidir. Metaverse konusunda WoS veri tabanında işletme ve yönetim sahasında yapılan çalışmaların yaklaşık %74'ü bu ülkelerde üretilmiştir. Yunanistan, İsrail, Japonya, Lüksemburg, Yeni Zelanda, Pakistan, Filistin, Katar, Romanya, İskoçya, Sırbistan, Singapur, Türkiye, Vietnam ve Galler gibi ülkeler ise bu alanda 1 yayınlı en az yayın yapılan ülkelerdir. Bu yayınların WoS veri tabanında hangi kategorilere ait olduğunu analiz etmek amacıyla tablo 5'te WoS kategorileri sunulmaktadır.

Tablo-5: Yayınların Yazar Dağılımı

Yazarlar	Yayın Sayısı
Buhalis D	4
Ahn SJ	3
Kim J	3
Rauschnabel PA	3
Tan TM	3
Belk R	2
Bourlakis M	2
Brengman M	2
De Ruyter K	2
Felix R	2
Hassouneh D	2
Hinsch C	2
Kim D	2
Korbel JJ	2
Kraus S	2
Lee HK	2
Leung D	2
Li F	2
Papagiannidis S	2
Salo J	2
Sharma A	2

Tablo 5’te 2 ve daha fazla yayın sayısına sahip yazarlar paylaşılmış olup, en çok yayın yapan yazar 4 yayın ile Buhalis D olarak gözükmektedir. Buhalis D, üç yazarlı üç yayında (Buhalis, Leung, vd., 2023; Buhalis, Lin, vd., 2023; Buhalis, O’Connor, vd., 2023) birinci yazar, yirmi yedi yazarlı bir yayında (Dwivedi vd., 2023) dokuzuncu yazar olarak yer almaktadır.

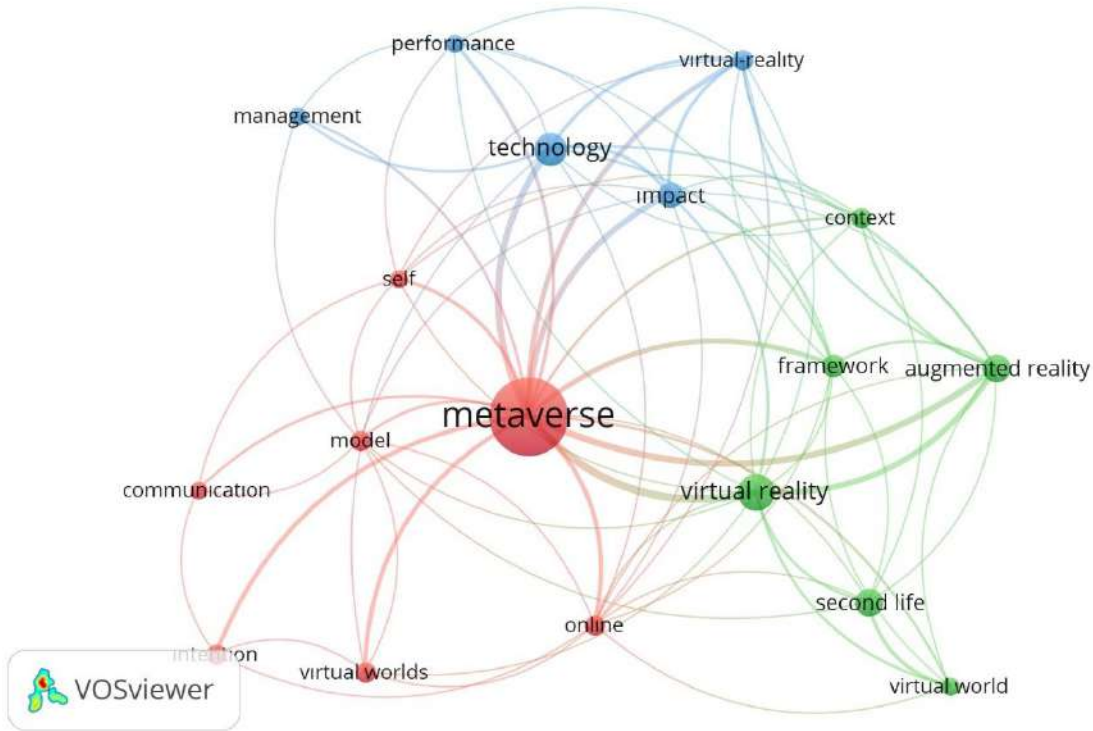

Kim J, WoS veri tabanı analizinde 4 yayın olarak gösterilmekte fakat bu durumun yayınlar incelendiğinde isim benzerliğinden kaynaklandığı anlaşılmaktadır. Georgia Üniversitesinde görev yapan Jooyoung Kim ve Sun Joo (Grace) Ahn 3 yayına sahiptir. Güney Koreli Juran Kim ise bir yayına (Kim & Bae, 2023) sahiptir. WoS analizinde Kim, J olarak bu iki ismin yayını tek bir yazarın gibi yanlış bir gösterim yapılmıştır.

Kim, bu yayınlardan üç yazarlı yayınlanan ikisinde (Ahn vd., 2022, 2023) ikinci yazar, yirmi yedi yazarlı diğer yayında (Dwivedi vd., 2023) ise on yedinci yazar, Ahn SJ ise üç adet yayının üç yazarlı iki yayında (Ahn vd., 2022, 2023) birinci, yirmi yedi yazarlı birinde (Dwivedi vd., 2023) beşinci yazar olarak yer almaktadır.

Diğer üç yayına sahip yazarlardan Rauschnabel PA beş yazarlı yayında (Rauschnabel vd., 2022) birinci yazar, dört yazarlı yayında (von der Au vd., 2023) ikinci yazar ve yirmi yedi yazarlı yayında (Dwivedi vd., 2023) yirmi üçüncü yazardır. Üç yayınlı son yazar olarak Tan TM iki yazarlı iki yayında (Tan & Salo, 2023; Tan & Saraniemi, 2022) ve dört yazarlı yayında (Tan vd., 2022) ilk yazar olarak yer almaktadır.

Ortak anahtar kelime analizi de bibliyometrik araştırmalarda alan yazının odak noktalarının anlaşılması açısından önemli bulgular sunmaktadır. Şekil 1’de ortak anahtar kelimelerin ağ haritası görülmektedir.

Şekil-1: Anahtar Kelimeler Ağ Haritası

Şekil 1’de yetmiş üç yayında yer alan dört yüz altmış dört anahtar kelimedenden en az dört kez kullanılmış olanlar filtrelenerek yapılan analizde toplam on sekiz anahtar kelime öbeği oluştuğu görülmektedir. En sık ve yoğun kullanılanlar sırasıyla 42 kez “metaverse”, 18 kez “virtual reality – sanal gerçeklik”, 8 kez “augmented reality – artırılmış gerçeklik”, 11 kez “technology – teknoloji”, 7 kez “impact – etki”, 5 kez “online – eşzamanlı”, 8 kez “second life – ikinci yaşam” ve 9 kez “virtual world(s) – sanal dünya(lar)” kelimeleridir. Harita incelendiğinde metaverse kavramının “virtual reality, augmented reality, virtual world, second life gibi farklı kavramlar ile de ifade edildiği anlaşılmaktadır.

SONUÇ

WoS veri tabanları üzerinden ulaşılan veri seti, “metaverse” kavramının akademik yazında ulaştığı nokta, kavramın sınırları, çalışma konuları, çalışma zaman eğilimi ve kavramı çalışan yazar ve kurumlarla ilgili bilgilere ulaşmak amacıyla bibliyometrik olarak performans analizi ve bilimsel alan haritalama yapılarak analiz edilmiştir.

Bu doğrultuda büyük çoğunluğu araştırma, çok az bir kısmı da bildiri, editoryal yayın ve derleme makale olan yetmiş üç yayın incelenmiştir. Yapılan inceleme neticesinde, kavrama olan ilginin özellikle son yıllarda arttığı, yetmiş üç çalışmadan yaklaşık %80’inin son iki yılda yürütüldüğü anlaşılmaktadır. Öyle ki bu çalışmalardan on beşi erken erişim durumundadır. WoS veri tabanında kavram ile ilgili en eski tarihli yayın ise 2008 yılına aittir.

En çok yayının yedi yayın ile Elsevier tarafından yayınlanan, SSCI indeksinde bulunan “Technological Forecasting And Social Change” dergisi ve dört yayın ile Wiley tarafından yayınlanan ve SSCI indeksinde bulunan “Psychology Marketing” dergisinde yayınlandığı görülmektedir.

Metaverse kavramı ile ilgili en çok yayın yapılan ülkeler incelendiğinde yürütülen çalışmaların büyük bölümü sırasıyla Amerika Birleşik Devletleri, İngiltere, Almanya ve Çin Halk Cumhuriyeti merkezlidir. Metaverse konusunda WoS veri tabanında işletme ve yönetim sahasında yapılan çalışmaların yaklaşık %74’ü bu ülkelerde üretilmiştir. Yazarlar açısından en çok yayın yapan yazarlar incelendiğinde ise en çok üç yayını olan yazarlar öne çıkmaktadır. Bu durumda kavramın son yıllarda popüler bir kavram olmasından kaynaklandığı değerlendirilmektedir.

Anahtar kelimelerden yola çıkılarak yapılan bilimsel haritalamada ise yüz altmış dört anahtar kelime üç kümede toplanmıştır. Bu kümeler içinde yoğun kesişime sahip kavram metaverse kavramıdır. Metaverse kavramı haricinde, “virtual reality - sanal gerçeklik, virtual world(s) – sanal dünya(lar), augmented reality - artırılmış gerçeklik ve second life – ikinci yaşam (web sitesi)” gibi kavramların tercih edildiği de görülmektedir.

Hemen hemen her endüstride etkileri görülen teknolojinin özellikle turizm ve seyahat endüstrisi, perakende, pazarlama, müşteri deneyimi ve müşteri ilişkileri, kripto para ve finansal yönetim, e-ticaret, tedarik zinciri ve operasyon yönetimi ile sanal eş zamanlı oyunlar gibi alanlarda sıklıkla çalışıldığı dikkat çekmektedir.

Örgütsel Sağlık Alan Yazın İncelemesi

Assoc. Prof. Dr. Özgür ÇARK

Bolu Abant İzzet Baysal University

ozgurcark@ibu.edu.tr

Orcid: 0000-0002-4881-0542

ÖZET

Örgütsel sağlık kavramı son zamanlarda iş yaşamında örgütsel davranış ve çalışma psikolojisi alanında öne çıkan konulardan biridir. Alan yazında örgütsel gelişimin incelenmesinde özellikle dikkate alınan örgütsel sağlık kavramı genel olarak bir işletmenin çalışanlarından yöneticilerine tüm içsel ve dışsal unsurlarının örgütsel amaç ve hedeflerine ulaşmak için uyumlu ve sağlıklı olarak iş birliği içinde olmasını ifade etmektedir. Görece yeni bir kavram sayılan örgütsel sağlık kavramının alan yazındaki mevcut durumunu, çalışma alanının sınırlarını anlamak amacıyla uluslararası alan yazın incelemesi yapılmıştır. Bu maksatla WoS veri tabanında başlık kısmında “örgütsel sağlık” ifadesi geçen yayınlar taranmış, ele 1978 ulaşılan yayından yönetim alanında yayınlanmış ve açık erişime sahip yayınlar filtrelenerek 141 ulaşılan yayın incelenmiştir. Yapılan inceleme sonucunda kavramın bazı çalışmalarda çalışan sağlığı merkezli, bazı çalışmalarda ise işletme performansı merkezli bir bakış açısıyla ele alındığı, birtakım çalışmalarda ise hem birey hem işletme performansını bir arada ele alan çalışmaların varlığı görülmektedir.

Anahtar Kelimeler: Örgütsel sağlık, İlgören sağlığı, İşletme sağlığı, Örgüt sağlığı

Organizational Health Literature Review

ABSTRACT

The concept of organizational health has recently been one of the prominent issues in the field of organizational behavior and work psychology in business life. The concept of organizational health, which is especially considered in the examination of organizational development in the literature, generally means that all internal and external factors of an enterprise, from its employees to its managers, are in adaptive and healthy cooperation to achieve organizational goals and targets. In order to understand the current status of the concept of organizational health, which is considered a relatively new concept, in the literature, and the boundaries of the field of study, an international literature review was conducted. For this purpose, publications with the phrase "organizational health" in the title section of the WoS database were searched and 1978 publications were found. Among these publications, those in the field of management and open access were filtered and 141 accessed publications were examined. As a result of the examination, it is seen that the concept is handled with an employee health-centered perspective in some studies and with a business performance-centered perspective in some studies, and there are studies that deal with both individual and business performance together in some studies.

Keywords: Organizational health, Employee health, Business health, Organizational health

GİRİŞ

Örgütler klasik dönem yönetim anlayışının mekanik yaklaşımı sonrasında eleştirel olarak gelişen davranışsal yaklaşım ve sistem yaklaşımı sonrasında işletmeyi iç ve dış çevresi ile iletişim ve etkileşim halinde olan bir canlı organizma veya sistem olarak ele almaya başlamıştır. Yani işletmelerin de her canlı gibi doğan, gelişen, olgunlaşan, gerileyen ve ölen bir yapıya sahip olduğu dolayısıyla her canlı gibi gelişim ve olgunlaşma sürecinin uzatılmasının ise sağlıklı oluşu ile ilgili olduğu fikri gelişmiştir. Farklı bir ifade örgütün sağlığı hem iç çevresi hem de dış çevresi ile uyumlu değişimi ve dönüşümü ile mümkün olabilmektedir.

Bütüncül bakışın önem kazandığı günümüz dünyasında iş tatmini, örgütsel bağlılık, örgütsel özdeşleşme, örgütsel vatandaşlık gibi konuları da kapsayarak ele alan bir kavram olarak “örgütsel sağlık” kavramsal olarak hala üzerinde çok fazla çalışmanın olmadığı bir konudur.

Özellikle eğitim alanında çalışılmaya başlanan kavram sonrasında yönetim ve işletme sahasında da ele alınmaya başlanmıştır. Özellikle iş, çevre ve endüstriyel psikoloji ile sağlık ilişkisi bağlamında örgütsel sağlık kavramının ele alındığı görülmektedir.

Bu çalışmanın amacı hala tanımı ve sınırları konusunda tam bir mutabakatın olmadığı “örgütsel sağlık” konusunun uluslararası akademik yazında ulaşılmış olduğu konum ve pozisyonun anlaşılmasıdır. Bu amaçla “örgütsel sağlık” kavramının sınırları, sınırlılıkları, hangi disiplinler tarafından ele alındığı, hangi tür çalışmalar yapıldığı, hangi değişkenler ile birlikte ele alındığı gibi kavramın ulaştığı konum, pozisyon ve sınırlar hakkında mevcut durumun ortaya konulması hedeflendi. Ayrıca kavramın hangi ülkeler, hangi dergiler ve hangi yazarlar tarafından daha çok çalışıldığı gibi sistematik ve performans dönük incelemeler ile birlikte kavrama dair performans analizi de gerçekleştirildi.

Bu maksatla WoS veri tabanında başlık kısmında “örgütsel sağlık” ve “örgüt sağlığı” ifadesi geçen yayınlar taranmış, iki yüz seksen iki ulaşılan yayından tüm alanlarda yayınlanmış ve açık erişime sahip yayınlar filtrelenerek ulaşılan seksen dört yayın, performans analizi ve bilimsel haritalama yapılarak incelenmiştir.

Yapılan incelemeler neticesinde eğitim alanında başlayan çalışmaların, bugün özellikle kamu, çevre ve iş sağlığı alanlarında yürütüldüğü görülmektedir. Ayrıca, konunun tek bir disiplinden ziyade disiplinler arası bir konum elde ettiği ve toplum sağlığı, çevre, psikoloji, iş ve yönetim alanlarının kesişim alanında konumlandığı da diğer dikkat çekici bir özelliktir. Bu durum kavramla ilgili tanımlarda da çeşitliliğe neden olmuş her disiplinin kendi ilgi alanına göre bir tanım geliştirdiği görülmüştür.

1. ÖRGÜTSEL SAĞLIK

Örgütsel sağlık ile ilgili tanımdan önce örgüt kavramını ele almakta fayda vardır. Kavram, Latince “*organum*”, Yunanca “*organon*” kelimelerinden Fransızcaya geçen “*organe*” yani alet, vücutta uzuv, organ kelimesinden türeyerek Fransızca örgütlemek, parçaları birleştirerek bir mekanizma kurmak anlamına gelen “*organiser*” kelimesinden türeyen İngilizce “*organization*” kelimesinden Türkçeye tercüme edildiği sanılmaktadır (Nişanyan Sözlük, 2023). Kavramın Türkçede benzer anlamlara gelen organizasyon, örgüt, müessese, teşkilat, kuruluş, idare şeklinde kullanımları mevcuttur (Sezer, 2015, s. 35). Örgüt alan yazında bilinen en kısa haliyle iki veya daha fazla kişinin ortak bir amacı gerçekleştirmek amacıyla bilinçli olarak bir araya gelerek oluşturdukları yapılardır.

İdeal bir kavram olarak öne çıkan örgütsel sağlık ile ilgili yapılan çalışmalar incelendiğinde, kavramın ilk kullanımına Argyris tarafından 1950’li yılların sonlarında kullanıldığı, fakat bugünkü anlamına en yakın haline ise 1965 yılında Miles tarafından kamu okulları için hazırlanan raporda planlı değişim ve örgütsel sağlık konusunu ele aldığı raporda ulaştığı görülmektedir. Araştırmacı bu raporda sağlıklı bir örgütü “yalnızca çevresinde varlığını idame ettirmekle yetinmeyen, aynı zamanda uzun vadede gelişimini sürdüren, varlığını devam ettiren ve zorluklara mücadele edebilen bir örgüt” olarak ifade etmektedir (Miles, 1965, s. 17). Yani sağlıklı bir örgüt ile ifade edilen yapı; bulunduğu çevrede varlığını sürdürmekle kalmayıp, gelişimini de devam ettirebilme ve zorluklarla başa çıkabilme becerisine sahip olup bu beceriyi geliştirebilen örgüt yapısıdır (Sandıkci vd., 2015, s. 168).

Örgütsel sağlık kavramı ile ilgili alan yazın incelendiğinde kavramın farklı disiplinler tarafından ele alındığı görülmekle birlikte özellikle eğitim alanında daha çok araştırma konusu olmuş bir kavram olduğu anlaşılmaktadır. Özellikle ilköğretim ve ortaöğretim alanında yapılan çalışmalar (Buluç, 2008; Korkmaz, 2005; Ordu & Tanrıoğen, 2013) öne çıkmaktadır. Daha sonra akademik eğitim alanında yapılan çalışmalarla (Aslan vd., 2008) konuya olan ilgi sahası genişlemiş Bunun yanı sıra turizm işletmelerinde de kavramla ilgili çalışmalar (Doğan & Bozkurt, 2008; Sandıkci vd., 2015) yer almıştır. Ayrıca kavramla ilgili kuramsal çalışmalar da alan yazında yer almıştır (Ardıç & Polatci, 2010; Aytaç, 2003; Garda, 2014).

2. YÖNTEM

Bu çalışmanın temel hedefi göreceli yeni bir kavram olan “örgütsel sağlık” veya “örgüt sağlığı” kavramı ile ilgili alan yazın incelenmesi yaparak konuyla ilgili genel durumun tespiti ve kavramla ilgili sınırların, sınırlılıkların, güncel değerlendirme ve çalışmaların geldiği aşama ve durum tespitinin yapılmasıdır. Bu maksatla WoS veri tabanlarında yer alan yayınlar taranarak incelenmiştir. Literatürdeki genel ve güncel yaklaşımların tespiti için bibliyometrik analiz yöntemi ile 08 Haziran 2023 tarihinde Web of Science (WoS) temel koleksiyonunda bulunan çalışmalar başlık adı kısmına “örgütsel sağlık (organizational health)” veya “örgüt sağlığı (organization health)” yazarak, tüm zamanları kapsayacak şekilde filtrelenerek 282 adet yayına ulaşılmıştır. Bu yayınlardan açık erişime sahip çalışmalar süzülerek 84 adet yayına ulaşılmıştır. 84 adet yayının analizinde WoS veri tabanında sunulan analizler ve VOSviewer paket programından yararlanılmıştır. Tarama sonucu elde edilen veri seti yayın türü, yayın yılı, yayımlandığı dergi, yayın sahibi ülke ile yazarlar ve ortak kelime analizi ile incelenerek performans analizi yapılmıştır. Daha sonra analizlerin bilimsel haritalaması gerçekleştirilmiştir.

2.1. Örgütsel Sağlık Yazınına İlişkin Bulgular

Bu kısımda WoS veri tabanları üzerinden ulaşılan veri setinin bibliyometrik analizi sonucunda ulaşılan bulgulara yer verilmiştir. Burada yayın türü, yayın ilgi alanı, yayın yılı, dergi adı, yayın sayısı, ülke ve yazar gibi literatürün mevcut durumunu yansıtmayı amaçlayan göstergeler yardımıyla gerçekleştirilen *performans analizi* ve alanın bilişsel ve zihni yapısı ile eğilimleri tespit etmek için görsel bir yöntem olan *bilimsel alan haritalama* analizleri (Bağış, 2021; Öztürk, 2021) kullanılmıştır. İlk başta “örgütsel sağlık” ve “örgüt sağlığı” alanına dair alanın bir performans analizi gerçekleştirilmiştir. Bu kapsamda çalışmaların yayın türü, yayın ilgi alanı, yayın yılı, dergi adı, yayın sayısı, ülke ve yazar bilgisine yönelik bulgular incelenmiştir.

WoS indeksinde bugüne kadar yayınlanmış örgütsel sağlık konusunda ulaşılan 84 adet çalışmanın yayın türü ve tarandığı indekslere göre dağılımı tablo 1’de gösterilmektedir.

Tablo-1: Çalışmaların Yayın Türü

Yayın Türü	Yayın Sayısı	84’ün %	WoS İndex	Yayın Sayısı	84’ün %
Araştırma Makalesi	57	67.857	(SSCI)	52	61.905
Bildiri	9	10.714	(SCI-E)	40	47.619
Derleme Makale	7	8.333	(ESCI)	15	17.857
Editörlü Çalışma	5	5.952	(CPCI-SSH)	8	9.524
Kitap İnceleme	2	2.381	(BKCI-SSH)	2	2.381
Erken Erişim	2	2.381	(CPCI-S)	2	2.381
Kitap	1	1.190			
Kitap Bölümleri	1	1.190			
Düzeltilme	1	1.190			
Mektup	1	1.190			
Haber Ögesi	1	1.190			

WoS indeksinde “örgütsel sağlık” ile ilgili yapılan çalışmalar türlerine göre incelendiğinde çalışmaların yaklaşık %68’i araştırma makalesi, yaklaşık %30’u ise bildiri, derleme makale, editörlü çalışma, kitap, kitap inceleme, kitap bölümü, mektup ve haber ögesi çalışmalarından oluşmaktadır. Mevcut ulaşılan 84 yayından 2’i erken erişim yayındır. Yayınların yaklaşık %62’si Social Science Citation Index - Sosyal Bilimler Atıf Dizini (SSCI), yaklaşık %48’i Science Citation Index Expanded – Genişletilmiş Bilimsel Atıf Dizini (SCIE), yaklaşık %18’i Emerging Sources Citation Index – Gelişmekte Olan Kaynaklar Atıf Dizini (ESCI), %12,329’u yaklaşık %2’si Book Citation Index – Social Sciences & Humanities – Kitap Atıf Dizini – Sosyal ve Beşeri Bilimler (BKCI-SSH), %2’si ise Conference Proceedings Citation Index – Science - Konferans Bildirileri Atıf Dizini – Bilim (CPCI-S) içerisinde yer almaktadır.

WoS dizininde örgütsel sağlık konusunda yapılan çalışmaların hangi disiplinlerde yürütüldüğünü anlamak için çalışma alanları incelenmiştir. Çalışmaların disiplin alanları tablo 2’de gösterilmektedir.

Tablo-2: Çalışmaların WoS Kategorileri

WoS Kategorileri	Yayın Sayısı	84’ün %
Kamu Çevre İş Sağlığı	43	51.190
Çevre Bilimleri	17	20.238
Sağlık Politikası Hizmetleri	7	8.333
Eğitim- Eğitim Araştırması	6	7.143
Uygulamalı Psikoloji	6	7.143
Sağlık Bilimleri Hizmetleri	5	5.952
Psikoloji Multidisipliner	5	5.952
Yönetim	4	4.762
İşletme	3	3.571

Endüstriyel İlişkiler - İşgücü	2	2.381
--------------------------------	---	-------

Örgütsel sağlık konusunun WoS kategorik dağılımı incelendiğinde konunun genellikle sağlık alanı ile ilintili olarak çalışıldığı görülmektedir. Yönetim, işletme, endüstriyel ilişkiler gibi alanlarda sağlık alanına kıyasla daha az çalışma verildiği görülmektedir. 84 çalışmadan sadece 9'u bu sayılan disiplinlerde içindedir. Bu çalışmaların ise 2013 – 2019 yılları arasında olduğu görülmekte olup, yönetim ve işletme sahasında konuya olan ilginin bu yıllardan sonra azaldığı anlaşılmaktadır.

WoS indeksinde yönetim ve işletme sahasında yayınlanan yayınların yayın tarihleri de konunun gelişimi hakkında önemli ipuçları sunmaktadır. Yayınların en çok yayın yapılan yıllara göre dağılımı tablo 3'de sunulmaktadır.

Tablo-3: Çalışmaların Yayın Yılları

Yayın yılları	Yayın Sayısı	84'ün %
2022	14	16.667
2020	12	14.286
2019	11	13.095
2021	10	11.905
2017	7	8.333
2014	6	7.143
2018	6	7.143
2013	5	5.952
2023	4	4.762
2016	3	3.571

Tablo 3 incelendiğinde en çok yayının 14 yayın ile 2022 yılında yapıldığı görülmektedir. 2013 yılında 5 yayın 2014 yılında 6 yayın olmasına rağmen 2015 yılında yayın olmaması ise dikkat çekicidir. Yayın yıllarına bakıldığında konuya olan ilginin 2019 yılı itibariyle artış gösterdiği ve çift haneli yayın sayılarına ulaştığı görülmektedir. En eski tarihli yayının (Launer, 2006) 2006 yılında tek bir yayın olduğu görülmekle birlikte sonrasında ise konu ile ilgili asıl ilginin 2013 yılı sonrasında yükselişe geçtiği anlaşılmaktadır.

Örgütsel sağlık konusunda yayınlanan yayınların en çok yayımlandıkları 10 dergi ise tablo 4'de gösterilmektedir.

Tablo-4: Çalışmaların Yayımlandığı Dergiler

Dergi Adı	Yayın Sayısı	84'ün %
INTERNATIONAL JOURNAL OF ENVIRONMENTAL RESEARCH AND PUBLIC HEALTH	16	19.048
PROCEDIA SOCIAL AND BEHAVIORAL SCIENCES	6	7.143
GESUNDHEITSWESEN	5	5.952
AMERICAN JOURNAL OF HEALTH PROMOTION	4	4.762
FRONTIERS IN PSYCHOLOGY	3	3.571

FRONTIERS IN PUBLIC HEALTH	2	2.381
JOURNAL OF OCCUPATIONAL AND ENVIRONMENTAL MEDICINE	2	2.381
PRIMENJENA PSIHOLOGIJA	2	2.381
PUBLIC HEALTH	2	2.381
STRESS AND HEALTH	2	2.381

Tablo 4 incelendiğinde en çok yayının 16 yayın ile MDPI tarafından ayda 2 sayı yayınlanan, SSCI indeksinde bulunan ve 2004 yılından beri yayınlanan “International Journal of Environmental Research and Public Health” dergisi ve 6 yayın ile Elsevier tarafından yayınlanan fakat 2019 itibariyle kullanımdan kaldırılan SSCI indeksinde bulunan ve 2009 yılından beri yayınlanan “Procedia - Social and Behavioral Sciences” dergisinde yayınlandığı görülmektedir. Daha sonra Georg Thieme Verlag KG tarafından yayınlanan SSCI indeksinde bulunan “Gesundheitswesen” dergisinde 5 yayın, SAGE tarafından 1986’den beri yayınlanan “American Journal of Health Promotion” adlı dergi ise 4 yayın ile konu hakkında en çok yayın yapan dergiler olmuştur.

Tablo-5: Yayınların Ülkelere Göre Dağılımı

Ülkeler/Bölgeler	Yayın Sayısı	84'ün %
GERMANY	17	20.238
USA	17	20.238
ENGLAND	11	13.095
IRAN	9	10.714
SWITZERLAND	8	9.524
CANADA	5	5.952
AUSTRALIA	4	4.762
PEOPLES R CHINA	3	3.571
AUSTRIA	2	2.381
IRAQ	2	2.381

Not: 37 kayıttan 10’u gösteriliyor, 2 kayıt (%2,381) analiz edilen alanda veri içermiyor

Örgütsel sağlık konusu hakkında hangi ülkelerde yayın yapıldığını anlamak için gerçekleştirilen analizde. Bu konu hakkında Almanya ve Amerika Birleşik Devletleri (ABD) 17’şer yayın ile en çok yayın yapılan ülkeler olduğu görülmektedir. Öyle ki yayınların yaklaşık %40’ı bu iki ülkede yapılan yayınlardan oluşmaktadır. Sonra sırası ile İngiltere 11 yayın, İran 9, İsviçre 8 ve Kanada 5 yayın sayısına sahiptir. Türkiye ise 2 yayına sahip olup, 9. Sırada iki yayına sahip olan 5 ülkeden biridir.

Tablo-6: Yayınların Yazar Dağılımı

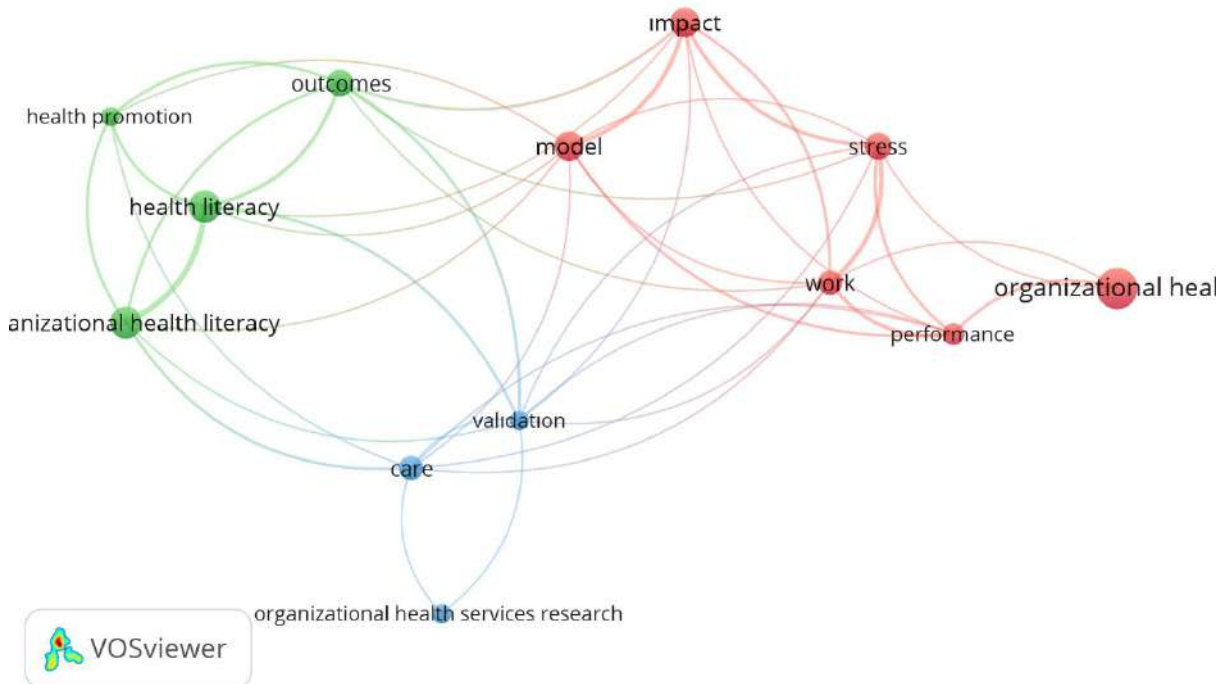

Yazarlar	Yayın Sayısı
Ansmann L	6
Nielsen K	4
Sorensen G	4
Bauer GF	3

Burke L	3
Dadaczynski K	3
De Gani SM	3
Ernstmann N	3
Hahn U	3
Karapanos M	3

Örgütsel sağlık alanında WoS veri tabanında ulaşılan 84 yayına dair 279 yazar kaydı bulunmakla birlikte yalnızca 1 kayıt (%1.190) analiz edilen alanda veri içermemektedir. Bu durumda her bir yayın 3,3 yazar ortalamasına sahiptir. 6 yayın (Ansmann, 2019; Ansmann, Albert, vd., 2019; Ansmann, Baumann, vd., 2019; Lubasch vd., 2021; Rolker-Denker vd., 2019; Wirtz vd., 2019) ile en çok yayına sahip Lena Ansmann Almanya, Oldenburg Üniversitesi Sağlık Hizmetleri Araştırma Bölümünde görev yapmaktadır. Sonra tabloda 4 yayın olarak görünen fakat WoS veri tabanında 5 yayınına (Hasson vd., 2016; Nagler vd., 2021; Peters vd., 2020; Sorensen vd., 2019, 2021) rastladığımız Karina Nielsen Birleşik Krallık, Sheffield Üniversitesi, Yönetim Okulu, Çalışma Psikolojisi Enstitüsü'nde görev yapmaktadır. Glorian Sorensen ise 4 yayına (Nagler vd., 2021; Peters vd., 2020; Sorensen vd., 2019, 2021) sahip olup, ABD, Boston, Harvard T.H. Chan Halk Sağlığı Okulu, Sosyal ve Davranış Bilimleri Bölümünde görev yapmaktadır. En çok yayın yapan yazar dağılımı incelendiğinde örgütsel sağlık alanındaki bu yayınların ortak yazarlı yayınlar olduğu anlaşılmaktadır.

Ortak anahtar kelime analizi de bibliyometrik araştırmalarda alan yazının odak noktalarının anlaşılması açısından önemli bulgular sunmaktadır. Şekil 1'de ortak anahtar kelimelerin ağ haritası görülmektedir.

Şekil-1: Anahtar Kelimeler Ağ Haritası

Şekil 1 incelendiğinde 84 yayında kullanılan 480 anahtar kelimedenden en az 5 kez kullanılmış olanlar süzülendiğinde 3 renk grubu altında ulaşılan toplam 13 kelime öbeği olmuştur. En sık ve yoğun olarak kullanım incelendiğinde 10 kez “health literacy – sağlık yazını” 15 toplam bağlantı gücü ve “organizational health literacy – örgütsel sağlık yazını”, 14 toplam bağlantı gücü, 8 kez “stress - stres 14 bağlantı gücü, 7 kez “work – çalışma” 14 bağlantı gücü, 9 kez “impact – etki” 14 bağlantı gücü, 8 kez “outcomes – sonuçlar” 13 bağlantı gücü, 9 kez “model – model” 12 bağlantı gücü, 6 kez “performance – performans” 12 bağlantı gücü, 5 kez “validation – doğrulama” 11 bağlantı gücü, 7 kez “care – bakım” 9 bağlantı gücü, 5 kez “health promotion – sağlık promosyonu” 8 bağlantı gücü, 14 kez “organizational health – örgütsel sağlık” 4 bağlantı gücü ve 5 kez “organizational health services research” 2 bağlantı gücü ile en sık ve en yoğun bağlantı gücü olan kavramlar olarak öne çıkmaktadır.

Haritadan hareketle örgütsel sağlık konusunun literatür inceleme yoğunluklu olarak performans, etki, iş ve sonuçlar üzerindeki etkileri ile ilgili araştırmalardan oluştuğu görülmektedir.

SONUÇ

WoS veri tabanları üzerinden ulaşılan veri seti, “organizational health – örgütsel sağlık” veya “organization health – örgüt sağlığı” kavramı ile ilgili mevcut literatürün geldiği konum, konunun sınırları, sınırlılıkları, kavramla ilişkili çalışılan konular, yayın türleri, yayın zamanları, ülkesi, yazarları gibi bilgilere ulaşmak amacıyla bibliyometrik olarak performans analizi ve bilimsel alan haritalama yöntemleri kullanılmıştır.

Bu doğrultuda ulaşılan yayınların yaklaşık %76 gibi büyük kısmı makale türü yayın olup bunlardan %61’i SSCI dizininde yer almaktadır. Bildiriler ise sadece yaklaşık %8’ orana sahip olup, geri kalan yayınlar ise editörlü çalışma, kitap, kitap inceleme, mektup ve haber ögesidir. İki yayın erken erişime sahip olup, bir yayın ise düzeltmeden oluşmaktadır.

Örgütsel sağlık kavramı ile ilgili çalışmaların özellikle kamu, çevre ve iş sağlığı alanında yürütüldüğü dikkat çekmektedir. Çevre bilimleri, sağlık hizmetleri, sağlık politikası gibi alanlarda sıklıkla ele alınan kavram ayrıca psikoloji, uygulamalı psikoloji sahasında disiplinler arası olarak da ele alınmaktadır. Sonrasında ise kavramın yönetim, işletme, endüstriyel ilişkiler ve iş gücü açısından ele alındığı anlaşılmaktadır.

Kavram ile ilgili WoS veri tabanlarında ulaşılan en eski yayın her ne kadar 2006 tarihli olsa da kavramla ilgili çalışmaların özellikle 2013 yılı sonrasında artışa geçtiği anlaşılmaktadır. 2019 yılından sonra ise kavramla ilgili yayınların çift haneli sayılara ulaşarak yukarı yönlü bir ivme kazandığı anlaşılmaktadır. Özetle konuya olan ilginin son beş yılda yükseldiği söylenebilir.

Çalışmaların yayımlandığı dergilere bakıldığında yukarıda da ifade edildiği en çok toplum sağlığı, çevre ve iş sağlığı ile davranış bilimleri ve psikoloji sahasında yayın yapan dergilerde yoğunluk olduğu görülmektedir. Bu bağlamda en çok yayının yapıldığı dergi “International Journal of Environmental Research and Public Health” dergisidir.

Kavramla ilgili en çok yayın yapan ülkeler incelendiğinde en çok yayının Almanya ve ABD tarafından yapıldığı görülmektedir. Almanya menşeli on üç araştırma ve iki derleme makale, bir adet bildiri ve düzeltme yayınlanırken, ABD tarafından on bir makale, üç editörlü çalışma, iki kitap inceleme, bir haber ögesi ve bir adet erken erişim çalışma yayınlanmıştır. Bu ülkelerden sonra en çok yayın yapan ülkeler sırayla İngiltere, İran ve İsviçre, Kanada,

Avustralya ve Çin Halk Cumhuriyeti'dir. Kavram ile ilgili yapılan çalışmaların yaklaşık %88'i bu ülkeler tarafından yürütülmüştür. Yazarlar açısından durum incelendiğinde ülke sıralamasına benzer bir durum görülmekte olup, en çok yayın yapan yazar Lena Ansmann Almanya, sonrasında Karina Nielsen Birleşik Krallık ve Glorian Sorensen ise ABD'de yer almaktadır. Bu yazarların ortak yayın sayıları da ayrıca dikkat çekicidir.

Anahtar kelimeleri üzerinden yapılan bilimsel haritalama sonuçlarına göre ise kavramın daha çok alan yazın üzerinden incelendiği, bu doğrultuda örgütsel sağlığın etkisi, sonuçları, iş performans ile olan ilişkisi ve örgütsel sağlık modeli üzerine incelemeler yürütüldüğü anlaşılmaktadır. Kavramın özellikle son beş yılda ciddi anlamda ele alındığı göz önünde bulundurulduğunda konunun tam olarak olgunlaşmadığı ve gelişme evresinde olduğu görülmektedir. Ayrıca kavram ile ilgili diğer dikkat çekici tespit ise konunun tek bir disiplinden ziyade disiplinler arası bir konum elde ettiği ve toplum sağlığı, çevre, psikoloji, iş ve yönetim alanlarının kesişim alanında konumlanmış olmasıdır. Yönetim ve işletme sahasında konuyla ilgili çalışmaların artırılması konuyla ilgili daha iyi bir projeksiyon ortaya konulabilmesi açısından önemli görülmektedir.

erhanhancigaz@gmail.com

Orcid: 0000-0002-4539-0394

ÖZET

İletişim insanın varlığıyla başlayan bir mecburiyettir. Hayatın her anında, günlük rutinlerin devamı için yazılı, sözlü ve sözsüz ifadelere ihtiyaç vardır. Bu ifadelerin doğruluğu ve tatmin edici olması insanlara olan güveni de artırmaktadır. Dolayısıyla meslek hayatına başlarken, kamusal görevler yerine getirilirken de yemin edilmesi ihtiyacı doğmuştur. Pek çok meslek grubunda üstlenilen görevlerde, göreve başlamadan önce yemin etme uygulaması görülmektedir. Toplumsal yapı içinde taahhüt anlamına gelen ve özellikle geleceği ilgilendiren bir kavram olan yemin, meslek hayatında kamusal vazifenin doğruluk zemininde yapılacağına dair güvence veren bir iletişim aracıdır. Farklı meslek gruplarında, değişik ifadeler içeren yemin metinleri ile göreve başlayan kişiler olmaktadır. Bu çalışmada, -çalışan sayısının ve hitap ettiği kitlenin yoğunluğu nedeniyle- hukuk, güvenlik, eğitim ve sağlık alanında çalışan kişilerin meslek hayatına başlarken yapmış oldukları meslek yeminleri içerik analizi yöntemiyle analiz edilmiştir. Ayrıca, önceden hazırlanmış olan soru formu ile dört kategoride vazife yapan meslek mensuplarıyla görüşme yapılarak, yemin eden kişilerin yeminlerine olan sadakatleri değerler bağlamında incelenmiştir.

Anahtar Kelimeler: İletişim, İletişim Sosyolojisi, Meslek Yemini, Kimlik, Tutum

Occupational Oaths as a Communication Instrument

ABSTRACT

Communication is an obligation that begins with human existence. At every moment of life, written, verbal and non-verbal expressions are needed for the continuation of daily dynamics. The accuracy and satisfaction of these statements increase the trust in people. Therefore, the need to take an oath has arisen at the beginning of professional life and while fulfilling public duties. In many professional groups, oath-taking is practiced before taking office. The oath, which means a commitment within the social structure and is a concept that concerns the future in particular, is a communication tool that assures that the public duty in professional life will be carried out on the basis of accuracy. In different professional groups, there are people who take office with oath texts containing different expressions. In this study, -due to the intensity of the number of employees and the audience it addresses- the professional oaths made by people working in the fields of law, security, education and health at the beginning of their professional life were analyzed by content analysis method. In parallel, a questionnaire prepared in advance was used to interview members of the professions working in the four categories, and the loyalty of the oath-takers to their oaths was analyzed in the context of values.

Keywords: Communication, Sociology of Communication, Occupational Oath, Identity, Attitude

Giriş

İnsan sosyal bir varlıktır dolayısıyla ilkel dönemlerden beri insanların birlikte yaşaması, üretmesi, tüketmesi tercihi değil mecburi bir eylemdir. Hayatın devamı için ihtiyaçların karşılanması gerekir ve bu bir bütünlük içinde gerçekleşir. Bu bütünlük herkesin farklı görevler üstlenmesini sağlamıştır aynı zamanda herkesin üstlendiği farklı görevler bir bütünlük oluşmasını sağlamıştır.

İnsan hayatındaki ilk toplumsal iş bölümü kadınların toplayıcılık, erkeklerin avcılık yapmasıyla beraber cinsiyet farklılığı üzerinden gerçekleşmiştir. Bu iş bölümü uzmanlaşmayı da beraberinde getirmiştir ve zamanla insanların duygusal ve düşünsel yaşamlarının da zenginleşmesine zemin hazırlamıştır (Şenel, 1995: 15-17). Durkheim'e göre modern toplumlarda iş bölümü geleneksel toplumlara göre daha ileri düzeydedir ve birey tek başına bir mana ifade etmez, içinde yaşadığı toplumun bir ürünüdür (Özyurt, 2007: 100). Toplum bireyden daha büyük ve kompleks bir yapıdır. Bu da toplumsal kuralların ortaya çıkmasına zemin hazırlamıştır. Toplumsal ihtiyaçların giderilmesi ve toplumsal kuralların uygulanması noktasında ise kurumlar ve meslekler doğmuştur. Bu da insanların toplum içinde belirli kurallar dahilinde yaşamalarını mecbur kılmıştır. Bütün toplumlarda denetleyici mekanizmalar vardır. Kural dışı hareketler sadece kuralı ihlal eden kişiyi değil tüm toplumu ilgilendirir. Dolayısıyla toplumsal düzenin sağlanması için çeşitli yaptırımlar devreye girer.

Toplumsal kaidelere aykırı hareket eden kişinin karşılaştığı tepkiye yaptırım denir. Yaptırımlı kuvvet cezalardır. İçsel ve dışsal olmak üzere iki şekilde değerlendirilebilir. İçsel olan yaptırımlı kuvvet insanın idraki ile ortaya çıkan sevinç ya da vicdan azabı şeklinde kendini gösterir. Dışsal kuvvetler ise sosyal ve hukuki olanlardır. Sosyal kuvvetlerin yaptırımı toplum içinde kınanma, ayıplanma gibi ortaya çıkarken, hukuki kuvvetlerin yaptırımı kanunlarda karşılığını bulmaktadır. Genel olarak ahlaki yaptırımların, hukuki yaptırımlardan daha zayıf olduğu düşünülebilir. Toplum nazarında her zaman ve her yerde karşılık bulmayabilir. Ancak hukuki yaptırımlara göre daha geniş bir alana sahiptir. Hukukta karşılığı olmayan durumları vicdan değerlendirebilir (Topçu, 2019: 196). Hangi kaynaktan beslenirse beslensin bütün değerler bir inanca dayanır ve insanın hareketi üzerinde tesir eder. Bu değerleri besleyen ve ferdin ruhuna istikamet veren dini ve ahlaki kaynaklar olabileceği gibi, kamusal yaşamı düzenleyen rasyonel kurallar da olabilir. Yemin kavramı da toplumsal yaşamda hem dini hem de hukuki boyutuyla karşımıza çıkmaktadır.

Yemi kelimesi Türkçeye Arapçadan geçmiş bir kelimedir. Türkçede ant kelimesi ile karşılık bulan kavramı Türk dil kurumu "Tanrı'yı veya kutsal bilinen bir kişiyi, bir şeyi tanık göstererek bir olayı doğrulama, yemin, kalem" olarak tanımlamıştır (Türkçe Sözlük, 2011: 2570). Günlük hayatta sıkça karşılaşılan bir kavram olan yemin, hedefi ya da hedef kitleyi inandırmak üzere yapılmaktadır. İnanca ve kültüre dayanan şekliyle insan hayatında mühim bir yer bulan yemin kavramı genelde kalıp ifadelerle sahiptir. Anadolu'da yerel ağızla kullanılan: Allah seni inandırсын, ekmek Mushaf çarpsın, iki gözüm önüme aksın gibi ifadeler günlük hayatta kullanılan bazı yeminlere örnek teşkil etmektedir.

Yemin aynı zamanda insanın diğer insanlar ve toplum karşısında güven eksikliğini gidermek için ya da güven oluşturmak için gerçekleştirdiği bir eylemdir. Yemin kavramı genelde dini ya da kültürel olarak ortak kutsalları konu edindiğinden etkileyici olması düşünülmektedir. İnsanlar yemin ederek kendileri ve söyledikleri için bir kalkan oluşturur ve geçmişte yapılan ve gelecekte yapılması muhtemel işler için bir teminat olarak kullanır. Yemin insanlar arasında sözlü bir anlaşma görevi yapar ve birey yemin ederek bir iletişim faaliyeti gerçekleştirir (Yıldırım, 2021: 1150).

Yemin bireysel olarak kullanılan bir araç olduğu gibi devlet ve uluslararası ilişkilerde de kullanılmaktadır. Dolayısıyla bu haliyle yemin kavramının kurumsallaşmasından bahsedebiliriz. Bu bağlamda tarihsel ve kültürel özelliklerinin yanında siyasi bir nitelik taşıyan yemin kavramı, karşı tarafa bir teminat verir ve yemin eden kişiyi kuruma ve göreve dahil eder (Tunalı, 2021: 173). Yemine sadakat noktasında Montesquieu ant içmenin Romalıları kanunlara şiddetli bir şekilde bağladığını ifade etmiştir. Romalıların ettikleri yemine bağlı kalmak uğruna yaptıklarını, başka hiçbir şey için yapmadığını söylemektedir (Montesquieu, 2014: 191).

Eskiden olduğu gibi günümüzde de çeşitli meslek gruplarındaki kişiler vazifelerini icra ederken yemin etmektedir. Türkiye’de de pek çok meslek mensubu göreve başlarken, görevini icra ederken ya da belirli bir süre sonra meslek yemini yapmaktadır. Bazı meslek gruplarında bu yemin etme işi törensel bir etkinlik havası içinde olmaktadır. Genel olarak meslek yeminleri doğruluk ve adalet, yasalar çerçevesinde, yolsuzluğa başvurmadan mesleğin gereklerinin yerine getirileceğine dair söz vermektir. Her mesleğin yemin metni birbirinden farklı olmakla beraber son kertede yemin din, namus, şeref, vicdan üzerine yapılmaktadır. Dolayısıyla yemin etme eylemi toplumsal yaşam içinde önemli bir yer kaplamaktadır.

Çalışmada meslek yeminlerinin insanları tatmin etme derecesi ve uygulamadaki karşılığı nedir? Sorusuna cevap bulabilmek için; kamu personeli statüsünde ve nispeten çalışan sayısı fazla olan hukuk, güvenlik, eğitim ve sağlık alanındaki meslek gruplarının meslek yeminleri nitel içerik analiz tekniği ile kuramsal temelde metin analizi ile irdelenmiştir. Çalışmada kamusal alanda belirlenen sağlık, hukuk, eğitim ve güvenlik olmak üzere dört meslek alanında yapılan meslek yeminleri içerik analizine tabi tutularak metin içinde yer alan kavramlar ana tema üzerinden değerlendirilmiştir. Çalışmanın bu dört alanla sınırlandırılması kamu çalışanlarının tercih edilmesiyle alakalı olmakla beraber, bu meslek gruplarındaki personel sayısının kitlesel eğilim gösteren alanlar olması ile de alakalıdır. Milletvekili ve benzeri yeminler kamu personeli kavramının dışında kabul edildiği için analize tabi tutulmamıştır. Ayrıca ifa edilen iş esnasında yapılan yeminlere muhatap kişilerin yaptığı yeminler de süreklilik arz etmediği için çalışmaya dahil edilmemiştir. Araştırmanın esasına uygun olarak yemin metinlerinin her biri için tematik kodlamalar yapıldıktan sonra içeriğin anlamlı bir bütün halinde yeniden yapılandırılması için temalar belirlenmiştir. Daha sonra tümevarımsal yöntemle metinler analiz edilmiştir. Ayrıca yukarıda belirtilen dört alanda vazife yapan yirmi dört meslek mensubu ile önceden hazırlanmış soruların yöneltilmesi ile görüşme yapılmıştır ve elde edilen veriler analize tabi tutularak sunulmuştur.

Araştırma Bulguları

Metin Analizleri

1. Hukuk Alanında Meslek Yeminleri:

1.1. Avukat Yemini:

Hukuka, ahlaka, mesleğin onuruna ve kurallarına uygun davranacağıma namusum ve vicdanım üzerine ant içerim. (www.mevzuat.gov.tr)

Tema: Evrensel kaidelere uygunluk

Kodlar: Hukuk, ahlak, meslek onuru, kurallara uygunluk, namus, vicdan, ant içmek.

Metin analizi

Hukuk toplumu ve sosyal hayatı düzenleyen ve yaptırım ile güçlendirilmiş kurallar bütünüdür. Ahlak ise hukuk ile benzerlik gösteren, toplum düzenini var eden hukukun kaynağıdır. Meslek

onuru toplumun o mesleğe vermiş olduğu değer iken, namus insanın kendinde ve başkalarında olan değerlere saygı göstermesidir. Vicdan ise insanın iyi ve kötüyü ayırt edebilmesi ve davranışlarını iyiden taraf kullanmasıdır (Topçu, 2019: 190). Ant içmek kavramı “bir şeyi yapmaya veya yapmamaya, söz vermek, yemin etmek (TDK) anlamında kullanılan Arapça kökenli “yemin” kelimesinin Türkçe karşılığıdır.

Yemin metninde geçen, hukuk, meslek onuru, kurallara uygun davranma, namus ve vicdan kavramlarının tamamının ahlak temelli evrensel kaideler olduğu görülmektedir. Toplumsal yapıda geniş bir karşılık bulan avukatlık mesleğinin icra edilmesi sırasında vazifeyi yapan kişilerin de, namus ve vicdan gibi iki önemli kavram üzerine söz vermiş olması, meslek sahipleri için belirleyici bir motivasyon unsuru olmakla beraber, yapılacak işin de önemini vurgulamaktadır.

2. Güvenlik Alanında Meslek Yeminleri

2.1. Asker Yemini

“Barışta ve savaşta, karada, denizde ve havada, her zaman ve her yerde milletime, cumhuriyetime doğruluk ve muhabbetle hizmet ve kanunlara ve nizamla ve amirlerime itaat edeceğime ve askerliğin namusunu, Türk sancağının şanını canımdan aziz bilip icabında vatan, cumhuriyet ve vazife uğrunda seve seve hayatımı feda edeceğime namusum üzerine ant içerim.” (Avşar, 2012: 50).

Tema: Her Koşulda Vatana Hizmet- Bağlılık

Kodlar: Barışta ve savaşta, karada, denizde ve havada, her zaman ve her yerde, millet, cumhuriyet, Türk sancağı, candan aziz bilmek, hayatı feda etmek.

Metin Analizi

Yemin metninde geçen, Barışta ve savaşta, karada, denizde ve havada ifadeleri şart ne olursa olsun bu işi yapan kişilerin vazifeye hazır olduğunu anlatmaktadır. Ayrıca vazifenin vatan ve millet için yapılıyor olması ve bu uğurda insanın canını bile severek feda edebilmesi ifadesi yapılan işin sıradan bir iş olmadığını göstererek hem meslek olarak askerliği hem de bu vazifeyi yapan kişileri yüceltmektedir. Aynı zamanda bu ifadeler güçlü, cesur, mücadeleci, hâkim erkek duruşunu sergilemektedir. Metinde genel ifadelerin haricinde askerlik kavramının da yer alması meslek açısından yemin metnini daha özel hale getirmektedir.

2.2. Polis Yemini

“Türkiye Cumhuriyeti Anayasasına, Atatürk İlke ve İnkılâplarına Anayasada ifadesi bulunan Türk Milliyetçiliğine sadakatle bağlı kalacağıma Türkiye Cumhuriyeti kanunlarını Millettin hizmetinde olarak, tarafsız ve eşitlik ilkelerine, bağlı kalarak uygulayacağıma, Türk Milletinin, Milli, Ahlaki, İnsani, Manevi ve Kültürel değerlerini benimseyip, koruyup bunları geliştirmek için çalışacağıma, İnsan Haklarına ve Anayasanın Temel İlkelerine dayanan, Milli, Demokratik, Laik bir Hukuk Devleti olan, Türkiye Cumhuriyetine karşı görev ve sorumluluklarımı bilerek, bunları davranış halinde göstereceğime namusum ve şerefim üzerine ant içerim” (www.edmer.org.tr).

Tema: Millete Hizmet

Kodlar: Anayasa, Atatürk İlke ve İnkılâpları, Milliyetçilik, Türk milleti, milli, ahlaki, insani, manevi, kültürel değerler, insan hakları, laik hukuk devleti, görev, sorumluluk.

Metin Analizi

Polis toplumun iç güvenliğinin sağlanmasından sorumlu olan kişidir. Metinde devletin kurucu ilkeleri, yasalar ve bununla beraber toplumun milli ve ahlaki değerlerine vurgu yapılarak, polis bu değerler ışığında vazifesini yerine getireceğine vurgu yapılmaktadır. Aynı zamanda iç güvenlikten sorumlu olan ve toplumun devamlı muhatap olabileceği bir kişinin Türk milletine hizmet ederken bu hizmeti yasalar çerçevesinde yapacağı belirleyici ifade olmaktadır. Metinde polis ifadesi geçmemektedir daha genel ifadeler üzerinden bir yemin metni oluşturulduğu görülmektedir.

3. Eğitim Alanında Meslek Yeminleri

3.1. Öğretmen Yemini

“Türkiye Cumhuriyeti Anayasasına, Atatürk inkılâp ve ilkelerine, Anayasada ifadesi bulunan Türk Milliyetçiliğine sadakatle bağlı kalacağıma; Türkiye Cumhuriyeti kanunlarını Millettin hizmetinde olarak tarafsız ve eşitlik ilkelerine bağlı kalarak uygulayacağıma, Türk Milletinin milli, ahlaki, insani, manevi ve kültürel değerlerini benimseyip, koruyup, bunları geliştirmek için çalışacağıma; insan haklarına ve Anayasanın temel ilkelerine dayanan milli, demokratik, laik bir hukuk devleti olan Türkiye Cumhuriyeti’ne karşı görev ve sorumluluklarımı bilerek, bunları davranış halinde göstereceğime namusum ve şerefim üzerine yemin ederim.” (www.mevzuat.gov.tr).

Tema: Millete Hizmet

Kodlar: Anayasa, Atatürk İlke ve İnkılâpları, Milliyetçilik, Türk milleti, milli, ahlaki, insani, manevi, kültürel değerler, insan hakları, laik hukuk devleti, görev, sorumluluk.

Metin Analizi

Metin incelendiğinde polis yemin metni ile aynı olduğu görülmektedir. Özel olarak öğretmenlik mesleği, eğitim, öğrenci, okul gibi kavramlar kullanılmadan genel kavramlar üzerinden bir yemin metni oluşturulmuştur.

4. Sağlık Alanında Meslek Yeminleri

4.1. Doktor Yemini

“Tıp fakültesinden aldığım bu diplomanın bana kazandırdığı hak ve yetkileri kötüye kullanmayacağıma, hayatımı insanlık hizmetlerine adayacağıma, insan hayatına mutlak surette saygı göstereceğime ve bilgilerimi insanlık aleyhinde kullanmayacağıma, mesleğim dolayısıyla öğrendiğim sırları saklayacağıma, hocalarıma ve meslektaşlarıma saygı göstereceğime din, milliyet, cinsiyet, ırk ve parti farklarının görevimle vicdanım arasına girmesine izin vermeyeceğime, mesleğimi dürüstlük ve onurla yapacağıma, namusum ve şerefim üzerine yemin ederim.” (www.edmer.org.tr).

Tema: Meslek Onuru

Kodlar: Tıp fakültesi, diploma, hak ve yetki, insan hayatı, insanlık, sır, saygı, ayırım gözetmemek, dürüstlük, onur.

Metin Analizi

Metin incelendiğinde genel ifadeler yerine direkt meslek vurgusunun yapıldığı görülmektedir. Tıp fakültesi ve diploma kavramları -sağlık sektörünün istismara açık bir alan olması hasebiyle herkesin bu işi yapamayacağı anlamı verilerek- sağlık çalışanı olarak yetkinliği göstermektedir. mesleğin icabı olarak sahip olunabilecek özel bilgilerin ifşa edilmemesi, insan hayatına,

hocalara, meslektaşlara saygı, hekimlik mesleğinin disiplinli yapısını göstermektedir. Ayrıca hiçbir ayırım gözetilmeksizin mesleğin icra edilmesi evrensel bir bakış açısını göstermektedir.

4.2. Hemşire Yemini

“Yüklenmiş olduğum sorumlulukların bilincinde geliştirdiğim anlayış ve becerilerimle herhangi bir ırk, inanç, siyasal veya sosyal düzen ayırımı gözetmeksizin, hastalarımın bakacağıma; Hayatı korumak, ıstırapı hafifletmek, sağlığı yüceltmek için gereken her türlü çabayı göstereceğime; Bakımım altındaki hastaların bütün değer ve dini inançlarına saygı duyacağıma; Bana birileriyle ilgili olarak verilen tüm bilgileri saklayacağıma; Hayatı ya da sağlığı tehdit edebilecek her türlü girişimlerden sakınacağıma; Mesleki bilgi ve becerilerimi en üst düzeyde tutmaya çalışacağıma; Sağlık ekibinin bütün üyeleri ile işbirliği yapacağıma ve onları destekleyeceğime; Bunların tümünü yaparken uluslararası hemşirelik ahlak yasasının onurunu korumak için gerekecek bütün çabaları sarf edeceğime ve hemşireliğin bütünlüğünü koruyacağıma ant içerim.” (Bölüktaş, Özer ve Yıldırım, 2018: 92)

Tema: İnsan hayatı

Kodlar: Sorumluluk, ayırım gözetmemek, hayatı korumak, ıstırapı hafifletmek, sağlığı yüceltmek, inançlara saygı, sır, meslek onuru.

Metin Analizi

Hemşirelik yemininde de direkt meslekle ilgili ifadeler yer verilmiştir. Hastalara bakma, hayatı korumak, ıstırapı hafifletmek, sağlığı tehdit edebilecek girişimlerden uzak durmak genel ahlaki ifadeler yerine mesleği tarif etmek için kullanılmıştır. Aynı zamanda bu hassasiyetleri gösterirken hasta mahremiyetinin korunması, ayırım gözetilmemesi ve meslek onurunun korunması için çaba gösterilmesi de psikolojik motivasyon unsuru olarak vurgulanmıştır.

B. Görüşme Analizleri

Araştırmada görüşme formu hazırlanarak hukuk, güvenlik, sağlık ve eğitim olmak üzere dört alanda vazife yapan 24 meslek mensubu ile görüşme gerçekleştirilerek, analizleri yapılmıştır.

Görüşme yapılan meslek mensuplarından 7’si sağlık, 6’sı güvenlik, 7’si Eğitim, 4’ü ise hukuk alanında çalışmaktadır. Görüşme yapılan meslek grupları tablo 1.de gösterilmiştir.

Tablo 1. Görüşme yapılan meslek grupları

Araştırmaya katılanların 5’i 2-10 yıl 14’ü 11-20 yıl, 5’i 21-30 yıl hizmet yılı belirtilmiştir. Hizmet yılı tablo 2.de gösterilmiştir.

Tablo 2. Hizmet yılı

Katılımcıların 4'ü yapmış olduğu yemini hatırlarken, 20'si yapmış olduğu yemini hatırlamadığını belirtmiştir. Yemini hatırlama oranı tablo 3.de sunulmuştur.

Tablo 3. Yemini hatırlama oranı

Yemine uymayan meslek sahipleri için yaptırım gerekli mi sorusuna katılımcıların 17'si evet cevabını verirken, 6'sı hayır cevabını vermiştir. 1 kişi ise kararsız olduğunu belirtmiştir. Yemine uymayan meslek sahipleri için yaptırım gerekliliği tablo 4'de belirtilmiştir.

Tablo 4. Yemine uymayan meslek sahipleri için yaptırım gerekliliği

Meslek yemininin davranışınız üzerinde etkisi var mı sorusuna evet diyenlerin sayısı 4 iken, hayır diyenlerin sayısı 17'dir. 3 kişi ise kararsız olduğunu belirtmiştir. Meslek yemininin davranış üzerinde etkisi tablo 5.de verilmiştir.

Tablo 5. Meslek yemininin davranış üzerinde etkisi

Meslek sahiplerinin davranışının yeminle çelişme durumu sorulduğunda 8'i çeliştiğini belirtirken, 16'sı çelişmediğini ifade etmiştir. Meslek sahiplerinin davranışlarının yemin ile çelişme durumu tablo 6.da verilmiştir.

Tablo 6. Meslek sahiplerinin davranışlarının yemin ile çelişme durumu

Sonuç

İletişim toplumsal yapının zorunlu bir koşuludur. Toplumdaki hiçbir şey iletişim olmadan gerçekleşmez. Bu ortak yapı içinde iletişim tercihi bir eylem olmaktan çıkar. Dolayısıyla iletişim, toplumun ve toplumdaki bağımsız olmayan bireyin varlığını devam ettirmesi için gerekli olan her şeyi sunan bir fiziksel ve düşünsel faaliyettir. Bu faaliyetle birey evde, otobüste, okulda, işyerinde gün içinde bulunduğu çok farklı mekanlarda karşılaşabilir.

Bir iletişim aracı olarak meslek yeminleri de özellikle ileri düzey iş bölümünün gerçekleştiği modern toplumlarda var olan göreve başlama ve görevi ifa etme sürecinin bir parçasıdır. Yemin genel olarak bir ikna sürecidir. Kaynağını dinden ve kültürden alan yemin ifadeleri ile öncelikle karşındakini ikna etmeyi ve inandırmayı hedefler. Ancak meslek yeminlerinde temel amaç yemin eden kişinin kendini ikna etmesidir. Kamusal sorumluluk üstlenen kişilerin hizmet sürecinde yemin ederek sorumluluğunun farkında olması amaçlanmıştır. Yeminle alakalı törensel etkinlikler ve yemin metinlerinde geçen ifadeler yaklaşım noktasında yemine verilen ehemmiyeti göstermektedir. Çalışmada kamusal alanda belirlenen sağlık, hukuk, eğitim ve

güvenlik olmak üzere dört meslek alanında yapılan meslek yeminleri içerik analizine tabi tutularak metin içinde yer alan kavramlar ana tema üzerinden değerlendirilmiştir. Yemin metinleri incelendiğinde evrensel ahlak kaideleri üzerinden verilen mesajlar görülmektedir. Genel olarak şeref, namus, vicdan kavramları üzerinden ant içme söz konusudur. Yemin kavramının dinlerle ilişkisi olmasına rağmen metinlerde direkt İslam fihına konu olacak ifadelere rastlanmamıştır. İncelenen yemin metinlerinde din üzerine, kitap üzerine yapılan bir yemine ya da Allah'ı şahit tutarak yapılan bir metne rastlanmamıştır. Türk milleti, kültürel değerler, meslek onuru, millete hizmet kavramlarının ön plana çıktığı görülmektedir. İncelenen metinlerde meslek gruplarına has mesajlar verilmiştir. Mesela asker yemininde vatan için can verme kavramı kullanılırken, doktor yemininde insan hayatına saygı ifadesi vurgulanmıştır. Ancak Öğretmen ve polis yemininde mesleğe dair ifadelere rastlanmamıştır genel olarak Türkiye Cumhuriyeti'ne hizmet vurgusu ön plana çıkmıştır.

İnsanın kimliği kendi hakkında ne söylediğinden ziyade neyi nasıl yaptığıyla belirlenir. Dolayısıyla insanı değerlendirebilmek için söylediğinden ziyade yaptığına bakmak gerekir. Kişi kendini lafla üretiyorsa bunu nasıl yaptığına bakmak gerekir (Erdoğan, 2011: 83). Bu yüzden metin analizleri neticesinde bu alanlarda vazife yapan kişilerin meslek yeminleriyle ilişkilerinin incelenmesi de amaçlanmıştır. Görüşme yapılan kişilerden elde edilen bilgiler doğrultusunda adalet, eğitim, sağlık ve güvenlik alanında yemin eden kişilerden %80'den fazlasının yaptığı yemini hatırlamadığı tespit edilmiştir. Bu da mesleki uygulamaları ettikleri yemine göre olarak değil, kendi vicdan ve prensipleri üzerinden yaptıklarını göstermektedir. Benzer neticeyi katılımcıların kahir ekseriyetinin “meslek yemininin davranışınız üzerinde etkisi var mı” sorusuna verdikleri hayır cevabında da görmekteyiz. Yine de meslek sahiplerinin davranışının yeminle çelişme durumu sorulduğunda % 70'i davranışlarının çelişmediğini ifade etmiştir. Araştırmanın ilginç ve paradoks içeren bulgularından biri meslek mensubu olan kişilerin çoğunun yaptığı yemini hatırlamamasına rağmen yine çoğunluğun yemine aykırı hareket edenlerin yaptırımı tabi tutulması gerekliliğine inanmasıdır. Dolayısıyla meslek mensuplarının büyük çoğunluğunun yemin metinlerini hatırlamamasına rağmen içerik olarak kabullendiği, metinlerde geçen ifadelerin uygulamada yer bulması gerekliliğine inandığı ve hatta bu içerikleri hatırlamamalarına rağmen uygulamaya çalıştıkları sonucu, yemin törenlerinin ve yemin metinlerinin tekrar incelenmesi gerekliliğini ortaya çıkarmaktadır. Uzun metinler yerine daha konsantre metinlerin tercih edilmesi akılda kalıcı olması için bir çözüm önerisi olarak sunulabilir. Ayrıca yemin törenlerinin periyodik aralıklarla tekrar edilmesi ve yemin metinlerinin çalışma alanlarında asılı olması farkındalık oluşturması için tavsiye edilebilir. Vicdani sorumlulukla metin içeriklerine uygun hareket etme kabul edilebilir bir uygulama olsa da kurumsal yapılarda işin vicdani sorumluluktan ziyade biçimsel çerçeveye uygun hareket etme gerekliliğinden kaynaklanması gerekmektedir. Aksi takdirde meslek yeminleri törensel etkinlikten öteye gitmeyen bir uygulama olarak karşımıza çıkacaktır.

ÖZET

Minecraft'ın içerik olarak öğrencilere sunabileceği seçenekler oldukça zengindir. Oyun evlerimizdeki legoları bilgisayar teknolojisi ile buluşturup sınırsız hayal gücü ve kaynaklar sunmaktadır. Bu oyunun içerisinde kümes kurmak, tavuklara yem vermek, at ehlileştirmek, balık tutmak, ev yapmak, ağaç kesmek ve dikmek, fırın, sandık gibi eşyalar yapmak, maden üretmek gibi seçenekler mevcut olmakla birlikte uygun kazanımları arka planında tutarak kullanabilmek de mümkündür. Bu zengin eğlenirken öğrenen ortamın tam ortasında ise öğrencinin olduğunu düşününce Sosyal Bilgiler dersinde yer alan Coğrafi becerilerin etkililiği ve kalıcılığı artacaktır. Bununla birlikte öğrenciler arasında grup çalışması ve yarışmaların yapılabileceği gibi önceden hazırlanmış bir program ışığında da ders daha verimli bir hal alacaktır. Bu araştırmanın amacı 4. Sınıf Sosyal Bilgiler Dersi öğretim programında yer alan kazanımların Minecraft oyununa göre analizini yapmaktır. Bu kazanımların tespitinden sonraki aşama ise bu coğrafi oyuna entegre edilebilecek kazanımların öğrencilere bu yöntem ile öğretilmesidir. Araştırmanın doğasına uygun olması gereğiyle bu çalışmada nitel araştırma yöntemleri kullanılmıştır. Veri toplama aracı olarak doküman incelemesi yapılırken veri analizi ise doküman analizi ile desenlenmiştir. Sosyal Bilgiler dersi öğretim programına bakıldığında Kültür ve miras öğrenme alanından 1 kazanımın, İnsanlar, yerler ve çevreler öğrenme alanından 6 kazanımın tamamının, Bilim, teknoloji ve toplum öğrenme alanından 3 kazanımın, Üretim, dağıtım ve tüketim öğrenme alanından ise 4 kazanımın Minecraft ile Bloom taksonomisinin üst bilişsel düzeyde etkili bir biçimde öğretilbileceği tespit edilmiştir.

Analysis of the Achievements in the Classroom (4) Social Studies Course Curriculum According to the MineCraft

ABSTRACT

The options that Minecraft can offer to students as content are quite rich. The game combines legos in our houses with computer technology and offers unlimited imagination and resources. There are options such as setting up a coop, feeding chickens, taming horses, fishing, building a house, cutting and planting trees, making furnaces, crates, producing mines in this game, but it is also possible to use them by keeping the appropriate gains in the background. Considering that the student is in the middle of this rich learning environment while having fun, the effectiveness and permanence of the Geographical skills included in the Social Studies course will increase. However, group work and competitions can be held between students, as well as the course will become more efficient in the light of a pre-prepared program. Dec. The aim of this research is 4. The aim of the Classroom Social Studies Course is to analyze the achievements in the curriculum according to the Minecraft game. The next stage after determining these achievements is to teach students the achievements that can be integrated into this

6th International CEO Communication, Economics, Organization & Social Sciences Congress

geographical game using this method. Qualitative research methods were used in this study on the grounds that they are appropriate to the nature of the research. While document analysis is performed as a data collection tool, data analysis is patterned with document analysis. When looking at the Social Studies course curriculum, it was found that 1 acquisition from the field of culture and heritage learning, all 6 acquisitions from the field of people, places and environments learning, 3 acquisitions from the field of science, technology and society learning, and 4 acquisitions from the field of production, distribution and consumption learning, Bloom taxonomy with Minecraft can be taught effectively at an upper cognitive level.

Keywords: Minecraft, Geographical Skills, Geographical Games, Digital Games, Social Studies Course Curriculum

GİRİŞ

Günümüzde birçok dijital oyun eğitim-öğretim sürecine dahil edilmiştir. Bunlardan bir tanesi de Minecraft isimli oyundur. Bu oyun, 2009 yılında İsveç'te Mojang firması tarafından geliştirilmiş olup, gerçek dünya, oyunun dijital platformunda sanal bir modele dönüşmüştür. 2014 yılında ise Microsoftun, Minecraft Eğitim Sürümü (Minecraft: Education Edition [MinecraftEDU])'nü tasarlamak için Mojang firmasından telif hakları satın alınmıştır. Ayrıca Türkçe dil desteği de mevcuttur. 115 ülke eğitimde kullanmak üzere bu oyunu öğretim programlarına entegre etmişlerdir. Oyun içerisinde farklı ortamlarda gerçek dünyaya ait unsurların modellenmesi çeşitli nesnelere tanınmasına imkân sağlaması da oyunun günlük yaşamla ne kadar iç içe olduğunu göstermektedir.

Minecraft oyununda sınırsız kaynaklar ile tamamen bireysel ve özgün tasarımlara yer verilebilme imkânı sağlanmıştır. “Creative Mode” yani “Yaratıcı Mod” ile Minecraft dünyası, keşfedilmiş sınırlı kaynaklar üzerinden bir yaşam kurma mücadelesini yansıtmaktadır. Bununla birlikte, temel yaşam ihtiyaçlarından olan barınma ihtiyacı için de oyuncu kendisini korumak için bir ev inşa edebilmektedir. Bu mod ise “Survival Mode” yani “Hayatta Kalma Modu” olarak tanımlanmaktadır (Mojang, 2009).

KURAMSAL ÇERÇEVE

OECD ve TALIS raporunda da belirtilen ve 21. yy. becerileri arasında sıralanan, problem çözme becerisi, yaratıcılık ve iş birliğine olanak sağlayan çözümler üretebilen bu oyunun, eğitim ve öğretim sürecinde yararlanılması Minecraft: Education Edition (MES)'in bu versiyonunda olası görünmektedir (Mojang, 2014). Minecraft oyununda öğrenciler, günlük yaşama ait problemlere çözümler üretebilmektedirler. Örneğin bir baraj tasarımı yapıp, o şehrin su sorununu çözebilmektedirler. Ya da hava kirliliği sorununu çözmek için yeni enerji kaynakları geliştirip üretebilmektedirler. Ve bunların tamamını bir harita rehberliğinde yapmaktadırlar. Oyunun her bir bölümünde bir sabit bir harita kullanım alanına dair dönütler vermektedir. Oyunun içeriğine bakıldığında fen, matematik ve Sosyal Bilgiler dersinde kullanılabilirliğinin oldukça aktif olması gerekmektedir (Sarıçam ve Dostoğlu, 2017).

Öğretim programlarında; dijital yetkinlikle ilgili, öğrencilerin doğru bilgiye ulaşmaları konusunda özen gösterildiğine yer verilmiştir. Bununla birlikte, öğrencilerin eleştirel bir bakışa sahip olması, dijital dünyada gördüğü her bilgiyi sorgulaması ve eleştirel bir gözle bakması da dijital yetkinlik bağlamında edinilmesi istenen bir kazanımdır. Öğrencilerin, güvenli bir ortamda internet ağlarına erişebilir olması da dijital yetkinlik kapsamında verilmek istenen mesajın özünü iletmektedir (MEB, 2018a).

Konu ile ilgili önemli bir bilgi ise şu şekilde aktarılmaktadır; Birleşmiş Milletler Habitat Programı, Minecraft'ı köylülerin kentsel dönüşümü hayal edip alt yapı ve ihtiyaç analizinin bu bağlamda nasıl planlanması gerektiğini kurgulamak için 300 farklı köyde kullanmaktadırlar (Brand ve Kinash, 2013).

BULGULAR VE TARTIŞMA

Bu araştırmanın amacı 4. Sınıf Sosyal Bilgiler Dersi öğretim programında yer alan kazanımların Minecraft oyununa göre analizini yapmaktır. Bu kazanımların tespitinden sonraki aşama ise bu coğrafi oyuna entegre edilebilecek kazanımların öğrencilere bu yöntem ile öğretilmesidir. Araştırmanın doğasına uygun olması gerekçesiyle bu çalışmada nitel araştırma yöntemleri kullanılmıştır. Veri toplama aracı olarak doküman incelemesi yapılırken veri analizi ise doküman analizi ile desenlenmiştir. Sosyal Bilgiler dersi öğretim programına bakıldığında Kültür ve miras öğrenme alanından 1 kazanımın, İnsanlar, yerler ve çevreler öğrenme alanından 6 kazanımın tamamının, Bilim, teknoloji ve toplum öğrenme alanından 3 kazanımın, Üretim, dağıtım ve tüketim öğrenme alanından ise 4 kazanımın Minecraft ile Bloom taksonomisinin üst bilişsel düzeyde etkili bir biçimde öğretilbileceği tespit edilmiştir.

Gerçeğin, sanal modeller üzerinden bu derece sistematik bir biçimde öğretilbilir olması, ayrıca bir simülasyona gerek duyulmaması ders materyali sorunsalı yaşayan öğretmenler için çok kıymetli bir veri tabanı oluşturmaktadır. Öğrencilerin şarkıları öğrenebilmesi ve söyleyebilmesi (Chris, 2016) dili öğrenebilme ve etkili bir biçimde dili pratik düzeyde kullanabilmeye (Kuhn, 2018) kadar farklı disiplinleri içeren alanyazında Minecraft'tan faydalanan araştırmalara rastlanmıştır. Minecraft'ın, bilgisayar dillerini programlamayı öğrenmede de güçlü bir öğretim tekniği olduğuna dair bilgilere de çalışmalarda yer verilmiştir (Karsenti ve Bugmann, 2017). Bununla birlikte, eğitim ve öğretim programında, günlük yaşamda yaşanan problemlerin çözümünün önemini vurgulayan kazanımlar da mevcuttur (Yenilik ve Eğitim Teknolojileri Genel Müdürlüğü (YEGİTEK) (MEB, 2018a). Böylelikle MES aracılığı ile Sosyal Bilgiler dersinin içerik ve kazanımları baz alınıp günlük yaşamdaki problemlerin çözümü için öğrencilerin yaratıcılık becerilerini aktif ederek, problemlere çözüm önerileri geliştirmeleri sağlanabilir.

SONUÇ VE ÖNERİLER

Sosyal Bilgiler dersi öğretim programına bakıldığında Kültür ve miras öğrenme alanından 1 kazanımın, İnsanlar, yerler ve çevreler öğrenme alanından 6 kazanımın tamamının, Bilim, teknoloji ve toplum öğrenme alanından 3 kazanımın, Üretim, dağıtım ve tüketim öğrenme alanından ise 4 kazanımın Minecraft ile Bloom taksonomisinin üst bilişsel düzeyde etkili bir biçimde öğretilbileceği tespit edilmiştir.

MES'in problem çözme, yaratıcı düşünme, iş birliğine dayalı öğrenme ve eleştirel düşünme becerisi gibi becerileri geliştirdiğine dair alanyazında çeşitli çalışmalar bulunmaktadır (Ellison, Evans ve Pike, 2016; Karsenti ve Bugmann, 2017; Nebel, Schneider, ve Rey, 2016). Bu beceriler öncülüğünde, problem çözme becerisinin geliştirilebilmesi için harita okuryazarlığının kullanılabilir olması ve bunun için CBS ile Minecraft başta olmak üzere, çeşitli dijital oyunların kullanılması mümkündür.

ÖZET

Coğrafi becerilere bakıldığında bunlar; Coğrafi gözlem, arazide çalışma, coğrafi sorgulama (Farkına varma, konu veya problemi tanımlama, açıklama, analiz etme ve yorumlama, gelecek ile ilgili tahminlerde bulunma ve karar verme, kişisel çıkarımlar yaparak bir kanıya verme süreçlerinden oluşmaktadır.), zamanı algılama, değişim ve sürekliliği algılama, harita becerisi, tablo, grafik ve diyagram hazırlama ve yorumlama ve kanıt kullanma becerileridir. Bu becerilerin ölçme ve değerlendirmeye tabi tutulması ise coğrafya olimpiyatları okuryazarlığı kavramını da beraberinde getirmektedir. Yalnızca coğrafi sorgulama becerisinin içeriğine bakılarak bile aslında bu okuryazarlık becerisinin önemini anlamak mümkündür. Coğrafya olimpiyatları okuryazarlık becerileri tüm bu coğrafi becerileri ölçmek için bir yol haritası belirlemiş olsa da amacına ve zamana hitap etmiş bir okuryazarlık becerisinin günümüz ile sınırlı kalmayıp geleceğe taşınacağı da büyük bir gerçekliktir. İşte tam da bu noktada 21. yüzyıl becerileri konunun anlam ve önemini anlamak ve yorumlamak açısından önem arz etmektedir. Bu araştırmanın amacı Uluslararası Coğrafya Olimpiyatlarının 21. Yüzyıl becerileri açısından değerlendirilmesidir. Araştırmanın doğasına uygun olması gerekçesiyle bu çalışmada nitel araştırma yöntemleri kullanılmıştır. Veri toplama aracı olarak doküman incelemesi yapılırken veri analizi ise doküman analizi ile desenlenmiştir. Uluslararası Coğrafya Olimpiyatlarında yer alan sorular incelendiğinde bu soruların; Eleştirel düşünme, problem çözme, iletişim, iş birliği, yaratıcılık, inovasyon, girişimcilik, esneklik ve uyum, sosyal ve kültürler arası ilişki ile üretkenlik ve sorumluluk becerileriyle ilişkili olduğu tespit edilmiştir.

Anahtar Kelimeler: Uluslararası Coğrafya Olimpiyatları, 21. Yüzyıl Becerileri, Coğrafya Eğitimi

Evaluation of the International Geography Olympiads in Terms of 21st Century Skills

ABSTRACT

When looking at geographical skills, they consist of geographical observation, field work, geographical inquiry (Awareness, identification of a topic or problem, explanation, analysis and interpretation, making predictions about the future and making decisions, making personal inferences and giving an opinion.), time perception, change and continuity perception, map skills, table, chart and diagram preparation and interpretation and evidence use skills. The subjection of these skills to measurement and evaluation also brings with it the concept of geography Olympiad literacy. Even by looking only at the content of the geographical inquiry skill, it is possible to understand the importance of this literacy skill. Although literacy skills of the geography Olympiad have determined a

6th International CEO Communication, Economics, Organization & Social Sciences Congress

roadmap for measuring all these geographical skills, it is also a great reality that a literacy skill that addresses its purpose and time will not be limited to the present but will be carried into the future. This is exactly at this point 21. century skills are important in terms of understanding and interpreting the meaning and importance of the subject. The aim of this research is to present the results of the 21st International Geography Olympiad. It is to be evaluated in terms of century skills. Qualitative research methods were used in this study on the grounds that they are appropriate to the nature of the research. While document analysis is performed as a data collection tool, data analysis is patterned with document analysis. When the questions in the International Geography Olympiads were examined, it was found that these questions were related to critical thinking, problem solving, communication, cooperation, creativity, innovation, entrepreneurship, flexibility and adaptation, social and intercultural decoupling, productivity and responsibility skills.

Keywords: International Geography Olympiad, 21. Century Skills, Geographical Education

GİRİŞ

Eğitimin temel amaçlarından biri de bireyleri yaşamın koşullarına en iyi biçimde hazırlamaktır. Bu amaçla eğitim, yaşamları boyunca karşılaştıkları problemlere karşı hazırlıklı olmaları için bireyleri problem çözme becerileri ile donatmakla sorumludur. Günümüzde değişen toplumsal, ekonomik ve teknolojik koşullarla birlikte eğitimden beklenen nitelikler de değişip, gelişmektedir. Örneğin Coğrafya derslerinde; Yalnızca şehirlerin yerleri, ülkelerin başkentleri, tarımsal ağlar, bir dağın yüksekliği ya da bir ülkenin yüz ölçümünü bilmenin temel bilgiler olarak sınıflandırıldığı anlaşılmaktadır. Artık öğrencilerden öğrenmeleri istenen 21. Yüzyıl becerileri ile donatılmış, öğrenmeyi öğrenmiş, problemin ne olduğunu değil o probleme en uygulanabilir yöntem ile çözüm üretebilen, insana ve çevreye duyarlı, sorumlu bir birey olarak yetişmesidir.

Bu özellikler sebebiyle, sorgulama temelli öğrenme öğrenci merkezli bir öğrenme yaklaşımı olarak kabul edilmektedir ve bu beklentileri karşılayabilecek bir yapıya da sahiptir. Sorgulama temelli öğrenmenin amacı, öğrencilerin temel bilgiyi öğrenmesi değil, öğrencilerin bilgiyi anlamlandırmaları da değil sorgulama temelli öğrenmenin amacı, öğrencilerin çeşitli görev ve sorumluluklar alarak, problem çözmek için var olan beceri ve değerlerin kazandırılmasıdır (Love, vd., 2015).

Sorgulama temelli öğrenme sonucunda öğrenciler, belli becerileri kazanırlar (Hwang, Wu, Zhuang ve Huang, 2017). Bir başka deyişle sorgulama temelli öğrenme, öğrencilere farklı beceriler kazandırırken, sorgulama özelinde de bir beceri kazandırmayı hedeflemektedir. Böylece bireyi yaşama hazırlamak sorgulama temelli öğrenmenin de ana amacını oluşturmaktadır (Kidman ve Casinader, 2017).

Problem, günlük yaşamda bireyin karşısında mücadele etmek zorunda olduğu şey olarak ifade edilmiştir (Adair, 2017; Huilt, 1992). Bununla birlikte problem, insanın bilişsel düşünme kapasitesini karmaşıklaştıran, belirsizliğe sebep olan bireyi huzursuz eden bir yapıya sahiptir. Bu his sosyal yaşamında içinde yer alan bireye, kendisine ve topluma karşı uyumsuzluk teşkil etmektedir (Duman, 2013; Kalaycı, 2006).

KURAMSAL ÇERÇEVE

Birey, zihninde ulaşmak istediği noktaya varmak için mücadele ediyorsa çözümlenmesine ihtiyaç duyulan problemlerin varlığı ortaya çıkmaktadır (Aksoy, 2003; Bingham, 1983). Probleme sahip olan bir durum, mevcut durumdan farklı niteliklere sahiptir (Kneeland, 2001; Öğülmüş, 2006). Bireyler, yaşamları süresince çeşitli problemlerle karşılaşmak ve mücadele etmek zorundadırlar (Çetinkale, 2006). Bu problem, öğretmenin derste verdiği ödev, sorumluluk, ya da yoldaki birinin sorusu, evde ebeveynlerinin sorusu olabilmektedir (Gelbal, 1991). Bir amaç uğrunda çalışmalara girişmek (Altun, 2000; Kalaycı, 2006) ve karşılaşılan zorluklarla mücadele etme süreci (Aksu, 1998; Bingham, 1983), bireyin karşısına çıkan problemi çözmesi konusundaki kararlılığı ve istekliliği (Konan, 2013) olarak, ifade edilen problem çözme, daima geliştirilip dönüştürülmesi gereken öneme sahip bir beceri niteliğine sahiptir.

Problemlerin analiz edilmesine ihtiyaç duyulması, problem çözme sürecinin de önemine dikkat çekmektedir. Problemlerin, bireyi birey yapan özellikleri olduğu düşünüldüğünde eğitim-

öğretim sürecinde problem çözme becerisine ne derecede önem verilmesi gerektiğine ilişkin algı netleşmektedir. Problemlerin etkili, doğru ve bir mantık çerçevesinde analiz edilip çözülebilmesi için probleme dair, problemin ne olduğuna dair ve çözüme dair tespitlerin doğru yapılmış olması gerekmektedir (Duman, 2013). Bir problemle karşı karşıya gelen kişi, o problemi çözebilmek için bir probleme karşı neler yapabildiği, nasıl çözüm üretebildiğini belirlerken bir nevi kendisini de tanımaktadır aslında. Bireyin bir problemi çözmesi demek aynı zamanda onun yaratıcı düşüncüyü de bilişsel düzeyde geliştirmesi anlamına gelmektedir.

Problem çözme becerisi, ilk bakışta matematiksel bir olay ve matematik dersinde geliştirilen bir beceri gibi gözükse de bu beceri, yaşamın tüm alanlarında kritik bir öneme sahiptir. Çünkü problem çözme becerisi hem bilimsel bir süreç içinde bu becerinin geliştirebilmesi için bir öğrenme-öğretme stratejisini içermektedir. Bir başka algı ise problem çözme becerisinin, Sosyal Bilgiler dersi öğretim programında var olmasına rağmen, Fen Bilimleri ve Matematik derslerinde, Sosyal Bilgiler dersine göre daha önemli bir pozisyonda olduğu algısıdır.

Oysa Dünya Ekonomik Forumunun 2025 yılına ait yayınladığı geleceğin becerilerine bakıldığında problem çözme becerisinin, 21. Yüzyıla ait beceriler listesi içerisinde yer aldığı dikkati çekmekle birlikte bu becerinin, yaşamsal bir öneme sahip olduğu da açıkça vurgulanmaktadır. Yaratıcılık, problem çözme ve eleştirel düşünme gibi 21.yüzyıl becerilerinin çocuklara kazandırılmasının önemi çok büyüktür. Günümüzde hatırı sayılır ölçüde önem taşıyan bir problemin varlığı değildir. Problemlere çözüm üretememek ve çözümleri başka disiplinlerle ilişkilendirememek, eksikliğin kendisidir (Capraro, 2013).

Problem çözme becerisinin bireylere kazandırılması, gerçek dünya üzerindeki problemlerin çözümü için önemlidir (Tanenbaum, 2016). Aynı zamanda bireylere problem çözme becerisi kazandırmak diğer derslerle de disiplinlerarası bir entegrasyon sağlayacak olup günlük yaşamdaki problemlerin çözümüne katkı sunacak bir beceri olarak değerlendirilmektedir (Basham ve Marino, 2013).

21. yüzyılın mesleklerine bakıldığında akademik beceriler olarak nitelendirilen okur-yazarlık becerisinin, matematiksel bir problemi çözebilmenin dışında, farklı bir problem çözme becerisine sahip olmaları gerektiği vurgulanmaktadır. Bu beceri bireylerin yaşamlarında karşılaşacakları problemleri tanıyıp, ona göre çözüm bulmalarını sağlayacak bir yetiye sahip olmalarını gerekli kılmaktadır. Bu noktada, yaşamın içerisinde canlı bir biçimde varlığını sürdüren, bireylerin yaşamlarını, doğayla ve birbirleriyle olan ilişkilerini, geçmiş ve günümüz çerçevesinde değerlendiren Sosyal Bilgiler dersine büyük bir görev düşmektedir.

BULGULAR VE TARTIŞMA

Problem çözme becerisine yönelik algı, kararlılık ve isteklilik temalarından oluşan araştırma aynı zamanda çeşitli alt temalara da sahiptir. Bu alt temalar; Öğrencileri analiz, sentez ve değerlendirme yapmaya yönlendirme, öğrencilere 21.yüz yıl becerileri başlığı altında yer alan karar verme, iş birlik öğrenme gibi becerileri de kazandırma, Zorlukları fırsata çevirmenin yollarını bulma, öğrencilerin topluma hizmet edecek ve topluma fayda sağlayacak bir birey olarak yetişmesini sağlayacak değerlerin öğretilmesi, özgüven, öz saygı, risk alma ve kriz yönetimini kazanabilme becerisi elde etmelerini sağlama, öğrencilerin günlük yaşam

kalitelerini yükseltme gibi boyutlar yer almaktadır. Araştırma bulgularında da değinilecek olan bu alt boyutların harita etkinlikleri ile problem çözme becerisinden kaynaklandığına dair bulgular ve öğrenci ifadelerine yer verilmiştir.

Coğrafya olimpiyatları okuryazarlık becerileri tüm bu coğrafi becerileri ölçmek için bir yol haritası belirlemiş olsa da amacına ve zamana hitap etmiş bir okuryazarlık becerisinin günümüz ile sınırlı kalmayıp geleceğe taşınacağı da büyük bir gerçekliktir. İşte tam da bu noktada 21. yüzyıl becerileri konunun anlam ve önemini anlamak ve yorumlamak açısından önem arz etmektedir. Bu araştırmanın amacı Uluslararası Coğrafya Olimpiyatlarının 21. Yüzyıl becerileri açısından değerlendirilmesidir.

SONUÇ VE ÖNERİLER

Uluslararası Coğrafya Olimpiyatlarında, görsel ve yaşamın içinde yer alan soru ve sorunların önemini kavradıktan sonra, bu çalışmanın ülkemiz öğrencileri üzerindeki etkisini tespit edebilmek adına önem taşıdığı için araştırmaya yönelik bir motivasyon kaynağı olmuştur. Uluslararası Coğrafya Olimpiyatlarında yer alan sorular incelendiğinde bu soruların; Eleştirel düşünme, problem çözme, iletişim, iş birliği, yaratıcılık, inovasyon, girişimcilik, esneklik ve uyum, sosyal ve kültürler arası ilişki ile üretkenlik ve sorumluluk becerileriyle ilişkili olduğu tespit edilmiştir.

ABSTRACT

In order to combat customer satisfaction and competition conditions in the consumer market, companies must be able to produce products that meet the demands of consumers. In order to compete with many products in the market and to be the reason for preference, the consumers wishes gain importance. In this context, it is of great importance to understand the preferences of consumers in the selection of cleaning products and to produce according to these preferences. The subject of the study is the examination of the factors affecting the preferences of cleaning materials in the consumer market with the conjoint analysis method. Conjoint analysis, which is one of the multivariate statistical analysis methods, is a widely used analysis to measure and determine how consumer preferences change within the scope of multi-feature and qualified products. The aim of the study is to determine the degree of importance of the factors that people give the most importance in the selection of cleaning materials and to determine which of the determined levels will be demanded more. After this determination, it is the examination of which features the company should give importance to the production of cleaning materials according to the preferences. Cards consisting of the factors of price, brand, smell, accessibility and degree of promotion, which are important in the selection of cleaning materials, were prepared. For these cards, the participants were asked to rank from the most preferred to the least preferred. As a result of the study, it was determined that the brand of cleaning materials was the most important among the preferences with 32%.

Key Words: Cleaning material selection, Conjoint analysis, SPSS analysis

Konjoint Analizi ile Tüketicilerin Temizlik Malzemesi Seçiminin İncelenmesi

ÖZET

Çok değişkenli istatistiksel analiz yöntemlerinden biri olan konjoint analizi çok özellik ve nitelikli ürünler kapsamında tüketici tercihlerinin nasıl değiştiğini ölçmek ve belirlemek amacıyla yaygın olarak kullanılan bir analizdir. Bu yöntemin temelinde tüketicilerin bir şeyin faydasını veya değerini, her bir özneliğin sağladığı ayrı miktarlarda faydayı birleştirerek değerlendirme vardır. Diğer çok değişkenli metodlar ile karşılaştırıldığında, araştırmacının kendisinin özellikler ve düzeylerini seçerek ürün veya hizmetleri gerçek ya da hipotetik olarak inşa ettiği tek yöntemdir. Çalışmanın konusu tüketici piyasasında temizlik malzemeleri tercihlerini etkileyen faktörlerin konjoint analiz yöntemiyle incelenmesidir. Amacı ise kişilerin temizlik malzemelerinin seçimlerinde en fazla önem verdikleri faktörlerin önem derecesinin belirlenmesi ve belirlenen düzeylerin hangisinin daha çok talep edileceğinin tespiti. Bu tespitten sonra tercihlere göre firmanın hangi özelliklerde temizlik malzemesi_ üretimine

6th International CEO Communication, Economics, Organization & Social Sciences Congress

önem vermesi gerektiğinin incelenmesidir. Temizlik malzemesi seçiminde önemli olan fiyatı, markası, kokusu, ulaşılabilirliği ve promosyonu derecesi faktörlerinden oluşan kartlar hazırlanmıştır. Oluşturulan bu kartlar için katılımcılardan en çok tercih edilenden en az tercih edilene doğru sıralaması istenmiştir. Çalışma sonucunda temizlik malzemelerinin markasının %32 ile tercihler içerisinde en önemli olduğu tespit edilmiştir.

Anahtar kelimeler: Temizlik malzemesi seçimi, Konjoint analizi, SPSS analizi

GİRİŞ

Tüketici piyasasında müşteri memnuniyeti ve rekabet şartları ile mücadele edilebilmesi için firmaların tüketicilerin isteklerine uygun ürünler üretebilmesi gereklidir. Piyasada bulunan birçok ürün ile yarışabilmek ve tercih sebebi olabilmek için tüketicilerin istekleri önem kazanmaktadır. Bu kapsamda tüketicilerin temizlik ürünleri seçimlerindeki tercihlerini iyi anlamak ve bu tercihlere göre üretim yapmak büyük önem taşımaktadır. Çalışmanın bu konuda tüketicilerin isteklerine yönelik ürünlerin üretilmesi konusunda firmaya ışık tutacağı düşünülmektedir. Bu amaçla konjoint analizi kullanılacaktır. Konjoint analizi literatürde bir çok alanda uygulanan bir yöntemdir.

Yang ve diğ., (2017) yaptıkları araştırmacı vaka çalışmasında, çevrimiçi otel incelemesi bağlamındaki yorum yararlılığı açısından altı buluşsal özelliğin (inceleyen konumu, inceleyen seviyesi, inceleyen faydalı oyu, inceleme puanı, inceleme uzunluğu ve inceleme fotoğrafı) karşılaştırmalı önemini incelemeyi amaçlamışlardır. Bu amaçla TripAdvisor'daki bir otel hakkında toplam 1.158 yorumu toplamış ve Konjoint analizi metoduyla analiz etmişlerdir. Sonuç olarak yorum puanı ve yorumcu faydalı oyu özelliklerinin en önemli iki faktör olduğunu tespit etmişlerdir. Son olarak, çalışmanın bulgularına dayalı olarak üç ana önerme öne sürülmüşler ve çeşitli teorik ve yönetsel çıkarımları tartışmışlardır.

Ong ve diğ., Konjoint analizi yaklaşımını kullanarak en çok tercih edilen sütlü çay özelliklerinin kombinasyonunu belirlemeyi amaçlamışlardır. Spesifik olarak, çalışmalarında tapyoka incilerinin boyutu, şeker seviyesi, fiyat aralığı, markalar, sütlü çay türü, krem peynir içeriği ve buz miktarı gibi farklı özellikleri dikkate almışlardır. Sütlü çay tüketicilerinin tercihini değerlendirmek için ortogonal desenli konjoint analizi kullanmışlardır. Sonuç olarak, inci boyutunun tüketiciler tarafından en çok dikkate alınan özellik (%29,137), ardından şeker seviyesi (%17,373), buz miktarı (%17,190), içecek türü (%13,421), fiyat (%11,207) olduğunu ve en az dikkate alınanların ise krem peynir içeriği (%9,525) ve markalar (%2,147) olduğunu belirlemişlerdir.

Silayoi ve Speece (2007), Konjoint analizi yaklaşımını kullanarak Tayland'da paketlenmiş gıda ürünleri için tüketiciler arasında ambalaj tasarımının önemini ve ambalajın tüketici iletişimi için bir araç olarak rolünü incelemişlerdir. Analiz sonucunda, paketleme teknolojisi hakkındaki algıların, tüketicinin satın alma olasılığı üzerinde genel olarak en önemli rolü oynadığını göstermişlerdir.

Sharma ve diğ., (2023) hükümette ve daha spesifik olarak Hindistan eyalet hükümetlerinde kamu hizmetlerinin sunumunda blok zincirinin benimsenmesi için kritik zorlukları tanımlamışlardır.

Kritik zorlukları belirlemek için bir literatür taraması ve paydaşlarla bir odak grubu çalışması gerçekleştirmişlerdir. Her zorluğu Konjoint analizi metodunu kullanarak paydaşların görüşlerine göre sıralamışlardır. Bu çalışmaları ile, Blockchain'in hükümet tarafından benimsenmesiyle ilgili olarak, ekolojik değişimlerin teknolojiden daha önemli bir zorluk olduğuna işaret etmişlerdir.

Lin ve diğ., (2021) kanıta dayalı müdahalelerin (KDM) benimsenmesinde hastane paydaşlarının karar verme sürecini araştırmak için bir pazarlama araştırması tekniği olan Konjoint analizi metodunu kullanmışlardır. Çalışmada, Çin'in Fujian kentindeki altmış

hastane müdürü, (1) idari destek, (2) maliyet, (3) personel katılımı, (4) format, (5) süre, (6) teknik destek ve (7) hastane ile öncelik uyumu dahil olmak üzere yedi özelliğin tercih edilen ve tercih edilmeyen seviyelerine sahip sekiz varsayımsal senaryo üzerinden KDM nin hastanelerinde benimseme olasılığını değerlendirmiştir. Yazarlar, müdahale uygulamasının parasal maliyetinin (etki puanı = 2,12), KDM nin benimsenme olasılığı üzerinde en büyük etkiye sahip olduğunu, bunu müdahalenin süresi (etki puanı = 0,88), teknik desteğin mevcudiyeti (etki puanı = 0,69) ve biçimin esnekliği faktörlerinin (etki puanı = 0,36) izlediğini ifade etmişlerdir. Diğer özelliklerin etki puanlarının istatistiksel olarak anlamlı olmadığını belirtmişlerdir. Bulguların, sağlık hizmetleri ortamlarında müdahalelerin geliştirilmesi ve yaygınlaştırılmasında maliyet, süre, teknik destek ve format esnekliğinin dikkate alınmasının önemini ortaya koyduğunu ifade etmişlerdir.

Jantzi ve McSweeney (2019) çalışmalarında Nova Scotia tüketicilerinin şarabı sevmesine neden olan özellikleri araştırmayı hedeflemişlerdir. Bir literatür taraması yapmışlar ve şarap tutkunlarından oluşan bir odak grubu (n = 15) belirlemişlerdir. Şarap stili, üretim yöntemi, menşe bölgesi, fiyat ve lezzet dahil olmak üzere beş özellik belirlemişlerdir. Bu öznelikleri seçime dayalı bir Konjoint analizi anketi oluşturmak için kullanmışlardır. Anketi Kanada Nova Scotia' da ikamet eden 374 kişiye (40,5 ± 11,6) uygulamışlardır. Yaptıkları çalışmada sonuç olarak fiyat ve menşe bölgesinin Nova Scotian şarap tüketicileri için en önemli nitelikler olduğunu göstermişlerdir. Lezzet açıklamalarının tüketici tercihi üzerinde ciddi bir etkisi olmadığını ifade etmişlerdir.

Igarashi ve diğ. (2022) Japon bireylerinin varsayımsal bir bulaşıcı hastalığa karşı aşılama isteklerini araştırmışlardır. Bir internet anket ajansı aracılığıyla genel bir halk paneli ile Konjointanalizi yapmışlardır. Aşı etkinliği, aşı güvenliği, bağışıklık süresi ve fiyat, faktörlerini analiz özellikleri olarak seçmişlerdir. Her katılımcı, çevrimiçi bir panel kullanarak 12 varsayımsal senaryoarasından seçim yapmıştır. Daha yüksek etkinlik, yaşam boyu bağışıklık süresi ve pandemi korkusu, aşı olma isteğini olumlu etkilerken, daha yüksek aşılama fiyatı ve daha yüksek toksisite olumsuz etkilere sahip olduğunu ifade etmişlerdir. Çalışma popülasyonunun toplam %69,2'si %100 etkili, ömür boyu bağışıklığı olan, düşük toksisiteli ve ücretsiz bir aşı yaptırmaya istekli olduğu sonucuna varmışlardır.

1. MATERYAL VE METOT

Konjoint analizinin uygulaması ve beklenen yararlarının optimum sonuç verebilmesi için aşağıdaki aşamalarda yürütülmesi gereklidir (Sönmez, 2006).

- 1- Mal ve hizmetin önem arz eden tüm özelliklerinin belirlenmesi
- 2- Her özelliğe ilişkin düzeylerin belirlenmesi
- 3- Gerekli anket formatının hazırlanması
- 4- Anket uygulaması
- 5- Her anket için her özelliğin tüm düzeylerinin tüketime etkisinin tahmin edilmesi
- 6- Benzer özellik tercihlerinde bulunan tüketicilerin gruplanarak bazı ortak tercih modellerinin veya tüm tüketiciler için genel tüketim modelinin oluşturulması
- 7- Çalışmada ele alınan ürünün rakip mal alternatifleri arasında tercih paylarının tüm pazar veya seçilmiş pazar kesintileri için simüle edilmesi

Yukarıda sıralanan aşamalardan ilkinde, konu edilen mal veya hizmetle ilgili tercih belirlemede etkisi olabilecek tüm özelliklerin belirlenmesi gerekir. Bu özelliklerin belirlenirken konuya üretici ve tüketici yönünden yaklaşımda yarar vardır.

İkinci aşama büyük ölçüde birinci aşamaya bağlı olup bu aşamada belirlenen özelliklerin her biri için anlamlı olacak düzeylerin de aynı mantık çerçevesinde belirlenmesi gerekir.

İlk iki aşamada belirlenmiş özellikler ve düzeylerinden sonra anket formunun hazırlandığı üçüncü aşamada soruların açık, net kısa olmasına dikkat edilerek bir anket formu oluşturulur. Dördüncü aşama olan anket uygulamasında özellikle uygulanması gereken en önemli husus, anketin gerçekleşen talep durumunda doldurulmasıdır.

Beşinci ve izleyen diğer iki aşama, kullanılan bilgisayar paket programı ile ilgili olup, araştırmacının müdahalesi söz konusu değildir. Bu aşamaların en önemli konusu, elde edilen analiz sonuçlarının doğru yorumlanmasıdır ki bu da büyük ölçüde araştırmacının deneyimine ve konu hakkında bilgi sahibi olmasına bağlıdır (Şimşek ve Akman, 2022).

Her istatistiksel çalışmada olduğu gibi bu çalışmada da doğru bilgi elde edilmesine, sırlamanın ciddi ve özenle yapılmasına dikkat edilmiştir. Çünkü Konjoint analizi yöntemi bilinçli tüketici ile karşı karşıya olduğu varsayımı üzerine kurulmuştur.

Son olarak elde edilen sonuçlar yorumlanır. Dikkat edilmesi gereken en önemli şey sonuçların doğru yorumlanmasıdır.

Bu araştırmada tüketicilerin temizlik ürünlerini seçerken nelere dikkat ettikleri, seçimlerinde hangi özellikleri daha ön planda tuttukları Konjoint analizi yardımıyla belirlenmiştir. Analizde fiyat, marka, koku, promosyon ve ulaşılabilirlik faktörleri olarak belirlenmiştir. Değişkenlere ait düzeyler Tablo 1 de gösterilmiştir. Faktörler belirlenirken tüketicilerin en çok dikkat edebilecekleri özellikler göz önüne alınmıştır.

Tablo-1: Değişkenlere ait düzeyler

Özellik	Boyut	Boyut sayısı
Koku Derecesi	(Az), (Orta), (Çok)	3
Fiyat	(<40), (40-60), (>60)	3
Promosyon	(Var), (Yok)	2
Ulaşılabilirliği	(Kolay), (Zor)	2
Marka	(Bingo), (Cif), (Domestos) (Domol)	4

Analizler için veriler anket toplama yöntemiyle elde edilmiştir. 10 kişiye elektronik ortamda anketler iletilmiştir.

Tüketicilerin temizlik ürünlerinde aradıkları özelliklerin önem derecesini belirlerken belirlenen düzeylerin demografik özellikler ile incelenmesi için cinsiyet, yaş, çalışma durumu, mesleği, medeni durumu olmak üzere 5 demografik bilgi belirlenmiştir. Tercihlerin belirlenmesi için Konjoint Analizi kullanılmıştır.

2. BULGULAR VE TARTIŞMA

Bu çalışmanın amacı temizlik ürünü kullanımında kişilerin hangi özelliklere göre tercih yaptığının belirlenmesine yöneliktir. Uygulama adımları şu şekildedir.

1.Adım. Değişkenlerin ve düzeylerinin belirlenmesi:

Değişkenler: Koku derecesi, fiyat, promosyon, ulaşılabilirliği, marka faktörler belirlenmiştir.

Düzeyler: Fiyat: <40, 40-60, >60 ; Koku derecesi: az, orta, çok; Promosyon: var, yok;

Ulaşılabilirliği: kolay, zor; Marka: bingo, cif, domestos, domol olmak üzere belirlenmiştir.

Demografik bilgiler: Yaş: 18-25, 25-35, 35-45, 45-55, 55 ve üstü; Cinsiyet, Medeni durum, meslek, çalışma durumu olmak üzere 5 başlık belirlenmiştir.

2.Adım. Değişken-düzye kombinasyonunun belirlenmesi:

Anket tekniği açısından tüm olası kombinasyonlarının sıralanması mümkün olmadığından dolayı her bir özellik ve düzeylerinin seçiminin birbirinden bağımsız olduğu varsayımı ile sadece ana özelliklerin dikkate alındığı “ortogonal düzen” adı verilen deney düzeni kullanılmaktadır. Bu düzen SPSS paket programı ile gerçekleştirilmiştir. Kriterlere göre yer alan kombinasyonları $3*3*2*2*4=144$ adet olmaktadır. Bu araştırma kapsamında olası kombinasyonlar çok olduğu için ortogonal bir alt küme oluşturulmuştur. Ortogonal tasarımda 25 CardID + 4 Holdout CardID oluşturulmuştur. Oluşturulan kart listesi Tablo 2’de yer almaktadır.

3.Adım. Anket formunun hazırlanması:

Uygun anket formu oluşturulmuş ve katılımcılara online olarak ulaştırılmıştır. İlk tercih edecekleri karta 1 vererek son tercih edecekleri karta doğru sıralama yapılması istenmiştir. Ayrıca demografik bilgilerde girilmiştir.

4.Adım. Verilerin toplanması:

Elde edilen veriler excelde birleştirilmiştir. 10 kişi tarafından anketler doldurulmuştur.

5.Adım. Analizin yapılması

Elde edilen veriler birleştirildikten sonra SPSS paket programı ile analizleri gerçekleştirilmiştir.

Tablo-2: Ortogonal tasarım sonucu elde edilen kartlar

Card List

Card ID	Ürünün Markası	Ürünün Fiyatı	Koku Derecesi	Ürünün Ulaşılabilirliği	Ürün Promosyonu
1	Cif	40-60	Orta	Kolay	Yok
2	Domol	<40	Orta	Kolay	Var
3	Bingo	40-60	Çok	Zor	Var
4	Domestos	<40	Orta	Zor	Yok
5	Domol	>60	Az	Zor	Yok
6	Bingo	<40	Orta	Kolay	Yok
7	Bingo	40-60	Az	Kolay	Yok
8	Bingo	<40	Orta	Kolay	Var
9	Domol	<40	Çok	Zor	Yok
10	Domestos	<40	Az	Kolay	Var
11	Domol	40-60	Az	Kolay	Var
12	Cif	<40	Çok	Kolay	Var
13	Domestos	40-60	Orta	Zor	Var
14	Cif	<40	Az	Zor	Var
15	Bingo	<40	Az	Kolay	Var
16	Domestos	40-60	Çok	Kolay	Yok
17	Bingo	40-60	Orta	Zor	Var
18	Bingo	<40	Az	Zor	Yok
19	Domestos	>60	Az	Kolay	Var
20	Cif	40-60	Az	Zor	Var
21	Domol	40-60	Orta	Kolay	Var
22	Bingo	>60	Çok	Kolay	Var
23	Cif	>60	Orta	Kolay	Yok
24	Bingo	40-60	Az	Kolay	Yok
25	Bingo	>60	Orta	Zor	Var
26 ^a	Bingo	40-60	Az	Zor	Yok
27 ^a	Domestos	<40	Çok	Kolay	Var
28 ^a	Domestos	<40	Az	Zor	Yok
29 ^a	Bingo	40-60	Az	Zor	Var

a. Holdout

Demografik bilgilerin analizlerinin bazıları şu şekildedir. Tablo 3’de ankete katılanların demografik özelliklerine göre ağırlımı görülmektedir. Cevaplar incelendiğinde ankete katılanların çoğunluğunu % 80 ile kadınların oluşturduğu gözlenmektedir. % 40 ile 25-35 yaş arasının oluşturduğu gözlenmektedir. Mesleklerine bakıldığında % 30 ile öğretmen ve %30 ile mühendislerin oluşturduğu gözlenmektedir. Çoğunluğu %50 ile lisans mezunları oluşturmaktadır. Katılımcıların hepsi çalışmaktadır.

Tablo-3:Katılımcıların demografik özellikleri

Cinsiyet		Eğitim	
Kadın	8	Lise	1
Erkek	2	Üniversite	5
		Lisansüstü	4
Yaş		Meslek	
18-25	2	Mühendis	3
26-35	4	Öğretmen	3
36-45	3	Satış yöneticisi	2
46 ve üstü	1	Teknik uzman	2

Konjoint analizi yapılabilmesi için gerekli ortogonal tasarım ve veri dosyası daha önce belirtildiği gibi hazırlanmıştı. Hazırlanan plan ve veri dosyaları yardımı ile analiz gerçekleştirilir.

Konjoint analizi'nin SPSS programında grafiksel ara yüzü bulunmamaktadır. Bu nedenle, SPSS programında Syntax oluşturularak analiz yapılır. SPSS programında Syntax yazılacak yere File>New>Syntax menüleri basılarak ulaşılmaktadır. Bu doğrultuda örneğimiz için oluşturulan Syntax kodu Tablo 4 de verilmiştir.

Tablo 4. Veri analizi için oluşturulan Syntax

```
CONJOINT PLAN='/Users/tolgaoflu/Downloads/Konjoint Ödev/Temizlik Ortogonal.sav'  
/DATA='/Users/tolgaoflu/Downloads/Konjoint Ödev/Veriler.sav'  
/SEQUENCE=Card1 TO Card29  
/SUBJECT=ID  
/FACTORS=Marka (DISCRETE)  
Fiyat (LINEAR LESS)  
Koku (LINEAR MORE)  
Ulaşılabilirlik (DISCRETE)  
Promosyon (DISCRETE)  
/PRINT=SUMMARYONLY
```

Bu Syntax'ın hazırlanabilmesi için öncelikle daha önce elde edilen iki dosyaya gereksinim vardır. Bu dosyalardan biri plan dosyası diğeri ise veri dosyasıdır. Plan dosyası, araştırmadaki ortogonal tasarımı içermektedir. Veri dosyası ise ankete katılanların ürünü değerlendirirken Cardlara verdikleri puanları kapsamaktadır. Tablo 4' de verilen Syntax incelendiğinde araştırmamızda plan dosyası olan ortogonal tasarımın elde edildiği dosya "Temizlik Ortogonal", verilerin oluşturduğu dosya veri dosyası ise "Veriler" adında yer almaktadır.

Syntax çalıştırılarak elde edilen sonuçlar Tablo 5' de yer almaktadır.

Katılımcıların kararlarındaki ilk önemli faktör marka onu sırasıyla ulaşılabilirlik, promosyon, fiyat ve koku takip etmiştir. Faktör düzey katsayıları incelendiğinde katılımcılar için en iyi tercihler sırasıyla; domestos (0.819), ulaşılabilirlik kolay (0.344), promosyon var (-1.260), fiyat <40 (-1.259), koku çok (2.250) olarak tahmin edilmiştir ve tabloda yer almaktadır.

Konjoint modeli:

$$Y = 14.331 + (0.819) \text{ domestos} + (0.344) \text{ ulaşılabilirlik} + (-1.260) \text{ promosyon} + (-1.259) \text{ fiyat} + (2.250) \text{ koku}$$

şeklindedir. En iyi kriterlere ait modelin sonucu 15.225 birimlik fayda sağlamaktadır.

Tablo 6'da korelasyon analizi sonuçları görülmektedir.

Tablo-5: Konjoint analizi fayda

Utilities

		Utility Estimate	Std. Error
Marka	Bingo	-1.156	.778
	Cif	.194	.963
	Domestos	.819	.963
	Domol	.144	.963
Ulaşılabilirlik	Kolay	.344	.518
	Zor	-.344	.518
Promosyon	Var	-1.260	.518
	Yok	1.260	.518
Fiyat	<40	-1.259	.679
	40-60	-2.518	1.357
	>60	-3.777	2.036
Koku	Az	.750	.679
	Orta	1.500	1.357
	Çok	2.250	2.036
(Constant)		14.331	1.814

Tablo-6: Korelasyon analizi

Correlations ^a		
	Value	Sig.
Pearson's R	.665	.000
Kendall's tau	.497	.000
Kendall's tau for Holdouts	-.183	.359

a. Correlations between observed and estimated preferences

Araştırmada yapılan korelasyon analizinde değişkenler arasındaki ilişkinin, miktarının Pearson's R=0.665, p=0.000, Kendall's Tau=0.497, p=0.000 olduğu tespit edilmiştir. Dolayısıyla, kurulan konjoint modeli ile gözlenen sonuçlar arasında yüksek bir ilişkinin olduğu sonucu elde edilmiştir.

3.SONUÇLAR

Konjoint analizi işletmeler ve her türlü hizmeti sağlayan kuruluşlar için başta tüketici eğilimlerini anlama açısından çok faydalı bir tekniktir. İşletmeler ya da girişimciler, tüketicilere en çekici gelen gelecek özelliklerin kombinasyonunu bilmekle her zaman ilgilendikleri için, bu yöntem sayesinde üretici ya da girişimciler ürettikleri ve üretecekleri ürün ya da hizmet kombinasyonlarını doğru belirleyerek müşteri, Pazar ve maliyet açısından rekabet avantajı elde edebilmektedir.

Çalışmada tercih edilmesi gereken temizlik ürünlerine yönelik belirlenmiş olan değişkenler ve düzeyler:

Marka: Bingo, Cif, Domestos, Domol, Fiyat: <40, 40-60, >60, Koku: az, orta, çok, Ulaşılabilirlik kolay, zor, Promosyon: var, yok, Demografik bilgiler: Yaş: 18-25, 25-35, 35-45,

45-55, 55 ve üzeri, Cinsiyet, Çalışma durumu, Meslek durumu, Öğrenim durumu, Medeni durumu yer almaktadır.

Katılımcıların kararlarındaki ilk önemli faktör ürünün markası onu sırayla fiyat, koku, promosyon ve ulaşılabilirlik takip etmektedir.

Bu faktörlere ait düzeylerin fayda katsayıları incelendiğinde cevap verenler için en iyi tercih sırasıyla; domestos (0.819), ulaşılabilirlik kolay (0.344), promosyon var (-1.260), fiyat <40 (-1.259), koku çok (2.250) olarak tahmin edilmiştir.

Konjoint modeli:

14.331 + (0.819) domestos + (0.344) ulaşılabilirlik + (-1.260) promosyon + (-1.259) fiyat + (2.250) koku şeklindedir. En iyi kriterlere ait modelin sonucu 14.331 birimlik fayda sağlar. Araştırmada yapılan korelasyon analizinde değişkenler arasındaki ilişkinin, miktarının Pearson's R=0.665, p=0.000, Kendall's Tau=0.497, p=0.000 olduğu tespit edilmiştir. Dolayısıyla, kurulan konjoint modeli ile gözlenen sonuçlar arasında yüksek bir ilişkinin olduğu sonucu elde edilmiştir.

ÖZET

Coğrafya dersi öğrenciler açısından ezbere dayalı bir ders olarak görülmektedir. Bununla birlikte coğrafya dersi öğrencilerin günlük hayatta kullanabileceği coğrafi becerilerle örüntülüdür. Coğrafi becerilerin tamamının sınıf içi öğrenme ortamlarında kazandırılmayacağı aşikardır. Çoğunlukla sınıf dışı öğrenme ortamına, arazi ve saha çalışmasına ihtiyaç duyulmaktadır. Öte yandan içinde bulunduğumuz pandemi koşulları ve uzaktan eğitim süreci bırakın arazi çalışmasına gitmeyi, sınıf içi öğrenme ortamlarının bile önünde engel oluşturmuştur. Öğrenci sınıf dışı öğrenme ortamları ile daha üst düzeyde düşünebilme becerisine sahip olmaktadır. Bu nedenle GeoGame olarak tanımlanan oyunların içinde bulunduğumuz salgın döneminde doğru öğrenme ortamında kullanılması dezavantajı avantaja çevirmek açısından önemlidir. Pandemi koşulları içinde gelişen şu sürece faydalı bir bakış açısı olarak coğrafi oyunların coğrafi becerileri kazandırmak ve geliştirmek için kullanılabilmesi bu çalışmada ifade edilmiştir. Bu nedenle, bu çalışmanın amacı, coğrafi oyunlar olarak bilinen etkileşimli oyunların coğrafi beceriler üzerindeki etkisini analiz etmektir. Araştırma sürecinde Coğrafi oyun olarak tanımlanan oyunların coğrafi becerileri ne ölçüde kazandırabilecekleri araştırılmıştır. Nitel araştırma yöntemlerinden biri olan doküman analizi ile toplanan veriler, Türkiye bağlamında gerek sosyal bilgiler dersi öğretim programı gerekse Coğrafi oyunlar çerçevesinde derinlemesine analiz edilecektir. Oyun sadece bir eğlence aracı değil, aynı zamanda okullarda coğrafi eğitim için bir öğrenme ortamı yaratma kapasitesine de sahiptir. Doğru oyun doğru öğrenme ortamıyla birleştirildiğinde, çocukların eğlenirken öğrendikleri optimum bir öğrenme ortamı oluşturulabilir. Coğrafya eğitiminde ders dışı etkinlikler yoğun olarak kullanılması gereken bir öğretim yöntemidir. Günümüz pandemi koşulları öğrencileri interaktif eğitim modeline yaklaştırmıştır. Bu süreçte eğlenirken öğrenmek mottosu ile pandeminin dezavantajlı koşullarını avantaja çevirerek coğrafi becerilerin kazandırılmasına katkı sağlanabilir.

Anahtar Kelimeler: Coğrafi oyunlar, Coğrafi beceriler, Coğrafya eğitimi, Dijital Oyunlar

Digitalization in Geographical Education

ABSTRACT

Geography course is seen as a rote-based course from the point of view of students. However, the geography course is patterned with geographical skills that students can use in daily life. It is obvious that not all geographical skills can be acquired in classroom learning environments. There is often a need for an out-of-class learning environment, land and field work. On the other hand, the pandemic conditions we are in and the distance education process let alone going to field work, it has created obstacles even in front of classroom learning environments. The student has the ability to think at a higher level with out-of-class learning environments. For this reason, it is important to use the games defined as GeoGames in the right learning environment during the epidemic period we are in in order to turn the disadvantage into an advantage. A useful perspective on the process that is developing under pandemic conditions as stated in this study, geographical games can be used to acquire and develop geographical skills. Therefore, the purpose of this study is to analyze the effect of interactive games, known as geographical games, on geographical skills. In the research process, it was investigated to what extent the games defined as geographical games can acquire geographical skills. The data collected by document analysis, which is one of the qualitative research methods, will be analyzed in depth within the framework of both the social studies course curriculum and Geographical games in the context of Turkey. The game is not only a means of entertainment, but also has the capacity to create a learning environment for geographical education in schools. When the right game is combined with the right learning environment, an optimal learning environment can be

6th International CEO Communication, Economics, Organization & Social Sciences Congress

created in which children learn while having fun. Extracurricular activities in geography education are a teaching method that should be used intensively. Today's pandemic conditions have brought students closer to the interactive educational model. In this process, with the motto of learning while having fun, it can contribute to the acquisition of geographical skills by turning the disadvantaged conditions of the pandemic into an advantage.

Keywords: Geographical Games, Geographical Skills, Geographical Education, Digital Games

GİRİŞ

Harita okuryazarlığı etkinlikleri yoluyla problem çözme becerisinin geliştirilmesi, CBS uygulamaları ile de mümkünken, bunun yanında öğrencilerin ilgi ve motivasyonlarını karşılamak için dijital materyallerin de etkili olduğu bilinmektedir. Araştırmacılar dijitale özgü oyun tabanlı eğitimin, öğrencilerin bilgi ve yeterlik düzeylerini problem çözme, karar verme ve yaşamın içinde aktif öğrenmede kullandıklarını ifade etmektedirler (Gee, 2007; Kiili, 2005; Prensky, 2001). Dijital oyunlar bir çok disiplin için önemli bir güce ve alana sahiptir (Craft, 2004). Birçok disiplin için önemli bir güce ve alana sahip olan dijital oyunlar (Craft, 2004), karmaşık problemlerin çözümü için çok özel bir yapıya sahiptir. Bulunmaz bir nitelik taşımaktadır. Bu oyunlar öğrencilerin, problem çözebilme kabiliyetlerini geliştirirken bireyin kendine duyduğu özgüvenin de artmasına olanak sağlamaktadır. Aynı zamanda oyun içinde yer alan görseller de ilgi ve dikkat düzeyini diri tutmakta ve bu becerilerin gelişimine de katkı sağlamaktadır (Green ve Bavelier 2003, Griffiths, 2005).

KURAMSAL ÇERÇEVE

Teknolojinin hızına yetişmenin çok zor olduğu günümüzde, doğrudan veya dolaylı olarak örgün eğitim, bu teknolojik gelişmelerden etkilenmektedir ve öğretim programları bu doğrultuda güncellenmekte ve güçlendirilerek öğrencilerin 21. yüzyıla ait beceriler ile donatılmasının önemi vurgulanmaktadır (MEB, 2018a).

Millî Eğitim Bakanlığı tarafından, 2018 yılında yenilenen Sosyal Bilgiler Dersi Öğretim Programı incelendiğinde, teknoloji ve inovasyonun öğretim programları üzerindeki etkilerini görmek mümkündür. Yenilenen Sosyal Bilgiler Dersi Öğretim Programı'nda yer alan dijital yetkinlik, bu etkilerden sadece bir tanesidir. Dijital yetkinlik kavramı; günlük yaşamın içerisindeki her türlü aktivitede, bilgi ve iletişim teknolojilerinin, güvenli aynı zamanda sorumlu ve bir o kadar da eleştirel bir süreç bağlamında kullanılmasını kapsamaktadır. Dijital yetkinlik, bilgiye erişimi kolaylaştırırken, aynı zamanda bilginin depolanması, sentezlenmesi ve aktarılması gibi becerileri de beraberinde getirmektedir (MEB, 2018a).

Öğretim programlarında; dijital yetkinlikle ilgili, öğrencilerin doğru bilgiye ulaşmaları konusunda özen gösterildiğine yer verilmiştir. Bununla birlikte, öğrencilerin eleştirel bir bakışa sahip olması, dijital dünyada gördüğü her bilgiyi sorgulaması ve eleştirel bir gözle bakması da dijital yetkinlik bağlamında edinilmesi istenen bir kazanımdır. Öğrencilerin, güvenli bir ortamda internet ağlarına erişebilir olması da dijital yetkinlik kapsamında verilmek istenen mesajın özünü iletmektedir (MEB, 2018a). Bu sebeple öğrencilerin sınıf içi ve sınıf dışı ortamlarda, iş birliği içerisinde analitik düşünüp yaratıcılıklarını ortaya koyabilecekleri, problem çözme becerilerine dönük uygulamalar önem taşımaktadır. Dijital oyunlar ya da dijital içerikler, 2000'li yıllar ile yaşamımıza dahil olmuşlardır. Özellikle savunma birliklerinin ve havacılık eğitimcilerinin kullandığı bu içerikler, zamanla, fen eğitimi gibi öğretim programları ile de tanışmıştır (Annetta, Mangrum, Holmes, Collazo, Meng ve Cheng, 2009).

Günümüzde birçok dijital oyun eğitim-öğretim sürecine dahil edilmiştir. Bunlardan bir tanesi de Minecraft isimli oyundur. Bu oyun, 2009 yılında İsveç'te Mojang firması tarafından geliştirilmiş olup, gerçek dünya, oyunun dijital platformunda sanal bir modele dönüşmüştür.

2014 yılında ise Microsoftun, Minecraft Eğitim Sürümü (Minecraft: Education Edition [MinecraftEDU])'nü tasarlamak için Mojang firmasından telif hakları satın alınmıştır. Ayrıca Türkçe dil desteği de mevcuttur. 115 ülke eğitimde kullanmak üzere bu oyunu öğretim programlarına entegre etmişlerdir. Oyun içerisinde farklı ortamlarda gerçek dünyaya ait unsurların modellenmesi çeşitli nesnelere tanınmasına imkân sağlaması da oyunun günlük yaşamla ne kadar iç içe olduğunu göstermektedir.

Minecraft oyununda sınırsız kaynaklar ile tamamen bireysel ve özgün tasarımlara yer verilebilme imkânı sağlanmıştır. “Creative Mode” yani “Yaratıcı Mod” ile Minecraft dünyası, keşfedilmiş sınırlı kaynaklar üzerinden bir yaşam kurma mücadelesini yansıtmaktadır. Bununla birlikte, temel yaşam ihtiyaçlarından olan barınma ihtiyacı için de oyuncu kendisini korumak için bir ev inşa edebilmektedir. Bu mod ise “Survival Mode” yani “Hayatta Kalma Modu” olarak tanımlanmaktadır (Mojang, 2009).

OECD ve TALIS raporunda da belirtilen ve 21. yy. becerileri arasında sıralanan, problem çözme becerisi, yaratıcılık ve iş birliğine olanak sağlayan çözümler üretebilen bu oyunun, eğitim ve öğretim sürecinde yararlanılması Minecraft: Education Edition (MES)'in bu versiyonunda olası görünmektedir (Mojang, 2014). Minecraft oyununda öğrenciler, günlük yaşama ait problemlere çözümler üretebilmektedirler. Örneğin bir baraj tasarımı yapıp, o şehrin su sorununu çözebilmektedirler. Ya da hava kirliliği sorununu çözmek için yeni enerji kaynakları geliştirip üretebilmektedirler. Ve bunların tamamını bir harita rehberliğinde yapmaktadırlar. Oyunun her bir bölümünde bir sabit bir harita kullanım alanına dair dönütler vermektedir. Oyunun içeriğine bakıldığında fen, matematik ve Sosyal Bilgiler dersinde kullanılabilirliğinin oldukça aktif olması gerekmektedir (Sarıçam ve Dostoğlu, 2017). Gerçeğin, sanal modeller üzerinden bu derece sistematik bir biçimde öğretiler olabilmesi, ayrıca bir simülasyona gerek duyulmaması ders materyali sorunsalı yaşayan öğretmenler için çok kıymetli bir veri tabanı oluşturmaktadır.

Öğrencilerin şarkıları öğrenebilmesi ve söyleyebilmesi (Chris, 2016) dili öğrenebilme ve etkili bir biçimde dili pratik düzeyde kullanabilmeye (Kuhn, 2018) kadar farklı disiplinleri içeren alanyazında Minecraft'tan faydalanan araştırmalara rastlanmıştır. Minecraft'ın, bilgisayar dillerini programlamayı öğrenmede de güçlü bir öğretim tekniği olduğuna dair bilgilere de çalışmalarda yer verilmiştir (Karsenti ve Bugmann, 2017). Bununla birlikte, eğitim ve öğretim programında, günlük yaşamda yaşanan problemlerin çözümünün önemini vurgulayan kazanımlar da mevcuttur (Yenilik ve Eğitim Teknolojileri Genel Müdürlüğü (YEGİTEK) (MEB, 2018a). Böylelikle MES aracılığı ile Sosyal Bilgiler dersinin içerik ve kazanımları baz alınıp günlük yaşamdaki problemlerin çözümü için öğrencilerin yaratıcılık becerilerini aktif ederek, problemlere çözüm önerileri geliştirmeleri sağlanabilir.

Konu ile ilgili önemli bir bilgi ise şu şekilde aktarılmaktadır; Birleşmiş Milletler Habitat Programı, Minecraft'ı köylülerin kentsel dönüşümü hayal edip alt yapı ve ihtiyaç analizinin bu bağlamda nasıl planlanması gerektiğini kurgulamak için 300 farklı köyde kullanmaktadırlar (Brand ve Kinash, 2013).

BULGULAR VE TARTIŞMA

Araştırmada öğrenciler, harita becerisi ekinliklerinin dijital ortamlarla entegre edilmesinin klasik ders yürütme sürecinden bağımsız ve farklı bir materyal olarak düşündüklerini bildirmişlerdir. Daha önce Google Earth (GE) uygulaması ile yapılan çalışmalarda da GE' ye dayalı öğretimin aktif öğrenmeyi güçlendirdiği sonucuna ulaşılmıştır. (Karakuş ve Oğuz, 2013). İlgili araştırmalardan oluşan sonuçlar araştırmanın bulgularıyla örtüşmekle birlikte, GE uygulamasının öğrencilerin ilgi, istek ve motivasyonunu artırdığı sonucu ile benzerlik göstermektedir. Araştırmada öğrenciler GE uygulaması ile yeni yerler öğrendiklerini, merak ettiklerini, duydukları yerleşim yerlerine kolayca ulaşabildiklerini, problem çözebildiklerini ve kroki çizme ve yön bulma konusunda kendilerini geliştirdiklerini ifade etmişlerdir. Öcal (2015)'in bulgularına dayalı olarak öğrencilerin yakın çevrelerine dair yer kavramına ilişkin ciddi sorunların olduğu, bu sorunların kendi okul çevresi ve yaşadığı yeri tarif etmede problem yaşarken, daha uzaktaki iller ve ülkeler hakkında daha fazla bilgiye sahip olmak olarak tanımlanabileceği söylenebilir. Bu da öğretimde yer alan yakından uzağa ilkesinin Sosyal Bilgiler dersi bağlamında oldukça önemli bir unsur olarak değerlendirilmesi gerektiğini vurgulamaktadır.

Yine araştırma ile benzerlik gösteren, öğrencilerin HOE ile yürütülen Sosyal Bilgiler derslerinde problem çözme becerisinin geliştiğini ifade eden (Glover, 2002; Thomas, 2014; Wolk,1994) yaptıkları çalışmalar sonucunda harita becerilerinin coğrafi sorgulama becerileri ile ilintili olması sebebi ile proje tabanlı öğrenmeye de uygun bir paradigmaya sahip olmasının öğrencilerin derse olan ilgisini arttırdığını, daha önce sorgulama ve sorun çözme temelindeki etkinliklere karşı motivasyonu düşük olan öğrencilerin Coğrafya ve Sosyal Bilgiler derslerine ve çalışmalarına yönelik olumlu tutumlar geliştirdiklerini belirtmişlerdir.

Araştırmanın bir diğer sonucu olan öğrencilerin harita okuryazarlığı etkinlikleri ile problem çözme becerilerini geliştirmekle kalmayıp, kendi aralarında sağlıklı iletişimden kaynaklanan problemlerin de çözümüne katkı sağladığıdır. Öğrencilerin kendilerini tanımalarını sağlayan harita okuryazarlığı etkinlikleri, öğrencilerin kendi iç dinamikleri açısından bakıldığında da katkı sağlamıştır. Bu araştırmanın sonuçlarıyla benzer bir biçimde Naimnule vd. (2020)'de ve Tee ve Lee (2011)'de yaptıkları çalışmada problem çözme becerisinin bireylerin arasındaki iletişim sorununa dair çözüm üretmelerine yardımcı olduğunu aynı zamanda öğrendikleri bilgileri içselleştirdikleri şeklinde tespit edilmiştir.

SONUÇ VE ÖNERİLER

Sosyal Bilgiler derslerinde haritaların kullanımına yönelik çalışmalara bakıldığında zaman Balkan (2017)'in Sosyal Bilgiler dersinde harita kullanmaya yönelik yapmış olduğu çalışmada, harita kullanımının yaygın olduğu öğrenme alanlarında öğrencilerin akademik başarı düzeyi ve ders karşı olan ilgi ve motivasyonları da artmıştır.

Ertuğrul (2008)'un 6. sınıf öğrencileri üzerinde yaptığı harita ve küre kullanma becerilerine yönelik çalışmada öğrencilerin harita ve küre kullanabilme becerilerinin %53 oranında olduğu ve unun sınıf ortalamasının üzerinde bir değer olduğu ifade edilmekle birlikte, bu durumun oluşmasında dersin yürütücüsü olan Sosyal Bilgiler öğretmenin etkisi de belirtilmiştir. c

yaptığı çalışmada anismanyonların ve dijital haritaların Sosyal Bilgiler derslerinde kullanımının öğrencilerin Sosyal Bilgiler dersindeki akademik başarılarına olumlu katkıda bulunduğunu tespit etmiştir. Yine Aksoy ve Sönmez (2012), tarafından yapılan araştırma sonuçlarının araştırma ile benzer niteliklere sahip olduğu tespit edilmekle birlikte teknoloji tabanlı eğitim öğrencilerin harita beceri düzeylerini geliştirirken haritalar üzerinde verilen temel problemlerin çözümüne de katkı sağlamaktadır.

Araştırma sürecinde Coğrafi oyun olarak tanımlanan oyunların coğrafi becerileri ne ölçüde kazandırabilecekleri araştırılmıştır. Nitel araştırma yöntemlerinden biri olan doküman analizi ile toplanan veriler, Türkiye bağlamında gerek sosyal bilgiler dersi öğretim programı gerekse Coğrafi oyunlar çerçevesinde derinlemesine analiz edilecektir. Oyun sadece bir eğlence aracı değil, aynı zamanda okullarda coğrafi eğitim için bir öğrenme ortamı yaratma kapasitesine de sahiptir. Doğru oyun doğru öğrenme ortamıyla birleştirildiğinde, çocukların eğlenirken öğrendikleri optimum bir öğrenme ortamı oluşturulabilir. Coğrafya eğitiminde ders dışı etkinlikler yoğun olarak kullanılması gereken bir öğretim yöntemidir. Günümüz pandemi koşulları öğrencileri interaktif eğitim modeline yaklaştırmıştır. Bu süreçte eğlenirken öğrenmek mottosu ile pandeminin dezavantajlı koşullarını avantaja çevirerek coğrafi becerilerin kazandırılmasına katkı sağlanabilir.

ÖZET

Ölçme belli bir nesnenin belli bir özelliğe sahip olup olmadığını, sahipse sahiplik derecesinin gözlemlenip gözlem sonuçlarının belirli özelliklere sahip sembollerle ve sayılarla ifade edilmesi şeklinde açıklanmaktadır. Ölçme konusu olan özellik, bazı durumlarda özelliğin direkt olarak gözlemlenip sayılabildiği ve sıralanabildiği doğrudan ve özelliğin direkt olarak gözlemlenemeyip özellikle ilişkili olduğu bilinen başka bir büyüklüğü bilinen nesne ile ölçüldüğü durumlarda dolaylı yollarla gözlemlenebilmektedir. Her ölçme işlemi sonucunda ölçülmek istenen özellik ile bu özelliğin ölçülmesine yarayan bir ölçek (ölçme aracı) kullanılmaktadır. Ölçekler, ölçme işlemi kolaylaştırmanın yanı sıra, elde edilen sonuçların niteliğinin de belirlenmesini sağladığı için küresel boyuttaki değişimler halı hazırda kullanılan ölçekler ile yansıtılamamakta ve var olan ölçeklerde eksikler ortaya çıkmaktadır. Bu çalışmada yeni bir ölçme aracına ihtiyaç duyulduğu ve ölçülmek istenen olguda değişim yaşanması durumunda ele alınacak yöntemler ile yeni bir ölçeğin geliştirilme aşamaları incelenmektedir.

Scale Developing and Validating

ABSTRACT

The measurement is explained as whether a certain object has a certain feature or not, and if it does, the degree of ownership is observed and the observation results are expressed with symbols and numbers with certain characteristics. The feature that is the subject of measurement can be observed directly in some cases where the feature can be directly observed and counted and listed, and indirectly in cases where the feature cannot be observed directly but is measured with another object of known size, which is known to be related to the feature. As a result of each measurement process, a scale (measurement tool) is used to measure the feature to be measured and this feature. As the scales not only facilitate the measurement process, but also enable the determination of the quality of the results obtained, the changes in the global dimension cannot be reflected with the scales currently used and deficiencies arise in the existing scales.

In this study, when a new measurement tool is needed and there is a change in the phenomenon to be measured, the methods to be discussed and the stages of development of a new scale are examined.

Anahtar Kelimeler: Scale, Scale Development, Scale Validating

GİRİŞ

Ölçmeye konu olan özelliklerin sınıflanmasının/sıralanmasının belirlenmesi için uyulması gereken kural ve kısıtlamaları belirleyen ölçme araçları olarak kabul edilen ölçekler, ölçme işlemini kolaylaştırmaya ek olarak elde edilen sonuçların niteliğinin de belirlenmesini imkan tanımaktadır. Bireylerden sözlü/yazılı olarak bilgi amacıyla yapılan ölçek aracılığıyla, ilgili bilgilerin nicel/nitel ölçümler olarak toplanması sağlanabilmektedir. Ölçek yönteminin kullanılması için araştırma konusunun ölçek yöntemine uygun olması, konunun ölçek yoluyla kişilerin bilgi verebilmesi muhtemel olgular olması, sorulan soruların konuyla ilgili olması ve uygun ölçekle ifade edilmiş olması, yasak ve sakıncalı bilgiler istenmemesi, kişilerin bilgi vermeye zorlanmaması ve yönlendirici olmaması, yeterli sayıda bireylerden bilgi alınmış olması, ölçek hatalarını azaltmak için gerekli eğitim, iletişim ve örgütsel önlemlerin alınmış olması, ölçek yöntemiyle alınan bilgilerin mümkünse deney, gözlem ve literatür verileri ile takviye edilmesi ve irdelenmesi, elde edilen verilerin, bilgisayar ortamında veri girişine, analizlere ve testlere olanak tanınması gerekmektedir. Ölçek uygulamasında deneklerin yanıtlarında samimi ve tarafsız olması, rasyonel-akılcı bir tavır içinde olması, araştırmacının sorduğu konuyla ilgili olması vb.gibi varsayımlarının sağlanması durumunda verilerin analizinde/yorumlanmasında kolaylıklar elde edilebilmektedir (Foddy, 1993 :22).

Bir ölçeğin geçerli ve güvenilir olması için, ölçeğin geliştirilmesi ve kullanılması aşamalarında birçok kritere/standarda uygun çalışılması ve yorum yapılması gerekmektedir. Aksi durumda, ölçeğin geçerlik ve güvenilirliği düşerek, ölçeğin ülke düzeyinde ve hatta uluslararası düzeyde kullanıldığı çalışmalarda birtakım hatalara ve tarafsızlık ilkesinin bozulmasına zemin hazırlamaktadır. Çalışma kapsamında, yeni bir ölçme aracına ihtiyaç duyulduğu ve ölçülmek istenen olguda değişim yaşanması durumunda ele alınması muhtemel yöntemler ile yeni bir ölçeğin geliştirilme aşamalarının belirlenmesi amaçlanmaktadır. Çalışmanın ilk bölümünde, ölçek ve bileşenleri hakkında bilgiler verilerek ölçek geliştirme sürecinden kullanılan ekonometrik/istatistiksel yöntemler hakkında teorik bilgiler yer almakta ve sonrasında ölçek geliştirilmenin aşamalarına değinilmektedir.

Her ölçme işlemi sonucunda ölçülmek istenen özellik ile bu özelliğin ölçülmesine yarayan bir ölçek (ölçme aracı) kullanılmaktadır. Ölçek türleri, ölçme sonuçlarını sadece nitel ayrımlarla yansıtan grupta yer alan sınıflama (adlandırma) ölçeği ve ölçme sonuçlarının derece/miktar gibi nicelikler taşıyan grupta yer alan sıralama ölçeği, eşit aralıklı ölçek ve oran ölçeği olmak üzere iki gruba ayrılmaktadır (Tavşancıl, 2010). Sınıflama ölçeği, nesne veya bireydeki bir özelliğin sadece belli bir şekliyle var ya da yok olduğunu gösteren ölçek türüdür. Sıralama ölçeği, nesnelere belirli bir özelliğe sahip oluş miktarı bakımından sıraya konması ile elde edilmektedir. Eşit aralıklı ölçekler, belirli bir başlangıç noktasına göre ve belirli bir özelliğe sahiplik derecesi bakımından eşit aralıklara göre sıralandığında veya sıraların arasındaki farkların eşit olduğu ölçekler olarak tanımlanmaktadır. Eşit aralıklı ölçekte keyfi olan başlangıç noktası (sıfır), mutlak sıfır olarak alınarak veya sabit bir nokta olarak seçilirse oran ölçeğine geçiş sağlanmaktadır. Oran ölçeği ile elde edilmiş verilere tüm aritmetik işlemler uygulanabildiğinden diğer üç ölçeğe göre daha güçlü bir ölçek olarak değerlendirilmektedir (Netemeyer vd., 2003). Ölçme aracı olarak kullanılan ölçeklerin taşınması gereken özellikler arasında güvenilirlik, geçerlilik, kullanılabilirlik, duyarlılık, tek boyutluluk ve süreklilik yer almaktadır. Güvenilirlik; ölçme aracının ölçtüğü özelliği ya da özellikleri ne derecede bir kararlılıkla ölçmekte olduğunu göstergesidir. Ölçmede türdeşliği ortaya koyan bir kavram olan güvenilirlik (Özdamar, 1999), ölçme sonuçlarının rasgele hatalardan arınmışlık derecesini (Turgut,1997) göstermektedir. Ölçek içindeki her bir maddeye verilen cevaplar arasında belirli bir ilişkinin varlığının ortaya konması gerekmektedir.

Faktör analizi ile geliştirilmekte olan ölçek için maddeler arasındaki korelasyonlar ölçeğin tek bir yapıyı ölçtüğüne dair kanıt olarak kullanılabilir. Faktör analizi, p tane değişkenin olduğu bir yapıda birbirleriyle ilişkili yapıları bir araya getirerek, daha az sayıda birbiri ile ilişkisiz değişken bulmayı amaçlamaktadır. Diğer bir ifadeyle, faktör analizi ile ortak boyutların oluşturulması, boyut indirgenmesi ve bağımlılık yapısının ortadan kaldırılması sağlanmaktadır. Şekil 1.'de gösterilen değişkenler arasındaki ilişkiden yola çıkarak faktör bulmaya çalışan *keşfedici(açıklayıcı) faktör analizi* ve değişkenler arasındaki ilişkinin daha önceden belirlenen hipotezin doğruluğunun analizini sağlayan *doğrulamalı faktör analizi* olmak üzere iki yaklaşım bulunmaktadır. Faktör analizinin uygulanmasında dikkat edilmesi gereken hususlar arasında örneklem büyüklüğü, normal dağılım ve doğrusallık yer almaktadır. Faktör analizi yöntemi ile aynı yapıyı ölçen maddelerin aynı faktör altında toplanması ve bu yapıyı ölçmeyen maddelerin ayıklanması işlemi gerçekleştirilmektedir. Bu çerçevede ele alındığında, maddelerin faktör yüklerinin yüksek olması beklenmektedir. Birbirleriyle yüksek seviyede ilişkili olan maddeler bir yapıyı ya da bir faktörü ölçmektedir. Bu nedenle, maddelerin sadece bir faktör için yüksek yük değerine sahip olması beklenirken, diğer faktörler için de düşük yük değerine sahip olması beklenmektedir. Ortak faktör yüklerinin ise yüksek olması beklenmektedir (Bardakçı, 2013). Faktör analizindeki son aşamada ise öz değerler, açıklanan varyans oranı ve çizgi grafikler kullanılarak ölçek maddelerinin ölçtüğü faktör sayıları belirlenmektedir (Arslan, 2015).

Ölçek geliştirme amacıyla gerçekleştirilen çalışmalarda, araştırmanın amacına uygun ve iyi bir şekilde oluşturulmuş örnekleme yönteminin kullanılması gerekmektedir. Tesadüfi olmayan örnekleme yöntemleri, özellikle zaman ve bütçe kısıtlarının söz konusu olduğu, ana kütleli sınırlı olduğu veya pilot nitelikteki araştırmalarda yaygın bir şekilde kullanılmaktadır (Blankson, ve Kalafatis, 2004; Netemeyer vd., (2003). Örneklemelerinin, farklı demografik yapıdan katılımcıları olabildiğince yakın sayıda içermesine özen gösterilmektedir. Tesadüfi olmayan örnekleme yöntemlerinin kullanılması durumunda örnek büyüklüğü, araştırmanın amaçları, kapsamı ve kısıtları, araştırmada yer alan değişken sayısı ve yararlanılan istatistiksel analizlerin varsayımları gibi unsurlar göz önünde bulundurularak belirlenmektedir. Bu çerçevede, araştırmanın doğası, sahip olduğu zaman ve maliyet kısıtları ile araştırmada kullanılacak olan istatistiksel analizlerin varsayımları göz önünde bulundurularak, araştırmanın örnek büyüklüğünün belirlenmesi gerekmektedir. Tesadüfi olmayan örnekleme yöntemleri içerisinde, özellikle kota örnekleme, etkin şekilde uygulandığında, diğer tesadüfi olmayan örnekleme yöntemlerine kıyasla daha ayrıntılı ve doğru veri toplanmasına imkân tanımaktadır (Yükselen, 2003). Kota örnekleme yönteminden hareketle; ana kütlede yer alan bazı spesifik özelliklerin, örnek kütlede de yer almasının sağlanması için, araştırmacı tarafından çeşitli nitelik ve nicelikte kotalar belirlenmektedir (Böke, 2011).

Bir ölçümün geçerliliği, öncelikle ölçülmek istenen yapının iyi şekilde tanımlanması (kavramsallaştırılması) ve bu yapının farklı yönlerinin veya boyutlarının en iyi şekilde belirlenmesine bağlı olmaktadır. Geçerlilik, ölçme aracının ölçmeyi amaçladığı özelliği, başka herhangi bir özellikten karıştırmadan doğru olarak ölçebilme yeteneği olarak tanımlanmaktadır (Tekin 2004). Ölçeğin geçerliliğini düşüren etkenler, ölçek geliştirme süreci ve uygulama süreci ile alakalıdır. Yüksek geçerlilikte ölçek geliştirebilmek için; ölçme konusu olan özelliğin tanımının mantığa uygun olması ve önceki bilinen gerçeklerle çelişkili olmaması, ölçme aracının gerektirdiği iş ile yapılan tanım arasında uyumun olması ve testin güvenilir olması gerekmektedir (Tavşancıl, 2010). Yapının boyutluluğu hakkında bir bilgi sahibi olmadan, söz konusu yapıyı ölçebilecek iyi bir ölçek geliştirmek imkansız olduğundan ilgilenilen yapının boyutluluğunun ortaya konulması, ölçek geliştirme sürecinin önemli bir parçasıdır. Boyutluluk kavramı, bir ölçekte yer alan değişkenler arasındaki korelasyonun hesaplanabilmesi için ihtiyaç

duyulan ortak faktör veya örtük değişkenlerin sayısı olarak ifade edilmektedir (Netemeyer vd., (2003). Dar kapsamlı yapılan bir tanım, ölçülmek istenen yapının önemli yönlerini (boyutlarını) dışarda bırakabileceği gibi, geniş kapsamlı bir tanım ise aslında ölçülmek istenen yapı ile çok fazla ilgili olmayan, gereksiz bazı boyutların yapı içerisine dâhil edilmesine sebep olabilmektedir. Ek olarak, ölçülmek istenen yapının sınırlarının, boyutlarının ve bu boyutların içeriklerinin belirlenmesine katkı sağlamanın yanı sıra, ölçülmek istenen yapının, bağımlı ve bağımsız değişken şeklinde, başka hangi teorik yapılarla ilişkili olduğuna dair bilgilerin elde edilmesine ve oluşturulacak ölçeğin nomolojik bağlamda geçerliliğinin test edilmesine de imkân sağlanmaktadır.

Ölçeğin yapı geçerliliğinin zarar görmemesi adına birbiri ile örtüşen boyutları, tekrarlamayı engelleyecek şekilde elemek ve birbirinden farklı olan boyutları dikkate almak gerekmektedir. Bir ölçeğin yapı geçerliliği, elde edilen veriler yardımıyla sonuçların, ölçme konusu olan özelliği açıklamasına olanak tanımaktadır. Diğer bir ifadeyle, ölçme aracının soyut bir olguyu veya tutumu doğru ölçme derecesini göstermektedir. Ölçülmek istenen kavramın ya da boyutun gelişimini etkileyen koşullar, boyutun ortaya çıkarılması, tanımlanması, işlevi vb. konularında yardımcı olacak her türlü veri toplanarak yapı geçerliliği kapsamında değerlendirilmektedir. Ölçek geliştirilirken dayanılan kuramsal çerçeve, bu yapının diğer yapılarla benzeşen ve ayrılan yönlerini göstermektedir (Terry ve Cain, 2016). Yapı geçerliliğinin tespitinde bazı teknikler kullanılmakla birlikte genellikle faktör analizi tercih edilmektedir. Bir ölçekte yer alan değişkenler, söz konusu ölçeğin boyutlarını temsil eden bütün değişkenlerin yer aldığı, değişkenler evreninden elde edilen bir örneklemdir. Bu nedenle ölçeğin geçerliliği, bir anlamda bu teorik değişkenler evreninden yapılacak olan örneklemin temsil yeteneğine bağlı olmaktadır. Ölçeğin boyutlarını yansıtan, teorik düzeyde var olan bütün değişkenlere ulaşmak mümkün olamamaktadır. Bu bağlamda, temsil gücü iyi bir örnekleme yapabilmek adına, örnekleme yapabileceğimiz değişken havuzunda yer alan değişken sayısının, mümkün olduğunca fazla tutulması gerekmektedir. Değişken ya da diğer bir deyişle ifade oluştururken, üzerinde dikkatle durulması gereken bazı noktalar vardır. Ölçekte yer alması muhtemel değişkenler oluşturulurken, dikkat edilmesi gereken en önemli hususlardan biri, ifadelerin mümkün olduğunca açık ve anlaşılır (ifadeler mümkün olduğunca kısa tutulmalı ve iki farklı durumu anlatan tek bir ifade oluşturmaktan sakınılmalı) olması sağlanarak içerik geçerliliğine (değişkenler arasındaki korelasyonun artmaması ve ölçülen yapının boyutlarını daha iyi temsil edecek ifadelerin ölçeğe girmesi) katkı yapması sağlanmaktadır. Ölçme konusu olan özelliğin iyi bir örnekleme ile mümkün olan içerik(kapsam) geçerliliği, ölçme aracı içindeki maddelerin veya soruların ölçme konusu olan özelliği dengeli bir şekilde temsil etme derecesi olarak tanımlanabilmektedir. Kapsam geçerliliğinin belirlenmesinin bir yolu, ölçme aracı ile ölçme konusu olan özelliğin önceden belirlenip soruların veya maddelerin bu kapsama göre hazırlanmasıdır. Kapsam geçerliliğini belirlemenin diğer bir yolu, aynı kapsamı ölçtüğü bilinen geçerliliği ve güvenilirliği belirlenmiş bir başka ölçme aracı ile arasındaki korelasyonun incelenmesidir. Önemli olan nokta, aynı kapsamı ölçen bir ölçeğin varlığı biliniyorsa yeni bir ölçek geliştirmek uygun olmamaktadır. Yeni geliştirilen ölçeğin mutlaka farklı veya üstün özellikleri olması gerekmektedir (Tavşancıl, 2010). Kapsam geçerliliğindeki temel sorun ölçekteki maddelerin veya soruların ölçülmek istenen özelliğin gözlenebilen tüm belirtilerini temsil edip etmemesidir. Bu çerçevede, ölçme konusu olan özelliğin performans alanının belirlenmesi, performans alanı ile ölçek maddelerinin eşleşmesi için yapılandırılmış çerçeve oluşturulması, eşleşme sürecinde elde edilen verilerin özetlenmesi gerekmektedir.

Tek boyutluluk kavramı; bir ölçüm setinin temelinde tek bir özellik veya yapının var olduğunu ifade etmektedir (Gerbing ve Anderson (1988). Bir ölçekte özellikle ikiden fazla yapının (boyutun) var olduğu durumlarda, tek boyutluluk kavramı kritik öneme sahiptir

(Görmez,2016). Mevcut bir ölçeğin tek boyutluluk özelliğinin değerlendirilmesi, ilgili ölçeğin güvenilirlik ve geçerliliğinin değerlendirilmesinde bir ön koşul olarak kabul edilmektedir (Netemeyer vd., 2003). Ölçeğin güvenilirliği, içsel tutarlılık, tekrarlayan ölçümler gerçekleştirildiğinde ölçeğin tutarlı sonuçlar üretme derecesini veya tesadüfi hata (örnekten örneğe farklılaşma ortaya çıkması muhtemel örnekleme hatası) içermeme ölçüsünü göstermektedir (Malhotra,2010). Bir ölçeğin güvenilirliğini belirlemek için iki yaklaşım kullanılmaktadır. Birinci yaklaşım, birbirini takip eden ölçme işlemleri neticesinde elde edilen sonuçların tutarlılık göstermesinin araştırılmasıdır. Elde edilen sonuçlar arasındaki korelasyon katsayısı hesaplanmakta ve hesaplanan korelasyon katsayısı güvenilirlik katsayısı olarak adlandırılmaktadır. Güvenirlik katsayısının tahmininde, istikrarlılık katsayısı, eşdeğerlik katsayısı ve iç tutarlılık katsayısına başvurulmaktadır. İkinci yaklaşım ise, ölçüm sonucunda ortaya çıkan hataların büyüklüğü ile ilgili olmaktadır. Ölçümlerdeki değişme standart sapma olarak ifade edilmekte ve ölçmedeki gerçek hatanın tespiti için standart hata kullanılmaktadır. Ölçmenin standart hatası, bireysel ölçümlerde elde edilen hataların büyüklüğü ile ilgilidir. Güvenirliği etkileyen faktörler arasında testin uzunluğu, zaman boyutu, örneklem genişliği, uygulama koşulları, vb. yer almaktadır. Ölçeğin tesadüfi hatadan arındığı ölçüde güvenilir olduğu bilgisi altında, ölçek güvenilirliği örtük değişkenin gerçek değerine atfedilebilir varyans ile ilgili oran olarak değerlendirilmektedir. Ölçekteki sistematik varyasyonun oranının belirlenmesi vasıtasıyla değerlendirilen ölçek güvenilirliği, ölçeğin farklı zamanlarda uygulanması ile elde edilen değerler arasındaki ilginin yüksek belirlenmesi ile ortaya çıkarılmaktadır. Ölçek güvenilirliğinin değerlendirilmesinde, test-yeniden test güvenilirliği (test-retest reliability), alternatif formlar güvenilirliği (alternative form reliability) ve içsel tutarlılık güvenilirliği (internal consistency reliability) kullanılmaktadır (DeVellis, 1991).

Ölçeğin veya ölçüm setinin, ilgilenilen kavramı tam olarak temsil edebilme derecesini ifade eden geçerlilik (Hair vd.,2006), ölçüm skorlarındaki farklılıkların, ölçülen karakteristik özelliklere dair bireyler arasındaki gerçek farklılıkları, sistematik veya tesadüfi hatadan arındırılmış bir şekilde yansıtma derecesi olarak tanımlanmaktadır (Churchill ve Lacobucci, 2006). Ölçeğin geçerliliği, ölçülmek istenen yapıyı ölçmeye uygunluğunun ve bu yapıyı doğru biçimde ölçebilme yeteneğinin derecesi olarak ele alınmaktadır. Tesadüfi hata, güvenilirlik kavramı üzerinde etkili iken; sistematik hata geçerlilik kavramı üzerinde etkili olmaktadır (Demir vd., 2011). Ölçek, sistematik hatadan arındığı veya belli bir dönemde kişiler arasındaki gerçek farkları veya aynı kişinin zaman içindeki gerçek farklarını yansıttığı ölçüde geçerli olmaktadır. Ölçülen değişkenlere ilişkin gerçek değerleri bilmek mümkün olmadığından, geçerlilik değerlendirilmelerinde farklı ölçütlerden yararlanılmaktadır (Kurtuluş, 2010).

Ölçek geliştirme sürecinin ilk aşamalarında, ölçülmek istenen yapı ve bu yapının boyutlarının tanımlanmasının ardından, tanımlanan boyutları yansıtacak değişkenlerin oluşturulması gerekmektedir. Başka bir deyişle, ölçülecek yapının boyutlarını en iyi biçimde ortaya koyacak ifadelerin elde edilmesi ve bu sayede, ölçeği meydana getirecek muhtemel ifadelerin yer alacağı, değişken havuzunun oluşturulması gerekmektedir. Yukarıda ifade edilen bu eylemin gerçekleştirilmesi ise ancak alan örnekleme (domain sampling) ile mümkündür. Alan örnekleme, bir ölçeğin, değişkenlerle ilgili geniş teorik bir alandan elde edilen, bir değişkenler örnekleminde oluştuğunu ifade etmektedir. Daha açık bir anlatımla, bir ölçekte yer alan değişkenler, söz konusu ölçeğin boyutlarını temsil eden bütün değişkenlerin yer aldığı, değişkenler evreninden elde edilen bir örneklemdir. Bu nedenle ölçeğin geçerliliği, bir anlamda bu teorik değişkenler evreninden yapılacak olan örneklemin, temsil yeteneğine bağlı olmaktadır. Bu kavram ise içerik geçerliliği kavramına karşılık gelmektedir. Ölçüm aracının içeriğinin temsil edicilik derecesini veya örneklemin yeterliliğinin göstergesi olan içerik geçerliliği; belirli bir ölçüm amacına ilişkin olarak hedeflenen yapının temsilcisi ve bu yapıyla

ilgili olma derecesinin sistematik bir değerlendirmesidir (McDaniel ve Gates, 1999). İçerik geçerliliğinin değerlendirilmesinde, literatür taraması, açık-uçlu sorular, ön saha uygulamaları ve uzman kişiler ile görüşme aşamalarını kapsayan ölçek geliştirme sürecinin ilk aşamalarında, ölçülmek istenen yapıyı ve ilgili boyutlarını temsil etme gücü en yüksek değişkenler elde edilerek, ölçeğin içerik geçerliliğinin sağlanmasına çalışılmaktadır (Netemeyer, vd., 2003).

Ölçeğin, anlamlı bir kriter olarak seçilen diğer değişkenlere tepki olarak beklenen davranışını gösterip göstermediği kriter geçerliliği ile ifade edilmektedir. Kriter geçerliliğinin belirlenmesi, katı bir şekilde kriter ve ölçüm değişkenleri vasıtasıyla elde edilen ölçümler arasındaki korelasyonunun değerlendirilmesine dayanmaktadır. Her iki ölçüm arasındaki korelasyon yüksekliği kriter geçerliliğinin o ölçüde sağlandığını ifade etmektedir. İlgilenilen zaman periyoduna bağlı olarak kriter geçerliliği; eş zamanlı geçerlilik (concurrent validity) ve tahmin geçerliliği (predictive validity) olmak üzere iki şekilde ortaya çıkmaktadır (Meydan ve Şeşen, 2015). Eş zamanlı geçerlilik, tahmin (ölçülen değişken) ve kriter değişkeninin her ikisinin ölçümünün aynı zaman dilimi içerisinde yapılması durumunda, bu iki değişkene ait ölçümler arasındaki ilişkinin incelenmesini dikkate almaktadır. Kriter değişkeninin sonuçları ile ölçüm aracı sonuçlarının aynı zaman dilimi içerisinde meydana gelmesi gerekmektedir (Demir vd., 2011). Eş zamanlı geçerliliğin değerlendirilmesi için, mevcut ölçeğin kısa bir alternatifin oluşturulması ve ölçeğin uzun versiyonu ile aynı anda uygulanması ve iki ölçüme ait sonuçların birbiri ile karşılaştırılması gerekmektedir. Tahmin geçerliliği ise bir ölçekten elde edilen mevcut değer aracılığıyla, bir kriter değişkenin gelecekteki düzeyini ne ölçüde tahmin edilebildiğinin göstergesi olmaktadır (McDaniel ve Gates, 1999). Tahmin geçerliliği, bir ölçüm aracının diğer başka özelliklerin veya bireysel bir davranışın tahmin edilmesinde sağladığı faydaya odaklanmaktadır. Tahmin geçerliliğinin sağlanması için, tahminin geleceğe dönük olması ve belli bilgiler temelinde istatistiksel teknikler kullanılarak yapılmış olması gerekmektedir. Bir testin tahmin geçerliliğini belirlemede en önemli husus uygun bir ölçüt ölçüsü elde etmektir. Bu ölçüt ölçüsünün, testin tahmin etmeye çalıştığı özellik ile doğrudan ilişkili olması gerekmektedir. Ölçüt ölçüsü, kararlı bir yapısı olmalı ve zaman içerisinde değişmemesi, bireyin başarısını yansıtan nesnel ve güvenilir bir ölçüt olması ve ölçütün elde edilmesinin kolay ve pratik olması gerekmektedir (Tekin, 2004) Ölçüt araştırmalarında, öncelikle geçerli olduğu bilinen bir ölçeğin bulunması gerekmektedir. Geliştirilmekte olan ölçek için başka bir ölçekten elde edilen puanlar ölçüt ölçüsü (dış ölçüt) olarak kullanılabilir.

Çok boyutlu bir ölçeğin sahip olması gereken önemli geçerlilik türlerinden biri olan yapı geçerliliğini ve buna bağlı olarak tek boyutluluk (unidimensionality) ilkesinin değerlendirilmesi gerekmektedir. Yapı geçerliliği, teorik yapılar ve onların ölçümleri ile arasındaki uyumun derecesi ile ilgili olduğu için, teori geliştirme ve test etmek için gerekli bir koşul olarak ortaya çıkmaktadır (Peter, 1981). Yapı geçerliliği, ölçeğin gerçekte neyi ölçtüğü sorusuyla doğrudan ilgilenebilir. Ölçeğin sergilediği performans/ skorların altında hangi yapı, kavram veya özelliklerin yattığını ortaya koymaktadır. Ölçümün yapı geçerliliği, açık bir biçimde tanımlanmış, teorik bir alt yapı sağlanmadan değerlendirilememektedir. Yapı geçerliliğinin değerlendirilmesinde, ölçeğin işe yarama nedeni veya ölçeğin altında yatan teori dikkate alınarak nasıl bir çıkarsama yapılabileceğine ilişkin teorik soruların yanıtlarının ortaya konması gerekmektedir. Bu nedenle yapı geçerliliğinin değerlendirilmesi, ölçülen yapının doğasına ve diğer yapılarla ilişkisine dair güçlü teori gerektirmektedir (Malhotra, 2010). Yapı geçerliliğinde, yapısal eşitlik modelleri kullanılarak, çeşitli varsayımları sağlayan ölçek aracılığıyla araştırma kapsamında ölçülen örtük değişkenin boyutları değerlendirilmektedir (Yılmaz ve Çelik, 2009). Yapı geçerliliğinin ortaya konulmasında doğrulayıcı faktör analizi yaklaşımı kullanılmaktadır (Bagozzi, ve Foxall, 1996).

Doğrulayıcı faktör analizi modeli, gözlenen değişkenin bir gözlenemeyen değişkeni oluşturup oluşturmadığını veya birden fazla gözlenemeyen değişken arasında ilişkinin olup olmadığının analizinde kullanılmaktadır. Her gözlenemeyen değişken bir grup gözlenen değişken tarafından ölçüldüğünden değişkenler arası ilişkiler önemli olmaktadır. Yapısal regresyon modeli, doğrulayıcı faktör analizi modeline benzese de ikisinin arasındaki en temel fark, gözlenemeyen değişkenler arasındaki çift yönlü ilişki yerine gözlenemeyen regresyon etkilerine yapısal regresyon modelinin sahip olmasıdır. Bu model gözlenemeyen değişkenlerin aralarındaki etkileşimin bilinmediği durumlarda aralarındaki ilişkilerin ortaya çıkarılmasında kullanılmaktadır. Son yapısal model şekli olan gözlenemeyen değişken değişim modeli ise zaman içerisinde bir gözlenemeyen değişkende meydana gelen değişmeyi göstermektedir. Yapısal eşitlik model analizlerinde farklı model tahmin yöntemleri (maksimum olabilirlik yöntemi, genelleştirilmiş en küçük kareler yöntemi, olağan en küçük kareler yöntemi, ölçekten bağımsız en küçük kareler yöntemi ve asimtotik olarak dağılımdan bağımsız tahmin) kullanılmaktadır. Maksimum olabilirlik ve genelleştirilmiş en küçük kareler yöntemini kullanılabilmesi için gözlenen değişkenlerin birbirinden bağımsız ve çok değişkenli normal dağılıma sahip olması, örneklem hacminin büyük olması ve gözlenen değişkenlerin en az eşit aralıklı ölçek düzeyinde olması gerekmektedir. Yapısal eşitlik model analizlerinde model testleri gerçekleştirilirken birden fazla uyum indeksleri kullanılmakta ve teorik olarak ortaya konan modeldeki kovaryans matrisi ile gözlenen değişkenlerden elde edilen örneklem kovaryans matrisi ile karşılaştırılmaktadır. Bu iki matrisin arasındaki farkın yüksek olması elde edilen verilerin, teorik olarak ortaya konan yapıya uymadığını göstermektedir. YEM analizinde modelin çizilmesinden sonra parametre tahminleri yapılmaktadır. Parametreleri tahmininde, gözlenen değişkenlerin gözlenemeyen değişkenlerle olan ilişkisini ifade eden model ile örneklemden alınan ölçüm değerlerini ifade eden veri arasında bir hata ortaya çıkmaktadır. Uyum indekslerine ilave olarak modelin daha yüksek uyum sağlaması için bir kısım değişiklikler yapılması ile model modifikasyonu sağlanmaktadır. Ek olarak, modelin kötü uyum indekslerine sahip olması durumunda teorik çerçeveye bağlı kalınarak modelin uyumunun geliştirilmesi için de model modifikasyonuna ihtiyaç duyulmaktadır. Değişkenler arasındaki ilişkilerin daha iyi tahmin edilmesini sağlayan model modifikasyonu işlemi, belirleme araştırması teorik yapıya en uygun modelin belirlenmesi sürecini oluşturmaktadır. Araştırılmak istenen konu dahilinde, önceki araştırmalar ve kuramsal çerçeve, model için rehber niteliğinde ele alınması, kuramsal çerçeve dâhilinde kurulan teorik model test edilmesi, önce ölçüm modeli daha sonra yapısal model için belirleme araştırması yapılması, test edilen her modelin uyum indeksleri kontrol edilmesi, sabit olmayan parametrelerin istatistiksel olarak anlamlılığı araştırılması (herhangi bir parametrenin sonraki modelde sabit olup olmadığı) ve model modifikasyon indeksleri hesaplanması gerekmektedir. Gerbing, ve Anderson, (1988), ölçek geliştirme ve değerlendirme çalışmalarında, tek boyutluluk ilkesinin değerlendirilmesi için kullanılan alfa katsayısı, madde-toplam korelasyonları ve keşfedici faktör analizi gibi geleneksel yöntemlere alternatif olarak, daha tutucu bir yaklaşım olan doğrulayıcı faktör analizinin kullanımı önermektedir. Faktör analizinin amaçları arasında değişken sayısını azaltmak ve değişkenler arasındaki ilişkilerden yola çıkarak yeni değişkenler ortaya çıkarmak yer almaktadır (Özdamar,1999). Keşfedici faktör analizi, çok sayıdaki değişken arasında ilişkilere dayanarak, birbirinden bağımsız ve daha az sayıda, daha anlamlı yeni değişkenlerin oluşumunu sağlamaktadır. Mevcut olduğu bilinmekle beraber direk olarak gözlemlenemeyen, gözlenemeyen yapıları ortaya çıkarmak ve çok daha fazla sayıdaki veri setlerini azaltarak basitleştirmeyi amaçlamaktadır. Keşfedici faktör analizi; çok sayıdaki değişkeni, belirli sayıda gruplara ayırarak, her bir grubun içindeki değişkenler arasındaki ilişkiyi maksimum, gruplar arasındaki ilişkiyi ise minimum yaparak, bu grupları yeni

değişkenlere dönüştürmektedir. Türetilen yeni değişkenlere ise faktör adı verilmektedir (Karagöz, 2015). Keşfedici faktör analizinde her gözlenen değişken her gözlenemeyen değişkenle ilişkili, hata terimleri korelasyonsuz ve tüm parametreler verilerden hareketle tahmin edilmektedir. Elde etmek istenen faktör sayısı ve yapısı ile ilgili olarak teorik bir varsayıma sahip olduğu doğrulayıcı faktör analizindeki amaç, elde edilen veri seti ile sahip olunan teorik varsayımın uyumunu ortaya çıkarılmasıdır.

Doğrulayıcı faktör analizi çok sayıda gözlenen veya ölçülen değişken tarafından temsil edilen gözlenemeyen yapıları içeren, çok değişkenli istatistiksel teknikleri tanımlamak amacıyla kullanılmaktadır. Diğer taraftan, keşfedici faktör analizi ile belirlenen faktörlerin, hipotez ile belirlenen faktör yapılarına uygunluğu test edilebilmektedir. Keşfedici faktör analizi hangi değişken gruplarının hangi faktör ile yüksek düzeyde ilişkili olduğunu test etmek için kullanılırken; doğrulayıcı faktör analizi belirlenen k sayıda faktöre katkıda bulunan değişken gruplarının bu faktörler ile yeterince temsil edilip edilmediğinin belirlenmesi için kullanılmaktadır (Aytaç ve Öngen, 2012). Doğrulayıcı faktör analizinde, her gözlenen değişkenin teorik yapıda ortaya konan gözlenemeyen değişkenlerle bağlantılı olması, bazı hata terimleri arasında korelasyon olabilmesi, parametrelerin bir kısmının bazı değerler ile sınırlandırılabilmesi mümkündür. Doğrulayıcı faktör analizinde, tüm çapraz faktör yükleri sıfıra eşitlenmektedir. Doğrulayıcı faktör analizi, özellikle örtük değişkenler ile gözlenen değişkenler arasındaki ilişkilerin ölçüm modelleriyle ilgilenen, yapısal eşitlik modellemesinin özel bir türü olarak ele alınmaktadır. Doğrulayıcı faktör analizi, örtük bir değişkeni incelemeye yönelik ölçek geliştirme süreci boyunca kullanılmakta ve bu bağlamda, ölçeğin temelinde yatan boyutların sayısının doğrulanması ile boyutların yapılarının ortaya konulmasında kullanılmaktadır (Brown,2006). Verilen her bir cevap için örtük yapı skorları elde edilebildiğinden, yapılar arasındaki ilişkilerin, yapıların ölçüm değerlerinde var olan hata varyansı miktarı ile otomatik olarak düzeltilmesine izin verilmektedir (Hair, vd., 2006). Uygulanan doğrulayıcı faktör analizinin sonuçlarının geçerli olduğunu söylemek, ancak ölçüm modeline ilişkin üretilen uyum iyiliği indekslerinin değerlendirilmesi ile mümkün olmaktadır. Temel olarak, önerilen modelde yer alan gözlenen değişkenlere ait gözlenen kovaryans matrisi ile beklenen kovaryans matrisinin karşılaştırılması sonucu iki matris arasındaki benzerlik veya farklılıklara dayalı olarak hesaplanan uyum iyiliği indeksleri, önerilen bir modelin (ölçüm veya yapısal model), veri seti örtüşme göstergesi olarak ele alınmaktadır (Meydan ve Şeşen, 2015).

SONUÇ ve TARTIŞMA

Sosyal bilimlerde kullanılan ölçeklerin geçerlik ve güvenilirlik düzeyi hem alan uygulamalarında hem de araştırma sonuçlarının yorumlanmasında hatalara yol açabilmektedir. Güvenirliği, geçerliği, doğruluğu istenen düzeyde olmayan bir ölçek, araştırmalarda ölçümlerin heterojen hale gelmesine neden olarak, istatistiksel testlerin gücünü düşürmesinin, gruplararası farkın anlamlı olarak tespit edilmesini engellemesinin yanı sıra daha fazla sayıda deneğin araştırmaya dahil edilmesini zorunlu kılarak maliyet artışına ve zaman kaybına olanak sağlamaktadır. Bu nedenle, herhangi bir amaca olarak geliştirilen ölçeğin çeşitli istatistiksel beklentileri karşılaması önem arz etmektedir. Çalışma kapsamında, yeni bir ölçme aracına ihtiyaç duyulduğu ve ölçülmek istenen olguda değişim yaşanması durumunda ele alınması muhtemel yöntemler ile yeni bir ölçeğin geliştirilme aşamalarının incelenmesi amaçlanmaktadır. Elde edilen sonuçlar genel olarak değerlendirildiğinde, ölçek geliştirme süreci, sekiz temel sürece ayrılabilir (Churchill, 1979). Ölçek geliştirmede başlangıç noktası, ilgilenilen yapının ve bu yapıyı oluşturan boyutların açık ve net bir şekilde belirlenmesidir. Bu noktada, kavramsallaştırılma ve boyutlandırma yapılacağı için ilgilenilen yapının tanımına dâhil edilenlerin ve hariç tutulmaların belirlenmesi gerekmektedir. Ölçek

geliştirme sürecinin ikinci adımı ise ilgilenilen yapının, açık bir şekilde belirlenen boyutlarını ortaya koyabilecek nitelikte, değişkenlerin (ifadelerin) oluşturulmasıdır. Bu adım, çoğunlukla keşfedici nitelikte bir araştırmayı gerekli kılmaktadır. Değişkenlerin oluşturulmasında, literatür taraması, deneysel anketler, odak grup görüşmesi vb. yöntemlerden yararlanmak mümkündür. Bu aşamada önemli olan, elde edilen tüm değişkenlerin, mümkün olduğunca net ve anlaşılır bir biçimde ifade edilmiş olmasına özen göstermektir. Bu açıdan elde edilen ifadelerin yüzeysel ve içerik geçerliliklerinin de değerlendirilmesi gerekmektedir. Bir sonraki aşamada gerçekleştirilecek olan testlerin uygulanabilmesi için verilerin toplanması, ölçek geliştirme sürecinin üçüncü adımını oluşturmaktadır. Ölçek geliştirme sürecinin dördüncü adımı olan bu aşamada, elde edilen verilerin güvenilirlikleri değerlendirilirken, keşfedici faktör analizinden yararlanılarak ölçeğin boyutları ortaya konulmaya çalışılmaktadır. Kullanılan analizlere göre gerekli kriterleri sağlamayan değişkenler ölçekten çıkarılmakta ve böylece ölçek sadeleştirilmektedir. Beşinci aşama, altıncı ve yedinci aşamada gerçekleştirilecek olan analizler için, ölçekte kalan değişkenlere ilişkin, farklı ve yeni bir örneklem üzerinden yeniden verilerin toplanmasını içermektedir. Ölçek geliştirme sürecinin altıncı basamağında, toplanan yeni veriler üzerinden, ölçeğin güvenilirliği değerlendirilmektedir. Yedinci aşamada ise beşinci aşamada elde edilen veriler üzerinden ölçeğin yapı geçerliliği değerlendirilmektedir. Sekizinci ve son aşamada ise normlar geliştirilmektedir. Elde edilen ölçeğin kullanımına ilişkin kuralların geliştirilmesi ve ortaya konulması gerektiğinden bahsedilmektedir. Özellikle, ortaya konulan ölçek yeni bir ölçek olduğundan, ölçekten elde edilen skorların yorumlanmasına dair açık ve net normların oluşturulması önem arz etmektedir.

Son olarak, ölçek geliştirme çalışmaları bilgi birikimi, araştırma, emek ve zaman isteyen çalışmalar olması nedeniyle ölçeklerin tutarlı, hatadan mümkün olduğunca arındırılmış, geçerli veriler üretebilmek ve çözüm üretebilmek adına doğru saptamalar yapabilmesi gerekmektedir. Bu çerçevede çalışmanın, ilgili amaçları taşıması muhtemel gelecek araştırmalar ışık tutacağı düşünülmektedir.

Orcid: 0000-0002-3085-0327

ÖZET

Francis Bacon bilimi önceleyen bir düşünür olarak kadim bilgeliği reddetmiştir. O, deneyselliği ve tümevarımı savunarak niceliksel bir gelişimi savunmuştur. Çünkü onun için nesnel dünya ve gerçeklik için bu önemli bir husustur. Bu doğrultuda Bacon, gözlem yapmayı ve olguları irdelemeyi esas alarak bilgi elde etmeyi savunmuştur. Dolayısıyla ona göre gerçekliğe ulaşmanın ilk şartı, alımlama ve akıl melekesini kullanmaktan geçer.

Bacon'a göre sistemli bir şekilde bilgi elde etmek evrensel ve kapsayıcı olmaktan geçer. Bu durum insanın yetenek ve becerilerinin gelişimi sadece el yordamıyla değil, aynı zamanda zihinsel bir gelişimin de sağlanmasıyla mümkündür. Sanatçının da bu doğrultuda ilerlemesi gerektiğini savunan Bacon için sanatçı bilimsel olmalıdır. Sanatçı için duyuların ve zihnin algılarının merkezi evren değil insanın bizzat kendisidir. Çünkü sanat aracılığıyla sanatçı nesnelere anlamlarını genişleterek fikirlerini görünür kılar.

Bacon'a göre doğadaki gerçekliği belirsiz ve düzensiz bir şekilde kavrayan insan sanat aracılığıyla belirlenim ve düzen kazandırır. Dolayısıyla gerçekliğin ideal olan bir forma kavuşturulmasıyla insanın yaratıcılığı, hayal gücü, yetenekleri ve becerileri aracılığıyla sanat eseri meydana gelir.

Anahtar Kelimeler: Francis bacon, Sanat, Estetik.

Reflection of Aesthetic In The Idea of Francis Bacon

ABSTRACT

Francis Bacon rejected ancient wisdom as a thinker who prioritized science. He advocated a quantitative development by advocating empiricism and induction. Because this is an important issue for the objective world and reality for him. In this direction, Bacon advocated obtaining information based on making observations and examining facts. Therefore, according to him, the first condition of reaching reality is to use the skill of reception and reason.

According to Bacon, obtaining information in a systematic way is to be universal and inclusive. In this case, the development of human abilities and skills is possible not only by groping, but also by providing a mental development. For Bacon, who argues that the artist should progress in this direction, the artist must be scientific. For the artist, the center of the senses and perceptions of the mind is not the universe, but the man himself.

Because through art, the artist makes his ideas visible by expanding the meanings of objects.

According to Bacon, man, who comprehends the reality in nature in an uncertain and irregular way, gains determination and order through art. Therefore, by bringing reality into an ideal form, a work of art is created through human creativity, imagination, talents and skills.

Keywords: Francis bacon, Art, Aesthetic.

1. GİRİŞ

1.1 Problem Durumu

Sanat kuramı en geniş anlamıyla estetik biliminin baş konusu ve gerecidir. Daha dar anlamıyla ise sanatsal düşünme, tasarımlama ve yaratmanın evrim içindeki yasaya benzer düzenliliklerinin felsefi çerçevesini çizer. Tüm sanatsal yaratıların ve yaratma olayının doğuşundan başlayarak, sanatın nitelik, özellik ve sınırları ile çeşitli türlerinin biçimleme tarzlarına, konu ve konu dağarlarına, biçim (üslup) ve akımların oluşmalarına dek geniş bir alan, sanat kuramının ilgi alanıdır. Sanatın oluşumu sorunsalında sanatçının ruhsal yapısı, psikoloji durumu, karakter ve huyu (temperament), imgelem ve düşlem gücü, kalıtım, algılama, yaratıcı yeti gibi sanat psikolojisi alanına konularla da ilgilenir. Biçim-içerik, işlev ve yapı gibi diyalektik sanat konularına eğilir. Sanat sosyolojisi alanına giren, sanat toplumsal etkileri, sanat izleyicindeki bilinçlenme ya da değişimler üzerinde durur. Geçmişin sanat görüş ve akımları hakkında görüşler ileri sürerken en çok sanat tarihinden ve sanat eleştirisinden yararlanır (San, 2008: 67-68).

Kabul edilebilir sanat, hakikatlerin felsefi gözetimi altında olmalıdır. Sanat meramı içkinliğe terk edilemeyecek bir duyu öğretimidir. Sanatın normu eğitim olmalıdır. Eğitimin normu ise felsefedir (Badiou, 2017: 13). Barkan'a göre sanat eğitimcileri teoriden kaçınmazlar, çünkü onlara teori rehberlik etmelidir. Bu nedenle sanat eğitimcisi; sanatçıları, estetikçilerin, eleştirmenlerin ve tarihçilerin sanat hakkındaki bilgilerini sentezlemek zorundadır (Artut, 2009: 105).

Bu nedenle, sanatın *“kavram tarafından nitelenen nesnel gerçekliğin ve öznel yansıtmanın söz konusu alanından ve düzeyinden, bunun içerik ve biçiminden, çevresinden vazgeçmesi olanaksızdır”*. Söz konusu *“düşünsellik sanatsal biçimlendirmeden dışlandığı takdirde”*, insanın sanatta sahip olduğu *“en büyük şey-Yunan tragedyası ve Dante, Michelangelo ve Shakespeare, Goethe ve Beethoven- olanaksız olurdu”*. Dolayısıyla, düşünsellik olmadan nitelikli sanat/yazın olamaz (Kula, 2008: 166).

1.2. Problem Cümlesi

- Francis Bacon'ın felsefi düşünceleri ile estetik arasında anlamlı bir ilişki var mıdır?

1.3. Alt Problemler

- Francis Bacon'ın felsefi düşünceleri var mıdır?
- Francis Bacon'ın felsefi düşünceleri var mıdır?

2. FRANCIS BACON'IN DÜŞÜNCESİNDE ESTETİK

Resim-1: Paul Van Somer, *Francis Bacon*, 1617, (“Sanal”: 2023).

Bilime büyük bir inanç besleyen, modern dünyanın bilim üzerinden inşa edileceğine inanan Bacon, bir yandan modern bilimin öncülüğünü yaparken, diğer yandan kadim bilgeliğe, sadece Skolastisizme değil, fakat Platonik ve Aristotelesçi geleneklere de büyük bir savaş açmıştır. O, önce doğaya ilişkin bilimsel bilgiye giden yolu kapatan idollerini zihnin yanlış düşünce kalıplarıyla ön yargılarını ortadan kaldırmaya çalışmış, sonra da deneysel yöntemin ve tümevarımcılığın savunuculuğunu yapmıştır (Cevizci, 2017a: 53).

Geleneksel metafizikçi filozofları örümceğe benzeten Bacon, eskilerin tümdengelimci ve usçu düşüncesinin, sadece insanın kendi usunun ürünü olan birçok mükemmel sistemleri oluşturduklarını söyler. Fakat bunların gerçeklikle ve dış nesnel dünya ile direkt bir ilişkide olmadıklarını rahatlıkla söylemek yanlış olmaz. Bu sistemler, örümceğin ağını örerken yalnızca kendi içinden üretmesi gibi, hiç dış malzeme bulundurmamaktadır (Çüçen, 2013: 270).

Descartes düşünce kurallarının ilk taslağını yazdığı zamanlarda İngiliz filozof Francis Bacon da anlamaya ilişkin köklü yöntem arayışındaydı. Matematik bilgisinden mahrum olan Bacon gözlemin önemini vurgulamayı ve olguları biriktirmeyi tercih etti. O da devrimsel bir görüş sahibiydi. O da bütün bilgiyi yeni bir tabiatın deneysel olarak “*rahatsız edilmesi*”nden türemiş sağlam olgu temeline dayandırmayı amaçlıyordu (Roszak, 2013: 349).

Bacon’a göre “*doğaya boyun eğerek onu yeneriz*” yani “*bilgi güçtür*”. Doğaya boyun eğdirmek teknik üstünlüğü elde tutmak için doğayı tanımak gerekir. Doğaya egemen olmanın ve bu yolu sağlayacak yolu bulmanın ilk koşulu, akli ve duyulama yeteneğimizi kullanmamızdır (Taşkın, 2013: 72).

Bacon’ın katkısı, sistemli bilgi elde etmek için evrensel ve kapsayıcı bir metot algısında yatar. Birinci olarak, bu süreç kolektif ve birikimsel olarak görülür. Yine bu süreç, ivme

kazanmaya devam eden bir girişimdir. Dolayısıyla bilme “işi” bireyin eline bırakılmamalı, bilakis uzmanlardan oluşan takımlar tarafından gerçekleştirilmelidir. Onun ikinci dikkat çekici özelliği olarak şunu söyleyelim: Bilme işi “*sanki makina tarafından*” yapılmalıdır. Burada yine şu söz konusudur: Her şeyi zapt eden her şeyi yiyen makina metaforu! Ama bu kez tamamen yeni bir anahtarda metodolojik bir ilke olarak. Bacon çarpıcı bir etkiyle “*mekanik insanlar*”ın eğer insanî hüner ve marifet ile icat edilen araç ve gereçlerden yardım almaksızın sadece çıplak elleriyle çalışırlarsa insan başarılarının küçük olacağını anlatmaya devam eder. Benzer biçimde insan “*çıplak anlama güçleri*” ile bilgi elde etmeye çalışırsa az bir şey başarabilecektir. Zihinsel alanda da bir düşünce aletine ve aracına ihtiyacımız var (Smith, 2013: 309).

Bacon’a göre, Tanrı’nın gözlerimizin önüne koyduğu hakikati görmemizi engelleyen şey, kendi günahkâr doğamızdır. Bilim adamı gibi, manzara ressamı da geleneksel görüşü iyice incelemeden kabul etmemeli; doğa olgularının araştırmacısı kimliğine bürünmeli, bu olguları aralıksız olarak gözleyip kayda geçirmelidir (Gombrich, 2015: 231).

Novum Organum adlı eserinde tümevarım yönteminin yeterli olmadığını göstererek tümevarım metodunu iyi bir örnek oluşturarak bilginin kendi içinde bir sonunun olmadığını tersine bilginin bir süreç olduğunu belirtmiştir. Bunun yanında eserinde bu metodun geniş ve verimli bilim alanına uygulayabileceğimiz göstererek Rönesans enerjisini yeni bir yöne çekmiştir.

Araştırmacı ve yorumlayıcı bilim adamı ancak yeni bir yöntemle eskiyi aşabilir. Çünkü eski metot artık yeni bir şey ortaya koyamamaktadır... Bacon da ancak doğa üzerinde kaybolmuş egemenliği yeniden kazanmanın tek yolunun, yeni bilimsel yöntemde olduğuna inanır. Bacon, bu konudaki düşüncelerini şu şekilde ifade eder: “*Doğanın yorumlayıcısı ve hizmetkârı olarak insanoğlu doğayı olguda ya da doğanın gidiş yönü düşüncesinde yalnızca gözlemleyerek, onu pek çok durumu ile anlayabilir ve değiştirebilir. Bunun ötesinde o, hiçbir şey bilemez ve yapamaz*” (Çüçen: 2013: 271).

Evrende gerçekleşen olayların sebebi nedir? Bacon, bu temel problemi kurcalamıyor, yalnız doğada gözlemlendiği olayları kaydederek bu evrensel yasaların değişmezliğini ileri sürüyordu. Bize, bu yasaları öğretecek teorileri ve yöntemleri veriyordu (Rahmi, 2001: 54).

Ona göre soy idolleri, bizzat insanın soy veya ırkının doğasında vardır. Çünkü insan, anlamsız bir biçimde “*şeylerin*” ölçüsü olduğunu iddia eder; üstelik bununla da kalmaz hem duyuların hem de zihnin bütün algılarının kaynağı olarak evreni değil, insanı gösterir. İnsan zihni, ışınları yayması, çarpıtması ve şeklini bozması bakımından kendi özelliklerini farklı nesnelere veren içbükey ve dışbükey aynalara benzer (Taşkın, 2013: 73).

Sanat, doğayı insan ile ilgisi bakımından ele alır. Sanat nesnelere olduğu gibi kopya etmek yerine doğal biçimlerini koruyarak, onların anlamlarını genişleterek genel özelliklerini kavrar. Genel olanı bireyselde göstermeye çalışarak nesnelere ortaya koydukları fikirleri (idealleri) görünür kılar. Doğadaki nesnelere model olarak almasına rağmen, onları aşar, idealleştirir. Bunu yaparken nesnenin doğadaki biçiminin ideasına bağlı kalır. Sanat yapıtı gerçekleri hayal gücü ile birleştirmeden doğar. Doğadaki gerçeklikte belirsizlik ve düzensizlik içinde kavradığımız nesnelere, hayal gücünün onlara katılmasıyla birden düzen ve belirlilik kazanır. Gerçekliği

olması gereken ideal bir duruma yükseltir. Bacon, “*sanat doğayla ekli insandır*” tümcesiyle sanatın tanımını yapar. Doğa sayısız zengin kaynaklara sahip olmasına rağmen, sanatsal açıdan tek başına yeterli değildir. Çünkü ona çeşitli anlamlar veren, onu yorumlayan, değerlendiren insandır. İnsan, bir doğa ürünü olan doğal varlıktır. Doğal yaşam güçleriyle donatılmıştır. Bu güçler insan benliğinde, yetenek ve içgüdüler olarak varlığını sürdürür. Bu güçlere işlerlik kazandıran yaşamda gerçeklik duyulanla algılanabilen nesnelere dışlaştırma çabasıdır. Bunun sonucu olarak, sanat yapıtı ortaya çıkar (Ersoy, 2002: 46).

Francis Bacon’ın dediği gibi “*tek bir güzel yoktur ki bir takım gariplikler göstermesin*”. Güzel apaçık olsa da çeşitliliktir bu. Yapıt da olsa yaşam gibi, bizim duygu dünyamız gibi çelişkilidir. Yapıt derindir, yüzeyde bir takım şeyler gösterse de onun asıl zenginliği derindedir yapıt derinlerine çeker bizi, görünmez yanlarına tanık olalım ister, bizi gizlerini tanımaya çağırır. Bunun için kavrayıcı gücümüzün yetkinliklerimizin olması gerekir (Timuçin, 2013: 11). Bacon sanatı, “*insanların tabiata ilavesi*” suretinde tanımlıyordu. Bu anlayış sanatın, zihnin tercüme ettiği realite olduğunu söylemekle gerçeğin idealle tam bireşimini müdafaa etmektedir (Topçu, 2014: 124).

3. SONUÇ VE DEĞERLENDİRME

Sanata ait kuramlar geniş anlamda estetik ile ilişkilidir. Dar anlamda ise insana ait yetiler olan sanatsal düşünme, tasarımı ve yaratmaya ait yasa haline gelmiş düzen felsefi bir çerçeve çizmektedir. Sanatsallığın ilk basamağı olan yaratımdan son basamak olan sanat eserinin meydana gelişi ile bu ikisi arasında yer alan çevre, insan, sanatçı, tarih, psikoloji, tabiat vs. unsurlar sanat kuramlarıyla ilgilidir. Dolayısıyla sanat olarak kabul edilen “şey” düşünsellikten nesnellığe, çevreden insana vs. dair bilgilerin sentezi olarak ortaya çıkmaktadır.

Kadim bilgeliği reddeden Francis Bacon bilimi önceleyerek deneyciliği ve tümevarımı ileri sürerek kantatif bir gelişimi savunmuş ve nesnel dünya ile gerçekliğe önem atfetmiştir. Bu doğrultuda Bacon, gözün ve zihnin eğitimi olan gözlem yapmayı ve olguları inceleyerek bilgi elde etmeyi amaç edinmiştir. Bundan dolayı ona göre gerçekliğe ve gerçek bilgiye ulaşmanın ilk koşulu önce alımlama yapmak ve sonra akıl melekesini kullanmaktır.

Doğadaki gerçekliği düzensiz ve belirsiz bir biçimde algılayan ve kavrayan insan sanat vasıtasıyla insan için doğaya düzen ve belirlenim kazandırır. Doğaya yorumlama katan, algılanabilir hale getiren ve olguları dışlaştırarak gerçekliğin ideal olan bir forma ulaşmasıyla insan yaratıcılığı, hayal gücü, yetenekleri ve becerileri aracılığıyla sanat eseri meydana gelir. Dolayısıyla Bacon’un ifadesi ile “*sanat doğayla ekli insandır*”.

ÖZET

İnternet ortamında pazarlamanın en önemli konularından biri fiyatlandırmadır. Fiyatlandırma tüketici ve işletmeler açısından oldukça önemli bir faktördür. Tatil rezervasyon siteleri mal veya hizmeti pazarlarken mal veya hizmetler için fiyatlandırma yapmak durumundadır. Yaptıkları bu fiyatlandırmanın hem tatil rezervasyon sitelerini hem de tüketicileri hoşnut etmesi gerekmektedir. Tüketiciyi hoşnut etmenin yollarından biri dinamik fiyatlandırma uygulamalarıdır. Ancak dinamik fiyatlandırma uygulamalarının da adil olması gerekir. Fiyatın adil algılanması tüketicilerin mal veya hizmeti tekrar satın alması için önemli bir faktördür. Araştırma, dinamik fiyatlandırmada fiyat adalet algısının tekrar satın alma niyetine etkisini analiz etmeyi amaçlamaktadır. Araştırma nitel veri toplama araçlarından yarı yapılandırılmış görüşme tekniği ile gerçekleştirilmiştir. Araştırmada tatil rezervasyon sitelerinden tatil satın almış toplam 15 kişi ile görüşülmüştür.

Anahtar Kelimeler: Dinamik Fiyatlandırma, Fiyat Adalet Algısı, Tekrar Satın Alma Niyeti, Turizm.

The Effect of Price Fairness Perception on Repurchase Intent in Dynamic Pricing: A Study on Users of Holiday Booking Sites

ABSTRACT

One of the most important issues of marketing in the internet environment is pricing. Pricing is a very important factor for consumers and businesses. Holiday booking sites have to price the goods or services when marketing the goods or services. Their pricing should satisfy both holiday booking sites and consumers. One of the ways to please the consumer is dynamic pricing practices. However, dynamic pricing practices also need to be fair. Fair perception of the price is an important factor for consumers to repurchase the good or service. The research aims to analyze the effect of price fairness perception on repurchase intention in dynamic pricing. The research was carried out with semi-structured interview technique, one of the qualitative data collection tools. In the research, a total of 15 people who bought a holiday from holiday booking sites were interviewed.

Keywords: Dynamic Pricing, Perception of Price Fairness, Repurchase Intent, Tourism.

1. GİRİŞ

Gelişen ve değişen dünya düzeninde teknolojiye kayıtsız kalmak neredeyse olanaksızdır. Günümüz toplumunda teknolojinin insan yaşamına getirdiği kolaylıklar yadsınamayacak derecede çoktur. Bunlar arasındaki en önemli kolaylık ise internetin kullanılmaya başlanmasıdır (Şenel ve Gençoğlu, 2003: 47). İnternetin ortaya çıkması, iletişim tercihimizi, etkileşim biçimimizi, satın alma ve pazarlama faaliyetlerimizi önemli ölçüde değiştirmiş ve şekillendirmiştir. İnternet ortamındaki web siteleri sayesinde tüketiciler istedikleri mal ve hizmete erişim sağlayabilmektedir. Daha sonra bu mal ve hizmet hakkındaki tecrübelerini sosyal medya aracılığıyla paylaşabilmektedir. Tecrübe ve bilgilerin internet ortamında paylaşılmasıyla turizm sektöründeki tüketiciler tatil planlaması, rezervasyon işlemleri ve satın alma yönündeki eylemleri internet aracılığıyla gerçekleştirebilmektedir. Bu konuda tatil rezervasyon siteleri etkin bir rol oynamaktadır (Erdoğan Tarakçı ve Göktaş, 2020: 449).

“Dinamik fiyatlandırma” terimi, mal veya hizmetlerin fiyatını arz ve talebe göre değiştirmeyi gerektiren bir fiyatlandırma stratejisini ifade eder. Yeni teknolojinin gelişmesiyle birlikte, dinamik fiyatlandırma daha geniş ölçüde mümkün ve aynı zamanda ticari olarak uygulanabilir bir strateji haline gelmiştir. Dinamik fiyatlandırmada sabit bir fiyat uygulaması yoktur, fiyatların zamana ve piyasaya göre farklılaşması söz konusudur (Deksnyte, 2012; Avunduk ve Küçükyılmaz, 2020; Neubert, 2022). Dinamik fiyatlandırma stratejisinde farklı fiyat uygulamalarının olması fiyat adaletinin sorgulanmasını da beraberinde getirmiştir.

Fiyat adaleti, bir satıcının fiyatı ile karşılaştırmalı bir diğer tarafın fiyatı arasındaki farkın makul, kabul edilebilir veya haklı olup olmadığına dair bir tüketici değerlendirmesi olarak tanımlanır (Andrés-Martínez vd., 2013: 319). Fiyat adaleti bir fiyat veya prosedürün ilgili bir standart, referans veya norm ile karşılaştırmasını içerir (Altın Gümüşsoy ve Köseoğlu, 2016: 524). Fiyatlandırma uygulaması, dijital pazarlarda artan rekabeti ve fiyat adaletini de beraberinde getirmiştir. Artık tüketiciler aynı ürünü sunan farklı satıcılar arasında seçim yapabilmekte ve web üzerinde fiyat karşılaştırma sitelerinde fiyat karşılaştırmaları yapabilmektedir (Prakash ve Spann, 2022: 300). Ayrıca sadece web üzerindeki fiyat karşılaştırma siteleri değil kulaktan kulağa yayılan duyularla da tüketiciler fiyat adaletini kendi içerilerinde değerlendirebilmektedir. Fiyat adaleti satın alma davranışı üzerinde önemli bir etkiye sahiptir çünkü tüketiciler adil olmadığını bildiği bir mal veya hizmeti tekrar satın alma niyeti göstermeme eğilimindedir. Fiyatın adil algılanması tüketicilerin mal veya hizmeti tekrar satın alması için önemli bir faktördür (Beşlioğlu, 2022: 46-47).

İlgili literatür incelendiğinde dinamik fiyatlandırma, fiyat adalet algısı ve tekrar satın almaya yönelik araştırmaların yapıldığı görülmektedir. Bu araştırmalar içerisinde Beşlioğlu'nun (2022), golf oyuncularının algılanan hizmet kalitesi ve tekrar satın alma niyeti üzerindeki ilişkisi, Mammadli'nin (2017) dinamik fiyatlandırmada fiyat adalet algısının tüketicinin marka değiştirme niyetine etkisi, Malc vd.'nin (2016) tüketicilerin kişisel geliri ışığında fiyat adaleti anlayışındaki değişiklikler, Goh vd.'nin (2016) tüketicinin tekrar satın alma niyetini belirleyen temel belirleyicilerin neler olduğu yer almaktadır. Ayrıca, Andrés-Martínez vd.'nin (2013), tüketici satın alma davranışında algılanan fiyat adaleti kavramının temel yönleri, Kuzay'ın (2012) internetteki alışveriş sitelerinde uygulanan dinamik fiyatlandırmanın müşterilerin algıladığı değere olan etkisi, Lee vd.'nin (2011) çevrimiçi dinamik fiyatlandırma bağlamında alıcıların algılanan fiyat adaletini etkileyen faktörlerin neler olduğu, Dai'nin (2010), fiyat farklılıklarının büyüklüğünün ve zamansal yakınlığının, dinamik fiyatlandırmanın algılanan fiyat adaleti üzerindeki rolü araştırmaları da vardır. Ancak literatürde doğrudan bu araştırmanın konusu olan; tatil rezervasyon sitelerinin uyguladığı dinamik fiyatlandırmada, fiyat adalet algısının tekrar satın alma niyetine etkisini analiz etmeye

yönelik herhangi bir araştırmanın yapılmadığı saptanmıştır. Araştırma konusu alan yazındaki bu boşluğu doldurmak amacı ile belirlenmiştir. Bu bağlamda araştırmanın amacı tatil rezervasyon sitelerinin uyguladığı dinamik fiyatlandırmada, fiyat adalet algısının tekrar satın alma niyetine etkisini analiz etmektir.

2. Kavramsal Çerçeve

Dinamik fiyatlandırma, fiyatların zaman içinde, tüketiciler arasında veya mal/hizmet paketleri arasında değiştiği bir fiyatlandırma stratejisi olarak tanımlanmaktadır (Kannan ve Koppalle, 2001: 63). Dinamik fiyatlandırma, mal veya hizmetin algılanan değerine bağlı olarak fiyatların tüketicilere göre dinamik olarak ayarlanmasıdır. Dinamik fiyatlandırma uygulanırken; satıcı fiyatları zamana, malın talep edilme durumuna ve arza göre değiştirir (Deksnyté, 2012: 24). Günümüzde dinamik fiyatlandırma, konaklama, seyahat, eğlence, e-ticaret, perakende, elektrik vb. birçok sektörde kullanılan yaygın bir fiyatlandırma stratejisidir. Her sektör, kendi ihtiyaçlarını ve ürünlere olan talebi göz önünde bulundurarak malları fiyatlandırmada farklı yaklaşımlar benimsemektedir (Victor ve Bhaskar, 2017: 242).

Fiyat adaleti, bir müşterinin bir satış işlemi ve sonucunun adil, kabul edilebilir ve makul olduğuna ilişkin algısıdır (Bassegy, 2014: 20; Çilesiz ve Selçuk, 2018: 44). Fiyat adalet algısı, bir tüketicinin bir satıcı tarafından talep edilen fiyatın makul, kabul edilebilir veya gerekçelendirilebilir olup olmadığına ilişkin bilişsel ve duygusal değerlendirmesi olarak tanımlanmaktadır. Fiyatların adil olup olmadığına yönelik tüketici değerlendirmesinde belirli karşılaştırmalar vardır. Bunlar: diğer tüketiciler tarafından ödenen fiyatlar, piyasa referans fiyatları ve geçmiş veya alışılmış fiyatlardır. Uygulanan fiyat ile karar için oluşturulan referans fiyat arasında bir fark olduğunda, kişilerin fiyat adalet algısında farklılıklar ortaya çıkmaktadır (Atılğan vd., 2017: 37-38; Erdem, 2019: 39-40; Santos ve Mayer, 2019: 246). Malc vd., (2016) araştırmalarında kişisel gelir ışığında fiyat adalet algısındaki değişiklikleri incelemişler. Araştırmada; ortalamanın altında, ortalama ve ortalamanın üzerinde kişisel gelire sahip kişilerin fiyat adalet algılarının önemli ölçüde farklı olduğunu saptamışlar ($F = 9.27$; $p < 0.001$). Tüketicilerin fiyat adalet algısını etkileyen bazı faktörler vardır. Bu faktörlerden biri memnuniyettir. Bassegy (2014) araştırmasında algılanan fiyat adaletinin müşteri memnuniyeti üzerinde olumlu bir etkisi olduğunu saptamıştır ($r = .901$). Gumussoy ve Koseoglu, (2016) araştırmalarında fiyat adaleti algısının, müşteri memnuniyetinin yordayıcılarından biri olduğu sonucuna ulaşmışlar ($R^2 = 0.61$). Nacar vd. (2012) araştırmalarında fiyat adalet algısının tüketici memnuniyetini etkilediğini ($\beta = .759$; $t = 12,979$) ve tüketici memnuniyetindeki değişimin %57'sini açıkladığını saptamışlar.

Tekrar satın alma, tüketicinin aynı mal veya hizmeti bir veya birden fazla kez satın alması olarak tanımlanmaktadır. Niyet ise kişilerin bir eylemi gerçekleştirmelerine ilişkin duygu ve düşüncelerin bütünüdür (Arlı, 2013: 62; Kara ve Kimzan, 2015: 79). Tekrar satın alma niyeti tüketicinin bir malı veya hizmeti aynı işletmeden tekrar satın alması olarak tanımlanabilir (Akçadağ, 2019: 2; Beşlioğlu, 2022: 46). Tekrar satın alma niyeti, tüketicilerin (alışveriş yapılan tedarikçiden en az bir kez alışveriş yapmış olanların) tekrar satın alma isteği durumunu ifade etmektedir (Chung ve Lee, 2003; Çelik, 2018: 14). Alışveriş ile ilgili tatmin edici deneyimler, benzer koşullar altında kişinin aynı eylemi tekrar etme eğilimini arttırmaktadır. Bu nedenle, tekrar satın alma niyetinde memnuniyet önemli bir rol oynamaktadır (Çakırkaya ve Karaboğa, 2019: 1521-1522; Levent ve Özkul, 2020: 109). Tekrar satın alma niyetinde memnuniyetin etkili olduğunu belirten araştırmalar incelendiğinde: Abdul-Muhmin (2010), araştırmasında önceki çevrimiçi satın alımlardan genel memnuniyetin ($\beta = .441$; $p < .005$) ve çevrimiçi satın almaya yönelik tutumun ($\beta = -.189$; $p < .005$) tekrar satın alma niyeti üzerinde olumlu etkisi olduğunu tespit etmiştir. Araştırmada memnuniyetin tutumu etkilediği ve bu nedenle tutumların tekrar satın alma niyetleri üzerinde etkili olduğu saptanmıştır. Chiu

vd. (2010), arařtırmalarında memnuniyetin ($\beta = 0.54$) ařınalıktan ($\beta = 0.19$) daha gcl bir alışkanlık yordayıcısı olduğunu tespit etmişler. Bu arařtırmanın sonuçları, memnuniyetin tekrar satın alma niyeti üzerinde anlamlı bir etkiye sahip olduğunu göstermektedir. Dger ve Kahraman (2017), mřteri memnuniyetinin tekrar satın alma niyeti üzerinde olumlu etkisi olduğunu saptamışlar ($\beta=0,368$; t deęeri=5,505; $p<0,01$).

3.Yöntem

Arařtırma keřifsel bir nitelik tařımaktadır. Arařtırma nitel veri toplama aralarından yarı yapılandırılmış grřme teknięi ile gerekleřtirilmiřtir. Veriler, tatil rezervasyon sitelerinden tatil satın almıř tketicilerden toplanmıřtır. Katılımcılar, grřmeye katılmaya gnll olanlar arasından amalı rnekleme teknięiyle belirlenmiřtir. Arařtırmada tatil rezervasyon sitelerinden tatil satın almıř toplam 15 kiři ile grřlmřtir. Yarı yapılandırılmış grřme 01 Haziran – 5 Haziran 2023 tarihlerinde yapılmıřtır. Grřmeler sonucunda elde edilen veriler betimsel analiz yntemiyle analiz edilmiřtir. Analizin ilk ařamasında grřmecilerin sorulara verdikleri cevaplar ayrı ayrı okunarak kodlamalar yapılmıřtır. Yapılan bu kodlamalardan hareket edilerek kodlar ortak ifadelere gre dzenlenmiřtir. Bu řekilde katılımcıların grřleri arasındaki benzerlikler ve farklılıklar ortaya konulmaya alıřılmıřtır. Son olarak da veriler dzenlemelere gre bulgulara dnřtrlmř ve yorumlanmıřtır.

4. Bulgular

Arařtırmaya katılan 15 kiřinin 6’sı erkek, 9’u kadındır. Arařtırmaya katılan en gen katılımcı 27 ve en yařlı katılımcı 39 yařındadır. Katılımcıların 5’i bekar, 10’u evlidir. Katılımcılardan bir kiři lise, drt kiři lisans, 2 kiři n lisans ve sekiz kiři lisansst eęitim seviyesindedir. Katılımcıların mesleęine bakıldıęında, biri ev hanımı, biri bankacı, biri kamu alıřanı, biri Migros mdr yardımcısı, biri ğretmen, ikisi muhasebe elemanı, ikisi resepsiyonist, ikisi zel sektr alıřanı ve  akademisyendir. 15 kiřiden biri alıřmadıęını ifade etmiřtir. Katılımcıların gelirlerinin ortalamasına bakıldıęında ise ortalama gelir 14.385’tir.

Katılımcılara *“Dinamik fiyatlandırma, fiyatların zaman iinde, tketiciler arasında veya mal/hizmet paketleri arasında deęiřtięi bir fiyatlandırma stratejisi olarak tanımlanmaktadır. Mřteriler ve iřletmeler aısından bu uygulamayı nasıl deęerlendiriyorsunuz?”* sorusu sorulduęunda 9 katılımcı mřteri ve iřletme iin olumlu grdęn, 2 katılımcı mřteri iin olumsuz grdęn, iřletme iin olumlu grdęn, 4 katılımcı mřteri ve iřletme iin olumsuz grdęn ifade etmiřtir.

Katılımcılara *“rnlerin fiyatlandırılmasının tketicie gre yapılması/kiřiselleřtirilmesi hakkında dřnceleriniz nelerdir? Doęru buluyor musunuz?”* sorusu sorulduęunda 10 katılımcı doęru bulduęunu, 4 katılımcı doęru bulmadıęını, 1 katılımcı ise kararsız olduęunu ifade etmiřtir.

Katılımcılara *“Fiyatların zamana ve talebe gre kiřiselleřtirilmesi hakkında dřnceleriniz nelerdir?”* sorusu sorulduęunda 7 katılımcı doęru bulduęunu, 1 katılımcı doęru bulduęunu ve talep ynetimi aısından zm olarak grdęn, 1 katılımcı ise zamana gre deęiřimini doęru bulduęunu, talebe gre doęru bulmadıęını, 6 katılımcı ise genel olarak bu uygulamaları doęru bulmadıęını, bunlardan biri fırsatılık olarak grdęn, biri fiyatların enflasyona gre dzenlenmesi gerektięini, biri ise bu fiyat deęiřimlerinin mřteriler üzerinde karmařıklık hissi yaratacaęını ve dengenin kurulması gerektięini ifade etmiřtir.

Katılımcılara *“Tatil sitelerinde bazı dnemelerde aynı otel iin farklı fiyatların olduęunu grrz. Size gre aynı otelde kaldıęımız bir mřteriden daha az veya daha fazla deme*

yapmanız adil bir fiyatlandırma mıdır? Bu konuda düşünceleriniz nelerdir?” sorusu sorulduğunda ise 8 katılımcının adil gördüğü ifade edilmiştir. Bunlardan 5’i fiyatlarda farklılıklar olmasını fiyat adaleti açısından olumsuz algılamamakta ve sadakat programları çerçevesinde bu uygulamaların normal olacağını ifade etmekte, 2 katılımcı adil görünmenin yanı sıra daha fazla ödeme yapmanın kendisini mutsuz edeceğini ifade etmekte, 1’i ise sadakat programları çerçevesinde adil bir yaklaşım olduğunu ancak aynı şartlarda hizmet alımı yapıldığında herhangi bir farklılığın olmaması gerektiğini ifade etmektedir. 7 katılımcı farklı fiyat uygulamalarını adil görmezken bunlardan 4’ü uygulamanın tamamen adaletsiz olduğunu ifade etmekte, 3’si aynı şartlarda kalınıyorsa adil görmemektedir.

Katılımcılara “Adil fiyatlandırma size göre nedir? Nasıl tanımlarsınız?” sorusu sorulduğunda 2 katılımcı dinamik fiyatlandırma uygulamasının adaletli bir fiyatlandırma uygulaması olduğunu ifade ederken 2 katılımcı ekonomik koşullara göre fiyatlandırma yapılması gerektiğini ifade etmiştir. 3 katılımcı ortalama değerinde, makul ve beklentiyi karşılayan bir fiyatlandırmanın adil olacağını ifade etmiştir. Katılımcılardan 2’si haksızlığa uğramadıklarını hissetmelerinin fiyatı adaletli algılamalarını sağlayacağını ifade etmiş, 1 katılımcı herkesin aynı mal veya hizmete aynı fiyatı ödemesinin adaletli olacağını söylemiştir. 1 katılımcı ise fiyat adaleti açısından aynı hizmet için uygulanacak farklı fiyat düzeyleri arasında makas aralığı olmaması gerektiğini belirtmiştir. Bunu destekler nitelikte 4 katılımcı mal/hizmetin ederine göre fiyatlandırma yapılması gerektiğini söylemiştir.

Katılımcılara “Tatil paketi satın aldığınız bir rezervasyon sitesindeki fiyatları adil algılamanız tekrar satın alma niyetinize ne ölçüde etki eder?” sorusu yöneltildiğinde, genel olarak tüm katılımcılar fiyat adalet algısının tekrar satın alma niyeti ve davranışı ortaya çıkaracağını ifade etmişlerdir. 1 katılımcı fiyatları adaletli olarak algıladığında tekrar satın almanın yanı sıra siteyi başkalarına da önereceğini ifade etmiş, 2 katılımcı ise sürekli aynı siteden alışveriş yapacağını belirtmiştir. Bunun yanı sıra 2 katılımcı ise yine de diğer alternatiflere de bakacaklarını ifade etmiştir.

Katılımcılar “Daha önce kullandığınız rezervasyon sitesinde dinamik fiyatlandırma yapılıyor olmasının yeniden aynı siteden rezervasyon yapmanızda nasıl bir etkisi olur?” sorusuna karşılık, 9 katılımcı olumlu etki edeceğini ifade etmiştir. Bunlardan 2’si fiyatların makul olması durumunda olumlu etkinin oluşacağını söylerken 1’i dinamik fiyatlandırma yapılıyor olmasının siteyi yeniden ziyaret etmeye ve yeniden satın almaya teşvik edeceğini, 3’ü de olumlu etki etmenin yanı sıra kendilerinde avantajlı fiyatı yakalama isteği uyandıracığını, dolayısıyla hızlı karar almaya ve erken rezervasyon yapmaya teşvik edeceğini belirtmişlerdir. 1 katılımcı dinamik fiyatlandırma yapılıyor olmasının yeniden aynı site üzerinden rezervasyon yapma kararı üzerinde herhangi bir etkisinin olmayacağını ifade ederken, 5 katılımcı fiyatlardaki tutarsızlığın olumsuz bir algı yaratacağını ve bu duruma karşı önyargılı bir yaklaşımlarının olabileceğini ifade ederek diğer seçenekleri dikkatlice karşılaştıracıklarını belirtmişlerdir.

Katılımcılara “Tatil paketi satın aldığınız bir rezervasyon sitesinden tekrar satın almanızı sağlayacak başlıca nedenler nelerdir?” soru sorulduğunda Tablo 1’deki faktörler cevap olarak verilmiştir.

Tablo 1. Tatil Paketi Satın Alınan Bir Rezervasyon Sitesinden Tekrar Satın Almayı Sağlayacak Başlıca Faktörler

Katılımcı Sayısı	Faktörler
6 katılımcı	Fiyat Adaleti

6 katılımcı	Hizmet Kalitesi
5 katılımcı	Güvenilirlik
5 katılımcı	Güvenli Ödeme Koşulları
5 katılımcı	Donanımlı ve Etkili Web Sayfası (Detaylı Bilgi İçermesi, Tüm Otel Seçeneklerini İçermesi, Karşılaştırma Özelliğinin Bulunması)
4 katılımcı	Avantajlı Fiyatlar (Promosyon, İndirim, Avantajlı Hizmet Paketleri,
4 katılımcı	Fiyat Uygunluğu
4 katılımcı	Müşteri Odaklılık
3 katılımcı	Ödeme Kolaylığı (Avantajlı Ödeme Seçenekleri)
2 katılımcı	İade ve İptal Koşulları

Tablo 1’de de görüleceği üzere tatil paketi satın alınan bir rezervasyon sitesinden tekrar satın almayı sağlayacak başlıca nedenler fiyat adaleti ve hizmet kalitesidir.

5. Sonuç ve Öneriler

Yapılan araştırma, dinamik fiyatlandırmada fiyat adalet algısının tekrar satın alma niyetine etkisini analiz etmeyi amaçlamaktadır. Araştırma verilerini toplamak için tatil rezervasyon sitelerinden tatil satın almış 15 kişi ile görüşme yapılmıştır. Görüşme yapılan 15 kişinin demografik özellikleri birbirinden farklılık göstermektedir.

Araştırmanın amacı doğrultusunda görüşme yapılan kişilere 8 adet açık uçlu soru sorulmuştur. Görüşmeler neticesinde ilk soruda dinamik fiyatlandırmayı 9 katılımcının müşteri ve işletme için olumlu gördüğü, 2 katılımcının müşteri için olumsuz gördüğü, işletme için olumlu gördüğü (Uygulamanın müşteriler için de aslında karlı olabileceğinin öğretilmesi, buna yönelik pazarlama iletişimi faaliyetlerinin yapılması, indirim dönemlerini değerlendirebilmeleri için özellikle mevcut müşterilere kişiselleştirilmiş mesajların ya da kişisel satış çabalarının yönlendirilmesi etkili olabilir), 4 katılımcının müşteri ve işletme için olumsuz gördüğü (uygulamanın daha iyi anlaşılabilmesi, avantajlarının vurgulanması açısından mevcut ve potansiyel müşteriler ile karşılıklı ilişkilerin kurulması etken olabilir) tespit edilmiştir.

İkinci soruda görüşmecilerin ürünlerin fiyatlandırılmasının tüketiciye göre yapılması/kişiselleştirilmesini doğru bulup bulmadığı öğrenilmeye çalışılmıştır. Buna ilişkin 10 katılımcının doğru bulduğu (İlk ifadede 9 katılımcı uygulamaya olumlu bakıyor 2’si müşteri için olumsuz işletme için olumlu bakıyordu. Burada olumsuz bakanlardan 1’i olumluya dönmüş. Bu da aslında uygulamaya yönelik bilgi eksikliği ya da ön yargıların olabileceği sonucunu ortaya çıkarıyor. Uygulama anlatıldığında algıların olumluya dönüşebileceğine işaret ediyor. Dolayısıyla dinamik fiyatlandırmanın hem tüketici hem müşteri açısından faydalarının doğru aktarılması için bir takım iletişim çabaları yürütülebilir, uygulamadan daha etkili olarak faydalanmaları sağlanarak fiyat adalet algısı olumlu yönde desteklenebilir) 4 katılımcının doğru bulmadığı (ilk ifade ile tutarlı), 1 katılımcının ise kararsız olduğu (olumsuzdan kararsıza dönmesi etkili pazarlama iletişimi çabaları ile fiyat adalet algısının olumlu yönde desteklenebileceğini göstermektedir) saptanmıştır. Kuzay (2018) araştırmasında dinamik fiyatlandırmanın, günümüzde müşterinin algıladığı değere büyük bir etkisi olmadığını, Neubert

(2022) ise araştırmasında tüketicilerin dinamik fiyatlandırmaya bakışlarının sektöre, kaynakların mevcudiyetine ve kişisel koşullara bağlı olduğunu tespit etmiştir.

Üçüncü soruda katılımcıların fiyatların zamana ve talebe göre kişiselleştirilmesi hakkında düşünceleri öğrenilmeye çalışılmıştır. Buna ilişkin 7 katılımcının fiyatların zamana ve talebe göre kişiselleştirilmesini doğru bulduğu, 1 katılımcının doğru bulduğu ve talep yönetimi açısından çözüm olarak gördüğü, 1 katılımcının ise zamana göre değişimini doğru bulduğu, talebe göre doğru bulmadığı, 6 katılımcının ise genel olarak bu uygulamaları doğru bulmadığı tespit edilmiştir. Genel olarak uygulamaları doğru bulmadığını ifade eden katılımcılardan 1'i fırsatçılık olarak gördüğünü, 1'i fiyatların enflasyona göre düzenlenmesi gerektiğini diğeri ise bu fiyat değişimlerinin müşteriler üzerinde karmaşıklık hissi yaratacağını ve dengenin kurulması gerektiğini ifade etmiştir. Burada ön plana çıkan olumsuz algıların temelini fiyat adaleti konusunda yaşadıkları tereddütler oluşturmaktadır. Olumsuz algıların ortaya çıkmasında en önemli etken, dinamik fiyatlandırmanın avantajlarından haber olamamak, yeterli ve zamanında bilgi edinememekten dolayı diğer müşterilere göre aynı hizmeti daha yüksek fiyattan almış olma durumuna yönelik kaygıdır. Dinamik fiyatlandırma müşteriler için de birçok avantaj sunmaktadır. Özellikle indirim dönemlerinde müşterilerin haberdar edilmesi, uygulanacak sadakat programları ile aidiyetin oluşturulması, böylece bu avantajlardan yararlanabilmelerinin desteklenmesi mevcut olumsuz algıların ortadan kaldırılması için etkili olabilecektir. Sözer (2019) araştırmasında dinamik fiyatlandırma uygulamalarındaki indirim tekliflerinin satın alma niyetleri üzerinde anlamlı düzeyde pozitif doğrudan etkisi olduğunu tespit etmiş ($R^2 = 0,583$, $F(3;672) = 313$, $p < 0,001$). Araştırmada indirim seviyesi daha yüksek olduğunda, indirim yapılmayan durumlara kıyasla satın alma niyeti üzerinde anlamlı ve daha yüksek pozitif doğrudan etkiye yol açtığı saptanmıştır ($B = 1.114$, $p < 0.001$).

Dördüncü soruda katılımcıların 'Aynı otelde kaldığınız bir müşteriden daha az veya daha fazla ödeme yapmanız adil bir fiyatlandırma mıdır?' sorusuna ilişkin görüşleri öğrenilmeye çalışılmıştır. Buna ilişkin 8 katılımcının adil gördüğü saptanmıştır. Bunlardan 5'i fiyatlarda farklılıklar olmasını fiyat adaleti açısından olumsuz algılamamakta ve sadakat programları çerçevesinde bu uygulamaların normal olacağını ifade etmekte, 2 katılımcı adil görmeyen yanı sıra daha fazla ödeme yapmanın kendisini mutsuz edeceğini ifade etmekte, 1'i ise sadakat programları çerçevesinde adil bir yaklaşım olduğunu ancak aynı şartlarda hizmet alımı yapıldığında herhangi bir farklılığın olmaması gerektiğini ifade etmektedir. 7 katılımcı farklı fiyat uygulamalarını adil görmezken bunlardan 4'ü uygulamanın tamamen adaletsiz olduğunu ifade etmekte, 3'si aynı şartlarda kalınıyorsa adil görmemektedir. Burada, fiyat adalet algısını olumsuz etkileyen etmen ise koşulların farklılığının müşteri tarafından doğru algılanıp algılanmadığıdır. Bu da sadakat programları içerisinde ya da talep yönetimi açısından dinamik fiyatlandırma uygulanırken fiyat değişimlerinin nedenlerinin müşteriye detaylı ve çok doğru aktarılması gerektiğini göstermektedir. Karanlı (2019) araştırmasında katılımcılar aynı hizmet için farklı fiyat ödediklerinde, düşük fiyatı kazanç ve yüksek fiyatı kayıp olarak algılamaktadırlar sonucuna ulaşmıştır. Kolsuz (2021) araştırmasında dinamik fiyatlandırma ile fiyat adaleti algısı arasında ($r = .621$, $p < 0.01$) istatistiksel açıdan anlamlı ve pozitif bir ilişki tespit etmiştir.

Beşinci soruda katılımcıların adil fiyatlandırma tanımlamaları öğrenilmeye çalışılmıştır. Buna yönelik 2 katılımcı dinamik fiyatlandırma uygulamasının adaletli bir fiyatlandırma yöntemi olduğunu ifade ederken 2 katılımcı ekonomik koşullara göre fiyatlandırma yapılması gerektiğini ifade etmiştir. 3 katılımcı ortalama değerde, makul ve beklentiyi karşılayan bir fiyatlandırmanın adil olacağını ifade etmiştir. Katılımcılardan 2'si haksızlığa uğramadıklarını hissetmelerinin fiyatı adaletli algılamalarını sağlayacağını ifade etmiş, 1 katılımcı herkesin aynı mal veya hizmete aynı fiyatı ödemesinin adaletli olacağını söylemiştir. 1 katılımcı ise fiyat

adaleti açısından aynı hizmet için uygulanacak farklı fiyat düzeyleri arasında makas aralığı olmaması gerektiğini belirtmiştir. Bunu destekler nitelikte 4 katılımcı mal/hizmetin ederine göre fiyatlandırma yapılması gerektiğini söylemiştir. Fiyat adalet algısı açısından bakıldığında, genel olarak katılımcıların beklentisinin aynı mal ya da hizmete, aynı koşullarda daha fazla fiyat ödemek istemedikleri söylenebilir. Aynı zamanda koşullar farklılaştığında uygulanacak farklı fiyat uygulamalarında fiyat aralıklarının çok fazla olmaması dinamik fiyatlandırma uygulamalarının daha adaletli algılanmasını sağlayacaktır.

Altıncı soruda katılımcıların “Tatil paketi satın aldığınız bir rezervasyon sitesindeki fiyatları adil algılamanız tekrar satın alma niyetinize ne ölçüde etki eder?” sorusuna ilişkin görüşleri öğrenilmeye çalışılmıştır. Buna yönelik genel olarak tüm katılımcılar fiyat adalet algısının tekrar satın alma niyeti ve davranışı ortaya çıkaracağını ifade etmişlerdir. 1 katılımcı fiyatları adaletli olarak algıladığında tekrar satın almanın yanı sıra siteyi başkalarına da önereceğini ifade etmiş, 2 katılımcı ise sürekli aynı siteden alışveriş yapacağını belirtmiştir. Bunun yanı sıra 2 katılımcı ise yine de diğer alternatiflere de bakacaklarını ifade etmiştir. Fiyat adalet algısının yeniden satın alma niyeti üzerinde güçlü bir etkisi olduğu, hatta müşteri sadakati yarattığı ve tavsiye etme davranışı ortaya çıkardığı söylenebilir. Benzer bulgular, Mammadli (2017) araştırmasında da ortaya çıkmıştır. Araştırmada, tekrar satın alma niyeti ile fiyat adalet algısı arasında ilişki gözlemlenmiştir ($F= 141.326$ $p=0.000$). Sonuç olarak araştırmada, fiyat adalet algısının yüksek olduğu durumda, tekrar satın alma niyetinin de yüksek olduğu sonucuna ulaşılmıştır. Goh vd. (2016) araştırmalarında fiyat adaletinin ($\beta = 0,375$, $t = 2,837$, $P = 0,005$) tüketicinin tekrar satın alma niyetini önemli ölçüde etkilediğini tespit etmişlerdir. Lee vd. (2011) araştırmalarında, fiyat adaletinin tekrar satın alma niyeti üzerinde olumlu bir etkiye sahip olduğu ($\beta= 0.73$, $p< 0.001$) sonucuna ulaşmışlardır. Literatürdeki araştırmalar ile yapılan araştırmanın sonucu desteklenmektedir. Buradan hareketle araştırmanın amacına yönelik olarak fiyat adalet algısının tekrar satın alma niyetini etkilediği ortaya konmuştur.

Yedinci soruda katılımcıların “Daha önce kullandığınız rezervasyon sitesinde dinamik fiyatlandırma yapılıyor olmasının yeniden aynı siteden rezervasyon yapmanızda nasıl bir etkisi olur?” sorusuna ilişkin görüşleri öğrenilmeye çalışılmıştır. Buna yönelik 9 katılımcı olumlu etki edeceğini ifade etmiştir. Bunlardan 2’si fiyatların makul olması durumunda olumlu etkinin oluşacağını söylerken 1’i dinamik fiyatlandırma yapılıyor olmasının siteyi yeniden ziyaret etmeye ve yeniden satın almaya teşvik edeceğini, 3’ü de olumlu etki etmenin yanı sıra kendilerinde avantajlı fiyatı yakalama isteği uyandıracaklarını, dolayısıyla hızlı karar almaya ve erken rezervasyon yapmaya teşvik edeceğini belirtmişlerdir. 1 katılımcı dinamik fiyatlandırma yapılıyor olmasının yeniden aynı site üzerinden rezervasyon yapma kararı üzerinde herhangi bir etkisinin olmayacağını ifade ederken, 5 katılımcı fiyatlardaki tutarsızlığın olumsuz bir algı yaratacağını ve bu duruma karşı önyargılı bir yaklaşımlarının olabileceğini ifade ederek diğer seçenekleri dikkatlice karşılayacaklarını belirtmişlerdir. Burada yeniden satın alma niyetinin oluşmasında fiyat adalet algısı belirleyici bir aracı rol üstlenmektedir. Dinamik fiyatlandırma stratejisi ile uygulanacak farklı fiyat düzeylerinin adaletli olarak algılanması, yeniden satın alma niyeti ve davranışının oluşmasında etken olacaktır. Santos, Mayer ve Marques (2020) araştırmasında, dinamik fiyatlandırmaya ilişkin tüketici algılarının statik olmadığını ve bu nedenle sunuldukları bağlama göre değişiklikler gösterdiğini tespit etmiştir. Victor ve Bhaskar (2017) araştırmalarında, dinamik fiyatlandırmanın tüketicilerin memnuniyet düzeyi ($t=-4,5908$, $p<0.005$) ve gelecekteki satın alma istekleri ($t = 2,3193$, $p<0.005$) üzerinde bir etkisi olduğu sonucuna ulaşmışlardır.

Son soruda katılımcıların tatil paketi satın aldıkları bir rezervasyon sitesinden tekrar satın almalarını sağlayacak başlıca faktörlerin neler olduğu öğrenilmeye çalışılmış. Katılımcılar tatil paketi satın aldıkları bir rezervasyon sitesinden tekrar satın almalarını sağlayacak başlıca 10

faktör öne sürmüşlerdir. Buna ilişkin tekrar satın alma kararı üzerinde en büyük belirleyici faktör fiyat adaleti ve hizmet kalitesi olarak tespit edilmiş. En büyük etkiye sahip diğer faktörler ise sırasıyla; güvenilirlik, güvenli ödeme koşulları, sitenin donanımlı ve etkili olması, avantajlı fiyatlar, fiyat uygunluğu, müşteri odaklılık, ödeme kolaylığı, iade ve iptal koşulları olarak saptanmıştır. Bu sonuçtan hareketle tekrar satın alma karında fiyat adaleti ve hizmet kalitesinin önemli olduğu ve tatil rezervasyon sitelerinin bunları dikkate alması gerektiği sonucuna ulaşılabilir.

Bu araştırmanın sonuçları doğrultusunda şu önerilerde bulunulabilir;

- ✓ Dinamik fiyatlandırma uygulamalarının müşteriler ve işletmeler için aslında karlı bir uygulama olabileceği öğretilir ve buna yönelik pazarlama iletişimi faaliyetleri gerçekleştirilebilir.
- ✓ Dinamik fiyatlandırma uygulamalarının daha iyi anlaşılabilmesi, avantajlarının vurgulanması açısından mevcut ve potansiyel müşteriler ile karşılıklı ilişkiler kurulabilir.
- ✓ Görüşmeler sırasında katılımcıların dinamik fiyatlandırmayı başlangıçta pek anlamadıkları ancak konuşuldukları katılımcıların dinamik fiyatlandırmayı anlamaya başlayarak olumlu cevaplar verdikleri görülmüştür. Bu durum aslında uygulamaya yönelik bilgi eksikliği olduğu sonucunu ortaya çıkarmakta ve uygulama detaylıca anlatıldığında, algıların olumluya dönüşebileceğine işaret etmektedir. Bu sonuçtan hareketle dinamik fiyatlandırmayla ilgili doğru bilgi aktarılması için bir takım iletişim çabaları yürütülebilir.
- ✓ İndirim dönemlerini değerlendirebilmeleri için mevcut ve potansiyel müşterilere kişiselleştirilmiş mesajlar gönderilebilir.
- ✓ Dinamik fiyatlandırmanın hem tüketici hem müşteri açısından faydalarının doğru aktarılması için bir takım iletişim çabaları yürütülebilir, müşterilerin uygulamadan daha etkili olarak faydalanmaları sağlanarak fiyat adalet algıları olumlu yönde desteklenebilir.
- ✓ Dinamik fiyatlandırmanın adalet yaklaşımı korunarak fiyat adalet algısının olumlu olması için sadakat programları sisteme entegre edilebilir.
- ✓ Araştırmada dinamik fiyatlandırmada fiyat adalet algısının tekrar satın alma niyetini etkilediği tespit edilmiş. Buna ilişkin dinamik fiyatlandırma stratejisi ile uygulanacak farklı fiyat politikalarının adaletli olarak algılanması sağlanarak yeniden satın alma niyeti ve davranışının oluşması sağlanabilir.
- ✓ Araştırmada müşterilerin tatil paketi satın aldıkları bir rezervasyon sitesinden tekrar satın almalarını sağlayacak başlıca faktörlerin fiyat adaleti ve hizmet kalitesi olduğu görülmüş. Buna yönelik olarak gerekli düzenlemeler yapılabilir.

ÖZET

Sanayi Devrimi sonrasında ortaya çıkan küreselleşme ile birlikte ülkeler büyümeye yönelik adımlar atmıştır. Atılan adımlar sonucu üretim ve tüketim anlayışı arasında birtakım dengesizlikler ortaya çıkmıştır. Bu dengesizliklerin sebebi tüketim ve üretim oranının paralellik göstermemesidir. Tüketimde zamanla birlikte artışlar meydana gelmiştir. Ancak, tüketimde artış yaşanırken tüketilenin yerine yenisi o kadar hızlı üretilmemiştir. Tüketimdeki artışların ilerleyerek devam etmesi toplumun sürdürülebilirlikle ilgili endişe duymasına yol açmıştır. Sürdürülebilirlik, ekosistemin ve toplumun ya da daha genel olarak devam eden herhangi bir sistemin temel kaynaklarını tüketmeden kendini idame ettirebilmesi durumu olarak tanımlanmaktadır. Sürdürülebilirlik her sektör için olduğu gibi turizm sektörü için de önem arz etmektedir. Turizm, kaynak yoğun bir endüstri olarak kabul edilmekte ve dünyanın en büyük endüstrilerinden biri olarak kabul edilmektedir. Turizm faaliyetleri sosyo-kültürel, ekolojik, politik ve ekonomik çevre ile yakın ilişki içerisinde. Bu nedenle hem yerel hem de küresel ölçekte sürdürülebilirlik açısından turizmin hesap verebilir olması gerekmektedir. Bu araştırmada sürdürülebilirlikle ilgili turizm alanında farkındalık oluşturmak hedeflenmiştir. Araştırmada sürdürülebilirlik ve sürdürülebilir turizm kavramları detaylı olarak incelenmekte, sürdürülebilir turizmin önemi kapsamlı bir şekilde ele alınmaktadır. Çalışmada, Türkiye için sürdürülebilir turizmin neden ve nasıl geliştirilmesi gerektiğine yönelik örnek yaklaşımlar tanımlanmaya çalışılmıştır.

Anahtar Kelimeler: Sürdürülebilirlik, Sürdürülebilir Turizm, Turizm Endüstrisi, Tüketim.

A Literature Review on Sustainable Tourism

ABSTRACT

With the globalization that emerged after the Industrial Revolution, countries took steps towards growth. As a result of the steps taken, some imbalances have emerged between the understanding of production and consumption. The reason for these imbalances is that the consumption and production rates do not show parallelism. Consumption has increased over time. However, while there was an increase in consumption, a new one was not produced so quickly to replace the consumed one. The progressive increase in consumption has caused the society to be concerned about sustainability. Sustainability is defined as the state of being able to sustain itself without depleting the essential resources of the ecosystem and society, or more generally of any ongoing system. Sustainability is important for the tourism sector as it is for every sector. Tourism is considered a resource-intensive industry and is considered one of the largest industries in the world. Tourism activities are in close relationship with the socio-cultural, ecological, political and economic environment. For this reason, tourism must be accountable in terms of sustainability on both a local and global scale. In this research, it is aimed to raise awareness in the field of tourism related to sustainability. In the research, the concepts of sustainability and sustainable tourism are examined in detail, and the importance of sustainable tourism is discussed comprehensively. In the study, exemplary approaches to why and how sustainable tourism should be developed for Turkey have been tried to be defined.

Keywords: Sustainability, Sustainable Tourism, Tourism Industry, Consumption.

1. Giriş

Turizm, ekonomik kalkınmaya katkıda bulunan, kişisel ve milli geliri artıran birçok alanda çok sayıda iş imkânı yaratmaya yardımcı olan önemli bir endüstri alanıdır (Hunter, 2002: 9; Tachir ve Alalı, 2023: 63). Seyahat ve turizm sektörü, 2019 yılında küresel GSYİH' ya % 10,3 katkıda bulunmuş; salgına yönelik devam eden kısıtlamalar nedeniyle 2020'de bu oran %5,3'e düşmüş; 2021'de %6,1'e yükselmiştir. 2020'de yaklaşık 4,9 trilyon ABD Doları kaybın (-%50,4 düşüş) ardından, Seyahat ve turizmin GSYİH' ya katkısı 2021'de 1 trilyon ABD Doları artmıştır (+%21,7 artış) (WTTC, 2022). Turizm, küresel düzeyde ana sektörlerden biri olarak kabul edilmektedir (Baltezarević vd., 2022: 125). Ancak turizm düzensiz ve disiplinsiz planlandığında gelecek nesillerin çevresel kaynaklarını tehdit ederek çevreyi ve doğal kaynakları olumsuz etkilemektedir. Bu nedenle, sürdürülebilir bir turizm gelişimine ihtiyaç vardır (Karakaş ve Türkseven, 2022: 346; Tachir ve Alalı, 2023: 63). Turizmde sürdürülebilirliğin sağlanabilmesinden yola çıkarak sürdürülebilir turizm kavramı ortaya çıkmıştır.

Dünya Turizm Örgütü, sürdürülebilir turizmi “mevcut ve gelecekteki ekonomik, sosyal ve çevresel etkileri tam olarak göz önüne alan, ziyaretçilerin, endüstrinin, çevrenin ve ev sahibi toplulukların ihtiyaçlarına hitap eden turizm” olarak ifade etmektedir (UNWTO, 2022). Turizm endüstrisinin sürdürülebilir olabilmesi için kültür, doğa, çevre, tarih, folklor gibi vazgeçilmez unsurların korunması ve geliştirilmesi gerekir. Bu sayede kaynaklar korunabilir ve gelecek nesillere aktarılabilir (Çalan, 2014: 2). Kaynakların korunup geliştirilerek gelecek nesillere aktarılabilmesi açısından sürdürülebilir turizm önem arz etmektedir. Bu bağlamda araştırmanın amacı, sürdürülebilirlikle ilgili turizm alanında farkındalık oluşturmaktır.

2. Sürdürülebilirlik Kavramı

İnsanlar tarih boyunca doğal çevreyle iç içe yaşam sürmüştür. Ayrıca, doğaya kendi istek ve beklentilerine göre yön vermiştir. Ancak doğal çevrenin kontrolsüz kullanılması tahribatlara yol açmaya başlamıştır. Bu tahribatların oluşmaya başlamasıyla insanlar önlem alma gereksinimi hissetmiştir. Çünkü tek bir doğal çevre vardır ve bunun yok olması insanlığın yok olması demektir (Kılıç, 2020: 4). Buradan hareketle ekonomik refahı teşvik eden, ekolojik sistemlerin bütünlüğüne saygı duyan ve sosyal olarak eşitlikçi topluluklar yaratılacak bir şekilde gelişme ihtiyacı sürdürülebilirliği gündeme getirmiştir (Ferreira, 2023: 433). Sürdürülebilirlik kavramı; toplumun sosyal, kültürel, bilimsel, doğal ve insan kaynaklarının tümünün dikkatli bir şekilde kullanılmasını gerektiren ve buna saygı duyma temelinde sosyal bir bakış oluşturan katılımcı bir süreç olarak tanımlanmaktadır (Tıraş, 2012: 59). Sürdürülebilirlik, bugünün ihtiyaçlarını, gelecek nesillerin kendi ihtiyaçlarını karşılama yeteneğinden ödün vermeden karşılamak anlamına da gelmektedir (Harris, 2003: 1). Daha genel ve geniş bir perspektiften bakıldığında sürdürülebilirlik, bir şeyin kendisini muhafaza edebilmesi, koruyabilmesi, varlığını devam ettirebilme becerisi ve yeteneğine denk gelmektedir. Buradan hareketle bir mal, bir faaliyet veya herhangi bir şey sürdürülebilir ise ilgili olan şey tekrar kullanılabilir veya yeniden dönüştürülebilir (Şen vd., 2018: 5). Başka bir deyişle sürdürülebilirlik, yaşam koşullarını sonsuza kadar geliştirmek ve desteklemek için yaşam tarzımızı değiştirme ihtiyacıdır. Bu durum da ancak kişisel veya toplumsal ihtiyaçlar ile doğal kaynakların kapasitesi arasında bir denge bulmakla mümkündür (Tüzün, 2021: 7). Daha genel anlamda sürdürülebilirlik kaynakların "dengeli" veya "akıllı" kullanımınıdır (Pelit vd., 2015: 41). Lu ve Nepal'e (2009: 6) göre sürdürülebilirlik kavramı için dört temel ilke de dikkate alınmalıdır. Bunlar;

1. Bütüncül planlama ve strateji oluşturma fikri,
2. Temel ekolojik süreçleri korumanın önemi,
3. Hem kültürel mirası hem de biyolojik çeşitliliği koruma ihtiyacı,

4. Üretkenliğin gelecek nesiller için uzun vadede sürdürülebileceği fikrine dayalı kalkınma.

Hızlı bir yaşam sürme anlayışından kaynaklanan ve bu hızlılığın mevcut ekosistemde zararlara yol açmasına önlem olarak meydana çıkan sürdürülebilirlik yaklaşımı, doğa-çevre-insan bağlamında etkisi olan entegre bir kavramdır (Çokal vd., 2020: 205). Sürdürülebilirlik yaklaşımı, küresel ölçekte tartışılmaya başlanan, iklim değişikliği, çevre kirliliği, karbon salınımının artması, kaynakların tükenmesi, biyoçeşitliliğin kaybı, suyun kirlenmesi ve su kaynaklarının tahribi gibi dünyanın temel sorunlarının çözümü haline gelmiştir (Tüzün, 2021: 6). Sürdürülebilirlik yaklaşımında temel amaç mevcut kaynakları koruyarak gelecek nesillere aktarmaktır. Bu aktarımın yapılması için de sosyal, ekolojik, ekonomik, politik ve çevresel yaklaşımların işbirliği içinde olması gerekmektedir (Çokal vd., 2020: 205). Doğal çevrenin büyümeye sınırlar koyduğu ve bu sınırların aşılması durumunda toplumsal olarak sıkıntıların yaşanabileceği bilinci, sürdürülebilirliğin gelişme sürecine giden ilk adımlardan biri olmuştur (Postma vd., 2017: 14).

2. 1. Sürdürülebilirliğin Gelişme Süreci

Dünyanın sürdürülebilirliğini sağlamak için mevcut kaynakların etkin ve doğru kullanımı büyük önem arz etmektedir. Diğer yandan, tarih boyunca insanoğlu bireysel çıkarları için toprak ve su gibi doğal kaynakları kontrolsüzce kullanmış, endüstrileşmenin bir sonucu olarak da doğanın dengesini bozmuştur. Dünya üzerinde yaşayan tüm canlılar için bu durum yaşamı tehdit eder boyutlara ulaşmıştır. Artan bu kirlilik, kaynak kıtlığı ve tehditler neticesinde insanoğlu çözüm arayışlarına girmiş ve sürdürülebilirlik kavramı ortaya çıkmıştır (Kılıç, 2020: 5; Trišić vd., 2023: 1). Sürdürülebilirlik kavramı ilk olarak birkaç yüz yıl önce bir Alman ormancı Hans Carl von Carlowitz tarafından 1712 tarihli Sylvicultura Oekonomika adlı metinde, ormanların uzun vadede nasıl yönetilmesi gerektiğini belirtmek için ortaya atılmıştır. Bununla birlikte, kavram 1980'lere kadar çok geniş bir geçerlilik kazanmamıştır (Scoones, 2007: 590). 1980'lerden itibaren, özellikle 1992'de Rio'da düzenlenen Birleşmiş Milletler Çevre ve Kalkınma Konferansı'nda (UNCED), 172 katılımcı hükümetin tümü, sürdürülebilir kalkınma ve küresel sürdürülebilirliğin önemi üzerine kapsamlı bir küresel anlaşma imzalayarak, Gündem 21 sürdürülebilir kalkınma planını benimsemeye karar vermiştir (Rahman vd., 2022: 22). 1994 yılına gelindiğinde ise Elkington, iş sektörüne sürdürülebilirliği tanıtmıştır. Ayrıca sürdürülebilir bir ekonomi inşa etmek isteyen herkesi çevresel, ekonomik ve sosyal bileşenlerin olduğu sürdürülebilirliğin "üçlü alt çizgisine" katmıştır. Yine 2015 yılında 193 BM üye ülkesinin tümü 2030 Gündemini kabul etmiştir (Turhan vd., 2018: 21; Napierała vd., 2022: 42).

2. 2. Sürdürülebilirliğin Boyutları

Sürdürülebilirlik kavramının tanımı geçmişten günümüze gelişerek daha geniş bir anlama ulaşmış ve bütüncül bir yaklaşıma sahip olmuştur. İnsanların yaşarken kaynakları yok etmeden hedefledikleri yaşamı sürdürmeleri önemlidir. Bu anlamda insanlar hem yaşamlarını sürdürmek zorundadırlar hem de çevre ile uyum içinde ve çevreye zarar vermeden, gerekli kaynak tüketim planlamasını yaparak ekonomilerini düzenlemelidir. Bu nedenle sürdürülebilirlik kavramı farklı boyutları kapsamaktadır. Birleşmiş Milletler Dünya Zirvesi'nde sürdürülebilirlik ekonomik, sosyal ve çevresel olmak üzere üç boyutta ele almıştır (Öztürk ve Eraydın, 2010: 113; Thukia vd., 2022: 372). İlk olarak ekonomik boyuta bakıldığında, işletmelerin ve ulusların kaynakları verimli kullanarak karlılıklarını artırmayı ve sürdürülebilir büyümeyi hedeflemeleri gerekmektedir. Dünya kaynakları sınırlı olup, ekonomik faaliyetlerin gerçekleştirilmesinde kaynakların dikkatli kullanılması ve gerektiğinde yenilenebilir kaynaklara yönelim sağlanması önemlidir. Ekonomik olarak sürdürülebilir bir sistem sürekli olarak mal ve hizmet üretebilmeli, yönetilebilir devlet ve dış borç seviyelerini sürdürebilmeli

ve tarımsal veya endüstriyel üretime zarar veren tehlikelerden kaçınılabilmelidir (Harris, 2003: 1; Çalan, 2014: 11).

Sosyal sürdürülebilirlik boyutuna bakıldığında, ülkelerde uzun vadeli sosyal refahın sağlanması ve her bireyin yoksulluk sınırının üzerinde yaşama hakkına sahip olacak şekilde yönetilmesi gerekir. Sosyal olarak sürdürülebilir bir sistem, dağıtım ve fırsatta adaleti, sağlık ve eğitim dahil olmak üzere sosyal hizmetlerin yeterli şekilde dağıtılmasını, cinsiyet eşitliği ve katılımı sağlamalıdır (Nugraheni vd., 2019: 168-169). Genel hatlarıyla ele alındığında sosyal sürdürülebilirlik, yaşam için gerekli olan barınma, gıda temini, temiz suya erişim ve istihdam gibi ihtiyaçların karşılanmasını zorunlu kılmaktadır (Macbeth, 2005: 967; Tüzün, 2021: 10). Çevresel sürdürülebilirlik boyutuna bakıldığında ise, daha çok doğal kaynakların sürdürülebilirliği üzerinde durulmaktadır. Çevresel sürdürülebilirlik, toplumlarda doğal kaynakların bilinçli kullanımı konusunda farkındalık yaratılması ve aynı zamanda ekosistemin korunması açısından önemlidir (Dywer vd., 2009: 65). Çevresel olarak sürdürülebilir bir sistem, yenilenebilir kaynak sistemlerine yatırım yaparak çevrenin sürdürülebilirliğine katkıda bulunur. Çevresel sürdürülebilirlik, yaşam için uygun iklim ve atmosfer koşullarını sağlamalıdır. Ayrıca, biyolojik çeşitliliğin ve doğal kaynakların korunmasına yardımcı olmalıdır (Yeni, 2014: 192).

3. Sürdürülebilir Turizm

Turizm gelişimi ile ilgili olarak, hayati bir rol oynayan faktörlerden biri sürdürülebilirliktir. Sürdürülebilir turizm kavramı, sürdürülebilir kalkınmadan gelişmiş bir kavramdır (Streimikiene vd., 2021: 2). Sürdürülebilir kalkınmanın en yaygın olarak kullanılan tanımı, Brundtland Komisyonu tarafından 1987'de 'gelecek nesillerin kendi ihtiyaçlarını karşılama yeteneğinden ödün vermeden bugünün ihtiyaçlarını karşılama süreci' olarak formüle edilen tanımıdır (Kaya ve Smardon, 2001: 222; Yeni, 2014: 184). Sürdürülebilirlik kavramı literatürde ilk olarak ekonomik, çevresel ve sosyal faktörleri barındıran sürdürülebilir kalkınma kavramı ile gündeme gelmiştir. Ancak zaman içinde artan önemi ile sürdürülebilir pazarlama, sürdürülebilir tüketim, sürdürülebilir turizm, sürdürülebilir tedarik, sürdürülebilir işletme, sürdürülebilir yaşam gibi birçok alanda ortaya çıkarak eylemlerin sürdürülebilirliği açısından gerekli tedbirlerin alınması ve bu doğrultuda stratejilerin geliştirilmesi gerekliliğini vurgulayan bir anlam ifade etmeye başlamıştır (Barutçu ve Tomaş, 2013: 11). UNWTO, sürdürülebilir turizmi sosyo-kültürel perspektifle birlikte 'ziyaretçilerin, sektörün ve toplulukların ihtiyaçlarının yanı sıra şimdi ve gelecekteki çevresel, ekonomik ve sosyal etkileri dikkate alan turizm' olarak tanımlamaktadır (Yasarata vd., 2010: 346; Alkan, 2015: 6693; Baltezarević vd., 2022: 127). Sürdürülebilir turizmi tanımlarken Muller (1994), hedef durumun, hiçbir unsurun (özel refah/çevresel/sağlıklı kültür/ziyaretçi memnuniyeti) baskın olmadığı dengeli turizm gelişimi olduğunu savunmaktadır (Muller, 1994'ten akt. Hardy ve Beeton, 2001: 171). Sürdürülebilir turizm, çevresel kaynakları uygun şekilde kullanmalı, toplulukların sosyo-kültürel özgünlüğüne saygı duymalı ve ekonomik faaliyetleri uzun vadede uygulayabilmelidir (Costa ve Pereira, 2022: 50). Birleşmiş Milletler Çevre Programı (UNEP) 12 başlık altında sürdürülebilir turizmin amaçlarını belirlemiştir. Sürdürülebilir turizmin on iki amacı şunlardır (UNEP, 2005: 18-19):

Tablo 1. Sürdürülebilir Turizmin On İki Amacı

1	Ekonomik Canlılık	Turizm destinasyonlarının ve işletmelerinin yaşayabilirliğini ve rekabet edebilirliğini sağlamak, böylece uzun vadede gelişmeye ve fayda sağlamaya devam edebilmelerine yardımcı olmak.
2	Yerel Refah	Yerel ziyaretçi harcamalarının oranı da dahil olmak üzere turizmin, ev sahibi destinasyonun ekonomik refahına katkısını en üst düzeye çıkarmak.
3	İstihdam Kalitesi	Cinsiyet, ırk, engellilik veya başka şekillerde ayırım gözetmeksizin işe alım yapmak.
4	Sosyal Eşitlik	Turizmden elde edilen ekonomik ve sosyal faydaların adil bir şekilde dağıtılmasını sağlamak.
5	Ziyaretçi Memnuniyeti	Cinsiyet, ırk, engellilik veya başka şekillerde ayırım gözetmeksizin herkese açık, ziyaretçiler için güvenli ve tatmin edici bir deneyim sağlamak.
6	Yerel Kontrol	Yerel toplulukları, diğer paydaşlarla istişare ederek, bölgelerinde turizmin yönetimi ve gelecekteki gelişimi hakkında planlama ve karar alma süreçlerine dahil etmek.
7	Toplum Refahı	Sosyal yapılar ve kaynaklara erişim, kolaylıklar ve yaşam destek sistemleri dahil olmak üzere yerel topluluklarda yaşam kalitesini korumak ve güçlendirmek, her türlü sosyal bozulma veya sömürüden kaçınmak.
8	Kültürel Zenginlik	Ev sahibi toplulukların tarihi mirasına, otantik kültürüne, geleneklerine ve ayırt edici özelliklerine saygı duymak ve geliştirmek.
9	Fiziksel Bütünlük	Hem kentsel hem de kırsal peyzajların kalitesini korumak ve geliştirmek ve de çevrenin fiziksel ve görsel olarak bozulmasını önlemek.
10	Biyolojik Çeşitlilik	Doğal alanların, habitatların ve yaban hayatının korunmasını desteklemek ve bunlara verilen zararı en aza indirmek.
11	Kaynak Verimliliği	Turizm tesis ve hizmetlerinin geliştirilmesi ve işletilmesinde kıt ve yenilenemeyen kaynakların kullanımını en aza indirmek.
12	Çevresel Sağlık	Turizm işletmelerinin ve ziyaretçilerin hava, su, toprak kirliliğini ve atık oluşumunu en aza indirmek.

Bu on iki amacın listelenme sırası herhangi bir öncelik sıralaması anlamına gelmemektedir. Her biri eşit derecede önemlidir (UNEP, 2005: 19). Sürdürülebilir turizmin on iki amacının bütün turizm destinasyonlarında uygulanması gerekir. Ayrıca sürdürülebilir turizm çeşitli özelliklere sahiptir. Kahraman ve Türkay (2014), sürdürülebilir turizmin özelliklerini şu şekilde özetlemektedir (Kahraman ve Türkay, 2014'ten akt. Çiftlikçi, 2020: 12):

- ✓ Doğal, tarihi ve kültürel kaynaklar turizmin bugünü ve geleceği için korunur.
- ✓ Turizm gelişimi, bölgede çevresel ve sosyo-kültürel sorunlara yol açmayacak şekilde planlanır ve yönetilir.
- ✓ Çevrenin genel kalitesi korunur ve gerektiğinde iyileştirilir.
- ✓ Destinasyonun pazarlama bilirliliği ve popülaritesini koruyarak yüksek düzeyde ziyaretçi memnuniyeti elde edilir.
- ✓ Turizmin faydası toplumun daha geniş kesimlerine yayılır.

Sürdürülebilir turizm aynı zamanda yüksek düzeyde turist memnuniyeti sağlanmasına yardımcı olur. Turistlere anlamlı deneyimler yaşatır ve sürdürülebilirlikle ilgili turistlerin farkındalıklarını arttırarak sürdürülebilir turizm uygulamalarını teşvik eder (UNEP, 2005: 11).

3. 1. Literatürde Sürdürülebilir Turizm

Konaklama, ulaşım, eğlence, dinlenme, beslenme ve alışveriş dahil olmak üzere turizmle ilgili geniş bir faaliyet alanı vardır. Turizmle ilgili bu geniş faaliyet alanının sürdürülebilir olması gerekmektedir. Temel olarak sürdürülebilir turizm, doğaya ve yerel halka zarar vermeyen ve aynı zamanda ülkenin çevresine, toplumuna ve ekonomisine olumlu yönde katkıda bulunan turizmi ifade etmektedir (Sarı, 2019: 2; Jeong vd., 2023: 1). Sürdürülebilir turizm, turizm gelişiminin olumsuz etkilerini azaltmak ve turizmle uğraşan herkesin eşit faydalar elde etmesini sağlamak için ortaya çıkmıştır (Sathsarani ve Arachchi, 2017: 68). Sürdürülebilir turizm, turistlerin ihtiyaçlarının yüksek düzeyde tatmin edilmesini sağlamalı, tüketiciler için önemli deneyimler sunmalı ve sürdürülebilir turizm uygulamalarının yayılmasını teşvik etmelidir. Ayrıca sürdürülebilir turizm, sürdürülebilirlik konularında farkındalık oluşturmalıdır (Streimikiene, 2021: 259). Sürdürülebilirlik konularında farkındalık oluşturmak sürdürülebilir turizm gelişimi için önemlidir. Sürdürülebilir turizm uygulamaları ile kitle turizminin olumsuz etkilerinin çoğu ortadan kaldırılabilir ve birçok turizm türü de teşvik edilebilir (Tosun, 2001: 291).

Sürdürülebilir turizm üzerine literatür taraması yapıldığında ilk olarak Akış (1999) tarafından yapılan çalışmada, turizmin Türkiye ekonomisindeki yerini sürdürülebilirlik çerçevesinde ele almıştır. Yazar, Türkiye'de turizm politikaları belirlenirken turist sayısını ve yatak kapasitesini artırmanın hedef olduğunu ancak çevrenin gerektiği şekilde korunmadığına dikkat çekmiştir. Ceylan (2001) ise araştırmasında, sürdürülebilirlik ilkelerinden hareketle, sürdürülebilir turizmin gelişmesine açıklık getirmeyi amaçlamıştır. Araştırmanın sonucunda, turizmin olumsuz etkilerinin anlaşılması ve çevreye duyarlı bir gelişme kavramının oluşmasında, sürdürülebilir turizm yaklaşımının uygun bir yaklaşım olduğu sonucuna ulaşmıştır. Tosun (2001) tarafından gerçekleştirilen çalışmada ise gelişmekte olan ülkelerde sürdürülebilir turizm gelişimine yönelik zorlukların bir analizi sunulmuştur. Araştırmada, sürdürülebilir turizm gelişiminin önündeki engeller olarak ortaya çıkan faktörlerin ulusal ekonomi politikasının öncelikleri, kamu yönetiminin yapısı, çevresel sorunların ortaya çıkması, aşırı ticarileştirme ve uluslararası turizm sisteminin yapısı ile ilgili olduğunu sonucuna ulaşılmıştır. Diğer taraftan, Alkan (2015) Alaçatı destinasyonunda yürüttüğü çalışmada, bölgenin sahip olduğu turistik çekiciliklerin ve kaynakların sürdürülebilirliği için özel sektör, kamu sektörü ve sivil toplum kuruluşlarının işbirliği çerçevesinde ortak fikir üreterek, birlikte harekete geçilmesinin gerekliliğini savunmuştur. Higgins-Desbiolles (2018) çalışmasında, turizmin daha geniş bir sürdürülebilirlik çerçevesinde anlaşılması ve yönetilmesi gerektiğini ve bunun için öncelikle Birleşmiş Milletler Dünya Turizm Örgütü'nün sürdürülebilir hareketlilik ofisine dönüştürülmesini ve küresel bir Turizm Varlık Fonunun oluşturulmasını önermiştir. Ayrıca, ekolojik sınırlar ve insan yararı için daha dengeli bir turizm teşviki sağlamak adına çalışmaların yapılmasını gerekliliğine dikkat çekmiştir.

Vasilyevna vd. (2018), sürdürülebilir turizm kavramının önemli bir parçası olarak gönüllü turizm geliştirme sorununu incelemişlerdir. Araştırmada, sürdürülebilir turizm gelişimi ile gönüllü turizm (gönüllü turistler) arasında doğrudan pozitif bir ilişki olduğu tespit edilmiştir. Huang vd. (2019) ise sürdürülebilir turizm ile ilgili yapılan çalışmaları analiz etmişlerdir. 641 makale inceledikleri çalışmada, sürdürülebilir turizm ile ilgili yayın sayısının 2006 yılından bu yana önemli ölçüde arttığını ortaya koymuşlardır. Sürdürülebilir turizm gelişimi için hedeflenen ülkelerin/bölgelerin çoğunun Asya, Avrupa ve Amerika olduğunu tespit etmişlerdir. Tamer ve Yangil (2021) araştırmalarında, Bodrum'da faaliyet gösteren otel işletmelerinde görev alan yöneticilerin sürdürülebilir turizmle ilişkin bakış açılarının tespit edilmesi ve sürdürülebilir turizm boyutlarına ilişkin algılarının öncelik sırasına göre belirlenmesini amaçlamışlardır. Araştırmanın sonuçlarına göre otel işletmeleri yöneticilerinin algıları

açısından çevresel sürdürülebilirlik boyutunun en yüksek önceliğe sahip boyut olduğu tespit edilmiştir.

Son olarak, Jafari vd. (2023) tarafından gerçekleştirilen araştırmada, sürdürülebilir turizm bağımlı değişkeni üzerindeki sosyal istikrar, politik istikrar, hizmet kalitesi, çevresel sürdürülebilirlik, kültürel sürdürülebilirlik, sürdürülebilir pazarlama, turist memnuniyeti, turist güveni ve turist sadakatının etkilerini incelemişler. Araştırma sonucunda, sürdürülebilir turizm değişkeni üzerinde turist sadakati değişkeninin en fazla etkiye sahip olduğu ve çevresel sürdürülebilirlik değişkeninin en az etkiye sahip olduğu sonucuna ulaşmışlar.

3. 2. Sürdürülebilir Turizmin Önemi

Turizmin gelişimi olumlu ve olumsuz olmakla beraber birçok ülke için önemli bir ekonomik getiri kaynağıdır. Bu nedenle turizm sektörü, günümüzde, önemi giderek artan bir ekonomik faaliyet alanını oluşturmaktadır (Akış, 1999: 36). Turizm sektörü, ekonomik büyüme ve sürdürülebilir kalkınma sağlayan en önemli sektörlerden biridir (Bashiru ve Fagbolu, 2022: 165; Baltezarević vd., 2022: 125). Ayrıca uluslararası turist sayısı, çevresel ve ekonomik etkilerin artmasıyla birlikte sürdürülebilir turizmin önemi de artmaya başlamıştır (Go, 2023: 2).

Tablo 2. Türkiye'ye Gelen Turist Sayısı, Turizm Geliri ve Ortalama Harcamanın Yıllara Göre Dağılımı

Yıllar	Gelen Turist Sayısı	Turizm Geliri (1000 \$)	Ortalama Harcama (\$)
2004	20 753 734	17 076 607	843
2005	25 045 142	20 322 111	842
2006	23 924 023	18 593 951	803
2007	27 239 630	20 942 500	770
2008	31 137 774	25 415 067	820

Kaynak: Kültür ve Turizm Bakanlığı, 2023

Tablo 2’de de görüleceği üzere turizmin ekonomiye kayda değer bir katkısı vardır. Turizm sektörü belli başlı üç çevresel kaynağı ekonomik talebe dönüştürmektedir. Bunlar; doğal kaynaklar (deniz kıyıları, ormanlık alanlar, ulusal parklar vb.), insan yapısı kaynaklar (tarihi kent dokuları, arkeolojik alanlar vb.) ve sosyo-kültürel kaynaklar (yeme-içme, merasim vb. örf ve adetler) şeklindedir (Aslan ve Güneş, 2016: 7).

Turizm-çevre-insan etkileşiminin yaşandığı, yalnızca doğal değil, kültürel değerlerinde hâkim olduğu bir sektördür (Akış, 1999: 36; Sezgin ve Karaman, 2008: 429). Bu nedenle turizmin çevresel, ekonomik ve sosyo-kültürel boyutlar arasında uygun bir denge kurulması gerekmektedir (Hakim vd., 2012: 61-62). Dengenin kurulabilmesi için de turizmin sürdürülebilir olması önem arz etmektedir. Sürdürülebilir turizm, gelecek için fırsatları korurken ve geliştirirken mevcut ekonomik, sosyal ve çevresel bütünlüğün sürdürülmesini sağlayan turizmdir. Sürdürülebilir turizmin ana fikri, turizm ortamının gelişiminin sürdürülebilirliğidir (Liu, 2003: 460; Jafari vd., 2023: 654). Turizmin sürdürülebilirliği, turizme sebep olan yerel, bölgesel ve ülkesel değerlerin bilinmesi, korunması, geliştirilmesi ve çekiciliğinin her dönem devamlılığının sağlanmasıyla olur (Sezgin ve Karaman, 2008: 429). Sürdürülebilir turizm, doğanın bozulmamasına, kaynakların korunmasına ve ekonominin devamlılığına yardımcı olur (Tamer ve Yangil, 2021: 947). Bu konuda, Butler (1999: 10) sürdürülebilir turizm faaliyetleri hakkında şunları belirtmektedir;

- ✓ Hem şimdi hem de gelecekte doğal kaynakların yenilenmesi ve korunmasını sağlar,
- ✓ İnsanların ve toplulukların, geleneklerin ve yaşam tarzlarının turizm deneyimine yaptığı katkıyı kabul eder,
- ✓ Bağlı olduğu çevreye zarar vermeden yerel ekonomilerin sürdürülmesine yardımcı olur,
- ✓ Ekonomik faaliyetin yapısını olumsuz etkilemeden insanlar için ekonomik fırsatlar oluşturur.

Sürdürülebilir turizm, doğal kaynakları ve biyolojik çeşitliliği korur, turizmin gelişim göstermesinde anahtar bir unsur olan çevresel kaynakların en etkin biçimde kullanılmasını sağlar, sosyo-kültürel özgünlüklere saygı göstererek kültürel mirasları ve geleneklerin korunmasına yardımcı olur, istihdam yaratır, sosyo-ekonomik faydalar sağlar ve yoksulluğun azaltılmasına yardımcı olur (UNEP, 2005: 11; Chandralal ve Fernando, 2022: 1-2). Bu bağlamda, dünya da olduğu gibi Türkiye’de de sürdürülebilir turizmi sağlamak önemlidir. Sürdürülebilir turizm sağlanmak için turizmin çevre üzerindeki olumsuz etkilerinin azaltılması ve turizm faaliyetlerinin sürekliliğinin sağlanması gerekmektedir. Bunun için de kaynakların sürekli ve dengeli kullanımı sağlanmalı, aşırı tüketim ve atık miktarı azaltılmalı, planlama ile turizm gelişimi bütünleştirilmeli, çeşitlilik korunmalıdır. Ayrıca yerel toplumla kesintisiz bir iletişim sağlanmalı ve sürekli inceleme ve analiz çalışmaları yapılmalıdır (Cottrell, 2007: 219-220; Yıldız ve Kalağan, 2008: 44; Go ve Kang, 2023: 381).

4. Sonuç ve Öneriler

Dünya ekonomisi için önemli bir döviz kaynağı olan turizm sektörü, Türkiye ekonomisi için de ihracattan sonra ikinci büyük döviz kaynağıdır (Uğuz, 2014: 21). Turizm endüstrisi

bütün dünyada olduğu gibi Türkiye’de de döviz girdisi sağlama, ekonomik olarak büyüme, istihdam sağlama ve yerel halkın kalkınmasında büyük faydalar sağlamaktadır (Çakır, 2001: 389-390; Wani ve Nagaraj, 2020: 6311). Turizm sektörü, hem somut kaynakları (ormanlar, arazi ve doğal kaynaklar) hem de somut olmayan kaynakları (örn. gelenek, kültürler veya sosyal uyum) bünyesinde barındıran bir sektördür (Yoopetch vd., 2022: 2). Turizmin devam etmesi için tek seçenek bilinçsiz turizminden uzaklaşıp sürdürülebilir turizme yönelmektir. Bu nedenle turizmin sürdürülebilir olması gerekmektedir. Sürdürülebilir turizm ziyaretçi çeken ve karşılığında ekonomik gelir sağlayan destinasyonların, özgün, doğal ve kültürel değerlerini koruyabilmeleri için gereklidir (Çiftlikçi, 2020: 13).

Sürdürülebilir Turizm İçin Öneriler:

- ✓ Turizm talebinin dengeli dağılması,
- ✓ Turizmin yaz mevsimine mahsus bir sektör olmaktan çıkarılıp tüm yıl aktif bir şekilde çalışan bir endüstri haline getirilmesi,
- ✓ Sektörel sürdürülebilirlik bağlamında turizm türü çeşitliliğinin artırılması,
- ✓ Sektörün gelişimine olanak sağlayacak etkin teşvik politikalarının planlanması ve uygulanması,
- ✓ Turizmin, doğal, kültürel ve ekonomik kaynakları yok etmeyecek, aksine turizmin bağlı olduğu kaynakların değerlendirilmesini teşvik edecek şekilde yürütülmesinin sağlanması,
- ✓ Ekolojik, doğaya duyarlı ve çevre dostu konaklama işletmelerinin sayısının artırılması,
- ✓ Otel ve restoranlarda yenilenebilir enerji kaynaklarına yönelim sağlanması, atıkların ayrıştırılması, güneş panelleri ve çevre dostu temizlik ürünlerinin kullanılması,
- ✓ Turistleri yeşil otellerde kalmaları yönünde teşvik etmek ve bilgilendirmek,
- ✓ Herhangi bir destinasyonun sürekliliğinin sağlanması konusunda sıkıntı var ise o destinasyona yönelik önlemler almak,
- ✓ Destinasyonların taşıma kapasitelerini dikkate alarak ziyaretçi kısıtlaması yapmak,
- ✓ Sürdürülebilir turizm için, çevresel kalite ile turizm faaliyeti arasında denge kurmak,
- ✓ Ormansızlaştırılmış bir alana ağaç dikmek gibi çevreye fayda sağlayan turistlerin katılacağı faaliyetler yaratmak,
- ✓ Kitle turizmine sınır getirmek,
- ✓ Tüketime azaltılması ve yerel ekonominin turizmden daha fazla yararlanabilmesi için her şey dahil sistemin gözden geçirilmesi,
- ✓ Turizm gelişiminde sürdürülebilirlik hedefiyle, turistler, turistik destinasyonların yerlileri, ilgili işletmeler ve hükümet gibi çok sayıda unsurdan oluşan ayrıştırılmamış bir karar vericiler sistemi inşa edilmelidir.

Bütün bu bilgiler ışığında, turizm sektörünün varlığını devam ettirebilmesi doğal, sosyal ve kültürel kaynakların korunarak gelecek kuşaklara aktarılmasını önemle belirten sürdürülebilirlik anlayışı ile mümkündür. Sürdürülebilir turizmin gelişim gösterebilmesi için hem akademik açıdan hem de karar vericiler ve uygulayıcılar açısından daha fazla çalışmanın yapılması gerekmektedir. Yapılan bu çalışmalarla turizm alanında farkındalıklar artırılabilir.

ÖZET

Hofstede Kültür Boyutları, 1970'lerde **IBM**'de insan kaynaklarında çalışan Hollandalı psikolog Geert Hofstede tarafından geliştirilmiş ve farklı ülkelerin kültürel farklılıklarını ölçmek amacıyla kullanılan bir modeldir. Kültürel boyutlar teorisi olarak da bilinen bu teori, farklı kültürlerdeki farklılıkların, toplumu ve o toplumda yaşayan bireylerin davranışlarını nasıl etkilediğini açıklamaktadır. Bu makale, ABD ve Türkiye'nin kültürel farklılıklarını ve bu farklılıkların insan kaynakları yönetimi üzerindeki etkilerini Hofstede Kültür Boyutları bağlamında karşılaştırmaktadır. Hofstede Kültür Boyutları, kültürel değerlerin ve davranışların ölçümü için kullanılan bir modeldir ve model şu boyutlardan oluşur: güç mesafesi, bireysellik ve kolektivizm, erillik ve dişilik, belirsizlikten kaçınma, kısa-uzun dönemli yönelim, hoşgörü ve kısıtlamadır. Bu araştırmada, halihazırda var olan verileri kullanmayı içeren yöntem olan ikincil veri analizi yöntemi kullanılmıştır. Bu makale, ABD ve Türkiye'nin kültürel farklılıklarını Hofstede Kültür Boyutları bağlamında analiz ederek, insan kaynakları yönetimi açısından bu farklılıkların nasıl etkiler yarattığını göstermektedir. İnsan kaynakları profesyonelleri, bu farklılıkları anlamak ve kültürel bağlamı dikkate alarak stratejiler geliştirmek için bu karşılaştırmadan yararlanabilirler.

Anahtar Kelimeler: İnsan Kaynakları Yönetimi, Kültür, Hofstede Kültür Boyutları, Farklılıklar

Comparison of Human Resource Management Between The United States And Turkey in The Context of Hofstede's Cultural Dimensions

ABSTRACT

The Hofstede Cultural Dimensions is a model developed by Geert Hofstede, a Dutch psychologist working in human resources at IBM in the 1970s. It is used to measure cultural differences between different countries and explain how these differences influence society and the behavior of individuals within that society. Also known as the theory of cultural dimensions, this theory explains how differences in culture affect the behavior of individuals and societies. This article compares the cultural differences between the United States and Turkey and their impact on human resource management within the context of the Hofstede Cultural Dimensions.

The Hofstede Cultural Dimensions is a model used to measure cultural values and behaviors and consists of the following dimensions: power distance, individualism versus collectivism, masculinity versus femininity, uncertainty avoidance, short-term versus long-term orientation, and indulgence versus restraint. This research utilizes the method of secondary data analysis, which involves using existing data, to analyze the cultural differences between the United States and Turkey within the context of the Hofstede Cultural Dimensions. The article aims to demonstrate how these cultural differences impact human resource management.

Human resource professionals can benefit from this comparison by understanding these differences and developing strategies that take the cultural context into account. By analyzing the cultural differences between the United States and Turkey through the lens of the Hofstede Cultural Dimensions, this article highlights the effects of these differences on human resource management.

Keywords: Human Resource Management, Culture, Hofstede's Cultural Dimensions, Differences

GİRİŞ

Küreselleşme ve uluslararası işbirliği çağında, farklı kültürel değerlere sahip ülkeler arasında iş ilişkileri önemli ölçüde artmaktadır (Hofstede, 1980). Bu durum, işletmelerin kültürel farklılıkları göz önünde bulundurarak etkili bir insan kaynakları yönetimi (İKY) stratejisi geliştirmelerini gerektirmektedir. İKY, işletmelerin çalışanlarını işe alma, yeteneklerini geliştirme, performans değerlendirmesi ve motivasyon sağlama gibi önemli faaliyetlerini içeren bir süreçtir (Armstrong, 2009). Ancak, kültürel farklılıkları dikkate almadan gerçekleştirildiğinde, bu süreç işletmelerin başarısını ve çalışanların memnuniyetini olumsuz etkileyebilir.

Hofstede'nin kültür boyutları, kültürel farklılıkları anlama ve yönetme amacıyla kullanılan bir çerçeve sunmaktadır (Hofstede, 1980). Bu boyutlar, farklı ülkelerin kültürel değerlerini karşılaştırmak ve analiz etmek için kullanılan bir araçtır.

ABD, bireysellik, rekabetçilik ve başarı odaklı bir kültüre sahip olarak bilinmektedir (Hofstede, 1980). ABD işletmeleri genellikle performansa dayalı teşvik sistemleri ve yüksek özerklik sağlayarak çalışanların motivasyonunu artırmayı hedeflemektedir. Diğer yandan, Türkiye daha kolektivist ve aile odaklı bir kültüre sahiptir (Hofstede, 1980). Türk işletmeleri, çalışanların aidiyet duygusunu geliştirmek ve ekip çalışmasını teşvik etmek için daha fazla vurgu yapmaktadır.

Bu makalede, ABD ve Türkiye'nin Hofstede'nin kültür boyutlarına göre nasıl farklılaştığı ve bu farklılıkların İKY uygulamaları üzerinde nasıl bir etkisi olduğu incelenecektir. Bu araştırmanın amacı, ABD ve Türkiye'nin kültürel farklılıklarını ve bu farklılıkların İKY üzerindeki etkilerini Hofstede Kültür Boyutları bağlamında karşılaştırmaktır. İKY süreçlerini etkin bir şekilde yöneterek kültürel farklılıkları dikkate alan işletmeler, çalışan bağlılığını artırabilir, verimliliği ve performansı yükseltebilir ve sürdürülebilir bir rekabet avantajı elde edebilir.

1. TEORİK ÇERÇEVE

Kültür, bir toplumun değerleri, inançları, davranışları, normları, dil ve iletişim biçimleri, sanat anlayışları, gelenekleri ve sosyal yapıları gibi unsurları içeren karmaşık bir kavramdır. Bu kavram, toplumların kolektif kimliğini şekillendirir ve bireylerin bir arada nasıl var olduklarını belirler. Kültür, kuşaktan kuşağa aktarılan ve bireylerin düşünce kalıplarını, değer yargılarını ve davranışlarını derinden etkileyen bir miras olarak görülebilir (Hofstede, 1980). Kültür, insanların dünya görüşlerini, yaşam tarzlarını, iletişim kalıplarını ve iş ilişkilerini etkiler (Akçora, 2017). Her kültür, toplum üyeleri arasındaki sosyal etkileşimleri düzenleyen ve yaşam tarzlarına rehberlik eden farklı değerler, normlar ve inanç sistemlerine sahiptir (Hofstede, 1980). Kültürel farklılıklar, daha geniş bir şekilde dünya görüşlerini anlamayı teşvik eder, hoşgörüyü destekler ve toplumlardaki çeşitliliği zenginleştirir. Kültürel çeşitlilik, karşılıklı saygıyı besler ve kültürler arası etkileşimleri geliştirerek fikir, bakış açısı ve deneyim alışverişine olanak tanır (Hofstede, 1980).

1.1. HOFSTEDE KÜLTÜR BOYUTLARI

Hofstede Kültür Boyutları, 1970'lerde IBM'de insan kaynaklarında çalışan Hollandalı psikolog Geert Hofstede tarafından geliştirilmiştir. Geert Hofstede tarafından geliştirilmiş ve farklı ülkelerin kültürel farklılıklarını ölçmek amacıyla kullanılan bir modeldir. Kültürel boyutlar teorisi olarak da bilinen bu teori, kültürel değerlerin ve davranışların ölçümü için kullanılan bir modeldir. HOFSTEDE göre kültür boyutları modeli, bireyselcilik ve kolektivizm, erillik ve

dişilik, belirsizlikten kaçınma, kısa-uzun dönemli yönelim, hoşgörü ve kısıtlama boyutlarından oluşmaktadır.

1.1.1. Güç Mesafesi

Hofstede Kültür Boyutları, 1970'lerde Hollandalı psikolog Geert Hofstede tarafından IBM'deki insan kaynakları çalışmaları sırasında geliştirilmiştir. Bu model, farklı ülkelerin kültürel farklılıklarını ölçmek amacıyla kullanılan ve kültürel değerlerin ve davranışların ölçülmesine yönelik bir teoridir. Güç Mesafesi, Hofstede'nin kültür boyutlarından biridir ve bir toplumun üyelerinin güç ve otorite dağılımına verdikleri önemi ifade eder. Yüksek Güç Mesafesi olan toplumlarda, hiyerarşik yapılar daha belirgindir ve güçlü otorite figürlerine saygı ve itaat ön plandadır. İletişimde üstlerin emirlerini sorgulamadan kabul etme kültürü yaygındır. Öte yandan, düşük Güç Mesafesi olan toplumlarda güç ve otorite daha eşitlikçi bir şekilde dağıtılır, insanlar arasındaki statü farkları daha az vurgulanır ve iletişim daha katılımcı bir yaklaşımla gerçekleşebilir. Güç Mesafesi, bir toplumun liderlik tarzını, iletişim biçimlerini ve iş ilişkilerindeki dinamikleri etkiler. Yüksek Güç Mesafesi olan toplumlarda liderler daha otoriter bir rol üstlenebilirken, düşük Güç Mesafesi olan toplumlarda liderlik daha demokratik ve katılımcı olabilir. Bu kültürel farklılık, işletmelerin insan kaynakları yönetimi stratejilerinde farklılıklara yol açabilir. Örneğin, kültürel olarak yüksek Güç Mesafesi olan bir ülkede, işletmeler daha otoriter bir yönetim tarzını benimseyebilirken, düşük Güç Mesafesi olan bir ülkede daha demokratik ve katılımcı bir liderlik yaklaşımı tercih edilebilir (Hofstede, 1980).

1.1.2. Bireysellik ve Kolektivizm

Hofstede'nin kültür boyutlarından biri olan Bireysellik ve Kolektivizm, bir toplumun üyelerinin kendilerini nasıl tanımladığı ve ilişkilerini nasıl düzenlediği konusunda farklı yaklaşımları ifade eder. Bireysellik, bireyin özgürlüğüne, bağımsızlığına ve kişisel hedeflerine verilen önemi ifade ederken, Kolektivizm ise grup bağlarına, toplumsal dayanışmaya ve grup hedeflerine vurgu yapar. Bireysellik yüksek olan toplumlarda, bireylerin ihtiyaçları, hakları ve hedefleri ön planda tutulur. Bireyler genellikle bağımsızlık, kişisel başarı ve özgürlük gibi değerlere odaklanır. Karar alma süreçlerinde bireylerin özerkliği ve kendi çıkarları öncelikli olabilir. Bu toplumlarda, bireyler genellikle kendi hedeflerini gerçekleştirmek için rekabetçi bir tutum sergileyebilir. Kolektivizm yüksek olan toplumlarda ise grup kimliği ve toplumsal bağlar daha ön planda tutulur. Grup içinde uyum, dayanışma ve ortak hedeflere ulaşma önemlidir. Bu toplumlarda, karar alma süreçleri genellikle konsensüs ve grup uzlaşısı üzerine kuruludur. Bireyler, grup veya aile onurunu koruma, sosyal normlara uyma ve başkalarıyla işbirliği yapma eğilimindedir. Bireysellik ve Kolektivizm arasındaki farklılıklar, toplumların değerler sistemi, liderlik anlayışı, iş ilişkileri ve iletişim tarzları gibi birçok alanda etkili olabilir. Örneğin, bireysellik yüksek olan toplumlarda bireyler daha bağımsız çalışmayı tercih edebilirken, kolektivizm yüksek olan toplumlarda ise grup uyumu ve işbirliği daha ön planda olabilir (Hofstede, 1980).

1.1.3. Erillik ve Dişilik

Erillik ve Dişilik, Hofstede'nin kültür boyutlarından biri olup bir toplumun cinsiyet rollerine ve cinsiyetler arası ilişkilere verdiği önemi ifade eder. Erillik, genellikle güç, rekabet ve bağımsızlık gibi "eril" olarak kabul edilen özelliklere odaklanan bir kültürel eğilimi ifade ederken, Dişilik ise daha çok empati, bakım ve işbirliği gibi "dişi" olarak kabul edilen özelliklere vurgu yapar. Erillik yüksek olan toplumlarda, genellikle güçlü, rekabetçi ve liderlik odaklı değerler ön plandadır. Cinsiyet rolleri arasındaki farklılıklar daha belirgindir ve erkeklerin daha özerk ve bağımsız olması beklenirken, kadınlar daha çok ev ve aileyle

ilişkilene rollerine odaklanabilir. Bu toplumlarda, iş yaşamında rekabetçi bir ortam ve güçlü liderlik özellikleri önemli kabul edilir. Dişilik yüksek olan toplumlarda ise empati, bakım, işbirliği ve toplumsal ilişkiler daha ön plandadır. Cinsiyet rolleri arasındaki farklılıklar daha esnek ve erkeklerin duygusal ifadeye ve bakım görevlerine katılımı teşvik edilirken, kadınlar daha fazla iş yaşamında yer alabilir. Bu toplumlarda, iş yerinde işbirliği, ekip çalışması ve duygusal zeka önemli kabul edilir. Erillik ve Dişilik boyutları, toplumun cinsiyet rolleri, iş paylaşımı, liderlik tarzı ve iletişim biçimleri gibi birçok alanda etkili olabilir. Örneğin, erillik yüksek olan toplumlarda liderlik genellikle otoriter ve karar verici bir yaklaşım sergileyebilirken, dişilik yüksek olan toplumlarda liderlik daha işbirlikçi ve duygusal zekaya dayalı olabilir (Hofstede, 1980).

1.1.4. Belirsizlikten Kaçınma

Belirsizlikten Kaçınma, Hofstede'nin kültür boyutlarından biridir ve bir toplumun belirsizlik ve riske karşı tepkisini ifade eder. Yüksek Belirsizlikten Kaçınma olan toplumlarda, belirsizlik durumlarından kaçınma ve güvenceye yönelme eğilimi vardır. Kurallar, düzenlemeler ve prosedürlerin net ve kesin olması beklenir. Düşük Belirsizlikten Kaçınma olan toplumlarda ise belirsizlik ve risk daha fazla tolere edilir. Esneklik, spontane karar alma ve değişime uyum sağlama eğilimi yaygındır.

Belirsizlikten Kaçınma, bir toplumun karar alma süreçleri, risk yönetimi, yenilikçilik ve değişime karşı tutum gibi birçok alanda etkili olabilir. Örneğin, yüksek Belirsizlikten Kaçınma olan toplumlarda karar alma süreçleri daha uzun ve analitik olabilirken, düşük Belirsizlikten Kaçınma olan toplumlarda kararlar daha hızlı alınabilir ve riskli girişimlere daha açık olunabilir (Hofstede, 1980).

1.1.5. Kısa-Uzun Dönemli Yönelim

Kısa-uzun dönemli yönelim, Hofstede'nin kültür boyutlarından biridir ve bir toplumun zaman perspektifine ve hedeflerine nasıl odaklandığını ifade eder. Kısa dönemli yönelimde, bireyler anlık tatmin, geçici başarı ve anında sonuçlara odaklanma eğilimindedir. Bu durumda, hızlı sonuçlar elde etmek ve anlık gereksinimleri karşılamak önemlidir. Bireyler çabalarını kısa vadeli hedeflere yönlendirir. Uzun dönemli yönelimde ise, toplum geleceği planlama, sürdürülebilirlik ve ertelenmiş tatmin gibi faktörlere vurgu yapar. Bireyler genellikle uzun vadeli hedeflere yönelir ve gelecek nesillerin refahını gözetir. Bu durumda, bireylerin çabaları ve kararları sürdürülebilirlik ve uzun vadeli kazanımlar üzerine odaklanır. Kısa-uzun dönemli yönelim, bir toplumun değerleri, iş yapma şekilleri, yatırım tercihleri ve kişisel hedefler gibi birçok alanda etkili olabilir. Örneğin, kısa dönemli yönelim daha hızlı sonuçlar ve anlık tatmin üzerinde duran bir iş kültürüne yol açabilirken, uzun dönemli yönelim daha planlı ve sürdürülebilir bir iş stratejisi benimsemeyi teşvik edebilir (Hofstede, 1980).

1.1.6. Hoşgörü ve Kısıtlama

Hoşgörü, bir toplumun farklı düşüncelere, inançlara veya yaşam tarzlarına karşı anlayış ve saygı gösterme kapasitesini ifade eder. Eğer bir toplumun hoşgörüsü yüksekse, insanlar arasında çeşitlilik ve farklılıklara karşı daha fazla tolerans gösterme eğilimi görülür. Bu durum, toplumun içindeki bireylerin farklı kültürler, dinler, ideolojiler veya yaşam tarzlarıyla bir arada barış içinde yaşayabilme yeteneğini yansıtır. Kısıtlama ise, belirli davranışların veya faaliyetlerin sınırlandırılması veya kontrol altında tutulması anlamına gelir. Bir toplumun kısıtlama düzeyi yüksekse, daha fazla düzenlemeler, kısıtlamalar ve sınırlamalar bulunabilir. Bu

durumda, toplumdaki bireylerin davranışları ve faaliyetleri belirli normlar, kurallar ve yasalarla düzenlenir ve kontrol altında tutulur (Kymlicka, 2002; Jackson, J., 2006).

2. YÖNTEM

2.1. Araştırmanın Modeli

Bu araştırmanın amacı, ABD ve Türkiye'nin kültürel farklılıklarını ve bu farklılıkların insan kaynakları yönetimi üzerindeki etkilerini Hofstede Kültür Boyutları bağlamında karşılaştırmaktır. Bu çalışmada, halihazırda var olan verileri kullanmayı içeren yöntem olan, ikincil veri analizi yöntemi kullanılmıştır.

2.2. Bulgular

2.2.1. Güç Mesafesi Boyutu

Kaynak: [Country Comparison - Hofstede Insights \(hofstede-insights.com\)](http://Country Comparison - Hofstede Insights (hofstede-insights.com))

Türkiye Güç Mesafesi: 66, ABD Güç Mesafesi:40

2.2.2. Bireysellik / Toplumsalcılık Boyutu

Kaynak: [Country Comparison - Hofstede Insights \(hofstede-insights.com\)](http://Country Comparison - Hofstede Insights (hofstede-insights.com))

Bireysellik Türkiye: 37, Bireysellik ABD: 91

2.2.3. Erillik / Dişillik Boyutu

Kaynak: [Country Comparison - Hofstede Insights \(hofstede-insights.com\)](https://www.hofstede-insights.com)

Erillik ABD: 62 puan, Türkiye: 45 puan

2.2.4. Belirsizlikten Kaçınma Boyutu

Kaynak: [Country Comparison - Hofstede Insights \(hofstede-insights.com\)](https://www.hofstede-insights.com)

Belirsizlikten Kaçınma: Türkiye 85 puan, ABD 46 puan

2.2.5. Kısa Uzun Dönemli Yönelim Boyutu

Kaynak: [Country Comparison - Hofstede Insights \(hofstede-insights.com\)](http://hofstede-insights.com)

Uzun Dönemli Yönelim: Türkiye 46 puan, ABD 26 puan

2.2.6. Hoşgörü / Kısıtlama Boyutu

Kaynak: [Country Comparison - Hofstede Insights \(hofstede-insights.com\)](http://hofstede-insights.com)

Hoşgörü Türkiye 49 puan, ABD 68 puan olarak almış görünmektedir.

4. Tartışma ve Yorum

İş yerlerinde güç mesafesi, bireysellik/toplumsalcılık, erillik/dişillik, belirsizlikten kaçınma ve kısa/uzun dönemli yönelim gibi faktörler, her iki ülkede de farklı şekillerde etkili olabilir. Aşağıda bu faktörlerin her iki ülkedeki iş kültürüne nasıl yansiyebileceğiyle ilgili bir özet bulunmaktadır.

ABD'de iş yerlerinde genellikle düşük bir güç mesafesi bulunur. Şirketlerde daha yatay bir hiyerarşi yapısı benimsenir ve karar alma süreçleri daha demokratiktir. Çalışanlar, fikirlerini özgürce ifade etme ve yöneticilerle iletişim kurma konusunda rahatlık yaşarlar. Öte yandan, Türkiye'de genellikle yüksek bir güç mesafesi vardır. İş yerlerinde daha belirgin bir hiyerarşi yapısı bulunur ve karar alma süreçleri genellikle üst yönetim tarafından gerçekleştirilir. Çalışanlar genellikle daha az söz hakkına sahip olup yöneticilere karşı daha saygılı bir tutum sergilerler. ABD'de iletişim ve katılım daha açıktır, çalışanlar fikirlerini rahatlıkla ifade edebilirler ve iletişim kanalları daha çok yönlüdür. Türkiye'de ise iletişim genellikle daha hiyerarşik bir şekilde gerçekleşir, çalışanlar yöneticilerine karşı daha saygılı bir tutum sergiler ve görüşlerini çekingen bir şekilde ifade ederler. ABD'de iş yerlerinde eşitlik ve adalet önemli bir değer olarak kabul edilirken, Türkiye'de eşitlik algısı daha esnek olabilir ve sosyal statü ve kişisel ilişkiler bazen iş yerinde daha fazla etkiye sahip olabilir. Bu durum, işe alım, terfi ve ödül sistemlerinde objektiflik ve adil davranışların ön planda olduğu ABD'yi, subjektif faktörlerin önemli olduğu Türkiye'den ayırt eder (Hofstede, 1984; Triandis, 1995).

Bireyci toplumlar, insanların kendi çıkarlarını ve yakın ailelerini önceliklendirdiği, bağların daha gevşek olduğu ve insanların daha bağımsız olduğu toplumlardır. Bireyler genellikle kendi hedeflerini takip eder ve kişisel başarıya odaklanırlar. Öte yandan, kolektivist toplumlar, insanların güçlü ve birbirine bağlı gruplara entegre olduğu toplumlardır. Bu toplumlarda sadakat önemli bir değerdir ve insanlar aileleri, toplulukları ve kültürleriyle bağlılıklarını sorgusuz şekilde sürdürürler. ABD genellikle yüksek bireysellik değerlerine sahipken, Türkiye daha toplumsal bir yaklaşım sergiler. ABD'de bireylerin kendi ihtiyaçları ve başarıları ön plandayken, Türkiye'de toplumsal bağlantılar ve grup ilişkileri önemlidir. Bu farklılıklar,

kültürel, sosyal ve tarihsel faktörlere bağlı olarak değişiklik gösterebilir. Bu durum, insan kaynakları yönetimi politikaları ve uygulamalarının her iki ülkede de farklılık gösterebileceğini göstermektedir (Hofstede, 1984; Triandis, 1995).

Hofstede'nin Erillik/Dışillik boyutu, ABD ve Türkiye arasında cinsiyet rolleri, cinsiyet eşitliği ve cinsiyet temelli davranış kalıpları açısından farklılıklar göstermektedir. ABD'de erillik değerleri orta düzeydedir, bu da erkekleri bağımsız, rekabetçi ve özgüvenli olmaya teşvik eder. Liderlik rolleri genellikle erkek çalışanlara aittir. Dışillik değerleri de orta düzeydedir ve kadınların bağımsızlık, özgürlük ve kendi kararlarını alma becerisi üzerine teşvik edilir. Cinsiyet eşitliği önemli bir değer olarak benimsenir. Türkiye'de ise erillik değerleri daha yüksektir, erkekler gücü ve otoriteyi temsil etme beklentisiyle büyütülür. Liderlik rolleri genellikle erkek çalışanlara aittir ve erkeklerin kariyerlerinde yükselme fırsatları daha fazla olabilir. Dışillik değerleri de yüksektir ve kadınların aile ve toplumun bakımı ve desteklenmesiyle ilişkilendirilir. Kadınların liderlik pozisyonlarına erişimi ve kariyer gelişimi bazen zorlu olabilir. İnsan kaynakları politikaları, cinsiyet eşitliğini teşvik etmeyi ve kadın çalışanların desteklenmesini amaçlayabilir (Hofstede, 1984; Williams, 1995).

Belirsizlikten kaçınan kültürler, katı yasalar ve kurallar, güvenlik ve güvenlik önlemleri ve mutlak Hakikat inancıyla belirsizlikleri en aza indirmeye çalışırken, belirsizliği kabul eden kültürler ise farklı görüşlere daha hoşgörülüdür ve daha az kurala sahip olma eğilimindedir. ABD genellikle düşük belirsizlikten kaçınma değerlerine sahip bir toplumdur. İş yerlerinde risk alma, değişime uyum sağlama ve yenilikçilik teşvik edilir. İnsan kaynakları politikaları esneklik, girişimcilik ve yaratıcılığı destekleyebilir. Türkiye'de ise belirsizlikten kaçınma değerleri daha yüksektir. İnsanlar genellikle belirsizlikten kaçınma eğilimi gösterir ve daha fazla güvence, istikrar ve kurallara bağlılık arar. İş yerlerinde prosedürler, politikalar ve yönergeler daha ayrıntılı ve belirgin olabilir. İnsan kaynakları politikaları çalışanlara güvenlik ve istikrar sağlama üzerine odaklanabilir. (Hofstede, 1984; Bond, 2002).

ABD genellikle kısa dönemli yönelime sahip bir toplum olarak tanımlanır. Bu durum iş yerlerinde hızlı sonuçlara odaklanmayı, hedeflere ulaşmayı ve anlık tatmini ön plana çıkarmayı gerektirir. İnsan kaynakları politikaları, performans değerlendirmeleri ve ödüllendirme sistemleri gibi uygulamalar kısa vadeli hedeflere ve projelere odaklanabilir. Türkiye'de ise uzun dönemli yönelim daha belirgindir. Toplum genellikle gelecek planlaması, sürdürülebilirlik ve geleneklere bağlılık üzerine odaklanır. İş yerlerinde uzun vadeli projeler, işbirliği ve istikrar önemlidir. İnsan kaynakları politikaları, çalışanların uzun vadeli kariyer gelişimi ve kişisel büyüme üzerine odaklanmayı hedefleyebilir. Bu farklı yönelimler, insan kaynakları yönetimi stratejileri ve uygulamalarının farklılaşmasına yol açabilir (Hofstede, 2021; Taras et al., 2010).

Hoşgörü, insanların hayattan zevk alma ve eğlenme arzularını özgürce tatmin edebildikleri bir toplum yapısını ifade eder. Bu tür toplumlarda, insanlar farklı düşüncelere, inançlara ve yaşam tarzlarına karşı anlayış ve saygı gösterme eğilimindedir. Hoşgörü, daha fazla mutluluk beyanı, yaşam kontrolü algısı, konuşma özgürlüğünün önemi ve olumlu duyguların daha sık hatırlanması gibi faktörlerle ilişkilendirilebilir. Kısıtlama ise, ihtiyaçların kontrol altında tutulduğu ve katı sosyal normların düzenlediği bir toplumu ifade eder. Daha kısıtlama odaklı toplumlarda ise bireylerin davranışları daha fazla sınırlanabilir ve katı kuralların baskısı altında yaşanabilir (Hofstede, 2021; Gudykunst & Kim, 2003). ABD'de iş yerlerinde hoşgörü, farklılıklara saygı ve kapsayıcılık önemli değerlerdir. Çeşitlilik teşvik edilir ve insan kaynakları politikaları çeşitlilik eğitimleri, adil işe alım süreçleri ve destekleyici politikalar üzerine odaklanır. Türkiye'de ise hoşgörü değerleri, genellikle kısıtlamalara ve geleneksel yaklaşımlara göre şekillenebilir. İş yerlerinde daha homojen bir çalışma ortamı ve belirli normların

korunması önemlidir. İnsan kaynakları politikaları, yerel kültüre uygunluk ve kurumsal değerlere uygunluk üzerine odaklanabilir (Hofstede, 2021; Aycan, 2005).

SONUÇ VE ÖNERİLER

Türkiye ve ABD arasında iş yerlerinde kültürel farklılıklar bulunmaktadır. Türkiye'de genellikle yüksek bir güç mesafesi vardır ve iletişim daha hiyerarşik bir şekilde gerçekleşir. Çalışanlar çekingen davranabilir ve kararlar genellikle üst yönetim tarafından alınır. ABD'de ise düşük bir güç mesafesi vardır ve iletişim daha açıktır. Çalışanlar fikirlerini rahatça ifade edebilir ve karar alma süreçleri daha demokratiktir. Eşitlik algısı açısından da farklılıklar görülür, ABD'de eşitlik ve adalet önemli bir değerken, Türkiye'de eşitlik algısı daha esnek olabilir ve sosyal statü ve kişisel ilişkiler iş yerinde daha fazla etkili olabilir. Her iki ülkede de iş etiği önemlidir ve çalışma süreçleri bulunur, ancak Türkiye'de kararlar genellikle üst yönetim tarafından alınırken, ABD'de daha demokratik bir karar alma süreci benimsenebilir. Çalışanların katılımı açısından da farklılıklar vardır, ABD'de çalışanlar fikirlerini rahatça ifade edebilirken, Türkiye'de bu katılım bazen sınırlı olabilir (Hofstede, 2021; Gudykunst & Kim, 2003; Hall, 1976; Aycan, 2005; House et al., 2004).

İnsan kaynakları politikaları ve uygulamaları, her ülkede şirketlere ve sektörlerimize göre farklılık gösterebilir. ABD ve Türkiye arasındaki kültürel farklılıklar, insan kaynakları yönetimi stratejileri ve uygulamaları üzerinde önemli etkilere sahip olabilir. Güç mesafesi, bireysellik/toplumsalcılık, erillik/dişillik, belirsizlikten kaçınma ve kısa/uzun dönemli yönelim gibi Hofstede'nin kültür boyutları, her iki ülkenin iş yerlerindeki liderlik tarzları, iletişim yöntemleri, performans değerlendirmeleri, cinsiyet eşitliği politikaları, risk yönetimi ve stratejik hedef belirleme gibi alanlarda farklı yaklaşımların olduğunu göstermektedir. Bu bağlamda, insan kaynakları yönetimi profesyonelleri, kültürel farklılıkları dikkate alarak etkili stratejiler geliştirmeli ve yerel kültüre uygun politikalar benimsemelidir.

ÖZET

Anlatılar, bir “kendiliğın” yaratılmasında ve tarihsel süreçlerde bir toplumun kendini tanımlayıp dünya aileleri arasında kendini konumlandırması için vazgeçilmez unsurlardır. Anlatı bir boşluk doldurma işlevidir. Mevcut dünya tarihi yazımı ise Avrupa merkezci bir anlayışla bu boşlukları Batıcıl bir biçimde yontarak doldurur. Her ne kadar bağlantılı tarih anlayışları mevcut literatüre eleştirel bir giriş olarak ortaya çıksa da henüz yeterli olgunluğa ulaşmamıştır. Bağlantılı tarih anlatımından başka Doğuyu ve özeld İslam dünyasını başka bir yere konumlandırın dünya tarihi ile medeniyet tarihini birlikte okumak olmuştur. Bu iç içe geçen okuma gayet anlaşılırdır. Ancak Hegel'den mülhem bir dünya tarihi anlatısına eleştiri getirmek ve yeni bir düşünce pratiği ortaya çıkarmak için sakıttır. Çünkü medeniyet kavramı da tıpkı dünya tarihinin süregelmiş anlatıları gibi önce bir tanım çizer, ötekini bir boşluğa hapseder ve bu boşluğu bir dünya kurma edimiyle (worlding) kendi zaviyesinden ve iktidar tekniklerinden yararlanarak doldurur. Ayrıca sosyal bilimler için medeniyet katı bir öteki ayırımından yola çıkarak evrensel düşünceyi ketler. Bu çalışmada medeniyet kavramının neden bir düşünce pratiğine izin vermediği dünya tarihinin izi sürülerek incelenecektir. Sistematik bir literatür taraması yöntemiyle betimleyici çıkarsamalardan yola çıkan bu çalışmanın sonucuna göre evrensel bir tarih yazımının gerekliliği değerlendirilmektedir. 16. Yüzyıl ile başlatılan Batı egemenliğinde bir dünya tasavvuru oluşturmak ne kadar sorunluysa dar bir medeniyet düşüncesi de bir o kadar sorun teşkil etmektedir. Sonuç olarak bir düşünce pratiği alanı açmayı hedefleyen bu çalışma daha çok geçmişe bakıp oradan bir izdişüm çizen anlatılara karşı çıkarak, yeni bir anlayışın benimsenmesi yolunda kavramların yeniden takdimini sağlamayı amaçlamaktadır.

A Thought Practice on World History: Problematizing the Concept of Civilization

ABSTRACT

Narratives are indispensable elements for a society to define itself and to perceive itself among world families when a “self” is created and in its historical development. Narrative is a fill-in-the-blank function. The current world historiography, on the other hand, fills these gaps in a Westernist way with a Eurocentric approach. Although related understandings of history emerged as a critical introduction to the existing literature, they have not yet reached sufficient maturity. Apart from the related history narrative, he read together the historical world and the civilization process, which positioned the East and the Islamic world in particular. This interlaced reading is intelligible. However, it is reluctant to criticize a world history narrative inspired by Hegel and to reveal a new practice of thought. Because the concept of civilization, like the narratives that have continued in the history of the world, first draws a definition, traps the other in a void, and fills these inhabitants with a world-building act (worlding) by making use of its own perspective and power techniques. Also, for the social sciences, civilization inhibits universal thinking based on a rigid otherness. Why this concept of civilization allows a practice of thought will be examined by tracing the world effects. The necessity of a universal historiography is evaluated according to the result of this study, which is based on descriptive inferences with a systematic literature review method. With the 16th century, he is trying to create a world vision under Western management. As a result, those who aim

6th International CEO Communication, Economics, Organization & Social Sciences Congress

to open a field of thought practice, this study aims to provide a re-presentation through the principles of obtaining and adopting a new understanding against narratives that draw a projection from there, by looking more at the past.

GİRİŞ

Bir sınır- deneyimi olarak kim olduğumuzu daha çok ötekiler belirler. Ötekinin varlığı kendimizi tanımlamamızda en temel unsur olarak karşımıza çıkarken aynı zamanda benliğimizdeki yarıkları göstermesi bakımından da önemlidir. Mitler bu tanımlama ediminin bir yansıması olarak hayatımıza girer. Modern zamanlar öncesi mitlerdeki bu yansıma daha çok yabancılara; insan olmayanlara ve canavarlar üzerinden yapılmaktaydı (Kearney, 2022). Modern zamanlarla birlikte bir ulusun veya bir toplumun kendisini tanımlaması daha çok sınır kurgularıyla alakalı olmuştur. Sınır kurguları ve sınır-deneyimleri ise ulus devlet için oldukça kullanışlı bir tanımlama edimi olmuştur. Nitekim tanımın veya tanımlamanın kendine içrek yapısı bir sınırlama işlemini de içinde taşır. “*Her sınır uzamı/alani ortadan ikiye ayırmaktadır. Burası ile orası, içerisi ve dışarısı, en nihayetinde ise biz ve onlar.*” Sonuçta, her kendini tanımlama, sınırın bir yanında bulunup, öte yanında bulunmayan ayırt edici bir özelliğin veya özellikler toplamının vurgulandığı bir karşıtlığı dile getirir (Bauman 2017, 15).

Bir biz yaratmanın kurgulanması bugün de devam etmektedir. Siyasi topluluklar “*yabancı virüslerden*” kendilerini yabancıları patolojikleştirerek korumaya çalışır. Biz ve onlar karşıtlıklar altında sürekli tanımlanır. Tanımlama bugün daha çok söylem kurguları ve anlatılar yoluyla gerçekleşir. Anlatılar da tıpkı tanımlar gibi bir sınır çizer ve yabancıya karşı kendi üstün özelliklerini ortaya koyan bir toplum yaratır. Anlatılar bugün tarih yazımıyla yakından ilişkilidir. Tarih yazımında kullanılan bir biz yaratma ise Batı Merkezci bir bağlamda sıklıkla karşımıza çıkar.

Avrupamerkezcilik fikri sığ ama yaygın bir sorunun ürünü gibi gözükmektedir. Neden zenginlikleri ve görece ekonomik refahı ve nüfusuyla Doğu atılım yapamadı da demografik açıdan kısıtlı ve gelişmesi bakımından sınırlı olan Batı, Doğu karşısında bu derece üstünlük sağladı? Soru başka bir soruyla pekiştirilir: Dünya üzerinde hâkimiyet kuran Batı, yükselen Doğu güçleri karşısında gerilemekte midir? (Diamond, 2021). Yine, Niall Ferguson Uygarlık: Batı ve Ötekiler (2017) alt başlığı ile yazdığı kitabında Diamond’un metodunu benimser, hatta ondan esinlenmiş gibidir. Başlangıçtaki soru yapısal olarak aynıdır ve cevaplar bilimsel gelişmelerden daha çok ekonomik, siyasi ve askeri olarak yanıtlanır: Ferguson, 1500’lü yıllardan itibaren Doğu karşısında böylesine nüfusu az, gelişmemiş, uygarlıktan yoksun ve salgın hastalıklarla uğraşan küçük Avrupa’nın nasıl Doğuya galebe çaldığı sorusuyla ilgilenir. Ancak cevaplar çok tanındıktır: Rekabet, Bilim, Durağanlık, Eğitim, Akademik Disiplin, Çalışkanlık... Ferguson’un soruları metot bakımından aynı olmakla birlikte sonuçları itibariyle de benzerlik göstermektedir: Dünyaya bir şekilde beş yüz yıldır hükmeden Batı Uygarlığı gerilemekte midir? Yazar bu çerçevede Rising China Empire (Yükselen Çin[Richard Van Alstyne’in Yükselen Amerikan İmparatorluğu eserine atıf]) karşısında Avrupa ve ABD’nin güç kaybettiği, küresel hâkim gücün el değiştirebileceği endişesi ve korkusunu kendi açısından sorgulamaya koyar. Avrupamerkezcilik’in nirengi noktalarından birisi de Çinli Hadım Kâşif Zheng He’nin Çin deniz seferlerinden döndükten sonra Çin Hanedanının bu keşif gezilerinden vazgeçmiş olmasıdır. Bu vazgeçiş keşif zenginliklerinden Çin’i mahrum bırakırken, aynı zamanda parçalanmış ve rekabet halindeki Batı için Despotluğun ve merkeziliğin zararları olarak açıklanmaktadır. Bu keşifler Çin için bir güç gösterimi olarak adlandırırken, Avrupalıların amacı egemenlik kurma ve fetih arzularına dayandırılmaktadır (Ferguson, 2017,

58). Böylelikle Dünya Tarihi yazımı Avrupamerkezci bir perspektiften, Doğu'yu yoklukların alanına hapsedtikten sonra daha kolay olacaktır. Nitekim “*Doğulu toplumların bir tarihi yoktur, çünkü onların bir devletleri yoktur*” (Akt: Bhambra, 2015, 20) diyen Hegel ancak böyle haklılaştırılabilir ve dünya tarihi köle-efendi diyalektiğine bu yolla indirgenebilirdi.

Böylece, Dünya Tarihi yazımının kendisine dair bir eleştiriden yola çıkan bu çalışma, bu yazına karşı batı dışı toplumların nasıl cevap verdiğine dair bir açılım sunar ve dünyanın kalabalık ailesi içerisinde kendi anlatısına kavuşması için batı dışı toplumların neden *medeniyet* gibi bir kavramın kullanılmayacağını ve kullanıldığında *ne ölçüde* Batının dışarıda bırakan anlatısına katılacağını sorgular. Yokluğun ve boşluğun alanına itilmiş Doğu 16. Yüzyıl itibarıyla Dünya Tarihine çok da katkı vermez gibi düşünülür. Bu düşünce bir zihin alışkanlığı olarak bugüne kadar özgün düşüncenin ortaya çıkmasını da engellemiştir. Düşüncenin kaynağı öteki olduğunda ve kendini tanımlama ötekinin bakışıyla yapıldığında anlatılarda boşluk doldurulamamaktadır. 16. Yüzyıla kadar eşsiz bir medeniyet yaratmış olan İslam'la birlikte bugünü düşünmek gelecek için bir düşünce pratiği sunamamaktadır. Bu şekildeki bir düşünce pratiği ve kavrayış, sadece İslami toplumlar da değil genelleştirilerek diğer Doğulu toplumlarda da kendi bilgi sahasının dışına çıkılması ve yeni bir bilgi alanına dâhil olunmak istenmesi gibi gerilimler ortaya çıkarmıştır. Anlatılardaki boşluk ve çatlaklar büyümüştür (Shayegan, 2018).

1. Sorunlu Bir Dünya Tarihi Yazımını Kritik Etmek

“*Bizlere okulda ve okul dışında Batı diye adlandırılan bir varlığın bulunduğu ve bu Batı'yı diğer toplum ve uygarlıklardan bağımsız, hatta onlar karşısında konumlanan bir toplum ve uygarlık olarak düşünebileceğimiz öğretili. Çoğumuz bu Batı'nın bir soyağacı olduğuna inanarak büyüydük. Bu soyağacına göre, Yunanistan Roma'yı, Roma Hıristiyan Avrupa'yı, Hıristiyan Avrupa Rönesans'ı, Rönesans Aydınlanma'yı, Aydınlanma siyasal demokrasi ve Sanayi Devrimi'ni doğurmuştu. Sanayi ile demokrasinin birleşmesinden de ortaya yaşam, özgürlük ve mutluluk arayışı haklarının somutlaştığı ABD çıkmıştı*” (Wolf, 2019, 6).

Wolf devam eder, çalışmanın omurgası da bu devam pasajında saklıdır: “*Bu tür bir gelişim şeması yanıltıcıdır. Yanıltıcıdır, çünkü öncelikle tarihi bir manevi başarı hikâyesine, yarıştaki her koşucunun özgürlük meşalesini bir sonraki koşucuya teslim ettiği, zamana yayılmış bir yarışa dönüştürüyor. Bu şekliyle tarih, erdem in daha ileri taşınmasını, erdemlilerin kötüler karşısında nasıl muzaffer olduklarını anlatan bir hikâyeye haline geliyor. Çoğunlukla da bu, kazananların erdem ve iyiliklerini galip gelerek nasıl kanıtladıklarına dair anlatılar ortaya çıkarıyor. Eğer tarih, manevi bir amacın zaman içinde gerçekleşmesi ise, o halde bu gerçekten hareketle bu amaca sahip çıkanlar, tarihin önceden seçilmiş araçları kimliği kazanır*” (Wolf, 2019, 6).

Wolf'tan hareketle böyle bir hikayenin bugün tasavvur ettiğimiz dünyada hala geçerli olduğu görülür. Erdemliler anlatısı birçok eserde karşımıza çıkmaktadır. Dünya Tarihi kitapları ve makalelerin tıpkı bu şematik tabloya göre örnekleri mevcuttur. Bunlar Türkçe ve İngilizce literatürde de oldukça geniş yer bulur: Bauer, Antik Dünya, 2018; Bauer, Ortaçağ Dünyası, 2022; Bauer, Rönesans Dünyası, 2022; Braudel, 2014; Diamond, 2021; Ferguson, 2017; McNeill, Dünya Tarihi, 2021; McNeill, The Rise of the West: A History of the Human Community, 2009; Curtin, The World and the West, 2002.

Bu nedenlerle her dünya tarihi anlatısı biraz sorunludur. Çünkü bir sınır çizer. Sınırın kendisi sorunludur. Hem içine dahil ettikleri hem dışında bıraktıkları yönetsel olarak bir dünya kurma edimi (worlding) gerektirir. Dışarıda bırakılan alan ya boş bırakılır ya da içi genelleyici bilgilerle doldurulur; Oryantalizm gibi. O halde bir merkez kurma ve oradan diğerine projeksiyon tutma haritalar kadar düşüncelerimize yansımıştır. “*Tüm bu özelliklere ve onların neden olduğu gelişmelerden yoksun olarak tasavvur edilen bir Doğu Tarihi, bu biricik ve çok özel olarak tasavvur edilen Avrupa tarihinin bir arka planını oluşturmaktadır. Avrupa'nın özelliği, özel olmayanla kıyaslandığında ortaya çıkar. Doğu'nun tarihine bir yokluklar alanı olarak Avrupa tarihinin üstünlüğünü kanıtlamak için sahnelenmiş bir oyunda, bir figüranlık görevi verilmiştir sanki*” (İslamoğlu, 2014,13).

Dünya tarihi anlatısında ikinci sorun; Batı-merkezli tarih yazımıdır. Hegelden mülhem, tarihçilerin “*Doğulu halkların devleti olmadığı için tarihleri de olmayacağı*” ön kabulü dünyanın 16. yüzyıldan itibaren Batının kurmuş olduğu politik ve ekonomik sistem içerisinden dünyanın ve onun tarihinin anlatılmasıyla sonuçlanır. Şarkiyatçılık gibi disiplinler yoluyla biçimlenir ve kurumsallaşır (Said, 2016). *Şarkiyatçılık* geniş bir kavramsal örüntüde tarihin yeniden okunmasına imkân vermektedir. Bu kavramsal örüntü Batı düşünce dünyasının temel dinamiklerini yansıtması bakımından önemlidir. Kavram setinin bir ucunda iktidar, diğer ucunda özne varken; ortasında entelektüel, Avrupa-merkezci yaklaşım, nesne-özne ikiliği, hegemonya, temsil, kültür vs. egemene ait birçok kavram bulunur. Kavram setinin bu yapısını sorgulamaya açmak, eleştirmek, yeniden yorumlamak ve nesnel bilgiye ulaşma çabasında Edward Said'in yazmış olduğu *Şarkiyatçılık, Kültür ve Emperyalizm* (2016) *Medyada İslam* (2008) ve *Yeni Binyılında Filistin Sorunu* (2004) kitaplarıyla bir bütün oluşturarak tüm kültürel temsillere ve özcü yaklaşımlara eleştiri getirerek bir temel teşkil eder. *Şarkiyatçılık*, Oryantalizmin masum olmadığını da teyitlemektedir. Oryantalizm, geçmişi çarpıtmanın bir yolu olarak nesnel bilgi ve hakikatlerin önünde bir bariyer gibi durmaktadır. Geleceğe ilişkin kavramsal örüntüyü ve evrensele ulaşma çabasını da değersizleştirir, belirsizleştirir veya siler. Hakikatler bütünü, tarih ve bilgiler yığınının Oryantalizm yollu nasıl belirsizleştirildiği ise yerleşik düşünceleri derinden sarsacak olan Edward Said'in *Şarkiyatçılık* adlı eserinin başarısıdır (Özdemir, 2019).

Ayrıca bir dünya ve onun tarihi bir müktesebat oluşturacak biçimde ortaya çıkmışsa, bu Doğu ve Batı'nın karşılaştığının ve karşılaşma alanlarının varlığını gösterir. Bu da toplumların hayatîyetinin geçmişten bugüne sürdüğünü ve hayat damarlarındaki kanın aktığının göstergesidir. Oryantalizme giden yolun sınırlarını belirlemek adına Bhambra'nın (Moderniteyi Yeniden Düşünmek, 2015, 15) eseri benzersiz bir uğrak alanı sunar. Bhambra, “moderniteyle başlayan süreçte Batının değişimin öncüsü ve lideri olduğuna, bu anlayıştan kaynaklanan evrensel faillğine ilişkin sava ve en önemlisi bütün “*modernite fikirlerinin fark ve kopuş*” gibi teorilere dayandığı anlayışlara itiraz eder” Bhambra, modern dünyanın *fark ve kopuş* fikirleriyle diğerlerinden ayrıldığı savlarına itiraz ederken aynı zamanda bu fark ve kopuşun modern dünyanın eşsiz bir biçimi olarak sunulan “*geleceği ipotek altına alma*” yaklaşımına da itiraz etmektedir.

Karşılaşma alanına dair güçlü sav *dünya düzeni* kavramıyla daha güçlü bir şekilde anlaşılabilir. Eleştirel dünya tarihi okumaları İslam'ın 7. Yüzyılla birlikte başlayan hızlı

yayılmasıyla birlikte Doğu'nun başını çektiği bir dünya düzeni oluşmuştur. Ticaret güzergâhlarının ve bu güzergâhların İslam devletlerinin kontrolü altında olması güçlü bir ekonomik-coğrafya yaratmıştır. Nitekim İslam'ın yayılmasından önce de Kuzeybatı Avrupa dışında devletlerin gelişimine, düşüncenin yeşermesine ve kurumların oluşmasına tanık oluruz. Marshall Hodgson da (Hodgson, 2018) eserinde bu panoramanın betimlemesini yapar. Marshall Hodgson Karl Jaspers'in bir kavramsallaştırması olan *Mihver Çağ*'dan hareketle yola çıkar. Karl Jaspers, M.Ö 800-200 yıllarını kapsayan zaman diliminin, Doğu'da Çin, Himalayalar'ın güneyinde Hint, Grek ve Anadolu Yarımadalarında Grek veya Avrupacı ve Nil'den Amuderya'ya kadar olan bölgede İran- Sami olmak üzere dört yaratıcı kültür geleneğinin ortaya çıktığı bir çağ olduğunu ifade eder. Aynı zamanda bu dört yaratıcı kültür geleneğinin de ortaya çıktığı yer Afro-Avrasya "*ökümenidir*". Yazılı eserlerin ortaya konduğu, mali mübadelenin başladığı, etkileşim ve değişimin arttığı, entelektüel ve yaratıcı eserlerin görünmeye başladığı ve belki de en önemlisi modern zamanlar öncesinde yazılı geleneklerin en büyük motiflerinin görüldüğü bir çağdır. Bir başka deyişle Konfüçyüs'ün, Buda'nın, Zerdüştü'nin, Sokrates'in ve İsaiah'ın çağıdır ve modern dönemlere kadar şehirleşmiş halkların ifadesini bulduğu bir dönemdir. İslam'ın artık yayılmasının kurumsallaştığı 13. Yüzyıla gelindiğinde ise ökümendeki kayda değer değişimler ise İslam eliyle gerçekleşiyordu. Bu değişiklikler sadece Nil'den Amuderya'ya kadar olan bölgeyle sınırlı kalmıyor, Hindistan ve Akdeniz boyunca da uzanıyordu. Bu değişimler genellikle şehirleşmiş hayatın kültürel faaliyetleriyle ilgiliydi. Sudan, Kuzey Avrupa, Çin, Malezya bu değişikliklere sadece ürünleriyle değil fikirleriyle de katılıyorlardı. Sözü edilen dünya içerisinde İslam toplumu merkezi bir konuma yükseldi. Bu nedenle *16. Yüzyılda ana akışa katılan bir halk varsa o da Portekizlilerdi, Müslümanlar değil*. İslam Hint ve Çin geleneğinin yoğun etkisi altında kalan İran- Sami kültürünü de tekrar canlandırmakla kalmadı, Sanskrit geleneğiyle de kaynaşyordu. Ökümenin Anadolu ve Balkanlar kesimi 13. Yüzyılda Müslümanların egemenliğine girerken aynı zamanda Hint alt kıtasında Müslüman güçler yoğunlaşıyordu. Güney İtalya ve Sicilya kontrol edilmese de İslam'ın yoğun etkisi altındaydı. Kısacası Afro-Avrasya ökümeninde Hint ve Akdeniz boyunca şehirleşmiş toplumlar İslam altında birleşiyordu. 16. Yüzyılda Müslümanlarının kültür ufkunu yansıtan bir örnek vermek gerekirse Aquinaslı Thomas İspanya'dan Macaristan'a ve Sicilya'dan Norveç'e kadar okunurken İbn Arabi İspanya'dan Sumatra'ya, Shawili sahilinden Volga nehrinden Kazan'a kadar okunuyordu (Hodgson, 2018, 230-35).

16. yüzyıldaki ana akış ve dünya düzenine adapte olma bağlamında literatürdeki diğer eserler de bu görüşü desteklemektedir. Özellikle ticaret doğrultusunda ve bu ticaretin etkileri bakımından düşünülen bu fikirler çoğunluktadır. Bu eserlere bakıldığında ise "bağlantılı tarih yazımı" başa çekmektedir. Bağlantılı tarih anlatımına geçmeden önce, İpek Yolu'nun sadece ticaret güzergahı olmadığını açıklayan Frankopan tıpkı Diamond gibi hastalıkların, fikirlerin, salgınların ve düşüncelerin de bu güzergahta merkezi bir yeri aldığını ifade eder (Frankopan, 2018). Aynı şekilde 15. Yüzyılda Portekiz'in Ceuta fethi de İslam'ın yaratmış olduğu dünya düzeni ve ekonomik sisteme katılım (Wolf, 2019) emaresidir. Bu görüşü destekleyen diğer bir önemli eser ise Immanuel Wallerstein'in Dünya Sistemi teorisini yeniden yorumlayan *Avrupa Hegemonyasından Önce* (Abu-Lughod, 2020) kitabıdır. Abu Lughod, bu kitabında modern dünya ekonomisinin kökenlerinin 16. Yüzyılda değil 13. Yüzyılda saklı olduğunu vurgular.

Dünya Tarihi yazınında başka bir eleştiri ise *bağlantılı-dünya tarihi* yaklaşımıdır. Bu yaklaşıma göre Dünya'nın modern anlamda bugünü dışarıda bırakılan önemli şehirler ve bölgelerden bağımsız değildir. Ekonominin ve devlet yönetme sisteminin işlevsel olarak hayat sürdüğü bu yerler Dünya Tarihi'ne katkıları bakımından dışarıda bırakılamayacak kadar ehemmiyete haizdir. Wolf, bu bağlamı *Border* (Sınır) ve *Frontier* (Ön Bölge) kavramlarıyla açıklar. Gerçekten de bazı şehirlerin ve merkezi yerlerin birkaç kasabayı kendisine çektiği, alışverişin merkezi konumda olduğu ve bilimin kendisinden yayıldığını bilmekteyiz. Halep ve Bağdat gibi, Kudüs ve Semerkant gibi merkezlerin bir ön bölge olarak Dünya Tarihindeki ve sistemindeki yeri kuşku götürmeyecek biçimde kuvvetlidir.

Her ne kadar bağlantılı tarih yaklaşımı önem kesbetse de eleştirileri totalleştirememek ve bağlantılı coğrafyayı genele yayamamak gibi sıkıntılar taşımaktadır. Bağlantılı tarih anlayışında ilginç bir yaklaşım Sharman'dan (Zayıfların İmparatorlukları, 2021) gelmektedir. Geoffrey Parker'ın *Askeri Devrim* teorisini yeniden ele alan Sharman'a göre Avrupa'nın gerçekleştirmiş olduğu askeri devrim sadece Avrupa içiyle sınırlı kalmıştır. Yayılmayacağına başladığı 16. Yüzyılla birlikte Avrupalı devletler bu devrimden doğan yeni taktiksel ve stratejik askeri kazanımları sömürge coğrafyasında pek kullanmamıştır. Daha çok sömürge topraklarında yerleşik otoriteler ile bir kazan-kazan ilişkisine dayanarak denizlerde faaliyet göstermeyi seçmişler ve karanın yönetim faaliyetleri yerleşik otoritelere devredilmiştir. Denizden lojistiğini sağlayan Avrupalı devletler karayla oldukça az ilgilenmiş, karada hüküm süren otoriteler ise kendilerini rahatsız etmediği sürece denizlerle pek alakadar olmamışlardır. Yine de bu yaklaşım denizi sadece Avrupalı devletlere bırakmak gibi genel bir kanaati yansıttığı için sorunlu görülmektedir.

Bağlantılı tarih yaklaşımı ve dünya tarihi için genel kanaate farklı bir bakış açısı sunan diğer bir yaklaşımsa Christopher Bayly'dir. Bayly'in (Modern Dünyanın Doğuşu, 2021) eseri hem dünya tarihi eleştirilerinin bir toplamı hem de bağlantılı tarih yaklaşımlarının bir derlemesi gibi görünmektedir. Eleştirel Dünya Tarihinin çoğu, bir bölgenin veya bir ülkenin yerel ve özsel niteliklerinden sadece biri veya birkaçını anlatırken, yukarıda da değinildiği gibi anlattığı bölgenin ölçeğini ve etki sahasını genişletmek de zorlanır. Bayly, diğerlerinden sadece bölgesel bir konumu ve meseleyi uluslararası bir anlatıya dönüştürmekle değil aynı zamanda *bağlantılı'lar* arasında kurduğu dünya ölçeğiyle ayrılır. Bayly'in temel iddiası dünya için bir *arkaik küreselleşmenin* varlığıydı ve modern zamanlar öncesinde de dünya küresel bir yerdi. Bayly'in *arkaik küreselleşme* olarak adlandırdığı bu olgu; hem dünya genelinde coğrafi farklılıklara rağmen tarımsal egemenliğe dayalı yönetim sistemlerinden dolayı yaşam tarzlarının benzer olduğu hem de askeri, siyasi ve ekonomik düzenlerin birbirlerini çok yakın olmasını imler. Fransız ve Sanayi Devrimleri her ne kadar Batı'nın katalizörü olsa da ve Doğu için bir geri çekilme anlamı ihtia etse de dönüşümün hızı düştüğü kadar hızlı değildir. Evrimsel bir süreçten bahsetmek gerekirse bu 16. Yüzyıl gibi geç bir tarihte değil 18. Yüzyılın ikinci yarısında başlayan bir devrimdir. Nitekim Bayly'in bu savı diğer bir eseri olan (Modern Dünyanın Yeniden İnşası, 2022) ile yerli yerine oturtulacaktır. Bağlantılı bölgelerin bu niteliklerini yitirmesi ve dünyanın diğer tarafıyla bir kopuş ilişkisine girmesi Doğunun kurmuş olduğu dünyanın yeni bir kabuğu olan Avrupa'nın modern dünyayı yeniden ele almasıyla olacaktır.

2. Neden medeniyet kavramı eleştiri için kullanışlı bir kavram değildir?

Dünya Tarihi anlatılarının eleştirisi bir cevap verme gereği doğurmuştur. Eleştiriler genellikle modernleşmeye ve onun getirdiklerine ilişkindir. Doğunun, özeldde ise İslam Dünyasının kendini yeni bir anlatıyla var etmesi ve mevcut anlatıların dışına çıkarak yeni bir düşünce pratiği geliştirmesi farklı cevaplar yoluyla olmaktadır. Bunların en başında gelen ise eşsiz bir kültür yaratımı olarak İslam Medeniyetinin benzersiz özelliklerinin soykütüğünün çıkartılması ve bu medeniyetin tekrar canlılığının sağlanmasıdır. Ancak medeniyet bir düşünme biçimi olarak oldukça sıkıntılı bir kavramdır. Öyle ki medeniyet kavramını merkeze alan yaklaşımlar düşünceyi sınırlandırır. Sınırlamanın birçok nedeni vardır. Başlıca nedenler medeniyet kavramının kendisinin *tarihselleştirilememesi*, medeniyetin Avrupalı bir kavram olması, geçmişi yücelten medeniyetin geleceğe ilişkin bir düşünce izleği sağlayamaması, özcü genellemelerin medeniyet kavramı için geçerli olması, medeniyetin muğlak bir kavram olması ve en nihayetinde sosyal bilimler için kullanışlı bir kavram olmamasıdır.

İlk olarak medeniyet Avrupalı bir kavramdır. 17. Yüzyıla gelindiğinde ve Avrupa yayılcılığı belli bir seviyeye ulaştığında Avrupa'nın medeniyet anlayışı diğerlerine/ötekilerine bir uygarlık götürme işlevine dönüşmüştür. Nitekim adabı muâşeret kurallarında başlayan (Eagleton, 2019) ve medeni insanın özelliklerini yansıtan yeni davranışlar bütününe de Avrupa'da işaretlenir (Elias, 2017). Bazı Avrupalı düşünürlerin de medeniyetleştirme misyonu hakkındaki görüşleri açık seçiktir. Özellikle Montesquieu ve Tocquevelli gibi isimler örnektir. Montesquieu'nun iklim ve insan karakteri üzerinde *Şark despotizmi* haklı çıkarılması ünlüdür. Tocquevelli ise, Fransa'nın ulusal çıkarları ve menfaatleri adına savaşa girmesinin gerekli olduğunu belirtir. Hatta Cezayir'e yönelik savaşın Fransız kamuoyunda rağbet görmemesi düşünürü endişeye sevk etmiştir. Çünkü Cezayir'deki barbar kabilelerden çekinen ve savaşa girmeye imtina eden Fransa için tüm dünyanın önünde küçük düşecek, mağlubiyeti ve güçsüzlüğü uluslararası arenada kabul edilecektir. Bu geri çekiliş aynı zamanda geri kalmışlığın bir kabulüdür ona göre. Bu nedenlerden dolayı savaşa girmek ulusal çıkar ve imaj adına olmazsa olmaz bir adımdır (Curtis, 2015). Tocquavelli'nin Cezayir'de *Kabiliyeliler* üzerinden yaptığı araştırma dikkat çekicidir. Tocquevelli, ulusal çıkarlara yardım etmeye ve yol göstermeye devam eder: "*Kabiliyeliler, Fransa'yla savaşa girmeye, Araplardan daha az meyillidir. Bu da silah yoluyla değil, gelenek ve göreneklerin ve görüşlerinin farkına vardırılmadan değiştirilmesiyle ve kurnazlıkla boyunduruk altına alınabilecekleri anlamına gelir. Fransa, Kabiliyeliler'in ruhuna nüfuz edebilir. Kabiliyeliler artık Fransa'nın hırslarından korkmaz ve kendilerini Fransız kanunlarının koruması altında hisseder hale geldiğinde; Fransa'da "özgürlükleri konusunda korku duymayı bıraktıkları anda bu yabanileri medeni insanlar haline getirecek olan gizli cazibenin vaktinin geldiğini" hissedecektir*" (Curtis 2015, 227). Bu düşüncelerin benzerlerini ya da muadillerini Max Weber, Karl Marks ve Edmund Burke gibi isimlerde de görmek mümkündür. Dolayısıyla her medeniyet tasavvuru ileride olana yetişmek ve diğerleriyle aynı seviyeye gelmek anlamlarını içinde taşıdığından medeniyet ile ilgili düşünce pratikleri bu misyon fikirleriyle bir noktada kesişecektir.

İkinci olarak medeniyet gibi bir düşünce pratiği tarihselleştirilememe gibi bir durumla karşı karşıyadır. Tıpkı Avrupamerkezi yazarların yaptığı gibi her Doğulu medeniyet tasavvuru

lineer bir izlek taşır. Medeniyetle birlikte düşündüğümüzde araştırmaların sonucu araştırmayı yapanları 16. Yüzyılda kilitleyecektir. Nitekim böyle anlatılar daha çok 16. Yüzyıla kadar Doğu dünyası nasıl bir yolla güçlendi? Sorusu yerine 16. Yüzyılda ne oldu da Doğu dünyası geri kaldı? Olarak soruyu hatalı sorar. Lapidus'un da yaptığı gibi (Lapidus, 2020). Avrupamerkezci bakışla bir keşisim de burada farkedilir. Zira bu yüzyıldan sonra kaotik bir Doğu dünyası resmedildiğinden anlatı için tutarlı malzeme bütünü oluşturulamayacaktır. Böyle anlatılar, kesinlikle, medeniyet tasavvurunun bir geri çekilme, bir sona erme bir durdurulma veya bir kırılma ile karşılaştığını bizlere söylecektir. Geçmiş tutarlı kılamayan bu anlatılar gelecekle de çok fazla ilgilenmezler. Oysa ki gelecek geçmişten daha yakın durmaktadır ve İbn Haldun bunu bize göstermektedir (Mahdi, 2022).

Üçüncü olarak Medeniyet herkesin kullandığı muğlak bir kavrama dönüşmüştür. Muğlaklığı kendisini tanımlayan niteliklerin yanına yeni özellikler eklenmesiyle birlikte ilerlemiştir. Politika, etik, hukuk kavramları da medeniyet içine dahil edilmiştir. Bu anlam fazlalığı onun içeriğini boşaltmıştır. Sanki İslam toplumlarında veya Doğu ülkelerinde kurumsallaşmamış başka bir yapı yokmuş veya toplumsal düzeni oluşturan temel kaidelerden yoksunmuş gibi. Bu yaklaşım anlatının dil ve üslubuna da etki eder. İçeriden bakış ve medeniyetin durdurulması ve kırılmaya uğrması esefle ve hayal kırıklığı ile anılır. Bunun en tipik örneği Türk Edebiyatında Cemil Meriç'tir. O eserlerinde geçmişin gücüyle bir yandan hülyalı fetihler düşler öte yandan medeniyet yoksunluğundan dolayı öfke ve gazapla bir mağdur gibi konuşur (Gürbilek, 2018).

Son olarak Samuel Huntington'ın Medeniyetler Çatışması Tezi hala tazedir (Huntington, 2020). Medeniyetin özcü kavramlarıyla konum almak bu çatışma olasılığını artırır. Farklılıkların zenginliklerini ve evrensel düşüncüyü bir savaşın içine çeker (Yılmaz, 2020). Özcü genellemeler ve medeniyetlerin kendilerine içkin yaklaşımları evrensel düşünce ve dünya barışı için tehlikedir. Bu sosyal bilimler mantığında da yer alamayacak ve yer almaması gereken bir anlayış olarak medeniyet kavramının sosyal bilimler için de kullanışlı olmadığını bize göstermektedir.

3. Sonuç

Medeniyet kavramının dünya halkları arasındaki yerini arayan ve dünya şölenine katılmak isteyen toplumlar için neden kullanışlı olmadığını betimleyip araştırmacılar için yeni bir düşünce pratiği sunan bu çalışma, temellendiği yaklaşım itibarıyla anlatılara ve anlatıların vücuda geldiği Dünya Tarihi yazınına takip etmiştir. Sistematik bir literatür taramasının sonucu olarak hem dünya tarihi hem de medeniyet kavramının bağlantısını ve eleştirilerini ortaya koyan bu çalışmada düşüncenin ketlenmemesi ve evrensel düşüncenin serpilip gelişmesi için bu anlamda literatüre katkı vermeyi de hedeflemiş ve bunu en başta yerleşmiş kavramlara karşı çıkararak yapmıştır. Sonuç olarak dünya tarihi anlatılarının bir eleştirisine dayanan bu çalışmada tek düşünce kaynağının medeniyet kavramı olmadığı anlatılmaya çalışılmıştır.

ÖZET

Afetler, Dünya'nın birçok yerinde meydana gelmektedir. Oluşan afetler bireylere, çevreye ve ekonomiye ciddi boyutta zararlar verebilmektedir. Afetlerin giderek artmasıyla birlikte büyük ekonomik kayıplar yaşanmakta ve ülkelerin afetlere karşı savunmasız olma durumu ülke ekonomilerini olumsuz etkilemektedir. Finans sektöründe yenilikçi çözümler geliştirmeye yönelik yeni bir finansal araç olan afet tahvilleri, ülkelerde meydana gelen afetlerin olumsuz etkilerini en aza indirmek ve afet risklerini yönetebilmek için önem arz etmektedir. Sigorta bağlantılı menkul kıymetler (ILS) biçimi olan afet tahvilleri, afet risklerini sermaye piyasalarına transfer etmek ve afet risklerinin etkilerine karşı ülkelerin finansal dayanıklılığını güçlendirmek ve sürdürülebilir ekonomik kalkınmayı desteklemek için önemli bir araç olarak değerlendirilmektedir. Bu çalışmada, yeni bir finansal enstrüman olan afet tahvillerinin incelenmesi ve finans sektörüne etkileri üzerinde değerlendirme yapılması amaçlanmaktadır. Çalışmada kullanılan ikincil veriler, içerik analiz yöntemi ile incelenmiştir. Araştırma sonucuna göre, afetlerin sayıları arttıkça afet tahvil ihraçlarına ihtiyaç duyulduğu görülmektedir. Bu doğrultuda, afet risklerinin etkin yönetimi için afet tahvil ihraçları artırılmalıdır. Afet tahvil ihraçlarının artması ile risk paylaşılarak hükümetlere ve işletmelere hızlı finansman sağlanacağı, finansal piyasalarda finansal istikrarın artacağı ve toplumların afet sonrası normal yaşamlarına dönme sürecinin hızlanacağı değerlendirilmektedir.

A Study on the Catastrophe Bonds

ABSTRACT

Catastrophes occur in many parts of the world. Catastrophes can cause serious damage to individuals, the environment, and the economy. With the gradual increase in catastrophes, great economic losses are experienced and the vulnerability of countries to catastrophes negatively affects the economies of the countries. Catastrophe bonds, which are a new financial instrument for developing innovative solutions in the financial sector, are important in minimizing the negative effects of catastrophes in countries and in managing catastrophe risks. Catastrophe bonds, a form of insurance-linked securities (ILS), are considered an important tool to transfer catastrophe risks to capital markets, strengthen the financial resilience of countries against the effects of catastrophe risks, and support sustainable economic development. This study, it is aimed to examine catastrophe bonds, which are a new financial instrument, and to evaluate their effects on the financial sector. Secondary data used in the study were analyzed by content analysis. According to the results of the research, it is seen that there is a need for catastrophe bond issuances as the number of catastrophes increases. In this direction, catastrophe bond issuances should be increased for effective management of catastrophe risks. It is evaluated that with the increase in catastrophe bond issuances, rapid financing will be provided to governments and businesses by sharing risk, financial stability will increase in financial markets, and the process of returning to normal lives after the catastrophes will accelerate.

GİRİŞ

Afet tahvillerinin gelişimi, 1990'lı yıllardan beri sürdürülebilir finans alanındaki en önemli finansal yeniliklerden biri olduğu söylenebilir. Afetler, hem işletmeleri hem de bireyleri mali açıdan olumsuz etkilemektedir. Afet tahvilleri ya da diğer adıyla sürdürülebilir tahviller, afetlerin olumsuz etkilerini en aza indirmek için ortaya çıkan bir finansal araçtır. Geleneksel reasürans sisteminin tamamlayıcısı olarak görülen sigortaya dayalı menkul kıymetler arasında yer alan afet tahvilleri, sel, kasırga, orman yangınları, terörizm ve deprem gibi afet risklerini yönetme ve afet sonrası iyileştirme süreçlerini hızlı bir şekilde finanse etme imkânı sağlamaktadır. Ayrıca afet tahvillerinin, ülkelerin sürdürülebilir ekonomik kalkınmasını desteklemek için kullanıldıkları görülmektedir.

Son yıllarda giderek artan afetlerin sıklığı ve büyüklüğü, sigorta sektöründeki işletmelerin afet risklerini yönetmek ve finansal güvence sağlamak için daha fazla çözüm aramalarına neden olmuştur. Bu noktada, reasürans sözleşmelerinin yanı sıra sermaye piyasalarından afet tahvilleri gibi finansal araçların da daha fazla önem kazandığı görülmektedir. Afet tahvilleri, bir afet durumunda belirli bir riskin gerçekleşmesi durumunda yatırımcılara ödeme yapmayı taahhüt eden sigorta bağlantılı menkul kıymetler (ILS) biçimi olan yüksek getirili finansal araçlardır. Bu tahviller, sigorta işletmelerinin genellikle bir afetten kaynaklanan riski tipik olarak bir reasürör aracılığıyla yatırımcılara aktarmakta, yatırımcıların da varlık portföylerini çeşitlendirmesine olanak tanımaktadır. İhraççılar, afet riskini sermaye piyasalarına transfer etmek ve afetlerin yaratacağı riskleri paylaşmak için bu tahvilleri ihraç etmektedirler.

Dünya'da yeni bir finansal araç olarak ortaya çıkan afet tahvilleri, yatırımcıların ilgisini çeken finansal araçlar olarak değerlendirilmektedir. Birçok işletme afet risklerini finanse etmek ve afetlere hazırlık çalışmalarını desteklemek için afet tahvilleri ihraç etmektedir. Fakat Türkiye'de afet tahvilleri ile ilgili yatırımcı ilgisinin henüz beklenen düzeyde olmadığı ve bu alanda yapılan çalışmaların sınırlı olduğu belirtilmektedir (Öztürk 2019; Ando vd. 2022). Bu çalışmada, finansal piyasalar içinde yeni bir finansal araç olan afet tahvillerinin incelenmesi ile finans sektörüne etkileri üzerinde değerlendirme yapılması amaçlanmaktadır. Bu çalışmada, afet tahvillerinin özellikleri ifade edilmekte, avantajları ve dezavantajları ele alınmaktadır. Ayrıca afet tahvil ihraç örnekleri detaylı olarak açıklanmakta ve yıllar içerisindeki ihraç verileri içerik analiz yöntemiyle incelenmektedir. Yapılan çalışmanın, afet tahvillerinin anlaşılmasına katkı vermesi, ülkelerin afetler karşısında finansal dayanıklılığını güçlendirmesi ve sürdürülebilir ekonomik kalkınmayı desteklemesi açısından önemli olduğu değerlendirilmektedir. Ayrıca çalışma ile Türkiye'de finansal piyasalarda afet tahvillerinin gelişimine katkı sağlanması hedeflenmektedir.

1. FİNANSAL PİYASALAR VE AFET RİSKİ

Finans, üretim, harcama, borçlanma ve borç verme kararlarının incelenmesini kapsar. Finans, bireyler, işletmeler, hükümetler ve yabancı yatırımcılar gibi çeşitli aktörler tarafından fonların toplanması, yönetilmesi ve kullanılmasıyla ilgilenen bir alanı ifade etmektedir (Burton vd., 2015: 4). Finansal sistem, tasarrufları teşvik eden ve onları en verimli alanlarda kullanmaya yönlendiren bir sistem olarak tanımlanmaktadır (Gomez, 2008). Finansal sistem, fonların en etkin bir şekilde dağıtılmasını sağlayarak bir ülkenin ekonomik kalkınmasında önemli rol oynamaktadır (Gomez, 2008; De Haan vd., 2009).

Finansal sistem, finansal piyasaları ve kurumları içerir. Finansal piyasalar, genellikle vadesine göre para piyasası ve sermaye piyasası olmak üzere ikiye ayrılır (Gomez, 2008). Para piyasası, kısa vadeli finansal varlıkların alınıp satıldığı bir piyasa iken; sermaye piyasası, uzun vadeli finansal varlıkların alınıp satıldığı piyasadır. Para piyasası menkul kıymetleri, uzun vadeli

menkul kıymetlerden daha yaygın olarak alınıp satıldığı için daha likit olma eğilimi göstermektedir. İşletmeler ve bankalar, para piyasasını aktif olarak kullanmaktadır (Mishkin ve Eakins, 2006: 20). Sermaye piyasası, genellikle tahviller ve hisse senetleri gibi finansal araçları içerir. Tahviller, kamu ve özel işletmeler tarafından ihraç edilen orta ve uzun vadeli borçlanma araçlarıdır (Madura, 2014: 5). Hisse senetleri ve tahviller, sigorta işletmeleri, emeklilik işletmeleri ve diğer finansal araçlar tarafından sıkça kullanılan finansal araçlardır. Bu işletmeler genellikle uzun vadeli yükümlülükleri olan ve gelecekte belirli miktarda fon ihtiyacı olan kuruluşlardır (Mishkin ve Eakins, 2006: 20). Sigorta şirketleri, kişilere veya kurumlara mali riskleri hafifletmek için sigorta poliçeleri sağlar. Bu poliçeler, ölüm, hastalık, mal hasarı, kaza ve doğal afetler gibi potansiyel zarar durumlarında bireyler ve işletmeler için finansal koruma sağlar. Bu şirketler üstlendikleri riskler karşılığında sigorta poliçesi yaptıranlardan prim almaktadır. Sigorta şirketleri tarafından alınan primler, fona ihtiyaç duyulana kadar çeşitli yatırım araçlarında değerlendirilir. Toplanan primlerin genellikle hisse senetlerinde veya tahvillerde değerlendirildiği bilinmektedir. Bu sayede fon ihtiyacı olan birimlerin ihtiyaçlarının finanse edilmesinde önemli finansal aracı olma görevi üstlenilmektedir (Madura, 2014: 15).

Menkul kıymetleştirme, finansal sisteminin çeşitlendirmesi ve risk yönetiminin işlevlerini yerine getirilmesi için önemli bir araçtır. Menkul kıymetleştirme, likit olmayan varlıkları likit varlıklara dönüştürmektedir (De Haan vd., 2009: 10). Sigorta işletmeleri, belirli risklere karşı öngörülemeyen fon ihtiyaçları için likidite sağlamak zorundadır. Örneğin, 2004'te Florida'da dört kasırga meydana geldiğinde, sigorta işletmeleri sigorta poliçe sahiplerine milyarlarca dolar ödeme yapmıştır. Sigorta işletmelerinin bu fon talebini karşılamak için para piyasasındaki menkul kıymetlerinin bir kısmını sattıkları görülmektedir (Mishkin ve Eakins, 2006: 260). Sigortacılar ve finans uzmanları, afet riskini piyasaya aktarmanın ve aynı zamanda yatırımcılardan ek sermaye almanın yollarını geliştirmiştir. Gelişen menkul kıymetleştirme kavramı, sigorta şirketlerinin risklerini sermaye piyasalarına transfer etmek için kullanabilecekleri yenilikçi bir risk yönetimi ürününe dönüşmüştür (Torre-Enciso ve Laye, 2001: 65). Sigortaya dayalı menkul kıymetler, sigorta şirketlerinin afetlerden kaynaklanan risklerin yönetimine yardımcı olmak için kullanılmaktadır (Erpek, 2007: 11). Son zamanlarda afet risklerinin finansmanı için çeşitli önlemler alınmaktadır. Bu önlemler, afet risklerine karşı hazırlıklı olmak ve afet sonrası finansal desteği sağlamak amacıyla kullanılan afet rezerv fonları, olağanüstü durum kredileri, afet tahvilleri ve afet sigortaları gibi finansal araçları içermektedir. Özellikle afet tahvillerinin sermaye piyasalarında daha geniş kullanım potansiyeline sahip olduğu ifade edilmektedir (Miller ve Keipi, 2005: 1).

2. AFET TAHVİLLERİ

Türk Dil Kurumu (TDK, 2023) afeti; “*Çeşitli doğa olaylarının sebep olduğu yıkım*” olarak tanımlamaktadır. Dünya’da gözlemlenen doğal afet türleri, jeolojik (deprem, heyelan, tsunami gibi), iklimik (kuraklık, hortum, dolu gibi), biyolojik (erozyon, salgınlar, orman yangınları gibi), sosyal (terör saldırıları, yangınlar savaşlar gibi) teknolojik afetler (maden, sanayi, ulaşım kazaları gibi) şeklinde sınıflandırılmaktadır (AFAD, 2023). Öngörülmesi zor, nadir olarak meydana gelen, gerçekleştikleri zaman büyük hasarlara yol açan ve birçok sorunları beraberinde getiren doğal afet türleri, çoğunlukla bir coğrafik bölgeyi etkileyen büyük felaketler olarak ifade edilmektedir (Torre-Enciso ve Laye, 2001: 64). Doğal afet risklerinin, bütün dünyada kasırga, deprem, sel, heyelan ve kuraklık gibi çeşitli nedenlerden dolayı oldukça arttığı, büyük ve beklenmedik kayıplara neden olduğu bilinmektedir. Son yıllarda, tek bir kasırganın veya depremin 50-100 milyar dolarlık hasara yol açabileceği yaygın olarak kabul edilmektedir (Froot, 2001: 530). Doğal afetlerin 2021 yılında bir önceki iki yıla göre önemli ölçüde daha yüksek hasarlara neden olduğu görülmüştür. Geçici verilere göre, 2021 yılında

fırtınalar, seller, orman yangınları ve depremler gibi doğal afetlerin toplam 280 milyar dolar zarara neden olduğu ve bu rakamın yaklaşık 120 milyar dolarının sigorta kapsamında olduğu ifade edilmektedir. Başka bir örnekte ise Ida Kasırgası, 65 milyar dolar toplam zarar oluşturmuş, bunun 36 milyar doları sigortalı zararı olarak ifade edilirken, yaşanan afetin yılın en maliyetli afeti olduğu belirtilmiştir (Munich Re, 2022).

Son yıllarda küresel doğal afetlerin sayısı ve ekonomik kayıpların büyüklüğü giderek artmaktadır. 2022 yılında toplam doğal afetlerin neden olduğu ekonomik kayıpların 313 milyar dolara ulaştığı görülmüştür. Tablo 1’de ilk on küresel ekonomik kayıp olayları gösterilmektedir.

Tablo-1: İlk 10 Küresel Ekonomik Kayıp Olayı

Doğal Afetin Gerçekleştiği Tarih	Doğal afet	Yer	Ekonomik Kayıp (milyar \$)	Sigortalı zarar (milyar \$)
09/27-10/01	Ian Kasırgası	ABD	95.5	52.5
Yıllık	Avrupa Kuraklık	Güney, Batı ve Orta Avrupa	22.0	3.0
Yıllık	ABD Kuraklığı	ABD	16.0	8.0
06/14-10/30	Pakistan Mevsimsel Seller	Pakistan	15.0	0.1
06/01-09/30	Çin Mevsimsel Seller	Çin	15.0	0.4
03/16	Fukuşima Depremi	Japonya	9.1	2.9
02/23-03/31	QLD ve NSW Taşkınları	Avustralya	8.0	4.0
Yıllık	Çin Kuraklığı	Çin	7.6	0.2
02/18-02/19	Eunice Fırtına	Batı ve Orta Avrupa	4.5	3.4
05/17-10/31	Hindistan Mevsimsel Seller	Hindistan	4.2	0.1
Diğer tüm olayların toplamı			115.6	57.4
Toplam			313 Milyar \$	132 Milyar \$

Kaynak: (AON, 2022: 9)

Tablo 1’de görüldüğü üzere, Ian Kasırgası oluşturduğu yaklaşık 95.5 milyar dolar toplam zararlar ilk sırada yer almaktadır. En maliyetli on afet arasında Amerika Birleşik Devletleri, Avrupa ve Çin’de meydana gelen üç küresel kuraklık olayı, tehlikenin küresel ölçekte artan önemini vurgulamaktadır. Sigorta sektörü, yaşanan zararların 132 milyar dolarlık kısmını karşılamış ve bu durum 2022 yılının sigorta sektörü için en maliyetli yıllar arasında yer bulmasına sebep olmuştur. Özellikle Avrupa ülkelerindeki kuraklık zararları 2003 yılından beri en yüksek seviyeye ulaşırken ABD’nin genel ekonomik kayıplar açısından 2012 yılından beri en zarar verici kuraklığı yaşadığı görülmektedir. Tabloda yer alan afetler arasında Japonya’daki Fukushima Depremi hariç tüm yaşanan afetlerin hava ve iklimle ilgili olduğu ifade edilebilir (AON, 2022: 9).

Doğal afetler çok sayıda can kaybına neden olmasının yanı sıra aynı zamanda ciddi üretim, altyapı ve bireysel mal kayıplarına da yol açmaktadır (Nowak ve Romaniuk, 2013: 18). Bazı afetlerin olası zarar tahminleri, sigorta piyasalarının kapasite sınırlarını zorlamaktadır (Nell ve Richter, 2002: 1). Ian Kasırgası, küresel sigorta sektörü için yılın en maliyetli olayı olarak görülmektedir. Queensland ve Yeni Güney Galler’deki seller, Avustralya sigorta sektörü tarihindeki en yüksek kayıp olan 4 milyar dolarlık sigortalı zararlar sonuçlanmıştır (AON, 2022: 13). Böyle büyük doğal afetten kaynaklanan kayıplar, sigorta şirketlerini ve poliçe sahiplerini ciddi şekilde etkileyebilmektedir. Birçok sigorta şirketi yaşanan kayıplar nedeniyle iflas durumlarıyla karşılaşabilir ya da önemli boyutta mali sıkıntılar içine düşebilir. Sigorta şirketleri afet olaylarından beklenen zarar dağılımını belirlemek için analizler yaparak afet riskinin boyutunu ölçmeye çalışmaktadır (Meyers ve Kollar, 1999: 1-2). Fakat sigorta şirketlerinin analizleri ters seçim ve ahlaki tehlike gibi birçok sorunlarla kayıplar karşısında yetersiz

kalabilmektedir (Nowak ve Romaniuk, 2013: 18). Afet riski finansmanında sigorta şirketleri kendi afet risklerini finanse etmenin yollarını aramaktadır (Meyers ve Kollar, 1999: 3).

Doğal afet olaylarının zararlarıyla başa çıkabilmek için sigortaya dayalı yeni finansman araçlarına ihtiyaç duyulduğu değerlendirilmektedir (Nowak ve Romaniuk, 2013: 18). Sermaye piyasalarında geliştirilen finansal varlıkların, sigorta ve reasürans sektörünün ihtiyaçlarına cevap verebileceği düşünülmektedir (Anbar, 2008: 142). Girişimcilerin sigorta şirketlerinin afet riskini finanse etmek için afet risklerini menkulleştirerek yatırımcılara yayacak çözümler geliştirdikleri görülmektedir. Sigortaya dayalı menkul kıymetleştirmenin başlıca biçimleri arasında afet tahvilleri yer almaktadır (Meyers ve Kollar, 1999: 4). Afet tahvilleri, bir ihraççıdan veya spondordan (sedan şirket) sermaye piyasası yatırımcılarına belirli bir riski aktaran sigorta menkul kıymetleştirmesine bir örnektir (Artemis, 2023). Ayrıca bu tahviller, sigorta bağlantılı menkul kıymetler (ILS) sınıfında önemli bir kategoride yer almaktadır (Edesess, 2015: 6).

Afet tahvili, sedanın (sigortalının) deprem, kasırga, fırtına gibi afetlerin meydana gelmesi durumunda sermaye piyasasından fon almasına olanak sağlayan bir borçlanma aracıdır (Ando vd., 2022: 9). Afet tahvili, bir ihraççı ile bir yatırımcı arasındaki bir sözleşmeye dayanır (Nell ve Richter, 2002: 2). Tahvil, yatırımcı tarafından anapara ödemesi ile satın alınır ve genellikle üç ayda bir olmak üzere düzenli aralıklarla ödeme alınır. Tahvilin vadesi bir yıldan beş yıla kadar değişmekle birlikte afet tahvilleri genelde üç yıldır. İhraççı genellikle bir reasürördür. Fakat bir sigorta şirketi, kamu veya özel şirket, bir emeklilik fonu ve hatta kâr amacı gütmeyen bir işletme bile olabilmektedir (Edesess, 2015: 6). Afet tahvilleri, genellikle hayat dışı branşlarda faaliyet gösteren sigorta şirketleri ile reasürans şirketleri tarafından ihraç edilen ve ödemeleri doğal afetlere bağlı olan tahvillerdir (Deutsche Bank, 2003). Yatırımcılar afet tahvili satın aldıklarında, ödeme karşılığında belirli bir doğal afetin meydana gelme riskini üstlenmektedir (Morana ve Sbrana, 2019). Afet tahvillerinde yatırımcının anapara kaybı, teminat kapsamındaki afetin meydana gelmesiyle tetiklenir (Edesess, 2015: 6). Afet tahvillerindeki tetikleyiciler; belirli bir sigortacının afet hasarları, genel olarak sigorta sektörünün afet hasarları, belirli bir afet indeksinin düzeyi, kasırgalar için rüzgâr hızları veya Richter ölçeği gibi belirli olayların parametreleri, deprem büyüklüklerine dayanmaktadır (Meyers ve Kollar, 1999: 7). Tetikleme tutarı, örneğin sigortacının kendi zararları veya sektör çapındaki zararlar olabilmektedir. İlk durumda, temel risk ortadan kaldırılmaktadır. Fakat bu durum da yatırımcıların, sigorta şirketleri tarafından bildirilen zararları şişirmesini teşvik ederek ahlaki tehlike sorununu da ortaya çıkarabilmektedir (Loubergé vd., 1999: 130).

Afet riskini menkul kıymetleştiren yatırımların sonuçları, afet kaybına bağlıyken, diğer yatırım araçlarının çoğu ekonomik koşullara bağlıdır. Afet tahvillerinin sonuçları, diğer yatırımların sonuçlarıyla ilişkili değildir (Torre-Enciso ve Laye, 2001). Bir başka ifade ile afet tahvilleri ile piyasa riskleri arasında zayıf bir şekilde ilişki olduğu söylenebilir (Litzenberger vd., 1996; Nell ve Richter, 2002). Doğal afetlerin meydana gelmesi genellikle borsa ve faiz oranı hareketleri, enflasyon gibi ekonomideki olaylarla ilişkili değildir. Aynı zamanda, kapsadıkları riskler hisse senedi piyasası riski, faiz oranı riski, kredi riski gibi diğer risklerle neredeyse ilişkili olmadığından, yatırımcılar için cazip gelmektedir (Edesess, 2015). Bu durumun sonucunda da, yatırımcıların portföyüne afet tahvillerini eklemesi, portföyün performansını artırarak portföyü daha kârlı ve daha az riskli olma avantajı sağlamaktadır (Torre-Enciso ve Laye, 2001).

Afet tahvil piyasasının, 2011-2021 yılları arasında yıllık yaklaşık %10'luk bileşik bir oranda büyüdüğü görülmektedir. Bu tahvillerle toplanan paralar, olası kayıpları karşılamak için finansal piyasa fonlarında değerlendirilmektedir. Sözleşmede belirtilen tetikleyiciler, örneğin bir kasırgadan belirli bir seviyeye ulaşan sigortalı kayıpları karşılanırsa, sigorta şirketleri parayı poliçe sahiplerine ödemek için kullanır. Bu durumda, sigorta şirketi tahvil sahiplerine geri

ödeme yapmak zorunda değildir. Tahvilin kapsadığı doğal afetler meydana gelmezse, yatırımcılar tahvilin vadesi geldiğinde, genellikle üç ila beş yıl içinde paralarının tamamını geri alırlar. Ayrıca bu vade süresinde yatırımcılar bu tahvilden düzenli faiz ödemeleri de almaktadır (Henry, 2021).

Afet tahvili ihraç eden sigortacılar, yatırımcılara önemli miktarda bilgi sağlama ihtiyacı nedeniyle yüksek işlem maliyetleriyle karşı karşıya kalabilmektedir (Meyers ve Kollar, 1999: 9). Afet riskinin sigortalanmasındaki en büyük sorun, bir afetin aynı anda birçok sigortalıya zarar vermesidir. Bu sebeple, bu tür sigortaların ve özellikle reasürans sözleşmelerinin genellikle önemli oranı temerrüde düşme riskiyle karşı karşıya kalmaktadır (Richter, 2003). Nell ve Richter (2002) çalışmalarında, reasürans sözleşmeleri önemli ahlaki tehlike ve temerrüt riski sorunlarına sebep olabileceğinden, bu hususların dikkate alınmasının önemli olacağını vurgulamıştır. Richter (2003) çalışmasında, sigorta riskinin afet tahvilleri ile menkul kıymetleştirilmesinin, temerrüt riskinden tamamen kaçınmak için tasarlanabileceğini ifade etmiştir. Lee ve Yu (2007), afet tahvillerinin ihraç edilmesi ile reasürans sözleşmelerinin değerinin yükseldiğini ve temerrüt riskinin azaldığını ifade etmiştir.

Literatürde, afet tahvilleri ile ilgili yapılan çalışmalar incelendiğinde, Croson ve Kunreuther (1999), kamu sektörünün yanı sıra özel sektörü kullanarak doğal afet riski finanse etmenin farklı yollarını anlamayı ve doğal afet risklerle ilgili farklı paydaşların karşılaştığı sorunları daha gerçekçi bir şekilde sınıflandırabilmek için daha fazla araştırmaya ihtiyaç duyulduğunu belirtmişlerdir. Lakdawalla ve Zanjani (2012) çalışmalarında, afet tahvillerinin, risk transferi için daha geniş bir piyasada önemli rol oynayacağı ifade edilmiştir. Yavuz ve Dikmen (2015) çalışmalarında, doğal afetlerin olumsuz etkilerinin en aza indirilmesi için afet sigortaları, afet tahvilleri gibi finansal araçların kullanımı yaygınlaştırılmasının gerekliliğini vurgulamışlardır.

Morana ve Sbrana (2019) çalışmalarında, sermaye piyasasında riskten kaçınan yatırımcılar için çeşitlendirme araçları olarak afet tahvillerinin uygunluğu hakkında soru işaretlerinin olduğu belirtmişlerdir. Bu duruma kanıt olarak çalışmada, özellikle 2017'de meydana gelen önemli doğal afet kayıplara rağmen, afet tahvilleri ve sigorta menkul kıymet piyasasının büyüme potansiyeli ve kurumsal yatırımcıların bu tür menkul kıymetlere olan ilgisi gösterilmiştir. Öztürk (2019) çalışmasında, Türkiye'deki sigortaya dayalı menkul kıymet olan afet tahvillerinin sermaye piyasalarında henüz yeni olduğu, hem devlet hem özel sektör tarafından bu finansal varlığa yeterli ilginin oluşmadığını vurgulamıştır. Ando vd. (2022) çalışmalarında, yüksek işlem maliyetlerinin afet tahvillerinin daha yaygın kullanılmasına engel teşkil ettiğini ifade etmişlerdir. Bu anlamda yeşil ve afet tahvilleri birbirini tamamlayabileceği vurgulanarak iklim değişikliğine duyarlı olan ülkeler için bu yeni yatırım araçlarının daha büyük ülke ihraçlarını teşvik etmek için çalışmaların yapılmasının gerekliliği önerilmiştir.

2. AFET TAHVİL PİYASASININ GELİŞİMİ

Afet tahvili işlemlerinde, afet modelleme yöntemleri ile zarara yol açabilecek risklerin analiz ve ölçümü sağlanmakta ve maruz kalan coğrafi bölgeyi tanımlamak hayati önem taşımaktadır. Son yıllarda afet tahvillerinin kullanımı giderek yaygınlaşmakta ve risk türleri arasında yer alan üçüncü taraf sorumluluk riskleri, terörizm riskleri, finansal risklerini öne çıkaran son düzenlemelerle genişlediği görülmektedir (Artemis, 2023). Afet tahvil piyasası ilk ihraç edildiğinden ve piyasaya sürüldüğünden günümüze hızla büyümektedir (Edesess, 2015: 7). Grafik 1'de 2013-2022 yılları arasında ihraç edilen Afet Tahvili ve Sigortaya Bağlı Menkul Kıymetler (ILS) Risk Sermayesi kümülatif teminatları (milyar dolar) gösterilmektedir.

Grafik-1: 2013-2022 Yılları Arasında İhraç Edilen Afet Tahvili ve ILS Risk Sermayesi

Kaynak: <https://www.artemis.bm/deal-directory/> adresinde yer alan bilgiler yazarlar tarafından derlenmiştir.

Grafik 1’de yer alan Artemis verilerine göre, 2013 yılında afet tahvili ihracı yaklaşık 7,2 milyar dolar iken, Sigortaya Bağlı Menkul Kıymetler (ILS) toplam ihrac yaklaşık 7,7 milyar dolar tutarında gerçekleştiği görülmektedir. 2022 yılında ise afet tahvili ihracı yaklaşık 9,2 milyar dolar iken, Sigortaya Bağlı Menkul Kıymetler (ILS) toplam ihrac yaklaşık 11,7 milyar dolardır. 2013-2022 yılları arasında en fazla afet tahvil ihracı 2021 yılında yaklaşık 12,6 milyar dolar olarak görülmektedir. Bu sonuçlar, yatırımcıların afet tahvillerini yıllar içerisinde daha fazla tercih ettiğini ve afet tahvil piyasasının istikrarlı bir şekilde büyüdüğü ifade edilebilir.

Swiss Re Afet Tahvil endeksi, hayat ve sağlık tahvilleri hariç, afet tahvillerinin piyasa değeri ağırlıklı bir endeks olarak ifade edilmektedir (Rzym ve Zeid, 2018). Grafik 2’de afet tahvil endekslerinin hisse senedi ve tahvillere karşı performansı yer almaktadır.

Grafik-2: Afet Tahvil Endekslerinin Hisse Senedi ve Tahvillere Karşı Performansı

Kaynak: (Rzym ve Zeid, 2018)

Grafik 2’de 2006 yılı ile 2018 yılları arasında afet tahvil endeksinin (Cat Bond Index), diğer sigorta bağlantılı menkul kıymetlerin endeksi (insurance-linked securities, (ILS) HF Index), hisse senetleri endeksi (equities) ve tahvil endeksine (bonds) karşı performansı gösterilmektedir. Hisse senetleri ve geleneksel tahviller finansal piyasalarda yıllar içerisinde dalgalanmalar göstermekte iken, özellikle afet tahvillerinde yılları içerisinde değer artışlarında artma eğiliminde olduğu görülmekte ve diğer finansal araçlara göre performansının daha yüksek olduğu söylenebilir. Buradan hareketle afet tahvillerinin yatırımcıların ilgisini çeken bir unsur olduğu değerlendirilmektedir.

Swiss Re Afet Tahvil Endeksi'nin 2002-2023 yılları arasındaki getirileri Grafik 3'te gösterilmektedir.

Grafik-3: Yıllara Göre Swiss Re Afet Tahvil Endeksi Getirileri

Kaynak: <https://www.artemis.bm/news/swiss-re-cat-bond-index-already-having-best-year-since-2013/>

Afet tahvili piyasası tarafından sağlanan toplam getiriler için yaygın olarak kullanılan kıstas aracı Swiss Re Afet Tahvil Endeksidir. Grafik 2'de görüldüğü üzere, 2002-2022 yılları arasında en yüksek afet tahvil getirisi %15.43 oranla 2007 yılında olduğu görülmekte iken en düşük tahvil getirisi ise -%2.15 oranla 2022 yılında gerçekleştiği görülmektedir. 2023 yılının Mayıs ayında Swiss Re Afet tahvil endeksinin 2013'ten beri en yüksek getirisi olduğu görülmektedir.

Dünya'da doğal afet türleri içinde yer alan jeolojik, iklimik, biyolojik, sosyal, teknolojik doğal afetlerde artış gözlemlenmekte ve risklerden doğacak olan zararı en aza indirmek için afet tahvil ihraçları gerçekleştirilmektedir. Afet tahvil piyasasının 2025 yılının sonuna kadar 50 milyar dolarlık bir pazara ulaşacağı tahmin edilmektedir (Swiss Re, 2021: 7). Tablo 2'de 2022 yılı içerisinde afet tahvil ihraç örnekleri (400 milyon dolar üzeri) yer almaktadır.

Tablo-2: 2022 Yılında İhraç Edilen Bazı Afet Tahvil İhraç Örnekleri

İhraççı	Sedan / sponsor	Kapsanan Riskler/Tehlikeler	Tetikleme türü	Boyut (milyon dolar)
Long Point Re IV Ltd.	Travelers	ABD tropikal kasırgası, deprem, şiddetli fırtına, kış fırtınası (yalnızca Kuzeydoğu ABD eyaletleri)	Tazminat	575
Sanders Re III Ltd.	Allstate	ABD adlı fırtına, deprem, şiddetli hava, orman yangını, volkanik patlama, göktaşı çarpması (Florida hariç)	Tazminat	550
FloodSmart Re Ltd.	FEMA / NFIP via Hannover Re	ABD sel riski (adlandırılmış fırtınalardan)	Tazminat	450
Residential Reinsurance 2022 Limited	USAA	ABD tropikal siklonları, depremler (artı yangın), şiddetli fırtına, kış fırtınası, orman yangını, volkanik patlama, göktaşı çarpması, diğer tehlikeler (hepsi araba ve kiracı poliçesi sel kayıpları dâhil)	Tazminat	430

Tailwind Re Ltd.	Validus Holdings	ABD, Kanada, Porto Riko, ABD Virjin Adaları adlı fırtınalar ve depremler	Sanayi kaybı endeksi	400
------------------	------------------	--------------------------------------------------------------------------	----------------------	-----

Kaynak: <https://www.artemis.bm/deal-directory/> adresinde yer alan bilgiler yazarlar tarafından derlenmiştir.

Tablo 2’de 2022 yılı içerisinde ihraç edilen, ABD tropikal kasırgası, deprem, şiddetli fırtına, kış fırtınası (yalnızca Kuzeydoğu ABD eyaletleri) tehlikelerini kapsayan, tetikleme türü tazminat olan ve afet tahvillerinin içerisinde en yüksek boyutun 575 milyon doları kapsadığı görülmektedir. Bu büyük boyutta yer alan afet tahvil ihraçlarının doğal afetler türleri içerisinde jeolojik ve iklimik afet türlerinin ağırlıkta olduğu söylenebilir.

Afet tahvil ihraçlarında ve Sigortaya Bağlı Menkul Kıymetler (ILS) piyasasında görüldüğü üzere birçok tetikleme türü olduğu görülmektedir. Afet Tahvili ve Ödenmemiş ILS Risk Sermayesinin tetikleyici türler arasında en fazla orana sahip olan türün tazminat olduğu ve onu takip eden unsurun sanayi kaybı endeksi olduğu görülmektedir. 2022 yılında ihraç edilen bazı (400 milyon dolar üstü) afet tahvil ihraç örnekleri incelendiğinde de tetikleme türleri arasında tazminat ve sanayi kaybı endeksi olduğu dikkat çekmektedir (<https://www.artemis.bm/dashboard/cat-bonds-ils-by-trigger/>).

Doğal afetlerin kayıpları incelendiğinde, afet tahvilleri gibi risk tutma ve risk transfer mekanizmalarının üstlenilmesinin ülkeleri ve sigorta sektörünü doğal afetlere karşı daha dirençli hale getireceği ifade edilmektedir (Poundrik, 2011: 12).

2.1. Türkiye’de Afet Tahvil İhraçları

2013-2022 yılları arasında Türkiye’de dikkat çeken afet tahvil ihraçları örnekleri incelendiğinde, 2013 yılında ihraççı özel amaçlı sigorta şirketi olan “Bosphorus 1 Re Ltd.” tarafından afet risklerini havuzlayan devlet destekli bir sigorta şirketi olan Türkiye Doğal Afet Sigortaları Kurumu (DASK) adına ihraç edildiği görülmektedir. Yapılan afet tahvili ile DASK’ a olay bazında üç yıllık tam teminatlı deprem reasürans teminatı sağlamayı amaçlanmıştır. Borçlanma senetleri, öncelikle Türkiye'nin İstanbul bölgesini etkileyen depremler için reasürans teminatı sağlamaktadır. Yapılan afet tahvilin boyutu 400 milyon ABD doları iken bir parametrik tetikleyici kullanılmaktadır. Derecelendirme kuruluşu Standard & Poor's 'BB+ notu ile bir değerlendirme yapmıştır. Risk modelleme, gerçek deprem ölçüm verilerinin kaynağı Boğaziçi Üniversitesi Kandilli Rasathanesi ve Deprem Araştırma Enstitüsü'dür (KOERI). Parametrik kayıp tetikleyicisi, KOERI veya bir yedekleme kuruluşu tarafından bildirilen verilere dayanmaktadır (<https://www.artemis.bm/deal-directory/bosphorus-1-re-ltd/>).

2015 yılında “Bosphorus Ltd.” ile DASK arasındaki reasürans anlaşmasını teminat altına almak için 2015-1 Serisi A Sınıfı afet tahvillerinin tek bir dilimini ihraç ederek yatırımcılara satmıştır. Daha önceki afet tahvilinde olduğu gibi bu yeni 2015-1 anlaşması, DASK 'ın sigortalı risklerinin en yüksek yoğunlukta olduğu Türkiye'nin İstanbul bölgesini etkileyen depremlere odaklanmaktadır. Afet tahvilinin boyutu 100 milyon dolar iken tetikleme türü parametrikdir. Hesaplama işleminde, maruz kalma seviyesini temsil etmek için bir faktöre uygulanan, spektral ivmeden ve hesaplama konumlarının sayısından türetilen bir endeks içerdiği görülmektedir (<https://www.artemis.bm/deal-directory/bosphorus-ltd-series-2015-1/>).

2020 yılında, ihraççı “ILN SAC Ltd.” ile bilinmeyen sedan / sponsor şirketin arasında yapılan afet sanayi kaybı endeksi ile tetikleme türünü belirtmektedir. Yapılan anlaşmanın Türkiye'deki 7 milyon dolarlık depreme maruz kalmasıyla ilişkili riski transfer eden ve bunu sigorta bağlantılı borçlanma senedi ile menkul kıymetleştiren, sektörel zarara dayalı bir işlemi içerdiği belirtilmektedir. Geleneksel bir reasürans sözleşmesini menkul kıymetleştirip menkul kıymetlere yani sigorta bağlantılı senetlere dönüştürdüğü görülmektedir. Altta yatan tehlike

Türkiye'de depremdir ve düzenleme sedana 7 milyon dolarlık toplam endüstri/sanayi kaybına dayalı koruma sağlayacağı ifade edilmektedir. Anlaşmanın, sigorta bağlantılı menkul kıymetler (ILS) piyasasında tamamen yeni olan bir sedanı içerdiği belirtilmektedir (<https://www.artemis.bm/deal-directory/iln-sac-ltd-iln-ky-q-1/>).

SONUÇ

Doğal afetlerin finansmanını sağlamak için kullanılan afet tahvillerinin finans sektörü üzerinde etkisi olduğu bilinmektedir. Bu çalışmada, yeni bir finansal enstrüman olan afet tahvillerinin incelenmesi ve finans sektörüne etkileri üzerinde değerlendirme yapılması amaçlanmıştır. Dünya'da giderek artan afetlerin ekonomik kayıpları ülkeleri ve bireyleri önemli düzeyde etkilediği görülmüştür. 2022 yılında toplam doğal afetlerin neden olduğu ekonomik kayıpların 313 milyar dolara ulaştığı görülmekte yaşanan afet türleri arasında Ian Kasırgası yaklaşık 95.5 milyar dolar toplam zararlar ilk sırada yer almaktadır. Sigorta sektörü, yaşanan zararların 132 milyar doları kapsamakta ve Ian Kasırgası küresel sigorta sektörü için yılın en maliyetli olayı olarak görüldüğü tespit edilmiştir.

Ekonomik kayıpların artmasıyla afet tahvili gibi finansal araçların artması beklenmektedir. Sigorta şirketleri, reasürans şirketleri ve diğer finansal kuruluşlar afet tahvilleri aracılığıyla doğal afet risklerini finansal piyasalara transfer ederek riskleri paylaştıkları görülmektedir. Dünya genelinde yaşanan doğal afetlerin sayıları arttıkça afetlere yönelik finansman ihtiyacı da artmakta ve bu durum afet tahvillerine olan talebi de artırmaktadır. 2013-2022 yılları arasında afet tahvil ihracı incelendiğinde; ilgili yıllar arasında en fazla afet tahvil ihracı 2021 yılında yaklaşık 12,6 milyar dolar olarak görülmektedir. 2022 yılı içerisinde ihraç edilen, ABD tropikal kasırgası, deprem, şiddetli fırtına, kış fırtınası (yalnızca Kuzeydoğu ABD eyaletleri) tehlikelerini kapsayan, tetikleme türü tazminat olan ve afet tahvillerinin içerisinde en yüksek boyutu 575 milyon doları kapsadığı görülmektedir. Yatırımcıların afet tahvillerini yıllar içerisinde daha fazla tercih ettiği ve afet tahvil piyasasının istikrarlı bir şekilde büyüdüğü söylenebilir. Bu veriler göz önünde bulundurulduğunda afet tahvilleri ve afet risklerinin daha etkin bir şekilde yönetilmesine yardımcı olduğu ve işletmelere, bireylere ve devletlere finansman sağlamada önemli bir araç olduğu değerlendirilmektedir.

Afet tahvil endeksi, sigortaya bağlı menkul kıymetler endeksi, hisse senedi endeksi ve tahvil endeksi performanslarına ve getirilerine bakıldığında, afet tahvillerinin piyasa performansı diğer varlıklara göre daha yüksek düzeyde görülmektedir. Getiriler açısından bakıldığında afet tahvillerinin 2002-2022 yılları arasında en yüksek afet tahvil getirisinin %15.43 oranda olduğu görülmektedir. 2023 yılının Mayıs ayında Swiss Re Afet tahvil endeksinin 2013'ten beri en yüksek getiri seviyesine ulaştığı görülmektedir.

Türkiye, coğrafi konumu nedeniyle çeşitli doğal afetlere maruz kalmakta ve ciddi kayıplarla karşılaşmaktadır. 2013-2022 yılları arasında Türkiye'de dikkat çeken afet tahvil ihracı örneklerinde tetikleme olarak depreme odaklanıldığı ve sadece 2013, 2015 ve 2020 yılları arasında afet tahvil ihraç edildiği görülmüştür. Buradan hareketle afet tahvillerinin Türkiye'deki finansal piyasalarda henüz tam anlamıyla gelişme kaydetmediği yorumunu ortaya çıkarmaktadır. Afet tahvillerinin popülerlik kazanamamasının başlıca nedenleri arasında, yatırımcılar arasında yeterince bilinmediği, yatırımcılar tarafından riskli bir yatırım aracı görülmesi, diğer finansal varlıklara göre daha karmaşık sözleşme unsurları içermesi olabilir.

Türkiye'de afet risk yönetiminde sigorta şirketleri ile devlet destekli kurumlar faaliyet gösterdiği bilinmektedir. Dolayısıyla afet tahvillerinin avantajları hakkında daha fazla

bilgilendirme yapılması farkındalık çalışmalarının artırılması önem arz etmektedir. Afet tahvillerine yönelik ilginin artırılabilmesi için bireylere ve kurumlara çeşitli projeler kapsamında afet bilinci farkındalığı oluşturulmalı ve afet finansman yönetimi için afet tahvillerine yönelik eğitim kampanyaları düzenlenmeli, uygun yönetmeliklerin oluşturulmasının sağlanması ile yatırımcıların güvenilir ortamda işlem yapabilmelerine zemin hazırlanmasının piyasa gelişimine katkı vereceği değerlendirilmektedir.

Türkiye bulunduğu jeopolitik konumdan dolayı oldukça sık şekilde karşılaşılan doğal afetlerin ülke ekonomisine, işletmelere ve bireylere oluşturacağı zararın en aza indirilmesi açısından afet tahvilleri piyasasının gelişimi önem arz etmektedir. 6 Şubat 2023 tarihinde Kahramanmaraş merkezli meydana gelen ve Türkiye’de yer alan 11 şehrin yanı sıra bölgede yer alan diğer ülkeleri de etkileyen yüzyılın felaketi olarak adlandırılmıştır. Meydana gelen depremin etkisi ile uzun yıllardır bilim adamlarının üzerinde önemle durduğu beklenen büyük Marmara Depremi ülke gündeminde oldukça yoğun olarak yer almaya devam etmektedir. Yaşanılan depremlerin ve bilim adamlarının çalışmaları neticesinde beklenen depremler ve doğal afetler vesilesiyle farkındalık çalışmalarına ve afet tahvillerinin ülkeler ekonomisine verdiği katkılara yönelik çalışmalara ağırlık verilmesi gerekmektedir. Gelecekte yapılacak çalışmalarda, afet tahvilleriyle ilgili olarak daha fazla araştırma yapılması bu doğrultuda önem arz etmektedir. Literatürde yapılan çalışmalar göz önünde bulundurulduğunda afet tahvili konusunda çalışmaların sınırlı olduğu görülmekte olup bu çalışma ile literatüre katkı sağlanması beklenmektedir.

ÖZET

Katılım bankacılığı geleneksel bankacılık sistemine alternatif olarak kurulmuştur. Katılım bankalarında tasarruf sahiplerinden toplanan fonlar, faizsizlik ilkesiyle, ortaklık ve ticaret gibi çeşitli yöntemlerle fon talep eden kişilere sunulmaktadır. Bankacılık sektörü dinamik ve yeniliklere hızlı bir şekilde uyum sağlayan sektörlerin başında gelmektedir. Gelişen ve değişen teknolojiye etkin bir şekilde adapte olan bankacılık sektöründe dijitalleşmenin etkisiyle müşteriler kesintisiz ve şubelere gitmeden internet desteği ile hizmet alabilmektedir. Katılım bankacılığı ürün ve hizmetlerinin dijitalleşmesi ile yeni nesil teknolojilerin bankacılık ürün ve hizmetlerinde kullanılması, müşteri deneyimlerinin iyileştirilmesi ve müşterilerin daha ulaşılabilir hizmetler alabilmesine yardımcı olmaktadır. Bankacılık sektöründe yer alan katılım bankalarının, rekabet ortamında avantaj elde edebilmeleri ve sektör içindeki pazar payını artırabilmeleri için bankacılık işlemlerinde dijital dönüşüme uyum sağlayarak sürdürülebilir gelişmeyi sağlamaları gerekmektedir. Bu çalışmanın amacı, Türkiye’de geleneksel bankacılık ve katılım bankacılığının dijital görünümü ortaya koymak ve dijitalleşme sürecinin yıllar içerisindeki gelişimini incelemektir. Dijital bankacılık verileri, içerik analiz yöntemi ile incelenmiştir. Araştırma sonucuna göre, yıllar içerisinde aktif müşteri sayılarında, toplam işlem hacminde ve uzaktan müşteri ediniminde artış gözlemlenmiştir. Yıllar içerisinde katılım bankası müşterilerin hizmet geçişlerinde dijital kanallara daha fazla yönelmeleri, katılım banka sektörünün müşteri deneyimlerini sürekli iyileştirme sağlamaları ve çeşitli kanallar ile daha ulaşılabilir bir hizmet anlayışına sahip oldukları görülmektedir. Teknolojik yenilikler ve dijitalleşmenin finansal ürün ve hizmetlerde kullanılması katılım bankacılığı sektörü açısından önem arz etmektedir. Gün geçtikçe dijitalleşmenin daha da arttığı dünyamızda 2025 yılında bankacılık pazarı içerisinde pazar payını %15 olarak hedefleyen katılım bankacılığı sektörünün müşterilerine sağladığı ürün ve hizmetlerde dijital unsurları etkin bir şekilde kullanılmasının sektörel büyümeye önemli katkılar sunacağı mülahaza edilmektedir. Ayrıca önümüzdeki on yılda ekonominin içerisinde doğrudan yer alacak olan bugünün genç bireylerinin beklentilerine yönelik dijital tabanlı hizmetlerin ve ürünlerin sunulması katılım bankalarının pazardaki payına olumlu bir etki yapacağı değerlendirilmektedir.

Anahtar Kelimeler: Bankacılık, Katılım Bankacılığı, Dijital Dönüşüm, Dijital Bankacılık

Digital Transformation in Participation Banking

ABSTRACT

Participation banking was established as an alternative to the traditional banking system. Funds collected from savers in participation banks are offered to people who request funds through various methods such as partnership and trade with the principle of interest-free. The banking sector is one of the dynamic and rapidly adapting sectors. With the effect of digitalization in the banking sector, which adapts effectively to the developing and changing technology, customers can receive service with internet support without interruption and without going to the branches. The digitalization of participation banking products and services and the use of new-generation technologies in banking products and services help improve customer experiences and provide customers with more accessible services. Participation banks in the banking sector need to ensure sustainable development by adapting to digital transformation in banking transactions to gain an advantage in the competitive environment and increase their market share in the sector. This study aims to reveal the digital view of traditional banking and participation banking in Turkey and to examine the development of the digitalization process over the years. Digital banking data were analyzed by content analysis. According to the results of the research, an increase has been observed in the number of active customers, total transaction volume, and remote customer acquisition over the years. Over the years, it has been observed that participation bank customers have turned to digital channels more in their service transitions, the participation bank sector has continuously improved their customer experience, and they have a more accessible service approach through various channels. The use of technological innovations and digitalization in financial products and services is important for the participation banking sector. In a world where digitalization is increasing day by day, it is considered that the effective use of digital elements in the products and services provided by the participation banking sector, which aims to have a market share of 15% in the banking market in 2025, will make significant contributions to the sectoral growth. In addition, it is considered that the provision of digital-based services and products for the expectations of today's young individuals, who will be directly involved in the economy in the next ten years, will have a positive impact on the market share of participation banks.

Keywords: Banking, Participation Banking, Digital Transformation, Digital Banking, Financial Services Marketing

GİRİŞ

Dijital dönüşüm, birçok sektörde olduğu gibi bankacılık sektöründe de önemli değişikliklere neden olmaktadır. Özellikle COVID-19 salgını bankacılık sektöründe dijital dönüşümü hızlandırmıştır. Salgının etkisiyle, tüketiciler fiziki olarak bankalardan hizmet almak yerine dijital kanallar yoluyla işlemlerini gerçekleştirmişlerdir. Bu süre zarfında bankalar birçok dijital uygulamaları müşterilerine sunarak daha fazla erişilebilir ve iyi müşteri deneyimi sağlamışlardır. Bankacılık Düzenleme ve Denetleme Kurumunun (BDDK) 2021 yılında yayınladığı “Uzaktan Müşteri Edinimi” düzenlemesi ile dijital bankaların iş modelinin fizibilitesinin de arttığı görülmektedir.

Son yıllarda bankacılık sektör temsilcilerinin ve tüketicilerin finansal teknolojilere (FinTech) ilgisinin artması ile ürün ve hizmetlerde değişikliğe gidildiği görülmüştür. Teknolojik gelişmelere uyum sağlayan bankaların giderek müşteri portföylerini genişlettiği ve bu doğrultuda pazar paylarını da arttırdıkları görülürken teknolojik alanda değişime ayak uyduramayan bankaların ise pazar paylarında azalmalar olabileceği düşünülmektedir. Bu çalışmada Türkiye’de geleneksel bankacılık ve katılım bankacılığının dijital görünümünü ortaya koymak ve dijitalleşme sürecinin yıllar içerisindeki gelişiminin incelenmesi amaçlanmıştır. Çalışma kapsamında bankacılık sektöründeki dijital gelişim ve dönüşümün ortaya konulmasıyla sektörün gelişimine ve özellikle katılım bankacılığı sektörünün bankacılık sektörü içerisindeki pazar payını arttırmaya katkı sağlayacağı düşünülmektedir. Katılım bankacılığının dijitalleşmesi alanında literatürde oldukça kısıtlı oranda çalışma yer almaktadır. Bu kapsamda çalışmanın bankacılık ve finans alanındaki literatüre ve özellikle katılım bankacılığı literatürüne de katkı sağlaması hedeflenmektedir.

1. KAVRAMSAL ÇERÇEVE

1.1 Dijital Bankacılık

Teknolojik gelişmeler, finansal hizmetlerin işlem görme şeklini değiştirmektedir (Shin vd., 2020). Bankalar son yıllarda hem maliyetleri azaltma amaçlı hem de müşteri deneyimlerini iyileştirme amacıyla teknolojik yatırımlara hız vermektedir (Sarel ve Marmorstein, 2003). Bilgi teknolojileri alanında yaşanan büyük değişimler ve gelişmeler bankacılık sektöründen hizmet alan bireyler için birer hizmet deneyimine dönüşmektedir (Chauhan vd., 2022). Teknolojik gelişmeler ve hızla büyüyen dijitalleşme trendi bankaların geleneksel banka anlayışından vazgeçmelerini ve dijitalleşmeyi bünyelerine entegre etmesini sağlamaktadır (Beybur, 2022: 292).

Bankalar, işletme maliyetlerini düşürme, kârlılık seviyelerini artırma, ulaşılabilir hizmet üretimi ve kaliteli hizmet sunmak amaçlarıyla teknolojinin sağladığı imkânlar ölçüsünde ATM, mobil bankacılık, internet bankacılığı ve dijital bankacılık gibi unsurlarla müşterilerine dijital bankacılık hizmetleri sunmaktadır (Sarel ve Marmorstein, 2003).

Dijital bankacılık, bankalardan alınan birçok hizmetin (fatura ödemesi, yatırım işlemleri vb.) internet desteği ile çevrimiçi platformlar aracılığı ile üstlenilmesi anlamına gelmektedir (Windasari vd., 2022). Bir başka ifade ile dijital bankacılık, bankacılık işlemlerinin sorunsuz bir şekilde gerçekleşmesi için teknolojinin sağladığı avantajlar ile sorunsuz, erişilebilir, sürdürülebilir olarak teknolojik alt yapılar ile kullanılması şeklinde ifade edilebilir. Dijital bankacılık geleneksel bankacılık hizmetlerinin aksine kullanıcıya daha çok kişiselleştirilmiş hizmet sunma fırsatı vermektedir (Sardana ve Singhanian, 2018: 28). Dijital bankalar tarihsel olarak ilk 1995 yılında Amerika Birleşik Devletleri’nde ortaya çıkmış ve aynı yıl hemen ardından Avrupa’da görülmeye başlamıştır (Shin vd., 2020). 2000’li yıllarda internet

kullanımının hızlı bir şekilde artması bankaları internet siteleri kurmaya teşvik etmiş ve internet bankacılığı hizmeti müşterilerin kullanımına sunulmuştur. 2006 yılında akıllı telefonların kullanılmaya başlaması bankacılık hizmetlerinin dijitalleşmesi açısından bir devrim niteliğinde olmuş ve bankalar tarafından mobil bankacılık uygulamaları geliştirilmeye, müşterilere sunulmaya başlamıştır (Beybur, 2022: 292).

Finans sektörünün yapısı bankacılık sektörünün dijitalleşmeyi benimsemesi ile bir değişim sergilemiştir. Banka müşterileri çeşitli dijital mecralar ve uygulamalar ile bankacılık işlemlerini çevrimiçi olarak gerçekleştirmeye yönelik özgüven sahibi olmaya başlamıştır (Alnemer, 2022). Otomasyon, mobilizasyon, yapay zeka ve dijitalleşme ilerleyen zamanda müşterilerin günlük kullanım alışkanlıkları haline gelmeye başlayarak elektronik ticaretinde yapısını değiştirmektedir (Shaikh vd., 2020). İnternet ve mobilin küresel yayılımı ve kullanımı, yeni bankacılık ve finansal ödeme biçimlerinin geliştirilmesine katkı sağlamaktadır (Leong vd., 2020). Bankacılık sektöründeki hizmetlerin sunumunda, özellikle dijital ve mobil bankacılık hizmetlerinin büyümesinde de önemli değişiklikler görülmüştür (Alkhowaiter, 2020).

Bankaların pazarlama stratejilerine uygun olarak dijitalleşmenin etkisi ile şubelerin de dijital yetenekleri kazanması ve banka personelinin de dijital yetkinliklerle donatılmış olması önem arz etmektedir (Kaur vd., 2021). Geleneksel bankacılık anlayışının değişerek daha dijital, daha erişebilir ve yeni nesil bankacılık anlayışının geliştiği günümüzde yapay zekâ teknolojilerinin de oldukça yoğun yer aldığı görülmektedir. Bu sayede bankacılık hizmetleri kullanıcı dostu olmanın yanı sıra, zaman tasarrufu sağlayan ve müşterilerin isteği doğrultusunda gelişen hizmetler haline gelmektedir (Ahmed ve Sur, 2023). Ayrıca dijital bankacılığın yaygınlaşması ile bankaların maliyetlerinin azalması, müşteri davranışlarını tahmin edebilme, yeni tüketicilere ulaşma, müşteri sadakatini artırma ve faaliyet sürdürülebilirliği gibi avantajlar artarak devam etmektedir (Shin vd., 2020).

Bankacılık hizmet sağlayıcıları, yapılan faaliyetlerin ve gerçekleşen hizmetler sonucu oluşan finansal sonuçların dijital bankacılığın müşteriler üzerindeki etkisine göre de analiz edebilmektedir (Chauhan vd., 2022). Shin vd. (2020) çalışmalarında, bankacılık hizmeti kullanılarak finansal faydaların ve yararlı bilgilerin ne ölçüde elde edilebileceğini ifade eden yararlılık araçları dijital banka kullanıcıları arasında geleneksel banka kullanıcılarından daha yüksek olduğu tespit edilmiştir. İslamoğlu ve Bayrak (2022) çalışmalarında, banka ve finans kuruluşlarının müşterilerine sunduğu ürün ve hizmetlere yönelik gerçekleştirmiş olduğu yeniliklere dair müşterilerin bu hizmetleri daha fazla talep etmelerine neden olduğu sonucuna ulaşılmıştır. Bu bağlamda yapılan çalışmada, Türkiye Bankalar Birliği'ne kayıtlı bankalardan elde edilen finansal veriler kullanılarak, dijital bankacılık hizmetlerinin bankaların finansal performansına etkisi zaman serisi analizi ile incelenmiştir. Araştırma kapsamında Türkiye'de bankaların sunduğu dijital bankacılık hizmetlerinin, bankaların finansal performanslarını pozitif yönlü etkilediği sonucuna ulaşılmıştır. Ahmed ve Sur (2023) çalışmalarında, dijital bankacılık hizmetlerinin daha iyi sağlanmasına yönelik ihtiyacı rasyonelleştirerek, bankaların dijital dönüşümlerini nakitsiz bir ekonomiye doğru ilerletmek için stratejilerini yenilemeleri gerektiğini savunmuştur.

1.2 Katılım Bankacılığında Dijitalleşme Süreci

Türkiye'de bankacılık sektöründe kalkınma ve yatırım bankaları, mevduat bankaları ve katılım bankaları şeklinde üç bankacılık türü yer almaktadır (Bankacılık Kanunu, 2005). Mevduat bankalarına alternatif olarak kurulan katılım bankaları, faizsizlik prensibi ile İslam hukuku ilkeleriyle fon toplayan ve fon kullandıran kurumlardır (Odeduntan ve Adewale, 2015: 2). Mart 2023 dönemi itibarıyla Türk Bankacılık sektöründe 35 adet mevduat bankası, 6 adet katılım

bankası ve 16 adet kalkınma ve yatırım bankası olmak üzere toplamda 57 adet banka bulunmaktadır (BDDK, 2023). Katılım bankaları arasında Türkiye Finans, Albaraka Türk, Kuveyt Türk, Ziraat Katılım, Vakıf Katılım ve Emlak Katılım yer almaktadır. Ayrıca 2023 yılında faaliyet izni verilen 2 adet şubesiz dijital banka T.O.M. Katılım ve Hayat Finans Katılım bankaları da faaliyetlerine başladığı anda katılım bankaları arasında yerini alacaktır (TKBB, 2023). Mart 2023 dönemi itibarıyla bankacılık sektörünün toplam aktiflerine göre, mevduat bankaları %86, kalkınma ve yatırım bankaları %6 ve katılım bankaları %8 oranında pazar payına sahiptir (BDDK, 2023). Katılım bankacılığı sektörü gelecek iki yıl içerisinde bankacılık sektörü içerisindeki pazar payını %15 seviyelerine çıkartmayı hedeflemektedir (TKBB, 2023). Ortaya konulan hedefe ulaşmak için katılım bankacılığı sektörünün hızla gelişen teknolojiye uyum sağlaması önem arz etmektedir. Türkiye’de faaliyet gösteren katılım bankalarının 2022 yılı faaliyet raporlarında dijitalleşme unsuru oldukça yoğun bir şekilde yer almaktadır. Aşağıda Türkiye’de faaliyet gösteren Katılım bankalarının 2022 yılı faaliyet raporlarında yer alan dijitalleşme çalışmaları her bir banka için ayrı ayrı yer almaktadır.

1.2.1. Albaraka Türk Katılım Bankası

Albaraka Türk Katılım Bankasının 2022 yılı faaliyet raporunda bir önceki yıla oranla internet bankacılığı müşteri sayısında %21 ve mobil bankacılık aktif kullanıcı müşteri sayısında %23 oranında bir artışın olduğu tespit edilmiştir. Ayrıca dijital kanallar aracılığı ile kâğıtsız işlem adedi 36 milyon seviyesini aştığı tespit edilmiştir. Uzaktan müşteri kazanım sayısı bir önceki yıla oranla dikkat çekici bir büyüme ile %155 büyümüştür. Bu büyümede Albaraka Türk Bankası’nın müşterilerine şubeye gitme zorunluluğu olmadan, dijital kanallar vasıtası ile sunduğu hizmetlerden olan Pratik Finansman Kart ve yine kurumsal müşterine sunduğu çevrimiçi teminat mektuplarının etkisi olduğu yorumlanabilir. Albaraka Türk Bankası bünyesinde gerçekleşen günlük işlemlerin %90’ı dijital kanallardan, kartlardan ve pos makineleri üzerinden gerçekleştirilmiştir. Kart ve pos işlemleri haricinde salt olarak dijital kanallardan gerçekleştirilen işlemlerin günlük işlemlere oranı ise %80’dir. Albaraka Türk Katılım Bankasının müşterilerine sunduğu sanal asistan olan “Albaraka Asistan”ın kullanımında %56, yanıtlanan soru sayısında %77 oranında artış tespit edilmiştir. Müşterilere sunulan dijital hizmetlerin yanı sıra Albaraka Türk Katılım Bankası personeline sunduğu hizmet içi eğitimlerde de dijitalleşmenin sunduğu avantajlardan yararlanmışır. 2022 yılında banka personeline sunulan eğitimlerin büyük bir kısmı (toplam eğitimlerin %70’i) çevrimiçi olarak gerçekleşmiştir (Albaraka Türk, 2022).

1.2.2. Kuveyt Türk Katılım Bankası

Kuweyt Türk Katılım Bankası 2022 yılı faaliyet raporu incelendiğinde, Kuveyt Türk Katılım Bankasının dijital yenilikleri bünyesine eklediği görülmektedir. 2021 yılında geliştirilen ve Türkiye’de bir ilk olarak 2022 yılında banka tarafından müşterilerine yönelik şubeye gitme ihtiyacı duyulmadan araç finansmanı sunulmaya başlamıştır. Geliştirilen bu uygulama ile banka müşterileri uçtan uca güvenlik önlemleriyle mobil uygulama aracılığı ile finansman kullanabilmektedir. 2022 yılı verilerine göre 2.5 milyonu aşkın müşteri Kuveyt Türk Bankası’nın dijital uygulamalarını kullanmıştır. Ayrıca 2022 yılı içerisinde bankanın dijital uygulamaları kullanan müşterin tüm aktif müşterilere oranı %90’ı aşmıştır. Banka hesabı açmak isteyen müşterilerin %25’i şubeye gitmeden müşteri temsilci ile görüntülü konuşma sağlayarak işlemlerini gerçekleştirmiştir. Dijitalleşmenin getirdiği yenilikler kapsamında bankanın pazarlama birimlerince gerçekleşen uygulamalarla teminat mektuplarının dijital uygulamalarla müşterilere sunulması sağlanmış ve bu sayede toplam mektup taleplerinin %90’ı dijital mecralar aracılığı ile gerçekleşmiştir. Yapay zekâ destekli çalışmalar kapsamında bankanın müşterilerine yönelik sunduğu dijital asistan uygulaması “Selim” ismiyle hizmet

vermektedir. “Selim” 2020 yılından itibaren bankanın dijital kanallarında, 2021 yılından itibaren bankanın Whatsapp İletişim birimlerinde ve 2022 yılından itibaren sesli yanıt sistemi olarak hizmet vermeye devam etmektedir. Yılda 10 milyon üzerinde müşterilerce sorulan soruları yanıtlayan dijital asistan üzerinde gerçekleştirilen yenilikler 2020 yılından başlayarak görülen değişim ve gelişim ile bankacılık sektörünün dijital gelişmelere yönelik dinamik olarak çalışmalar yaptığının bir göstergesi olarak değerlendirilmektedir (Kuveyt Türk, 2022).

1.2.3. Türkiye Finans Katılım Bankası

Türkiye Finans Katılım Bankası'nın 2022 yılı faaliyet raporunda dijitalleşmeye yönelik çalışmaları oldukça geniş yer tutmaktadır. Türkiye Finans Katılım Bankası dijitalleşme sürecinde 2022 yılında faaliyet raporunda gelişmeler incelendiğinde, banka yatırım ürünlerinde dijital kanalları kullanan müşteri sayısını 2021 yılına oranla %20 civarında arttırmıştır. Banka müşterilerine sunulan ihtiyaç finansmanı ve ekstra limit ürünlerinde dijital mecralardaki limit 100.000 TL'ye çıkartılmış ve bu sayede müşterilerin dijital kanalları kullanımları teşvik edilmiştir. Türkiye Finans tarafından müşterilere sunulan yurt dışı hisse senetleri ve yatırım fonların dijital mecralarda kullanımının artırılması amacıyla ürün hattı genişletilerek Katılım hesabı ile Sukuk ürünü “Bol Kepçe Hesap” adıyla dijital mecralarda yoğun bir talep görmüştür. 2021 yılına oranla uzaktan dijital müşteri başvuru sayısını %20 oranında arttıran banka, mobil şubelerden gerçekleşen finansal işlem hacmini %48 ve internet şubelerden gerçekleşen işlem hacmini de %16 oranında arttırmıştır. Dijital Çek uygulaması hayata geçirilmiş olup bu uygulama ile işletme sahibi müşterilerin çek tahsilat, iade ve erteleme işlemleri dijital mecralara taşınmıştır (Türkiye Finans, 2022).

1.2.4. Ziraat Katılım Bankası

Kamu katılım bankaları arasında yer alan Ziraat Katılım Bankası'nın dijitalleşme odaklı 2022 faaliyetleri incelendiğinde, bankacılık işlemlerinde müşterilerin fiziki şubeye gitmesine gerek kalmadan dijital belge onay seçeneğini hizmete aldığı görülmektedir. Ayrıca banka anında finansman adıyla hizmete aldığı uygulama ile müşterilerine günün her saati şubeye gitmeksizin anlaşmalı mağazalardan aldıkları ürünlere yönelik dijital kanallar aracılığı ile finansal destek sağlamıştır. 2015 yılında faaliyetlerine başlayan Ziraat Katılım Bankası 2022 yılında 21.015 adet mobil kullanıcıya ulaşmıştır. Mobil kullanıcı sayısı 2021 yılına oranla 2022 yılında %16 civarında artmıştır. Ayrıca 2022 yılı içerisinde bankaya 47.668 adet görüntülü görüşme talebi gelmiş ve bu görüşmelerin büyük bir çoğunluğu müşteri temsilcisi ile görüntülü görüşme yaparak işlemlerin sonuçlandırılması şeklinde sona ermiştir (Ziraat Katılım, 2022).

1.2.5. Vakıf Katılım Bankası

Vakıf Katılım Bankası dijitalleşme sürecinde 2022 yılında faaliyet raporunda gelişmeler incelendiğinde, Vakıf Katılım Bankası 2021 yılına oranla dijital müşteri kazanım sayısını %25 oranında arttırmıştır. Bankanın çalışmaları sonucu geliştirmiş olduğu Garantili Fon Transferi ile de 2022 yılı sonunda 1 Milyar TL GFT hacmine ulaşılmıştır. Vakıf Katılım Bankası bünyesinde geliştirilen dijitalleşme çalışmaları sonucu dijital müşteri oranını genel müşteri oranına göre %72 seviyelerine taşımıştır. Bu doğrultuda Vakıf Katılım Bankası aracılığıyla gerçekleştirilen para transferlerinin %94'ü, döviz alım satım işlemlerinin %83,5'i ve kıymetli maden işlemlerinin %95'i dijital mecralar kullanılarak gerçekleştirilmiştir. Ayrıca bankanın internet bankacılığı müşteri sayısı 80 bin civarına yaklaşırken, mobil bankacılık müşteri sayısı da 330 bin civarında olduğu görülmüştür (Vakıf Katılım, 2022).

1.2.6. Türkiye Emlak Katılım Bankası

Emlak Katılım Bankası dijitalleşme sürecinde 2022 yılında faaliyet raporunda gelişmeler incelendiğinde, banka faaliyetlerinde dijital mecralara yönelik geliştirmiş olduğu iyileştirme ve gelişmeler sonucunda mobil bankacılık üzerinden şubeye gitmeye gerek kalmadan müşteri kazanım oranını bir önceki yıla oranla %101 civarında bir artış sağlamıştır. 2022 yılında, dijital kanal müşteri sayısı bir önceki yıla oranla %93 artmış, mobil uygulamaları aktif olarak kullanan müşteri sayısının toplam dijital aktif müşteri sayısı içerisindeki payı ise %90 seviyesine yükselmiştir. Bankanın dijital ödeme aracı Emlak Katılım Cep POS'un müşteri sayısı %62 oranında artarken, işlem hacmi bir önceki yıla göre %440 oranında artmış, komisyon gelirinde ise banka 5 kattan fazla artışa ulaşmıştır. Bankanın bireysel müşteri ediniminin %9'unu uzaktan görüntülü görüşme ile elde ettiği görülmektedir (Emlak Katılım, 2022).

1.3. Dijital Bankacılık İzni Alan Kurumlar

Şubesiz Dijital bankaların Türkiye'de öncüsü her ne kadar "Enpara.com" olarak bilirse de QNB Finansbank bünyesinde kurulması nedeniyle şubesiz dijital banka olarak (Neobank) değerlendirilememektedir. "Enpara.com" 2012 yılında QNB Finansbank tarafından kurulan, tüm hizmetlerini sadece dijital kanallar üzerinden sunan ve şubesiz olmasının kendisine sağladığı maliyet avantajını masrafsız ve avantajlı bankacılık anlayışıyla müşterileriyle paylaşan bir dijital bankacılık uygulamasıdır (QNB Finansbank, 2023).

2021 yılında, Bankacılık Düzenleme ve Denetleme Kurulunun (BDDK) tarafından bankalarca kullanılacak uzaktan kimlik tespiti yöntemlerine ve elektronik ortamda sözleşme ilişkisinin kurulmasına dair yönetmeliğin yürürlüğe girmesiyle şubesiz dijital bankacılığın temellerinin atıldığı söylenebilir. Yönetmeliğin amacı, "*bankalar tarafından yeni müşteri kazanımında kullanılabilecek uzaktan kimlik tespiti yöntemlerine ve müşteri kimliğinin tespit edilmesini müteakip sunulacak bankacılık hizmetlerine yönelik olarak mesafeli olsun olmasın bir bilişim veya elektronik haberleşme cihazı üzerinden yazılı şeklin yerine geçecek şekilde ya da mesafeli olarak sözleşme ilişkisinin kurulmasına yönelik usul ve esasları düzenlemektir*" (<https://www.resmigazete.gov.tr/eskiler/2021/04/20210401-7.htm>). Yönetmelik kapsamında, dijital banka kurma hazırlıklarının başladığı söylenebilir. Ayrıca yine 29 Aralık 2021 tarihinde dijital bankaların faaliyet esasları ile servis modeli bankacılığı hakkında yönetmelik yürürlüğe girmiştir. Bu yönetmelik ile de "sadece elektronik bankacılık hizmetleri dağıtım kanalları üzerinden hizmet veren şubesiz bankaların faaliyetlerine ve bankacılık hizmetlerinin finansal teknoloji şirketleri ve diğer işletmelere bir servis modeli olarak sunulabilmesine ilişkin usul ve esasların belirlenmesi amaçlanmıştır (<https://www.mevzuat.gov.tr>).

Türkiye'de, 2021 yılında açıklanan Ekonomi Reformları Eylem Planı ile Dijital (Şubesiz) Bankacılık lisanslamalarına (uygulamalarına) olanak sağlanacağı belirtilmiştir (<https://ms.hmb.gov.tr/uploads/2021/03/Ekonomi-Reform-Takvimi.pdf>). Bu kapsamda dijital bankacılık faaliyeti yapmak isteyen kuruluşlar faaliyet izini almak üzere Bankacılık Düzenleme ve Denetleme Kurumuna başvuru yapmaya başlamıştır. Bu kapsamda faaliyet izni almaya hak kazanan bankalar arasında; Hayat Finans Katılım Bankası, 2022 yılında kuruluş izni alan ve gerekli şartları yerine getirmesinin ardından, Hayat Finans Katılım Bankası Türkiye'nin ilk şubesiz dijital bankası olma özelliği taşıyan Hayat Finans Katılım Bankası 23 Mart 2023'te Bankacılık Düzenleme ve Denetleme Kurumu'ndan faaliyet izni almıştır (<https://www.bddk.org.tr/Mevzuat/Liste/55>). %100 Türk sermayesi ile kurulan Türkiye'nin ilk dijital bankası olma özelliği taşıyan Hayat Finans Katılım Bankası'nın 2023 yılının son çeyreğinde internet alt yapısı ile hizmet vermeye hazır olacağı beklenmektedir (Hayat Finans Katılım, 2023).

T.O.M. Katılım Bankası, Türkiye’de dijital bankacılık faaliyet izni almayı hak eden ikinci kuruluş T.O.M. Katılım bankasıdır. 31 Mart 2023 itibarıyla BDDK tarafından faaliyet izni resmi olarak alınmıştır (<https://www.bddk.org.tr/Mevzuat/Liste/55>). “*Şubesiz, kolay ve şeffaf bankacılık ile her ihtiyacınızda yanınızdayız!*” mottosuyla tanıtımlarına başlayan banka taksitli alışveriş kredisi, faizsiz kredi çözümleri, katılım bankacılığı hesap hizmetleri, döviz-altın işlemleri, ücretsiz kurum faturaları ödeme ve para transferlerinin yapılacağını duyurmuştur (T.O.M Katılım, 2023).

Bankacılık Düzenleme ve Denetleme Kurulu tarafından faaliyet izni verilen bu iki banka haricinde şubesiz dijital bankacılık faaliyeti yapmak üzere BDDK tarafından kuruluş izni verilen bankalarda bulunmaktadır. Bu bankalar kuruluş izinlerinin ardından gerekli şartları yerine getirmesi durumunda faaliyet izni alarak çalışmalarına başlayabileceklerdir. Kuruluş izni verilen dijital bankalar; “Kasa Katılım Bankası”, “Fups Bankası” ve “Ziraat Dinamik Bankası’dır (<https://www.bddk.org.tr/Mevzuat/Liste/55>).

2. ARAŞTIRMA YÖNTEMİ

Çalışmanın amacı, Türkiye’de geleneksel bankacılık ve katılım bankacılığının dijital görünümü ortaya koymak ve dijitalleşme sürecinin yıllar içerisindeki gelişimini incelemektir. Türkiye Katılım Bankalar Birliği ve Türkiye Bankalar Birliği ile Bankacılık Düzenleme ve Denetleme Kurumu internet sitesinde yer alan dijital bankacılık ve finansal verilerin yıllar içerisindeki değişimi ve gelişimi değerlendirilmektedir. Dijital bankacılık ve finansal veriler içerik analiz yöntemi ile incelenmiştir. Araştırmanın örneklemini Türkiye’de faaliyet gösteren mevduat ve katılım bankaları oluşturmakta ve dönem olarak ise 2020-2022 yılları kapsama alınmıştır. Kalkınma ve yatırım bankaları verilere dâhil edilmemiştir.

3. BULGULAR

3.1. Dünya’da ve Türkiye’de Dijitalleşme

Dünya nüfusu 2023 yılında 8 milyar kişiyi aşmıştır. Türkiye nüfusu ise 85.59 milyon olarak tespit edilmiştir. Dijitalleşmenin her geçen gün yoğun olarak artmaya devam ettiği dünyamızda dünya geneli internet kullanan birey sayısı 5 milyarı aşmış ve bu dünya toplam nüfusuna oranı %65 seviyelerine yaklaşmıştır. Türkiye’de nüfusun %83’ü internet kullanıcı haline gelmiştir. Yapılan araştırmalar 16-64 yaş arasındaki internet kullanıcılarının interneti kullanmalarının temel nedenleri arasında finans ve tasarruf yönetiminin oranının %42 civarında olduğunu göstermektedir. 2023 yılının Şubat ayında “We Are Social ve Meltwater” ortaklığıyla hazırlanan Dijital 2023 Türkiye raporunda; 15 yaş üstü tüketicilerin finansal hizmetleri kullanma oranı incelendiğinde; finansal bir kuruluşta hesabı olan bireyler %73.4’tür. Aynı yaş aralığında kredi kartı sahipleri %32.6, banka kart sahipleri %58.9, mobil ödeme hesabı olanların oranı %18.3, internet üzerinden satın alma işlemleri yapanlar oranı %30.3 ve internetten fatura ödeyenlerin oranının %42.1 olduğu sonucuna ulaşılmıştır (Türkiye Dijital, 2023). Bu doğrultuda dijitalleşmenin finans ve bankacılık sektörünü doğrudan etkilediği değerlendirilebilir.

3.2. Dijital Bankacılık Verileri

2023 yılı verilerine göre Türkiye’de toplam 57 adet bankanın faaliyet gösterdiği bilinmektedir. 57 adet bankanın içerisinde 35 adet mevduat bankası, 6 adet katılım bankası ve 16 adet kalkınma ve yatırım bankası yer almaktadır (BDDK, 2023). Son yıllarda teknoloji alanında görülen ilerleme sonucu dijitalleşme Dünya genelinde birçok alanda etkisini göstermiş ve bankacılık sektörü de dijitalleşmenin etkisi ile bir değişim içine girmiştir. Değişen müşteri davranışlarından hareketle bankalar dijitalleşen dünyada şube sayılarını ve çalışan sayılarını azaltarak kârı maksimize etme yoluna gitmişlerdir. Avrupa’da banka şube sayısı 2016 yılından

2023 yılına kadar %25 oranında azalmıştır. Bu azalmanın yanı sıra personel sayısı da %12 oranında gerilemesine karşın bankaların yıllık iş hacimlerinde %25 bir yükselme olduğu tespit edilmiştir (Kearney, 2022). Grafik 1’de bankaların personel sayıları, şube sayıları ve ATM sayıları gösterilmektedir.

Grafik-1: Bankaların Şube, Personel ve ATM Sayıları

Kaynak: BDDK (2023) internet sayfasından elde edilen veriler yazarlar tarafından derlenmiştir.

Grafik 1’de görüldüğü üzere, katılım bankaları ve mevduat bankaları yıllar içerisinde yurt içi, yurt dışı, çevrimiçi sisteme dâhil şube sayısı toplamında değişiklik görünmüş ve özellikle mevduat bankalarının şube sayılarında bir azalışın olduğu görülmektedir. Mevduat bankalarının yıllar içerisinde yurt içi ve yurt dışı personel sayısında ve ATM sayısında 2021 yılında bir önceki yıla göre azalma dikkat çekicidir. Katılım bankalarında ise yıllar içerisinde personel sayısının artması pazar payını büyütme çabalarından kaynaklandığı şeklinde ifade edilebilir. Yapılan araştırmalar göz önünde bulundurulduğunda, bankaların faaliyetlerinde dijitalleşmenin artmasıyla şubeleşme hızının azaldığı ve mevcut şube sayılarında, personel ve ATM sayılarında azaltma yoluna gidildiği değerlendirilebilir.

Grafik 2’de katılım bankacılığı sektöründe 2020-4.Dönem, 2021-4.Dönem ve 2022-4.Dönem arasında Dijital Bankacılık Müşteri Sayıları gösterilmektedir. Grafikte yer alan istatistikler, Türkiye Bankalar Birliği üyesi ve internet bankacılığı hizmeti veren 27 banka ile mobil bankacılık hizmeti veren 21 banka verisinden oluşmaktadır. Katılım bankaları verileri ise, Türkiye Katılım Bankalar Birliği üyesi ve internet bankacılığı hizmeti veren ve mobil bankacılık hizmeti veren 6 katılım bankası verilerinden oluşmaktadır.

Grafik-2: Bankaların Aktif Dijital Müşteri Sayısı (Milyon)

Kaynak: Veriler TKBB ve TBB (2023) internet adresinden alınmıştır.

Grafik 2’de görüldüğü üzere, 2020 yılı 4.dönemde katılım bankacılığı sisteminin aktif dijital müşteri sayısı yaklaşık 3 milyon iken geleneksel bankacılık sisteminin yaklaşık 65 milyona ulaştığı görülmektedir. 2021 yılı 4.dönemde katılım bankacılığı sisteminin aktif dijital müşteri sayısı yaklaşık 4 milyon seviyelerinde iken geleneksel bankacılık sisteminin yaklaşık 77

milyona ulaştığı görülmektedir. 2022 yılı 4.dönemde katılım bankacılığı sisteminin aktif dijital müşteri sayısı yaklaşık 5 milyon iken geleneksel bankacılık sisteminin yaklaşık 94 milyona ulaştığı görülmektedir. Bu sonuçlar göz önünde bulundurulduğunda, hem geleneksel bankacılık sisteminin hem katılım bankacılığı sisteminin aktif dijital müşteri sayıları yıllar içerisinde artma eğiliminde olduğu görülmüştür.

Tablo 1’de bankacılık sektöründe 2020-4.Dönem, 2021-4.Dönem ve 2022.4-Dönem arasında Dijital Bankacılık istatistiklerinin yıllar içerisindeki değişimi gösterilmektedir.

Tablo-1: Dijital Bankacılık İstatistiklerinin Yıllar İçerisindeki Değişimi

	Yıllar	Sadece İnternet Bankacılığı Kullanan	Sektörün Bir Önceki Yıla Göre Büyüme Oranı (%)	Sadece Mobil Bankacılık Kullanan	Önceki Yıla Göre Büyüme Oranı (%)	Hem İnternet Hem Mobil Bankacılık Kullanan	Önceki Yıla Göre Büyüme Oranı (%)
KB	2020	242.949	-	2.759.447	-	294.614	-
	2021	221.717	-9	3.474.309	25	347.137	18
	2022	200.400	-10	4.226.099	22	369.121	6
GB	2020	3.177.000	-	53.234.000	-	9.267.000	-
	2021	2.764.000	-13	65.954.000	24	9.214.000	-0.5
	2022	2.301.000	-17	82.304.000	25	9.786.000	6

Kaynak: Veriler TKBB ve TBB (2023) internet adresinden yazarlar tarafından derlenmiştir.

Tablo 1’de 2021 yılında katılım bankalarında sadece internet bankacılığını kullananların sayısı bir önceki yıla göre %9 azalış, 2022 yılında ise %10 oranında azalış göstermiştir. 2021 yılında mevduat bankalarında sadece internet bankacılığını kullananların sayısı bir önceki yıla göre %13 azalış, 2022 yılında ise %17 oranında bir azalışın olduğu tespit edilmiştir. 2021 yılında katılım bankalarında sadece mobil bankacılık faaliyetlerini kullananların sayısı bir önceki yıla göre %25 artış, 2022 yılında ise %22 oranında bir artış tespit edilmiştir. 2021 yılında mevduat bankalarında sadece mobil bankacılığı kullananların sayısı bir önceki yıla göre %24 oranında artış, 2022 yılında ise %25 oranında artış tespit edilmiştir. 2021 yılında katılım bankalarında hem internet hem mobil bankacılığı kullananların sayısı bir önceki yıla göre %18 artış, 2022 yılında ise %6 bir artış tespit edilmiştir. 2021 yılında mevduat bankalarında hem internet hem mobil bankacılığı kullananların sayısı bir önceki yıla göre %0,5 azalış, 2022 yılında ise %6 bir artış tespit edilmiştir. İki bankacılık türünde de dijitalleşme trendinin aynı oranlarda olduğu görülmektedir.

Mevduat bankalarının ve katılım bankalarının dönem net kârları Grafik 3’te gösterilmektedir.

Grafik-3: Bankaların Dönem Net Kârı (Milyon)

Kaynak: Veriler BDDK (2023) internet adresinden alınmıştır.

<https://www.bddk.org.tr/BultenAylik>

Grafik 3'te görüldüğü üzere, mevduat bankalarının ve katılım bankalarının dönem net kârlarında artış olduğu gözlemlenmiştir. Özellikle dijitalleşmenin etkisiyle bankaların maliyetlerinde düşmeler ve kârlılıklarında artışların bu duruma katkı sağladığı şeklinde bir yorum yapmak mümkündür. Ulusoy ve Demirel, (2021) çalışmalarında da dijitalleşme ve kârlılık arasında pozitif bir ilişkinin varlığını ortaya koymuşlardır.

3.3.Uzaktan Müşteri Edinim Verileri

Bankalar teknolojinin gelişmesinin sağladığı avantajlar ile müşterilerinin banka şubesine gitmesine gerek kalmadan görüntülü görüşme gibi imkânlarla uzaktan müşteri kazanma yollarını tercih etmektedir.

Grafik 4'te 2022 yılını kapsayan TBB ait uzaktan müşteri edinim verileri gösterilmektedir.

Grafik 4: 2022 Yılı Uzaktan Müşteri Edinim Verileri

Kaynak: TBB (2023) internet adresinden alınmıştır.

<https://www.tbb.org.tr/Content/Upload/istatistikraporlar>

Grafik 4'te 2022 yılı uzaktan müşteri başvuru sayısının toplam 11.114.772 olduğu görülmektedir. Uzaktan en yüksek başvuru sayısının 1.409.652 ile nisan ayında gerçekleştiği görülmektedir. Dijitalleşmenin sağlamış olduğu katkılar neticesinde bankaların daha az maliyet ve iş gücü ile uzaktan müşteri edinimlerini sağladığı ve müşterinin de bu duruma uyum sağladığını söylemek mümkündür.

Grafik 5'de 2022 yılını kapsayan TKBB ait uzaktan müşteri edinim verileri gösterilmektedir.

Grafik 5: 2022 Yılı Uzaktan Müşteri Edinim Verileri

Kaynak: TKBB (2023) internet adresinden alınmıştır.

<https://tkbb.org.tr/veri/istatistikler>

Grafik 5’de 2022 yılı uzaktan müşteri edinimi başvuru sayısı toplam 881.186 iken en fazla olan ay Aralık ayında ile 63.402 adet başvurunun gerçekleştiği görülmektedir. Uzaktan başarılı sonuçlandırılan toplam müşteri sayısı 387.048 iken en fazla ay Aralık ayı 29.385 iken, şubeden başarılı sonuçlandırılan toplam müşteri sayısı 1.841.602 ve en fazla ay Eylül ayında 101.049 olduğu görülmektedir. Oransal olarak bakıldığında uzaktan başvuruların daha olumlu sonuçlandığı görülmektedir.

SONUÇ

Bankaların, dijital dönüşüm sürecinde müşterilerine daha iyi ürün ve hizmet verebilmek için yeni teknolojik uygulamaları rekabet edebilmek ve kârlılıklarını artırabilmek için kullanmaları fayda sağlayan bir unsurdur. Bankalar internet ve mobil bankacılık uygulamaları sayesinde müşterine daha düşük maliyetlerle ürün ve hizmet verebilmektedir. Ayrıca, bankalar uzaktan müşteri edinimi sayesinde müşteri portföyünü geliştirebilmekte, yapay zekâ ve blok zincir teknolojilerindeki gelişmeler sayesinde hızlı ve güvenilir işlem yapabilmektedir. Bu çalışmanın amacı, Türkiye’de geleneksel bankacılık ve katılım bankacılığının dijital görünümü ortaya koymak ve dijitalleşme sürecinin yıllar içerisindeki gelişimini incelemektir.

Araştırma sonucunda, 2023 yılında dünya genelinde internet kullanıcılarının nüfusa göre kullanım oranı %64.4 iken Türkiye’de internet kullanıcılarının nüfusa göre kullanım oranı %83.4 olduğu görülmektedir. Bu kullanıcıların interneti kullanmalarının temel nedenleri arasında %42.30 oranında finans ve tasarruf yönetimi olması bankacılık sektörü için önemli bir olgudur. 2023 yılında internet kullananların finans ve bankacılık sektöründe dijital ortamda ağırlıklı olarak işlem yaptıkları yorumundan hareketle bankaların potansiyel dijital müşteri sayıları göz önünde bulundurmaları ve bu müşteri kitlesine yönelik pazarlama stratejileri dizayn etmesinin önemli olduğu değerlendirilmektedir.

Dijitalleşme ile birlikte dünyada bankacılık sektöründe yaşanan gelişmelerde bankaların personel, şube, ATM sayılarında azalma trendine girdiği görülmüştür. Türkiye’de ise, bu durum sadece mevduat bankaları için geçerlidir. Mevduat bankaları yurt içi ve yurt dışı personel sayısı ve ATM sayısı toplamında özellikle 2021 yılında bir önceki yıla göre azalma eğiliminde iken, 2022 yılında az da olsa bir artışın olduğu tespit edilmiştir. Pandeminin etkisinin azalmasıyla 2022 yılında yine müşterilerin fiziki ortamda hizmet almayı tercih etmelerinin bu durumda etkisi olduğu ifade edilebilir. Katılım bankalarının sektör paylarının küçük olması ve

birçok bölgede şubeleşmeye gitmesi şube sayılarında, personel ve ATM sayılarındaki artışa neden olduğu söylenebilir.

2020-2022 yılları arasında hem geleneksel bankacılık sisteminin hem katılım bankacılığı sisteminin aktif dijital müşteri sayılarında dikkat çekici bir artışın olduğu görülmektedir. 2021 yılında katılım bankalarında sadece internet bankacılığını kullananların sayısında bir önceki yıla göre %9 oranında azalış, 2022 yılında ise %10 oranında azalışın olduğu görülmektedir. 2021 yılında mevduat bankalarında sadece internet bankacılığını kullananların sayısı bir önceki yıla göre %13 bir azalış, 2022 yılında ise %17 bir azalış olduğu görülmektedir. 2021 yılında katılım bankalarında sadece mobil bankacılığı kullananların sayısı bir önceki yıla göre %25 artış, 2022 yılında ise %22 bir artış tespit edilmiştir. Akıllı telefonların kullanımının yaygınlaşması ve bilgisayarlarla yapılan birçok işlemin artık mobil uygulamalar ile yapılıyor olmasında bu durumun etken olduğu söylenebilir. Yine 2021 yılında mevduat bankalarında sadece mobil bankacılığı kullananların sayısında bir önceki yıla göre %24 artış, 2022 yılında ise %25 bir artış olduğunun tespit edilmesi de bu duruma örnektir.

Mevduat bankalarının ve katılım bankalarının dönem net kârlarında artış olduğu gözlemlenmiştir. Özellikle dijitalleşmenin etkisiyle bankaların maliyetlerinde düşmeler ve kârlılıklarında artışlar olacağı değerlendirilmektedir. Ulusoy ve Demirel, (2021) çalışmalarında da dijitalleşme ve kârlılık arasında pozitif bir ilişkinin varlığını ortaya koydukları görülmüştür.

Genel anlamda mevduat bankaları ile katılım bankalarının teknolojik gelişmelerden yararlanarak ve teknolojiye ayak uydurarak faaliyetlerini geliştirdikleri yorumunu yapmak mümkündür. Müşterilerin şubeye gitmeden hizmet alma imkânları, müşteri olmayanların yine dijital yollarla müşteri portföyüne eklenmeleri bu duruma örnek olarak gösterilebilir.

Bankaların finansal hedefler doğrultusunda, yeni pazarlama trendlerini ve gelişen dijitalleşme ile müşterilerine daha iyi hizmet verebilmelerine yönelik çalışmalar yapması kârı maksimize etmede önemli bir unsurdur. Bu çalışma sadece katılım ve mevduat banka verilerini kapsamaktadır. Dönemsel olarak 2020 ve 2022 yıllarının incelenmesi çalışmanın en önemli kısıtlarındandır. Katılım bankacılığının bankacılık sektörü içerisindeki dijital görünümü ve gelişimine yönelik çalışmaların daha geniş dönemleri kapsayacak şekilde gelecek araştırmalarda yer alması önerilmektedir.

ABSTRACT

Cities around the world are striving to attract people, capital and businesses with global competition in mind. The aim of this study is to determine the importance of the criteria affecting the performance of global cities in order to become a power center city. In the study, CRITIC weighted method is used with the 2022 data of London, New York, Tokyo, Paris, Singapore, Amsterdam, Seoul, Berlin, Melbourne and Shanghai, which are the top 10 cities in the Global Power City index in 2022. In addition, variables such as Economy, R&D, Cultural-Interaction, Livability, Environmental and Accessibility are discussed as performance indicators of cities. According to the findings obtained as a result of empirical analysis, the performance criterion that has the most importance for the top 10 global cities in 2022 is "accessibility". The second important criterion is "environmental". The least important performance criterion for the global 10 cities is "Cultural-Interaction". In conclusion, in line with these findings of the study, policymakers offer important recommendations for global cities to become stable powerhouse cities.

Keywords: CRITIC Method, Global Cities, Quality of Life, Performance Indicators

1. Introduction

People's lifestyles are changing and urbanization is accelerating with the industrial revolution (Çağlar, 2020). Therefore, a rapid urbanization trend observed worldwide indicates that more than half of the world's population lives in cities (Wang et al., 2017). In the urban century, too, most of the people on our planet will live in cities (Kourtit et al., 2014). At the same time, this urban change seems to be more pronounced, especially in developing regions, but less in developed regions (Wang et al., 2017). Since most of the rate of urbanization occurs in developing countries, these developing global cities are doing great things in mitigating the effects of climate change and also improving the efficiency of cities' social and economic fluctuations (Wang & Chi, 2016).

While the rapid growth of cities, that is, cities, causes environmental pollution, sources of unhappiness such as stress and structural problems to increase, it increases the income level, increases the welfare level, improves the education level and improves the life consciousness (Çağlar, 2020). On the other hand, with the globalization that occurred in the 1990s, it shows that factors such as environment and communication affect the welfare of society and individuals in changing living conditions (Akar, 2014).

In an ever-changing world, the strengths, weaknesses, and challenges of global cities are grasped not only through a ranking, but also by analyzing specific components of that ranking (The Mori Memorial Foundation, 2022). Therefore, the aim of this study is to determine the importance level of the criteria affecting the performance of the global city in order for London, New York, Tokyo, Paris, Singapore, Amsterdam, Seoul, Berlin, Melbourne and Shanghai, which are the top 10 cities in the Global Power City Index in 2022, to be a strong center city by using the CRITIC hospitality method. In the study, with the data of 2022, variables such as Economy, R&D, Cult-Inter, Livability, Environmental and Accessibility are discussed as performance indicators of cities.

The rest of the work is designed as follows. In the first part, the studies in the literature are examined and evaluated. In the third part, the data and method are mentioned and in the fourth part, the study findings are explained. In the last section, the result of the study is described.

2. Literature review

Today, the determination of the quality of life of cities and the determination of the performance of global cities are becoming the focus of many researchers and are examined as an important issue studied in the literature. At the same time, many researchers use Multi-Criteria Decision Making (MCDM) methods when examining and analyzing this issue (Kaya et al., 2011; Kourtit et al., 2014; Çınaroğlu, 2021). For example; Kaya et al. (2011) analyzes the quality of life of 31 countries, namely 27 European Union (EU) countries, EEA country Norway and EU candidate countries Croatia, Macedonia and Turkey, using the multi-criteria decision-making method VIKOR method by using the European Quality of Life survey in 2003, 2005 and 2007. According to the findings obtained, Spain in 2003 and 2007, Denmark and Norway in 2005 were determined as the countries with the best quality of life, while in three years Turkey was found to be almost in the last place.

Similarly, Aydın and Yıldız (2021) aims to classify 44 global cities from 29 different countries in terms of similar functions mentioned above by calculating the Global Power Index. According to the fuzzy clustering analysis method, global cities have a statistically significant difference in terms of economy, livability, environment and accessibility indicators.

On the other hand, Türe (2019) calculates the welfare scores of 34 OECD countries by using the gray relational method, which is a multi-criteria decision-making method, with the entropy method. Analyzing 15 years of current data for the period 2000-2014, it is obtained that Iceland,

Australia, Norway and Switzerland have the highest level of prosperity, while Hungary, Greece, Turkey and Mexico are at the lowest level. Yıldız et al. (2019) examines the quality of life of the European Union countries by taking into account the living conditions, working status, education, health, social relations, security, management, environment and housing criteria. Using the Pythagorean Fuzzy AHP method and the Modified Delphi method, the researchers obtain that the "health" criterion has the highest importance and the "working status" criterion has the least importance among the criteria. At the same time, it is seen that the quality of life of Norway, Denmark, Switzerland and Finland, which have a value greater than 0.90 according to the TOPSIS method, is the highest value.

As a result, the studies examined in the literature are a source of motivation in determining the purpose of this research.

3. Data and Method

The data used in the study are obtained from the GPCI (2022) database. Information on the global cities included in the analysis, the evaluation criteria and the benefit/cost aspects of the criteria are shared in Table 1.

Table 1: Data Used in the Study

Countries	Criteria	Code	Criterion Direction
Newyork	Economy	EC	Max
London	R&D	RD	Max
Tokyo	Cult-Inter	CI	Max
Paris	Livability	LI	Max
Singapore	Environmental	EN	Max
Amsterdam	Accessibility	AC	Max
Seoul			
Berlin			
Melbourne			
Shanghai			

In this study, CRITIC weighting method is used to determine the importance of the criteria affecting the performance of global cities. The CRITIC (Criteria importance through inter-criteria correlation) method is a correlation-based technique that uses analytical tests to extract basic information from decision criteria. Using the contrast intensity and the contradictory nature of the criteria, it determines the level of importance of the criteria. The CRITIC method introduced the concept of conflict into multi-criteria decision-making methods (Zafar et al. (2021). The relevant method consists of 5 steps and these steps are as follows (Çınaroğlu, 2021);

Step 1: The decision matrix is determined.

Step 2: A normalized decision matrix is created by normalizing the decision matrix.

Step 3: The level of correlation between the criteria is determined.

Step 4: The value of the amount of information belonging to the criteria is calculated.

Step 5: Criterion weights are determined.

4. Results

The analysis findings of the CRITIC method are as follows;

Step 1: Create a decision matrix. The decision matrix of the study is given in Table 2.

Table 2: Decision Matrix

Cities	EC	RD	CI	LI	EN	AC
Newyork	362,50	207,40	254,30	304,00	157,10	220,60
London	324,50	181,30	338,90	358,30	192,90	196,80
Tokyo	292,00	145,40	210,60	353,10	181,00	185,10
Paris	253,10	103,10	235,50	383,40	156,30	225,40
Singapore	286,30	96,80	162,00	330,70	182,70	175,30
Amsterdam	259,80	66,10	144,80	360,00	168,60	229,30
Seoul	248,60	130,50	145,90	316,50	180,50	167,10
Berlin	222,80	80,90	171,60	359,00	195,20	153,50
Melbourne	242,00	80,20	124,40	349,40	201,60	159,70
Shanghai	265,10	87,50	112,00	282,90	139,30	247,10

Step 2: The normalized decision matrix is obtained by normalizing the created decision matrix. When obtaining a normalized decision matrix, the benefit and cost aspects of the criteria are taken as basis. The normalized decision matrix created is given in Table 3.

Table 3: Normalized Decision Matrix

Cities	EC	RD	CI	LI	EN	AC
Newyork	1,0000	1,0000	0,6271	0,2100	0,2857	0,7169
London	0,7280	0,8153	1,0000	0,7502	0,8604	0,4626
Tokyo	0,4953	0,5612	0,4346	0,6985	0,6693	0,3376
Paris	0,2169	0,2619	0,5443	1,0000	0,2729	0,7682
Singapore	0,4545	0,2173	0,2204	0,4756	0,6966	0,2329
Amsterdam	0,2649	0,0000	0,1446	0,7672	0,4703	0,8098
Seoul	0,1847	0,4558	0,1494	0,3343	0,6613	0,1453
Berlin	0,0000	0,1047	0,2627	0,7572	0,8973	0,0000
Melbourne	0,1374	0,0998	0,0546	0,6617	1,0000	0,0662
Shanghai	0,3028	0,1515	0,0000	0,0000	0,0000	1,0000

Step 3: In this step, the levels of correlation between the criteria are calculated. The obtained correlation values are given in Table 4.

Table 4: Correlation Coefficients Between Criteria

Criteria	EC	RD	CI	LI	EN	AC
EC	1,0000	0,8681	0,6714	-0,3024	-0,2285	0,3467
RD	0,8681	1,0000	0,7722	-0,2156	-0,0537	0,0899
CI	0,6714	0,7722	1,0000	0,3381	0,1026	0,1129
LI	-0,3024	-0,2156	0,3381	1,0000	0,4726	-0,2506
EN	-0,2285	-0,0537	0,1026	0,4726	1,0000	-0,8906
AC	0,3467	0,0899	0,1129	-0,2506	-0,8906	1,0000

Step 4: In this step, the amount of information contained in the criteria is calculated. The calculated values are given in Table 5.

Table 5: Information Quantities of Criteria

Cities	EC	RD	CI	LI	EN	AC
--------	----	----	----	----	----	----

EC	0,0000	0,1319	0,3286	1,3024	1,2285	0,6533
RD	0,1319	0,0000	0,2278	1,2156	1,0537	0,9101
CI	0,3286	0,2278	0,0000	0,6619	0,8974	0,8871
LI	1,3024	1,2156	0,6619	0,0000	0,5274	1,2506
EN	1,2285	1,0537	0,8974	0,5274	0,0000	1,8906
AC	0,6533	0,9101	0,8871	1,2506	1,8906	0,0000

Step 5: In this step, which is the last stage of the CRITIC method, the weight values of the criteria are calculated. The importance levels of the criteria are presented in Table 6.

Table 6: Criterion Weights and Ranking

Criteria	EC	RD	CI	LI	EN	AC
w_j	0,1294	0,1396	0,1098	0,1786	0,2108	0,2318
Rank	5	4	6	3	2	1

When the results obtained are examined; It has been determined that the most important criterion affecting the performance of global cities is AC (Accessibility). The most important criteria following the relevant ranking are; EN (Environmental), LI (Livability), RD (R&D), EC (Economy). It was concluded that the criterion that least affected the performance of global cities was CI (Cult-Inter).

6. Conclusion

Today, determining the quality of life of cities and determining the performance of global cities are becoming the focus of many researchers. The purpose of this study, the purpose of this study, is to determine the importance level of the criteria affecting the performance of the global city in order to be a strong center city. The study uses the CRITIC weighting method, focusing on the top 10 cities in the Global Power City index in 2022, London, New York, Tokyo, Paris, Singapore, Amsterdam, Seoul, Berlin, Melbourne and Shanghai. At the same time, the data of these cities for 2022 and variables such as Economy, R&D, Cultural-Interaction, Livability, Environmental and Accessibility are discussed as performance indicators.

Empirical findings show that the most important criterion affecting the performance of global cities is accessibility. In second place is environmental, in third place is livability, in fourth place is R&D and in fifth place is economy. It is determined that the criterion that affects the performance of global cities the least is cultural interaction.

Thus, given the global competition between cities around the world, global cities must improve their performance in order to attract people, capital and businesses, first of all in terms of accessibility, but also in environmental, livability, R&D, economy, and cultural interaction.

ABSTRACT

One of the most important problems of countries is climate change and one of the factors that cause these climate conditions to worsen is carbon emissions (CO₂). As climate change affects many countries, it causes the deterioration of climate conditions in China, which is rapidly industrializing and whose economy is growing rapidly. Therefore, the aim of this study is to examine the relationship between China's CO₂ emissions in the period 1990-2020 and climate policy uncertainty, the development of financial institutions and the development of financial markets. For this purpose, firstly, whether the variables contain unit roots or not is tested with Ng-Perron and DF-GLS unit root tests, and then the long-term relationship between the variables is tested with the Johansen Cointegration approach. In the final stage, the causality relationship between the variables is investigated with the VECM Granger causality method. Empirical findings indicate that the variables are cointegrated at the I(1) level and that there is a long-term relationship between CO₂ emissions and climate policy uncertainty, the development of financial institutions and the development of financial markets. The findings of causality also suggest that there is one-way causality that extends from climate policy uncertainty, the development of financial institutions and financial markets to CO₂ emissions. As a result, the study offers many recommendations to policy makers and financial institutions in line with these findings.

Keywords: CO₂ Emissions, Climate Policy Uncertainty, Development of Financial Institutions, Development of Financial Markets.

1. Introduction

Climate change tends to move over a very long period of time and causes ecological degradation over a very long period of time (Thuiller, 2007). Therefore, climate change is expressed as a slow and gradual change in average climatic conditions (Weber, 2010). Climate change appears to be shaping the sociological, geopolitical, and financial dynamics of our time (Venturini, 2022).

Since the mid-1990s, climate change has been on the environmental agenda all over the world, especially in developed countries. A wide range of strategies and measures are being proposed and implemented at different scales to mitigate climate change. Many of these measures and strategies are explicitly nation-state-oriented, as nation states are still seen as the main actors, institutions, and platforms for designing and implementing climate change mitigation (Mol, 2012). Therefore, one of the most important problems of countries is climate change and one of the factors that cause the worsening of these climate conditions is carbon emissions (CO₂) (Lee & Brahmašre, 2013; Purcel, 2019; Fried et al., 2021).

Climate change affects many countries and causes deterioration of climate conditions in China, which is rapidly industrializing and whose economy is growing rapidly (Chien et al., 2023). In this study, the aim is to examine how China's CO₂ emissions, which are rapidly industrializing and whose economy is growing rapidly, are affected by climate policy uncertainty, the development of financial institutions and the development of financial markets. In line with this purpose, the model of the study is created by taking into account the studies of Habiba et al. (2021) for the G-20 countries and Dinç (2022) for the USA. Thus, in this study, firstly, the stationarity properties of the variables are examined by using Ng-Perron and DF-GLS unit root tests. Then, by applying the Johansen method, the long-term relationship between the variables is investigated. Finally, the causality aspect among the variables is examined and the VECM Granger method is performed.

2. Literature Review

In recent years, numerous studies have been conducted on the determinants of environmental degradation. CO₂ emission is often used as an environmental quality indicator in studies on environmental degradation. When the literature on environmental quality is examined, it is seen that the Environmental Cousin Curve hypothesis has been tested in some of the published studies in this field. One of the studies on this subject is the work of Baek (2015). Baek (2015) tested the EKC hypothesis using the ARDL approach in a sample of 7 Arctic countries over the period 1960-2010. The results of the analysis showed that in many countries, energy consumption has a negative impact on CO₂ emissions, while economic growth has reduced CO₂ emissions only in some Arctic countries. On the other hand, the validity of the ECC hypothesis has been accepted in selected countries. Another study belongs to Şeker and Çetin (2015). In this study, the authors investigated the determinants of CO₂ emission in the case of Turkey and with the data of the period 1961-2010. As a result of the study, they found that the Environmental Kuznets Curve Hypothesis is valid for the Turkish economy.

In addition to testing the EKC hypothesis, the literature shows that many variables such as fossil-based energy consumption, renewable energy consumption, direct investment, trade openness, tourism, political stability, corruption control, rule of law, natural resource revenues and financial development are used as determinants of CO₂ emissions. For example, Lee and Brahmašre (2013) investigated the impact of tourism, economic growth and direct investment on CO₂ emissions with data from 1988-2009 in the case of 27 European countries. The results of the analysis revealed that economic growth increased CO₂ emissions, while tourism and foreign direct investments reduced CO₂ emissions. In another study, Purcel (2019) examined

the relationship between political stability and CO₂ emissions in low- and low-middle-income countries over the period 1990-2015. The results from the study showed that political stability improves environmental quality. On the other hand, Muhammad and Long (2021) analyzed the determinants of CO₂ emissions with data from 65 countries for the period 2000-2016. The results show that institutional factors such as political stability, corruption control and the rule of law improve environmental quality; economic growth, energy consumption, direct investments and trade openness have shown that environmental quality has deteriorated. Altay Topcu (2022) investigated the impact of financial development, renewable and non-renewable energy consumption and natural resource revenues on carbon emissions in the Turkish economy in the period 1990-2015. As a result of the analysis, it was found that financial development and fossil-based energy consumption lead to environmental degradation. On the other hand, it has been found that renewable energy consumption and natural resource revenues improve environmental quality.

Only two studies have been found in the literature in recent years that have used the climate policy uncertainty (CPU) variable as a predictor of CO₂ emissions. Focusing on the CPU as one of the determinants of CO₂, Dinç (2022) investigated the relationship between CO₂ emissions by sectors and climate policy uncertainty index, energy consumption and economic growth for the period 2000M1-2021M11 in the US economy. It found that the asymmetric causality relationship between climate policy uncertainty and CO₂ emissions and energy consumption changed according to sectors. It was emphasized that policies aimed at reducing climate policy uncertainty should be implemented in order to improve environmental quality in the United States. Another study is that of Fried et al. (2021). Fried et al. (2021) concluded that the CPU reduces CO₂ emissions by the same amount in the United States. Therefore, they found that this reduction in emissions and climate policy risk shifted the economy to cleaner production.

Although there have been limited studies in the literature in recent years examining the impact of climate policy uncertainty (CPU) on the environment, relatively more empirical studies have been found examining the impact of this uncertainty on renewable energy consumption. For example, Syed et al. (2023) used the monthly dataset for the U.S. and found that the novel Fourier augmented autoregressive distributed lags approach increases the consumption of renewable energy in the long and short term. The study emphasizes that the CPU needs to be reduced to increase renewable energy consumption.

Xi et al. (2023) analyzed the impact of climate policy uncertainty on five types of renewable energy consumption for countries taking part in the UN Climate Change Conference (COP26) for the period 2020-2021. Granger causality test results showed that the CPU has a significant impact on solar and wind energy, but not on hydroelectric, geothermal and biomass energy. The time-varying Granger causality test results revealed that the CPU has no effect on geothermal energy, but intermittently affects the consumption of other renewable energy sources.

Zhou et al. (2023) investigated the relationship between climate policy uncertainty, oil prices, and renewable energy consumption in the U.S. economy using monthly data for the period 2005-2021. The results of the research showed that in most periods, climate policy uncertainty positively affects oil prices in the short and medium term and total renewable energy consumption in the short and long term. On the other hand, it was found that the effect of the CPU on the consumption of five types of renewable energy was heterogeneous.

Shang et al. (2022) analyzed the impact of the CPU on renewable and non-renewable energy consumption in the United States using quarterly data from 2000-2021. As a result of the study, it was found that crude oil prices supported the demand for non-renewable energy and the CPU

reduced it. On the other hand, the CPU has been shown to positively affect the demand for renewable energy in the long term.

3. Model and data

This study examines the relationship between China's climate policy uncertainty, the development of financial institutions and the development of financial markets and CO2 emissions in the period 1990-2020. While creating the model of this study, the following regression model is created by considering the studies of Habiba et al. (2021) for the G-20 countries and Dinç (2022) for the USA.

$$\ln CO2_t = \delta_0 + \delta_1 \ln CPU_t + \delta_2 \ln FID_t + \delta_3 \ln FMD_t + \mu_t \quad (1)$$

Here, *CO2* is carbon emissions measured by total CO2 emissions (Isik et al., 2019; Atsu & Adams, 2021); *CPU* demonstrates climate policy uncertainty developed index by Gavriilidis (2021) (Yan & Cheung, 2023); *FID* states financial institution development which is measured by financial institution development index (Habiba et al, 2021); and *FMD* shows financial market development which are financial market development index (Habiba et al, 2021). The data in the study is collected of different sources, including the International Energy Agency-IEA (2023) and International Monetary Fund-IMF (2023). Table 1 summaries the symbol, measure and source of variables and Table 2 reports descriptive statistics and correlation matrix of variables analysed in the study. Figure 1 also demonstrates the trend of variables.

Table 1. The symbol, measure and source of variables

4. Methodology

The methodology of the study consists of 3 stages. In the first stage, the stationarity properties of the variables are tested by Ng-Perron and DF-GLS unit root tests. In the second stage, the cointegration relationship is tested by the Johansen method. In the last stage, the causality relationship between the variables is examined with the VECM Granger causality method.

In the first phase of the methodology, Ng-Perron and DF-GLS unit root tests are applied to test whether the variables are stationary or contain a unit root. The Ng-Perron unit root test developed by Ng and Perron (2001) proposes four statistics for stationarity analysis, eliminating the problems of ADF and PP unit root tests. These are MZa, MZt, MSB and MPT. In addition, the DF-GLS unit root test of Elliott, Rothenberg, and Stock (1996) is applied to test the stationarity properties of variables. This test is more powerful than the ADF test and has been widely used since its introduction (Wu, 2010).

In the second stage of the methodology, the Johansen cointegration test developed by Johansen (1988) is used to test the long-term relationship between the variables in the study. In this test, trace test is used and Johansen trace test is applied to determine the number of cointegration vectors between climate change uncertainty, the development of financial institutions and the development of financial markets and CO2 emissions. The probability value of at least one vector must be significant for a possible cointegration (Katircioglu, 2009).

After defining the cointegration relationship between the variables in the study, the VECM Granger causality test is used to determine the causality relationship between these variables in the final stage of the methodology. This method appears to have been obtained by Engle and Granger (1987) by adding the term error to the classical Granger causality approach (ECT_{t-1}). The VECM Granger causality regression model is constructed as follows.

$$\begin{aligned}
 (1-L) \begin{bmatrix} \ln CO2_t \\ \ln CPU_t \\ \ln FID_t \\ \ln FMD_t \end{bmatrix} &= \begin{bmatrix} b_1 \\ b_2 \\ b_3 \\ b_4 \end{bmatrix} + \sum_{i=1}^p (1-L) \begin{bmatrix} c_{11i} c_{12i} c_{13i} c_{14i} \\ c_{21i} c_{22i} c_{23i} c_{24i} \\ c_{31i} c_{32i} c_{33i} c_{34i} \\ c_{41i} c_{42i} c_{43i} c_{44i} \end{bmatrix} \times \begin{bmatrix} \ln CO2_{t-1} \\ \ln CPU_{t-1} \\ \ln FID_{t-1} \\ \ln FMD_{t-1} \end{bmatrix} + \begin{bmatrix} \beta \\ \theta \\ \delta \\ \gamma \end{bmatrix} ECT_{t-1} \\
 &+ \begin{bmatrix} u_{1t} \\ u_{2t} \\ u_{3t} \\ u_{4t} \end{bmatrix} \tag{2}
 \end{aligned}$$

In the equation, the term delayed error obtained from the ECT_{t-1} long-term relationship and the fact that this term is significant and negative express the long-term relationship between the variables. At the same time, the statistical significance of the F -statistical value indicates the existence of a short-term relationship.

5. Results and discussion

The Johansen cointegration approach and the VECM Granger causality technique are chosen to analyze the relationship between CO2 emissions and China's climate policy uncertainty, the development of financial institutions and the development of financial markets. Before applying these techniques, the stationarity properties of the variables are checked with Ng-Perron and DF-GLS tests, which are different unit root tests. The findings of these unit root tests are reported in Table 3. The findings of the Ng-Perron and DF-GLS tests show that not all variables are stationary at the level, and it is confirmed that all variables are integrated at the first difference level. We test cointegration to verify whether there is a long-term relationship between these variables.

Table 3. Ng-Perron and DF-GLS unit root tests results.

Regressor	Ng-Perron				DF-GLS	
	MZ_a	MZ_t	MSB	MPT	t -Statistic	Result
Panel A: Level						
$\ln CO2_t$	-0.725	-0.361	0.498	16.523	-0.312	-
$\ln CPU_t$	-5.126	-1.198	0.233	5.656	-1.342	-
$\ln FID_t$	-0.705	-0.292	0.414	13.554	-0.022	-
$\ln FMD_t$	-0.132	-0.075	0.570	22.141	-0.579	-
Panel B: First Difference						
$\Delta \ln CO2_t$	-10.210**	-2.227**	0.218**	2.522**	-2.836***	I(1)
$\Delta \ln CPU_t$	-12.440**	-2.476**	0.199**	2.038**	-7.781***	I(1)
$\Delta \ln FID_t$	-19.805***	-3.140***	0.158***	1.257***	-2.660***	I(1)
$\Delta \ln FMD_t$	-14.364***	-2.638***	0.183**	1.861**	-4.903***	I(1)

Before the cointegration test is performed, the optimal delay length of the model is determined. Schwartz Bayesian criterion (SBC) recommends the use of 1 of the delay length according to VAR. In this study, the optimal delay length is used as 1.

Table 4. Determining the appropriate delay length

Delay Length	<i>LR</i>	<i>FPE</i>	<i>AIC</i>	<i>SIC</i>	<i>HQ</i>
1	184.707*	1.44e-09*	-9.023*	-8.072*	-8.733*
2	20.589	1.65e-09	-8.964	-7.251	-8.441
3	10.990	3.08e-09	-8.554	-6.080	-7.798

Note: * indicates the optimal delay length.

The findings in Table 5 test the existence of a long-term relationship between the variables for China. The findings confirm the existence of cointegration between variables by rejecting the zero hypothesis that there is no cointegration at the 5% significance level of both trace test and maximum-eigen statistical values. This suggests a long-term relationship between China's CO2 emissions and climate policy uncertainty, the development of financial institutions and the development of financial markets.

Table 5. Johansen Cointegration test

Panel A: Model	VAR lag order selection criteria.	
Hypothesized no. of CE(s)	<i>Trace Statistic</i>	<i>Max-Eigen Statistic</i>
R=0	41.522**	25.100**
R≤1	16.422	9.686
R≤2	6.736	6.693
R≤3	0.042	0.042

Note: ***, ** and * indicate the significant at 1%, 5% and 10% level of significance, respectively.

The existence of a cointegration relationship between variables guides us to the application of the VECM Granger causality method, and knowledge of the direction of causality between these variables also draws an important path for policy makers to create political formulas. Therefore, this VECM Granger causality method, which provides information of interest in causality, is important for the study (Kyophilavong et al., 2016). The causality findings in the study are summarized in Table 6 and long-term causality is determined by the negative and statistically significant coefficient of the delayed ECT_{t-1} error term. According to the causality findings, at the 1% significance level, it is determined that there is causality extending from CO2 emissions in China to climate policy uncertainty. In contrast to this finding, Dinç (2022) obtains that climate policy uncertainty in the industrial and electrical sector in the US is the cause of CO2 emissions.

In addition, Table 6 shows that at the 5% significance level in the long term, there is a one-way causality from China's CO2 emissions to the development of financial institutions. This finding from the study is not similar to the study finding of Weili et al. (2022), which found that financial institutions Belt and Road as indicators of financial development play an important role in improving the environmental quality of countries. At the same time, Chen et al. (2023) also reveal that there is a bidirectional causality between the CO2 emissions of African countries and the development of financial institutions during the period 1980-2017.

The last long-term causality finding is that the development of financial markets at the 1% significance level is the cause of China's CO2 emissions. This finding is not confirmed by Paramati et al. (2017), which found that stock market development of the G20 countries was the cause of CO2 emissions, and Zafar et al. (2019), which found that stock market performance and CO2 emissions in the N-11 and G-7 countries during the period 1990-2016 were the cause of each other.

Table 6. Causality Test Results.

Dependent variables	Independent variables				Long-term (p-value)
	Short term				
	F- Statistics (p-value)				
	$\Delta \ln CO_2$	$\Delta \ln CPU$	$\Delta \ln FID$	ΔFMD	ECT_{t-1}
$\Delta \ln CO_2$	-	0.007 (0.759)	0.167 (0.453)	0.003 (0.967)	-0.014 (0.831)
$\Delta \ln CPU$	-1.551 (0.171)	-	-1.828 (0.193)	0.624 (0.245)	-0.815*** (0.005)

$\Delta \ln FMD$	-0.036 (0.936)	-0.007 (0.887)	-0.174 (0.717)	-	-0.541*** (0.007)

Note: ***and ** represent significance levels of 1% and 5%, respectively.

6. Conclusion

The aim of this study is to examine the relationship between China's climate policy uncertainty, the development of financial institutions and the development of financial markets and CO2 emissions in the period 1990-2020. For this purpose, firstly, the stationary properties of the variables, in other words whether they contain a unit root, are examined by Ng-Perron and DF-GLS unit root tests. In the second stage, the Johansen method tests the existence of a long-term relationship between climate policy uncertainty, the development of financial institutions and the development of financial markets and CO2 emissions. In the last stage, the causality relationship between the variables is examined with the VECM Granger causality method. Empirical findings show that the variables are integrated at the $I(1)$ level. In addition, China's climate policy uncertainty, the development of financial institutions and the development of financial markets are obtained to be co-integrated with CO2 emissions. Finally, it is determined that there is a one-way causality in the long term that extends from China's CO2 emissions to climate policy uncertainty, the development of financial institutions and the development of financial markets.

ÖZET

Kentlerin kültürel miras hafızaları yaşanan her kırılma döneminde aslında o kente ait olan her şeye ve herkese yönelik farklı bir bakış açısı ortaya koymaktadır. Bugün iç savaş etkisinden henüz çıkmış bulunmayan, yönetiminin meşruiyeti sorgulanır halde duran, egemenliğinin ve bağımsızlığının temelden sarsıldığı, tarihi ve kültürel birikimlerinin tahrip edildiği ve halkının dünyada göçmen/sığınmacı duruma düştüğü Suriye'nin durumu da böyledir. Bunların yanı sıra bugün Esad ailesi rejiminin kontrolünde olan ve kentin başkenti olan Şam, nam-ı diğer Dımaşk el-Şam(Damascus - Şam-ı Şerif) tarihi ve kültürel hafızasıyla barındığı coğrafyadan demografik yapısına, yönetimlerinden mimarisine, ticaretten içinde bulunduğu ve etkileşimde bulunduğu medeniyetlere kadar önemli kazanımlar elde etmiştir. Bu noktada elde edilen bu kazanımların Şam'ın kent kavramına ne kadar etki edebildiği yorumlanmaya çalışılacaktır. Söz konusu tarihi ve kültürel birikimler tikel kırılma noktalarına ve dönemine has değerlendirmelere tabi olsa da bu çalışmada bütünsellik gözetilecektir. Bu bütünselliği oluşturan husus ise bir İslam kenti olması ve İslam'a kentsel gelişim açısından katkısı üzerinden Şam'ı incelemektir. Bu yüzden Şam kentinin İslam kent yapısına hususi olarak kattıklarını ele alabilmek için bu çalışmada çeşitli dokümanların incelenmesi yoluyla literatür taraması yöntemi uygulanmaktadır. Bu sebeple ulaşılabilecek, ikinci ve internet kaynakları ile benzer minvalde üretilen akademik çalışmalar esas alınmaktadır. Nihayetinde kente İslam'a dair uygarlık kazanımları günümüzde nasıl algılanmaktadır ve kentin, İslam dünyasıyla beraber kazanımları ne ölçüde gerçekleşmiştir? Soruları ile bugünün sorunlarına da bir çıkış yolu bulunabileceği beklenilmektedir.

Anahtar Kelimeler: Kent, İslam Kenti, Şam

On the Contributions of Damascus With Its History And Culture to the Islamic City Concept

ABSTRACT

The cultural heritage memories of the cities reveal a different perspective towards everything and everyone that belongs to that city in every breaking period. Such is the situation in Syria, which has not yet come out of the effects of the civil war, whose legitimacy is questioned, whose sovereignty and independence have been shaken to the core, whose historical and cultural heritage has been destroyed, and whose people have become refugees/refugees in the world. In addition to these, Damascus, which is under the control of the Assad family regime and the capital of the city today, also known as Damascus al-Sham (Damascus - Damascus - Şam-ı Şerif) with its historical and cultural memory, is important from its geography to its demographic structure, from its administration to its architecture, from trade to the civilizations it is in and interacts with has made gains. At this point, it will be tried to interpret how much these gains can affect the city concept of Damascus. Although the mentioned historical and cultural accumulations are subject to particular breaking points and evaluations specific to the period, integrity will be observed in this study. The point that constitutes this integrity is to examine Damascus through its being an Islamic city and its contribution to Islam in terms of urban development. Therefore, in this study, literature review method is applied by examining various documents in order to discuss the contributions of the city of Damascus to the Islamic city structure. For this reason, it is based on academic studies that can be accessed, secondary and internet resources, and produced in a similar way. Finally, how are the civilizational achievements regarding Islam in the city perceived today, and to what extent have the city's gains been realized together with the Islamic world? It is expected that a way out of today's problems can be found with their questions.

Keywords: City, Islamic City, Damascus

GİRİŞ

Bugün iç savaş etkisinden henüz çıkmış bulunmayan, yönetiminin meşruiyeti sorgulanır halde duran, egemenliğinin ve bağımsızlığının temelden sarsıldığı, tarihi ve kültürel birikimlerinin tahrip edildiği ve halkının dünyada göçmen/sığınmacı duruma düştüğü Suriye'nin durumu tüm dünyada gözler önündedir. On yılı aşkındır Arap Baharı hareketinin son durağı olarak gündemde olan Suriye, sadece siyasi, idari, ekonomik veya insani değerlerini değil aynı zamanda İslami kent kültürünü korumak için de çaba harcamak durumundadır. Öte yandan tarihsel süreç bakımından Suriye'nin içerisinde barındırdığı demografik çeşitlilik de bu durumun uzun sürmesinde izah noktası olarak ileri sürülebilir. Bunların yanı sıra bugün *Esad* ailesi rejiminin kontrolünde olan ve kentin başkenti olan Şam, nam-ı diğer *Dımaşk el-Şam* (*Damascus - Şam-ı Şerif*) tarihi ve kültürel hafızasıyla barındığı coğrafyadan demografik yapısına, yönetimlerinden mimarisine, ticaretten içinde bulunduğu ve etkileşimde bulunduğu medeniyetlere kadar önemli kazanımlar elde etmiştir. Bu noktada elde edilen bu kazanımların Şam'ın kent boyutuna ne kadar etki edebildiği yorumlanmaya çalışılacaktır. Söz konusu tarihi ve kültürel birikimler tikel kırılma noktalarına ve dönemine has değerlendirmelere tabi olsa da bu çalışmada bütünsellik gözetilecektir. Bu bütünselliği oluşturan husus ise bir İslam kenti olması ve İslam'a kentsel gelişim açısından katkısı üzerinden Şam'ı incelemektir. Bu yüzden İslam kentlerini genel kent kabullerinden hareketle tanımlamak ve ardından Şam kentinin İslam kent yapısına hususi olarak kattıklarını ele alabilmek için bu çalışmada çeşitli dokümanların incelenmesi yoluyla literatür taraması yöntemi uygulanmaktadır. Bu sebeple ulaşılabilecek, ikincil ve internet kaynakları ile benzer minvalde üretilen akademik çalışmalar esas alınmaktadır. Nihayetinde kentte İslam'a dair uygarlık kazanımları günümüzde nasıl algılanmaktadır ve kentin, İslam dünyasıyla beraber kazanımları ne ölçüde gerçekleşmiştir? Soruları ile bugünün sorunlarına da bir çıkış yolu bulunabileceği beklenilmektedir.

KENT KAVRAMININ TARİHSEL VE KÜLTÜREL İZLENİMİ

Kent kavramı mekân ve çevre etkisiyle sosyal ilişkilerin bir ürünü olarak karşımıza çıkmaktadır. Ayrıca birey ile bulunduğu sosyal çevrenin birbirini karşılıklı etkilediği kabulüyle bir bütünü ifade etmektedir. Öte yandan bir kente dair bağlılık ve aidiyet hissi o kentin değerlerini sonraki dönemlere aktarmakta önemlidir. Yani bir kente karşı var olan bilgi ancak o kente yönelik ilgiyle ortaya çıkar. Bununla birlikte kent ve bu kentlerin bulunduğu bölgelerle ilgili çalışmalar oradaki mekânlara, orada yaşayan önde gelen isimlere, kentin siyasi tarihine veya faziletlerine göre şekillenmektedir (Barca, 2017: 94). Bu durum kent kavramının analizinde bütüncül yaklaşımı kolaylaştırmaktadır.

Tarih yazı ile başlamaktadır ve medeniyet için başlangıç noktasıdır. 1400'lü yıllar ise barbarlığın medeniyetle iletişime geçtiği "Antika Tarih" sonrası dönemdir. Söz konusu sosyal iletişim ve etkileşim dünyanın her yerinde aynı seviyede olmasa da mücadelesi daimidir ve sonunda kurulan muhakkak bir medeniyettir. Ayrıca medeniyeti geliştiren ve ileriye götüren sınıf çatışmalarını da göz ardı etmemek gerekir. Bununla birlikte "devlet" kavramı medeniyet adına önemli bir olgudur. Engels'e göre "Atina'daki gelişim ile Irak'ın Sümer kentlerindeki gelişim kan bağına bağlı olarak birebir aynıdır". "Yine Roma'nın gelişimi ile Hicaz'ın Mekke-Medine kentlerindeki gelişimde kan bağından ayrı bir kent oluşumu geçerlidir". Her ikisi de "kan anayasası yerine devleti geçirmiştir". Bununla birlikte iki tür geçiş de "Kent'ten" (Yukarı Barbarlıktan), Medeniyete geçiştir. Buradan hareketle, "gerek Atina Medeniyeti, gerek Roma Medeniyeti ve gerekse İslâm Medeniyeti "Orijinal" birer medeniyet olmuşlardır". Ayrıca

kentleşme olgusunun Mekke'ye, Irak'tan (Ur'dan) Hz. İbrahim soyundan geldiği ve diğer kentler gibi etkileşim sonucu meydana geldiği öne sürülmektedir. Bu etkileşimin başını ise ekonomi ve politika çekmektedir. Modern devletin mücadelesi de burada başlamakta ve kan bağı, İbn-i Haldun'un dediği "soy asabiyyesini" kontrol altına almak gerekmektedir. Dolayısıyla medeniyete geçiş ya kentten olur ya da göçebelikten (Kıvılcımlı, 2012: 199-202). Nitekim bu çıkarımla beraber kentin inşasının ve varlığının her yönüyle medeniyetin seyrini etkilediği ortaya çıkmaktadır. Bu seyir ise kent yaşamının tarihsel kırılma dönemlerine özgü reflekslerin tecrübesinden beslenmektedir.

Erken kent yaşayışından beri esasen yaratıcıya ait mülkiyet, gerek Batı toplumlarında olsun gerek İslam toplumlarında sıkı bir denetim ve kayıt altında tutulmuştur. Öte yandan kentler sürekli bir bayram, eğlence ve kutlama sebebi bulan insanlardan meydana gelmektedir. Bu şölenlere tüm kamu katılım göstermektedir. Ekonomik ve sosyal eşitlik bağlamından dolayı ilk kent yaşamları en demokratik yerleşimler olarak bilinir. Bu demokrasinin temeli ise yazısız kurallara dayanmaktadır. Nesilden nesle aktarılır ve ezberlenmişlerdir. Ayrıca "Kur'an-ı Kerim'in kafiyesi ve okunuşunda dikkat edilen tecvidli okunuşu, "Kanun" sözcüğünün Latince aslında "Carmina" (mısra), Grekçede "nomoy" (vouoi: şarkı) ifadelerinden türemesi" tesadüf değildir. Bunun yanında kanun kent içinde bir kutsaldır ve çok iyi muhafaza edilmiştir. Bu yüzden kent tarihlerine ulaştıran en önemli kaynaklardan biri eski kanunlarıdır (Kıvılcımlı, 2012: 206-208). Böylece belirli bir nizam ve ahenk kentin varlığını belirginleştirmektedir.

Kentin yönetimi ise bir şekilde tüm toplumla illiyet bağı kurularak tesis edilmektedir. Yani yasama da yürütme de yargı da kentte yaşayanların toplamıdır. Coğrafi şekil bakımından Şam adına da bir çıkarım yapıldığı görülmüştür. Buna göre kent biçimini etkileyen ulaşım, nüfus, işgücü ve enerji kaynaklarına erişim gibi hususlar kentin gelişimiyle doğrudan ilgilidir. Bunun yanında eski tarihlerden beri kentler buldukları tarihi döneme, doğal konumlarına, yöneticilerinin dünyevi ve ruhani algısına, diğer kentlerle olan ilişkilerine göre ya yuvarlak ya da kare formunda gelişim göstermişlerdir. İşte İslam kenti olarak Şam da (eski Yunan-Roma kenti üzerine kurulu bir kent olarak) Ortaçağ kent biçimine uygun bir şekilde "organik bir kare biçimli" kent olmuştur (Tekkanat ve Türkmen, 2018: 114,115).

Kentleşme sürecinin ortaya çıkması yaklaşık 10.000 yılı bulmaktadır. Orta Doğu bölgesindeki Mezopotamya, Mısır gibi bölgelerde ilk yerleşik hayat izleri erken dönem Antik kentler olarak yer almaktadır. Bu şehirlerin yapısal olarak belli başlı kaynakları ise "bilgi, güç, zenginlik ve kontrol" olarak gösterilebilmektedir (Güneş (Ed.), 2013: 3,4). Günümüzde Göbeklitepe kazıları ile birlikte ise kent tarihi çok daha eski zamanlara şimdiden uzamıştır. Batı'da "ilk kent oluşumları dini mekânlar, ticaret ve pazar alanları gibi kamusal alanlar ile egemenliğin ön plana çıktığı politik Yunan antik kentleri olan Polis'lerdir. Burada yaşayan Civis (yurttaş) ise bu kentler sayesinde imtiyazlar, haklar elde eden topluluktur". Keza Klasik Roma benzer şekilde cumhuriyetçi düşünel yapıyla kent yapısını sürdürürken askeri özelliğini ön plana çıkarmıştır. Öte yandan iş gücüne göre toplumsal sınıfları belirlemiş kent yerleşimi de bu sınıflara göre ayarlanmıştır. Bu durumu "kentsel devrim" adlandırmasıyla ortaya atan Gordon Childe, avcı-toplayıcı toplumdaki tarım toplumuna geçişteki kentleşme için "emeğin uzmanlaşmasını, karşılıklı bağımlılığın artmasını ve farklı işlevlerin farklılaşmasını" gerekli görmüştür (Akt.: Güneş (Ed.), 2013:4,5). "Asya, Yakın Doğu ve Latin Amerika'da" ise varlıklı hale gelen kentler görülmüştür. İslam kentleri "Kuzey Afrika'da ve Yakın Doğu'da" gelişim gösterirken "İstanbul gibi eski Roma kentlerini de alarak genişlemiştir. (Güneş (Ed.), 2013: 5).

Sanayi Devrimi ise kent olgusunun yapılanmasında başka bir önemli kırılma noktasıdır. Kapitalizmin, feodalitenin ardından geldiği bu dönemde kırsaldan kent alanlarına gerçekleşen göç akınları ve iş gücü adına emeğin satılması dikkat çekici olmuştur. Keza kentleşmeyi gerektiren hususlar esasen köy ile kent arasındaki farkı ortaya koyan ekonomik, teknolojik,

siyasal ve sosyo-psikolojik boyutlar(Keleş, 2015: 39-45) etrafında bu bağlamda değerlendirmeye açık olmuştur. Kent algısına yönelik çağdaş değerlendirmelere bakıldığında ise kâr amacı güdülen mekânlar ayrımı (Lefebvre), sınıf savaşı temelinde değerlendirmeye devam eden yaklaşımlar(Manuel Castells , David Harvey), yine sermayenin güç odaklarınınca teknolojiyi ve bilgi sistemlerini kullanarak şekillendirdiği iddiasındaki dünya şehri(John Friedmann), ağ toplumu(Manuel Castells) ve küresel kentler(Saskia Sassen) gibi unsurlarla karşılaşmak mümkündür. Postmodern analiz kapsamında ise 2000’li yılların başında “Los Angeles Ekolü’nden” Postmetropolis(Edward Soja) kavramıyla kent, insan ekolojisinin sınıf, kültür ve sermaye bağlamında “kentsel siyasal sermaye” kuramsal çerçevesinde değerlendirilmiştir. Böylece “yurttaşlık sorumluluğu”, “kimlik”, “yaşam kalitesi” gibi belirleyicileri bulunan “megapolis” kentlerden söz edilmiştir(Güneş(Ed.), 2013: 15,16, Keleş, 2015: 110,111).

İslam tesirindeki kent tasvirine bakıldığında ise Andre Raymond, Arap kentlerinin tipolojisinin ortaya çıkarılması adına 1920-1950 arasında yer alan Şarkiyat çalışmalarının bir ürünü olarak “İslami kent teorisi” çalışmalarına dikkat çekmiştir. Bu bağlamda ilk ortaya koyulan çalışmaların bazıları G. Marçais – W. Marçais ve R. le Tourneau’nun ele aldığı “Cezayir”, J. Sauvaget, J. Weulersse’in incelediği “Şam” olarak sayılabilir. “The Structure of the Muslim Town” adlı makalesiyle Gustave von Grunebaum ise İslam kentlerinin dönemsel farklılıklarını ortaya koymuştur. Ona göre İslâm kenti düzenli bir yapıya sahip olmadığı için antik kentlerden ve kent meclislerinin noksanlığından ötürü Ortaçağ Batı kentlerinden ayrılmaktadır(Raymond, 2010).

“Ken(d)t” kavramının Soğdca’dan(İran sınırlarında bulunan ve Türkçeye katkısı olan bir dil) “şehir”in ise Farsçadan türediğini görmek mümkündür. Öte yandan eski Türkçede savunma amaçlı yapılan kalelerdeki malzeme olan “balçık”tan hareketle “balık” kavramının da kullanıldığı görülmüştür. Farsçada “şehir” kavramı “çalışma çağındaki nüfusta büyük bir kesimin ticaret, sanayi ve yönetim alanlarında yer aldığı büyük yerleşim alanları” olarak tanımlanmıştır. Arapçada şehir kavramını karşılayan isimler ise “medine(medâin)”, “belde(belde)”, “karye(kurâ)”, “dâr(diyâr)” ve “mısır(emsâr)” olarak görülmektedir. Bu isimler şehir/kent kavramını aktarmak üzere Kur’an-ı Kerîm’de de geçmektedir. Bu mekânlarda müftü, kadı, sâhibü’ş-şurta, muhtesip gibi yöneticiler yer almaktadır. Yerleşik alanın getirdiği dinamizm ve kent yaşamı şartlarına uygun olması bakımından ilahi tebliğler kentlere inmektedir ve kentlerde uygulanmaktadır(Küçükaşçı, 2010).

İslami kent yapılanmasının ilk örneği, İslam peygamberi Hz. Muhammed’in etkisiyle Yesrib’de(Medine) görülmüştür. İbadethane, eğitim-öğretim yerleşkesi, adalet hizmetlerinin görüldüğü yer, kamu idare alanı gibi işlevleri bulunan Mescid-i Nebevî’nin yapıldığı süreçten bu yana İslam kentlerinde cami, kentlerin kurulmasında merkezi yapı olarak öne çıkmıştır. Öte yandan çarşı merkezi belirlenmesiyle ekonomik hayat, siyasi ve idari yapıyla birleşmiş ve yerleşik bir İslami devlet tezahürü ortaya çıkmıştır. Mescid-i Nebevî’de hazine odası da yer almıştır. Medine ve Mekke’de idari görevlendirmeler sonraki kent yapılandırılmalarına örnek olmuştur. En önemli değişikliklerden biri de 7. ile 11. Yüzyıllar arasında hızla göçebe Arap kabilelerinin yerleşik kent yaşamına uyum sağlaması olmuştur. Kentleşmenin gelişmesiyle askeri yapılanmalar da artan sınırlardan ötürü kentlere dair önemli unsurlardan olmuştur. Ordugâh olarak yapılan bu kentlere Hz. Ömer zamanında ilk örnekleri inşa edilen ve Emeviler zamanında gelişim gösteren Kûfe, Basra gibi kentler sayılabilmektedir. Basra’da hamamlar da daha sonra idareye mahsus olmak üzere kent yapısına dâhil olurken bunları hapishaneler de takip etmiştir. Zamanla tahılların saklandığı “darürrızık”, postane işlerinin yürütüldüğü “darülberid”, su ihtiyacını karşılamak adına “kanallar” ve “mezarlık” alanları da İslami kentleşmenin şekillenmesinde etkili olmuştur(Küçükaşçı, 2010).

Müslümanlar yeni kent algısını Emeviler ile genişletmiş bunun yanı sıra antik Yunan, Roma, Sasani gibi kültürlerden devraldıkları kentleri de miras üzerine geliştirmiştir. Öte yandan İslam tarihinin en çok öne çıkan kenti olan Bağdat, iç içe iki dairesel sur yapısıyla dikkat çekmiştir(Gül, 2010: 74). Müslümanlarca ele geçirilen kentlerin değişimine dair önemli örneklerden biri Dımaşk(Şam)'da bulunan Yuhanna(Loannes/Yahya) Kilisesi'nin önce cami özelliğine geçirilip Hristiyanlarla beraber kullanıldığı, daha sonra Emeviler döneminde, bugün hâlâ varlığını sürdüren, “Emeviyye Camii”ne dönüştürülmesidir. Dımaşk(Şam) 11. yüzyıldan sonra kentsel görünümünü İslami motiflere göre büyük oranda yenilemiştir. Yine her meslek dalına ait çarşı mekânlarının tahsisi İslam kentlerinde öne çıkmıştır. Dımaşk(Şam) bu bakımdan öne çıkan kentlerden olmuştur(Can, 1995: 46).

İslamiyet'in yayıldığı tüm coğrafyalar göz önüne alındığında İslam kentlerinde tarihsel, kültürel, idari, felsefi ve coğrafi etmenler kent oluşumunda önemli rol oynamıştır. İslami kent yapısında öne çıkan mekânlar ise Büyük Cami(Ulu Cami-Cuma Cami), kale(idari yönetim alanı) ve Pazar alanı başta olmak üzere şöyle sayılabilir; Büyük cami, cami, medrese, hastane, imaret, çarşı, han, hamam, darülmare, çeşme. Bu yapılar İslam kentlerine has kimlikli unsurlardır(Aktüre,1987: 25, Can, 1995: 155-158). Özellikle cami yapısı İslam açısından tevhidî sağlamak adına çok önemli olmuştur. Öte yandan artan nüfus da bu kentleşmenin önemli etkenlerinden biridir. 15. Yüzyıldan sonra nüfusu 1 milyona ulaşan Bağdat ve yarım milyona yaklaşan Kahire, Dımaşk(Şam) ve Kurtuba başı çeken İslam kentlerindedir(akt.: Küçükbaşçı, 2010). İslam mimarisinde öne çıkan hususlardan biri de dini mekânların diğer yapılar tarafından sıkıştırılmaması veya bu dini yapıların da kentin üstüne nefes almayı zorlaştıracak şekilde çökmemesidir. Bu alanlar çevresinde geniş alanlar barındıran yerler olmuştur. Öte yandan mimaride güneş ışığını alma düşüncesi Kible yönü hassasiyeti önceliğinden sonra dikkat edilen bir husus olarak görünmektedir.

Pazar alanlarının aynı işi yapan esnaf tarafından meslek koluna göre bölümlere ayrılması bu mekânların Büyük camiye yakın konumlanmasına yol açmıştır. İslam kentlerinin karakteristik özelliklerinden biri olan bu mekânlara “kaysâriyye” ve “han” adı verilmektedir. Yine yeni oluşan İslam kenti alanlarında mahallelerin etnik kökene göre ayrılması aynı zamanda o kenti kendine has bir özelliğe kavuşturmuş ve farklı bir İslam kenti olma hususunu ortaya çıkarmıştır. Ancak dini farklılıklar bu yerleşik düzene çok nüfuz etmemiştir(akt.: Küçükbaşçı, 2010).

Son olarak İslam Medeniyeti kavramından bahsederken yıkıcı niteliği barındıran bir “devrimsel süreçten” bahsedilir. Öyle ki İslam Medeniyeti çökme tehlikesine girdiğinde bunu hareketlendiren güç barbar/bedevi somut müdahalesi olmaktadır. Dolayısıyla medeniyet tasavvurunun ürünü olan kent kavramı bir anlamda bu barbar/bedevi güçlerin ötekiliğiyle canlanmaktadır. Buna “Yecüc Mecüc” ulusu denilmektedir. Türk/Müslüman “Yecüc Mecüc” birliğinin bir ucu Şam'da, öbür ucu Horasan'da kabul edilmektedir(Kıvılcımlı, 2012: 47,48). Buradan da şu anlaşılmalıdır: İslam Medeniyeti kapsamında İslam kentleri sadece Arap kökenli kentler değildir ve diğer etnik kökenler tarafından etkiye açıktır. Bununla birlikte etkileşimi göz önüne aldığımızda her kentin kendine has bir geçmişi ve kimliği olduğunu kabul etmek gerekir. Bu özel çerçeveden genel çerçeveye baktığımızda ise İslam kenti yapılanmasını tümüyle reddetmenin hatalı olacağını söylemek gerekir. İslam kenti ne sadece Müslüman kentidir ne de sadece Arap; İslam kenti bir etkileşim sürecidir.

ŞAM ÖZELİNDE İSLAM KENTİ ANALİZİ

Burada öncelikle Şam'ın genel tasvirine yer vermek gerekirse; Suriye'nin 14 ili içindeki Rif Şam'ın (Şam İli Kırsalının), 9 ilçesinden biri olarak karşımıza çıktığı görülmektedir. Şam, Suriye'nin başkentidir. Ayrıca, Şam Valiliğinin ve Rif Şam Valiliği'nin de idari başkentidir.

Şam, dünya tarihi boyunca, hiç aralıksız en uzun süre kullanılan şehir olarak anılır. Bu yüzden bölgenin en eski başkenti olarak da bilinmektedir. Şehrin takma adı ise El Fahya(Güzel Kokan Şehir) olarak anılır(Wikipedia). Öte yandan Biladü's Şam/Levant(Suriye, Ürdün, Lübnan, Filistin) Sami ırkının bulunduğu coğrafya veya Arapçanın hâkim olduğu bölgenin Şam'ı kapsayan kısmıdır. Buraya Hz. Nuh'un oğlu Sîm'e (Sam, Shem) nispetle, "Şîm'in yurdu" anlamına gelen "Bilad-ı Şam" denmiştir. Bu kelime Süryaniceden "Şam" İbraniceden ise "Şîm" olarak nakledilir. Arap Yarımadası olarak anılan bu bölgede ayrıca Babilliler, Asurlular, Fenikeliler ve İbraniler de yaşamış fakat Arapça konuşan milletler hâlihazırda varlıklarını sürdürmektedirler. Bunun yanında Türkçe, Kürtçe, Ermenice, Rumca ve Çerkezce de konuşulan diller arasındadır. "Sünniler, Hristiyanlar, Nusayriler, Dürzîler, İsmâîlîler, Sâbiîler, Şîîler, Selefilere ve Yezidîler" bölgede bilinen inanç mensuplarından birkaçıdır(Wikipedia; Özkaya, 2016). Asıl Şam, Suriye denilen coğrafyanın eski adı olup merkezi olan şehrin ismi Osmanlı hâkimiyetinden itibaren Dımaşk (Dımaşk)'tır". Eski Aremice kaynaklarına (Eski Ahit İbrani harfiyle) göre ise "Darmeşeq" "iyi sulanmış yer" demektir. MÖ 14 yüzyıla ait Amarna yazılarında Akad dilinde "Dimaşqa" ifadesine rastlanılmıştır. Suriye isminin Asur Devleti'nden türediğine dair iddialar da bulunmaktadır. Batı dillerinde de genellikle Damascus ifadesi görülmektedir(Wikipedia).

Şam üzerinde kurulan medeniyetler genellikle bir önceki medeniyetin kalıntılarını kullandıkları için görülebilir kalıntı sayısı çok azdır. Bununla birlikte kentin tarihini daha eski dönemlere genellikle edebi eserler aracılığıyla götürmek mümkün iken ilk somut bulgular MÖ 2500 yılına dayanan "Mari" site devleti tabletleridir. Bu tabletlerde Damascus(Dimaşka) hakkında verilere ulaşıldığı gözlenmiştir. Daha sonra "İbla" site devletine ait tabletlerde de "Dimaski" adından bahsedildiği görülmüştür. Öte yandan Şam'ın MÖ 2000 civarında "Amorilerce" bir yerleşim alanı olarak inşa edildiği, halkının da Arap çöllerinden göç gelen "Sami kavimlerinin" oluşturduğu bilinmektedir. Bundan yarım asır sonra ise "Amarna tabletlerine" göre Şam'da sırasıyla Mısırlılar ve Hititler hüküm sürmüştür. MÖ 1200 sonrası dönemde Şam, "Arami" yönetiminde yaklaşık iki yüzyıl boyunca önemli bir kent konumunda bulunmuştur. Bu dönemin en önemli hususlarından biri, günümüzde bir İslam kenti olarak Şam'ın en önemli mekânsal varlıklarından biri olan, Emevi camisinin bu dönemde yapılan "Haddad Tapınağı" üzerinde bulunmasıdır. MÖ 732 yılında ise kent "Asur" kralı 3. Tiglath Pileser tarafından yıkılmıştır. Bunu MÖ 572'de "Babilliler" ve MÖ 539'da "Persler" de yinelemiştir. MÖ 332 yılında ise Persleri yenen "Yunanlılar" "Büyük İskender" komutasıyla kenti ele geçirmiş ve bu dönemde kentte önemli işlere imza atmışlardır. Daha sonra MÖ 84-56 arasında kente hâkim olan "Nabatiler", MÖ 64'te "Romalıların" kenti işgal etmesine rağmen yönetimi kaybetmemişlerdir. Romalılar Şam'ı ancak MS 1'de St. Paul'un Hristiyan öğretileri aracılığıyla tam olarak ele geçirebilmiştir. MS 117'de kent dönemin imparatoru "Hadrian" idaresinde metropol ilan edilmiştir. MS 222 yılında ise bir diğer imparator Severus, kente koloni niteliği kazandırmıştır. Bu gelişmeler kentin ticari faaliyetlerle önemli bir kervan yolu kavşağı olmasını ve buna bağlı olarak güvenlik önceliği gözetilerek kaleler, kent surları, kapılar gibi mühim mimari yapıların ortaya çıkmasını sağlamıştır. Ayrıca bu dönemde Haddad Tapınağı üzerine daha geniş bir alanı kapsayacak şekilde "Jüpiter Tapınağı" inşa edilmiş, "Via Recta" olarak anılan Düz Cadde genişletilmiş ve "Barada nehrinin" sularından daha fazla istifade etmek adına su kemeri inşa edilerek tarımsal faaliyetlere katkı sunulmuştur. Bizanslılar 4. Yüzyıldan sonra Hristiyanlığı kente hâkim kılmış ve Jüpiter Tapınağını kiliseye dönüştürmüştür. Kent 612 yılında geçici bir şekilde Sasanilerin eline geçmiş daha sonra Arabistan'dan yayılan İslam İmparatorluğu'nun 635 yılında "Halid bin Velid" yönetiminde "Yermuk savaşıyla" Bizanslıları yenerek kente ulaştığı görülmüştür. Dönemin halifesi Hz. Ömer, Yezid bin Ebu Süfyan'ı kentin valisi olarak görevlendirmiştir. Ondan sonraki vali ise kardeşi Muaviye olmuştur. Muaviye'nin halife Hz.

Ali ile mücadeleye girmesi ve Sıffin ve Tahkim olayları ardından Şam 662'den beri "Emevi İmparatorluğu'na" başkentlik yapmaya başlamıştır. 746 yılına gelindiğinde ise "Abbasilerin" hâkimiyeti Şam'ı geri plana itmiş ve sırasıyla Tolunoğulları, İhşidler(Akşitler) ve Fatımilerin kenti ele geçirdiği görülmüştür. Kent, Emevi camisini yakacak boyutlara ulaşan "Karamitlerin" işgal girişimlerine sahne olduktan sonra 1076'da Selçukluların idaresine geçmiştir. Bu tarihten sonra 1154 yılında Halep valisi "Nureddin Zengi" ve 1174'te Zengilerin ünlü komutanı "Selahattin Eyyubi'nin" kontrolüne giren Şam aynı zamanda "Haçlı savaşları" tehlikesi altında bulunmuştur. 1260 yılına gelindiğinde ise "Moğollar" kenti ele geçirmiş ancak "Memluk devleti" "Ayn Calut" savaşıyla kenti kısa sürede kendi kontrolüne almıştır. Bu dönemde Şam, Kahire'den sonra Memlukların ikinci başkenti olarak anılmıştır. 1516 yılında 1. Selim (Yavuz) "Mericidabık savaşıyla" Suriye'yi ve dolayısıyla Şam'ı alarak Osmanlı himayesine sokmuştur. Şam Osmanlı egemenliği altında yaklaşık dört asır kalmıştır. Bunun da en büyük sebebi hilafetin Osmanlı yönetiminde bulunması ve hac yolu üzerinde bir durak noktası olarak Şam'ın konumudur. Daha sonra "Azim ailesi" idarede söz sahibi olmuş özellikle "Esad Paşa" idaresi kente önemli katkılar sunmuştur. 1860'larda Dürzüler ile Hristiyan azınlıkların aralarında yaşadıkları çatışmalar Şam'ın demografik düzeni adına önemli bir iz bırakmıştır. Mithat Paşa'nın 19. yüzyılın son döneminde kattığı hukuki ve kültürel gelişmeler Şam'da Arap milliyetçiliğinin dönüm noktası olmuştur. "Kral Faysal" yönetiminde de Arap milliyetçiliği ve bağımsızlık duygusu olsa bile 1920'de Fransız mandası olan Suriye'de Şam yine ciddi şekilde bombalanmış ve ancak 1945 yılında Suriye'nin başkenti olarak bağımsızlığa kavuşmuştur. Fransız mandater yönetimi zamanında "Fransız Şam Devleti" adında geçici bir kent devletinin de kurulduğu görülmüştür(Apak, 2008: 166-170; Mert, 2010: 142-147; Okur, 2009; Raymond, 1995; TDV İslam Ansiklopedisi/Şam; Yazıcı, 1995; Yücel, 2017; Wikipedia).

Şam'ın kıymetini öne çıkaran kavramlardan biri de kendine has mimari yapıları olmuştur. Özellikle dini amaçlı yapılar bu anlamda başı çekmektedir. Şam, Müslümanların, Hristiyan ve Yahudilerin birlikte yaşadığı ve bu dinlerin izlerinin de yüzyıllardan beri baki kaldığı bir kenttir. Bilhassa insanlığın ilk atası olduğuna inanılan Hz. Âdem ve onun çocuklarından diğer peygamberlere kadar ilgili mekânların burada olduğu düşüncesi, kente ayrı bir anlam katmıştır. Bunlardan bazıları hakkındaki bilgiler ve Şam kültür ve tarihine İslami açıdan kattıkları kıymetlidir.

Bu mekânlardan biri "Şam Kalesi" olarak bilinen ve "Eski Şam'ın" kuzeybatı köşesinde bulunan bir yapıdır. MS. 285-305 zamanında Romalıların askeri kampı olan kare şeklindeki kale 1202 yılında Selahaddin Eyyubi'nin kardeşi el-Adil'in kale içinde yeni bir kale daha inşa etmesiyle daha büyük bir yapıya bürünmüştür. Ayrıca kale içine silah atölyesi, hamam, darphane, hapishane, taht odası, medrese ve cami inşa edilmiştir. Kalenin kuzeybatı köşesindeki kaldırım taşlı yoldan Hamidiye çarşısına ve Emevi camisine geçiş mümkündür. "Hamidiye Çarşısı(Hamidiyeh Suuk)" ise bugün antika eserler ve Bedevi halısı gibi ürünler satılan çarşıdır. İstanbul'daki "kapalı çarşıya" benzemektedir. İslam mimari yapısına has kubbeleri bulunan dükkânlara sahiptir. Bu çarşı Osmanlı padişahı 2. Abdülhamit tarafından yapılmıştır. Çarşılar İslami kent yapısında büyük cami olarak adlandırılan ana caminin hemen yanında bulunurlar. Ticari faaliyet alanlarından olan bu mekânlar sosyal ilişkiler bakımından da önemli bir işleve sahiptir. Hamidiye camisi de tam olarak böyle bir niteliğe haizdir. "Eski Şehir" denilen alan ise uzun tarihsel geçmişi ile kentin hafızası konumundadır. Dar sokak yapısı diğer İslam kentlerine benzer yapıdadır. Eski Şam şehir merkezinde tarihi yapıların olduğu klasik kesimdir. Yeni Şam ise merkezin etrafını saran yer yer merkeze biraz uzak modern yapıda binalar ve şehir düzenlemesine sahip yerlerdir. Eski Şam'ın etrafındaki surların altı kapısı vardır: Doğu Kapısı (Bab Şarki), Thomas Kapısı (Bab Touma), Jabiya Kapısı (Bab al-Jabiya), Cennet Kapısı (Bab al-Faradis), Keisan Kapısı (Bab Kisan), Küçük Kapı (Bab al-

Saghir). En önemli mimari yapı “Emevi Cami(Ulu Cami)” olarak kabul edilmektedir. Eski Şam’da, Roma tapınağının üzerine yapılan kilisenin cami ile birlikte genişletilmesi sonucu önemli bir mekân haline gelmiştir. 661’de Şam Emeviler döneminde İslam İmparatorluğunun başkenti olunca Emevi Cami de merkezi bir eser olarak revize edilmiştir. Cami avlusunun ortasında şadırvan bulunmaktadır. Batısında Hazine Kubbesi, Doğusunda ise Saathane bulunmaktadır. Burada kum saati koleksiyonu bulunmaktadır. Hindistan’daki Tac Mahal’in kubbesinin buradan esinlendiği söylenmektedir. Caminin üç minaresi bulunmaktadır; 1- Gelin Minaresi bu minarede Memlukler döneminde yaşanan tehlike karşısında Şam’dan yakılan ışığın minareler aracılığıyla Kahire’ye kadar ulaştırılmasından bahsedilmektedir. 2- Garbiye veya Kayıtbay Minaresi ve 3- İsa(Ak) Minaresi. Üç minareden en uzun olan bu minare Eyyubiler tarafından tamamlanmıştır. İnanişe göre Hz. İsa kıyamet gününden önce şeytanla savaşmak adına bu minareden inecektir. “Zahiriye Medresesi ve Baybars Mezarı”, Emevi camisinin kuzeybatısında Selahaddin Eyyubi’nin babası Eyüb beye ait olan Zahiriye, Adiliye Medresesi ve Memluk sultanı Zahir Baybars’ın mezarı bulunmaktadır. 1919 yılında buraya bir kütüphane eklenmiştir. Günümüzde burada “el-Mucemma el-ilmi el-Arabi(Arap Dil Kurumu)” bulunmaktadır. “Cakmakiye Medresesi ve Arap Epigrafi(Yazıtbilim) Müzesi” ise Memluklerin Şam valisi “Cakmak el-Ergunsavi” tarafından yapılmıştır. Bugün Epigrafi Müzesi olarak içinde yazıtlar, kitabeler, mühürler, alfabelerin gelişimine dair materyaller barındırmaktadır. “Nureddin Zengi” tarafından “El-Nuriye Medresesine” verilmek üzere “Nureddin Hamamı” da diğer bir yapılan önemli İslami mekânsal varlıktır. Bu hamam Şam’ın en eski hamamıdır. Özellikle hamamların da İslami kent yapısındaki önemi düşünüldüğünde bu hamamın kent içindeki konumu daha iyi anlaşılabilir. Yine “Esad Paşa” tarafından 1753’te yapılan “Esad Paşa Hanı”, zamanında Şam ticaretinin merkezi olan bir handır. Kubbeli yapı, çeşme, havuz, kemerli kolonlar bu yapıda da dikkat çekmektedir. “Nureddin Şifahanesi(Maristan-Bimaristan)”, Nureddin Mahmud bin Zengi tarafından 1154 tarihinde tıp okulu olarak inşa edilen Şam’ın en büyük hastanelerinden biridir. 1978 yılında “Araplarda İlim ve Tıp Müzesi’ne” çevrilmiştir. “Midan Sempti” de Mekke’ye hacca giden hacıların, Şam’da konakladığı ve içinde camileri, türbeleri, medreseleri ve hamamları barındıran yerdir. Şam hac yolu üzerinde olduğu için “Tarihi Hicaz Demiryolunun Şam İstasyonu” da önemli bir konum ve tarihsel köken barındırmaktadır. Öte yandan Şam’ın kuzeybatısında yer alan “Kasyon Dağı”, birçok efsane içermektedir. Bunlardan biri Kabil’in Habil’i bu dağdaki “Kan Mağarası’nda” öldürdüğüdür. Bir diğeri dağın doğu eteğinde yer alan mağaranın içindeki caminin Hz. İbrahim’in doğduğu yer olmasıdır. Başka bir söyleme göre Hz. İsa, annesi Hz. Meyrem, Zekeriya Peygamberin oğlu Hz. Yahya ve annesi ve İlyas, İbrahim, Lut, Musa ve Eyyub peygamberlerin de saklandığı ve ibadet ettiği bir dağ olarak anılmaktadır. Dağın üzerindeki “Kırklar Mescidinin” kuzeyinde 70 veya 7000 şehit ve 700 peygamber defnedildiği söylenilmektedir. “Kan Mağarasının” içinde 40 kişinin öldürüldüğü rivayet edilir. Öte yandan “Kasyon dağının” zirvesinde Hz. Âdem Mağarası ve camisi, 70 peygamberin açıktan öldüğü “Açlık Mağarası”, Kur’an-ı Kerim’de Kehf Suresinde ve Süryani kaynaklarında geçen “Kırklar Mağarası”, “Hz. İsa ve Hz. Meryem Mağarası”, “Zafer Kubbesi” de bulunmaktadır. Evler de İslami mekânlar olarak dikkat çeken yapılardır. Şam’ın yolları ve buradaki evlerin yapısal özellikleri hakkında en fazla bilgiyi seyyah Henry Maundrell (1697) vermiştir. “Şam sokakları dardı. Evlerin duvarları Hollanda usulü yanmış taşlarla (tuğla) çevriliydi. Kabaca sıvanmış evler vardı ve yolları kötüydü. Yağmurlardan sonra bütün şehrin sokakları çamur oluyordu” demiştir. Ayrıca binalardaki oyma ve kakma sanatıyla özenli olarak yapılan geçit ve kapılar onu oldukça şaşırtmıştır. “seçkin bir Türk evini ziyaret ettik” diyerek özenle döşenmiş bir evin iç dekorasyonu hakkında yazdığı bilgilendirmede eve ilk girildiğinde göze çarpan yeri, evin avlusu olarak tanımlanabilecek misafirlerin ağırlandığı mekân olarak göstermiştir. Burası

çeşitli kokuları olan ağaçlar, mermerden çeşmeler ve süslü divanlarla düzenlenmiştir diyen Maundrell oturacak yerleri günümüzde “şark köşesi” olarak tabir edilen Doğu kültürüne özgü bir tasarımla anlatmıştır. (İstek, 2020: 134,135; Mert, 2010: 147-219; Raymond, 1995; TDV İslam Ansiklopedisi/Şam; Wikipedia).

Kentin yönetimine bakıldığında ise Suriye’de 15 sayılı ve 1971 tarihli kanun, 2003 yılında Yerel Yönetimler Bakanlığı tarafından güncellenmiştir. Buna göre yeni yapılan düzenleme ile var olan idari yapı korunurken yerel yönetimlere daha çok imtiyaz ve serbestlik tanınmıştır. Ardından çıkarılan 107 sayılı ve 2011 tarihli yeni kanunda ise hem vilayetlerde hem de belediyelerdeki farklı yerel yönetim birimleri arasındaki ilişki belirlenmiştir. Yapılan anayasal düzenleme ile yerel yönetimlerin daha fazla yetki ve mali özerlik kazanarak adem-i merkezileşme adına gelişim kaydettiği görülmüştür. Böylece belediyeler insan ve mali kaynakları, iç işleri ve proje yürütme bakımından daha fazla serbestlik elde etmiştir. Bunun yanında yerel yönetimleri denetlemek ve sınırlarını çizmek adına “19/2015 sayılı kararname ve şehir planlaması” kapsamında özel şirketler, ilgili yerel yönetim biriminin mali denetimini sağlayabilmiş; “23/2015 sayılı yasa” ve muadilleri ise kent konseylerinin önemini arttırmıştır. 107/2011 sayılı yasa, “Yerel Yönetimler Yüksek Kurulu’nun” idaresine bırakılmıştır. Buna göre yasa “vilayetlerde, şehirlerde, kasabalarda ve belediye sınırlarında kurulan yerel meclisleri tanımlamıştır.” Vilayetlerde devlet başkanının atadığı vali, Şam’daki merkezi yönetimin desteğiyle meclise başkanlık etmektedir. Faaliyet kapsamında ise “adem-i merkezileşmeyi arttırmayı, yerel meclislerin kendi kalkınma planlarını uygulamasını kolaylaştırmayı, yerel meclislerin gelirlerinin arttırılmasını, yerel seviyede toplumun geliştirilmesini ve vatandaşlara sunulan hizmeti iyileştirmeyi” öncelemektedirler. Şehirlerde ise bu görev seçilmiş belediye başkanlarınca yürütülmüştür(Esen ve Chibli, 2020: 292).

Yerel yönetim meclisleri genel olarak sürdürülebilir ve dengeli kalkınma ilkeleri kapsamında şehir planlaması, toplu taşıma, katı atık yönetimi, sivil savunma, kültür, çevre vb. alanlarda sorumluluk almaktadır. Yine “Su Kaynakları Bakanlığı”, “yereldeki müdürlükleri aracılığıyla, su temin altyapısından ve su kalitesinden sorumludur.” Topraklarının yaklaşık %62’si devlete ait olarak addedilen Suriye’de yerel yönetimler 2011 tarihli 26 sayılı kanun ve stratejik projeleri çerçevesinde konut ve arazi temininden sorumludur. Sosyal hizmetlere bakıldığında ise sorumluluk, vilayetlere yani valilere devredilmiştir. Sağlık hizmetleri, merkezden, Sağlık Bakanlığı tarafından yürütülmektedir. Sağlık hizmetleri hiyerarşik bir dağılımla her birimde merkeze bağlı ancak kendi iç dinamikleri ile projelendirilen bir usulle yürütülmektedir. Eğitim konusuna bakıldığında ise Eğitim sistemiyle ilgili kararlar merkezi düzeyde Eğitim Bakanlığı tarafından yürütülmektedir. Vilayet, Teknik Hizmet Müdürlüğü vasıtasıyla okul yapımından sorumlu iken yerel yönetimler okul inşası için arsa tahsis etmektedirler. Eğitim Müdürlüğü ise okulların yönetimi ve politikaların yürütülmesi ile ilgilenen bölgesel bir birimdir(Esen ve Chibli, 2020: 295-296).

2009 yılında gerçekleştirilen “Suriye’de Sürdürülebilir Kentsel Kalkınma Bildirisinde” etkili bir yerel yönetim adına esas şartlar, “net bir politika çerçevesi, şehir yönetimi adına gerekli kapasite ile tüm paydaşları bir araya getiren iyi bir planlama, etkin bir şehir yönetimi adına müzakere, arabuluculuk ve iş birliği süreçlerini kolaylaştıracak yapılar” olarak belirtilmiştir. Bununla birlikte 107/2011 tarihli ve sayılı kanun her ne kadar “yetki devri (adem-i merkezileşme)” usulünü belirtmiş olsa da Suriye’de genellikle “yetkilendirme (yetki dağıtımı)” söz konusu olmaktadır. Ayrıca yetki devrinin gerçekleştiği yerler ise merkezden gelen kaynak aktarımından mahrum kalmaktadır(Esen ve Chibli, 2020: 299).

Bugün Şam Suriye’nin başkenti olarak, 8 Mart 1963 yılında askeri darbe sonucu yönetime gelen Baas Partisi tarafından yönetilmektedir. Baas hareketi içinde 1970 yılında Hafız Esad ilk defa Suriye cumhurbaşkanı olmuş 2000 yılına kadar iktidarda kalmıştır. Suriye’nin şimdiki devlet

başkanı, ülkeyi 2000'den beri yöneten, Hafız Esad'ın oğlu, Beşşar Esad'dır. Suriye Arap Cumhuriyeti üniter yapılı, yarı-başkanlık sistemine sahip, baskın tek parti rejimi şeklinde yönetilen ülkedir. Bununla birlikte baskın bir parti olarak “Arap Sosyalist Baas Partisi” öne çıksa da Suriye’de yasal başka partiler de Ulusal Birlik Cephesi altında bulunmaktadır. 1 Eylül 1918’de Osmanlı İmparatorluğundan ayrılan Suriye, 17 Nisan 1946 yılında da Fransa sömürgesinden bağımsızlığına kavuşmuştur. 27 Şubat 2012 tarihindeki mevcut Anayasayı kullanan Suriye'nin 2023 tahmini nüfusu ise 17 milyonun üstündedir. 2011 yılı itibariyle Tunus’ta başlayan ve birçok Arap ülkesine yayılan, “Arap Baharı” adı verilen, hükümet karşıtı ayaklanma ve silahlı isyanların son durağı Suriye olmuştur. Bugün çatışmalar Suriye’de hâlâ sürmektedir. Arap Baharı sonrası dünyada göç hareketliliği İslami algı üzerinde de etkili olmuştur(Adıbelli(ed.), 2012: 15-47, Gerçeker, 2019: 199,200; Wikipedia).

SONUÇ

Bir kente ait manevi görünüm, direkt olarak kültürle ilişkilidir. Kentin inşa edilmesinde hangi medeniyet söz konusu ise, fizikî görüntüsünden yaşam biçimine kadar tarihî ve kültürel aidiyetin varlığıyla karşı karşıya kalınmaktadır. Ayrıca ekonomik gelişme, mekânlar arasındaki farkı öne çıkaran önemli hususlardan biri olmuştur. Öyle ki büyük dinler genellikle kentlerde dikkat çekici somut unsurlarıyla var olmaktadır. İslam dini de bu yüzden kentleri vurgulayan bir çerçeve sergilemiştir. Bu durumu Weber, bilhassa Batı toplumlarında görülen ve “kent ile köy arasındaki her türlü hukuki fark” üzerinden açıkladığı burjuvazinin gelişimiyle desteklemiştir. Gerçi Sjoberg dünyada sanayi öncesi kentlerin hiçbirinde fark olmadığını yaptığı çalışmalarla desteklemişse de görülmüştür ki din kentler için önemli bir yer tutmuştur(Kaygalak, 2014: 22,23). Fakat belirtmeli ki İslam Medeniyetinden bahsedebiliyorsak burada kırsalın tümüyle reddedilmediğini de bilmek gerekir. Çünkü eksik kalmış bir din medeniyet boyutuna bir bütünlük içerisinde ulaşamaz(Armağan, 2010: 126,127). Şam’a gelince, bugüne dek tarihi çatışmalarla, savaşlarla, istilalarla ve yıkımlarla dolu olan bir kent, hatta vaktiyle isim olarak bir dönem temsil ettiği bir ülke olarak tüm bu çerçevede kendine has özellikleriyle İslami açıdan bir konum barındırmaktadır. İslam kentleri İslam’a, İslam da İslam kentlerine karşılıklı olarak katkı sağlamaktadır. Bu incelemede de Şam’ın üstüne düşen veriler aktarılmaya çalışılmıştır.

Nihayetinde Şam, tarihi boyunca çatışmalarla meşgulken diğer İslam kentlerinde de durum pek farklı değildir. Mezhepsel, etnik köken ve siyasi mücadelelerin hâkim olduğu bu çatışmalar İslam kentlerinin bir kısmı adına bir kaide olmuş gibi gözükmektedir. Bu durum elbette olumlu bir sonuç doğurmamıştır fakat bizlere sunduğu önemli bir husus vardır. O da İslam kenti olarak Şam’ın çok kültürlü yapısını her zaman koruyabildiğidir. Buna dayalı diğer bir çıkarım kentin mimari sürekliliğini devam ettirmesidir. Farklı kültürler kentte egemenliklerini sürdürürken medeniyetlerine dair mimari eserlerini daha önce var olan eserleri tümüyle yıkarak değil üzerlerine inşa ederek ortaya koymuşlarıdır. Bu davranış özellikle hoşgörü dini olarak anılan İslam’ın Şam kenti ile özdeşleştiği bir durumdur.

Bu noktada ilişkili bir konu da yönetici hükümdarlarla ilgilidir. Aslında tüm İslam kentlerinde ve hatta karizmatik bir liderin hüküm sürdüğü tüm toplumlarda genel bir görünüm, kentin bu yöneticinin yaşam üslubunu yansıtmasıdır. Elbette Şam da bu genel kaideye uymuştur. Şam adına öne çıkan isimler ise Nureddin Zengi, Selahattin Eyyubi gibi isimler sayılabilir. Elbette Emeviler Dönemi de dışarıda tutulamaz.

Şam kentine dair öne çıkan hususlardan bir diğeri ise kutsallık atfedilen coğrafi ve mimari mekânlarının bulunmasıdır. Bu durumu öne çıkaran ifade ise İbnü’z-Zahîra’nın, “el-Fezâilü’l-bâhira fi mehâsini Mısır ve’l-Kâhire” adlı eserinde Kahire ile Şam’ın üstünlük mücadelesini aktarırken Şam adına kullandığı “Peygamberlerin defnedildiği kent” tanımlamasında

yatmaktadır(Barca, 2017: 99). Bu sadece Müslümanların değeri değil diğer inanç değerlerini de kapsayan bir özelliktir. Bu mekânları önemli kılan şey ise farklılıkları ortak noktada ve uzlaşma içinde birleştirmektir. Böylece süreklilik sağlanmakta ve kente aidiyetlik hissi devam etmektedir. Son olarak dil Şam için bir İslam kenti hüviyeti adına kıymetli bir veridir. Kur'an-ı Kerim'in de dili olan Arapça bu kentin en çok konuşulan dilidir. Bu durum Şam ile İslam arasındaki en güçlü bağlardan biridir. Öyle ki İslami söylemler içeren bazı ifadeler Şam'ı anlatırken dahi karşımıza çıkabilmektedir. Fakat Arapçanın etkileşim içinde olduğu diğer dillerden etkilendiğini de unutmamak gerekir.

Bütün bunları birleştiren her ne kadar çatışmaların, savaşların öne çıktığı söylenebilse de arka planda hoşgörü ikliminin ve birlikte yaşayabilme birikiminin bu kentin hafızasında yer edindiği görülmektedir. Nitekim rekabet özellikle İslam kentleri için bireysel, toplumsal veya devlet bağlamında kaçınılmaz görünmektedir. Dolayısıyla bugün Arap Baharı denilen sürecin Şam özelinde Suriye adına umutsuz bir çıkmaz sokak olmadığı ifade edilebilir. Bir arada yaşamın uzlaşma gerektirdiği kadar hâkimiyet mücadelesini de getirdiği bilinmektedir. Önemli olan ise demokrasi çizgisi içinde bunu başarabilmektir. Diğer yandan Şam'ın, İslam kenti olarak bu konumunu sürdürmek adına üstüne düşeni yapmaya devam etmesi beklenmektedir ve gelecekte kentin İslami yaşam anlayışına katacağı değerler kıymetlidir. Son olarak İslam tarihi İslam kentleri için bir rehberdir ve o kentin yönetiminde bir şekilde illiyet bağı sağlanmaktadır.

ÖZET

Havacılık endüstrisi şüphesiz ki ulaşım faaliyetlerinin en önemli parçasını oluşturmaktadır. Havayolu taşımacılığı sektörü küresel pazarda hem ulaşım anlamında hem de ekonomik anlamda büyük bir öneme sahiptir. Sürekli olarak gelişen ve standartlarını yükselten bu sektörün meydana gelebilecek doğal durumlardan etkilenmesi de kaçınılmaz olmaktadır. Kırılgan bir yapıya sahip olması sebebi ile olası krizlerden kolay bir şekilde etkilenebilecek olan havacılık sektörü yakın tarihte 11 Eylül Saldırıları, Körfez Savaşları, SARS Virüsü, 2008 Küresel Krizi ve Covid-19 pandemisinden olumsuz etkilenmiştir.

Bu çalışmada havacılık sektörünün yaşadığı en son kriz olarak Covid-19 ele alınmış, salgın ve pandeminin sektör üzerindeki etkilerinin incelenmesi amaçlanmıştır. Küresel hava sahasında faaliyet gösteren havayolu işletmelerinin Covid-19 salgını ve pandemisi kapsamında güvenlik performansları ÇKKV yöntemleriyle analiz edilmiş, bu analiz sonuçlarına bağlı olarak ilgili havayolu işletmelerinin tercih edilebilirlik sıralaması oluşturulmuştur. Yapılan analizler sonucunda tercih edilebilirlik derecesi en yüksek olan işletme Singapore Airlines olarak görülürken, en düşük dereceye sahip işletme Pegasus olmuştur.

Anahtar Kelimeler: Havacılık, Covid-19, ÇKKV

Analysis Of Covid-19 Safety Performances Of Airlines By Multi-Criteria Decision Making Methods

ABSTRACT

The aviation industry is undoubtedly the most important part of transportation activities. The air transport sector has a great importance in the global market both in terms of transportation and in terms of economy. It is inevitable that this sector, which is constantly developing and raising its standards, will be affected by natural situations that may occur. The aviation sector, which can be easily affected by possible crises due to its fragile structure, has recently been adversely affected by the September 11 Attacks, Gulf Wars, SARS Virus, 2008 Global Crisis and Covid-19 pandemic.

In this study, Covid-19 was discussed as the latest crisis experienced by the aviation industry, and it was aimed to examine the effects of the epidemic and pandemic on the industry. The safety performances of the airlines operating in the global airspace within the scope of the Covid-19 epidemic and pandemic were analyzed by MCDM methods, and the preference ranking of the relevant airline companies was created based on the results of this analysis. As a result of the analyzes made, the company with the highest degree of preferability was seen as Singapore Airlines, while the operator with the lowest rating was Pegasus.

Keywords: Aviation, Covid-19, MCDM

² Bu çalışma Dr. Öğr. Üyesi Eda ÇINAROĞLU danışmanlığında, Burak KARADAĞ tarafından hazırlanan Havayolu İşletmelerine Ait Covid-19 Güvenlik Performanslarının Çok Kriterli Karar Verme Yöntemleri ile Analizi başlıklı yüksek lisans tezi esas alınarak hazırlanmıştır (Havayolu İşletmelerine Ait Covid-19 Güvenlik Performanslarının Çok Kriterli Karar Verme Yöntemleri ile Analizi adlı yüksek lisans tezi, Erciyes Üniversitesi, Kayseri, Türkiye,2023).

GİRİŞ

Uçma arzusu insanlık tarihinin başından bu yana her devirde insanlığın hayal gücünün genişlemesine katkıda bulunmuş ve gökyüzünde bulunan kuşlar gibi rüzgarda kanat açma isteğini oluşturmuştur. Bir romantizm akımı haline gelen uçma isteği birçok girişim, deney ve başarısızlık kaydı bulunmasıyla birlikte hala akıl almayan bir olay olarak insanlık tarihindeki yerini korumaktadır (Laufer, 1928).

Havacılık kavramı İkinci Dünya Savaşı ile birlikte ivme kazanarak gelişmiş, havacılığın yaşadığı teknolojik ve yapısal değişimlerin hızıyla hava taşımacılığı sektörü olarak ulaşım faaliyeti çeşitleri arasına girmiştir. Askeri uçakların sivil uçaklara dönüştürülmesi ile başlayan ticari havacılık faaliyetleri, yolcu odaklı tasarımlarla üretilen hava araçları ile gelişimini sürdürmüş, günümüzde ulaşım faaliyetlerinin yapı taşı haline gelmiştir (Korul, 2003).

Sivil hava araçları ile ücreti mukabilinde yolcu, yük veya yolcu ve yük taşımacılığı faaliyeti havayolu taşımacılığını tanımlamaktadır. Bununla birlikte bu faaliyetleri yürüten işletmeler ise koltuk kapasitesi yirmi ve üzeri olan hava araçlarıyla yolcu, yük veya yolcu ve yük taşımacılığı yapan ticari hava taşıma işletmeleri olarak tanımlanmaktadır (Bakır, 2017).

Gelişim hızı çok yüksek olan havacılık endüstrisi yerel ve global krizlerden çok çabuk etkilenebilme özelliğine sahiptir. Bu durumun temel sebebi sektörün kırılğan yapısı olarak gösterilmektedir. Havacılık sektörünün yapısal ele alındığında bu kırılğanlığın havayolu ulaşımının temel ihtiyaç değil lüks olmasıyla ilişkilendirebiliriz. Kriz dönemlerinde insanların ilk olarak lüks tüketimlerinden vazgeçebilmeleri sektörün etkilenmesine zemin oluşturmaktadır. Havayolu taşımacılığı geçmişten günümüze yaşanan birçok krizden küçük zararlarla çıkmayı başarmıştır. Havacılık sektörünün son dönemde 11 Eylül Saldırıları, Körfez Savaşları, SARS Virüsü ve 2008 Küresel Krizi gibi küresel olaylardan etkilendiği ancak tüm bu krizlerden minimum zararla ayrılmayı başardığı açıkça söylenebilir.

Günümüzde havayolu sektörünün etkilendiği en yeni global risk olarak Covid-19 pandemisi göze çarpmaktadır. 2019 yılında Çin'de ortaya çıkan koronavirüs salgını tüm sektörlerde yürütülen iş aktivitelerinde duraksama yaşanmasına sebep olmuştur. Virüsün insanlar arasında bulaşmasının kolaylığı havayolu sektörünü krizden etkilenen sektörler listesinin üst sıralarına taşıdığı görülmektedir (Maneenop, 2020). Covid-19 Krizi atlatılması en zor kriz olarak incelenirken, salgının başlangıcından itibaren salgının yayılımını engellemek ve toplum sağlığını korumak adına getirilen kısıtlamalar ve uygulanan yasaklar dünyada havacılık sektörünü neredeyse durma noktasına getirmiştir (Akça, 2020). Küresel çapta meydana gelen pandemilerde tedbir amacıyla birçok seyahat kısıtlaması uygulandığı bilinmektedir. Covid-19 salgınında virüsün yayılım hızı dikkate alınarak çeşitli kısıtlamalar uygulanmaya başlamıştır. İlk olarak hastalığın çıkış noktası olan Çin'den diğer ülkelere olan uçuşlar iptal edilirken, Güney Kore, Hong Kong ve Japonya gibi hastalığın görüldüğü diğer ülkelere de seyahat kısıtlamaları getirilmiştir. Daha sonra İspanya, İtalya ve İran gibi ülkelerde salgının yayılması ve kısıtlamaların getirilmesi sonucunda havacılık sektörü durma noktasına gelmiştir (Wilson, 2020).

Bu çalışmada global bir kriz olarak ele alınan Covid-19 pandemisinin havacılık sektörü üzerindeki etkileri çok kriterli karar verme yöntemleri kullanılarak havayolu işletmeleri bazında analiz edilmek istenmiştir. Birleşik Krallık'ta danışmaya dayalı uçuş araştırmaları servisi sunan Skytrax şirketinin sunduğu veriler ışığında ülkemizde ve dünyada faaliyet gösteren havayolu işletmeleri belirli kriterler göz önüne alınarak analiz edilmeye çalışılmıştır. Havayolu taşımacılığı pazarında faaliyet gösteren içerisinde ülkemizden de 2 işletmenin bulunduğu 20 havayolu işletmesi belirlenen 15 kriter ışığında çok kriterli karar verme yöntemleri yardımıyla analiz edilmiştir. Bu analiz gerçekleştirilirken çok kriterli karar verme yöntemlerinden ağırlıklandırma ve önem sırası belirleme işlemi için “Entropi” yöntemi kullanılırken, tercihlerin sıralandırılması ve karar önceliğinin saptanması için “Topsis” yöntemine başvurulmuştur.

Literatür Taraması

Literatürde araştırmamıza katkı sağlayacağı düşünülen “Covid-19 ve Havacılık” ve “ÇKKV ve Havacılık” başlıkları ile ilgili bazı çalışmalar aşağıda verilmiştir. Ayrıca Covid-19 sürecinde havacılık ile ilgili çalışmalarda Çok Kriterli Karar Verme yöntemleri kullanılmadığı gözlemlenmiştir.

Saban ve Trabzon (2021), çalışmalarında COVID-19 salgınının havayolu taşımacılık sektöründe faaliyet gösteren işletmelerin performanslarını ne şekilde etkilediğini finansal ve finansal olmayan performans ölçütleri ile ortaya koymak istemişlerdir.

Yıldız Akpur (2021), araştırmasında pandemi sürecinde Türkiye ve Avrupa’da faaliyet gösteren havayolu işletmelerinin Covid-19’a karşı aldığı önlemleri belirlemek istemiştir. Araştırmada, nitel araştırma yöntemlerinden içerik analizi ile veriler elde edilmiştir.

Şen ve Erdağ (2021), yaptıkları inceleme ile havayolu taşımacılığı sektörünün gelişimini evreye ayırmış ve Covid-19 sürecini ilave ederek toplam 6 dönem olarak değerlendirmişlerdir. Çalışmada, havayolu taşımacılığı gelişim evrelerinin politik, ekonomik, sosyal ve teknolojik açılardan içinde bulunduğu durumu değerlendirmek için PEST Analizi kullanılmıştır.

Macit ve Macit (2020), çalışmalarında Covid-19 pandemisine yönelik Türk sivil havacılık sektöründe alınan tedbirleri araştırmışlardır. Covid-19 pandemisinin küresel havacılıktaki yönetimi, uluslararası sağlık ve havacılık kuruluşlarının yayınladıkları tedbir önerileri incelenerek, Türk sivil havacılık sektöründe sürecin yönetimi değerlendirilmiştir.

Kalkın (2021), araştırmasında 2020 yılının ilk yarısında ortaya çıkan COVID-19 pandemisinin küresel ölçekte havacılık sektörüne etkisini incelemiştir. Yaşanılan kriz havacılık bağlamında ortaya konulmuş ve örgütsel dayanıklılık açısından değerlendirilmiştir.

Akça (2020), yaptığı çalışmada havacılık sektöründe COVID-19 kapsamında alınan tedbirlere değinmiş ve salgının sektör üzerindeki ekonomik etkisini incelemiştir. Ayrıca, Türkiye’nin havacılık sektörü göstergeleri üzerinden mevcut duruma ilişkin değerlendirmeler yapmıştır.

Özcan ve Ark. (2018), çalışmalarında bir havayolu şirketinde çalışan uzman görüşlerini alarak uçuş noktası seçimine etki eden kriterleri belirlemişlerdir. Belirlenen kriterler Ahp ve Topsis yöntemleri kullanılarak incelenmiş ve yeni bir uçuş noktası seçimi ortaya koymuşlardır.

Altınkurt ve Merdivenci (2020), araştırmalarında havayolu işletmelerinin hizmet kalitesini, Çok Kriterli Karar Verme yöntemlerinden AHP tabanlı EDAS yöntemi ile ölçmüşlerdir. Havayolu işletmelerinin hizmet kalitesi kriterlerine ilişkin önem ağırlıkları beş farklı havacılık uzmandan alınan verilerle değerlendirilmiş, EDAS yöntemiyle birleştirilerek havayolu işletmelerinin hizmet kalitesi sıralaması yapılmıştır.

Yıldız ve Başar (2020), çalışmalarında havacılık sektöründe yaşanan istenmeyen operasyonel aksaklık durumlarının genel değerlendirmesini MOORA Çok Kriterli Karar Verme Yöntemi ile incelemiş, bu aksaklıkları standardize eden kuruluşlar ve bu kuruluşların yolcu ve havayollarını bağlayan kuralları aktarmışlardır.

Dilmen ve Çetinyokuş (2020), yaptıkları araştırmada Ankara ilinde mevcut durumda sivil hava trafiğine hizmet veren Esenboğa Havalimanının yanı sıra ikinci bir havalimanı potansiyelini değerlendirmişlerdir. Anketlerden elde edilen veriler AHP, TOPSIS ve ELECTRE yöntemleri ile incelenmiş, hangi trafik seviyesine kadar Ankara ilinin hava ulaşım talebini mevcut havalimanı ile karşılayabileceği değerlendirilmiştir.

Bakır ve Akan (2018), 2016 yılı genelinde Avrupa’da en fazla yolcuya hizmet veren havaalanlarının hizmet kalitesi performanslarını Entropi tabanlı Topsis yöntemiyle değerlendirmişlerdir.

Deste ve Şimşek (2019), havayolu yolcu taşımacılığı sektöründe faaliyet göstermekte olan şirketlerin birbirleri arasındaki göreceli lojistik performans düzeylerinin belirlenmesine yönelik bir araştırma gerçekleştirmişlerdir. Çalışmada kullanılan kriterlerin ağırlık oranları havacılık sektöründe faaliyet gösteren şirketlerde yöneticilik yapan uzman kişiler ile yapılan görüşmelerin yanı sıra Shannon’s Entropi yöntemi ve basit ağırlıklandırma ile elde edilmiş, kriterler üç farklı ağırlık oranına göre Topsis yöntemi kullanılarak analiz edilmiştir.

Kıracı ve Bakır (2018), çalışmalarında havacılığa özgü ölçüm göstergeleri kullanılarak, havayolu şirketlerinin küresel finans krizi öncesi ve sonrası performansının çok kriterli karar verme yöntemleri aracılığıyla incelemişlerdir. Çalışmada kullanılan kriterlerin önem düzeylerinin tespit edilmesi amacıyla CRITIC yöntemi, havayolu firmalarının performanslarına göre sıralanmasında ise EDAS yöntemi kullanılmıştır.

Veri Seti

Çalışmamızda Skytrax şirketi tarafından sağlanan veriler, şirketin web sayfasında yıldızlı ifadelerle gösterilirken çalışmada kullanılabilmesi için sayısal değerlere dönüştürülmüştür.

Tablo 1: Çalışmada incelenen havayolu işletmeleri.

A1	Aeroflot Russian Airlines	A11	RyanAir
A2	Air Astana	A12	Lufthansa
A3	Air France	A13	TurkishAirlines
A4	AirBaltic	A14	British Airways

K1	Havaalanı: COVID-19 gereklilikleri hakkında tabela
K2	Havaalanı: El dezenfektanı görünürlüğü ve kullanılabilirliği
K3	Havaalanı: Kuyruklar: sosyal mesafenin kontrolü
K4	Uçuş: Uçağa binişte / koltukta sağlanan el dezenfektanı
K5	Uçuş: Uçağa binişte / koltukta sağlanan koltuk / masa dezenfektanı
K6	Uçuş: Yüz maskelerinin kullanılabilirliği ve yedeklerinin oluşu
K7	Kabinde temizlik: Koltuk arkılığı / taban / kolçak
K8	Kabinde temizlik: emniyet kemeri / toka
K9	Kabinde temizlik: tepsi tablası ve mandal
K10	Tuvalet kullanımı / kuyruğa alma ile ilgili talimatlar
K11	Tuvalet el dezenfektanı mevcudiyeti
K12	Kabin Personeli: COVID-19 talimatları için net bilgilerin verilmesi
K13	Kabin Personeli: Müşteri sosyal mesafesinin kontrolü
K14	Kabin Personeli: Düzenli ve mesafeli inişin sürdürülmesi
K15	İnternet Sitesi: COVID-19 Standardı Seyahat bilgileri

Entropi

Rudolph Clausius tarafından sistemdeki belirsizlik ve düzensizliğin ölçütü olarak tanımlanan entropi 1948 yılında Shannon tarafından enformasyon teorisine uygulanmıştır. Entropi yöntemi alt kriter ağırlığını hesaplamak için kullanılır. Entropi kavramı, ilgilenilen bir

olaya ilişkin maksimum belirsizlik ya da minimum belirliliği açıklamada kullanılan etkin bir yöntemdir.

Adım 1: Karar matrisinin normalizasyonu

$$r_{ij} = \frac{x_{ij}}{\sum_1^j x_{ij}}$$

- i: alternatif değeri
- j: kriter değeri
- r_{ij} : Normalize edilmiş değer

Adım 2: Entropi değerlerinin hesaplanması

$$e_j = -k \sum_{j=1}^m r_{ij} \ln(r_{ij})$$

- k: Entropi katsayısı
- r_{ij} = Normalize edilmiş değer
- e_j =Entropi değeri

Adım 3: Ağırlık değerlerinin hesaplanması

$$W_j = \frac{1 - e_j}{\sum_1^m (1 - e_j)}$$

- w_j : Ağırlık değeri
- e_j =Entropi değeri

Topsis

Bu yöntem, HwangYoon tarafından 1981 yılında pozitif-ideal çözüme en yakın ve negatif-ideal çözüme en uzak alternatiflerin performans sıralamasının yapılabilmesi için geliştirilmiştir. Technique for OrderPreferencebySimilaritytoIdealSolution yani ideal çözüme benzerlik yoluyla tercih sıralama cümlesinin ilk harfleriyle isimlendirilerek literatürde yer almıştır.

Adım 1: Veri setinin hazırlanması ve karar matrislerinin oluşturulması,

Karar problemine ait, karşılaştırmaya konu olacak m adet faktör serisi belirlenir.

$$x_i(x_i(j), \dots, x_i(n)), \quad i=1,2,3,\dots,m \quad j=1,2,3,\dots,n$$

Karar Matrisi

$$X = \begin{bmatrix} x_1(1)x_1(2) & \cdots & x_1(n) \\ \vdots & \ddots & \vdots \\ x_m(1)x_m(2) & \cdots & x_m(n) \end{bmatrix}$$

Adım2: Oluşturulan karar matrisinden normalize edilmiş değerlerin hesaplanması (N), normalleştirmek için Norm yöntemi kullanılmaktadır.

$$n_{ij} = \frac{a_{ij}}{\sqrt{\sum_{i=1}^m a_{ij}^2}}$$

Burada n_{ij} , j 'inci kritere göre i 'inci alternatifin normalize edilmiş değeridir.

Adım 3: Ağırlıklandırılmış karar matrisinin oluşturulması, bu adımda normalize edilen değerler kriter ağırlıkları ile çarpılır. Çalışmada kriter ağırlıkları, uzman görüşlerine göre Entropi yöntemi ile belirlenmiştir.

$$v_{ij} = r_{ij} \cdot w_{ij}$$

Adım 4: Pozitif İdeal (A^+) ve Negatif İdeal (A^-) çözümlerin belirlenmesi, bu adımda, ağırlıklandırılmış matriste, her bir sütunda yer alan maksimum ve minimum değerler belirlenir. Kriter fayda kriteri ise, pozitif ideal çözümde kriter değerlerinde maksimum olanı, maliyet kriteri ise minimum olanı alınır. Benzer şekilde, kriter fayda kriteri ise, negatif ideal çözümde kriter değerlerinde minimum olanı, maliyet kriteri ise maksimum olanı alınır.

$$A^+ = \{(max_i v_{ij} | j \in J), (min_i v_{ij} | j \in J)\}$$

$$A^- = \{(min_i v_{ij} | j \in J), (max_i v_{ij} | j \in J)\}$$

Adım 5: Alternatifler arası uzaklığın ölçülmesi: Alternatiflerin, maksimum ve minimum ideal noktalara olan uzaklıkları hesaplanır.

$$S_i^+ = \sqrt{\sum_{j=1}^n (v_{ij} - v_j^+)^2}$$

$$S_i^- = \sqrt{\sum_{j=1}^n (v_{ij} - v_j^-)^2}$$

Adım 6: İdeal çözüme göreli yakınlığın hesaplanması: her bir alternatifin ideal çözüme göreli yakınlığı hesaplanır. Göreli yakınlık C_i^+ , $0 \leq C_i^+ \leq 1$ aralığındadır ve aşağıdaki denklik ile hesaplanır.

$$C_i^+ = \frac{S_i^-}{S_i^- + S_i^+}$$

Analizin bu adımında normalize edilen kriterlere ilişkin entropi değerlerinin hesaplanması için her bir alternatifin her bir kriterine ait değer kendi logaritması ile çarpılmıştır. Bu noktada önceki aşamada belirtilen sayısal değeri “0” olan ölçütler, 0’ın logaritması tanımsız olacağından işleme dahil edilmemiştir.

Tablo 6 :k sabiti.

$k=1/\ln(m)$	0,33381
--------------	----------------

k sabiti bulunurken, “ $1/\ln(m)$ ” işlemi uygulanmıştır. m burada karar alternatifi sayısı olduğu için l’in karar alternatifi sayısının logaritmasına bölünmesi ile bulunmuştur.

Tablo 7 :Entropi değerleri ve farklılaşma dereceleri.

ej	-0,4998	-0,4994	-0,4987	-0,4781	-0,4578	-0,4908	-0,4995	-0,4987	-0,4996	-0,4911	-0,47	-0,4997	-0,4989	-0,4979	-0,5004
dj	1,49984	1,49941	1,49874	1,47808	1,45781	1,49081	1,49954	1,49874	1,49958	1,49114	1,46998	1,49972	1,49887	1,49788	1,50036

Entropi değeri yani ej değeri bulunurken, k sabiti her bir kriterin tüm alternatifler için olan değerleri toplamı ile çarpılmıştır. Bu işlemi takiben dj değeri yani farklılaşma derecesi entropi değerinin l’den çıkarılması ile bulunmuştur.

Tablo 8 :Kriterlerin önem ağırlıkları.

wj	0,06702	0,067	0,06697	0,06604	0,06514	0,06661	0,067	0,06697	0,067	0,06663	0,06568	0,06701	0,06697	0,06693	0,06704
-----------	---------	-------	---------	---------	---------	---------	-------	---------	-------	---------	---------	---------	---------	---------	---------

Yöntemin son adımında kriterlerin önem ağırlığının bulunması için her bir kriterine ait farklılaşma derecesi toplam farklılaşma derecesine bölünmüştür.

Entropi yöntemi sonuçlarına göre her bir kriterine ait önem ağırlıkları bulunmuştur. Bu işlem sonucunda kriterlerin önem ağırlıkları Tablo 9’de gösterilmiştir.

Tablo 9 :Kriterlere ait önem ağırlıklarının sıralaması.

K15: İnternet Sitesi: COVID-19 Standardı Seyahat Bilgileri	0,06704
K1: Havaalanı: COVID-19 Gereklikleri Hakkında Tabela	0,06702
K12: Kabin Personeli: COVID-19 Talimatları İçin Net Bilgilerin Verilmesi	0,06701

K2: Havaalanı: El Dezenfektanı Görünürlüğü Ve Kullanılabilirliği	0,067
K7: Kabinde Temizlik: Koltuk Arkalığı / Taban / Kolçak	0,067
K9: Kabinde Temizlik: Tepsi Tablası Ve Mandal	0,067
K3: Havaalanı: Kuyruklar: Sosyal Mesafenin Kontrolü	0,06697
K8: Kabinde Temizlik: Emniyet Kemer / Toka	0,06697
K13: Kabin Personeli: Müşteri Sosyal Mesafesinin Kontrolü	0,06697
K14: Kabin Personeli: Düzenli Ve Mesafeli İnişin Sürdürülmesi	0,06693
K10: Tuvalet Kullanımı / Kuyruğa Alma İle İlgili Talimatlar	0,06663
K6: Uçuş: Yüz Maskelerinin Kullanılabilirliği Ve Yedeklerinin Oluşu	0,06661
K4: Uçuş: Uçağa Binişte / Koltukta Sağlanan El Dezenfektanı	0,06604
K11: Tuvalet El Dezenfektanı Mevcudiyeti	0,06568
K5: Uçuş: Uçağa Binişte / Koltukta Sağlanan Koltuk / Masa Dezenfektanı	0,06514

Entropi yöntemi ile ağırlıklandırma işlemi tamamlanarak kriterlere ilişkin önem ağırlıkları tespit edilmiştir. uygulamanın sonraki adımında Topsis yöntemi, önem ağırlıkları bulunan kriter değerleri üzerinde uygulanacaktır.

Tablo 10 :Entropi tabanlı topsis karar matrisi.

Uygulamanın bu adımında normalize edilmiş kriterlere ait değerler her bir alternatif için entropi yöntemiyle elde edilen kriterlerin önem derecelerinden ilgili kriterlere ait olan değer ile çarpılarak ağırlıklandırılmış normalize karar matrisi elde edilmiştir.

Tablo 13 :İdeale en yakın ve en uzak değerler.

A+	0,017593	0,01776	0,018226	0,017308	0,01838	0,018662	0,017158	0,018226	0,017464	0,018345	0,019768	0,017377	0,018357	0,018938	0,016395
A-	0,012315	0,010656	0,010936	0	0	0,003732	0,010295	0,010936	0,010478	0	0	0,010426	0,011014	0,011363	0,011476

Ağırlıklandırılan normalize karar matrisinde bulunan değerlerden her kriter için tüm alternatiflere ait değerler arasından ilgili kriterin bulunduğu sütundaki en büyük değer ideale en yakın değer, sütundaki en küçük değer ise ideale en uzak değer olarak belirlenmiştir. Bu noktada bilmemiz gereken çalışmamızda ki tüm kriterlerin maksimizasyon yönlü olduğudur. Eğer çalışmamızda minimizasyon yönlü bir kriter olsaydı o kriter için ideale en yakın değer en küçük değer olacaktı.

Tablo 14 : İdeal ve negatif ideal çözüme olan uzaklıklar.

Topsis yönteminin sonraki adımında ideal çözüme olan uzaklığın hesaplandığı formül kullanılarak her bir alternatife ait kriterlerin değerlerinden ideale en yakın değer çıkarılması

ve sonucun karesinin alınması ve bu değerlerin toplanarak 0,5'inci kuvvetinin uygulanması ile ideal çözüme olan uzaklığı ve yine her bir alternatifte ait kriterlerin değerlerinden ideale en uzak değerin çıkarılarak karesinin alınması ve bu değerlerin toplamının 0,5'inci kuvvetinin alınmasıyla negatif ideal çözüme olan uzaklığı hesaplanmıştır.

Yöntemin son adımında ise negatif ideal çözüme olan uzaklık değerlerinin ideal çözüme olan uzaklık değerleri ve negatif ideal çözüme olan uzaklık değerlerinin toplamına bölünmesiyle her bir alternatifin ideal çözüme olan göreceli yakınlıkları bulunmuştur. Bulunan bu yakınlık değerlerine göre alternatiflerin sıralaması Tablo 15'te gösterilmiştir.

Uygulamanın sonuna geldiğimizde, öncelikle topladığımız ve sayısal değerlere dönüştürdüğümüz veriler üzerinde entropi yöntemi uygulanmış, bu yöntemle göre kriterlerin önem dereceleri bulunmuştur. Daha sonra yine aynı verilere önem derecesi değerleri ile topsis yöntemi uygulanarak küresel hava sahasında faaliyet gösteren havayolu işletmelerinin tercih edilebilirlik sıralaması oluşturulmuştur. Çalışmaya göre Covid-19 güvenlik performansı en yüksekten en düşüğe olmak üzere havayolu işletmeleri yukarıdaki tabloda gösterilmiştir.

Sonuçlar ve Öneriler

Havacılık sektörü küresel anlamda gerçekleşme ihtimali olan her krizden kolayca etkilenmemektedir. Endüstrinin geçmişten günümüze birçok krizden ve küresel olaydan etkilendiğini söylememiz kaçınılmaz olacaktır. Günümüzde havacılık endüstrisinin özellikle havayolu ulaştırma sektörü özelinde Covid-19 pandemisinden önemli derecede etkilendiğini söyleyebiliriz. Covid-19 salgını ve sonucunda yaşanan pandeminin üretim, ticaret ve turizm faaliyetleri üzerinde yaratmış olduğu baskı ve olumsuzluklar havacılık sektörü

üzerinde olumsuz etkiler yaratmış, hükümetler, havacılık otoriteleri ve havayolu işletmelerini bu krizle mücadele kapsamında belirli tedbirler ve uygulamalar oluşturma eğilimi göstermiştir.

Yapılan bu araştırmada havayolu işletmelerine ait Covid-19 güvenlik performanslarının entropi tabanlı topsis yöntemi ile analizi yapılmış, uygulama sonuçlarına göre bir liste hazırlanmış bu listeye göre; havayolu işletmeleri Covid-19 salgını ile mücadele kapsamında gösterdikleri güvenlik performanslarına göre sıralamaya tabii tutulmuştur. Uygulama sonuçları baz alınarak Covid-19 salgını ve pandemisine karşı aldıkları tedbirler ile tercih edilebilirlik sıralamasının birinci sırasında çok yüksek bir skor ile Singapore Airlines bulunmaktadır. AirBaltic ve Japan Airlines, Singapore Airlines'ı takip ederken bayrak taşıyıcı firmamız Turkish Airlines listenin 10. sırasında yer almıştır. Tercih sıralaması listesinin son kısmını düşük maliyetli havayolu işletmeleri oluştururken ülkemizde faaliyet gösteren Pegasus listenin son basamağında yer almaktadır.

Bu çalışmamız ve çalışmamıza bağlı olarak uygulama literatürde Covid-19 güvenlik performanslarının incelendiği ilk çalışma olması sebebi ile gelecek çalışmalara ışık olması hedeflenmiştir. Aynı zamanda çalışmamızın özgünlüğü tercih sıralamasında alt sıralarda bulunan havayolu işletmeleri için düzenleme fırsatı oluşturmakta listenin üst sırasında yer alan havayolu işletmelerini kendilerine referans alarak iyileştirmeler yapmaları ve güvenlik performanslarını arttırmaları açısından bu çalışmaya kılavuz niteli katmakta ve büyük önem yüklemektedir.

ÖZET

Presenteeism, işletmelerde gizli mali kayıplara neden olan negatif örgütsel bir fenomen olarak karşımıza çıkmaktadır. Zıttı olarak ortaya çıkan absenteeism (devamsızlık) bile işletmelerde presenteeismden daha az mali kayıplara neden olmaktadır. Bu durum uluslararası literatürde niceliksel çalışmalarla ispatlanmıştır (Johns, 2010). Özellikle finansal krizlerin yaşandığı günümüzde makro ekonomik olarak konuya eğilimin artmasının önemi oldukça yüksektir. Presenteeism, kısaca hasta iken işe gitmek olarak ifade edilebilir. Hizmet sektöründe önemli bir alt sektör olarak otel işletmelerinde çalışanların ve yöneticilerin konu üzerine farkındalıkları turizm sektörünün makroekonomik etkilerini pozitif yöne taşıyacaktır. İşletmeler açısından motivasyon ve iş tatmini konuları 1945'lerden bu yana Neo-Klasik Yönetim yaklaşımları ile organizasyon yapılarında oldukça önemli kavramlardandır. İşletme verimliliğini artıran başarılı bir sosyal sistem içinde çalışanların tatmin düzeyidir. Presenteeism, işletmelerde maddi kayıplara yol açan negatif bir örgütsel davranıştır. Gönüllü ya da zorunlu nedenlerden dolayı hastalık halinde işe devamı kabul eden birey, işletme için gizli maliyet yaratmaktadır. Bu durumun neden ve sonuçları kültür ekseninde değiştiği gibi gönüllülük ve zorunluluk esasına bağlı olarak da değişmektedir. Maliyet kayıplarının önüne geçmek amacıyla davranışın neden ve sonuçlarının tespit edilmesi önem taşımaktadır. Bu araştırmanın amacı presenteeism ve iş tatmini alanında yazın taraması yaparak bu iki kavram hakkında bilgi vermek ve gelecekte yapılacak çalışmalara yol gösterici nitelikte bulgulara ulaşmaktır. Bu araştırma ile presenteeism ile iş tatmini arasında yapılan Web of Science (WoS) ve Scopus veri tabanında yayınlanmış akademik araştırmaların bibliyometrik analizinin sonuçları sunulmaktadır. Veriler Vosviewer programı kullanılarak analiz edilmiştir.

Anahtar Kelimeler: İş Tatmini, Presenteeism, Bibliyometrik Analiz, Vosviewer

Bibliometric Analysis of Studies on Presenteeism and Job Satisfaction (Web of Science and Scopus)

ABSTRACT

Presenteeism emerges as a negative organizational phenomenon that causes hidden financial losses for businesses. Even absenteeism, which appears to be its opposite, causes fewer financial losses in businesses than presenteeism. This has been proven by quantitative studies in the international literature (Johns, 2010). Especially in today's world where financial crises are experienced, the importance of increasing the tendency toward the subject in terms of macroeconomics is very high. Presenteeism can be briefly expressed as going to work while sick. As an important sub-sector in the service sector, the awareness of the employees and managers in the hotel enterprises on the subject will carry the macroeconomic effects of the tourism sector in a positive direction. In terms of businesses, motivation and job satisfaction are very important concepts in organizational structures with Neo-Classical Management approaches since 1945. It is the level of satisfaction of employees within a successful social system that increases business efficiency. Presenteeism is a negative organizational behavior that leads to financial

6th International CEO Communication, Economics, Organization & Social Sciences Congress

losses for businesses. The individual who accepts to continue to work in case of illness due to voluntary or compulsory reasons creates hidden costs for the business. The causes and consequences of this situation change on the axis of culture as well as on the basis of voluntariness and necessity. It is important to determine the causes and consequences of the behavior in order to prevent cost losses. The aim of this research is to provide information about these two concepts by scanning the literature in the fields of presenteeism and job satisfaction and to reach findings that will guide future studies. The data were analyzed using the Vosviewer program.

Keywords: Job Satisfaction, Presenteeism, Bibliometric Analysis, Vosviewer.

GİRİŞ

Presenteeism, bir sağlık durumunun makul bir şekilde devamsızlık için mazeret teşkil edebileceği durumlarda işe fiziksel olarak katılma davranışıdır (Robertson ve Cooper, 2011) ve çoğu araştırma kronik koşullara odaklanır (Miraglia ve Johns, 2016). Kavramsal olarak, presenteeism hastalık sırasında üretkenliği olumsuz yönde etkilemelidir. İşe hasta gelen çalışanlar, fiziksel olarak işyerinde olmasına rağmen, çalışma yeteneği ve motivasyonu açısından hepsi orada sayılmaz (Christian ve diğerleri, 2011; Demeroutiet diğerleri, 2009; Johns, 2010; Luksyte ve diğerleri, 2015; Nahrgang ve diğerleri, 2011; Canfield ve Soash, 1955). Araştırmalar, presenteeism'in bireysel sağlık ve örgütsel üretkenlik üzerindeki olumsuz etkisi nedeniyle önemli olduğunu göstermektedir (Skagen ve Collins, 2016); Hemp, 2004). Sağlıkta üretkenlik kaybı, hastalık devamsızlığı ve işte var olmamayı içerir (Koopmanschap, Burdorf, Jacob, Meerding, Brouwer ve Severens, 2005). Presenteeism, hastalık devamsızlığından çok daha fazla üretkenlik kaybına yol açar ve profesyonel insanlar arasındaki çalışma verimsizliğinin ana modudur (Goetzel, Long, Ozminkowski, Hawkins, Wang ve Lynch, 2004). ABD'de yapılan araştırmalar, presenteeism'in hastalık izninden daha fazla üretkenlik kaybıyla sonuçlandığını göstermektedir (Collins, Baase, Sharda, Ozminkowski, Nicholson, Billotti ve Berger, 2005). Hasta olan çalışanlar daha fazla hata yapma eğilimindedir ve daha düşük performans ve üretkenlik seviyelerine sahiptir (Niven ve Ciborowska, 2015). Araştırmalar, hastayken işe gelmenin çalışanların iş performansına zarar verebileceğini gösteriyor (Miraglia ve Johns, 2016). Presenteeism daha önce iş performansındaki düşüşlerle ilişkilendirilmiştir (Letvak, Ruhm ve Gupta, 2012). Lohaus ve Habermann'a göre, presenteeism iki temel yaklaşımda incelemiştir. Amerikan perspektifinden bu değişken, bir kişinin sağlık sorunları nedeniyle iş verimliliğinin kaybı olarak anlaşılmaktadır. Öte yandan, Avrupa bakış açısına göre, çalışanların sağlık durumu ideal olmadığında evde kalmaları daha iyi olduğunda bile işe devam etmelerine odaklanmaktadır. Hastayken örgüt içerisinde bulunan işgörenlerden, optimal sağlıklı olduğunda elde edilenden daha düşük kalitede iş çıktıları elde edilmektedir (Gifford & Jinnett, 2014) ve bu durum da iş tatminsizliğine neden olmaktadır. Presenteeism, baskı altında yapılan bir seçim ve çalışma kapasitesinin azalması olarak görülebildiği gibi, iş tatmininin azalmasıyla da sonuçlanabilir (Karanika-Murra, Pontes, Griffiths ve Biron, 2015). Bu bağlamda presenteeism ve iş tatmini arasında olumsuz bir ilişki bulunduğu görülmektedir (Baker-McCleary et al., 2010; Cho, Park, Lee, Min, & Baek, 2016; Karanika-Murray et al., 2015; Lu, Lin, & Cooper, 2013). Presenteeism'in olumsuz etkisi sadece birey üzerinde değil, tüm örgüt üzerindedir.

TEORİK ÇERÇEVE

Hasta iken işe gitme olarak ifade edilen presenteeism kavramı Koopman vd. (2002) tarafından geliştirilen Standford Ölçeği ve Türkçe uyarlaması yapılan (Anık Baysal, 2012) ölçek hasta iken işe gelen çalışanın verimliliği üzerine odaklanmaktadır. Sağlık ve verimlilik ölçeği olarak da geçen Standford Presenteeism Ölçeği presenteeism tespiti için en sık kullanılan ölçektir. Hasta iken işe gelme eğilimi (Johns, 2010) olarak kısaca özetlenebilecek kavram A. Uris tarafından absenteeism (işe devamsızlık) kavramının zıttı olarak sözlükte karşılığı olmayan bir

kelime olarak türetilmiştir. Kavram fiziksel ya da psikolojik sağlık sorunları olmasına rağmen bireyin çeşitli (bireysel/örgütsel) nedenlerle işe devam etmeye karar vermesini ifade etmektedir (Johns, 2010). Presenteeism, absenteeisme göre 3 kat daha maliyetli olduğu çalışmalarca tespit edilmiştir (Hemp, 2004). İşletmelere maliyeti yüksek olan bu kavram bireyin performansı üzerine doğrudan etkilidir. Varlığı bireysel performansı düşürmekte ve örgütsel verimliliği azaltmaktadır.

Presenteeism, örgütsel ve bireysel nedenlerden kaynaklanabilmektedir (Koçoğlu, 2007). Örgütsel ve bireysel nedenlerle bireyin hasta iken işe devam etmesinin kararı (Johns, 2010) olumlu ve olumsuz çıktılara neden olabilir. İşletmede verimlilik düşüşü haricinde toplum sağlığı üzerine olumsuz etkileri de bulunmaktadır. Aynı zamanda bireysel olumsuz sonuçları arasında tükenmişlik de önemli sonuçlardandır. Presenteeism kararı alım sürecinde birey gönüllü ya da zorunlu olarak işe devam etmeyi tercih edebilir. Bu noktada bireyi karar alma sürecinde motive eden faktörlerin tespit edilmesi de bu araştırmanın bir parçasıdır.

Yücel (2020) tarafından konaklama işletmelerinde çalışanlar üzerine yapılan çalışmada iş tatmini ile presenteeism arasında negatif yönlü ilişki tespit edilmiştir. Minnesota İş Tatmini Ölçeği ve Stanford Presenteeism Ölçeği ile presenteeism ve içsel/dışsal tatmin arasında (iki boyut için) negatif yönde ilişki içsel ve dışsal tatmin arttıkça presenteeism azaldığı bulgulanmıştır. Araştırma, iş tatmini ve presenteeism arasında sınırlı sayıda araştırmayı da destekler nitelikte bulguları destekler niteliktedir (Haque, 2015; Karanika-Murray vd., 2015). Haque (2015) tarafından iş tatmini, presenteeism ve işten ayrılma niyeti değişkenleri arasındaki ilişkinin tespit edilmesi üzerine yapılan çalışmada, presenteeism ile iş tatmini arasında negatif bir ilişki tespit edilmiştir. Karanika-Murray vd. (2015) tarafından 158 ofis çalışanı örneklemini ile yapılan çalışmada presenteeism ile iş tatmini arasında negatif yönlü ilişki tespit edilmiştir.

YÖNTEM

Çalışmada veri analizi tekniği olarak bibliyometrik analiz kullanılmıştır. Bibliyometrik analiz, belirli bir alandaki araştırma performansını nicel olarak ölçmek için literatür ölçütlerini veya göstergelerini kullanan güçlü bir araçtır (Deng, Wang, Chen ve Wang, 2020). Bibliyometrik analiz, araştırmacıyı en etkili eserlere yönlendirerek araştırma alanını öznel önyargı olmadan haritalayarak, literatürü bir bütün olarak gösteren tekniktir (Zupic ve Cater, 2014). Araştırmacıların temel okuma yapabileceği eserleri, kurumları, yazarları, ülkeleri, en fazla atıf alan makaleleri daha araştırmaya başlamadan önce öğrenebilmesi için önemli bir kolaylık sağlamaktadır (Kurutkan ve Orhan, 2018).

Çalışmanın amacı, presenteeism ve iş tatmini hakkında alan yazın taraması yaparak bu kavramlar hakkında bilgi vermek ve gelecekte yapılacak çalışmalara yol gösterici nitelikte bulgulara ulaşmaktır. Bu bağlamda presenteeism ve iş tatmini yönelik araştırmaların bibliyometrik analizini yapabilmek ve görselleştirebilmek için “VOSviewer” adlı görselleştirme programı kullanılmıştır. VOSviewer, bilimsel yayımlar, bilimsel dergiler, araştırmacılar, araştırma kuruluşları, ülkeler, anahtar kelimeler veya terimlerden oluşan ağlar oluşturmak için kullanılabilir (Kurutkan ve Orhan, 2018). VOSviewer yazılımıyla haritalı bir şekilde literatür resmedilmeye çalışılmaktadır.

Bu çalışmada kullanılan veri setleri “web of science (WOS)” ve “scopus” veri tabanlarından elde edilmiştir. Web of science ve scopus dünyada yayınlanan bilimsel çalışmaları veri tabanlarında tutan ve bu çalışmaların analiz edilmesine imkân veren kapsamlı araçlardır (Zupic ve Cater, 2014). Bilimsel yayınların başlık ve anahtar kelime kısmına “presenteeism ve iş tatmini” yazılarak WOS ve Scopus’da, 2003 ile 12 Haziran 2023 tarihine kadar yayınlanan çalışmalar analize dahil edilmiştir. WOS da 123 adet yayın yapıldığı, Scopus’da ise 158 adet yayın yapıldığı görülmektedir. Ancak çalışmaların arama kriterlerine dil filtrelemesi (İngilizce) ve yayın türü olarak makale kısıtlaması ile yayın sayısı WOS’da 110, Scopus da ise 134 adede inmiştir ve analize bu çalışmalar dahil edilmiştir. Çalışmanın sınırlılığını WOS ve Scopus veri tabanında yayınlanan İngilizce makaleler oluşturmaktadır. Her iki veri tabanında Türkçe bir çalışmaya ulaşılmamıştır.

BULGULAR VE TARTIŞMA

Web of Science ve Scopus veri tabanlarında presenteeism ve iş tatminine ilişkin çalışmaların yıllara göre dağılımını içeren Şekil 1 incelendiğinde ilk çalışmaların Scopus veri tabanında 2003 yılında yayımlandığı görülmektedir.

Şekil 1: Presenteeism-İş tatminine İlişkin Çalışmaların Yıllara Göre Dağılımı

Scopus veri tabanındaki çalışmalar incelendiğinde 2006 ve 2012 yılında hiç çalışma yapılmadığı görülmektedir 2015 yılı itibari ile presenteeism ve iş tatminine ile ilgili çalışmalarda yıllar içinde artış olduğu ve 2022 yılında en fazla yayım yapıldığı görülmektedir. Web of Science veri tabanında ise ilk çalışmanın 2011 yılında yayımlandığı görülmektedir. 2012, 2013 ve 2015 yıllında konuyla ilgili çalışma yapılmadığı görülmektedir. 2017 yılı itibari ile çalışmalarda artış olduğu görülmektedir. Yıllara göre WOS’daki çalışmalar incelendiğinde presenteeism ve iş tatminine ile ilgili 2022 yılında en fazla yayım yapıldığı görülmektedir. Yıllar

içerisinde araştırma sayılarının artmış olması konunun bilim insanları tarafından farkındalığının arttığını göstermektedir.

Çalışma Alanlarının Kategorileşmesi

Aşağıda Şekil 2 ve Şekil 3’de presenteeism ve iş tatmini konusunda yayımlanan çalışmaların kategorileri incelenmiştir.

Şekil 2: WOS Preseenteism-İş tatmine İlişkin Yayınlanan Çalışmaların Konu Alanları

Şekil 3: Scopus Preseenteism-İş tatminine İlişkin Yayınlanan Çalışmaların Konu Alanları

WOS’da halk sağlığı, iş sağlığı, yönetim, çevre bilimleri, hemşirelik ve psikoloji alanında yayımlanan çalışmaların fazla olduğu tespit edilmiştir. Scopus veri tabanında ise sağlık, psikoloji, yönetim, işletme, hemşirelik ve çevre bilimleri konularının sıklıkla çalışıldığı sonucuna ulaşılmıştır.

Yazarların Haritalanması

Şekil 4 ve Şekil’de presenteeism ve iş tatmini konusunda yayın yapan yazarlar arasındaki ilişki bağının yoğunluk haritası gösterilmektedir.

Şekil 4: WOS Preseenteism-İş tatminine İlişkin Atıf Alan Yazar Yoğunluk Haritası

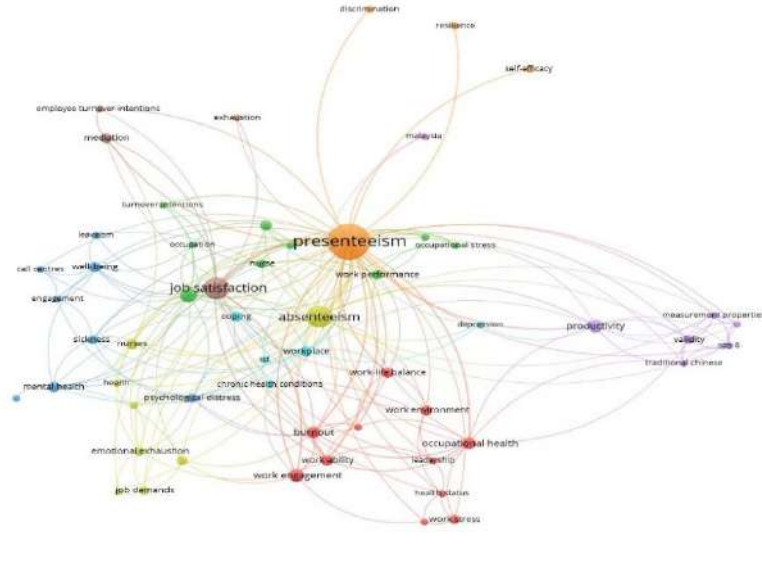

Şekil 5: Scopus Preseenteism-İş tatminine İlişkin Atıf Alan Yazar Yoğunluk Haritası

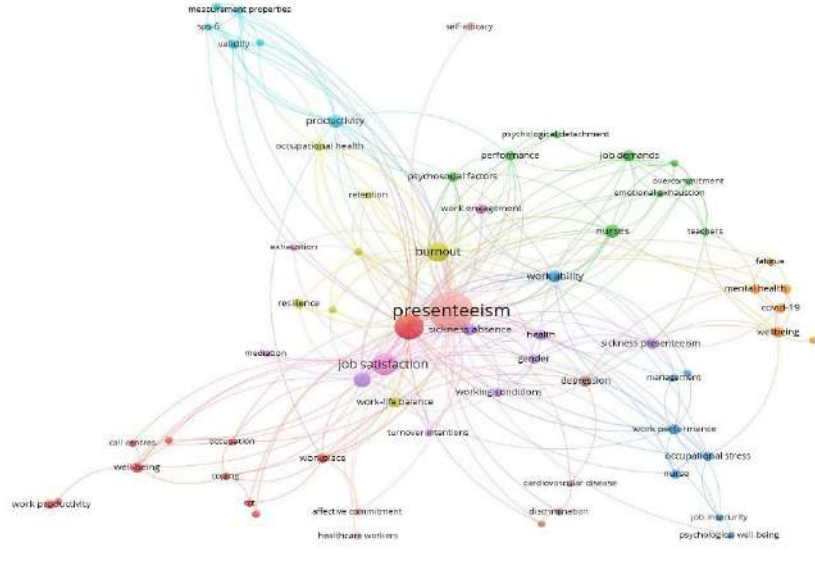

WOS’da Gillet Nicolas, Cooper Cary, Lu Lou, Haque Amlan, Stinglhamber Florence ve Lin Hui Yen’dir. Scopus da ise Ravalier J.M,Shi Y;Sears L.e;Coberley.C; Chuang K.J en fazla atıf alan yazarlar olarak tespit edilmiştir.

Anahtar Kelimelere İlişkin Bulgular

Çalışmada dokümanlarda yer alan kelimeler arası ilişki ağı kurmada kullanılan bir teknik olan özetlerde yer alan ortak kelime analizi ve ortak anahtar sözcük analizi kullanılmış olup WOS ve Scopus veri tabanı temel alınmıştır (Cobo, López-Herrera, Herrera-Viedma ve Herrera, 2011: 1383). İki düğüm arasındaki mesafe ne kadar kısaysa, iki anahtar kelimenin birlikte bulunma sayısı o kadar fazla olduğu anlamına gelmektedir. Çalışmalarda, anahtar kelime olarak çoğunlukla işe devamsızlık (absenteeism), iş performansı, tükenmişlik, hastalık sebebiyle işe gidememe (sickness absence), iş yaşam dengesi, depresyon, sağlık, hemşire, işe bağlılık ve iş stresi gibi kavramlar kullanılmıştır.

Şekil 6: WOS Preseenteism-İş Tatminine İlişkin Anahtar Kelime Ağ

Şekil 7: Scopus Preseenteism-İş Tatminine İlişkin Anahtar Kelime Ağ

Ülkelere İlişkin Bulgular

Aşağıda Şekil 8 ve Şekil 9’da da görüldüğü üzere, WOS ve Spocus’da Presenteeism ve iş tatmini konusuna ilişkin en çok yayına sahip ülke Amerika, İngiltere, Avustralya, Hollanda ve Kanada’dır.

Şekil 8: WOS Preseenteism-İş Tatminine İlişkin Ülkelerin Yoğunluk Haritası

Şekil 9: Scopus Preseenteism-İş Tatminine İlişkin Ülkelerin Yoğunluk Haritası

SONUÇ VE ÖNERİLER

Presenteeism, işletmelerde maddi kayıplara yol açan negatif bir örgütsel davranıştır. Gönüllü ya da zorunlu nedenlerden dolayı hastalık halinde işe devamı kabul eden birey işletme için gizli maliyet yaratmaktadır. Bu durumun neden ve sonuçları kültür ekseninde değiştiği gibi gönüllülük ve zorunluluk esasına bağlı olarak da değişmektedir. Maliyet kayıplarının önüne geçmek amacıyla davranışın neden ve sonuçlarının tespit edilmesi önem taşımaktadır. Bu araştırma ile presenteeism ile iş tatmini alanında yapılan çalışmaların bibliyometrik analizini sunmaktadır.

Çalışmalarda en fazla atıf verilen yazarlar incelendiğinde WOS ve Scopus’da Gillet Nicolas, Ravalier J.M., Shi Y; Sears L.E, Coberley C.R, ön plana çıkmaktadır. Her iki veri tabanında yayınlanan çalışmaların anahtar kelimeleri incelendiğinde işe devamsızlık, iş performansı, tükenmişlik, hemşire, iş yaşam dengesi, sağlık, kelimelerinin sıklıkla kullanıldığı tespit edilmiştir. WOS ve Scopus’da yayınlanan çalışmaların konu alanları incelendiğinde en fazla halk sağlığı, iş sağlığı, hemşirelik, çevre bilimleri, işletme ve yönetim alanlarında olduğu sonucuna ulaşılmıştır. WOS ve Scopus’da yayınlanan çalışmaların yayınlandığı dergilerin ülkeleri incelendiğinde ise Kanada, ABD, İngiltere, Avustralya ve Hollanda olduğu tespit edilmiştir. Bu çalışma, presenteeism ve iş tatmini konusunda Türkiye’deki ilk bibliyometrik analiz olma özelliği taşımaktadır.

Çalışma sonuçlarından yola çıkılarak bakıldığında, çalışanların işte var olamamalarına sebep olan faktörlerin belirlenmiş olmasının ve bu faktör ya da faktörlerle ilgili gerekli önleyici girişimlerde bulunulmasının, işyeri açısından nicel faydasının yanı sıra nitel açıdan da önemli derecede fayda sağlayacağını göstermektedir. Bu nedenle, bu tarz sıkıntı yaşanan durumlar karşısında işletmelere ivedilikle gerekli önlemleri almak için adımlar atmaları önerilmektedir. Ayrıca, bu alanda çalışanların işte var olamamalarına sebep olan başka faktörlerin belirlenmesinin çalışanların iş tatmin düzeylerini daha da arttırabileceği ön görüldüğü için bu alanda çalışmalar yapılmasının alan yazına katkı sağlayacağı düşünülmektedir.

ÖZET

Örgütsel bağlılık; adanma, sadakat veya bağlı olma anlamlarını ifade etmektedir (Mercan 2006). Örgütsel bağlılık, işletmede düzen sağlama görevine sahip olmasından kaynaklı son yıllarda yüksek ilgi görmüştür. Bu konu hakkındaki teorik çalışmaların çoğu farklı iki görüşü ortaya çıkarmıştır. İlk bakışa göre Morrow (1983) bağlılık kelimesinin iş gücü devri, performans vb. unsurlar üzerindeki etkilerinin önemli sonuçlarının anlaşılması için ilgili olduğu kavramlardan farklı olarak ele alınmasını öne sürmüştür (Meyer ve Allen 1997). Diğer bir görüşe göre ise Reichers (1985) örgütsel bağlılığın tek boyutlu bir kavram olarak değerlendirilmemesini, buna bağlı olarak bağlılığın örgütü oluşturan farklı gruplara olan bağlılıkla birleşim olarak değerlendirilmesi gerektiğini öne sürmüştür (Reichers, 1985). Örgütsel bağlılığın artmasıyla birlikte, bireylerin iş performanslarında artış göstermesi beklenmektedir. Kavram olarak iş performansı, örgütteki çalışanların ücret karşılığında çaba gerektirdikleri gayrettir (Rousseau ve McLean, 1993). Kohli (1985) iş performansını, çalışanın kendine eş değer çalışanlara nazaran işle ilgili davranış ve çıktılarının daha fazla ortaya çıkan verimlilik düzeyi olarak değerlendirmiştir. Bu araştırma ile, örgütsel bağlılık ve iş performansı ile ilgili yapılmış olan çalışmaların kronolojik (Web of Science ve Scopus) açıdan araştırılarak ortaya çıkarılması amaçlanmıştır. Veriler Vosviewer programı kullanılarak analiz edilmiştir.

Anahtar Kelimeler: Örgütsel Bağlılık, İş Performansı, Bibliyometrik, Vosviewer.

Bibliometric Analysis of Studies on Organizational Commitment and Job Performance (Web of Science and Scopus)

ABSTRACT

Organizational commitment; it means devotion, loyalty or commitment (Mercan 2006). Organizational commitment has received high attention in recent years due to the fact that it has the task of maintaining order in the enterprise. Most of the theoretical studies on this subject have revealed two different views. At first glance, Morrow (1983) suggests that the word commitment means turnover, performance, etc. in order to understand the important consequences of the effects of the effects on the elements, he suggested that they should be handled differently from the related concepts (Meyer and Allen 1997). According to another view, Reichers (1985) suggested that organizational commitment should not be evaluated as a one-dimensional concept, and accordingly, commitment should be evaluated as a combination of commitment to different groups that make up the organization (Reichers, 1985). With the increase in organizational commitment, individuals are expected to increase in their job performance. As a concept, job performance is the effort that employees in the organization require in return for wages (Rousseau & McLean, 1993). Kohli (1985) evaluated job performance as the productivity level of the employee's work-related behaviors and outcomes that emerge more than their peers. With this research, it is aimed to reveal the studies on organizational commitment and job performance by researching them chronologically (Web of Science and Scopus). The data were analyzed using the Vosviewer program.

Keywords: Organizational Commitment, Job Performance, Bibliometrics, Vosviewer.

GİRİŞ

İşletmelerin pazarda varlıklarını daha uzun süre koruyabilmeleri ve rakip işletmeler karşısında oluşan rekabetin üstünlüğünü koruyabilmeleri açısından belirli stratejilere sahip olması gerekmektedir. Bu stratejilerden belki de en önemlisini çalışanlar oluşturmaktadır. Çünkü işi meydana getiren ve sunan ‘insan’dır. Bu noktada işgörenlerin işletmeyle olan ilişkileri dikkate alınmalıdır. Farklı görevlerde ve özelliklere sahip olan işgörenlerin daha etkin ve verimli bir şekilde çalışmalarını için gerekli ortamların sağlanması gerekmektedir.

İşletmeler, işgörenlerin mal veya hizmet üretmeleri dışında yaptıkları işten veya kurumlarından memnuniyet durumlarını da göz ardı etmemelidir. İşgörenlerin çalıştıkları işletmeleri, pozisyonlarını ve işlerini benimsemeleri ve bunu sürdürmeleri son derece önem taşımaktadır. Bu noktada örgütsel bağlılık konusu dikkat çekmektedir. Örgütsel bağlılık, örgüt içerisinde çalışan işgörenlerin işletmelere olan bağlılığı, işlerini ne önemde benimsedikleri, işe geliş gidiş durumlarındaki hevesleri ve olası durumlarda işten ayrılma niyetlerine kadar olan durumları kapsamaktadır. İş gören işine ne kadar hevesli gelirse işlerini de o oranda hevesli ve daha özenli şekilde yapmaktadır.

Örgütlerin işgörenlerine karşı verdiği değer onların işlerine ve performanslarına direkt olarak yansımaktadır. İşgörene ne kadar değer verilirse ve bunu işgören hissederse, onların işletmeye geldikleri erken saatten yaptıkları iş miktarına kadar daha verimli olmaktadır. İşletmesinden memnun işgörenler işlerine zamanında gelip giderler, yoğun dönemlerde erken gelip geç çıkmaktan rahatsızlık duymazlar, sürekli etkin ve üretken olurlar, memnuniyetleri işlerine ve müşterilerine de yansımaktadır.

Bu çalışmanın amacı örgütsel bağlılık ve iş performansına ilişkin yapılmış çalışmaların Bibliyometrik analizi yer almaktadır. Yapılmış çalışmaların yıllara göre dağılımı ve kim tarafından hangi başlıklar altında yapıldığını belirlemek çalışmanın amaçları arasındadır. Çalışmanın amacına uygun olarak Web of Science ve Scopus veri tabanları kullanılarak Vosviewer programında analiz edilmiştir.

Örgütsel Bağlılık

Örgütsel bağlılık kelime anlamı olarak adanma, sadakat veya bağlı olma anlamlarını ifade etmektedir (Mercan 2006). Bu konu hakkındaki teorik çalışmaların çoğu farklı iki görüşü ortaya çıkarmıştır. İlk bakışa göre Morrow (1983) bağlılık kelimesinin iş gücü devri, performans vb. unsurlar üzerindeki etkilerinin önemli sonuçlarının anlaşılması için ilgili olduğu kavramlardan farklı olarak ele alınmasını öne sürmüştür (Meyer ve Allen 1997). Diğer bir görüşe göre ise Reichers (1985) örgütsel bağlılığın tek boyutlu bir kavram olarak değerlendirilmemesini, buna bağlı olarak bağlılığın örgütü oluşturan farklı gruplara olan bağlılıkla birleşim olarak değerlendirilmesi gerektiğini öne sürmüştür (Reichers, 1985).

Örgütsel bağlılıkla ilgili yapılan ilk çalışmalar örgütsel değerlerin içselleştirilmesini yansıtan tek boyutlu bir yapı olarak ele almış olsalar da Meyer ve Allen, örgütsel bağlılığın üç farklı boyuta sahip olduğunu ortaya koymuşlardır. Bu üç farklı boyutlar; duygusal, devamlılık ve normatif bağlılıktır (Yüceler, 2009; Açıkalin, 2011).

Duygusal Bağlılık: Bireylerin örgüte olan duygusal bağlantısıyla ilgilidir (Meyer ve Allen 1990). Yani, güçlü duygusal bağlılığa sahip olan çalışanlar en çok örgütte kalmayı istediklerini hissettikleri için örgütte kalırlar (Demircan 2003).

Devamlılık Bağlılığı: Bireylerin örgütten ayrıldıklarında getireceği maliyetlerin farkında olmasıdır (İnce ve Gül 2005). Bu bağlılık türünde, bireyler istese de örgütten ayrılamamaktadır.

Normatif Bağlılık: Bireyler kendilerini örgüte karşı zorunlu hissettiği için örgüte bağlanmaktadır. Bu bağlılık türüne göre, örgütün çalışana verdiği burs gibi ödüller sağladığında ya da eğitim gibi önemli olan maliyetleri üstlendiğinde meydana gelmektedir. Böylece çalışan, borçlarını ödeyene kadar kendisinde karşılığını ödeme yükümlülüğü hisseder (Allen ve Meyer 1990; Meyer ve Allen 1990).

Örgütsel bağlılık konusu, örgütsel davranış ve örgütsel psikoloji çalışanların son zamanlarda ilgilerini çeken en önemli konular arasında yer almaktadır. Örgütsel bağlılık, örgüt içerisinde çalışmakta olan işgörenlerin yaptıkları işlerdeki verimliliklerini ve etkiliklerini açıklamasının yanı sıra aynı zamanda işgörenlerin işten ayrılma niyetlerini de açıklamaktadır (Wasti, 2000, s.401). İş görenleri örgüte bağlama konusunda birtakım maliyetler ortaya çıkmaktadır. Bu maliyetler; örgütten elde edilen haklar, çalışma süreleri, herhangi bir olumsuzluk sonucu işgörenin işten ayrılması durumunda ihtiyaç duyulacak yeni iş arayışı zorluğu gibi hususlar yer almaktadır (Kömürcüoğlu, 2003, s.3).

Örgütsel bağlılık, işgörenlerin örgüte verdiği faydalarının yanında işletme tarafından ne kadar faydalandığıyla da ilgilidir. Bir çalışan işine ne kadar istekli ve hevesli şekilde gidiyorsa örgüte olan bağlılığı o yönde olmaktadır. Aynı zamanda ne kadar isteksiz ve hevesiz gidiyorsa işletmeye olan bağlılığı ve ilgisi o yönde azalmaktadır. Her iki tarafın dengeyi koruması gerekmektedir. Ancak bu denge sağlanırsa işletmenin hedefleri doğrultusunda ilerlemesi mümkün olmaktadır.

Örgütsel bağlılığın hem işgörenler hem de işletme açısından birtakım sonuçları bulunmaktadır. Bu sonuçlar şu şekilde verilebilmektedir (Ceylan ve Demircan, 2002, s. 55):

a) İşgören açısından

- Örgütün zor zamanında onların yanında olmaktadır,
- İşe erken gelip, geç çıkması gereken durumlarda sorun etmemektedir,
- Fayda sağlayıcı nitelikte olmayı hedeflemektedir,
- Örgütün varlıklarını korumayı amaçlamaktadır,
- İşe düzenli ve disiplinli gelmektedir.

b) Örgüt açısından

- Aylık ve yıllık planlanan hedefler tutturulmaktadır,
- İşini seven ve saygı gösteren çalışanlar bulunmaktadır,
- İş görenlerle işletme arasında duygusal bağlılık ortaya çıkmaktadır,
- İş stresinden uzak bir ortam sunulmuştur ve bunun sonucunda monotonlaşmış bir çalışma stiline dışına çıkılarak üreten, yeni yöntemler geliştiren bir ortam sağlanmıştır.

İş Performansı

İş performansı, örgütteki çalışanların ücret karşılığında çaba gerektiren gayret olarak ifade edilmektedir (Rousseau ve McLean, 1993). Kohli (1985) iş performansını, çalışanın kendine eş değer çalışanlara nazaran işle ilgili davranış ve çıktılarının daha fazla ortaya çıkan verimlilik düzeyi olarak değerlendirmiştir. Borman ve Motowidlo (1993) ise, çalışanların yaptıkları işe yönelik faaliyetleri şeklinde ifade etmiştir. İş performansı ve iş tatmini gerek literatürde gerekse ampirik araştırmalarda üzerinde çalışılan en önemli konular arasında yer almaktadır.

Kamu veya özel bütün sağlık kurumlarının yüksek performans gösterebilmeleri için performans ve performans yönetimine önem vermeleri gerekmektedir. Performans ölçümü ve yönetiminde ise dikkat edilmesi gereken hususlar şunlardır (Artley vd., 2001: 1-3):

- Performans ölçüm ve yönetim sistemlerinin oluşturulması ve aynı zamanda kullanımında liderlik edilmelidir.
- Kavramsal çerçeve çıkarılmalıdır.
- İçsel ve dışsal iletişim imkanları sağlanmalıdır.
- Sonuçların sorumluluğuyla ilgili unsurlar net ve anlaşılabilir olmalıdır.
- Performans yönetim sisteminden ortaya çıkabilecek bilgiler, karar vericilere yol gösterici niteliğinde olmalıdır.
- Maaş ve ödül gibi hususlar performans ile ilişkilendirilmelidir.
- Cezalandırıcı olmak yerine daha çok yol gösterici olunmalıdır.
- Süreçle ilgili bilgiler çalışanlar, müşteriler gibi tüm taraflara iletilmelidir.

İş performansı literatürde iki şekilde ele alınmaktadır. Bunlar; iş performansı ve görev performansıdır. İş performansını örgütlerin amaçlarına uygunluk, belirlenmiş davranış şekilleri, ortaya çıkan işin kalitesi, kişiler yetenekler ve genel yetenekler üzerinde ele alınmıştır. Görev performansı ise; işgörenlerin örgütün hedeflerine ulaşması için yazılı haldeki görev tanımlarıdır. Burada işgörenlerin işletmelerin belirlediği hedefler ve iş akışı doğrultusunda geliştirdikleri faaliyetler bulunmaktadır. Bu iş performansı türünde disiplin esastır. Çalışanlar risk almak istemezler. Aldıklarında örgüt tarafında tepki alacaklarını düşünmektedirler. Tamamen tekniksel ve sistematik yönetim şekli söz konusudur (Taştumur, 2018).

İş performansı ve görev performansı karşılaştırıldığında iki farklı yöntem yer almaktadır. İş performansı daha işgören odaklı olup, onların işe aktif katılımlarının sağlanması yönünde olmasında yanadır. Görev performansı daha sistematik ve astların motivasyonuna yönelik bir çalışma stili şeklinde olmaktadır. İş performansı konusu örgütlerde oldukça önemli noktada yer almaktadır. Bunun sebepleri arasında işleyişin düzgün bir şekilde ilerlemesi ve işgörenlerden maksimum fayda sağlanması gösterilebilmektedir. Aynı zamanda iş performansına ilişkin yapılmış çalışmaların analizi bu noktada önem taşımaktadır.

Yöntem

Emek-yoğun sektörlerden biri olan turizm sektöründe çalışan ve işletme arasında olan her türlü iletişimi konu alan ve sürdürülebilirliği sağlayan örgütsel bağlılık ile iletişim sonucunda çalışanların işletmeye sağladığı fayda ile direkt ilgili olan iş performansı hakkında yapılan çalışmaların analiz edilmesi çalışmanın konusunu oluşturmuştur. Çalışmanın amacı, alan yazın taraması yapmak, bilgi vermek ve gelecekte yapılacak çalışmalara yol gösterici bulgulara ulaşmaktır.

Çalışma temel sorununa uygun olarak nitel yöntem ile gerçekleştirilmiştir. Çalışmanın uygulama deseni bibliyometrik analize bağlı kalınarak tasarlanmıştır. Bibliyometrik analizler, çalışmaların yıllar itibarıyla dağılımlarının tespit edilmesinde önemli bir rol oynamaktadır. Yapılan çalışmaların niteliksel ve niceliksel anlamda ortaya konması sağlanırken, bilimsel bilginin birikimsel olmasından hareketle çalışmalarda meydana gelen değişiklikleri saptamayı beraberinde getirmektedir. Bunun yanı sıra yapılan anlamlı çıkarımlarla birlikte bibliyometrik analizler alt kategoriler aracılığıyla tümevarım yapmayı da mümkün kılmaktadır. Bibliyometrik analize yönelik çalışmalar gerek araştırılan konunun gerekse de konuyu içine alan bilim dalının

süreç içerisinde kaydettiği gelişmelerin ortaya konmasını sağlamaktadır. Bununla birlikte bibliyometrik çalışmalar, konuya ve ilgili bilim alanlarına yönelik problemlerin veya eksik yönlerin belirlenmesinde etkin bir rol oynamaktadır (Yılmaz, 2017). Bu noktadan hareketle örgütsel bağlılık ve iş performansı ile ilgili yapılan araştırmaların bibliyometrik analizi bu çalışmanın çıkış noktası olarak belirlenmiştir. Örgütsel bağlılık ve iş performansı gibi kavramların literatürde sıklıkla karıştırılması ilgili kavramların hem detaylı analizinin yapılmasını hem de belirli bir kategorizasyon içerisinde sistematik olarak incelenmesini zorunlu kılmaktadır. Bu bağlamda bibliyometrik çalışmalar oldukça önemli bir yer tutmaktadır. “Web of science (WOS)” ve “Scopus” veri tabanlarından veriler elde edilmiş ve Vosviwer programıyla analiz edilmiştir.

- WOS’da 830, Scopus’da ise 521 adet yayın yapıldığı görülmektedir.
- Dil filtrelemesi (İngilizce), yayın türü olarak makale ve son 20 yıl (2003-2023) kısıtlaması ile yayın sayısı WOS’da 658, Scopus’da ise 378 adet çalışma analize dahil edilmiştir.

Bulgular

Çalışmanın konusu olan örgütsel bağlılık ve iş performansına ilişkin yapılan çalışmaların Web of Science ve Scopus veri tabanlarına göre aşağıdaki bulgulara ulaşılmıştır.

Şekil 1: Web Of Science’da Örgütsel Bağlılık ve İş Performansı İlgili Çalışmaların Yıllara Göre Dağılımı

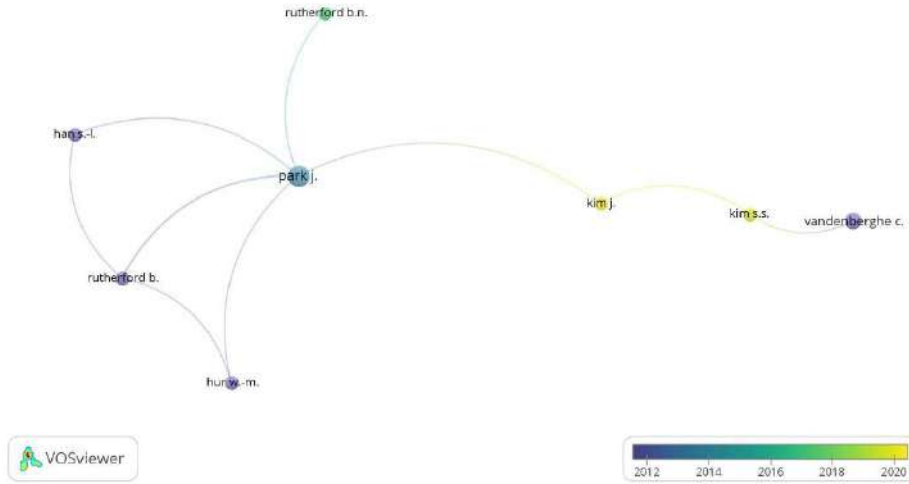

Şekil 1’de örgütsel bağlılık ve iş performansına ilişkin yapılmış çalışmaların yıllara göre dağılımı yer almaktadır. Web of Science’den elde edilen tabloya göre örgütsel bağlılık ile iş performansı konuları üzerine son 20 yıl baz alınarak 2003 yılında 10 çalışmanın altında olup zaman zaman iniş çıkışlar olmuştur. Genel olarak yıllar arttıkça çalışma sayıları da artmıştır. Özellikle konuyla alakalı yapılan çalışma sayısı en fazla olan yıl 2022 yılıdır. Günümüzde yapılan çalışma sayılarına bakılacak olursak 2023’ün 6.ayına kadar yapılan çalışma sayısı 20’nin altında kalmıştır.

Documents by year

Şekil 2: Scopus Örgütsel Bağlılık ve İş Performansı İlgili Çalışmaların Yıllara Göre Dağılımı

Şekil 2’de yukarıda yapılan çalışmanın Scopus veri tabanına göre sonuçları yer almaktadır. Örgütsel bağlılık ve iş performansına ilişkin son 20 yıl baz alınarak yapılan analizde; 2003 yılında yapılan çalışma sayısı 10’un altındadır. 2003’ten itibaren 3 yıl boyunca çalışma sayısı 10’u geçememiştir. 10’un üzerine çıkılan çalışma sayısı ilk olarak 2007 yılında olmuştur. 2008 yılında biraz düşüş yaşansa da sonraki yıllar artarak devam etmiştir. Araştırma konusu olan örgütsel bağlılık ve iş performansına ilişkin yapılan çalışmaların en yoğun olduğu yıl ise 2022 yılıdır. 2023 yılının ortasında bulunduğu göz önüne alındığında çalışma sayısı 15’in altında kalmıştır.

Şekil 3: Scopus Örgütsel Bağlılık ve İş Performansına İlişkin Atıf Alan Yazar Ağı

Şekil 3’te çalışmanın konusu olan örgütsel bağlılık ve iş performansına ilişkin yapılan çalışmalarda en çok atıf alan yazar ağları yer almaktadır. Scopus’ta yapılan analize göre işaretli renkli topların hacmine göre atıfı en çoktan en aza alana göre azalmaktadır. Buna göre konuya ilişkin atıf alan yazarlar; Rutherford, Hang, Hurw, Park J., Kim J., Kim S. ve Vanderberghe C. olmuştur. Bu yazarlar arasından en fazla atıf alan yazar ise Park J. olmuştur.

Şekil 4: WOS Örgütsel Bağlılık ve İş Performansına İlişkin Atıf Alan Yazar Ağı

Şekil 4'te çalışmanın konusu olan örgütsel bağlılık ve iş performansına ilişkin yapılan çalışmalarda en çok atıf alan yazar ağları yer almaktadır. Web of Science veri tabanında yapılan analizin sonucuna göre konuya ilişkin atıf alan yazarlar; Amy Colbert, Sue Oh, George Banks, Kang Shin, John Meyer, Alexandre Morin, Stephanie Austin ve Claude Fernet olmuştur. Bu yazarlar arasından en fazla atıf alan yazar ise John Meyer'dir.

Şekil 5: WOS Örgütsel Bağlılık ve İş Performansına İlişkin Atıf Alan Doküman Ağı

Şekil 5'te örgütsel bağlılık ve iş performansına ilişkin yapılan çalışmaların hangi yıllarda kim tarafından yapıldığına dair doküman ağı yer almaktadır. Web of Science'a göre yapılan doküman ağı sonucuna göre; 2003 yılında Cropanzano, 2014 Glavas, 2015 Humphrey gibi yazarlar yer almaktadır. Konuya ilişkin yapılan en çok çalışma ise 2008 yılında Bakker ve 2006 yılında Parker tarafından olmuştur.

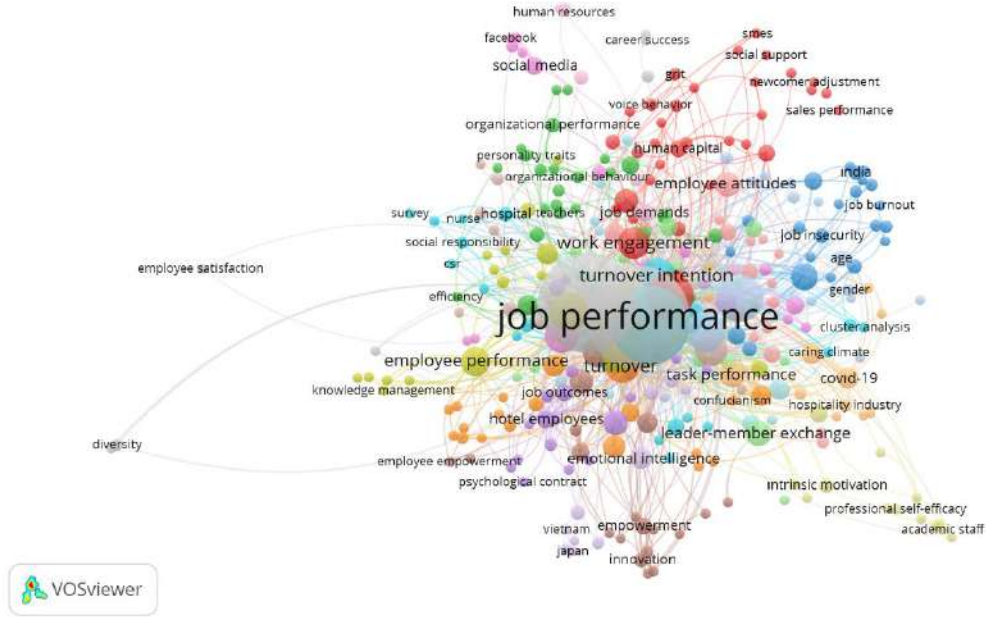

Şekil 6: Scopus Örgütsel Bağlılık ve İş Performansına İlişkin Atıf Alan Doküman Ağı

Şekil 6’da Scopus’a göre yapılan doküman ağı sonucuna göre; 2003 yılında Cropanzano, 2006 Jaramillo, 2007 Hunter, 2010 Bowling, 2015 Allen ve Humphrey gibi yazarlar yer almaktadır. Konuya ilişkin yapılan en çok çalışma ise 2008 yılında Bakker ve 2003 yılında Cropanzano tarafından olmuştur.

Şekil 7: Scopus Örgütsel Bağlılık ve İş Performansına İlişkin Anahtar Kelime Ağı

Şekil 7’de Scopus veri tabanında örgütsel bağlılık ve iş performansı başlıklarının taratılması sonucunda ortaya çıkan kelime ağı yer almaktadır. Çıkan kelime ağı sonucuna göre örgütsel bağlılık kelimesi en fazla yer almaktadır. Buna ek olarak iş performansı, liderlik, psikolojik güç, çeşitlilik, empati, meta analizi, iş tutumu, kültür, örgütsel destek, performans, hemşire, etkililik ve yaratıcılık gibi kelimeler yer almaktadır.

Şekil 8: WOS Örgütsel Bağlılık ve İş Performansına İlişkin Anahtar Kelime Ağı

Şekil 8’de Web of science veri tabanında örgütsel bağlılık ve iş performansı başlıklarının taratılması sonucunda ortaya çıkan kelime ağı yer almaktadır. Çıkan kelime ağı sonucuna göre iş performansı kelimesi en fazla yer almaktadır. Buna ek olarak iş gücü, faydalılık, sosyal sorumluluk, etkililik, örgütsel davranış, bilgi yönetimi, kişisel nitelikler, sosyal medya, liderlik, iş tutumu, iş talepleri, sosyal destek, yaş, cinsiyet, konaklama endüstrisi, görev performansı ve satış performansı gibi kelimeler yer almaktadır.

Sonuç ve Öneriler

Yapılan bibliyometrik analiz çalışmasında son 20 yıl baz alınmıştır. İlk olarak 2003 yılı ve son olarak 2023 yılı değerlendirilmiştir. Bu değerlendirme sonucunda Web of Science ve Scopus veri tabanlarından belirli kısıtlamalar ile elde edilen bulgular ışığında aşağıdaki sonuçlar ortaya çıkmıştır.

Çalışmalarda en fazla atıf verilen yazarlar incelendiğinde WOS ve Scopus’ da Amy Colbert, Sue Oh, George Banks, Kang-hyun Shin, John Meyer, Alexandre Morin, Stephanie Austin, Claude Fernet, Rutherford, J. Park, I. Hans, J. Kim, C. Vanderberghe ön plana çıkmaktadır. En çok örgütsel bağlılık ve iş performansına katılım; örgütsel davranış, motivasyon, iş tatmini, iş tutumu, iş ve işveren ilişkileri ve ödüllendirme gibi konularda çalışma yapan araştırmacılara atıf verildiği görülmüştür.

Bu çalışma, örgütsel bağlılık ile iş performansı hakkında çalışmaların ne zaman ve kimler tarafından daha çok hangi başlıklar altında ele alınarak yapıldığına dair net bir analiz çerçevesinde önem kazanmaktadır. Gelecekte yapılacak çalışmalarda;

- Ülkedeki örgütsel bağlılık ve iş performansında turizm potansiyelinin belirlenmesi,
- Örgütsel bağlılığın ve iş performansının geliştirilmesine yönelik politikaların üretilmesi,
- Örgüt çalışanlarının beklentilerinin belirlenmesi,

6th International CEO Communication, Economics, Organization & Social Sciences Congress

- Örgütsel bağlılığın ve iş performansının öneminin artırılması,
- Örgütlerin konuyla yakından ilgilenilmesi için teşvik edilmesi anlamında yararlı olacaktır.

ÖZET

Küreselleşme ile havaalanları, artan havayolu trafiği ve yolcu talebi nedeniyle giderek daha fazla rekabet koşullarına maruz kalmaktadır. Havaalanları, kendilerini sürekli olarak geliştirmek ve değişen teknolojiye uyum sağlamak zorundadır. Seyahat süresi boyunca havaalanları, sadece bir durak noktası olmaktan çıkmıştır, karmaşık ve büyük yaşam merkezlerine dönüşmüştür. Bu nedenle, havaalanlarındaki hizmet kalitesi giderek önem kazanmıştır.

2019 yılında, Airports Council International (ACI) tarafından sağlanan verilere dayanarak, Entropi ve TOPSIS gibi çok kriterli karar verme yöntemleri kullanılarak en fazla yolcu trafiği olan 10 havaalanı incelenmiştir. Çalışmada, kuyruk bekleme süresi, terminal temizliği, terminal oturma alanları, terminal işaret ve yönlendirme, yiyecek-içecek hizmetleri, havaalanı alışveriş mağazaları, Wi-Fi bağlantısı ve havaalanı personeli gibi 8 farklı kriter kullanılmıştır. Kriterler, Skytrax sitesi üzerinden belirlenmiştir.

Bu çalışmanın sonuçlarına göre, 2019 yılında en önemli kriter havaalanı alışveriş mağazaları olarak belirlenmiş ve Londra Heathrow Havaalanı en yüksek hizmet kalitesine sahip havaalanı olarak tespit edilmiştir. Ancak, COVID-19 salgınından sonra havaalanları için öncelikler değişmiştir. 2022 yılında yapılan bir güncellemeyle aynı havaalanları üzerinden bir karşılaştırma yapılarak en önemli kriterin havaalanı terminal temizliği olduğu ve Münih Havaalanı'nın en yüksek hizmet kalitesine sahip havaalanı olduğu sonucuna ulaşılmıştır. Bu karşılaştırma, havaalanlarının zaman içindeki performansını daha net bir şekilde gözlemlememize olanak sağlamıştır.

Salgın nedeniyle seyahat kısıtlamaları ve sağlık önlemleri uygulanmış, havaalanları ve havayolu şirketleri yeni protokoller ve güvenlik önlemleri geliştirmek zorunda kalmıştır. Yolcuların güvenliği ve sağlığı ön planda tutularak havaalanı terminal temizliği, sosyal mesafe önlemleri ve hijyen protokolleri gibi faktörler öncelik kazanmıştır. Havaalanları, bu zorluğa uyum sağlamak için çaba sarf etmiş ve hizmet kalitesini iyileştirmek için gerekli önlemleri almıştır.

Anahtar Kelimeler: Çok Kriterli Karar Verme, Entropi, TOPSIS, Havaalanları, Hizmet Kalitesi, Skytrax, COVID-19

Evaluation of Airport Service Quality Before and After COVID-19 Using Entropy-Based TOPSIS Approach

ABSTRACT

³ Bu çalışma Dr. Öğr. Üyesi Eda ÇINAROĞLU danışmanlığında, Beste Başak HORASAN'ın, Entropi Temelli Topsis Yaklaşımı ile Avrupada Bulunan Havaalanlarının Hizmet Kalitesinin Değerlendirilmesi:COVID-19 Öncesi ve Sonrası başlıklı yüksek lisans tezi esas alınarak hazırlanmıştır (Entropi Temelli Topsis Yaklaşımı ile Avrupada Bulunan Havaalanlarının Hizmet Kalitesinin Değerlendirilmesi adlı yüksek lisans tezi, Erciyes Üniversitesi, Kayseri, Türkiye,2023).

6th International CEO Communication, Economics, Organization & Social Sciences Congress

With globalization, airports are increasingly exposed to competitive conditions due to the rising air traffic and passenger demand. Airports must continuously improve themselves and adapt to changing technology. Throughout travel, airports have transformed from mere transit points to complex and large living centers. As a result, the quality of services provided at airports has become increasingly important.

In 2019, a study was conducted based on data provided by the Airports Council International (ACI) to examine the top 10 airports with the highest passenger traffic using multi-criteria decision-making methods such as Entropy and TOPSIS. The study utilized eight different criteria, including queue waiting time, terminal cleanliness, terminal seating areas, terminal signage and directions, food and beverage services, airport shopping stores, Wi-Fi connectivity, and airport staff. The criteria were determined through the Skytrax website.

According to the results of this study, airport shopping stores were identified as the most important criterion in 2019, and London Heathrow Airport was determined to have the highest service quality. However, priorities have changed for airports after the COVID-19 pandemic. In an update conducted in 2022, a comparison was made using the same airports, revealing that the most important criterion was terminal cleanliness, and Munich Airport was identified as having the highest service quality. This comparison allowed for a clearer observation of the airports' performance over time.

Due to the pandemic, travel restrictions and health measures have been implemented, and airports and airlines have had to develop new protocols and security measures. Factors such as airport terminal cleanliness, social distancing measures, and hygiene protocols have gained priority, with a focus on passengers' safety and health. Airports have made efforts to adapt to this challenge and have taken necessary measures to improve service quality.

Keywords: Multi-Criteria Decision Making, Entropy, TOPSIS, Airports, Service Quality, Skytrax, COVID-19

GİRİŞ

Havayolu sektörü, hızla gelişen teknolojiye bağımlı, küresel düzeyde yoğun rekabetin yaşandığı önemli bir sektördür. Yolcu talebi her geçen gün hızla artmakta ve bu da havayolu şirketleri ve havaalanlarının kendilerini sürekli olarak geliştirmelerini ve değişen teknolojiye uyum sağlamalarını gerektirmektedir. Günümüzde havaalanları, sadece bir durak noktası olmanın ötesine geçmiş, büyük ve karmaşık yaşam merkezlerine dönüşmüştür. Yolcuların taleplerine hızlı bir şekilde cevap verebilmek ve müşteri memnuniyeti sağlamak havaalanlarının odak noktası haline gelmiştir(Bakır&Akan,2018).

Günümüzde yolcular, sadece havayolu şirketlerini değil, hangi havaalanını tercih edeceklerini de seçebilmektedir. Hizmet kalitesi, havaalanları arasında rekabetin bir unsuru haline gelmiştir. Bu nedenle, havaalanları müşteri memnuniyetini sağlamak ve rakiplerinden ayrılmak için farklılaşmaya eğilim göstermektedir

Bu çalışma, 2019 yılında ACI tarafından sağlanan veriler doğrultusunda en yoğun yolcu trafiğine sahip olan 10 havaalanını Entropi ve TOPSIS gibi çok kriterli karar verme yöntemleri kullanarak incelemeyi amaçlamaktadır. 2022 yılı için ise 2019 da belirlenen 10 havaalanı kullanılmıştır. Çalışmada, Skytrax web sitesi üzerinden belirlenen 8 farklı kriter kullanılmıştır. Bu kriterler şunlardır: kuyruk bekleme süresi, terminal temizliği, terminal oturma alanları, terminal işaret ve yönlendirme, yiyecek-içecek hizmetleri, havaalanı alışveriş mağazaları, Wi-Fi bağlantısı ve havaalanı personeli. Seçilen kriterlerin öncelik sıralamalarını belirlemek için Entropi yöntemi kullanılmış ve daha sonra TOPSIS yöntemiyle sıralama yapılmıştır. Çalışma için öncelikle ilgili literatür taranmış, ardından kullanılan yöntemler ve uygulama adımları açıklanmıştır. Çalışmanın sonunda elde edilen bulgular, sonuçlar bölümünde değerlendirilmiştir.

1.LİTERATÜR TARAMASI

2. YÖNTEM

2.1 Çalışma Kapsamında Kullanılan Veriler

Yapılan çalışmada, araştırma konusu olarak Airport Council International(ACI)'nin 2019 yılı verilerine göre Avrupa'nın yolcu trafiği en yoğun olan on havalimanı seçilmiştir. Seçilen havalimanlarının hizmet kalitesi Skytrax tarafından belirlenmiştir ve www.airlinequality.com sitesinde sunulan kriterler doğrultusunda değerlendirilmesi amaçlanmıştır. Yolcular, Skytrax internet sitesinden ziyaret ettikleri havaalanlarını 1 ile 5 yıldız arasında puan vererek değerlendirebilmektedir. 2019 yılı verilerine göre Avrupa'nın yolcu trafiği en yoğun olan on havaalanı seçilmiştir. Seçilen havaalanlarının hizmet kalitesi performansına yönelik belirlenen kriterler doğrultusunda Entropi ve TOPSIS yöntemleri kullanılarak değerlendirilmiş ve sıralanmıştır.2022 yılında ise bir havaalanı değişmiştir. Veri setinin değişmemesi için 2022 yılı içinde 2019 yılının havaalanları uygulamaya dahil edilmiştir. 2019 yılına ait yorum yapan ve bütün kriterlere yıldız veren yolcuların verileri çalışmada kullanılmıştır. Her iki yıl içinde yorum yapıp, bütün kriterlere yıldız veren yolcular çalışma kapsamına dahil edilmiştir. Çalışmaya dahil edilen havaalanlarına verilen yıldızlar, kriterleri oluşturmaktadır.

İlk olarak her kriter için 2019 ve 2022 yıllarında yapılan yorumlar doğrultusunda verilen yıldızların aritmetik ortalaması alınarak başlangıç karar matrisi oluşturulmuştur. Sonrasında ise Entropi yöntemiyle kriterlerin önem katsayıları hesaplanmış ve TOPSIS yöntemi ile performans değerlendirmesi işlemi gerçekleştirilmiştir. Çalışmada “Microsoft Office Excel 2016 ” programı kullanılmıştır. Çalışma için seçilen 10 havalimanı ve hizmet kalitesi değerlendirmek için kullanılan kriterler aşağıda Tablo 2 ve Tablo 3 de yer almaktadır.

Tablo 2-Çalışma kapsamında seçilen havaalanları ve yolcu sayıları

IATA KODU	HAVAALANI	YOLCU SAYISI (2019)	YOLCU SAYISI (2022)
LHR	Londra Heathrow Havaalanı	80.888.637	61.284.215
CDG	Paris-Charles de Gaulle Havaalanı	76.131.198	57.478.888
AMS	Amsterdam Schiphol Havaalanı	71.706.999	52.472.189

Tablo 3-Çalışma kapsamında seçilen kriterler

Kriter Kodları	KRİTERLER
KK1	Kuyruk Bekleme Süresi
KK2	Terminal Temizliği
KK3	Terminal Oturma Alanları
KK4	Terminal İşaret ve Yönlendirme
KK5	Yiyecek – İçecek Hizmetleri
KK6	Havaalanı Alışveriş Mağazaları
KK7	Wifi Bağlantısı
KK8	Havaalanı Personeli

2.2 Entropi Yöntemi

1. Adım: Karar matrisinin oluşturulmasıdır.

$$A_{ij} = \begin{bmatrix} a_{11} & a_{12} & \dots & a_{1n} \\ a_{21} & a_{22} & \dots & a_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ a_{m1} & a_{m2} & \dots & a_{mn} \end{bmatrix}$$

2.Adım: Karar matrisindeki değerler normalizasyon işlemine tabi tutulur.Bu işlem, farklı ölçeklerdeki verilerin karşılaştırılabilir hale getirilmesini sağlamaktadır.

$$r_{ij} = \frac{a_{ij}}{\sum_{j=1}^n a_{ij}}$$

3.Adım: Kriterlere ilişkin entropi değerlerinin (e_j) hesaplanması. Entropi değeri, kriterin ne kadar bilgi içerdiğini ve bu kriterde ne kadar farklılık gösterdiğini ölçmektedir.

$$e_j = -k \sum_{j=1}^n r_{ij} \cdot \ln(r_j)$$

$$(i = 1,2,3, \dots, m \text{ ve } j = 1,2,3, \dots, n)$$

4.Adım: Bilginin farklılaşma derecesinin (d_j) hesaplandığı adımdır. e_j değerlerinin 1 sayısından çıkarılarak hesaplandığı değerlerdir.

$$d_j = 1 - e_j \quad (i = 1,2,3, \dots, m \text{ ve } j = 1,2,3, \dots, n)$$

5.Adım: Kriter ağırlıklarının (w_j) hesaplanması için “ $1 - e_j$ ” değeri satır toplamına bölünür ve kriter ağırlıkları elde edilir.

$$w_j = \frac{1 - e_j}{\sum_{i=1}^n (1 - e_j)}$$

Bu durumda $w_1 + w_2 + w_3 + \dots + w_n = 1$ eşitliği geçerli olur.

2.3 TOPSIS Yöntemi

1. Adım: Karar matrisinin oluşturulmasıdır.

$$A_{ij} = \begin{bmatrix} a_{11} & a_{12} & \dots & a_{1n} \\ a_{21} & a_{22} & \dots & a_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ a_{m1} & a_{m2} & \dots & a_{mn} \end{bmatrix}$$

2.Adım: Normalizasyon işlemidir. Karar matrisindeki değerler normalize edilir. Her kriterin performans değerleri, genellikle 0 ile 1 arasında olacak şekilde yeniden ölçeklendirilir.

$$r_{ij} = \frac{a_{ij}}{\sqrt{\sum_{i=1}^m a_{ij}^2}}$$

$$(i = 1, 2, \dots, m \text{ ve } j = 1, 2, \dots, p)$$

3.Adım: Bu adımda, normalize edilmiş karar matrisi kriterlere göre önem katsayıları w_i ile çarpılır ve ağırlıklandırma işlemi gerçekleştirilir.

$$V_{ij} = r_{ij} \cdot w_{ij}$$

4.Adım: İdeal çözümlerin belirlenmesi adımdır. Pozitif ideal çözüm (A^+) ve negatif ideal çözüm (A^-) belirlenir. Pozitif ideal çözüm, her kriter için en yüksek değerlere sahip olan havaalanı performansını temsil eder. Negatif ideal çözüm, her kriter için en düşük değerlere sahip olan havaalanı performansını temsil eder.

- Pozitif ideal çözüm için:

$$A^+ = \{(max_i v_{ij} | j \in J) , (min_i v_{ij} | j \in J')\}$$

$$A^+ = \{v_1^+, v_2^+, \dots, v_n^+\}$$

- Negatif ideal çözüm için:

$$A^- = \{(min_i v_{ij} | j \in J) , (max_i v_{ij} | j \in J')\}$$

$$A^- = \{v_1^-, v_2^-, \dots, v_n^-\}$$

5. Adım: Ayırım ölçülerinin hesaplanmasıdır. Bu uzaklık değerleri Öklidyen uzaklık yardımıyla elde edilirken pozitif ideal çözüme uzaklık S_i^+ ve negatif ideal çözüme uzaklık S_i^- olarak adlandırılır.

$$S_i^+ = \sqrt{\sum_{j=1}^n (v_{ij} - v_j^+)^2}$$

$$S_i^- = \sqrt{\sum_{j=1}^n (v_{ij} - v_j^-)^2}$$

6.Adım: İdeal çözüme görece yakınlık değerinin (C_i^+) hesaplanması TOPSIS yönteminin son aşamasıdır. Performans sıralaması sonuçları analiz edilir ve yorumlanır. En iyi performansa sahip alternatif veya alternatifler belirlenir. Karar vericiler, performans sıralaması sonuçlarına dayanarak kararlarını ve tercihlerini şekillendirir.

$$C_i^+ = \frac{S_i^-}{S_i^- + S_i^+}$$

3. ARAŞTIRMA VERİLERİNİN ANALİZİ ve BULGULAR

Entropi yöntemiyle elde edilen ağırlıklandırma sonuçları Tablo 4 de verilmiştir. 2019 yılı için en önemli kriterin 0,234586 önem katsayısı ile Havaalanı Alışveriş Mağazaları olduğu, ardından 0,167526 önem katsayısı ile Yiyecek-İçecek Hizmetleri, 3.olarak 0,146981 önem katsayısı ile Wifi bağlantısı olduğu sonucuna ulaşılmıştır. Entropi ağırlıklandırma sonucuna göre ise en önemsiz kriter terminal oturma alanlarıdır.

Tablo 4- 2019 yılı Entropi kriter ağırlıkları

wj Değeri	0,076091	0,090253	0,064189	0,122374	0,167526	0,234586	0,146981	0,098001
-----------	----------	----------	----------	----------	----------	----------	----------	----------

2022 yılı analizine göre Entropi ağırlıklandırma sonucuna göre ise en önemli kriter 0,196411 katsayısı ile terminal temizliği çıkmıştır. 2. Sırada 0,176516 ile havaalanı personeli ve 3.sırada 0,161016 ile kuyruk bekleme süresi en önemli kriterler olmuştur. Entropi ağırlıklandırma sonucuna göre ise en önemsiz kriter terminal işaret ve yönlendirmeleridir.

Tablo 5- 2022 yılı Entropi kriter ağırlıkları

wj Değeri	0,161016	0,196411	0,113722	0,048361	0,080162	0,096583	0,127228	0,176516
-----------	----------	----------	----------	----------	----------	----------	----------	----------

Tablo 6 da TOPSIS ile yapılan değerlendirme işlemi sonrasında en yüksek hizmet kalitesine sahip havaalanının Londra Heathrow Havaalanı olduğu belirlenmiştir. Sıralamaya göre ikinci sırada Moskova Sheremetyevo Havaalanı ve üçüncü sırada ise Amsterdam Schiphol Havaalanı yer almaktadır.

SONUÇ

Küreselleşme, dünyanın en hızlı ve önemli değişimlerine neden olmaktadır. Küreselleşme ile birlikte ulusal ve coğrafi sınırlarda ortadan kalkmaktadır. Havacılık sektörü de bu değişimlerden etkilenmektedir. Havacılık sektörünün en önemli ve en büyük paydaşlarından biri olan havalimanları da değişimlerden etkilenmektedir. Havacılığın çok yaygın olmadığı dönemlerde sadece ülkelere açılan kapılar olarak işlev gören havaalanları günümüzde birer yaşam merkezi haline gelmiştir. Yolcular artık sadece seyahat edecekleri havayollarını değil gidecekleri havaalanlarını seçmektedir. Günden güne değeri artan havaalanları için müşteri

memnuniyeti çok önemlidir. Müşteri memnuniyeti ise hizmet kalitesi ile doğru orantılıdır. Bu çalışmada da havaalanlarının günümüz toplumlarında artan öneminden yola çıkarak hizmet kalitesi performanslarının değerlendirilmesi amaçlanmıştır. Bu çalışmada 2019 yılında ACI 'den elde edilen veriler doğrultusunda en fazla yolcu trafiği olan 10 havaalanı çok kriterli karar verme yöntemleri olan Entropi ve TOPSIS yöntemleri ile incelenmiştir. Çalışmada 8 farklı kriter kullanılmıştır. Bu kriterler Skytrax sitesi üzerinden belirlenmiş ve veri değerlerine aynı site üzerinden ulaşılmıştır. COVID-19 öncesi ve sonrası yolcuların kriterlerinde ne gibi değişiklikler olduğunu gözlemleyebilmek adına 2022 yılının verileri de araştırmaya dahil edilmiştir.

Entropi yöntemiyle elde edilen ağırlıklandırma sonucunda 2019 yılı için en önemli kriterin 0,234586 önem katsayısı ile havaalanı alışveriş mağazaları olduğu, ardından 0,167526 önem katsayı ile yiyecek-içecek hizmetleri, 3.olarak 0,146981 önem katsayı ile Wifi bağlantısı olduğu sonucuna ulaşılmıştır. Entropi ağırlıklandırma sonucuna göre ise en önemsiz kriter terminal oturma alanlarıdır.

Entropi yönteminin ardından TOPSIS ile yapılan değerlendirme işlemi sonrasında en yüksek hizmet kalitesine sahip havaalanının Londra Heathrow Havaalanı olduğu belirlenmiştir. Sıralamaya göre ikinci sırada Moskova Sheremetyevo Havaalan ve üçüncü sırada ise Amsterdam Schiphol Havaalanı yer almaktadır.

2022 yılı analizine göre Entropi ağırlıklandırma sonucuna göre ise en önemli kriter 0,196411 katsayısı ile terminal temizliği çıkmıştır. 2. Sırada 0,176516 ile havaalanı personeli ve 3.sırada 0,161016 ile kuyruk bekleme süresi en önemli kriterler olmuştur. Entropi ağırlıklandırma sonucuna göre ise en önemsiz kriter terminal işaret ve yönlendirmeleridir. Entropi yönteminin ardından TOPSIS ile yapılan değerlendirme işlemi sonrasında 2022 yılı için en yüksek hizmet kalitesine sahip havaalanının Münih Franz Josef Strauss Havaalanı olduğu belirlenmiştir. Sıralamaya göre ikinci sırada İstanbul Havaalanı ve üçüncü sırada ise Adolfo Suarez Madrid-Barajas Havaalanı yer almaktadır.

Yolcu beklenti ve memnuniyeti, COVID-19 öncesinde odak noktası olan kriterlerin yanı sıra yeni kriterlere de dayanmaya başlamıştır. Örneğin, hijyen ve temizlik önlemleri, havaalanı personelinin maske takması ve sosyal mesafe kurallarına uyumu gibi faktörler artık yolcuların öncelikli beklentileri arasındadır. Yolcular, havaalanlarında el dezenfektanlarına kolay erişim, sık sık temizlenen ortak kullanım alanları ve uygun sosyal mesafe önlemleri gibi tedbirlerin alınmasını beklemektedir.

Ayrıca, yolcuların seyahat öncesi ve sonrası test gereklilikleri, karantina önlemleri ve seyahat kısıtlamaları gibi faktörler de yolcu beklenti ve memnuniyetini etkileyen önemli unsurlardır. Yolcular, havaalanlarında bu tür gerekliliklerin düzgün bir şekilde uygulandığını görmek ve bu süreçlerin sorunsuz bir şekilde yönetildiğinden emin olmak istemektedir.

COVID-19 salgınının etkisiyle birlikte, havaalanlarının hizmet kalitesi performansının değerlendirilmesinde de değişiklikler yaşanmıştır. Müşteri memnuniyetini artırmak için havaalanları, sağlık ve güvenlik önlemlerine ağırlık verirken, aynı zamanda hızlı ve etkili hizmet sunmayı da sürdürmek zorundadır. Bu değişiklikler, havaalanlarının COVID-19 sonrası dönemde yolcu beklenti ve memnuniyetini karşılamak için stratejilerini revize etmelerini gerektirmiştir. Havaalanları, sağlık önlemlerini güçlendirmek, iletişim ve yönlendirme

sistemlerini iyileştirmek, teknolojiyi kullanarak teması azaltmak ve yolculara güvenli bir seyahat deneyimi sunmak için çeşitli önlemler almaktadır. Havaalanları, giderek artan yolcu talebini karşılamak için hizmet kalitesini sürekli olarak iyileştirmek zorundadır.

ÖZET

Çağımızın en etkili ve dinamik sektörlerinden biri olan havacılık sektörü ülkelerin büyümelerine, istihdam olanaklarına ve gelişimlerine katkı sağlamaktadır. Bu nedenle ülkeler ekonomilerinin gelişmesine katkı sağlarken aynı zamanda havacılık sektörlerinin de büyümelerini amaçlamaktadır.

Ülkelerin neredeyse her şehrine inşa edilen havalimanlarının aktif olarak kullanılması ve performanslarının yüksek olması hem katma değer sağlarken hem de o havalimanına seyahat etmeyi planlayan yolcu potansiyelini etkilemektedir. Çalışmamıza konu olan Dünyanın en işlek 10 havalimanının da çeşitli operasyonel ve finansal kriterleri Çok Kriterli Karar Verme Tekniklerinden olan ENTROPI yöntemi ile önem dereceleri ağırlıklandırıldıktan sonra TOPSIS yöntemi ile bu alternatifler sıraya koyularak en yüksek performansa sahip havalimanının belirlenmesi amaçlanmaktadır.

Çalışmada analize dahil edilen havalimanları ACI 2021 yolcu verilerine bağlı olarak seçilmiştir. Bu kapsamda; Hartsfield-Jackson Atlanta Uluslararası Havalimanı, Beijing Capital Uluslararası Havalimanı, Los Angeles Uluslararası Havalimanı, Dubai Uluslararası Havalimanı, Tokyo Haneda Uluslararası Havalimanı, Chicago O'Hare Uluslararası Havalimanı, Londra Heathrow Uluslararası Havalimanı, Shanghai Pudong Uluslararası Havalimanı, Hong Kong Uluslararası Havalimanı, Sidney Kingsford Smith Uluslararası Havalimanı olarak toplam 10 adet havalimanından oluşmaktadır. Bu havalimanlarının performans değerlendirme analizinde kullanılacak kriterler (Cari oran, likit oran, aktif devir hızı, alacak devir hızı, özsermaye devir hızı, finansal kaldıraç oranı, toplam borç/özsermaye, maddi duran varlıklar/özsermaye, net kar marjı, özsermaye karlılık oranı, müşteri memnuniyeti, personel sayısı, havalimanının şehre uzaklığı, havalimanı büyüklüğü ve gecikme oranları) literatürde yer alan çalışmalardan belirlenmiştir.

Çalışmada analize dahil edilen finansal ve operasyonel kriterlerin, 2016-2021 yılları arasındaki verilerinin ortalamaları ile elde edilen analiz sonuçlarında Hartsfield-Jackson Atlanta Uluslararası Havalimanı ilk sırada yer alırken, Shanghai Pudong Uluslararası Havalimanı son sırada yer almaktadır.

Anahtar Kelimeler: Havacılık, Havalimanı, ÇKKV, Entropi, TOPSIS

Operational and Financial Comparison of the World's Top 10 Business Airports With The Entropy Based TOPSIS Method

ABSTRACT

The talented sector, which is one of the most effective and dynamic sectors of our age, contributes to the growth, employment resources and development of its countries. For this reason, while contributing to parts of the economies of countries, it also aims to grow the sectors of travelers.

The active use and high performance of airports built in almost every city of the countries both provide added value and affect the passenger potential who plan to travel to that airport. It is aimed to determine the airport with the highest performance by putting these criteria in order with the TOPSIS method, after various operational and financial criteria of the 10 busiest airports in the world, which are the subject of our study, are weighted with the ENTROPI method, which is one of the Multi-Criteria Decision-Making Techniques.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

Airports obtained in the study were selected based on ACI 2021 passenger data. In this context; Hartsfield-Jackson Atlanta International Airport, Beijing Capital International Airport, Los Angeles International Airport, Dubai International Airport, Tokyo Haneda International Airport, Chicago O'Hare International Airport, London Heathrow International Airport, Shanghai Pudong International Airport, Hong Kong International Airport, Sydney Kingsford Smith International Airport consists of 10 airports in total. Criteria to be used in the performance evaluation analysis of these airports (current ratio, liquid ratio, asset turnover, receivables turnover, equity turnover, financial leverage ratio, total debt/equity, tangible assets/equity, net profit margin, return on equity ratio, customer satisfaction, number of personnel, distance from the airport to the city, airport size and delay rates) were determined from the studies in the literature.

Hartsfield-Jackson Atlanta International Airport is in the first place, while Shanghai Pudong International Airport is in the last place in the analysis results obtained with the averages of the data between 2016-2021 of the financial and operational criteria included in the analysis in the study.

Key words: Aviation, Airport, MCDM, Entropy, TOPSIS

1. GİRİŞ

Çağımızın en etkili ve dinamik sektörlerinden biri olan havacılık sektörü ülkelerin büyümelerine, istihdam olanaklarına ve gelişimlerine katkı sağlamaktadır. Bu nedenle ülkeler ekonomilerinin gelişimini sağlarken, aynı zamanda havacılık sektörlerinin de büyümesini amaçlamaktadır. Ülkelerin neredeyse her şehrine inşa edilen havalimanlarının aktif olarak kullanılması ve performanslarının yüksek olması hem katma değer sağlarken, hem de o havalimanına seyahat etmeyi planlayan yolcu potansiyelini etkilemektedir.

Küreselleşen dünyada artan rekabet ülkelerin söz sahibi haline gelmeleri ve politik kararlarını diğer ülkelere kabul ettirebilmeleri için büyük önem arz etmektedir. Bu nedenle ülkeler kendilerine katma değer sağlayacak sektörlerle yatırım yaparak ekonomilerini ve pazar paylarını arttırmayı hedeflemektedirler.

Performans değerlendirme amacıyla ekonomi alanında ve çeşitli alanlarda binlerce analiz yöntemleri geliştirilmiştir (Akyüz ve Aydemir,2019). Farklı alternatifleri ve kriterleri aynı anda değerlendirme kabiliyeti ile Çok Kriterli Karar Verme (ÇKKV) teknikleri kullanılmaya başlandığı günden itibaren literatürde önemli ve geniş bir alanı kapsamaktadır.

Çalışmada dünyanın en işlek 10 havalimanının operasyonel ve finansal performans değerlendirmesi amaçlanmıştır. Havacılık alanında farklı ÇKKV yöntemleri kullanılarak performans değerlendirmesinin yapıldığı çalışmalar bulunmaktadır (Aktan ve Bodur, 2006). Fakat ele alınan çalışma dünyanın yolcu sayısı bakımından en işlek 10 adet havalimanını analize dahil ettiği ve 2016-2021 yılları arasındaki 5 yıllık dönemi temel aldığı için literatürde yer alan diğer çalışmalara kıyasla daha farklı bir nitelik taşımaktadır. Aynı zamanda literatür taraması sonucu analizlerde daha çok finansal kriterlerin esas alındığı saptanmıştır. Çalışmada esas alınan kriterler finansal (cari oran, likit oran, aktif devir hızı, alacak devir hızı, özsermaye devir hızı, finansal kaldıraç oranı, toplam borç/özsermaye, maddi duran varlıklar/özsermaye, net kar marjı, özsermaye karlılık oranı) ve operasyonel kriterler (müşteri memnuniyeti, personel sayısı, havalimanının şehre uzaklığı, havalimanı büyüklüğü ve gecikme oranları) şeklindedir. Çalışmanın havalimanlarını hem finansal, hem de operasyonel açıdan ayrı ayrı analiz etmesi nedeniyle literatürdeki çalışmalara göre daha kapsamlı bir nitelik arz ettiği düşünülmektedir. .

Çalışma, havalimanlarının iyileştirme alanlarını belirlemeleri için bir referans noktası sağlayacaktır. Çalışmanın bulguları, havalimanı işletmecileri tarafından yolcu tercihlerinde önemli kriterleri belirlemek, kaynakları daha etkin bir şekilde tahsis etmek ve havalimanının genel performansını iyileştirecek stratejik kararlar almak için de kullanılabilir. Genel olarak, bu çalışma küresel ulaşım altyapısının iyileştirilmesine katkıda bulunarak havalimanlarının daha verimli ve yolcu potansiyelinin farkında, katma değeri yüksek olarak kullanılması için daha verimli ve erişilebilir hale getirilmesine yardımcı olacaktır.

Çalışma beş ana bölümden oluşmaktadır. İkinci bölüm literatür taraması; çalışmaya konu olan yöntem ve havalimanlarının literatürde yer alan farklı çalışmalarının incelenmesi ile oluşturulmuştur. Üçüncü bölümde kullanılan yöntemler detaylı biçimde sunulmuştur. Dördüncü bölüm uygulama bölümüdür. Son bölüm ise sonuç ve değerlendirmeleri içermektedir.

2. LİTERATÜR TARAMASI

Gelişen ve küreselleşen dünyada zaman kavramının önemini arttırması ile ticari, teknolojik ve turizm gibi çeşitli faktörler aracılığıyla havacılık sektörü gelişmeye ve büyümeye başlamıştır. Devamlı olarak gelişim içinde olan bu sektörde havayollarının büyümeleri ve kar elde etmeleri için kullanım oranlarını etkileyen havalimanları büyük önem taşımaktadır (Altınkurt ve Merdivenci, 2020; Bakır ve Akan, 2018).

Yolcuların ulaşmak istedikleri son noktaya en hızlı, güvenilir ve uygun şekilde ulaşma istekleri gerek transfer noktası gerekse son nokta olarak kullanılan havalimanlarını seçim anında etkilemektedir. İşlevleri, şehir merkezine uzaklıkları gibi kullanım kolaylığına sebebiyet veren etkenler yolcuların havalimanı seçme tercihlerini önemli ölçüde etkilemektedir. Çalışmanın bu bölümünde bu konuyu ele alan çalışmaların incelemesine yer verilmiştir.

Ömürbek ve Kınay (2013), BIST' de faaliyet gösteren bir havayolu şirketinin Frankfurt Menkul Kıymetler Borsası'nda faaliyet gösteren bir havayolu şirketine kıyasla performansını analiz edilmeye çalışmışlardır.

Altın vd. (2017), 2010-2015 yılları arasındaki Avrupa'nın yolcu sayısı bakımından en büyük 20 havalimanının performanslarını ölçümlemeyi amaçlamışlardır. Bu amaçla performansı etkileyen kriterler (yolcu sayısı, terminal sayısı, uçak stand sayısı, otopark kapasitesi, pist sayısı, havalimanının şehir merkezine uzaklığı, vb.) olarak belirlenmiştir. Yapılan analiz sonucunda COPRAS yönteminde, ilk üç sırada Madrid Barajas Havalimanı, Frankfurt am Main Havalimanı ve Charles de Gaulle Havalimanı yer alırken Atatürk Havalimanı on birinci sırada yer almaktadır.

Asker vd. (2018), Türkiye' de faaliyet gösteren 15 havalimanının performansını ÇKKV tekniklerinden Entropi temelli TOPSIS yöntemi kullanarak değerlendirmeyi amaçlamışlardır. Sonuçlar çalışmaya dahil edilen 15 havalimanının Türkiye' de faaliyet gösteren diğer havalimanlarına kıyasla daha etkin çıktığı ve daha iyi performans gösterdiğine işaret etmektedir.

Avcı ve Çınaroğlu (2018), AHP temelli TOPSIS yöntemi ile havayolu işletmelerinin finansal analizini gerçekleştirmişlerdir. Analize dahil edilen kriterler cari oran, nakit oran, finansal kaldıraç oranı, özsermaye çarpanı, aktif devir hızı kriterleridir. Çalışmanın sonucuna göre performans değerlendirmede birinci sırada Rynair yer alırken, son sırada ise Lufthansa yer almaktadır.

Bakır ve Akan (2018), 2016 yılının yolcu sayısı bakımından en yoğun havalimanlarının hizmet kalitesi performansını Entropi temelli TOPSIS yöntemi ile analiz etmişlerdir. Araştırmaya terminal oturma alanları, terminal işaret ve yönlendirmeler, gıda hizmetleri, eğlence merkezleri ve havalimanı çalışanları gibi birçok kriter dahil edilerek hizmet kalitesini etkileyen faktörler değerlendirilmiştir. Çalışmanın sonucuna göre, Münih Havalimanı birinci sırada yer almaktadır.

Altınkurt ve Merdivenci (2020), çalışmalarında SKYTRAX'e üye olan 11 havayolunda iş amaçlı business class sınıfta seyahat etmekte olan yolcuların aldıkları hizmetten hangi ölçüde memnun kaldıklarını belirlemeyi amaçlamışlardır. Çalışmada AHP temelli EDAS yöntemi kullanımı tercih edilmiştir. Yapılan analizin sonucunda, hizmet kalitesi en iyi olan firma Ana Air olarak belirlenmiştir.

Köse (2021), çalışmasında THY A.O. ve Pegasus Hava Taşımacılık A.Ş. belirli kriterler çerçevesinde 2014-2019 yılları arasındaki verileri analiz edilmiş olup yapılan analizde CASK ve RASK verileri Pegasus Havayollarında daha yüksek çıkmıştır. Yapılan analizin ikinci

kısımda 7 adet finansal kriter kullanılarak TOPSIS yöntemi ile analiz tekrar edilmiştir. Bu sonuca göre de ilk analize benzer şekilde Pegasus Havayolları'nın finansal açıdan THY A.O.'ya göre daha başarılı olduğu sonucuna ulaşılmıştır.

Özbek ve Ghouchi (2021), çalışmalarında havacılık sektöründe yer alan 5 önemli firma (Air France, Easyjet, Lufthansa, Rynair ve THY) 2009-2018 verileri esas alınarak WASPAS ve EDAS yöntemleri ile analiz edilmiştir. Analiz sonucunda performansı en yüksek havayolu şirketinin Rynair, performansı en düşük havayolu şirketinin ise Lufthansa olduğu belirlenmiştir.

3. YÖNTEM

Çalışmada Entropi destekli TOPSIS yöntemi kullanılmıştır. Analiz sürecinde kriter ağırlıkları Entropi yöntemi ile belirlenmiş, sonrasında TOPSIS yöntemi ile havalimanlarının operasyonel ve finansal performans sıralamasına ulaşılmıştır.

3.1. ENTROPİ Yöntemi

Entropi Yöntemi, bilgi teorisinde, karar vermede, belirsizlik ve rastgeleliğin ölçümü ile ilgilenen çeşitli alanlarda kullanılan ÇKKV yöntemlerinden birisidir. Bu yöntem, bir sistemin düzensizliğinin veya rastgeleliğinin bir ölçüsü olan entropi kavramına dayanmaktadır (Altın vd., 2017).

Karar verme sürecinde entropi yöntemi, farklı alternatiflerin performansını birden çok kritere göre değerlendirmek için kullanılır. Entropi yöntemi, en iyi alternatifin en yüksek rastgelelik veya düzensizlik derecesine sahip olduğu ilkesine dayanmaktadır. Bu ilke, farklı kriterlere ağırlık atamak ve alternatifleri genel performanslarına göre sıralamak için kullanılmaktadır (Bakır ve Akan, 2018).

Yöntemin uygulama adımları şu şekildedir (Kiracı ve Bakır, 2018)

Adım 1: Karar Matrisinin Oluşturulması

İlk adım olarak tanımlanan bu adımda analize dahil edilecek olan verileri satırların alternatifleri ve sütunların kriterleri temsil ettiği bir karar matrisi tesis edilir.

Adım 2: Normalize Edilmiş Karar Matrisinin Oluşturulması

Adım 1'de yer alan normalize edilmiş karar matrisi aşağıda yer alan formül yardımı ile kriterlerin fayda ve maliyet etkilerini göz etmeksizin normalize edilir.

$$r_{ij} = \frac{a_{ij}}{\sum_j a_{ij}}$$

Adım 3: Kriterlere İlişkin Entropi Değerlerinin (e_j) Hesaplanması

Bu adımda kriterlerin Entropi değerleri aşağıda yer alan formül ile hesaplanmaktadır. Elde edilen sonuçlar 0-1 arasında yer almaktadır.

$$e_j = -k \sum_{i=1}^n r_i \cdot \ln(r_j) \quad (i=1,2,3,\dots,m \text{ ve } j=1,2,3,\dots,n)$$

Adım 4: Bilginin Farklılaşma Derecesinin (d_j) Hesaplanması

Bu adımda elde edilen değerler kriterlere ilişkin alternatifler arasındaki farklılığın derecesini ifade etmektedir.

$$d_j = 1 - e_j \quad (i=1,2,3,\dots,m \text{ ve } j=1,2,3,\dots,n)$$

Adım 5: Kriter Ağırlıklarının (w_j) Hesaplanması

Analizin son adımını oluşturan bu formülde analize dahil edilen kriterlerin ağırlıklarını başka bir deyişle önem derecelerini belirlemektedir. Bu adımda elde edilen kriter ağırlıklarının toplamının 1'e eşit olması gerekmektedir.

$$w_j = \frac{1 - e_j}{\sum_{i=1}^n (1 - e_j)}$$

3.2. TOPSIS Yöntemi

TOPSIS veya İdeal Çözüme Benzerliğe Göre Sipariş Tercihi Tekniği, yaygın olarak kullanılan çok kriterli bir karar verme yöntemidir. Birden çok kritere dayalı olarak farklı alternatiflerin performansını değerlendirmek için kullanılan matematiksel bir tekniktir. TOPSIS yöntemi, "ideal çözüm" ve "ideal olmayan çözüm" kavramlarına dayanmaktadır (Altın vd., 2017).

TOPSIS yöntemi, finans, tedarik zinciri yönetimi, ulaşım, sağlık, pazarlama, eğitim, enerji, çevre ve kentsel planlama gibi birçok alanda yaygın olarak kullanılmaktadır. Yöntem, bilim topluluğunda yaygın olarak kabul edilmiştir ve (Hwang,1981) çeşitli alanlarda birçok çalışmada kullanılmıştır.

TOPSIS yönteminin uygulama adımları şu şekildedir (Avcı ve Çınaroğlu, 2018):

Adım 1: Karar Matrisinin Oluşturulması

Başlangıç karar matrisi bu adımda tesis edilir.

Adım 2: Normalize Edilmiş Karar Matrisinin Oluşturulması

İlk adımda oluşturulan karar matrisinin sütunlarında yer alan her bir değer bulunduğu sütunun tüm elemanlarının kareleri toplamının kareköküne bölünmesi işlemi ile normalize işlemi tamamlanmaktadır. Formülün matematiksel gösterimi aşağıda yer almaktadır.

$$r_{ij} = \frac{a_{ij}}{\sum_{i=1}^m a_{ij}^2} \quad (i=1,2,3,\dots,m \text{ ve } j=1,2,3,\dots,p)$$

Adım 3: Ağırlıklı Normalize Karar Matrisinin (V) Oluşturulması

Bu adımda matriste yer alan her bir sütundaki (r_{ij}) değerleri, bulunduğu sütunun her bir ağırlık değeri (w_{ij}) ile çarpılarak ağırlıklandırılmış normalize karar matrisi elde edilmektedir.

$$v_{ij} = r_{ij} \cdot w_{ij}$$

Adım 4: Pozitif İdeal (A^+) ve Negatif İdeal (A^-) Çözümlerin Elde Edilmesi

Adım 3'te elde edilen ağırlıklandırılmış normalize karar matrisi (V) oluşturulduktan sonra analizin amacına bağlı olarak her bir kriterin pozitif ideal ve negatif ideal çözüm kümeleri elde edilmektedir. Kriterler fayda nitelikli ise pozitif ideal çözüm V matrisinin sütunlarının en büyük değerini oluştururken; negatif ideal çözüm ise V matrisinin en küçük değerini kapsamaktadır. Değerlendirme ölçütü maliyet nitelikli ise pozitif ideal çözüm V matrisinin sütunlarının en küçük değerini oluştururken; negatif ideal çözüm ise V matrisinin en büyük değerini kapsamaktadır. Belirtilen durumun matematiksel gösterimi aşağıda yer almaktadır.

Pozitif ideal çözüm değerleri,

$$A^+ = \{(\max_i v_{ij} \setminus j \in J), (\min_i v_{ij} \setminus j \in J)\} \quad A^+ = \{v_1^+, v_2^+, \dots, v_n^+\}$$

Negatif ideal çözüm değerleri,

$$A^+ = \{(\min_i v_{ij} \setminus j \in J), (\max_i v_{ij} \setminus j \in J)\} \quad A^- = \{v_1^-, v_2^-, \dots, v_n^-\}$$

Adım 5: Pozitif İdeal ve Negatif İdeal Çözümlere Olan Uzaklık Değerlerinin (S_i^+ ve S_i^-) Hesaplanması

Bu adımda analize dahil edilen kriterlerin her bir karar alternatifi için pozitif ideal ve negatif ideal çözüme olan uzaklıkları oklidyen uzaklık yardımı ile hesaplanmaktadır. Bulunan değerlerden pozitif ideal çözüme olan uzaklık, S_i^+ ifadesi ile gösterilirken; negatif ideal çözüme uzaklık ifadesi, S_i^- ile gösterilmektedir. İfadelerin matematiksel gösterimi aşağıda yer almaktadır.

Pozitif ideal çözüme olan uzaklık,

$$S_i^+ = \sqrt{\sum_{j=1}^n (V_{ij} - V_i^+)^2}$$

Negatif ideal çözüme olan uzaklık,

$$S_i^- = \sqrt{\sum_{j=1}^n (V_{ij} - V_i^-)^2}$$

Adım 6: İdeal Çözüme Görece Yakınlık Değerinin (C_i^+) Hesaplanması

Analizin son aşaması olan bu adımda elde edilen S_i^- ve S_i^+ değerleri yardımıyla belirlenen her bir alternatifi ideal çözüme göre uzaklığının hesaplanması sağlanmaktadır. Bulunan değerler 0-1 arasında yer almaktadır. Elde edilen değer 1'e ne kadar yakınsa pozitif ideal çözüme olan mutlak yakınlığını ifade etmektedir.

$$C_i^+ = \frac{S_i^-}{S_i^- + S_i^+}$$

Son aşamada hesaplanan değerler büyükten küçüğe sıralanarak analizdeki karar alternatiflerinin performanslarının sıralaması elde edilmektedir.

4. UYGULAMA

Çalışmada ACI verilerine göre 2021 yılında Dünya'da en fazla yolcu sayısına ulaşan havalimanlarının operasyonel ve finansal performans değerlendirilmesi ÇKKV tekniklerinden Entropi temelli TOPSIS yöntemi kullanılarak analiz edilmiştir. Analize dahil edilen havalimanları ve yolcu sayıları Tablo 1'de gösterilmektedir.

Tablo 1: Analize Dahil Edilen Havalimanları ve Yolcu Sayıları

IATA Kodu	Havalimanının Adı	Yolcu Sayısı
ATL	Hartsfield-Jackson Atlanta Uluslararası Havalimanı	107 milyon

PEK	Beijing Capital Uluslararası Havalimanı	100 milyon
LAX	Los Angeles Uluslararası Havalimanı	87.5 milyon
DXB	Dubai Uluslararası Havalimanı	87.3 milyon
HND	Tokyo Haneda Uluslararası Havalimanı	85 milyon
ORD	Chicago O'Hare Uluslararası Havalimanı	80 milyon
LHR	Londra Heathrow Uluslararası Havalimanı	80 milyon
PVG	Shanghai Pudong Uluslararası Havalimanı	72 milyon
HKG	Hong Kong Uluslararası Havalimanı	60 milyon
SYD	Sidney Kingsford Smith Uluslararası Havalimanı	42 milyon

Çalışmaya dahil edilen operasyonel ve finansal kriterler literatür incelemesinde yer verilen çalışmalar esas alınarak belirlenmiştir (Aktan ve Bodur, 2006, 61; Ömürbek ve Kınay, 2013, 356; Shaverdi vd., 2016, 250; Altın vd., 2017, 1052; Avcı ve Çınaroğlu, 2018, 322; Bakır ve Akan, 2018, 636; Asker vd., 2018, 517; Altınkurt ve Merdivenci, 2020, 52; Köse, 2021, 626; Özbek ve Ghouchi, 2021, 584). Bu kriterlere dair açıklamalar Tablo 2’de sunulmuştur.

Tablo 2: Analize Dahil Edilen Finansal Kriterler

Oranlar	Çalışmaya Dahil Edilen Oranlar	Formül
Likidite	Cari Oran (L ₁)	Dönen Varlıklar/Kısa Vadeli Borçlar
	Likit Oran (L ₂)	Likit Varlıklar/Kısa Vadeli Borçlar
Faaliyet	Aktif Devir Hızı (O ₁)	Net Satış/Aktifler
	Alacak Devir Hızı (O ₂)	Net Satış/Kısa Vadeli Alacaklar
	Özsermaye Devir Hızı (O ₃)	Net Satış/Özsermaye
Finansal	Finansal Kaldıraç Oranı (F ₁)	Toplam Borç/Toplam Varlık
	Toplam Borç/Özsermaye (F ₂)	Toplam Borç/Özsermaye
	Maddi Duran Varlık/ Özsermaye (F ₃)	Maddi Duran Varlıklar/Özsermaye
Karlılık	Net Kar Marjı (K ₁)	Net Kar/Net Satış
	Özsermaye Karlılık Oranı (K ₂)	Net Kar/Özsermaye

Çalışmaya dahil edilen finansal oranlar işletmelerin 2016-2021 yılları arasında yayınlanan finansal tabloları kullanarak hesaplanmıştır. Bu veriler analize dahil edilirken havalimanları bazında 5 yıllık ortalamaları alınarak kullanılmıştır.

Çalışmada operasyonel performans analizinde kullanılan kriterlere ise Tablo 3'te yer verilmiştir (Aktan ve Bodur, 2006, 61; Ömürbek ve Kınay, 2013, 356; Shaverdi vd., 2016, 250; Altın vd., 2017, 1052; Avcı ve Çınaroğlu, 2018, 322; Bakır ve Akan, 2018, 636; Asker vd., 2018, 517; Altinkurt ve Merdivenci, 2020, 52; Köse, 2021, 626; Özbek ve Ghouchi, 2021, 584).

Tablo 3: Analize Dahil Edilen Operasyonel Kriterler

Kod	Kriter Adı
H ₁	Müşteri Memnuniyeti
H ₂	Personel Sayısı
H ₃	Havalimanının Şehre Uzaklığı
H ₄	Havalimanı Büyüklüğü (m ²)
H ₅	Gecikme Oranları

Analize dahil edilen operasyonel kriterler havalimanlarının değerlendirmesini içeren Skytrax verilerinden ve web sitelerinde yayınlanan anketlerden elde edilmiştir. Veriler analize dahil edilirken belirlenen 5 yıllık ortalamaları alınarak kullanılmıştır.

4.1 Entropi Yöntemi ile Kriter Ağırlıklarının Belirlenmesi

Analiz için oluşturulan ve finansal oranları kapsayan karar matrisi Tablo 4'de yer almaktadır. Bu matris kriterlerin 2016-2021 yılları arasındaki ortalama değerleri ile elde edilmiştir.

Tablo 4: Havalimanlarının Finansal Kriterleri Esas Alınarak Oluşturulmuş Karar Matrisi

Kriterler	L ₁	L ₂	O ₁	O ₂	O ₃	F ₁	F ₂	F ₃	K ₁	K ₂

Hem finansal hem de operasyonel açıdan performansı en yüksek havalimanının Hartsfield-Jackson Atlanta Uluslararası Havalimanı olduğu sonucuna ulaşılmıştır. Performansı en düşük olan havalimanı ise Shanghai Pudong Uluslararası Havalimanı’dır.

5. SONUÇ ve ÖNERİLER

Küreselleşen dünyada artan rekabet ortamı ülkeleri pek çok açıdan global hale getirirken birbirleri ile girdikleri rekabeti sektörler bazında da etkilemektedir. Ülkelerin gayri safi yurt içi ve milli hasıla değerlerine doğrudan katkısı olan havacılık sektörü bu açıdan ülkelere en önemli katma değeri kazandıran sektörlerin başında yer almaktadır. Yaşanan rekabet ortamında stratejik olarak büyümeyi hedef alan ülkelerin aynı zamanda borç ve öz kaynak dengelerini doğru ifade eden politikalar geliştirerek hem istihdamı arttırmaları hem de turizm başta olmak üzere ulaşım ve ticari amaçlı havacılık faaliyetlerini doğru yönlendirmeleri ve doğru kararlar vermeleri gerekmektedir (Kiracı ve Asker, 2018; Shaverdı vd., 2015).

Günümüzde artan havacılık ihtiyacını karşılamak adına ülkeler önemli adımlar atarken, yeni kurulan havalimanlarının ülkeye olan kar katkılarının yanı sıra zarara neden olmaları da kaçınılmaz bir gerçektir. Bu kapsamda ülkelerin doğru pazar payı analizleri yaparak ülkelerindeki transfer bölgelerini belirlemeleri, yeni yatırımlara ek olarak mevcutta bulunan havalimanlarına sağlanacak katma değerleri doğru analiz etmeleri gerekmektedir. Bu anlamda yolcuların hangi sebeplerle havalimanlarını kullandıkları (transfer bölge, one way uçuşlar, iç hat seferler, gibi...) iyi analiz edilerek gerekli yatırımların gerçekleştirilmesi gerekmektedir (Budak ve Sakarya, 2022).

Çalışmada ACI verileri temel alınarak 2021 yılında dünyada en fazla yolcu taşıyan 10 adet havalimanı (Hartsfield-Jackson Atlanta Uluslararası Havalimanı, Beijing Capital Uluslararası Havalimanı, Los Angeles Uluslararası Havalimanı, Dubai Uluslararası Havalimanı, Tokyo Haneda Uluslararası Havalimanı, Chicago O'Hare Uluslararası Havalimanı, Londra Heathrow Uluslararası Havalimanı, Shanghai Pudong Uluslararası Havalimanı, Hong Kong Uluslararası Havalimanı, Sidney Kingsford Smith Uluslararası Havalimanı) hem finansal hem de operasyonel performansları açısından analiz edilmiştir. Analizde kullanılan finansal kriterler; cari oran, likit oran, aktif devir hızı, alacak devir hızı, özsermaye devir hızı, finansal kaldıraç oranı, toplam borç/özsermaye, maddi duran varlıklar/özsermaye, net kar marjı, özsermaye karlılık oranından oluşmaktadır. Elde edilen finansal verilere ek olarak operasyonel kriterler de Skytrax verileri taranarak seçilmiştir. Bu kriterler; müşteri memnuniyeti, personel sayısı, havalimanının şehre uzaklığı, havalimanı büyüklüğü ve gecikme oranlarından oluşmaktadır. Analize dahil edilen bu kriterlerin daha rasyonel ve objektif olabilmesi amacıyla 2016-2021 yılları arasındaki verilerin ortalamaları analize dahil edilmiş olup, kriterler önce ENTROPI yöntemi ile ağırlıklandırma işlemi yapılarak önem dereceleri belirlenmiştir. Belirlenen bu önem dereceleriyle birlikte objektif bir analiz olan TOPSIS yöntemi kullanılarak havalimanı performans sıralamaları elde edilmiştir.

Çalışmanın sonucuna göre, finansal açıdan Hartsfield-Jackson Atlanta Uluslararası Havalimanı ilk sırada, Londra Heathrow Uluslararası Havalimanı ikinci sırada ve Sidney Kingsford Smith Uluslararası Havalimanı üçüncü sırada yer alırken, Shanghai Pudong Uluslararası Havalimanı son sırada yer almaktadır. Operasyonel olarak yapılan analiz incelendiğinde, finansal analize benzer bir sonuca ulaşılmıştır. İlk sırada, Hartsfield-Jackson Atlanta Uluslararası Havalimanı; ikinci sırada Londra Heathrow Uluslararası Havalimanı ve üçüncü sırada Chicago O'Hare Uluslararası Havalimanı yer almaktadır. Son sırada ise, Shanghai Pudong Uluslararası Havalimanı yer almaktadır.

Gelecek çalışmalarda farklı ÇKKV tekniklerinin kullanımı ile havalimanlarının performans analizi konu edinilebilir. Ulaşılan sonuçlar mevcut çalışma bulguları ile kıyaslanabilir.

ÖZET

Tüketici ve üretici fiyat endeksleri ve buna göre şekillenen enflasyon ülkelerin refah seviyesine etki eden en önemli değişkenlerden bazılarıdır. Tüketici Fiyat Endeksi (TÜFE) ise bireylerin üretilen mal ve hizmetler karşısında, arz-taleplerini ölçerek "Enflasyon" kavramını ortaya koymaktadır. ÜFE ve TÜFE piyasadaki ekonomik şartları ve konjonktürel dalgalanmaları da içermektedir. Üretici Fiyat Endeksi ve Tüketici Fiyat Endekslerinin hangi faktörlere göre şekil aldığı hem ekonominin refahının ölçülmesi hem de oluşturulacak politikaların etkinliği bakımından oldukça önemlidir. Tüketici ve üretici fiyat endekslerini etkileyen faktörler ise döviz kuru, emtia fiyatları, üretim düzeyi ve faiz oranları gibi değişkenlerdir. Bu çalışmanın amacı, Türkiye'de 2019-2022 dönemleri arasındaki Tüketici Fiyat Endeksi (TÜFE) ile açıklayıcı değişkenler Üretici Fiyat Endeksi (ÜFE), Amerikan Doları (USD), Avrupa Para Birimi (Euro) ve Brent Petrol fiyatları arasında uzun ve kısa dönem ilişkilerini incelemektir. Buna göre döviz kurlarından enflasyona geçiş etkisinin olup olmadığı test edilecektir. Çalışmada yöntem olarak, modeldeki değişkenlerin durağanlık mertebeleri I(0) ve I(1) olarak farklı olduğundan dolayı ARDL modeli kullanılacaktır. Yerli ve yabancı literatürde TÜFE ile ÜFE, döviz kuru, faiz oranları ve petrol fiyatları gibi değişkenler arasında eşbütünlüğün olduğu sonuçlarına ulaşılmıştır. Çalışmamızın sonuçlarına göre değişkenler arasında uzun dönemli ilişki tespit edilmiş ve kısa dönemdeki sapmaların uzun dönemde tekrar dengede olduğu gözlemlenmektedir. İstatistiksel olarak anlamlı sonuçlanan değişkenler arasında TÜFE'yi uzun dönemde en yüksek katsayı ile Amerikan Doları etkilemektedir. Bu sonuç ithalatın genellikle Amerikan Dolarına bağlı olarak gerçekleştirilmesine bağlı olabilir. Döviz kuru geçişkenliği incelendiğinde Amerikan Dolarından, TÜFE'ye geçiş etkisi söz konusu iken EURO para biriminden TÜFE'ye negatif yönlü bir geçiş etkisi bulunmuştur. Diğer çalışmalardan farklı olarak Euro değişkenindeki bir birimlik artış TÜFE değişkeninde azalışa sebep olmaktadır. Türkiye'nin Avrupa ile yaptığı ihracatında para birimini Euro olarak tercih etmesi, Döviz kuru ile enflasyon geçişkenliğinin ters yönde çıkmasına neden olmuştur.

Anahtar Kelimeler: ÜFE, TÜFE, Döviz Kuru, Enflasyon, ARDL,

Short and Long Term Analysis of Consumer and Producer Price Indices: the Case of Turkey

ABSTRACT

Consumer and producer price indices and inflation are some of the most important variables that affect the welfare level of countries. The Consumer Price Index (CPI), on the other hand, reveals the concept of "Inflation" by measuring the supply-demand of individuals against the goods and services produced. The PPI and CPI coefficients also include the economic conditions in the market and cyclical fluctuations. The factors according to which the Producer Price Index and the Consumer Price Indices are shaped are very important both in terms of measuring the welfare of the economy and the effectiveness of the policies to be formed. Factors affecting consumer and producer price indices are variables such as exchange rate, commodity prices, production level and interest rates.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

The aim of this study is to examine the long- and short-term relationships between the Consumer Price Index (CPI) and the explanatory variables Producer Price Index (PPI), US Dollar (USD), European Currency (EURO) and Brand Oil prices in Turkey for the period 2019-2022. Accordingly, whether there is a pass-through effect from exchange rates to inflation will be tested. The ARDL model will be used as a method in the study, since the stationarity levels of the variables in the model are different as $I(0)$ and $I(1)$. In the domestic and foreign literature, it has been concluded that there is cointegration between variables such as CPI and PPI, exchange rate, interest rates and oil prices. According to the results of our study, a long-term relationship was determined between the variables and the short-term deviations were in balance again in the long-term was observed. This result may be due to the fact that imports are usually denominated in US Dollars. When the exchange rate pass-through is analyzed, there is a pass-through effect from the US Dollar to the CPI, while a negative pass-through effect from the EURO currency to the CPI is found. Unlike other studies, a one-unit increase in the Euro variable causes a decrease in the CPI variable. The fact that Turkey preferred Euro as the currency in its exports to Europe caused the exchange rate and inflation pass-through to go in the opposite direction.

Keywords: PPI, CPI, Exchange rate, inflation and ARDL

GİRİŞ

Ülkelerin ekonomik verimliliğinin ve sürdürülebilirliğinin ölçülmesinde önemli kriter olan Enflasyon kavramı, gelişmiş veya gelişmemiş ülkelerde farklı oranlarla ortaya çıkabilmektedir. Fiyatlar genel seviyesindeki sürekli olan yükselişler enflasyonun varlığını işaret etmektedir. (Uğurlu ve Saraçoğlu,2006:58) Enflasyonun ekonomiye getirdiği belirsizlikler ve maliyetler, fiyat istikrarının önemini ve ciddi bir iktisadi amaç olduğunu öne sürmektedir.

(Orhan,2007:30) Ayrıca Üretici Fiyat Endekslerindeki artış ve azalışlar, petrol fiyatları, Merkez Bankası faiz kararları, döviz kurlarındaki değişimler ile oluşan kur geçişleri gibi bir çok etken fiyatlar genel seviyesi üzerinde rol oynamaktadır. Enflasyonun ortaya çıkmasında etkili olan sosyal ve siyasi sebepler, arz-talep vd. durumlar etkili olduğu kadar ülkeler tarafından oluşturulabilecek enflasyona karşı mücadelede maliye ve para politikaları da önem taşımaktadır.

Türkiye’de 2019-2022 dönemlerine ait aylık veriler kullanılarak oluşturulan çalışmamızda, Tüketici Fiyat Endeksi ile Üretici Fiyat Endeksi, Brent Petrol fiyatları, Euro ve Amerikan Doları arasındaki uzun-kısa dönemli ilişkinin tespiti amaçlanmıştır. Serilerin farklı mertebelerden durağanlığı söz konusu olduğundan ARDL model ile test edilerek sonuçlar yorumlanmıştır.

Tüketici Fiyat Endeksi (TÜFE)

Tüketici Fiyat Endeksi (consumer prices index) veya kısaca TÜFE (CPI),ürün sepeti olarak ortalama hanehalkının tüketimi ile ilgili mal ve hizmetleri esas alan endekstir. Burada ürün sepeti ya da piyasa ürün sepeti, belirli bir ülkenin ekonomisini veya piyasa genelini temsil ettiği varsayılan sabit bir ürün listesi olarak adlandırılmaktadır. Bu şekilde bir listenin oluşturulma amacı, ortalama olarak bir tüketicinin en fazla satın aldığı mal ve hizmetleri, bütçede payına uygun olarak incelenmesidir. Örnek olarak açıklamak gerekirse, bir bireyin sepette gıda harcamalarının ağırlığı eğlence harcamalarından daha fazla olacaktır. Bundan dolayı gıda fiyatlarında yaşanan değişim TÜFE’yi eğlence fiyatlarındaki değişime oranla daha fazla etkileyecektir. (Yalta,2019:78)

Üretici Fiyat Endeksi (ÜFE)

Üretici Fiyat Endeksi, Tüketici Fiyat endeksi için ön bilgi özelliği taşımaktadır. ÜFE’deki artışlar TÜFE için olası bir artışın habercisi olabilir. Bundan dolayı Üretici Fiyat Endeksi ekonomist ve politikacıların önem verdiği endekstir. Kamuoyunda yorumların yapıldığı, incelendiği Enflasyon oranları Üretici Fiyat Endeksi ile ölçülen oranlardır. ÜFE ve TÜFE oranları arasında farklılıklar olabilir. Ekonomist ve Siyasiler ÜFE oranlarını daha fazla dikkate alırken, toplumda ekonomik sorunları olan bireyler TÜFE oranları ile ilgileneceklerdir.(Yıldırım,2012:39)

Enflasyonun Sosyal ve Ekonomik Etkileri

Enflasyonun toplumun üzerinde etkileri farklılık göstermektedir. Bu etkileri şöyle sıralayabiliriz:

- Enflasyon, ülkede belirsizlik ortamı yaratarak bireylerin sağlıklı yatırım veya üretim kararları almalarına engel olur ve bireyler uzun vadeli planlarından, hedeflerinden

kaçınımlarına neden olur. Yüksek enflasyon kaynaklı olarak nispi fiyat değişimleri ayırt edilemez ve bireyler sağlıklı kararlar alma konusunda yeterli bilgi elde edemezler.

- Enflasyon ortamında faizlerin yüksek olması sebebiyle borçlanma maliyeti artar ve birikimler de verimsiz alanlarda değerlendirilerek yatırımlar olumsuz etkilenir.
- Yüksek enflasyon dönemlerinde finans piyasaları gelecekle ilgili öngöründe zorlandığı için kredi piyasasının verimliliğini etkiler ve bu sebeple bireylere, firmalara kullanılabileceği kredi miktarını düşürür. Kısaca enflasyon kredi ve iş gücü piyasasında verimliliği azaltır, ülkenin rekabet gücünü zayıflatır.
- Enflasyon ortamı iş gücü piyasasının verimsiz çalışmasına sebep olabilir. Ekonomide dengesiz bir büyüme, iş gücü talebinde de dengesizliğe yol açmaktadır. Fakat fiyat istikrarı olan bir ekonomide, iş gücü piyasası da istikrarlı olur, istihdam artar, işten çıkarmalar azalır.
- Yüksek enflasyonun sebep olduğu belirsizlik, sosyal ve siyasi ilişkilerde, ahlaki açıdan bozuk ve menfaate dayalı davranışları artırmaktadır. Bu sebeple sadece bireyler arasında güven değil, yöneticilere olan güven de sarsılabilir, ülkedeki yönetime güven azalabilir.
- Enflasyon toplumda düşük gelirli bireylere daha fazla zarar vererek yoksullaştırmayı artırabilir. Tasarruf edebilme imkanına sahip kesim yüksek reel faizlerden faydalanırken, gelir düzeyi düşük olan kesim bu imkanlardan faydalanamaz ve gelir dağılımının bozulması ile sonuçlanır. Ayrıca bireyler düşük gelirlerinden dolayı günlük hayatta aktivitelerine veya etkinliklerine, harcamalarına daha az katılır, yoksunluk artar.
- Toplumda güvenin zarar görmesi, uyum sağlanamaması, bireylerde gelecek kaygısı artması, bireylerin kendilerini toplumdan soyutlaması, artan adaletsizlik, gelir dağılımının adil olmaması ve genç neslin gelecek planları, hedefleri için ümitsiz olmaları da enflasyonun toplum üzerinde yarattığı olumsuz etkilerden bazılarıdır. (TCMB 2004, www.tcmb.gov.tr).

METODOLOJİ

Çalışmanın temel amacı, Türkiye’de Tüketici Fiyat Endeksi ve Üretici Fiyat Endeksinin uzun dönemde birlikte hareketlerinin incelenmesine dayanmaktadır. Ayrıca modelde döviz kurunun enflasyona geçiş etkisi incelenmesi amacıyla Euro ve Amerikan Doları da modele dahil edilmiştir. Modelde yer alan değişkenler aşağıda belirtilmiştir :

Değişken Sembolü	Değişken Adı
TÜFE	Tüketici Fiyat Endeksi
ÜFE	Üretici Fiyat Endeksi
USD	Amerikan Doları (Efektif Satış Fiyatı)
EURO	Avrupa Para Birimi (Efektif Satış Fiyatı)
PETROL	Avrupa Brent Petrol Spot FOB(Varil Fiyatı)

Modelde yer alan değişkenlerin durağanlık sınamaları hem Genişletilmiş Dickey Fuller Birim Kök testi ile hem de yapısal kırılmalı Zivot-Andrews Birim Kök testi ile incelenmiştir. Her iki

birim kök testi ile serilerin farklı mertebelerden durağanlığı tespit edilmiştir. Farklı mertebelerden durağanlığın söz konusu olduğundan dolayı eş bütünleşmenin varlığı ARDL model ile test edilmiştir.

LİTERATÜR ARAŞTIRMASI

Erdem ve Yamak (2014) tarafından Türkiye’de 1987-2012 dönemine ait yapılan çalışmada, ÜFE ile TÜFE arasındaki ilişki araştırılmıştır. Araştırma sonucunda 2003 dönemi sonrasında Üretici Fiyat Endeksinden, Tüketici Fiyat Endeksine olan geçişin azaldığı gözlemlenmiştir. Yani üreticinin tüketiciye olan etkisinde kademeli olarak düşüş yaşanmıştır. Geçişkenliğin azalış sebebinin ise, çalışmaya ait dönemler kapsamında talep enflasyonunda oluşan baskıların göz önüne alınarak yorumlanabileceği belirtilmiştir. Ayrıca 2003 dönemi sonrasındaki Üretici Fiyat Endeksinin, enflasyona olan etkisinin azalmasında, yakın zamanda yaşanan ekonomik ve siyasi politikadaki değişikliklerin sebep olabileceğinden şüphe edilmiştir.

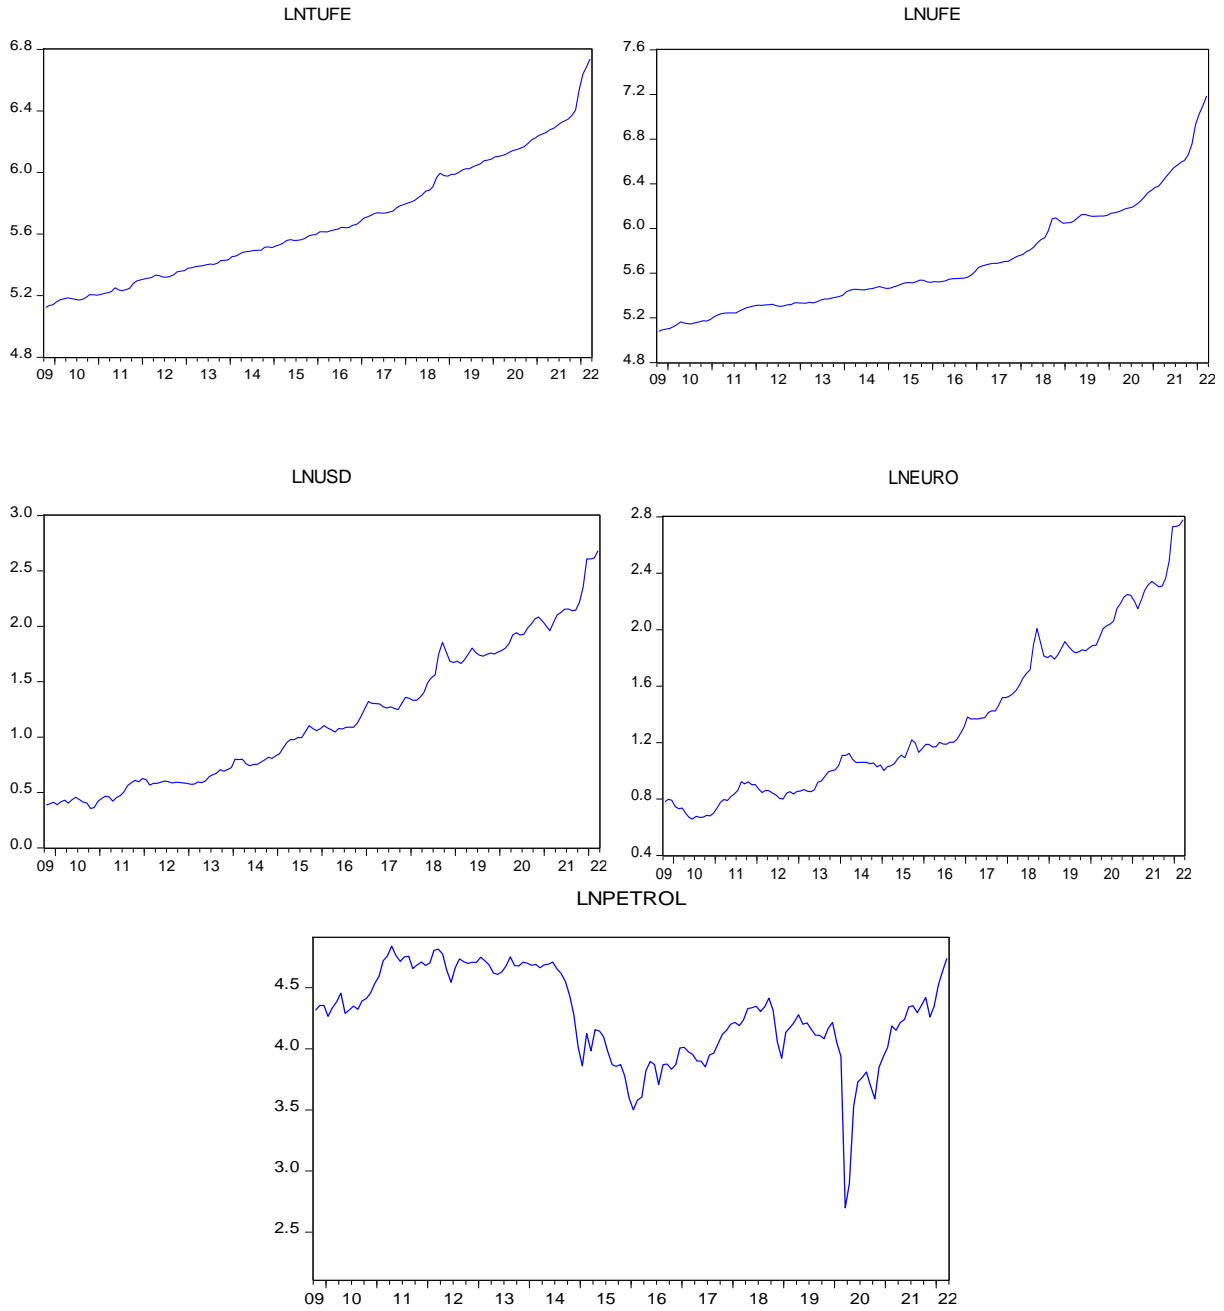

Sever ve Mızrak (2007) 1987-2006 dönemini kapsayan çalışmalarında enflasyon, faiz oranları ve döviz kuru üzerine etkileşimi incelemiştir. Çalışmada enflasyon, döviz kuru ve faiz oranlarının birlikte yüksek değerlerde olması sonucu refah seviyesinde azalmalara ve gelir dağılımında bozulmalara yol açabileceği tespit edilmiştir. İncelenen dönemler arasında döviz kurlarındaki artışların, enflasyon ve faiz oranları üzerinde yaklaşık olarak bir yıl etkili olabileceği öngörülmüştür. Döviz kurlarının enflasyondaki artışlara 4 dönem negatif tepki verdiği ve döviz kurlarında ki negatif tepkinin ise Türkiye’de dalgalı kur rejimi öncesinde bazı politika ve kararlarla kurlara farklı yollarla müdahale edilmesinin etkisinin olabileceği belirtilmektedir. Döviz kurlarında değişimin meydana gelmesi sonucu enflasyon yüksek tepki vermektedir ve döviz kuru istikrarlı oldukça fiyatlarda istikrarlı olmaktadır.

Demir ve Yenipazarlı (2020) tarafından 2003-2018 yıllarını kapsayan dönemde Türkiye’deki döviz kurlarının enflasyon üzerindeki etkileri incelenmiştir. Elde edilen sonuçlara göre döviz kurundaki azalışlar veya azaltmaya yönelik politikalar, enflasyonu artırıcı niteliktedir. Bu sonuçların nedeni araştırıldığında ise üretime bağlı olarak ülkenin iç etkenlerindeki kaynakların sınırlı olmasıyla döviz kurlarına endekslenerek ithal edilen malların bulunması, artan faiz maliyetleri ve dış borçların artması, ithal malların ucuzlaması sebebiyle talebin artması ve ihracatta baskıların meydana gelmesi sonuçlarının değerlendirilebileceği belirtilmiştir.

Öksüzler ve İpek (2011) 1987-2010 dönemleri arasındaki Türkiye’de ekonomik büyüme, petrol fiyatları ve Tüketici Fiyat Endeksi arasındaki ilişkiyi incelemiştir. Çalışma sonucunda ise petrol fiyatlarında meydana gelecek pozitif bir şokun, hem ekonomik büyümeyi hem de enflasyonu pozitif yönde etkilediği tespit edilmiştir. Ayrıca Türkiye’de ekonomik büyümenin petrol fiyatları dışında başka açıklayıcı değişkenler ile incelenmesi belirtilirken, petrol fiyatlarının enflasyon üzerindeki önemli etkisine değinilmiştir.

ARAŞTIRMA BULGULARI

Türkiye’de 2019-2022 dönemi verilerini kapsayan çalışmaya ait değişkenler ile analiz gerçekleştirilmeden önce serilerin logaritmik dönüşümleri sağlanmıştır. Daha sonrasında birim kök testleri uygulanan değişkenler modele dahil edilere analiz gerçekleştirilmiştir. Logaritmik dönüşümleri sağlanan değişkenlerin grafik gösterimi aşağıda yer almaktadır ;

ARDL Model ile Uzun ve Kısa Dönemde İlişkinin İncelenmesi

Değişkenler arasındaki uzun dönemde eş bütünleşmenin varlığının tespiti için öncelikle serilerin durağanlığı sınanmaktadır. Johansen eş bütünleşme testinin uygulanması için serilerin $I(1)$ yani birinci farkları alındığında durağanlığı söz konusu iken, ARDL model için serilerin farklı mertebelerden durağan olmaları yeterli olacaktır. Değişkenlerimiz farklı mertebelerden durağan olduğu için ARDL model uygun görülmüştür ve bulgular kontrol edilmiştir.

Tablo 3. ARDL Sınır Testi Sonuçları

T-İstatistiği	k	Kritik Sınır Değerleri		Anlamlılık Seviyesi
F-İstatistik Değeri: 8.3599	4	I(0)	I(1)	
		2.2	3.09	%10
		2.56	3.49	%5
		2.88	3.87	%2.5
		3.29	4.37	%1

ARDL model ile analiz gerçekleştirildiğinde Sınır Testi F-İstatistik değeri uzun dönemli ilişkinin varlığını belirtmektedir. Tablo 3. de yer alan sınır testi sonuçlarına göre uygun gecikme sayısının 4 olduğu modelde F-İstatistik Değeri 8.35 olarak tespit edilmiştir. Pesaran (2001) tarafından % 5 anlamlılık seviyesinde alt sınır 2.56 ve üst sınır ise 3.49 olarak sonuçlanmıştır. Elde edilen F-istatistik değeri (8.3599) üst sınır değerinden (3.49) büyük olduğundan dolayı değişkenler arasında uzun dönemli ilişkinin olmadığı yokluk hipotezi %5 anlamlılık seviyesinde reddedilmiştir. Yani değişkenler arasında uzun dönemli ilişki vardır.

Tablo 4. ARDL Modelinin Uzun Dönem Tahmin Sonuçları

Değişkenler	Katsayı	Standart Hata	t-Statistics	Prob.
C	-0.788743	1.329751	-0.593151	0.5547
LNPETROL	0.142764	0.053076	2.689808	0.0087**
LNUSD	1.024158	0.220273	4.649504	0.0000**
LNEURO	-1.194956	0.312260	-3.826792	0.0003**
LNUFE	1.142940	0.286803	3.985113	0.0001**

Not: * %10, ** %5 ve *** %1 anlamlılık düzeylerinde p değerlerini ifade etmektedir.

Tablo 4. İncelendiğinde Tüketici Fiyat Endeksi ve Petrol Fiyatları, Amerikan Doları, Euro ve Üretici Fiyat Endeksi arasında %5 önem seviyesinde anlamlı ilişki bulunmuştur. Modelde Petrol Fiyatındaki %1 lik artış, Tüketici Fiyat endeksinde yaklaşık 0.142 artışa, Amerikan Dolarındaki %1 lik artış Tüketici Fiyat Endeksinde yaklaşık 1.024 artışa, Üretici Fiyat Endeksindeki %1 artış ise Tüketici Fiyat Endeksinde 1.142 artışa sebep olmaktadır. Euro değişkeni negatif katsayıya sahiptir ve Euro kurundaki %1 lik artış Tüketici Fiyat Endeksinde 1.194 azalışa sebep olmaktadır. Ayrıca modelde CointEq(-1) yani kısa dönem hata düzeltme terimi -0.12 olarak sonuçlanmıştır. Kısa dönemde oluşan şoklar karşısında seri uzun dönemde dengeye gelmektedir.

SONUÇ VE ÖNERİLER

Enflasyon oranları gelişmiş ülkelerde ve gelişmemiş ülkelerde dönemlere bağlı olarak farklılık gösterebilmektedir. Tüketici Fiyat Endeksinde meydana gelen değişiklikler ise ülke içerisinde ki hane halkının arz ve taleplerine, üretimin miktarına, üretim maliyetlerinin karşılandığı kaynak türlerine vb.faktörlere bağlı olabilmektedir.

Araştırma sonuçları incelendiğinde Türkiye’de Dolar kuru ve Tüketici Fiyat Endeksini uzun dönemde birlikte hareket etmektedirler. İthalatın Dolar kuru üzerinden gerçekleşmesi ve uzun vadede etkili olması bu ilişkiyi açıklayabilmektedir. Üretici Fiyat Endeksi ise petrol fiyatları başta olmak üzere bir çok maliyet unsurlarını içermektedir. Modelde Üretici Fiyat Endeksi ve Petrol fiyatları da Tüfe ile uzun dönemli anlamlı ilişkiye sahiptir. Ancak Euro para biriminin Enflasyon ile negatif yönlü, uzun dönemli ilişkiye sahip olması döviz kuru geçişkenliğini öne sürecek niteliktedir.

Çalışmanın sonuçlarından yola çıkarak enflasyonun bireylerin satın alma gücündeki ve ekonomi piyasasında yaratmış olduğu olumsuz etkilerinden kaçınmak mümkün görünmektedir. Bu hususta hem bireyler hem de ülke yönetimi açısından sorumluluklar üstlenilebilir. Bireyler gereksiz harcamalardan kaçınmalı, kurallı ve bilinçli olmalıdır. Ülkede üretimin özendirilmesi, devlet tarafından teşviklerin artırılması, istihdamın artırılması,işsizliğin azaltılması, ithalattan çok ihracata yönelik bir politikanın benimsenmesi etkili olacaktır.

ABSTRACT

The coronavirus pandemic, which spread rapidly from the Wuhan region of China to the world, reached our country in a short time. With the various measures taken by the World Health Organization (WHO) and the health ministries of countries to manage this pandemic process, people's daily lives have changed suddenly and unexpectedly. Within the scope of the measures, some business lines continued to work from home to operate online, but especially the service sector faced uncertainty in the short term. This process has made the workers in the tourism sector, especially hotel workers, one of the groups most affected by the pandemic. For this reason, the study was based on examining the tolerance levels of uncertainty and covid-19 fear perceptions of hotel employees in Manavgat in Antalya and comparing them according to the demographic characteristics of the participants. In this context, 313 data were included in the analysis process. In this study, in which the survey method will be used, data were collected from hotel employees through a questionnaire. Frequency, percentage values and parametric comparison analyzes were used in the interpretation of the data. In the light of the findings obtained as a result of the analyzes and by making use of the relevant literature, suggestions for the sector and future studies have been developed.

INTRODUCTION

The COVID-19 pandemic has had a significant impact worldwide and has become a source of fear and concern for many people. COVID fear is defined as an emotional reaction related to the risk of contracting the COVID-19 virus or the course of the disease (Asmundson & Taylor, 2020). The rapid spread of the pandemic has heightened people's COVID fear. In fact, according to a study, during the early stages of the pandemic, individuals were exposed to numerous false or inadequate information about the virus, particularly through news media and social media interactions, which led to increased fear and concerns about their own health (Garfin & Holman 2020).

Intolerance of uncertainty is expressed as emotional and cognitive reactions to unknown and unpredictable events (Dugas, Buhr & Ladouceur 2004), incorrect evaluation, wrong decision making and threat perception (Freeston, Rhéaume, Letarte, Dugas & Ladouceur 1994). An individual's level of intolerance to uncertainty affects their perception and evaluation of events (Geçgin & Sahranç 2017). People who perceive uncertain situations as disheartening and anxiety-inducing are inclined to demonstrate a lesser capacity for tolerating uncertainty compared to their counterparts (Bozkur 2020). Individuals with high intolerance towards uncertainty tend to perceive encountered events with a negative and threatening outlook. Furthermore, these individuals exhibit a propensity for involuntarily exaggerating the significance of events (Kilit, Dönmezler, Erensoy & Berkol 2020).

Uncertainty in the course of the COVID-19 pandemic is identified as one of the factors that exacerbate COVID anxiety. Research indicates that individuals' lack of clear knowledge about how the virus spreads, how it is treated, and when the pandemic will end contributes to an increase in COVID fear (Rajkumar, 2020). In a study, it has been concluded that the uncertainty stemming from problems caused by the COVID-19 virus creates fear in individuals. This fear is found to be positively correlated with feelings of helplessness, illness, and death, leading to negative emotional states such as insecurity, depression, anxiety, and stress (Artan, Meydan & Irmak 2021).

When examining the relevant literature in the field, various studies have been found that establish different levels of relationships between people' socio-demographic characteristics, intolerance to uncertainty (Ersöz et al. 2016, Geçgin & Sahranç 2017; Yıldız & Güllü 2018; Kilit et al. 2020; Şahinler 2021) and COVID-19 fear (Cao, Fang, Hou, Han, Xu, Dong & Zheng 2020; Duman 2020; Altundağ 2021).

Considering the relevant literature in the field, the aim of this study is to compare the socio-demographic characteristics of hotel employees with their levels of intolerance to uncertainty and COVID-19 fear.

METHOD

The model of the research is the "relational screening model", which is a model that aims to determine the existence and/or degree of change between two or more variables (Karasar, 2016:114). The population of the research consists of the Turkish personnel working at the hotels in Manavgat in Antalya and the sample consists of 313 hotel workers selected by the convenience sampling method, which is one of the non-probability sampling types.

A questionnaire was used as a data collection tool in the research. The first part consists of 12 statements prepared as a five-point Likert type (1: Does not define me at all, 2: Does not describe me, 3: Describes me partially, 4: Describes me, 5: Definitely describes me) regarding the level of intolerance to uncertainty of the participants. In the second part, there are 7 statements prepared in five-point Likert type for the covid-19 fear levels of the participants (1: I strongly disagree, 2: I do not agree, 3: I agree at a moderate level, 4: I agree, 5: I strongly agree). In the third part, there are questions prepared regarding the demographic characteristics of the personnel included in the research (gender, marital status, age, education level, monthly average personal income level, department, working time). The level of intolerance to uncertainty scale (IUS-12) in the questionnaire was developed by Carleton, Norton, and Asmundson (2007) and adapted into Turkish by Sarıçam, Erguvan, Akın, and Akça (2014), and validity and reliability studies were completed. The Covid-19 fear scale was developed by Ahorsu, Lin, Imani, Saffari, Griffiths, and Pakpour (2020). Adaptation to Turkish, validity and reliability Artan et al. (2021).

In order to ensure a proper understanding of the statements in the survey before proceeding to data collection, expert validation (Gürbüz & Şahin, 2018) was sought by consulting two expert faculty members in the relevant field. Subsequently, a pilot study was conducted with 30 participants from hotel employees in the Muğla region, and no issues were identified, allowing the study to proceed. The research data were collected by the researchers during the period of June to September 2022.

The socio-demographic characteristics of the participants were analyzed using absolute and percentage values, while the statements related to the IUS-12 and the COVID-19 fear scale were analyzed using mean and standard deviation. Then, the levels of intolerance of uncertainty and perceptions of COVID-19 fear among the participants were examined to determine if they differed based on socio-demographic characteristics. Before conducting difference tests, the normality of the dataset was checked to assess whether it followed a normal distribution. It was observed that the skewness and kurtosis values of the dataset fall within the acceptable range of $(-1.5 < \text{skewness and kurtosis} < +1.5)$, indicating normality of the data (Tabachnick & Fidell, 2013). Therefore, it can be said that the data set related to the scales has a normal distribution feature. To compare two groups, an independent samples t-test was used, while for comparing three or more groups, one-way analysis of variance (ANOVA) was used. In statistical analyses, significance levels of $p < 0.01$ and $p < 0.05$ were considered acceptable. The internal consistency analysis using Cronbach's alpha was employed to assess the reliability of the scales. According to the analysis, the IUS-12 of $\alpha: 0.945$ and COVID-19 fear scale of $\alpha: 0.891$. These values indicate high levels of reliability for the scales. Only the significant results of the comparisons have been included in the tables, and non-significant results have not been reported.

FINDINGS

The demographic characteristics of the participants were analyzed and the following findings were obtained in Table 1. It can be observed that the majority of participants consist of males (53%), individuals who are single (52.7%), within the age range of 18-24 (35.5%), and possess

an associate's degree (28.1%). In terms of monthly average income levels, 31.3% of participants have an income of 4253 TL or below, 28.4% fall within the range of 4254 to 6500 TL, 19.8% fall within the range of 6501 to 8500 TL, while the remaining 19.5% possess incomes in the ranges of 8501-10500 TL, 12501 TL or above, and 10501-12500 TL, respectively. When examining the departments where participants are employed, 25.9% work in the kitchen, 25.6% are engaged in housekeeping services, 19.5% work in restaurants or bars, 16.9% work in reception, and 12.1% work in the accounting field. Regarding their length of employment, it can be deduced that 30.7% of participants have worked for 5 years or less, 30.4% have worked between 6 and 10 years, 29.1% have worked between 11 and 15 years, while 9.9% have worked for 16 years or more.

Table 1. Information on Participants' Demographic Characteristics (n=313)

Gender	n	%	Income (TL)	n	%
Male	147	47	4253 or less	98	31,3
Female	166	53	4254 – 6500	92	28,4
Marital Status	n	%	6501 – 8500	62	19,8
Married	148	47,3	8501 – 10500	44	14,1
Single	165	52,7	10501 – 12500	6	1,9
Age	n	%	12501 or more	11	3,5
18 – 24	99	35,5	Department	n	%
25 – 29	75	22,7	Kitchen	81	25,9
30 – 35	71	22,7	Restaurant	61	19,5
36 – 41	37	11,2	Housekeeping	80	25,6
42 – 47	31	8	Reception	53	16,9
Educational Level	n	%	Accounting	38	12,1
Primary school	47	15	Working Year	n	%
Secondary school	39	12,5	5 years or less	96	30,7
High school	80	25,6	6 – 10 year	95	30,4
Associate's degree	88	28,1	11 – 15 year	91	29,1
Bachelor degree	52	16,6	16 – 20 year	31	9,9
Postgraduate	7	2,2			

It was examined whether the arithmetic averages of the participants' levels of IUS-12 and their perceptions of fear of covid-19 differ according to gender and marital status (see Table 2). The levels of IUS-12 show a statistically significant ($p=0.007$) difference according to their marital status. A statistically significant ($p=0.005$) difference was found between the perceptions of fear of Covid-19 and gender.

The IUS-12 levels of the participants included in the study and their perceptions of fear of Covid-19 were compared in the Table according to age. No statistically significant result was found in the comparison made according to age in terms of both variables. However, it is understood that the highest average of the IUS-12 and covid-19 variables is in the 36-41 age range. In other words, the level of intolerance of uncertainty and the perception of fear of covid-19 of the participants aged 36-41 are higher than all other groups. The IUS-12 levels of the participants and their perceptions of the fear of Covid-19 were compared according to their educational status. While the highest average for IUS-12 levels is associate degree graduates, high school and equivalent graduates have the lowest average. The statistically significant

difference ($F=2.784$; $p=0.027$) is between associate degree graduates and undergraduate and higher graduates. The highest average for the perception of fear of Covid-19 belongs to secondary school graduates, while the lowest average belongs to graduates of undergraduate and higher education. The statistically significant difference ($F=2.445$; $p=0.047$) is between secondary school graduates and undergraduate and higher graduates.

When comparing participants' levels of Intolerance of Uncertainty (BTD-12) based on their duration of employment, it can be observed that the highest mean belongs to those with 16 years or more of work experience, while the lowest mean is attributed to the group of participants who have worked for 5 years or less. The statistically significant difference ($F=2.958$; $p=0.033$) is apparent between the group of participants who have worked for 5 years or less and those who have worked between 6-10 years, as well as between those who have worked for 5 years or less and those with 16 years or more of work experience.

In the comparison between perceptions of COVID-19 fear and duration of employment, the highest mean is observed among participants with 16 years or more of work experience, while the lowest mean is found among those who have worked for 6-10 years. The statistically significant difference ($F=4.713$; $p=0.033$) lies between participants with 16 years or more of work experience and all other groups.

The arithmetic means of participants' responses to the BTD-12 and COVID-19 statements were compared based on their monthly income levels. However, no statistically significant difference was found. When examining the means of participants' responses to the BTD-12 and COVID-19 statements based on their monthly income levels, the highest mean is observed in the income group of 8501 TL and above, while the lowest mean belongs to the income group of 6501-8500 TL.

The final comparison, according to Table 2, was conducted between participants' departments of employment and their levels of Intolerance of Uncertainty and perceptions of COVID-19. In the comparison between participants' departments of employment and their IUS-12 levels, it is understood that the highest mean belongs to the accounting department, while the lowest mean is attributed to the kitchen department. In the comparison based on perceptions of COVID-19, the highest mean is found in the restaurant/bar department, while the lowest mean is observed in the kitchen department.

The statistically significant differences between groups are apparent in the IUS-12 scale between the restaurant/bar and kitchen, floor services, and accounting departments, as well as between the accounting and kitchen, floor services, and accounting departments ($F=6.686$; $p=0.000$). In the COVID-19 scale, the significant difference between groups was found between the kitchen department and the restaurant/bar department ($F=3.926$; $p=0.004$).

Table 2. Comparison of IUS-12 and Covid-19 Fear Scale by Demographic Characteristics

Demographic Characteristics	IUS-12				Covid-19 Fear								
	n	Ort.	s. s.	t	F	p	n	Ort.	s. s.	t	F	p	
Gender													
Male							147	2,43	0,78	1,835		0,005	

Female					166	2,25	0,91			
Marital Status										
Married	148	3,12	1,06	-1,407		0,007				
Single	165	3,29	0,96							
Education Level

6 – 10 year	95	3,17*	1,01		2,958	0,033	95	2,26*	0,86	4,713
11 – 15 year	91	3,24	1,02				91	2,28*	0,80	0,033
16 – 20 year	31	3,68*	0,78				31	2,88*	0,88	

CONCLUSION AND SUGGESTIONS

This study examines the levels of intolerance to uncertainty and perceptions of COVID-19 fear among hotel employees, who are particularly affected by the COVID-19 pandemic. The pandemic has had a profound impact on the tourism industry, with people refraining from travel due to the outbreak and having to cancel their travel plans due to government travel bans or restrictions. Furthermore, employees in the tourism sector, especially those working in hotels, have experienced a work process fraught with uncertainty, including the fear of unemployment or the fear of contracting the virus while on the job.

Within this context, this study focuses on the levels of intolerance to uncertainty and perceptions of COVID-19 fear among hotel employees, who have been most affected by the pandemic. Firstly, the socio-demographic characteristics of the participants included in the study are examined. More than half of the participants are male and single. One-third of the participants belong to the group with minimum wage or lower income levels, and they are predominantly young individuals between the ages of 18 and 24. In terms of education level, the highest two groups consist of high school graduates and equivalent, as well as associate degree holders, with the number of individuals in these two groups being similar. When examining the departments in which the hotel employees work, it is observed that, except for the accounting department, the distribution among the departments is relatively equal, although the number of kitchen staff is relatively higher.

When analyzing the demographic characteristics of the employees based on their tenure (length of employment), it is found that the number of employees is roughly equal for each 5-year tenure interval, with the exception of employees with 16 years or more of tenure, who represent the smallest group.

The demographic characteristics of the employees included in the research were compared within the scope of intolerance of uncertainty and their perceptions of fear of covid-19. As a result of these comparisons, a statistically significant difference was found in the fear of covid-19 according to gender, and the level of intolerance of uncertainty according to marital status.

It is understood that the arithmetic mean of the answers given by the men is higher than that of the women, and the arithmetic mean of the answers given by the singles is higher than the married ones. These results show that men are more affected than women, and married people are more affected than singles in terms of the level of intolerance to uncertainty and covid-19 fear.

A significant difference was found in the comparisons made between the education levels of the hotel employees and the perception of IUS-12 and covid-19. It is understood that those who have graduated from associate degree level have higher tolerance for uncertain situations than all other education levels. It is one of the results of this study that employees with a bachelor's degree or higher have a lower intolerance to ambiguous situations compared to other groups. Although the perceptions of its employees' fear of covid-19 are low in terms of all education levels; In the comparison made, it is understood that the perception of fear of covid-19 is relatively higher among secondary school graduates compared to other groups, and the covid-19 perceptions of graduates and higher level graduates are the lowest.

There is no statistically significant difference between monthly average personal income and employees' IUS-12 levels and fear of covid-19. When the average of the answers given by the employees to the levels of intolerance to uncertainty and fear of covid-19 is analyzed, it is seen that the highest average in both variables belongs to the highest income group, namely 8501 TL and above. Therefore, it can be said that employees with high income can better cope with uncertainty and fear of covid-19. However, Ersöz et al. (2016) found in a study that those with a lower socioeconomic status can better cope with uncertainty, which does not coincide with the result of this study.

When the comparisons made in terms of the departments in which the hotel employees are operating, it is understood that the group with the highest intolerance to uncertainty level is the accounting department employees and the lowest is the kitchen department employees. On the other hand, while the covid-19 perception of restaurant/bar department employees is relatively high compared to other groups, that of kitchen workers is lower.

The findings of this study may be limited in generalizability, as they are focused specifically on hotel employees. Extrapolating the results to other occupational groups or industries could be done cautiously. There may be confounding variables that influence both intolerance towards uncertainty and COVID-19 fear perceptions. Controlling for potential confounders, such as personal health conditions, prior exposure to COVID-19, or socioeconomic factors, should be considered. It may be valuable to explore potential mitigation strategies for reducing intolerance towards uncertainty and COVID-19 fear among hotel employees. Examining the effectiveness of interventions or organizational policies aimed at addressing these issues could be beneficial. Addressing these problems will enhance the validity and reliability of the research findings and contribute to a better understanding of the relationship between intolerance towards uncertainty and COVID-19 fear among hotel employees.

This study was supported within the scope of the TÜBİTAK 2209-A University Student Research Projects Support Program, with the application number 1919B012109503.

ÖZET

Bir bireyin yeni bir girişim yaratmak için attığı birçok adımın ilki olarak kabul edilen girişimcilik niyeti, bireyin yeni bir iş yaratma inancı ve bunu gelecekte bilinçli olarak yapmayı planlaması olarak tanımlanmaktadır. Duygusal zekânın, girişimcilik süreçlerini tahmin etmede önemli bir rol oynadığı düşünülmektedir. Bireylerin, kendi duygularını düzenleme ve başkalarının duygularını tanıma yeteneklerine güvendiği takdirde, girişimci olmakla ilgili hayal kırıklıklarını ve mücadeleleri üstlenme konusunda kendilerini daha yetkin hissedebilecekleri belirtilmektedir. Bireyin çevresindekilerin duygularını algılama ve anlama yeteneğine sahip olması, bireyin başkalarına karşı duyarlı olmasını sağlamaktadır. Araştırmalar, yüksek düzeyde duygusal zekâyâ sahip bireylerin aynı zamanda daha yüksek düzeyde girişimcilik niyetine sahip olduklarını ve yüksek düzeyde girişimci tutum sergilediklerini göstermektedir.

Yaşam tatminin, bireylerin yaşamlarına yönelik değerlendirici tepkileri olan ve mutluluğun ölçüsü olarak kabul edilen öznel iyi oluşun önemli bir göstergesi olarak açıklanmaktadır. Daha yüksek duygusal zekâ düzeylerinin, özellikle yaşam tatminiyle bağlantılı olduğu belirtilmektedir. İnsanlar ancak mutlu, sağlıklı, başarılı ve huzurlu olduklarını hissettikleri bir ortamda yaşamdan zevk alabileceklerdir. Yaşamdan zevk alabildikleri kadar, yeni bir amaç belirlemek, yeni bir işe girişmek için kendilerinde enerji bulabileceklerdir. Aksi takdirde, geleceği hakkında endişe duyan, kaygılanan ve geleceğe ilişkin olumsuz yorumlarda bulunan kişi geleceğini planlamak konusunda odağını kaybedecektir. Dolayısıyla kendini bilen, öz farkındalığa sahip, zorlukların üstesinden gelebilen, iç motivasyona sahip, empati kurabilen dahası duygusal zekâyâ sahip insanların, şartlar ne olursa olsun bir amaçlarının olduğu, bir şeyleri başarmak için iç motivasyona sahip oldukları ve girişimcilik niyeti taşıdıkları düşünülmektedir. Bununla birlikte duygusal zekânın girişimcilik niyeti üzerine etkisinde yaşam tatmininin aracı rol oynadığı düşünülmektedir.

Bu çalışmada duygusal zekânın girişimcilik niyeti üzerine etkisinde yaşam tatmininin aracı rolünün incelenmesi amaçlanmıştır. Araştırma Gaziantep Üniversitesi İslahiye İktisadi ve İdari Bilimler Fakültesinde kolayda örnekleme yöntemi ile seçilen 215 öğrenci üzerinde gerçekleştirilmiştir. Alan araştırması sonucu elde edilen veriler üzerinde açıklayıcı faktör analizi (AFA) ve sonrasında doğrulayıcı faktör analizi (DFA) ile güvenilirlik analizleri, korelasyon ve regresyon analizleri yapılmıştır. Yapılan analizler sonucunda, duygusal zekânın girişimcilik niyeti ve yaşam tatmini üzerinde etkisi olduğu tespit edilmiştir. Fakat yaşam tatmininin girişimcilik niyeti üzerine etkisi olmadığı saptanmış, dolayısıyla aracılık etkisinin olmadığı sonucuna ulaşılmıştır.

Anahtar Kelimeler: Duygusal Zekâ, Girişimcilik, Girişimcilik Niyeti, Yaşam Tatmini

Emotional Intelligence and Entrepreneurial Intention: The Mediating Role of Life Satisfaction

ABSTRACT

Entrepreneurial intention, which is accepted as the first of many steps taken by an individual to create a new venture, is defined as the individual's belief in creating a new job and planning to do it consciously in the future. Emotional intelligence is thought to play an important role in predicting entrepreneurial processes. It is stated that

6th International CEO Communication, Economics, Organization & Social Sciences Congress

if individuals trust their ability to regulate their own emotions and recognize the emotions of others, they can feel more competent to take on the frustrations and struggles associated with being an entrepreneur. The ability of an individual to perceive and understand the emotions of those around him/her ensures that the individual is sensitive to others. Studies show that individuals with high levels of emotional intelligence also have higher levels of entrepreneurial intention and exhibit a higher level of entrepreneurial attitude.

Life satisfaction is explained as an important indicator of subjective well-being, which is the evaluative reaction of individuals towards their lives and is accepted as a measure of happiness. It is stated that higher emotional intelligence levels are especially associated with life satisfaction. People will be able to enjoy life only in an environment where they feel happy, healthy, successful and peaceful. As much as they can enjoy life, they will be able to find energy to set a new purpose, to embark on a new job. Otherwise, the person who worries, worries about the future and makes negative comments about the future will lose focus in planning the future. Therefore, it is thought that people who are self-aware, have self-awareness, can overcome difficulties, have internal motivation, can empathize, and who have emotional intelligence, have a purpose, have an internal motivation to achieve something, and have entrepreneurial intentions regardless of the circumstances. However, it is thought that life estimation plays a mediating role in the effect of emotional intelligence on entrepreneurial intention.

In this study, it is aimed to examine the mediating role of life satisfaction in the effect of emotional intelligence on entrepreneurial intention. The research was carried out on 215 students selected by convenience sampling method in Gaziantep University Islahiye Faculty of Economics and Administrative Sciences. Explanatory factor analysis (EFA) and then confirmatory factor analysis (CFA) and reliability analyzes, correlation and regression analyzes were performed on the data obtained as a result of the field research. As a result of the analysis, it has been determined that emotional intelligence has an effect on entrepreneurial intention and life satisfaction. However, it was determined that life satisfaction had no effect on entrepreneurial intention, so it was concluded that there was no mediation effect.

Keywords: Emotional Intelligence, Entrepreneurship, Entrepreneurial Intention, Life Satisfaction

1. GİRİŞ

Girişimcilik tüm dünyada olduğu gibi Türkiye’de de oldukça dikkat çeken bir konu olarak karşımıza çıkmaktadır. Bireylerin yeni bir iş başlatmak adına fikir inşa etmesi, adım atması, fikirleri üzerine düşünmesi ve bu fikri tüm olumlu ve olumsuz yönleri ile geliştirmeye ve hayata geçirmeye çalışması girişimci niyetlerinin varlığını göstermektedir. Bir girişimde bulunma niyetinin kişisel özelliklerle yakından ilişkili olduğu, bu nedenle kişisel özelliklerden biri olan duygusal zekâya sahip kişilerin kendi duygu durumlarını ayarlayabildikleri gibi başkalarının da duygularını anlama ve tanımlama yetenekleri sayesinde girişimde bulunmanın getirebileceği riskleri göze alma konusunda daha yetkin olabilecekleri düşünülmektedir.

İnsanlar ancak mutlu, sağlıklı, başarılı ve huzurlu olduklarını hissettikleri bir ortamda yaşamdan zevk alabileceklerdir. Yaşamdan zevk alabildikleri kadar, yeni bir amaç belirlemek, yeni bir işe girişmek için kendilerinde enerji bulabileceklerdir. Aksi takdirde, geleceği hakkında endişe duyan, kaygılanan ve geleceğe ilişkin olumsuz yorumlarda bulunan kişi geleceğini planlamak noktasında odağını kaybedecektir. Dolayısıyla kendini bilen, öz farkındalığa sahip, içsel motivasyonlu, zorlukların üstesinden gelebilen, empati kurabilen dahası duygusal zekaya sahip insanların, şartlar ne olursa olsun bir amaçlarının olduğu, bir şeyleri başarmak için iç motivasyona sahip oldukları ve girişimcilik niyeti taşıdıkları düşünülmektedir. Bununla birlikte duygusal zekânın girişimcilik niyeti üzerine etkisinde yaşam tahmininin aracı rol oynadığı düşünülmektedir.

Bu çalışmada duygusal zekâ ve girişimcilik niyeti arasındaki ilişkide, yaşam tatmininin aracılık etkisi incelenmiştir. Bu amaçla öncelikle literatür taraması ve hipotezlere yer verilmiş, araştırmanın yöntemi ve elde edilen bulgular paylaşıldıktan sonra sonuç ve öneriler kısmı ile sonlandırılmıştır.

2. LİTERATÜR TARAMASI

Bilgi ve teknolojinin hızlı yayılımı ve küreselleşmesinin hayatı kolaylaştırdığı gibi birçok sektörde ciddi sorunlara yol açtığı ve iş-yaşam dengesi üzerinde baskı yarattığı üzerinde durulmaktadır. Duygusal zekânın, modern çalışma ortamında oldukça ilgi gördüğü, bireysel ve örgütsel yaşamda rekabet avantajı sağlanmasına hizmet ettiği öne sürülmektedir (Shylaja ve Prasad, 2017: 18). Duygusal zekânın sosyal bağlamda insan ilişkileri için önemli olduğu ve teknik bilgi için gerekli olan bilişsel zekânın yerini son zamanlarda duygusal zekâyı bıraktığı belirtilmektedir (Arar ve Öneren, 2021: 392). Duygusal zekâ, kökeni sosyal zekâ kavramına dayanan ve ilk olarak Thorndike (1920) tarafından bahsedilen bir kavramdır (Rodrigues vd., 2019: 7). Duygusal zekâ ilk kez Salovey ve Mayer (1990: 189) tarafından “kendisinin ve başkalarının hislerini ve duygularını izlemek, bunlar arasında ayırım yapmak ve bu bilgiyi bir düşünce ve eyleme rehberlik etmek için kullanma yeteneğini” içeren bir tür sosyal ve kişisel zekâ olarak tanımlanmaktadır. Goleman (1998) ise “Duygusal Zeka” kitabında, duygusal zekayı, özdenetim, kendi kendini motive etme yeteneği, kendi duygularımızı ve başkalarının duygularını tanıma, kendimizin ve başkalarının duygularını etkili şekilde yönetme olarak açıklamaktadır (Goleman, 1998, Akt., Kumar ve Jyothirmmai, 2018: 380). Duygusal zekânın iş performansı ve iş tatmininin bir göstergesi olduğu ve başarılı girişimcilerin duygusal zekâsı

yüksek kişiler arasından çıktığına değinilmekle birlikte, duygusal zekanın öğrenilebilen ve uygulama ile geliştirilebilen bir beceri olduğuna vurgu yapılmaktadır (Swanson vd., 2018: 2).

Girişimcilik niyeti, bir bireyin yeni bir girişim yaratmak için attığı birçok adımın ilki olarak kabul edilmektedir (Davis ve Peake, 2014: 21). Velástegui ve Chacón'a (2021: 3) göre girişimcilik niyeti, bir bireyin yeni bir iş yaratma inancı ve bunu gelecekte bir noktada bilinçli olarak yapmayı planlaması olarak tanımlanmaktadır. Girişimcinin davranışlarını veya eylemlerini iş konseptinin geliştirilmesine ve nihayetinde uygulanmasına yönlendiren bir ruh halidir (Botsaris ve Vamvaka, 2016: 436). Kusumojanto vd. (2021: 3)'nin ifadesiyle girişimcilik niyeti, bireylerin iş fırsatları aracılığıyla yeni ürünler yaratarak ve risk alarak, yeni, yaratıcı ve benzersiz işler üstlenmeye veya yaratmaya yönlendiren bir düşünceye sahip olmasıdır.

Duygusal zekâ, girişimcilik süreçlerini tahmin etmede önemli bir rol oynamaktadır. Rodrigues vd. (2019: 8), bireylerin, duygularını düzenleme ve başkalarının duygularını tanıma yeteneklerine güvenirlerse, girişimci olmakla ilgili hayal kırıklıklarını ve mücadeleleri üstlenme konusunda kendilerini daha yetkin hissettiklerini belirtmektedir. Davis ve Peake (2014: 22) göre bireyin çevresindekilerin duygularını algılama ve anlama yeteneğine sahip olması, bireyin başkalarına karşı duyarlı olmasını sağladığı için önemlidir. Bu bireyler, bu beceriyi bir girişimci için bir iş kurma niyetlerini artırabilecek bir avantaj olarak da görebilmekte ve bu da iş kurma isteklerini güçlendirmektedir.

Araştırmalar, yüksek düzeyde duygusal zekâyâ sahip olan bireylerin aynı zamanda daha yüksek düzeyde girişimcilik niyetine sahip olduklarını ve yüksek düzeyde girişimci tutum sergilediklerini göstermektedir (Bilgiseven ve Kasımoğlu, 2019: 886). Örneğin, Rliee ve White (2007), başarılı girişimcilerin genellikle yüksek düzeyde duygusal zekâyâ sahip bireyler olduğunu doğrulamaktadır. Zampetakis vd. (2009) hem kendi duygularını hem de başkalarının duygularını düzenleme, denetleme ve değerlendirme konusunda daha yetenekli olan bireylerin, girişimci bir şekilde hareket etme konusunda daha iyi bir eğilime sahip olduklarını belirtmektedirler. Gelard ve Emamisaleh (2014), daha duygusal zekâyâ sahip üniversite öğrencilerinin daha fazla girişimcilik niyetine sahip olduğunu deneysel olarak göstermiştir. Archana ve Kumari (2018) yaptıkları çalışmada, öğrencilerin duygusal zekâlarının girişimcilik niyetleri üzerinde önemli bir etkiye sahip olduğunu öne sürmektedirler. Bu doğrultuda, aşağıdaki hipotez oluşturulmuştur:

H₁: Duygusal zekânın girişimcilik niyeti üzerinde etkisi vardır.

Yaşam tatmini, kişinin içinde bulunduğu yaşam koşullarından memnun olması veya yaşama ilişkin istek ve ihtiyaçlarını bir bütün olarak istediği gibi karşılayabilmesidir (İplik ve Ülbeği, 2021: 5167). Diener vd. (1985: 71) yaşam tatminini bireylerin o anda yaşadığı duygularından ziyade, yaşamının bir bütün olarak genel bilişsel değerlendirmesi şeklinde tanımlamaktadır. Martin ve Hill (2012: 1157) yaşam tatmininin kişinin durumunun istikrarlı bir değerlendirmesi olduğunu savunmaktadır. Yaşam tatmini, çok çeşitli olumlu kişisel, psikolojik, sosyal, kişilerarası ve içsel sonuçların önemli bir göstergesidir. Bu nedenle, yaşam tatmini

sıklıkla insanların yaşam kalitesini değerlendirmek için kullanılmakta ve öznel iyi oluşun önemli bir bileşeni olarak kabul edilmektedir (Liu vd., 2013: 850).

Yaşam tatmini kişisel özellikler ve çevredeki değişim ile belirlenmektedir (Anjum vd., 2020: 2972). Duygusal zekâ, yaşam tatmininin bir başka önemli yönüdür (Szcześniak ve Tułeczka, 2020: 224). Huang ve Lee'ye (2019: 2) göre etkili duygu yönetimi yoluyla, bireyler daha fazla yaşam tatmini elde etmek için olumsuz duyguları olumlu duygulara dönüştürebilmektedirler. Duygusal zekâ ile yaşam tatmini arasında anlamlı bir ilişkinin olup olmadığı pek çok araştırmacı tarafından sorgulanmış ve bu araştırmacılar duygusal zekâ ile yaşam tatmini arasında anlamlı ve doğrusal bir ilişki olduğunu ortaya konulmuştur (Ardahan ve Mert 2013: 890). Yüksek düzeyde duygusal zekâyâ sahip olan bireylerin, duyguları algılama, anlama ve yönetme konusunda daha yetenekli oldukları düşünülmekte ve dolayısıyla genel olarak daha fazla yaşam tatmini yaşayabilmektedirler (Kong vd., 2012: 513; Sun vd., 2014: 174). Bu doğrultuda, aşağıdaki hipotez oluşturulmuştur.

H₂: Duygusal zekânın yaşam tatmini üzerinde etkisi vardır.

Girişimcilik faaliyetlerinin, finansal önlemlerin örtesinde öngörüler gerektirdiği giderek daha çok kabul görmektedir. Yaşam tatmini, finansal bir sorun olmamakla birlikte, bir başarı ölçüsü olarak görülmektedir. Girişimcilerin açısından yaşam tatmini, girişimcilik sürecinin daha iyi anlaşılması ve özellikle de girişimcilikten elde edilen ekonomik ve sosyal faydaların devam ettirilmesi için oldukça önemli bir konudur. Yaşam beklentisi yüksek olan kişilerin güçlü girişimcilik niyetine sahip olduğu belirtilmektedir (Boz ve Alan, 2022: 199). Cetin vd. (2022: 2334), girişimcinin hayatından ve işinden duyduğu tatmin duygusunun girişimciliğin başarısının temeli olduğunu ifade etmektedir. Contreras-Barraza vd. (2022: 3) girişimcilik, aktörlerin amaçlarını, isteklerini ve beklentilerini dünyadaki eylemleriyle ilişkilendirdiği sosyal bir olgu olduğunu belirtmektedir. Girişimcilik, bir kişinin psikolojik tatminini kolaylaştırmakta ve psikolojik ve öznel iyi oluşu etkilemektedir. Brieger vd. (2020: 563), girişimcilerin kendilerini işleriyle kanıtlamak istediklerini, bu durum da sadece işleriyle değil, yaşamlarıyla da faydalı bir şeyler yaptıkları hissini verebileceğini belirtmektedirler. Haska ve Kume (2020), öğrencilerin girişimci tutumları ile yaşam tatminleri arasında istatistiksel olarak anlamlı pozitif bir ilişki olduğunu doğrulamaktadır. Kılıç (2022), bireylerin girişimciliğe yönelik eğilimleri arttıkça yaşam tatminlerinin de arttığını belirtmektedir. Bu doğrultuda, aşağıdaki hipotezler oluşturulmuştur.

H₃: Yaşam tatmininin girişimcilik niyeti üzerinde etkisi vardır.

H₄: Yaşam tatmininin, duygusal zekâ ile girişimcilik niyeti arasındaki ilişkide aracılık rolü vardır.

3. YÖNTEM

3. 1. Araştırma Amacı ve Önemi

Bu çalışmada, duygusal zekânın girişimcilik niyetine etkisinde yaşam tatmininin aracılık rolünü üniversite öğrencileri bağlamında incelenmesi amaçlanmıştır. Son yıllarda, yükseköğretim kurumları girişimciliği teşvik etmeyi bir öncelik olarak görmeye başlamıştır.

Dolayısıyla, üniversitelerin girişimcilik bilincini artırmak ve öğrencilerin girişimci ruhunu güçlendiren psikolojik ve davranışsal özellikleri geliştirmek için yapılanma yerleri haline gelmesi için bu bağlamda daha fazla araştırma yapılması gerektiği açıktır. Bu çalışma, öğrencilerin girişimcilik niyetini teşvik etmek için üst düzey eğitim programlarında hangi psikolojik faktörlerin teşvik edilmesi gerektiğinin anlaşılması yoluyla girişimcilik eğitimi alanına katkıda bulunmayı amaçlamaktadır (Rodrigues vd., 2019: 4).

3. 2. Veri Toplama Yöntemi ve Kullanılan Ölçekler

Bu çalışmada, duygusal zekânın girişimcilik niyetine etkisinde yaşam tatmininin aracılık rolünün incelenmesi amaçlanmıştır. Veri toplamak için anket tekniğine dayalı bir araştırma tasarımı kullanılmıştır. Araştırma kapsamında kullanılan anket formu iki bölümden oluşmaktadır. Birinci bölümde araştırmaya katılan öğrencilerin demografik özelliklerini ölçmeye yönelik 5 soru sorulmuştur. Anket formunun ikinci bölümünde araştırmaya katılan öğrencilerin duygusal zekâ düzeyini ölçmeye yönelik 16 ifade, girişimcilik niyetini ölçmeye yönelik 6 ifade ve yaşam tatminini ölçmeye yönelik 5 ifade yer almaktadır. Anket formunun ikinci bölümünde, araştırmaya katılan öğrencilerin her bir ifadeye katılma düzeyleri 5’li Likert ölçeği kullanılarak değerlendirilmiştir.

Duygusal Zekâ Ölçeği: Öğrencilerin duygusal zekâ düzeyini ölçmek için Wong ve Law (2002) tarafından geliştirilen, dört boyutlu “Duygusal Zekâ Ölçeği” kullanılmıştır. Türkçe uyarlaması Özbezek ve Paksoy (2017: 258) tarafından yapılan ölçüm aracının Cronbach Alpha Katsayısı kendi duygularını değerlendirme boyutu için 0,87; başkalarının duygularını değerlendirme boyutu için 0,81; duygu kullanımı boyutu için 0,74 ve duygu düzenlemesi boyutu için 0,76 olarak bulunmuştur.

Girişimcilik Niyeti Ölçeği: Öğrencilerin girişimcilik niyetini ölçmek için Linan ve Chen (2009) tarafından geliştirilen, tek boyutlu “Girişimcilik Niyeti Ölçeği” kullanılmıştır. Türkçe uyarlaması Şeşen ve Basım (2012: 24) tarafından yapılan ölçüm aracının Cronbach Alpha Katsayısı 0,86 olarak bulunmuştur.

Yaşam Tatmini Ölçeği: Öğrencilerin yaşam tatmin düzeyini ölçmek için Diener vd., (1985) tarafından geliştirilen, tek boyutlu “Yaşam Tatmini Ölçeği” kullanılmıştır. Türkçe uyarlaması Dağlı ve Baysal (2012: 1256) tarafından yapılan ölçüm aracının Cronbach Alpha Katsayısı 0,88 olarak bulunmuştur.

3. 3. Araştırmanın Örnekleme

Araştırma Gaziantep Üniversitesi İslahiye İktisadi ve İdari bilimler fakültesinde kolayda örnekleme yöntemi ile seçilen 215 öğrenci üzerinde gerçekleştirilmiştir. Genel olarak, erkek öğrencilerin oranı %48,8 iken, kız öğrencilerin oranı %52,2’dir. Araştırmaya katılan öğrencilerin %36,7’si iktisat bölümünde, %63,3’ü kamu yönetimi bölümünde öğrenim görmektedir. Öğrencilerin büyük çoğunluğu 21-23 yaşları arasında olup, bu %73,5’lik bir orandır. Öğrencilerin %21,4’ü birinci sınıfta, %47’si üçüncü sınıfta ve %31,6’sı dördüncü sınıfta eğitim görmektedir.

4. BULGULAR

4. 1. Ölçeklere İlişkin Güvenilirlik ve Geçerlilik Analizi

Araştırma modelini test etmeden önce kullanılan ölçeklerin yapı geçerliği ve güvenilirliği incelenmiştir. Bu amaçla açıklayıcı faktör analizi (AFA) ve sonrasında doğrulayıcı faktör analizi (DFA) ile güvenilirlik analizleri yapılmıştır. Tablo 2’de “Yaşam Tatmini Ölçeği”, “Girişimcilik Niyeti Ölçeği” ve “Duygusal Zekâ Ölçeği” üzerinde gerçekleştirilen AFA sonuçlarını ve Cronbach’s Alpha güvenilirlik katsayıları verilmiştir.

Tablo 1. Açıklayıcı Faktör Analizi Sonuçları

Ölçekler	Soru	Faktör Yükleri	Öz Değer	Açıklanan Varyans	K-M-O Değeri	Barlett Küresellik Testi	Sig.	Cronbach α
Yaşam Tatmini	5	0,873-0,907	3,839	76,783	0,831	915,148	0,000	0,921
Girişimcilik Niyeti	6	0,629-0,883	3,780	62,993	0,841	745,262	0,000	0,874
Duygusal Zekâ	Kendi Duygularını Değerlendirme	4	0,744-0,855	3,060	71,396	1962,149	0,000	0,905
	Başkalarının Duygularını Değerlendirme	4	0,756-0,836	3,046				
	Duyguların Kullanımı	4	0,625-0,810	2,690				
	Duyguların Düzenlenmesi	4	0,708-0,820	2,628				

Tablo 1’de AFA analizi sonucu KMO katsayısı 0,60’ın üzerinde olan yaşam tatmini (KMO=0,831; $\chi^2=915,148$; $p=0,000$), girişimcilik niyeti (KMO=0,841; $\chi^2=745,262$; $p=0,000$) ve duygusal zekâ (KMO=0,885; $\chi^2=1962,149$; $p=0,000$) ve ölçeklerin Barlett’s küresellik testi ki-kare değerinin de anlamlı olması verilerin faktör analizine uygun olduğunu göstermektedir. Bununla birlikte, yaşam tatmini ölçeğinin tek faktörle varyans açıklama yüzdesi %76,783; girişimcilik niyeti ölçeğinin tek faktörle varyans açıklama yüzdesi %62,993 ve duygusal zekâ ölçeğinin dört faktörle varyans açıklama yüzdesi %71,396 olarak bulunmuştur. Güvenilirlik analizi sonucu Cronbach’s Alpha katsayısının yaşam tatmini ölçeği için 0,921; girişimcilik niyeti ölçeği için 0,874 ve duygusal zekâ ölçeği için 0,905 olduğu görülmüştür. Bu sonuçlar kullanılan her bir ölçeğin hem örneklem yeterliliğinin hem de genellenebilirliğinin ve ölçüm gücünün yüksek olduğuna işaret etmektedir (Gürbüz, 2016: 312-319).

Tablo 2. Tanımlayıcı İstatistikler

Ölçekler	N	Ortalama	Std. Hata	Çarpıklık	Basıklık
Yaşam Tatmini	215	3,59	1,016	-0,772	0,025
Girişimcilik Niyeti	215	3,66	0,790	-0,564	0,309
Duygusal Zekâ	215	3,72	0,733	-0,603	0,508

Tablo 2’de yaşam tatmini ölçeğinin ortalama ve standart sapma değeri $3,59\pm 1,016$; girişimcilik niyeti ölçeğinin ortalama ve standart sapma değeri $3,66\pm 0,790$ ve duygusal zekâ ölçeğinin ortalama ve standart sapma değeri $3,72\pm 0,733$ olduğu gözlemlenmiştir. Bununla

birlikte, ölçeklere ilişkin çarpıklık ve basıklık katsayılarının ± 1 sınırları içerisinde olduğu görülmüştür. Bu durum verilerin normal dağılım gösterdiğine işaret etmektedir (Tabachnick ve Fidell, 2013: 133).

AFA ardından elde edilen faktör yapılarının uygunluğunu değerlendirmek amacıyla DFA uygulanmıştır. DFA sonucu elde edilen uyum indeksleri Tablo 3’de verilmiştir.

Tablo 3. DFA Sonucu Elde Edilen Uyum İyiliği İndeksi

Ölçekler	Modeller	$\Delta\chi^2$	df	$\Delta\chi^2/df$ ≤ 3	RMSEA $\leq,08$	AGFI $\geq,90$	GFI $\geq,90$	CFI $\geq,90$	NFI $\geq,90$
Yaşam Tatmini	Birinci Düzey	5,003	4	1,251	0,034	0,965	0,991	0,999	0,995
Girişimcilik Niyeti	Birinci Düzey	12,304	7	1,758	0,060	0,946	0,982	0,993	0,984
Duygusal Zekâ	Birinci Düzey	168,937	94	1,797	0,061	0,871	0,911	0,961	0,916
Duygusal Zekâ	İkinci Düzey	174,934	96	1,822	0,062	0,872	0,910	0,958	0,913

Tablo 3’de yaşam tatmini ve girişimcilik niyeti ölçeklerinin uyum iyiliği değerleri iyi/kabul edilebilir uyum aralığında olduğu görülmektedir. Bununla birlikte, duygusal zekâ ölçeğinin örneklem büyüklüğüne ve faktör yüklerine karşı hassasiyet gösterdiği bilinen GFI dışındaki uyum iyiliği değerlerinin istenilen aralıkta olduğu için uyum iyiliği kriterini karşıladığı kabul edilmiştir (Düger, 2020: 714).

4. 2. Korelasyon Analizi Sonuçları

Araştırma kapsamında duygusal zekâ, girişimcilik niyeti ve yaşam tatmini değişkenleri arasındaki ilişkileri incelemek amacıyla yapılan korelasyon analizi sonuçları Tablo 4’de verilmiştir.

Tablo 4. Korelasyon Katsayıları

Değişkenler	Yaşam Tatmini	Girişimcilik Niyeti	Duygusal Zekâ
Yaşam Tatmini	1		
Girişimcilik Niyeti	0,093	1	
Duygusal Zekâ	0,173**	0,145**	1

**p<0,01

Tablo 4’te görüldüğü üzere duygusal zekâ ile yaşam tatmini (0,173**) ve girişimcilik niyeti (0,145**) arasında pozitif yönlü ve düşük düzeyde ilişki olduğu tespit edilmiştir.

4. 2. Hipotez Testleri

Duygusal zekânın girişimcilik niyetine etkisinde yaşam tatmininin aracılık rolü olup olmadığını incelemek amacıyla araştırmanın kavramsal modeline uygun olarak, Hayes’in (2018) geliştirmiş olduğu PROCESS v3.4 makro uygulaması kullanılmıştır. Araştırma kapsamında aracılık analizi “model 4” üzerinden gerçekleştirilmiştir. Bu modele uygun olarak duygusal zekâ (X) bağımsız değişken, girişimcilik niyeti (Y) bağımlı değişken ve yaşam tatmini (M) aracı değişken olarak belirlenmiştir. Bootstrap 5.000 yeniden örnekleme seçeneği kullanılarak gerçekleştirilen analizlerde, aracı etki hipotezinin desteklenmesi için %95 anlamlılık (Bootstrap 95%CI) düzeyinde güven aralıklarının [BootLLCI ve BootULCI] sıfır değerini kapsamaması dikkate alınmaktadır (Gürbüz, 2019: 66). Duygusal zekânın girişimcilik niyetine etkisinde yaşam tatmininin aracılık rolünü incelemeye yönelik bootstrap regresyon analizine ilişkin sonuçlar Tablo 5’te yer almaktadır.

Tablo 5. Bootstrap Regresyon Analizi Sonuçları

Duygusal Zekânın Girişimcilik Niyeti Üzerindeki Etkisinde Yaşam Tatmininin Aracılık Rolü									
Değişkenler		Regresyon			BootCI		Model Özeti		
		b	t	Sig.	LLCI	ULCI	R ²	Model F	Sig. F
1	Duygusal Zekâ → Girişimcilik Niyeti	0,156	2,137	0,034*	0,012	0,300	0,021	4,569	0,034*
2	Duygusal Zekâ → Yaşam Tatmini	0,239	2,560	0,011*	0,055	0,424	0,030	6,555	0,011*
3	Duygusal Zekâ → Girişimcilik Niyeti	0,143	1,931	0,055	-0,003	0,289	0,026	2,797	0,063
	Yaşam Tatmini → Girişimcilik Niyeti	0,054	1,012	0,313	-0,051	0,160			
Dolaylı Etki (Aracı Etki)		Duygusal Zekâ → Yaşam Tatmini → Girişimcilik Niyeti							
		b = 0,013; % 95 CI [BootLLCI= -0,009 — BootULCI= 0,040]							

*p<0,05

Tablo 5'te görüldüğü üzere ilk aşamada duygusal zekânın girişimcilik niyeti üzerinde istatistiksel olarak anlamlı ve pozitif yönde bir etkisinin olduğu (%95 CI [0,012; 0,300]; b=0,156; t=2,137; p=0,034) ve girişimcilik niyetindeki değişimin %2,1'i duygusal zekâ tarafından açıklanabileceği sonucuna ulaşılmıştır (R²=0,021; F=4,569; p=0,034).

İkinci aşamada duygusal zekânın yaşam tatmini üzerinde istatistiksel olarak anlamlı ve pozitif yönde bir etkisinin olduğu (%95 CI [0,055; 0,424]; b=0,239; t=2,560; p=0,000) ve yaşam tatminindeki değişimin %3'ü duygusal zekâ tarafından açıklanabileceği sonucuna ulaşılmıştır (R²=0,030; F=6,555; p=0,011).

Üçüncü aşamada aracı etkinin belirlenmesi amacıyla bağımsız değişken duygusal zekânın ve aracı değişken yaşam tatmininin birlikte dahil edildiği regresyon modelinin istatistiksel olarak anlamlı olmadığı sonucuna ulaşılmıştır (R²=0,026; F=2,797; p=0,063). Bu regresyon modelinde, hem duygusal zekânın (%95 CI [-0,003; 0,289]; b=0,143; t=1,931; p=0,055) hem de yaşam tatmininin (%95 CI [-0,051; 0,160]; b=0,054; t=1,012; p=0,313) girişimcilik niyeti üzerinde istatistiksel olarak anlamlı bir etkisinin olmadığı da saptanmıştır.

Son olarak, aracı değişken olan yaşam tatmini modele dâhil edildiğinde hesaplanan dolaylı etkinin %95 bootstrap güven aralıkları sıfır değerini kapsadığından (b=0,013; %95CI [BootLLCI= -0,009; BootULCI= 0,040]) test edilen aracılık modelinin istatistiksel olarak anlamlı olmadığı sonucuna ulaşılmıştır. Bootstrap regresyon analizi sonuçlarına göre **H₁** ve **H₂** hipotezleri kabul edilirken, **H₃** ve **H₄** hipotezleri desteklenmemiştir.

5. SONUÇ VE ÖNERİ

Bu çalışmada, Gaziantep Üniversitesi İslahiye İktisadi ve İdari bilimler fakültesinde öğrenim gören 215 öğrencinin, duygusal zekâlarının girişimcilik niyetleri üzerindeki etkisini ölçmek ve bu iki değişken arasında yaşam tatmini algılarının aracı rol oynayıp oynamadığı incelenmiştir. Araştırmada kullanılan ölçekler, yüksek derecede güvenilir olarak ölçümlenmiştir. Korelasyon analizi sonucu, duygusal zekâ, girişimcilik niyeti ve yaşam tatmini arasında düşük fakat anlamlı ve pozitif yönde ilişki olduğu saptanmıştır. Regresyon analizi sonucunda, duygusal zekânın girişimcilik niyeti ve yaşam tatmini üzerinde etkisi olduğu, yaşam tatmininin girişimcilik niyeti üzerine etkisi olmadığı saptanmıştır, dolayısıyla aracılık etkisinin bulunmadığı sonucuna ulaşılmıştır.

Çalışma sonucu elde edilen bulgulara göre, üniversite öğrencilerinin kendi duygularını anladıkları, başkalarının duygularına karşı hassas oldukları, başkalarının davranışlarını gözlemledikleri ve anladıkları, her zaman kendileri ile ilgili hedef belirledikleri ve başarmak için en iyisini yapmaya çalıştıkları, kendi kendini motive ettikleri, öfkelerini kontrol edebilme,

zorlukları mantıklı bir şekilde ele alma, duygularını yönetme konusunda yetenekli olma şeklindeki duygusal zekâyâ ilişkin algılarının arttıkça, girişimci olma hedeflerinin bulunduğu, ciddi anlamda kendi işini kurmak ve sürdürmek konusunda çaba göstermek istedikleri, bu konuda kararlı oldukları, kendi işini kurmak konusunda ciddi bir niyet taşıdıkları şeklindeki girişimcilik niyeti algılarının da arttığı söylenebilmektedir. Bu sonuç, daha önce yapılan çalışmaların sonuçları ile paralellik göstermektedir. Şeşen ve Basım (2012), çalışmalarında girişimcilik niyeti ve kişisel özellikler arasında ilişki olduğunu belirtmektedirler. Bunun yanı sıra örneklemin %73,5 gibi büyük bir oranının 21-23 yaş aralığında yer alan gençlerden oluştuğu ele alındığında girişimci niyet konusunda algılarının yüksek olmasının yaşa bağlı olduğu düşünülebilir. Nitekim, Uluyol (2013), araştırmasında üniversite öğrencilerinin yüksek seviyede girişimci eğilimi taşıdıklarını belirtirken, Kara vd., (2020: 192), yaş faktörünün bireyin girişimcilik niyetini etkilediğini belirtmişlerdir. Choo ve Wong (2006), bireylerin kendi işini kurmaya genellikle 25 - 34 yaşları arasında karar verdiklerini öne sürmüşlerdir. Bununla birlikte Sahinidis ve Aegean (2021) tarafından yapılan çalışmada olduğu gibi girişimcilik niyetinin yaş ile ilişkili olmadığını belirten çalışmalar da mevcuttur. Ayrıca Swanson vd. (2018) çalışmalarında yüksek düzeyde duygusal zekânın, kişisel ilişkiler ve iş ilişkileri üzerinde olumlu ve önemli bir etkiye sahip olduğunu ve duygusal zekâ ile girişimcilik başarısı arasında güçlü bir ilişki olduğunu saptamışlardır.

Ayrıca, öğrencilerin duygusal zekâyâ ilişkin algıları arttıkça, ideallerine yakın mükemmel bir yaşantısı olduğu, yaşamından memnuniyet duyduğu, istediği şeylere sahip olduğu ve yine dünyaya gelse hayatındaki hiçbir şeyi değiştirmek istemediği yönündeki yaşam tatminine ilişkin algılarının da arttığı tespit edilmiştir. Fakat öğrencilerin hayatlarından memnun olmalarının, girişimcilik niyetleri üzerinde etkisi olmadığı araştırmanın sonuçlarındandır. Öğrencilerin henüz bir ailenin geçim kaynağından sorumlu olmamanın verdiği rahatlıkla böyle düşündükleri çıkarımı yapılabilir. Çünkü girişimde bulunmak pek çok zaman bazı riskleri üstlenmek zorunda kalındığı ve para gerektiği düşüncesini içinde barındırmaktadır. Çünkü zaten girişimciliğin temelinde, kâr elde etmek, hayatta kalmak ve büyümek vardır. Araştırma kapsamında yer alan katılımcıların henüz bir iş girişiminde bulunmadıkları düşünüldüğünde, öğrencilerin girişimcilik, başarılı bir iş kurma, yürütme bilgi ve yeteneğine sahip olmaları için eğitilmeleri gereklidir. İş fikirleri varsa KOSGEB gibi kurum ve kuruluşlarla nasıl iş birliği yapıldığı gibi farkındalık kazandıracak seminerler düzenlenmelidir. Alanında gençlerin örnek alabileceği, başarılı girişimciler üniversitelere davet edilmeli ve etkileşimli konferanslar düzenlenmelidir. Girişimciliğin yanı sıra, duygusal zekânın öğrenilebilen ve uygulama ile geliştirilebilen bir beceri olması hasebiyle gençlerin duygusal zekâlarını artıracak uygulama ve eğitimlere katılması sağlanmalıdır. Böylelikle gençlere, kişisel ve profesyonel ilişkiler kurma ve sürdürme yeteneği, kendi duygularını tanıma ve yönetme yeteneği, bunların başkaları üzerindeki etkilerini görme ve tanıma, ilişkileri yönetme yeteneği kazandırılmış olur. Böylelikle hem iş hem yaşam dengesi adına öz yeterlilik kazanan gençlerin giriştikleri işlerde başarı şanslarının yükselmesi hedeflenmelidir.

Gelecekte yapılacak çalışmalar için ele alınması gereken bazı kısıtlar bulunmaktadır. Çalışma da sadece üniversite gençliğine odaklanıldığında, araştırmanın genellenebilir olması açısından, farklı kitle ve yaş gruplarına tekrar uygulanması önerilebilir. Girişimcilik niyetine ilişkin yapılan araştırmalarda varlıklı bir ailede doğmuş olmanın, maddi durumun ya da farklı kişilik özelliklerinin girişimcilik niyeti üzerine etkisi olup olmadığının araştırılması önerilebilir.

ÖZET

Son dört yıl önce pandemi süreci ve sonrası 11 ilde deprem felaketi yaşayan Türkiye, bu ağır koşullar altında seçim sürecini ertelemeyerek, seçime gitmiş ve 28. Mayıs 2023 tarihinde seçimi tamamlamıştır. Yüzyıllık bir demokrasi deneyimi olan Türkiye Cumhuriyeti'nin ikinci yüzyılının 28 Mayıs 2023 ilk seçimi sonrasında seçmen profili yaş itibarıyla, 1. 18- 25 arası seçmen, 2. 25- 35 arası seçmen, 3. 35- 45 arası seçmen, 4. 45- 55 arası seçmen, 5. 55- 65 arası seçmen, 6. 65- 75 arası seçmen, 7. 75- 80 arası seçmen, 8. 80- sonrası seçmen diye sekiz başlıkta ele alınarak, tercihlerini olumlu olumsuz etkileyen nedenlerin neler olduğu hususu araştırılmıştır. Bu çalışmada nitel bir yöntem izlenmiştir.

Anahtar Kelimeler: Demokrasi, Profil, Seçim, Seçmen, Türkiye.

A Brief Overview of Voter Profile

ABSTRACT

Having experienced earthquake disasters in 11 provinces during and after the pandemic process four years ago, Turkey did not postpone the election process under these severe conditions, went to the elections and completed the elections on 28. May 2023. After the first election on 28 May 2023 of the second century of the Republic of Turkey, which is a century-long democracy experience, the electorate profile is as follows: 1. 18-25 voters, 2. 25-35 voters, 3. 35-45 voters, 4. 45-55 voters, 5. 55-65 voters, 6. 65-75 voters, 7. Voters between 75-80 and voters after 8.80- were discussed under eight headings, and the reasons that positively and negatively affect their preferences were investigated.

A qualitative method was followed in this study.

Keywords: Democracy, Profile, Election, Voter, Türkiye.

GİRİŞ

Bilindiği üzere, günümüz dünyasında her bireyin özgür iradesiyle siyasi tercihlerini yapmaları, demokratik devletlerin olmazsa olmazı haline gelmiştir. Türkiye yüzyıldan daha fazla bir demokrasi deneyimine sahiptir. Türkiyede siyasi tercih yapan kişi yani seçmen yaşı 18 dir. Ayrıca seçmen olmak için **1.** Nüfusa kayıtlı olmak, **2.** Kamu hizmetinde yasaklı olmamak. Seçim günü oy kullanamayacaklar ise; askeri öğrenciler, silah altında olan erler, tutuklu ve hükümlüler. Öte yandan aday olmanın koşulları: **1.** T.C. Vatandaşı olmak, **2.** Kamu hizmetinde kısıtlı olmamak, **3.** En az ilk okul mezunu olmak, **4.** Askerlik hizmetini yapmış olmak, **5.** Hüküm giymemiş olmak. 14. Mayıs 2023- 28 Mayıs 2023 arasında Türkiye’de yapılan seçimlerde yurtdışında yaşayan Türk vatandaşları da oy haklarını yerine getirmişlerdir.

LİTERATÜR TARAMASI

Türkiye’de 1876 Anayasasının ilanını izleyen 1877 yılında başlayarak, 1908, 1912, 1914, 1919, 1920, 1923, 1927, 1931, 1935, 1939, 1943 yıllarında aralıklarla seçim uygulamaları yapılmıştır. 1946- 1950 yılları arasında çok partili dönem başlar. Yeni seçim kanunu yapılır(Özek, s. 408...). Seçim uygulamalarının ast olan temel öğelerini siyasi partiler, seçilenler ve seçmenler teşkil eder. Seçmen profili: Seçmeni, diğer seçmenlerden ayıran tutum veya eğilimi(2011:2054). Bir başka ifadeyle ayırt edici özelliklerinin tümü. Seçmenin siyasi tercihi hususunda yaptığım literatür taramasında, geçmişten bugüne insan düşüncesinin bir sonucu, seçmen tercihinin birey tercihi olarak ele alınarak «erdem» ile «erdem» ‘in de «özgürlük» ile ilişkilendirilerek «özgür irade» altında ele alınarak incelendiğini belirledim. Bu incelemelerin belli başlılarından olan Determinist görüş; insanların kararlarında bağımsız olamayacağını, verdiği her kararın bir sebebe bağlı olduğunu savunurken, indeterminiz görüş ise, birey aldığı kararlarda bağımsız bir şekilde hareket edebilir ve özgür iradesiyle eylemlerini gerçekleştirebilir(Keil: 2007). Bu konu Aristoteles, Platon, Benjamin Libet, Spinoza, Ebu Bekir Razi, Farabi, İbn Rüşd, Leibniz, Schopenhauer ve bu gibi pek çok filozof tarafından tartışılmış, bugün tartışılmaya devam edilmektedir.

METODOLOJİ

Son dört yıl, salgın süreci ve sonrası 11 ilde yaşanan deprem felaketi yaşayan Türkiye, 14 Mayıs 2023 tarihli seçim kararını ertelemeyerek seçime gitmiş ve 14 Mayıs- 28 Mayıs 2023 tarihinde seçimi tamamlamıştır. Türkiye Demokrasisinin ikinci yüzyılında seçmen profili onar yıllık yaş itibarıyla; **1.** 18- 25, **2.** 25- 35, **3.** 35- 45, **4.** 45- 55, **5.** 55- 65, **6.** 65- 75, **7.** 75- 85, **8.** 85 sonrası olmak üzere sekiz başlıkta ele alınarak, tercihlerini etkileyen nedenlerin neler olduğu hususunun araştırılması amaçlanmıştır. İfade edildiği üzere, seçmen yaşı göz önüne alınmıştır. **1.** Yüz yüze görüşme, **2.** Grup görüşmesi benimsenmiştir. Yirmi binden fazla birey ile görüşme sağlanmıştır. Bu sayının sadece onu 85 sonrası seçmendir. Bu çalışmada nitel bir yöntem ve fenomenolojik bir yaklaşım benimsenmiştir. Toplum bireyleriyle çoğunlukla yüz yüze görüşülerek, durum, kavram, deneyim göz önünde bulundurularak sonuca gidilmiştir.

BULGULAR VE TARTIŞMA

Seçmen: Seçimde oy verme hakkı olan kimse(Türkiye’de 18 yaşına girmiş her seçmen oy kullanma hakkına sahiptir). 14 Mayıs 2023 seçimlerine katılan parti ve ittifaklar: **1.** Millet Partisi, **2.** Hak ve Özgürlükler Partisi, **3.** Sosyalist Güç Birliği İttifakı: **3.1.** Türkiye Komünist Partisi, **3.2.** Türkiye Komünist Hareketi, **3.3.** Sol Parti. **4.** Genç Parti, **5.** Memleket Partisi. **6.** Cumhuriyet İttifakı: **6.1.** Büyük Birlik Partisi,

6.2. Ak Parti, 6.3. Yeniden Refah Partisi, 6.4. MHP. 7. Emek ve Özgürlük İttifakı: 7.1. Yeşil Sol Parti, 7.2. Türkiye İşçi Partisi. 8. Büyük Türkiye Partisi. 9. Adalet Birlik Partisi, 10. Anavatan Partisi, 11. Yenilik Partisi, 12. Halkın Kurtuluşu Partisi, 13. Milli Yol Partisi, 14. Vatan Partisi, 15. Güç Birliği Partisi, 16. Millet İttifakı: 16.1. CHP, 16.2. İyi Parti. 17. Ata İttifakı: 17.1. Adalet Partisi, 17.2. Zafer Partisi, 18. Bağımsız Türkiye Partisi. 19. Bağımsızlar. Türkiye genelinde seçime katılım oranı % 88.92.dir. Seçmenleri etkileyen hususların(Ekonomi, eğitim, iş, kariyer, lider, parti, güven, istikrar ve bu gibi) önceliklerine göre yaş aralıklarının yanı sıra ikinci kez sınıflandırıldı.

1. 18- 25

- 1.1. Lider tercihl seçmen: 1. Güç, 2. Güven, 3. Lider sevgisi, 4. Milli duruş, 5. İş, 6. Milli savunma.
- 1.2. Değişim tercihl seçmen: 1.Yeni yüzler, 2. Koşullar, 3. Yaşam kalitesi.
- 1.3. Ekonomik ağırlıklı tercihl seçmen: 1.Yaşam kalitesi, 2. Güvence, 3. İş.
- 1.4. Eğitim ağırlıklı tercihl seçmen: 1. Kariyer imkanı , 2. Güvence.
- 1.5. İş ağırlıklı tercihl seçmen: 1. İş imkanı, 2. Güvence, 3. Lider sevgisi.
- 1.6. Kararsız ağırlıklı seçmen: 1. Beklentisi yüksek, 2. Değişim.

2. 25- 35

- 2.1. Lider tercihl seçmen: 1. Güç, 2. Güven, 3. Milli duruş, 4. İş.
- 2.2. İş ağırlıklı tercihl seçmen: 1. İş güvencesi, 2.Yaşam kalitesi.
- 2.3. Ekonomik ağırlıklı tercihl seçmen, 1. İstikrar , 2. Güvence, 3. Yaşam kalitesi.
- 2.4. Kariyer öncelikli tercihl seçmen: 1. Kariyer imkanı, 2. Değişim.
- 2.5. Kararsız ağırlıklı seçmen: 1. Beklentisi yüksek, 2. Yaşam kalitesi.

3. 35- 45

- 3.1. Ekonomik tercihl seçmen: 1.Yaşam kalitesi, 2.Sürdürebilir, 3. İstikrar.
- 3.2. Lider tercihl seçmen: 1. Güven, 2. Güç, 3. İstikrar.
- 3.3. İş ağırlıklı tercihl seçmen: 1. İş güvenliği, 2. Kariyer.
- 3.4. İstikrar tercihl seçmen: 1. Milli güvenlik, 2. Güven, 3. Sürdürebilirlik.
- 3.5. Güven tercihl seçmen: 1. İstikrar, 2. Yaşam kalitesi, 3. Güven.
- 3.6. Fanatik parti görüş tercihl seçmen: 1. Lider ve parti sevgisi.

4. 45- 55

- 4.1. İstikrar tercihl seçmen: 1. Milli güvenlik , 2. Güvence, 3. Güç.
- 4.2. Lider tercihl seçmen: 1. Güven, 2. Sevgi, 3. İstikrar.
- 4.3. Ekonomik tercihl seçmen: 1.Yaşam kalitesi, 2. Sürdürebilirlik.
- 4.4. Fanatik parti tercihl seçmen: 1. Parti ve lider sevgisi.
- 4.5. Güven tercihl seçmen: 1. Milli güvenlik, 2. İstikrar, 3. Güç.

5. 55- 65

- 5.1. Ekonomik tercihl seçmen: 1. Yaşam kalitesi, 2. Sürdürebilirlik, 3. Güven, 4. İş.
- 5.2. Güven tercihl seçmen: 1. Milli güvenlik, 2. İstikrar, 3. Sürdürebilirlik.
- 5.3. İstikrar tercihl seçmen: 1. Vatan sevgisi, 2. Güven, istikrar, 3. Güç.
- 5.4. Ülke geleceği tercihl seçmen: 1. Milli güvenlik, 2. İstikrar, 3. Güven.
- 5.5. Kararsız seçmen: 1. Yüksek beklenti, 2. Değişim.

6. 65- 75

- 6.1. İstikrar tercihl seçmen: 1. Milli güvenlik, 2. Güç, 3. Güven.
- 6.2. Ekonomik tercihl seçmen: 1.Yaşam kalitesi, 2. Sürdürebilirlik, 3. Güç.
- 6.3. Ülke geleceği tercihl seçmen: 1. Milli güvenlik, 2. İstikrar, 3. Sürdürebilirlik.

6.4. Güven tercihli seçmen: 1. İstikrar, 2. Milli irade, 3. Güç.

6.5. Fanatik parti tercihli seçmen: 1. Parti ve lider sevgisi.

7. 75- 85

7.1. Fanatik parti tercihli seçmen: 1. Parti sevgisi, 2. Lider Sevgisi.

7.2. Güven tercihli seçmen: 1. Milli Güvenlik, 2. İstikrar, 3. Sürdürülebilirlik.

8. 85 > ...

1. Güven tercihli seçmen: 1. İstikrar, 2. Güven, 3. Ekonomik refah, 4. Milli Savunma.

Bilindiği üzere, geçmişte ve günümüz dünyasında, seçmeni etkileyen medya söylem ve görsellerin tümünü içine alan kampanyalar yapıla gelmektedir. Geçmişe bakıldığında kampanyaları başarıya götüren anahtar sözcüklerin söylemlerin içinde olduğu görülebilir.

- . 1950 Seçimleri > Yeter Söz Milletindir.
- . 1950-1977 > Karaoğlan > Kahraman Ecevit. Beklenen.
- . 1977 > Seçim İçin Değil Rejim İçin Sandık Başına.
- . 1983 > 1984 Kimse İşsiz Kalmayacak, Birleşelim, Birleştirelim, Geçmişe Değil, Geleceğe Bakalım.
- . 1987 > Sıkılmış Limon “Çağ Atlayan Türkiye’ye Karşı.”
- . Yeni Bir Çağın Eşiğinde Türkiye, Neye Evet? Neye Hayır?.
- . Evet mi? Hayır mı? Çağ Atlayan Türkiye.
- . Baloncu Özal. Söylemedi Demeyin, Ülken, Belden Ailen için Bize Güven. Çareyi Demirel Bilir.
- . 1991 > Politika Değil İmaj Yarışı, Açtığımız Ufkun Kapanmasına İzin Vermeyeceğiz.
- . Yarınlar Bugünlerin Üzerine Kurulur. 21 Ekim Sabahı Yeni Bir Türkiye.
- . Orta Direk Yeniden Güçlenecek. Kalkınma Yeniden Başlıyor, Ne Farkları Var, Yol Ayrımı.
- . Faiz Beni Batırdı, Gencim Gelecek İstiyorum.
- . 1994 > Yerel Seçimler. Sağ mı Geliyor Hadi Canım Sen de, Biz Çözeriz. Türkiye’nin Teminatı Refah.
- . 1995 > Adil Düzen İktidarda. Türkiye’ye İlkeli Lider, Kararlı Siyaset Gerek.
- . 1999 > Boş Verme Karar Ver. Yeni 1000 Yılda, Yeni Bir Türkiye İçin BÜYÜK ÇAĞRI .

Bugüne iletişim açısından bakıldığında, radyo ve televizyonun yanı sıra, facebook, İnternet, Tweeter, You Tube, watsApp gibi. pek çok iletişim kanalı görülür. Bu durumun seçim çalışmalarına büyük avantaj sağlayacağı gibi olumsuz yönlerinden de söz edilebilir. Çünkü gündemi daima diri, güncel ve çözüm odaklı tutmanın zorluğunun aşılması söz konusudur. Sekiz başlıkta topladığım seçmen grubuna medyadan, söylev ve reklam, propagandalarından ne kadar etkilendiği sorusuna genelde verilen cevap aşağı yukarı aynı. “Söz konusu olan partiye, kişiye ve koşullara göre değişir.” **2001-2023** ün başlıca söylemleri: Türkiye Yüzyılı. Haydi Bir Daha. Durmak Yok Yola Devam. Haydi Bir Daha. Yeniden Türkiyem. Evet İle Güçlü Türkiye. Bu Vatana Söz Verdik. Güçlü Türkiye. Doğru Zamanda Doğru Adam.

18- 25, 25- 35, 35- 45, 45- 55, 55- 65, 65- 75, 75- 85, 85 ve sonrası, 10 yıl aralıklı belirlemiş olduğum seçmenlerin öncelikle göz ardı etmedikleri, partilerin lider ve adayları. Daha sonra ön planda tuttıkları ve tercihlerini doğrudan etkileyen hususlar: 1. Ülkenin düzen ve istikrarını bozmaya neden olacak her türlü etken başta olmak üzere (gelir dağılımının eşitsizliği, düzensiz göç ve bu gibi), istihdam, iş imkanı, iş güvenliği, kariyer imkanı, yaşam kalitesi ve bu gibi beklentileri. 2. Milli duruş, milli savunma, güvenli, istikrarlı, sürdürülebilir ve bu gibi koşullardan taviz vermeyecek güçlü, güvenli bir lider başkanlığında bir

yönetim beklentisi. 3. Lider sevgisi doğrudan etki. 4. Parti sevgisi doğrudan etki. Seçmeni doğrudan olumsuz etkileyen nedenler ise; 1. Ülke gerçeklerinin, sorunlarının ve çözümlerinin açık net bir şekilde ifade edilmemesi, 2. Artık Türkiye’de eski seçmenin olmadığını bile bile seçmenin hiç bir şeyi bilemeyeceği ortamının yaratılması, 3. Seçmen kararından şüphe duyulması, 4. Siyasetin öncelikle ülke insanına hizmet olduğu gerçeğinin unutulması, 4. Seçmenin beş yılda bir hatırlanması, 5. Ülke yönetimine talip olanların tam güven vermemesi.

SONUÇ

Ülkemiz insanının salgın daha sonra 11 ilde yaşadığı deprem sonrası seçime gitmesi sonucu köylüsü, kentlisi hangisi olursa olsun günümüz seçmenin çoğunluğunun en önemli özelliği, bireysel olarak kaliteli yaşamın öncelikleri arasında olduğu, milli değerlerden vazgeçilemeyeceği, gerektiğinde değişim, milli duruş, mill savunma, güçlü ekonomi, istikrar, sürdürülebilir, bilgi çağının gereğini yerine getirmede ve eğitimden taviz verilemeyeceği ve güçlü bir yönetimden yana tercihleri olduğuna ilişkin görüşlerini açık ve net bir şekilde dile getirmeleridir. Seçime ilgisiz olan seçmen sayısı ise, görüşülmüş seçmen sayısına göre yok denecek kadar azdır. 2023 seçimlerinin kazanılmasına etken söylemler: “**Doğru zamanda Doğru Adam**”, “**Türkiye Yüzyılı**”, “**Durmak Yok Yola Devam**”. Bu sonuca göre gelecek söylemlerin başarılı olmasının anahtar sözcüğü yine birey odaklı olacağı kesin. Sonuç olarak, seçmeni çok yönlü kuşatan parti propagandaları, diğer faaliyetler ve söylemlere rağmen, seçmen tercihini doğrudan etkileyen, her seçmenin kendine özgü seçmen hafızası ve sağduyusunun olduğunu söylemek yanlış olmaz. Bu nedenle, seçmen hafızası ve sağ duyusu gerçeğini göz ardı etmemek gerçeğine vurgu yapmak gerekir.

ÖZET

Halkla ilişkiler ve propaganda arasında yapılan iş ve işin yapılış biçimi bakımından farklar bulunmaktadır. Ancak işin/ faaliyetin/ pratiğin doğası bakımından iki alan arasında önemli bir fark yoktur. Halkla ilişkiler, siyasal yönetim etkinliğine halkın gönüllü katılımını sağlama ve beraberinde halk desteğini kazanmanın gerektirdiği siyasal koşullarda gelişmiştir. Bilgilendirme ile halkın düşüncesini biçimlendirme ya da halkı ikna etme işi, siyasal propagandada giderek yaygınlaşmış ve kamuoyu kavramının önemi artmıştır.

Çalışma, kamuoyunu biçimlendirme pratikleri olarak Türkiye’de halkla ilişkiler ve siyasal propaganda bağına incelemek için tasarlanmıştır. Kamu desteği oluşturma işi, Adalet Bakanlığı içinde örgütlü Medya İletişim Büroları örneğinde incelenmiştir. Birimde yapılan işler ve işin yapılma şekline yönelik yürütülen incelemede Artvin, Rize, Trabzon, Giresun, Ordu il adliyelerindeki bürolarda sorumlu yetkililerle yarı yapılandırılmış görüşmeler gerçekleştirilmiştir. Geleneksel niteliksel araştırma olarak tasarlanan bu araştırmanın sonuçları, yukarıda belirtilen teorik varsayımı desteklemektedir: Kamu desteğini sağlama biçimleri olarak halkla ilişkiler ve siyasal propaganda faaliyetleri, belli örgütlü amaçlar için bilgi oluşturma, yayma ve böylelikle halkın düşüncesini biçimlendirme karakteri taşımaktadır.

Anahtar Kelimeler: Kamuoyunu Biçimlendirme Pratikleri, Halkla İlişkiler ve Siyasal Propaganda Bağı, Medya İletişim Büroları, Doğu Karadeniz İl Adliyeleri.

The Connection to Public Relations and Political Propaganda

ABSTRACT

There are differences between public relations and propaganda in terms of the work done and the way work is done. However, there is no significant difference between the two fields in terms of the nature of the work/activity/practice. Public relations has developed in the political conditions required to ensuring the voluntary participation of the public of political administration activity and gaining public support. The work of shaping public opinion or persuading the public with information has become increasingly widespread in political propaganda and the importance of the concept of public opinion has increased.

The study is designed to examine the connection to public relations and political propaganda in Turkey as practices forming of public opinion. The work of building public support has been research in the example of Media Communication Bureaus organized within the Ministry of Justice. In the research carrying out on the work done in the unit and the way the work is done, Semi-structured interviews have been performed with the responsible officials in the offices in the provincial courthouses of Artvin, Rize, Trabzon, Giresun, Ordu. The results of this research, which was designed as a traditional qualitative research, support the above-mentioned theoretical assumption: Public relations and political propaganda activities as shaping of providing public support, has the character of knowledge creation, dissemination for certain organized purposes and thereby shaping of public opinion.

Keywords: Practices of Forming of Public Opinion, the Connection to Public Relations and Political Propaganda, Media Communication Offices, Eastern Black Sea Province Courthouses.

Giriş

Halkla ilişkilerin gelişim süreci modern toplumların geçtiğimiz yüzyıldan bu yana konuştuğu, anlamaya ve üzerinde uzlaşmaya çalıştığı konuları içermektedir. Halk anlayışı, halka yayma, kamuoyu, kamuoyunun rasyonelliği, kültürel değişim, bireysel kimlik, kitle, sivil toplum gibi kavramlar belli olgularla tartışıla gelmiştir. Kentleşme, kitlesel üretim, işçi hareketleri, kitlelerin kontrolü bu tartışmalara yön vermiştir. Kapitalizmin gelişmesi anlamına gelen modern toplum ve modern yönetim anlayışının yaşadığı sorunların çözümünde odak noktayı halkın düşüncesini kontrol oluşturmuştur. Özellikle savaş ve toplumsal hareket zamanları halkın aklını kontrolde yeni taktikler geliştirilmiş, halkla ilişkiler bunlar içinde yer bulmuştur.

Halkın düşüncesini bilme, bilineni biçimlendirme çabaları, propagandanın bir anlamda yeni hali olarak kabul edilen halkla ilişkiler faaliyetlerinin gelişim koşullarından biri olmuştur. Halkla ilişkiler ilk olarak siyasal alanda ortaya çıkmıştır. Seçme ve seçilme hakkı sağlayan siyasal koşullara bağlı olarak siyasal yönetim etkinliğine halkın gönüllü katılımı önem bulmuş ve kamuoyu oluşturma koşulu doğmuştur. Bilinç yönetimi yoluyla halk desteğini sağlama girişimleri, “aktif” kamuoyunun (en azından teorik olarak) oluşmasıyla önem kazanmıştır (Erdoğan, 2006). Modern yönetim tarzında yönetim etkinlikleri, halk desteğini sağlama gereksinimiyle şekillenmiştir.

Stuart Ewen’in (1977) ifadesiyle, halkla ilişkiler ve propaganda aynı aileden gelen ikiz kardeş gibidir. Halkla ilişkiler ve propagandanın yaptığı şey, bilgilendirme ile halkın düşüncesini biçimlendirmedir. Erdoğan’a (2018a) göre, yapılaş biçimi, koşulları, alanları farklı olmakla beraber yapılanın doğasında ciddi fark yoktur. Yapılan işin doğası bakımından ikisi arasında önemli bir fark olmadığını açıkça araştırmalarla gösterilmesi gerekir. Tam da bu noktada, çalışmanın önemi ve amacı ortaya çıkmaktadır. Halkla ilişkilerin propaganda ile benzerliği ve farkları, Türkiye’de halkla ilişkiler alanında yazılan hemen hemen her kitapta yer bulmaktadır. Yaptığı işin doğası bağlamında, her iki alanın arasındaki fark ya da benzerliği ortaya kayan çalışma ise oldukça sınırlıdır.

Araştırmanın amacı, siyasal yönetim etkinliğine halkın gönüllü katılımını sağlamanın önemli olduğu siyasal yapılarda halkın biliş, bilinç ve davranış yönetimi gereksinimini belirleyen koşulları açıklayarak halkla ilişkiler ve propagandada yapılanın doğası konusunda alandaki bilgi birikimine katkıda bulunmaktır. Çalışmanın önemi konudaki bilgi birikimine katkıda bulunma ile sınırlı değildir. Diğer yandan iletişim, kitle iletişim, propaganda ve halkla ilişkiler bağını açıklamaya katkıda bulunması umulmaktadır.

Çalışma, bilgilendirerek kamuoyunu biçimlendirme işi kapsamında halkla ilişkiler ve siyasal propaganda faaliyetlerinin ortak doğasını incelemek için tasarlanmıştır. İş, işin yapılaş biçimi, iş ilişkileri Adalet Bakanlığı içinde örgütlü Medya İletişim Büroları örneğinde incelenmiştir. Tanımlayıcı ve açıklayıcı niteliksel tasarıma sahip çalışmada, Medya İletişim Bürolarının örgütlenme biçimi, yapılan işler ve işin yapılma şekline yönelik yürütülen incelemede kurumsal dokümanlar, ilgili kitaplar, makaleler gibi yazılı kaynakların yanı sıra veri toplama tekniği olarak görüşmeler kullanılmıştır. Artvin, Rize, Trabzon, Giresun, Ordu il adliyelerindeki bürolarda, birim yetkilileriyle yarı yapılandırılmış görüşmeler gerçekleştirilmiştir.

Halkla İlişkiler ve Propaganda Pratikleri: Halk Desteğini Biçimlendirme-Kamuoyu Oluşturma

Propaganda ve halkla ilişkiler arasındaki bağ; belli halkları, belli bir amaç/çıkar doğrultusunda, bu amacı yüklenmiş üretilmiş iletiler yoluyla ikna etme işiyle ilgilidir. Halkın tutum, inanç ve davranışlarına etki etme, başka bir ifadeyle halkın düşüncesini kontrol etme işi/faaliyeti/pratiği ve pratiğin gerçekleşmesinin zorunlu koşulu olan ikna iletişimi yürütme, bu iki alanı birbirine bağlamaktadır. Dolayısıyla, modern toplumlarda ikna pratiklerinin çeşitlenmesinin bağlı olduğu gereksinim ve koşullar her iki alana, alandaki gelişmelere etki etmiştir. Gelişmeler, halkla ilişkiler ve propagandada profesyonel pratikleri beslemiştir.

Qualter'ın (1980) belirttiğine göre propagandanın varlığı nedeniyle demokrasinin temelindeki varsayımların yeniden düşünülmesini sezinleyen ilk yazar B. Jerrold olmuştur. 1883'te Jerrold, oy hakkının genişlemesiyle kamuoyunun, yöneticilerin yöneticiliklerini devam ettirmek için dayandıkları bir güç haline gelmesi nedeniyle "kamuoyu imalinin" daha derinlemesine incelenmesi gerektiğini yazmıştır (Qualter, 1980: 302). Oy hakkı ve siyasilere oy toplama gerekliliği beraberinde kamuoyunu kontrol işine profesyonellerin ilgisi artmıştır. Psikoloji alanındaki bilimsel gelişmeler, haberleşme teknolojisindeki gelişmeler vb. koşullar beraberinde siyasal alanının kontrolünü sağlamak isteyenler için ikna, özellikli bir iş haline gelmiştir.

19. yüzyılın sonunda kitlelerin kontrolü konusunda Freud ve sosyal psikolog Gustave Le Bon'un görüşleri önem kazanmıştır. 20. yüzyılın başlarında Freud'un yeğeni Edward Bernays, dayısının psikanaliz çalışmalarından faydalandığı halkla ilişkiler işleri yapmıştır. "Bernays, 1928'de halkla ilişkiler pratiği ile ilgili Propaganda adlı kitap yazmış, Nazi Enformasyon Bakanı Goebbels bu kitabı okumuştur. Goebbels, medyayı kullanarak Alman propagandasını gerçekleştirmiştir (Ewen, 1997; Erdoğan, 2018a). Kitle denetimi, sosyal kontrol ve böylelikle egemen toplumsal düzene katkı sağlamayı amaçlayan görüşler, gelişen tanıtım stratejileri üzerinde yoğun bir etki yaratmış (Ewen, 1996: 67), bir anlamda propagandanın yeni hali olan uygulamalar gelişmiştir. Başka biri ifadeyle, halkın desteğini alma ya da belli bir amaç için halkın düşüncesini biçimlendirme gereksinimi, modern propaganda faaliyetlerini çeşitlendirmiş ve halkla ilişkiler bu taktikler içinde yer almıştır.

Kamuoyu kavramı, siyasal propaganda ve kitlelerin yönetiminde 20. yüzyılda giderek artan biçimde önem kazanmıştır. Kamuoyu fikrinin geliştirilmesinde kentleşme ve kitlelerin hareketliliği gibi toplumsal koşullar ve bu koşullara bağlı şekilde gelişen gereksinimler etken olmuştur. Belli çıkar gruplarının amaçlarını meşrulaştırma ve bu meşrulaştırma sürecinde çıkar grupları lehine alınan kararları "herkese mal etme" düşüncesi, kamuoyunun yaygın kullanımını getirmiştir. Kamuoyu kavramının gelişmesinde, toplumsal değişim ve düzenin bozulması karşısında kontrol ve denetim ilişkilerinin, tutucuların aksine, daha ılımlı yürütülmesine vurgu yapan akademisyenlerin görüşleri etkili olmuştur. G. Tarde'ın geliştirdiği "kamu" fikri ile kitle ve kamu arasında yaptığı ayırım bu çalışmalar içinde önemli bir yer almıştır. Chicago Sosyoloji Okulu'nun temsilcilerinden R.E. Park, kitle ve kamu arasındaki farkı daha net bir şekilde belirlemiş ve farklı etkileşim biçimleriyle oluştuklarını iddia etmiştir (Pietilä, 2001: 15). Medyanın işlev ve etkileri alanında yürütülen çalışmalarda, kamu (halk) ve kamuoyu kavramları etkili olmuştur.

Türkiye'de kamuoyunun oluşum süreciyle ilgili yürütülen araştırmaların bir kısmı, konuya batı merkezli bakan çalışmaların aksine Osmanlı Devleti içindeki gelişmeleri başlangıç alan bir yaklaşımla bakmaktadır. Osmanlı'da kamusal mekânlar ve kamuoyu çalışmaları, devlet ve toplum arasında yer alan mekânlar üzerinde yoğunlaşmış ve salon, kulüp, kahvehane gibi mekânların öneminden bahsetmiştir. Osmanlı İmparatorluğu'nda salon veya kulüp gibi mekânlar daha çok Tanzimat sonrasının değişmeye başlayan toplum yapılanmasının ürünleri olarak kabul edilmektedir (Öztürk, 2005: 101). Kamusal alanın ve kamuoyunun ortaya çıkışı

ve gelişmesi açısından çok önemli roller biçilen kahvehanelerin ilk örneği 1554 yılında İstanbul Tahtakale’de açılmıştır (Desmet-Grégoire, 1999: 17’den aktaran Öztürk, 2005: 101). İktidarın üzerlerinde tam bir denetim kuramadığı varsayılan bu mekanlar ve oralarda oluşan kamuoyu, halkın siyasal karar alma etkinliğine gönüllü katılımı anlamında kamuoyunun oluşumunu örneklendiremeye de belli bir toplumsal tabakanın siyasal kontrol ve denetim iletişiminde belli bir güç elde etme çabası verdiğini göstermesi bakımından önemlidir.

Siyasetçinin belli aralıklarla tekrarlanan seçimlerde tercih edilmek zorunda kalması, kamuoyunun önemini artırır ve halkın desteğini alma gereksinimi oluşur. Bu açıdan İkinci Meşrutiyet sonrası yapılan 1908, 1912 ve 1914 seçimleri, Türk siyasi hayatında halkoyu desteğini alma çalışmaları bakımından önemli birikimler sağlamıştır. Yeni Türkiye Cumhuriyeti Devletinin yürüttüğü 1923, 1927, 1931, 1935 ve 1939 seçimleri, seçmenin oyunu isteme gerekliliği bakımından siyasal halkla ilişkiler açısından önemli gelişim evreleri olmuştur. Halkla (kamuyla) ilişkilerin gelişimi için; a) siyasal alanda birden çok partinin olması, b) siyasal partilerin seçimle iktidara gelmesi, c) seçim dönemlerinde seçmenin oyunu alma faaliyetinin de ortaya çıkması gerekmektedir (Erdoğan, 2014: 96). Çok partili siyasi hayat, halka seçme hakkı veren önemli bir koşuldur. Bu koşul Türkiye’de 1946’da yasal olarak çok partili siyasal hayata geçişle başlamıştır. Halka gidip oy isteme konusunda 1946 genel seçimleri önemli bir deneyimdir. 1950 ve sonrası “halk isteği”, bireysel çıkarlar-parti çıkarları için kullanılmaya başlanılmıştır. Halk desteğine olan gereksinimin doğmasına neden olan siyasal alanda oluşan koşulları ekonomik alandaki gelişmeler takip etmiştir. Kapitalist üretim tarzı ve ilişkilerinin Türkiye’de gelişimi, buna bağlı olarak serbest girişimin önem kazanması, sanayileşme, şehirleşme, kitle iletişim araçlarının yaygınlaşması gibi toplumsal değişimler beraberinde kamuoyunun öneminin artması ve halkın rızasını elde etmede yeni teknikleri kullanma koşulunu getirmiştir.

1950’lerden başlayıp 1991 Sovyetlerin dağılmasına kadar devam ettiği varsayılan Soğuk Savaş dönemi, halkla ilişkilerin gelişiminin gerektirdiği birçok koşulu sağlamıştır. Soğuk Savaş, “Bu savaşı destekleyen bilimsel girişimler, araştırmalar, bilgi toplama ve değerlendirme, yoğun uluslararası medya propagandası, dış yardım adı altında bağımlılık yaratma, kontrol politikaları ve Amerika’nın eski sömürgecilerin yerini alması yılları olmuştur (Erdoğan, 2006: 69). Bu yıllar, bir ideolojiler savaşı dönemi olmuş ve bu sebeple daha tutarlı bir propaganda veya algı yönetimi gerektirmiştir. Türkiye, Soğuk Savaş döneminde 27 Mayıs 1960, 12 Mart 1971 ve 12 Eylül 1980 olmak üzere üç askeri müdahale ile yüzleşmiştir.

Profesyonel düzeyde halk desteğini kazanma faaliyetlerine ilişkin deneyimler Türkiye’de 1960, 1971 ve 1980’de yaşanan siyasal kargaşa ve ekonomik bunalım koşulları içinde kazanılmıştır. Öğrenci ve işçi protestoları gibi kitlesel hareketler yaşanmış, toplumsal düzenin bozulması karşısında siyasal iktidarların gerekli önlemleri almada yetersiz kalması gerekçesiyle sivil yönetime askeri müdahaleler yapılmıştır. İşçi, çiftçi, öğrenci, kentli gibi farklı toplumsal gruplarda doğan istek ve memnuniyetsizlik ve bunları dillendirme karşısında verilen tepkiler olarak yönetsel faaliyetlerin, birçok zaman sert müdahaleler şeklinde olması bu dönemlerde yönetimin/yöneticilerin düzen sağlama, koruma ve sürdürmede seçtiği yol olarak öne çıkmıştır. Diğer yandan bu süreçlerde Türkiye’de halk yönetim/yönetici ilişkisinin Batı tarzında biçimlenmesinde etkili olan koşullar gelişmiştir.

Planlı kalkınma olarak adlandırılan yeni iktisadi hayat Türkiye’de 1960 sonrası oluşmaya başlamıştır. Bu gelişmeyi, yönetimin halkla olan ilişkilerini düzenlemesi gerekliliği düşüncesinin ilk olarak kamu kurumlarında ortaya çıkması takip etmiştir. Halkın düşüncesi ve düşüncenin bilinmesinin önemi artmış, halkoyunu biçimlendirme faaliyetleri özel ve kamu kesiminde kurumsal bir yapı kazanmış ve profesyonel olarak yürütülmeye başlanmıştır. 1987-

2001 yılları arası Türkiye için siyasal istikrarsızlık ve ekonomik bunalımların yaşandığı güç bir dönem olmuştur. 1989'da yabancı sermaye giriş ve çıkışları ve devletin dış borçlanması üzerindeki kısıtlamaları kaldıran 38 sayılı kararname ile ekonomi, daha sonra sıcak para olarak anılacak, kısa vadeli yabancı sermaye akımlarına açılmış, finansal küreselleşmenin en azından yasal çerçeveleri sağlanmıştır. Ekonominin giderek kırılanaştığı, bütçe açıklarına, kamunun borçlanma süreci ve sıcak para akımlarına duyarlı hale geldiği bu ortamda küreselleşme Türkiye için dalgalı ve son derece sıkıntılı bir sürece dönüşmüştür (Pamuk, 2017: 276, 278, 280). Küresel pazarın gereksinimleriyle 1980'ler ve sonrasında bilme ve bilgilendirme faaliyetleriyle bilinç yönetim işinde gelişmeler hızlanmıştır. Neo-liberal politikaların uygulanması ve beraberinde özel girişimin güçlenmesi koşulları oluşmuş, rekabetçi politikaların egemen olmasıyla iletişim alanı, dünyada olduğu gibi, daha da önem kazanmaya başlamıştır.

Türkiye modern dünya sisteminin çevre ülkesi olarak, sistemin işlemesine bağımlı bir ülke olma konumunu sürdürmüş ve 21. yüzyıla küresel stratejik planlı gelişmelerin bir parçası olarak girmiştir. Modern dünya sisteminin merkezi yapısı "2003 yılına gelindiğinde ülkeyi, Türkiye Cumhuriyeti'nin seksen yıllık tarihi boyunca gözlenen en ağır dış bağımlılık koşullarına mahkûm etmiştir" (Boratav, 2014: 245). Halkın kaderini belirleyen kararlar bir anlamda Washington, Brüksel, IMF ve Dünya Bankası gibi merkezlerde verilir olmuştur. Bu gelişmelerin temeli, 10-11 Aralık 1999 tarihlerinde Helsinki'de yapılan AB Devlet ve Hükümet Başkanları Zirvesi Komisyon ilerleme raporunda Türkiye'ye aday ülke statüsü verilmesiyle atılmıştır. Yapısal uyum süreci "uyum yasası" paketleri marifetleriyle yürütülmüş, Kopenhag siyasal kriterlerine uyum adı altında pek çok konuyu kapsayacak şekilde anayasal ve yasal düzenlemeler yapılmıştır. Kamuoyunu bilgilendirme politikaları açısından 2003 yılında devlet vatandaş ilişkisinde yeni bir düzenlemeye giden Bilgi Edinme Kanunu, kamu kurumlarına stratejik planlı hareket etme gerekliliği getiren ve 2023'te kabul edilen Kamu Malî Yönetimi ve Kontrol Kanunu öne çıkan düzenlemelerdir.

Kamuoyunu bilgilendirerek biçimlendirme faaliyetleri 2000 sonrası yapısal uyum programları kapsamında siyasal ve ekonomik değişimlerle birlikte gelen koşullara bağlı olarak biçimlenmiş ve çeşitlenmiştir. Kamu ve özel sektördeki yönetim anlayışında bilinç ve davranış biçimlendirme ve yönlendirme gereksinimini doğran/getiren gelişmeler olmuştur. Davranış bilimlerinin yönetime girmesi ve iletişimin önem kazanması, verimlilik ve kar çabalarının yönetimin tüm iletişim faaliyetlerinde öne çıkması beraberinde halkın düşünce ve duygularını yanılma, oluşturma, yönlendirme, yönlendirilmiş kullanma gerekliliği artmıştır. Buna bağlı olarak iletişim stratejileri geliştirme ve uygulama gereksinimi hem kamu hem özel kesimde artmış, bilgilendirerek bilinçlendirme faaliyetleri önem kazanmıştır. Bu durum Türkiye'de 2000'lerin koşullarında ortaya çıkmıştır.

Pratiğin Örgütlenme Tarzı ve Örgütlü Yapılarda İş İlişkileri

Bernays için propaganda, karlı amaçlar için savaşılabilen ve kaostan düzen çıkarmaya yardım edebilecek modern bir araçtır (Lesly, 1974: 26'dan aktaran Ewen 1996: 35). Ewen'a (1996) göre, neredeyse bir asırdır, "kaos" güçlerini kontrol altına alma girişimi, halkla ilişkiler düşüncesinin evrimini ele geçirmiş ve kurumsal halkla ilişkilerin gelişimini biçimlendirmiştir. 21. yüzyılda, insanların çözümlene yeteneğini belli özel çıkarlar yönünde şekillendirme, halkın dikkatini belli yönere çekerek belli çıkarları toplumsal faydanın önüne geçirme ve bunun toplumsal ilişkilerde kabulünü sağlama faaliyetleri gelişmiştir. Propaganda kavramı günümüzde döndürme (spin) ve haber yönetimi olarak popülerite kazanmıştır. "Döndürme, sıklıkla siyasal bilgilerin manipülasyonuna kaynak gösterilmektedir. Bundan dolayı halkla ilişkiler uzmanları ve basın çalışanları Spin Doctors olarak adlandırılmaktadırlar" (Jowett ve O'Donnell, 2012: 3). Ewen'a göre, (1996) modern toplumlarda halk spin doktorları, imaj

yöneticileri, iletişim danışmanları, halkla ilişkiler uzmanlarının oyun planlarına maruz kalmaktadır. Yaratılmış-kurgulanmış durumlar, halkın aklını kontrol için yapılan planlarda yer bulmaktadır.

Birinci Dünya Savaşı, propaganda pratikleri alanında denemeler yapmak için çok geniş olanaklar hazırlamıştır. 1914-1918 Savaşındaki propaganda, kamuoyunun kontrol altına alınması için girişilmiş ilk sistemli çaba olmuştur (Qualter, 1980: 258). Savaş propagandası, gerçek olmayan bilgi ve haberlerin üretilmesi, yayılması ve halkta istenilen yönlü saldırgan eğilimli tutum ve davranışların oluşması biçiminde yürütülmüştür. Qualter'a (1980) göre yalan söyleme propagandanın doğasıdır diyemeyiz çünkü belirlenmiş kitlelerin belli bir amaç/çıkar için istenilen yönde ikna edilmesi işi ne sadece yalana ne de sadece gerçeğe dayanarak yürütülmektedir. Gerçeği ya da yalanı kullanma kararı, ikna etme işinde hangisinin daha etkin olacağıyla ilgilidir. Neyin yalan neyin gerçek olduğunu belirleme zordur ve bu belirsizlik durumunu ikna iletişimde bilinçli bir şekilde kullanılmaya başlanmıştır.

Birinci Dünya Savaşı yıllarında kitlesel iknada elde edilen deneyimler artmış ve bu deneyimler kamuoyunun yönetilebileceği düşüncesini desteklemiştir. Kamuoyunun yönetimiyle beklenen, ticari çıkarlara daha uygun bir sosyal ortamın gerçekleştirilmesidir. Halkın aklını biçimlendirme işinde elde edilen yeni bulgu, halkın duygularına yönelik iletişimler yürütmenin gerekliliğidir (Ewen, 1996: 132). Bilinç kontrolünde, psikolojik manipülasyon taktiklerine dayanan tanıtım; haber medyasının yaygın kullanımı, okuma yazma oranının artışı, ulaşım ağının zenginleşmesi gibi koşullara bağlı şekilde yaygınlaşmıştır. Modern kitle iletişim teknolojilerinin, özellikle de sinemanın sahip olduğu ikna gücü birçok kişiye ilham kaynağı olmuştur. 1922'de Kamuoyu kitabını yayınlayan Lippmann bu gücü sezinleyenlerden biridir. Lippmann için, insanın gerçeğe ulaşımı sansürlenmedikçe tam anlamıyla bir propaganda gerçekleşmez. İnsanların arzularına uygun sahte bir ortam yaratabilmek için öncelikle gerçek ortama erişim sınırlandırılmalıdır (Ronald Steel, 1980: 42-43'ten aktaran Ewen, 1996: 152).

İkinci Dünya Savaşı yıllarında Hollywood ortalama 400 civarında uzun metrajlı film üretmiştir. Savaş sırasında İngiliz film endüstrisi altın çağını yaşasa da film üretimi hiçbir zaman bu rakamın beşte birinden fazla olmamıştır. Tüm savaş boyunca Britanya'daki en güçlü beyaz propaganda kaynağı BBC olmuştur (Taylor, 2003: 217, 222). Diğer haber medyası gibi, propaganda aracı olarak radyonun gücü, eğlence unsurunu barındırmasına dayanıyordu. Amerika savaşa girmesiyle birlikte siyah ve beyaz propaganda arasında ayırım yapmıştır. Bu amaçla iki ayrı teşkilat kurulmuştur: Stratejik Hizmetler Dairesi ve Savaş Bilgi Ofisi. Savaş Enformasyon Ofisi'nin gözetiminde çalışan Savaş Reklam Konseyi, savaş propagandacılarını barıştan sonra da seferberlik durumlarını sürdürmeye teşvik etmiştir. Amerika'nın savaş zamanı bilgi mekanizması neredeyse tamamen Amerikan iş dünyası tarafından desteklenmiştir (Ewen, 1996: 152).

Modern siyasal propagandanın kurumsallaşma sürecinde yeni taktikler gelişmiş ve halkla ilişkiler bunlardan biri olmuştur. Propaganda birimlerinde yürütülen halkla ilişkiler, kitleleri siyasal ve ekonomik alanlara katmayı amaçlayan planlı faaliyetlere eklenmiştir. Örneğin Committee on Public Information-Creel Committee'de çalışan Bernays buradaki işinden ayrıldıktan sonra müşterilerine "tanıtım yönetimi" hizmeti sunacağını söylediği Counsel on Public Relations adıyla özel bir danışmanlık şirketi açmıştır (Turney, 2015). Firma aslında Bernays ile eski bir gazete editörü, yazar ve feminist olan eşi Doris L. Fleischman ortaklığında açılmıştır. İlk yıllarında Thomas Edison, Henry Ford ve American Tobacco Company gibi büyük ticari şirketler müşterileri arasında yer almıştır (Turney, 2015). Halkla ilişkilerin öncülerinden kabul edilen Lee'nin 1920'lerde iki önemli müşterisi Sovyetler Birliği ve

1930'ların başında Nazi Almanya'sının kimya endüstrisine egemen olan I.G. Farben şirketi idi. 1920'lerde Sovyetler Birliği'nin Amerika ve diğer ülkeler tarafından diplomatik olarak tanınmasını teşvik eden bir tanıtım kampanyası başlatmıştır. Kendini düşünce kuruluşu olarak tanımlayan ve Rockefeller'lar tarafından desteklenen Council on Foreign Relations'ın (CFR) ilk üyelerinden olan Lee'nin kampanya kapsamında yazdığı yazılardan bazıları destek almıştır (Turney, 2015).

Propagandanın yeni hali olan profesyonel pratikler ve iş ilişkileri 1950'lerden sonra uluslararası alana taşınmıştır. Türkiye'de profesyonel örgütlü kamuyla ilişkiler pratikleri 1960 sonrası görülmeye başlanmıştır. Sanayi burjuvası ve onun çıkarlarını destekleyen planlı kalkınma tecrübesinin Türkiye'ye nakli, liberal kurumsal yapının oluşmasını gerektirmiş, 30 Eylül 1960'ta Devlet Planlama Teşkilatı (DPT) kurulmuştur. Planlı kalkınma düşüncesini kamuoyuna benimsetme işi DPT içinde Koordinasyon Dairesine verilmiştir. Koordinasyon Dairesinde halkla ilişkilerden sorumlu birimin adı Yayın ve Temsil Şubesi olarak belirlenmiş ve birim planlı kalkınma düşüncesini kamuoyuna benimsetme, kalkınma planını tanıtmaya işini yüklenmiştir.

1963 yılında Turizm ve Tanıtma Bakanlığı kurulmuştur. Bakanlık bünyesinde oluşturulan Basın-Yayın Genel Müdürlüğü uzun yıllar belli bir işlerlik kazanamamış ve 1968'de başbakanlığa bağlanmıştır. Başbakanlıkta halkla ilişkiler uzun yıllar Basın Merkezi adıyla başbakanın sözcüsü konumunda çalışmıştır (Asna, 1969). 1965 yılında 557 Sayılı Nüfus Planlaması Yasasıyla, Nüfus Planlaması Genel Müdürlüğü ve onun içinde Tanıtım ve Halk Eğitimi Şubesi kurulmuş ve nüfus planlaması projesinin yürütülmesine yardımcı birim olarak iş yapmıştır. Bilgilendirerek kamuyu biçimlendirme faaliyetlerinin örgütlenmesi ve birimlerin oluşmasını Dış İşleri Bakanlığı bünyesinde Enformasyon Dairesinin kurulması izlemiştir.

1954 yılında Başbakanlığın basınla ilişkileri düşünülerek kurulan Basın Merkezi birimi 1975 yılında kaldırılmış, 21 Nisan 1976 tarihli Başbakanlık oluru ile yerine Halkla İlişkiler ve Enformasyon Daire Başkanlığı kurulmuştur. Birimin basınla ilgili görevleri 21 Nisan 1978 tarihli kadro kararnamesiyle kurulan Basın Müşavirliği, halkla ilişkiler ise Halkla İlişkiler Bürosu tarafından yürütülmüştür (Başbakanlık Devlet Arşivleri GM, 1995: 753). Halkla İlişkiler ve Enformasyon Daire Başkanlığı kamudaki diğer birimlerle eşgüdüm felsefesine bağlı olarak merkezi birim olarak çalışmıştır. Başbakanlık Halkla İlişkiler Daire Başkanlığı'nın şikâyet alma, iletme ve cevabın halka bildirilmesi konusunda üstlendiği görev, Şubat 2006 tarihli Başbakanlık Genelgesi ile Başbakanlık İletişim Merkezi (BİMER) adıyla kurulan uygulama kapsamında biçimlenmiştir.

1976'da Başbakanlık genelgesi ile kamu kuruluşlarında en üst makama doğrudan bağlı ve Başbakanlıkta kurulu birim ile koordineli bir şekilde çalışacak birimlerin kurulması kararlaştırılmıştır. İllerde ise geleneksel Basın Büroları bu işle yükümlü kılınmış, sonrasında Basın ve Halkla İlişkiler Müdürlükleri oluşturulmuştur (Ertekin, 2000:167). Asna'nın (1969: 101) tespitiyle, Türkiye'de kamu kuruluşlarının halkla ilişkiler çalışmaları "basın büroları" kurulmasıyla başlamıştır. Bunlar, kurum yöneticilerinin direktifiyle kurumsal bilgileri basına açıklama, bu yolla kamuoyunu bilgilendirme, gazetelerde kurumla ilgili yer alan haberleri derleyip yöneticiye sunma biçiminde iş yapan birimlerdi. İç İşleri Bakanlığında Özel Kaleme bağlı Basın Bürosu ile Sağlık ve Sosyal Yardım Bakanlığında Basın Müşavirliği bu birimlere örnek verilebilir (Asna, 1969: 101).

Liberal siyasi ve ekonomik politikalara bağlı olarak devlet eliyle hazırlanan kalkınma planları ve devlet-akademi destekli yürütülen araştırma raporlarında yönetimin halkla olan ilişkisini düzenleme gerekliliği yer bulmuş ve bu kamu sektöründe halkla ilişkilerin profesyonel

örgütlenmesinin gelişiminde önemli bir koşul olmuştur. Halkoyuna gereksinim 1980 sonrası gelişmelerle yeni boyut kazanmıştır. 8 Haziran 1984 tarih ve 203 sayılı Kanun Hükmünde Kararname ile “Bakanlıklarda basın ve halkla ilişkilerle ilgili faaliyetleri planlamak ve bu faaliyetlerin belirlenecek usul ve ilkelere göre yürütülmesini sağlamak üzere Basın ve Halkla İlişkiler Müşavirliği” (www.resmigazete.gov.tr) kurulması kararlaştırılmıştır.

1990’larda dünyada neo-liberal politikalar ve söylemler daha net ve açık bir şekilde ifade edilmeye başlanmıştır. 1991 yılında hazırlanan KAYA (Kamu Yönetimi Araştırma Projesi) adlı çalışmada, kamu kurumlarında halkla ilişkiler ve enformasyon hizmetleri arasında koordinasyon sağlanması ve hükümet stratejilerinin saptanması önerilmiştir (Ertekin, 2000: 137). 1990’larda kamu kurumlarında özellikle belediyelerde birimlerin sayısı artmıştır. Halkın gönüllü katılımı ve desteğinin sağlanması faaliyetlerinin kurumsal yapısında, temelleri 7 Haziran 1920 tarihli yasa ile atılmış olan 1984’ten sonra Başbakanlığa bağlı olarak faaliyetlerini yürüten Basın Yayın ve Enformasyon Genel Müdürlüğü, Başbakanlık teşkilat yapısında yer alan ve 1985 yılında kurulmuş olan Tanıtım Fonu, Türk İşbirliği ve Koordinasyon Ajansı Başkanlığı (TİKA) önemli yere sahip diğer örgütlü yapılar arasında yer almaktadır.

2003-2007 yılları arası dönemde stratejik planlı yapısal uyum programlarının gerektirdiği düzenlemeler yürütülmüştür. Kurumlar; görevler, teşkilat yapısı, kaynaklar, kaynakların verimli kullanımı konularında yeni kalkınma modeline uygun olarak kendilerini yeniden düzenleme zorunda kalmıştır. Yeni yönetim anlayışında yer bulan şeffaflık, ulaşılabilirlik, yanıt verebilirlik nitelikleri kamu denetçiliği/ombudsmanlık yapısını gündeme getirmiştir. 14 Haziran 2012 tarih ve 6328 sayılı yasaya bağlı olarak kamu denetçiliği kurumsallaşmıştır. 24 Temmuz 2018 tarihli Cumhurbaşkanlığı Kararnamesi ile Cumhurbaşkanlığı İletişim Başkanlığı kurulmuştur. Basın Yayın ve Enformasyon Genel Müdürlüğü’nün yetki, sorumluluk ve mali yapısını devralan Başkanlık, bünyesinde Türkiye Marka Ofisi’ni kurmuştur. 2000 sonrası kamuya iletişimin önemli kurumlarından bir diğeri Cumhurbaşkanlığı Sözcülüğü olmuştur.

Adalet Bakanlığı Medya İletişim Büroları: Örgütlenme ve İş Yapma Biçimleri ve Yapılan İşler

Birimlerin kuruluşunun gerisinde “Kitlesele Medya ve Yargı Arasındaki İlişkilerin Güçlendirilmesi Projesi” yatmaktadır. Türkiye-Hollanda-Almanya tarafından yürütölen AB Eşleştirme Projesi (basin.adalet.gov.tr) 07.05.2013- 30.10.2015 tarihleri arasını kapsamış ve projeye AB katkısı (Avro) 1.700.000 €’dur (www.ab.gov.tr).

Adalet Bakanlığı projenin tamamlanması sürecinde Almanya, Avusturya ve Hollanda’dan gelen AB uzmanı hakimler, Avrupalı gazeteciler, Adalet Bakanlığı uzman yardımcısı, İzmir Cumhuriyet Başsavcı Vekili, Ege Üniversitesi İletişim Fakültesi öğretim üyeleri ve yargı muhabirlerinin katılımıyla toplantılar düzenlenmiştir. Toplantılar sonucunda Türkiye’deki adliyelerde basın sözcülüğünün hayata geçirilmesi gerektiği belirtirmiştir (www.hurriyet.com.tr).

Adalet Bakanlığı Strateji Geliştirme Başkanlığı koordinasyonunda, Türkiye Adalet Akademisi ile Hâkimler ve Savcılar Yüksek Kurulu’nun ortaklığında ve Avrupa Birliği’nin finansmanıyla hayata geçirilen proje kapsamında medya iletişim büroları kurulmuş ve basın sözcüleri atanmıştır. Medya İletişim Bürolarının yasal dayanağı 20.02.2015 tarih ve 153/1 sayılı “Soruşturmanın Gizliliği ve Basın Sözcülüğü” konulu genelgedir. Dış İşleri Bakanlığı Avrupa Birliği Başkanlığı tarafından 2010 yılı içinde gündeme alınan projelere yönelik verilen bilgilere göre, yasal dayanağın yanı sıra adliyelerde sözcülük sisteminin kurumsallaştırılması ve kolaylaştırılması için gerekli altyapı koşullarının, teknik donanımın ve sekreteryaya hizmetlerinin tamamlanması gerekmiştir (www.ab.gov.tr).

Basın sözcülüğü işlevi yüklenen Medya İletişim Büroları, ülke genelindeki adliyelerde yaygın hale getirilmektedir. Adalet Bakanlığı 2019-2023 Stratejik Planında yargıda medya ve halkla ilişkiler kurumsallaştırılacaktır hedefi kapsamında “Adliyelerde kurulan medya iletişim büroları “medya ve halkla ilişkiler büroları” olarak yeniden yapılandırılacaktır” stratejisi yer almıştır (sgb.adalet.gov.tr). Ancak günümüzde uygulamaya bakıldığında bu stratejiye yönelik bir faaliyet olmadığı görülmektedir.

Çalışmanın bu bölümünde Artvin, Rize, Trabzon, Giresun, Ordu il adliyelerindeki bürolarda görevli sorumlu yetkililerle gerçekleştirilen görüşmelerle ilgili veriler sunulmuştur. Birimlerle ilgili bilgiler şu şekildedir:

İl: Artvin

Yetkin Kişi: Cumhuriyet Başsavcısı
Ünvanı: Basın Sözcüsü
Sorumlu Kişi: Yazı işleri müdürü
Çalışan Sayısı: 3 kişi (Bilgi İşlem ve Zabıt Katibi)
Dışarıdan destek alma durumu: Parayla hizmet satın alınan iletişim şirketi yok.
Birimde Yapılan İşler:
<ul style="list-style-type: none">• Başsavcının talimatı ve yönlendirmesi üzerine basın bülteni bildirisi/açıklaması metinlerini yazma ve adliyenin resmî web sayfasında yayınlama.• Adliyede yürütülen “toplumsal fayda” içerikli faaliyetleri ve benzeri gelişmeleri haberleştirme, adliyenin resmi web sayfasında manşetler kısmında yayınlama.• Medya mensubundan gelen bilgi taleplerini değerlendirme, Başsavcıyı/Basın Sözcüsü taleplerle ilgili bilgilendirme ve talimatı doğrultusunda bilgi paylaşımı sağlama.• İnterpress üzerinden alınan medya takip hizmeti aracılığıyla haber takibi yapma, ilgili bilgileri basın sözcüsüne iletme.

İl: Giresun

Yetkin Kişi: Cumhuriyet Başsavcısı
Ünvanı: Basın Sözcüsü
Sorumlu: Bilgi işlem personeli
Çalışan Sayısı: 1
Dışarıdan destek alma durumu: Parayla hizmet satın alınan iletişim şirketi yok.
Birimde Yapılan İşler:
<ul style="list-style-type: none">• Başsavcının talimatı ve yönlendirmesi üzerine basın bülteni bildirisi/açıklaması/basın notu metinlerini yazma ve adliyenin resmî web sayfasında yayınlama.• Hazırlanan basın açıklaması/durusu/notu metinlerini yerel haber kanallarına, ulusal haber kanallarının Giresun il temsilcisi ya da bölge temsilcilerine servis etme.• Medya mensubundan gelen bilgi taleplerini değerlendirme, Başsavcıyı/Basın Sözcüsü taleplerle ilgili bilgilendirme ve talimatı doğrultusunda bilgi paylaşımı sağlama.• İlgili materyaller ve metinleri medyayla paylaşma.• UYAP aracılığıyla adliyedeki ilgili gelişmeler ve duyuruları Adalet Bakanlığının resmî web sayfasına aktarma.• İnterpress üzerinden alınan medya takip hizmeti aracılığıyla haber takibi yapma, ilgili bilgileri basın sözcüsüne iletme.

İl: Ordu

Yetkin Kişi: Cumhuriyet Başsavcısı
Ünvanı: Basın Sözcüsü
Birim Sorumlusu: Zabıt kâtibi
Çalışan Sayısı: 1
Dışarıdan destek alma durumu: Parayla hizmet alınan iletişim şirketi yok.
Birimde Yapılan İşler:
<ul style="list-style-type: none">• Başsavcının talimatı ve yönlendirmesi üzerine basın bülteni bildirisi/açıklaması/basın notu metinlerini yazma ve adliyenin resmî web sayfasında yayınlama.• Medya mensubundan gelen bilgi taleplerini değerlendirme, Başsavcıyı/Basın Sözcüsü taleplerle ilgili bilgilendirme ve talimatı doğrultusunda bilgi paylaşımı sağlama.• Yerel gazeteleri ve sosyal medyayı takip etme, kurumla ilgili güncel verileri basın sözcüsüne sunma.• İnterpress üzerinden alınan medya takip hizmeti aracılığıyla haber takibi yapma, ilgili bilgileri basın sözcüsüne iletme.

İl: Rize

Yetkin Kişi: Cumhuriyet Başsavcısı
Ünvanı: Basın Sözcüsü
Sorumlu: Yazı işleri müdürü (Gazetecilik eğitimi almış)
Çalışan Sayısı: 1
Dışarıdan destek alma durumu: Parayla hizmet alınan iletişim şirketi yok.
Birimde Yapılan İşler:
<ul style="list-style-type: none">• Başsavcının talimatı ve yönlendirmesi üzerine basın bülteni bildirisi/açıklaması/basın notu metinlerini yazma ve adliyenin resmî web sayfasında yayınlama.• Medya mensubundan gelen bilgi taleplerini değerlendirme, Başsavcıyı/Basın Sözcüsü taleplerle ilgili bilgilendirme ve talimatı doğrultusunda bilgi paylaşımı sağlama.• Gerekğinde gazetecilerin bilgi talepleri üzerine basın sözcüsünün izniyle bilgi notu geçme.• Yerel gazeteleri ve sosyal medyayı takip etme, kurumla ilgili güncel verileri basın sözcüsüne sunma.• Yerel medyayla rutin ilişkiler yürütme.• Duruşma saati, tarihi gibi konularda medyaya bilgi verme.• İnterpress üzerinden alınan medya takip hizmeti aracılığıyla haber takibi yapma, ilgili bilgileri basın sözcüsüne iletme.•

İl: Trabzon

Yetkin Kişi: Cumhuriyet Başsavcısı
Ünvanı: Basın Sözcüsü
Birim Sorumlusu: Zabıt kâtibi
Çalışan Sayısı: 1
Dışarıdan destek alma durumu: Parayla hizmet alınan iletişim şirketi yok.
Birimde Yapılan İşler:
<ul style="list-style-type: none">• Başsavcının talimatı ve yönlendirmesi üzerine basın bülteni bildirisi/açıklaması/basın notu metinlerini yazma ve adliyenin resmî web sayfasında yayınlama.• Medya mensubundan gelen bilgi taleplerini değerlendirme, Başsavcıyı/Basın Sözcüsü taleplerle ilgili bilgilendirme ve talimatı doğrultusunda bilgi paylaşımı sağlama.• Yerel gazeteleri ve sosyal medyayı takip etme, kurumla ilgili güncel verileri basın sözcüsüne sunma.• İnterpress üzerinden alınan medya takip hizmeti aracılığıyla haber takibi yapma, ilgili bilgileri basın sözcüsüne iletme.

Sonuç

Günümüzde hükümetler, kamu kuruluşları ve özel teşebbüs için kamuoyu, halkın yönetiminde önemli bir meşruiyet kaynağı haline gelmiştir. Halkın rızasını kazanmada kamuoyu oluşturma ve biçimlendirmenin öneminin anlaşılmasıyla propagandada yeni taktikler kullanılmaya başlanmış ve hakla ilişkiler bunların içinde yer almıştır. Chomsky'ye (1997) göre düşünce kontrolünün modern kurumlarının daha özgür toplumlarda oluşması doğaldır. Çünkü düşünce kontrolü, en zorbasından en özgürüne bütün devletlerin emeli olmuştur. Fakat daha özgür toplumlarda önemli bir şey vardır ki o da itaat baskıyla muhafaza edilemeyeceğidir. İngiltere “Propaganda Bakanlığı” ve Amerikan “Halk Enformasyon Komitesi” bu kurumlaşmanın ilk örnekleri olmuştur. Bu kurumlarda propagandanın yeni hali olarak halkla ilişkiler ortaya çıkmıştır. Onların başarıları ilerici demokrat teorisyenler ve modern halkla ilişkiler sektörüne ilham kaynağı olmuştur (Ewen, 1996).

Çalışmada, halkla ilişkiler ve propaganda arasında yapılan işin doğası bakımından önemli bir fark olmadığı varsayımı sınanmıştır. Bilgilendirme yoluyla halkın düşüncesini-kamuoyunu biçimlendirme hem halkla ilişkilerin hem propagandanın yaptığı şeydir. Belli amaçlar doğrultusunda önceden planlı etkinlikler yürütme yoluyla belirlenmiş halklarda düşünce ve davranış oluşturma veya değiştirme bu iki alanın benzer yönüdür. Çalışmada, halkı bilgilendirme etkinlikleri kamu kurumları özelinde, il adliyelerinde örgütlü Medya Büroları örneğinde incelenmiştir.

AB uyum sürecinde Yargı ve Temel Haklar başlıklı 23. fasıl, doğrudan Adalet Bakanlığı'nın sorumluluğu alanında bulunmaktadır. AB müzakere sürecinin Yargı ve Temel haklar faslının açılış kriterlerinden biri olarak belirlenen Yargı Reformu Stratejisi ve Adalet Bakanlığı 2010-2014 Stratejik Planı'nda; Yargı-medya ilişkilerinin geliştirilmesi ve büyük adliyelerde basın sözcülüğünün kurumsallaştırılması öngörülmüştür. Avrupa Birliği eşleştirme projesi olarak 2013 yılında Avrupa ülkelerindeki örnek uygulamalar izlenerek yargı ve medya arasındaki ilişkilerin geliştirilmesi amacıyla “Kitlesel Medya ve Yargı Arasındaki İlişkilerin Güçlendirilmesi Projesi” başlatılmıştır.⁴ 2016 yılında tamamlanan proje, Uluslararası Hukuki İşbirliği Alman Vakfı (IRZ) ve Uluslararası Hukuki İş birliği Merkezi (CILC) tarafından ortaklaşa yürütülmüştür. Adalet Bakanlığı'nın yanı sıra Türkiye Adalet Akademisi ile Hâkimler ve Savcılar Yüksek Kurulu proje ortağı konumundadır.⁵ İlk iletişim büroları 2014 yılında Adana, Diyarbakır, İstanbul ve İzmir Adliyelerinde açılmıştır.

Projenin hedefi Adalet Bakanlığı 2014 Yılı Faaliyet Raporu'nda: “Medya ile adalet kurumları arasındaki ilişkiyi kurumsal hale getirerek toplumun adalet sistemine olan güvenini güçlendirme” (s. 125) ⁶ olarak ifade edilmiştir. Ortaya konulmuş hedef, AB uyum süreciyle devlet yurttaş ilişkisinde bilgilendirerek kamuoyunu biçimlendirme gereksiniminin doğduğu/geldiği ya da öneminin arttığını ifade etmektedir. Adalet kurumlarıyla halk arasındaki ilişkinin yönetilmesinde medyanın kullanılması seçilmiş ve basın sözcülüğünün adalet kurumları içinde örgütlenmesi sağlanarak gereksinim karşılanmak istenmiştir. Dolayısıyla medya-iletişim büroları, Türkiye'ye yönelik 2000 sonrası yürütülen uyum politikaları ve programlarının ve bunların kapsamında oluşması beklenen toplumsal değişimlerin bir parçası olarak düşünülmeli, bilgilendirerek kamuoyunu biçimlendirme faaliyetlerinin örgütlenme/kurumsallaşma örneği olarak değerlendirilmelidir.

⁴ Adalet Bakanlığı 2013 Yılı Faaliyet Raporu, s. 228.

⁵ Adalet Bakanlığı 2014 Yılı Faaliyet Raporu, s. 125.

⁶ Adalet Bakanlığı 2014 Yılı Faaliyet Raporu, s. 125.

Medya İletişim birimlerinden yarı yapılandırılmış görüşmeler yoluyla toplanan verileri değerlendirmişte şunları söylemek mümkündür: Basın sözcüsü olarak Cumhuriyet Başsavcılığı atanmıştır. Birimlerde işlerin yapılmasını kurumlarda yazı işleri müdürü, bilgi işlem, zabıt kâtabi kadrolarında çalışan memurlar üstlenmiştir. **Rize, Trabzon, Giresun, Ordu** il adliyelerinde birim çalışanı bir kişi iken **Artvin** adliyesinde birim çalışanı üç kişidir. Birimlerde temel işleri yürüten sorumlu kişiler, Rize Adliyesi haricinde iletişim alanında eğitime sahip değildir. Rize Adliyesi Yazı İşleri Müdürü gazetecilik eğitimine sahiptir. Birim çalışanları TRT tarafından düzenlenen programlara katılarak birimde yapılan işler ve işlerin yürütülüşü hakkında iki haftalık eğitim almışlardır. Hizmet içi eğitimler yoluyla, sorumlu oldukları meslek işlerini öğrenmektedirler.

Adalet Bakanlığı'nın medya izleme şirketlerinden hizmet satın alımı gerçekleştirdiği görülmektedir. İnterpress Medya Takip şirketinden alınan haberler bakanlık ilgili birimlerine gönderilmekte, Medya İletişim biriminde çalışan yetkili haberleri takip etme ve basın sözcüsünü bilgilendirme işini yürütmektedir. Yerel ve bölgesel medyayı takip etme, ilgili haberleri basın sözcüsüne sunma, adliyede yaşanan ve halkın haberdar olması istenilen faaliyetleri ve gelişmeleri haberleştirme ve adliyenin resmi web sayfasında yayınlama, bu tür haberleri gerektiğinde talimatla yerel haber kanallarına, ulusal haber kanallarının il temsilcisi ya da bölge temsilcilerine servis etme gibi faaliyetler bu temele işe eşlik etmektedir. Birimlerde yürütülen bir diğer temel iş, Başsavcının talimatı ve yönlendirmesi üzerine basın bülteni, bildirisi/açıklaması/basın notu metinlerini yazma, adliyenin resmî web sayfasında yayınlamadır. Medya mensubundan gelen bilgi taleplerini değerlendirme, Başsavcılığı/Basın Sözcüsü taleplerle ilgili bilgilendirme ve talimatı doğrultusunda bilgi paylaşımı sağlama kurumsal yapının önemli işlerindedir.

Medya İletişim Bürolarının örgütlenme biçimi ve iş yapma biçimlerinin halkla ilişkiler birimlerinden farklılık gösterdiğini söylemek mümkündür. Birimlerde, basın bülteni/bildirisi, web sayfası, haber metni, medya takibi gibi taktikler kullanma/faaliyetler yürütme biçiminde halkla ilişkiler yürütmektedir. Halkla ilişkilerde “medyayla ilişkiler” adıyla kapsamı belirlenen meslek işleri- iş ilişkileri ve işi yapma biçimi olarak farklılık taşımakla beraber- Medya İletişim birimlerinde görevli memurlarca yapılmaktadır.

Adliyelerde basın sözcülüğünün kurumsallaşmasıyla, belli kurumsal amaçları yüklenmiş kitle medyasıyla halkı bilgilendirme, bilgilendirmeden geçerek kamuoyunu biçimlendirme faaliyetleri kurumsallaşmıştır. Adalet Bakanlığı'na ifade edilen yargı-medya ilişkilerinin geliştirilmesi amacı, AB uyum politikalarının bir parçası olma özelliği taşımaktadır. AB müzakere sürecinde Yargı ve Temel Haklar başlıklı 23. Fesil, toplumsal yapının dönüşümünde Türk Adalet yapısını konu almıştır. Türkiye mevzuatını AB norm ve standartlarına uydurmak başka bir söyleyişle AB hukuk düzeninin iç hukuk sistemimize entegrasyonu amacı, Türk yargı sistemine yargı-medya ilişkilerinin geliştirilmesi amacıyla ifade edilmiştir. Dolayısıyla, AB Eşleştirme Projesi olarak kurulan iletişim birimleri, “yapısal uyum” politika ve programların bir parçası olarak iş yapmaktadır. Yapılan işler, “uyum” programlarının amaçlarını yüklenmiş faaliyetlerdir.

Sonuç olarak, yürütülen işlerin doğası bağlamında Medya İletişim Bürolarının temel işlevi; Bilgilendirme yoluyla kamuoyunun düşüncesini biçimlendirme olarak ortaya çıkmaktadır.

Osmanlı Dönemi Trabzon'da Nafaka Uygulaması (1703-1738)

Dr. Öğr. Üyesi Fatih ÇİÇEK
Erzincan Binali Yıldırım University
Faculty Of Science and Literature
fcicek@erzincan.edu.tr

ÖZET

Nafaka kavramı Arapça infak kelimesinden türetilmiş olup, tanım olarak bir kişinin temel ihtiyaçlarının giderebilmesi amacıyla sarf edilen nakit para ya da buna karşılık gelen maddi bedeldir. İslam hukukunda nafaka, ihtiyaç sahibi kişilerin gıda, iye, giyim, konaklama ve sađlık gibi masrafların karşılanması şeklinde kullanılmıştır. Nafaka, sosyolojik açıdan ele alındığında hak sahibine hakkının verilmesi ile bireyin varlığının sürdürülmesine katkı sağlamış ve nafaka sorumluluđu olan kişilerin sosyal sorumluluđunu artırarak toplumda yardımlaşma ve dayanışma anlayışını hâkim kılmıştır. İslâm hukukunda nafaka türleri iki şekilde olup bunlar aile hukuku kapsamında olan nafakalar ve mülkiyet hukuku bağlamında olan nafakalardır. İslam aile hukukunda nafakanın en yaygın kullanıldığı şekli aile hukuku ilişkisinden kaynaklanan evlilik ve akrabalık nafakasıdır. Temel olarak nafaka ödemeleri işleyiş açısından boşanma sonrasında eşe mahkeme tarafından belirlenmiş ve düzenli olarak verilen bir nakit tutardır.

Bu çalışmanın amacı, 1703-1738 yılları arasında Trabzon şehrinde nafakanın türlerinin neler olduğunun tespitine yönelik olacaktır. Elde edilen veriler doğrultusunda Osmanlı dönemi Trabzon'da nafaka bedellerinin dönemin satın alma gücü karşılaştırmalı fiyat analizleri ile verilecektir. Osmanlı dönemi Trabzon şehrinde nafakanın satın alma gücünün ekonomik açıdan değerlendirilerek bu alanda literatüre katkı sağlanması hedeflenmiştir.

Anahtar Kelimeler: Trabzon, Nafaka, Aile

Alimony Practice in Trabzon in the Ottoman Period (1703-1738)

ABSTRACT

The concept of nafaka is derived from the Arabic word infaq, and by definition, it is the cash or the corresponding material price spent in order to meet the basic needs of a person. In Islamic law, alimony is used to cover the expenses of people in need such as food, subsistence, clothing, accommodation and health. When considered sociologically, alimony has contributed to the continuation of the existence of the individual by giving the right to the right owner, and has made the understanding of cooperation and solidarity dominant in the society by increasing the social responsibility of the people who are responsible for alimony. There are two types of alimony in Islamic law, these are alimony under family law and alimony in the context of property law. The most common form of alimony in Islamic family law is marriage and kinship alimony arising from the family law relationship. Basically, alimony payments are a cash amount determined by the court and given regularly to the spouse after the divorce in terms of operation.

The aim of this study will be to determine the types of alimony in the city of Trabzon between 1703 and 1738. In line with the data obtained, the purchasing power of the alimony costs in Trabzon during the Ottoman period will be given by comparative price analysis. It is aimed to contribute to the literature in this field by evaluating the purchasing power of alimony in the city of Trabzon in the Ottoman period from an economic point of view.

Keywords: Trabzon, Alimony, Family

Giriş

İnfâk kökünden türetilen nafaka kavramı; kelime anlamı olarak dağıtmak, harcamak, tüketmek anlamında kullanılmıştır. Nafaka literatürde bir ihtiyacı temin etmek veya ihtiyaçların giderilmesi maksadıyla masraf edilen para ve mal varlığı şeklinde tanımlanmıştır (Bilmen, 2013, 2/444; Sami, 2010, 1497; Aydın, 2019, 295). Nafaka beslenme, barınma, sağlık giderleri ve zaruri ihtiyaçların giderilmesi amacıyla iâşe, mesken ve nakit paranın temin edilmesidir (Erdoğan, 2019, 443). İslam Fıkhiinde nafakanın temin edilmesi noktasında kişi ilk etapta kendine bakacak sonrasında bakmakla sorumlu olduğu bireyler ile tasarrufunda olan köle, hayvan ve cansız varlıklara karşı nafaka sorumluluğunu karşılayacaktır (Erbay, 2006, 282). Nafaka, daha çok İslâm Aile Hukuku içerisinde düzenlenmiş olup evlilik birliğinin oluşumundan sonlanmasına ve boşanma sonrasında gerek eşin ve gerekse de çocukların bakımını üstlenmek şeklinde uygulanmıştır (Bekdemir, 2019, 14).

İslam Aile Hukukuna göre nafakanın koca tarafından verilmesi zorunludur. Nafakanın en temelde eş, çocuk, anne ve babaya verilmesi kocanın üzerine farz kılınmıştır. Ehl-i sünnet mezheplerinde nafakanı kocanın üzerine farz kılınması noktasında ittifak etmişlerdir fakat bu konuda mezhepler arasında bazı noktalarda ihtilaf vardır. Hanefi Mezhebine göre mahrem olan akrabalara da nafaka verilmesi hususunda görüş ileri sürmüşlerdir. Maliki Mezhebine göre ise nafaka sadece anne baba, eş ve çocuklara verilmesi gerekmektedir. Şafii Mezhebine göre üst soydan büyükbaba, büyükanne ile altsoydan torunlara da nafaka verilmesinin gerekliliği üzerinde görüş beyan etmişlerdir. Hanbeli Mezhebine göre miras hukuku cihetinden varis olacak her kişiye nafaka verilmesi konusunda görüşlerini ifade etmişlerdir (Zuhayli, 2006, 79-80). İslam Aile Hukukunda en önemli nafaka aile nafakasıdır. İslam fıkıhçılarının çoğunluğuna göre koca fakir bile olsa aile nafakasını ödemek zorunda olduğu konusunda ittifak etmişlerdir.

İslam Hukukunda kadının sosyo iktisadi açıdan hayatını sürdürmesi için ihtiyaç duyduğu her şeyi kocasının temin etmesi bir zorunluluktur (Karaman, 2008, 325). Eşler arasında nikah akdi var olduğu sürece aile nafakası erkek tarafından karşılanmaya devam edecektir (Erbay, 2006, 282). Eşler arasında nikah akdinin sonlaması ile aile birliğinin ortadan kalkması ile boşanma (iddet) nafakası erkek tarafından kadına verilecektir. İslâm fıkhında bir kadının eşinin vefatı ya da boşanmasının sonrasında tekrar nikah akdi yapabilmesi için beklemek zorunda olduğu süreye iddet denir. Bu süre zarfında erkek tarafından kadına iddet nafakası ödenecektir (Acar, 2000, 466).

Osmanlı dönemi 1703-1738 yılları arasında Trabzon mahkeme kayıtlarına göre nafaka için belgelerde nafaka ve kisve bahası tanımlaması yapılmıştır (TŞS1896-V54A/2). Çalışmanın yapıldığı tarih aralığı dahilinde Trabzon mahkeme kayıtlarından elde edilen tasnife göre nafaka uygulaması toplumsal hayatın içerisinde aşağıdaki başlıklara göre şekillendirilmiştir.

- 1-) Fûrû Nafakası (Alt Soy)
- 2-) Kimsesiz Çocuklara Verilen Nafakalar
- 3-) Aile Nafakası
- 4-) Tazminat Nafakası
- 5-) Kölelere Verilen Nafakalar
- 6-) Boşanma Nafakası

Fürü Nafakası

İslam Miras Hukukunda üst ve alt soy akrabalığı ifade etmek için usûl ve fürû kavramları kullanılmıştır. Usûl bir kimsenin soy bağı cihetinden üst soyu olan anne baba ve onların anne babalarını tanımlamaktadır (Boynukalın, 2012, 198). Fürû ise miras hukuku kapsamında bir kişinin alt soy hısımlarını ifade etmektedir. Bu bağlamda kişinin alt soyu kız ya da erkek çocukları varsa torunları ve onların çocuklarını takip eden bir soy bağıdır (Akgündüz, 1996, 249). 1703-1738 yılları arasında Trabzon Mahkemesine yansıyan fürû nafakası ile ilgili kayıtlarda yaygın olarak ebeveynlerinden herhangi birinin vefatı sonrasında geride kalan çocuklara yasal miras payları bırakılmıştır. Bu miras hakları çocukların yetişkinliğe ulaşmalarına dek bir vasi aracılığı ile idare edilmiştir.⁷ Mahkeme çocuğun ihtiyaçlarının karşılanabilmesi için çocuğa ait miras malından günlük belirli bir nafaka miktarı belirlemiştir. Vasi tayin edilen kişi belirlenen nafaka miktarı doğrultusunda harcama yapar ve ayrıca bir nazır tarafından da denetlenirdi (TŞS1876-V7A/2).

Fürû nafakası ile ilgili 5 Ağustos 1735 tarihli belge kaydına göre Trabzon Şehrinin İmaret Mahallesi sakinlerinden iken Molla Ahmed bin Mustafa vefat etmiştir. Molla Ahmed'in geride kalan yetişkin olmayan çocuklarına anneleri Fatma Hatun mahkeme tarafından vasi tayin edilmiştir. Yetişkin olmayan Hava ve Ebubekir adlı çocuklara günlük 8 pare nafaka tayin edilmiştir (TŞS1898-V28A/3). Fürû nafakasına dair 4 Mayıs 1725 tarihli bir diğer belge kaydına göre Trabzon Şehrinin Saçlı Hoca Mahallesi sakinlerinden Hüseyin Beşe bin Murad bu tarihten önce vefat etmiştir. Hüseyin'in geride yetişkin olmayan bir oğlu mirasçısı olarak kalmıştır. Hüseyin'in yetişkin olmayan oğluna yasal olarak annesi Ayşe Hatun vasi tayin edilmiştir. Ayşe Hatun mahkemeye başvurarak oğlu için günlük 50 akçe nafaka tayin ettirmiştir (TŞS1886- V107A/1).

Fürü nafakası sadece babadan kalan miras payından değil aynı zamanda annenin vefatı hâlinde onun mirasında da nafaka verilmiştir (TŞS1873-V41B/4). Nafaka miktarları belirlenirken çoğu kez kız ve erkek çocuğuna eşit miktarda nafaka verilmiş bazı durumlarda bu eşitlik erkek çocuk lehine artış göstermiştir. 12 Nisan 1707 tarihli belgede Tabakhane Mahallesi sakinlerinden iken vefat eden Mustafa Beşe'nin geride kalan 3 erkek ve 1 kız çocuğuna mahkeme tarafından her biri için günlük 5 akçe nafaka tayin edilmiştir (TŞS1888-V12B/1). Nafaka miktarlarının erkek çocuklar lehine farklılık gösterdiği 24 Şubat 1716 tarihli belgede ise Zeytinlik Mahallesi sakinlerinden iken vefat eden Çilingirzade Hacı Hüseyin Ağa geride kalan çocuklarına mahkeme tarafından İsmail ile İbrahim'e 12'şer akçe kızları Emine ve Hava'ya 11'er akçe nafaka tayin edilmiştir (TŞS1875-V15B/4). Fürü nafakasının nasıl harcanacağı ne şekilde işleme tabi tutulacağı vasiler tarafından harcama defterlerine kaydedilirdi (TŞS1867-V15A/1).

Fürü nafakalarında alt soya nafaka verildiğini ifade etmiştik. Bu bağlamda yetişkin olmayan çocuğun hizmetini gören hizmetçilerine de nafaka verilmiştir. 5 Ekim 1738 tarihli belgeye göre Eksotha Mahallesi sakinlerinden Hüseyin Ağa bin Mehmed Ağa vefat etmiştir.

⁷ Vasi, fiil ehliyeti olmayan kişilerin korunması ve mallarının idare edilmesi için yetkilendirilen kişidir. Vasi mahkeme kayıtlarında daha çok miras hukuku kapsamında daha çok vefat eden kişilerin geride kalan yetişkin olmayan çocuklarının miras payını yöneten kişidir (Bardakoğlu, 2013, 66-70).

Hüseyin Ağanın geride yetişkin olmayan oğlu Hasan'a günlük 25 akçe ve Hasan'ın hizmetçisi için ise günlük 5 akçe nafaka tayin edilmiştir (TŞS1903-V65A/2).

Füru nafakası için bireyin alt soyu olan çocuklarına nafaka için verilecek nakit ya da iâşe türünden bir mal olmadığı durumunda şayet babasının miras cihetinden gayrimenkulü var ise bu gayrimenkul satılarak çocuğun yasal miras payı verilir, çocuğa bir vasi tayin edilerek bu nakit miras payı üzerinden mahkeme tarafından nafaka tayini yapılırdı. 12 Nisan 1703 tarihli nafaka kaydına Boztepe Mahallesi sakinlerinden iken vefât eden Veli bin Ahmed'in yetişkin olmayan kızına nafaka verilebilmesi için Veliye ait gayrimenkul satılarak küçük kızın miras payı olan 90 kuruş vasisi İbrahim'e teslim edilmiştir (TŞS1867-V9B/3). Yetişkin olmayan çocuklara nafaka harcaması yapılabilmesi için bir vasi tayini yasal bir zorunluluk olduğunu yukarıda açıklamıştık. Füru nafakası verilen yetişkin olmayan küçük çocuklar ergenliğe ulaştıklarında kendilerine ait nafaka ve miras paylarını mahkemeye başvurarak vasilerinden almışlardır. 26 Nisan 1712 tarihli belgeye göre daha önce hac ibadeti Mekke'ye giden Mahmud bin Ahmed yolculuk sırasında vefat etmiştir. Mahmud'un geride yetişkin olmayan kızı Fatma'ya nafaka harcaması için Mehmed Beşe vasi tayin edilmiştir. Fatma ergenliğe ulaşınca dek nafaka harcaması vasi gözetimde yapılmıştır. Fatma yetişkinliğe ulaştığında mahkemeye başvurarak vasiliği kaldırıp kendine ait miras hakkını vasisi Mehmed Beşe'den almıştır. Yapılan harcama hesap defterine göre Mehmed Beşe 400 kuruşluk miras payından Fatma yetişkinliğe ulaşınca dek 210 kuruş sarf etmiştir. Geriye kalan 190 kuruş Fatma'ya teslim edilmiştir (TŞS1872-V10B/4).

Kimsesiz Çocuklara Verilen Nafakalar

Osmanlı dönemi Trabzon Şehrinde herhangi maddi bir geliri olmayan ve kimsesiz çocuklara da nafaka verildiği mahkeme kayıtlarından anlaşılmıştır. 12 Aralık 1718 tarihli nafaka talebi belge kaydına göre Trabzon Şehrinin Musa Paşa Mahallesi'nde yaşayan Fatma Hatun mahkemeye nafaka talebi için başvurmuştur. Fatma Hatun'un mahkemede verdiği ifadesine göre kendi sorumluluğunda olan hem öksüz hem de yetim Hava bint-i Ali adlı 4 yaşındaki kız çocuğunun bakımı için geride herhangi bir akrabası da yoktur. Fatma Hatun çocuğun bakımı için nafaka talebinde bulunmuş mahkeme bu doğrultuda Hava için günlük 4 akçe nafaka tayin etmiştir (TŞS1877-V4A/1). Kimsesiz çocuklara nafaka verilmesine dair 10 Aralık 1716 tarihli bir diğer mahkeme kaydına göre Trabzon Şehrinin Cami-i Kebir Mahallesi sakinlerinden Şerife bint-i Salih adlı kadın mahkemeden kimsesiz çocuklar için nafaka talebinde bulunmuştur. Şerife Hatun ifadesinde Maçka Kazasına bağlı Ulsa Köyü yakınlarında orman içinde yaşları 4 ile 1,5 arasında 2 erkek 1 kız çocuğu bulmuştur. Çocukların bakımı hususunda Trabzon Mahkemesi çocukları yasal olarak Fatma Hatuna teslim ederek her birine günlük 5 akçe nafaka verilmesine karar vermiştir. Ayrıca kayıp çocukların aile ve akrabalarının bulunması halinde Fatma Hatunun harcamış olduğu nafaka tutarı çocukların aile ve akrabalarından tahsil edilecektir (TŞS1876-V9B/5). Trabzon'da kimsesiz, yetim ve öksüz çocuklara nafaka tayin edilmesi durumu mahkeme kayıtlarına sıklıkla yansımıştır. 9 Mart 1736 tarihli belgede ilmiye sınıfı mensubu Mehmed Efendi'nin yetim kalan iki çocuğu için her birine 6'şar akçeden toplam 12 akçe nafaka verilmiştir (TŞS1898-V40A/3).

Aile Nafakası

Bu nafaka türünde genellikle herhangi bir nedenden dolayı ailesini bırakıp şehir dışına giden bireylerin geride kalan eşi ve çocuklarına ödemekle yükümlü olduğu nafakanın temin edilmesidir. 1700-1738 yılları arasında Trabzon Mahkemesine yansıdığı kadarı ile bu şekilde nafaka konusunu ihtiva eden belgelere denk gelinmiştir. 13 Mayıs 1735 tarihli belge kaydına göre İskender Paşa Mahallesi sakinlerinden Mustafa Ağa bin Mahmud'un yetişkin olmayan küçük çocukları Osman ve Ali ve anneleri İmhani Hatun için mahkeme tarafından günlük 10 pare⁸ nafaka tayin edilmiştir (TŞS1898-V15A/1). Aile nafakası ile alakalı 2 Haziran 1703 tarihli mahkeme kaydına göre Saçlı Hoca Mahallesi'nde ikamet eden Şerife Hatice Hatun mahkemeye başvurarak eşinin şehir dışına gittiği, kendisine ve oğluna nafaka olarak bir şey bırakmadığını beyan etmiştir. Trabzon Mahkemesi yaptığı inceleme neticesinde Şerife Hatice Hatun ve oğlu için günlük toplam 20 akçe nafaka tayin etmiştir (TŞS1867-V19A/1).

Trabzon'dan başka şehirlere giden bireylerin geride bıraktıkları eşleri mahkemeden nafaka talebinde buldukları zaman mahkeme nafaka talebinde bulunan eşin şehir dışına giden kişi ile nikahlı olduğuna dair ispat istediği durumlar olmuştur. 24 Aralık 1718 tarihli sicil kaydına göre Kale-i Kule Mahallesi'nde ikamet eden Fatma Hatun Trabzon Mahkemesine başvurarak nafaka talep etmiştir. Fatma Hatunun mahkemede beyanına göre 16 Aralık 1718'de eşim İbrahim Beşe bana nafaka olarak bir şey bırakmadan şehir dışına gitmiştir. Fatma Hatunun İbrahim ile evli olup olmadığının bilinmemesi üzerine mahkemeye sunulan iki şahit eşliğinde Fatma Hatun evli olduğunu ispat etmiştir. Bu doğrultuda İbrahim Beşenin geri döneceği varsayılarak onun üzerine borç sayılması şartıyla günlük 5 akçe nafaka tayin edilmiştir (TŞS1877-V12A/1).

Trabzon Mahkemesi aile nafakası başvurularında yaptığı inceleme doğrultusunda kişilerin sosyal ve ekonomik durumunu göz önünde tutarak nafaka miktarlarını belirlemiştir. Bu doğrultuda 21 Eylül 1705 tarihli belgeye göre Bâb-ı Pazar Mahallesi sakinlerinden Ayşe Hatun mahkemeye başvurarak eşinin şehir dışına gittiği kendisine ve küçük kızı Rukiye'ye bir nafaka bırakmadığını beyan etmiştir. Trabzon Mahkemesi bu beyan doğrultusunda yapmış olduğu keşif incelemesinin neticesinde Ayşe Hatun ile yetişkin olmayan kızı Rukiye için günlük 26 akçe nafaka belirlemiştir (TŞS1869-V4A/1). Aile nafakasına dair 25 Mayıs 1735 tarihli mahkeme kaydına göre Ka'le Mescidi Şerifi Mahallesi sakinlerinden Hüseyin Beşe bin Ali il dışına gitmiştir. Hüseyin Beşenin eşi Şerife Esma Hatun mahkemeye başvurarak eşinin il dışına gittiği fakat kendilerine bir nafaka bırakmadığını beyan etmiştir. Şerife Esma Hatun kendisi ve 4 çocuğu için mahkemeden nafaka talep etmiştir. Yapılan inceleme sonrasında mahkeme tarafından Şerife Hatun ve 4 çocuğu için toplam 40 akçe nafaka tayin edilmiştir. (TŞS1898-V34B/3).

Tazminat Nafakası

Bu dönemde Trabzon mahkeme kayıtlarına yansıdığı kadarı ile tazminat nafakaları suç kapsamında failin mağdur tarafa ödediği bedel olarak karşımıza çıkmıştır. 25 Ağustos 1712 tarihli belgeye göre Yoros Kazası ahalisinden Osman bin Nezir Trabzon Mahkemesine başvurarak aynı kaza ahalisinden Osman bin Abdulkerim'e dava açmıştır. Osman bin Nezir

⁸ 1 Pâre 3 akçe etmektedir. (Sahillioğlu, 1989, 224-227)

mahkemede verdiği ifadesinde “oğlum Ahmed daha önce Osman bin Abdülkerim’in saldırısına uğramıştır. Başının çeşitli yerlerinden yaralanan Ahmed iş göremez hale gelmiştir. Mahkemenin yaptığı tahkikat neticesinde Ahmed’in iyileşinceye dek bu süre içinde sağlık ve iâşe için günlük 10 akçe nafaka bedelini olayın faili olarak Osman bin Abdülkerim’in ödemesine karar vermiştir (TŞS1874-V62B/2).

Tazminat nafakası ile ilgili olarak 30 Haziran 1723 tarihli mahkeme kaydına göre Trabzon Şehrinin Faroz Mahallesi sakinlerinden olan İsmail Beşe bin Mehmed şehrin Mumhane adlı bölgesinde aynı gün Mustafa Beşe’nin bıçaklı saldırısına uğramıştır. Bu vakada İsmail Beşe yaralanarak iş göremez hale gelmiştir. İsmail Beşe şikayetini mahkemeye taşıyarak Mustafa Beşe’nin kendisine tazminat ödemesini talep etmiştir. Yapılan tahkikat neticesinde İsmail Beşe iyileşinceye dek onun sağlık ve iâşe nafakası için günlük 2 pare Mustafa tarafından ödenmesine karar verilmiştir (TŞS1882-V66A/2).

Kölelere Verilen Nafakalar

1703-1738 yılları arasında Trabzon’da mahkeme kayıtlarına yansıdığı kadarı ile toplumsal sınıf içerisinde yaşayan köle ve cariyelere de nafaka verilmiştir. 27 Ocak 1716 tarihli belge kaydına göre Trabzon Şehrinin Câmî-i Kebir Mahallesi sakinlerinden Ahmed Ağa’nın yetişkin olamayan oğlu ve onun hizmetini gören cariyesi Fatma için nafaka talebinde bulunulmuştur. Mahkeme yaptığı tahkikatın neticesinde çocuğa günlük 13 akçe cariyeye Fatma’ya günlük 7 akçe nafaka tayin etmiştir (TŞS1875-V13A/2). Kölelere verilen nafakaya dair 7 Ağustos 1735 tarihli bir başka belge kaydında ise İmaret Mahallesinde yaşayan Emine binti Mehmed mahkemeye başvurarak kendi terbiyesinde olan Ahmed isimli çocuk köleye nafaka talebinde bulunulmuştur. Mahkeme yapmış olduğu inceleme neticesinde köle çocuğa günlük 2 pare nafaka tayin etmiştir (TŞS1898-V29A/1). 4 Eylül 1735 tarihli bir diğer belge kaydında ise Tekfur Çayırı Mahallesi sakinlerinden Ali Çelebi bin Hüseyin mahkemeye başvurarak kendisine emanet verilen cariyeye Zeynep için nafaka talebinde bulunulmuştur. Ali Çelebi ifadesinin devamında cariyeye Zeynep’in efendisi olan İbrahim Ağa şehir dışına gitmeden önce cariyesi Zeyneb’i bana emanet etmiştir. Cariye Zeyneb’in nafakası olmadığından İbrahim Ağanın üzerine borç cihetinden o gelinceye dek günlük 2 pare nafaka verilmesine karar verilmiştir (TŞS1898-V37B/4).

Boşanma Nafakası

İslâm Hukukunda bir kadının kocasının ölümü veya kocasından boşanması hâlinde yeniden evlenebilmesi için beklemek zorunda kaldığı süreyi fikhi bir terim olarak iddet şeklinde tanımlamıştır (Aydın, 2019: 290-291). İslâm Hukukunda evlilik birliğinin sonlanması ile kadınlar bu süreyi iki usulde bekler. Birinci sırada eşi vefat eden kadının gebelik durumu yoksa 4 ay 10 gün bekler şayet gebeliği var ise doğum gerçekleşinceye kadar beklemek zorundadır. İddet süresinin ikinci usulünde ise eğer eşler arasında boşanma durumu gerçekleşmiş ve bir gebelik hali yoksa 3 ay iddet beklemek durumundadır. Fakat kadının gebelik hali var ise doğum gerçekleşinceye dek iddet beklemelidir (Kur’ân-ı Kerîm, 2/234, 2/228., Bilmen, 2013, 2/368-371). Boşanma sonrası kadınların bu bekleme süreleri içerisinde ihtiyaç duydukları iâşe ve nafakalarının erkek tarafından verilmesi zorunlu kılınmıştır (Acar, 2000: 468). İslâm

Hukukunda bu sürenin bu şekilde tayin edilmesindeki amaç boşanmış ya da kocası ölmüş kadının gebe olması durumunda şayet yeniden evlenirse doğacak çocuğun soy bağı karışıklığının önüne geçmektir. Bir diğer amaç bu bekleme süresi içerisinde kadının kendi iâşe ve nafakasının sağlanmasıdır (Acar, 2000: 468). İddet-i ma'lûme, kadının kocasından boşanması veya kocanın ölmesi hâlinde beklediği iddet süresince aldığı bedel olarak kayıtlara geçmiştir (TŞS1870-V66A/2). 24 Nisan 1733 tarihli belge kaydına göre Kale-i Kule Mahallesi'nde yaşayan Saliha Hatun eşinden boşanmıştır. Saliha Hatun boşandığı eşinden iddet nafakası olarak 10 kuruş almıştır (TŞS1896-V16A/2).

Boşanma sonrasında kocanın eşi ve çocuklara ayrı ayrı nafaka ödediği durumlarda olmuştur. 15 Mart 1713 tarihli mahkeme kaydına göre Kabuk Meydanı Mahallesi'nde yaşayan Molla Mahmud eşi Emine bint-i Ali ile anlaşmalı olarak boşanmıştır. Çiftin çocuklarının velâyeti anneye verilmiştir. Mahkeme çocukların nafakası için Molla Mahmud'a çocuk başına günlük 15 akçe olmak üzere toplamda 30 akçe nafaka ödemesine karar vermiştir (TŞS1873-V31B/4). Boşanma nafakasında boşanan eşin gebelik durumu olma ihtimaline karşılık beklemek zorunda olduğu yasal süre boyunca boşandığı eşi nafakasını ödemiştir. 22 Ocak 1716 tarihli belgede Cami-i Kebîr Mahallesi sakinlerinden iken vefat eden Ahmed Ağa'nın eşi yeniden evlenme durumu ortaya çıkınca vekili vasıtasıyla mahkemeye başvurarak gebelik durumu olduğunu beyan etmiştir (TŞS1875-V86B/1).

Trabzon'da Nafaka Bedellerinin Satın Alma Gücü

1703-1738 Yılları Arasında Trabzon'da Bazı Gıda Maddelerinin Ortalama Fiyatları⁹

S	Gıda Maddesi	Ölçü	Ortalama Fiyat
1	Ekmek	80 – 130 Dirhem	1 Akçe
2	Koyun Eti	1 Kıyye ¹⁰	10-15 Akçe
3	Pirinç	1 Kıyye	8-20 Akçe
4	Un	1 Kıyye	8-10 Akçe
5	Zeytin Yağı	1 Kıyye	30-45 Akçe
6	Sade Yağ	1 Kıyye	30-35 Akçe
7	Nohut	1 Kıyye	4-10 Akçe

S	Boşanma Nafakası	3 Ay 10 Günlük	Akçe Karşılığı
1	Esmâ Hatun	12 Kuruş	1920 Akçe
2	Fatma Hatun	10 Kuruş	1600 Akçe

S	Fürû Nafakası (Alt Soy)	Günlük	Aylık Toplam
1	2 Erkek Çocuk	24 Akçe	720 Akçe
2	2 Kız Çocuk	22 Akçe	660 Akçe
3	1 Erkek Çocuk	50 Akçe	1500 Akçe

S	Kimsesiz Çocuklara Verilen Nafaka	Günlük	Aylık Toplam
1	3 Kayıp Çocuk	4 Akçe	120 Akçe
2	Yetim Çocuk	15 Akçe	450 Akçe
3	Öksüz ve Yetim Çocuk	2 Pare (6 Akçe)	180 Akçe

⁹ Öztürk, 1998, 36-57

¹⁰ 1 Kıyye 1.3 kg denk gelmektedir (Kallek, 2007, 338-339).

S	Aile Nafakası	Günlük	Aylık Toplam
1	Şerife Hatun	20 Akçe	600 Akçe
2	4 Çocuk	20 Akçe	600 Akçe
3	Ayşe Hatun	13 Akçe	390 Akçe
4	Rukiye Çocuk	13 Akçe	390 Akçe
5	Afedora	25 Akçe	750 Akçe
6	Hava Hatun	25 Akçe	750 Akçe
7	Çocuk	9 Akçe	270 Akçe
8	3 Çocuk	30 Akçe (10 Pare)	900 Akçe
9	2 Çocuk	24 Akçe (8 Pare)	720 Akçe
10	2 Çocuk	24 Akçe (8 Pare)	720 Akçe
11	4 Çocuk	40 Akçe	1200 Akçe

S	Tazminat Nafakası	Günlük	Aylık Toplam
1	Adli Vaka tazminatı İsmail Beşe	25 Akçe	750 Akçe
2	Adli Vaka tazminatı Ahmed	10 Akçe	300 Akçe

S	Kölelere Verilen Nafakalar	Günlük	Aylık Toplam
1	Cariye Fatma	7 Akçe	210 Akçe
2	Köle Süleyman	6 Akçe	180 Akçe
3	Çocuk Köle	6 Akçe (2 Pare)	180 Akçe
4	Acem Cariye	6 Akçe (2 Pare)	180 Akçe

SONUÇ

İslam hukukunda en yaygın ahali ile Aile hukukundan doğan nafaka hakları kocanın üzerinde bulunmaktadır. Fakat hukuken nafaka türleri diye bir ayrım olmamasına rağmen uygulamada İslam aile hukuku ve bunun dışındaki yasal haklara dayanan nafakalar şeklinde ayrıma gidilerek bu çalışmada farklı nafaka tipleri ayrı başlıklar altında ele alınmıştır. Çalışmada Trabzon şer'iyeye sicillerinden yapılan tasnife göre yaygın olarak aile nafakasının kayıtlara daha çok yansıdığı görülmüştür. Aile nafakasının dışında adli suçlar kapsamında iş göremezlik durumunda verilen nafakalar göze çarpmaktadır. Özellikle vakıflar yoluyla kimsesiz çocuklara da nafaka verilmiştir. İslam Hukukunda en yaygın verilen nafaka türlerinden boşanma nafakası ve furu nafakası Trabzon mahkeme kayıtlarına da yansımıştır. Bu dönemde Trabzon'da toplumsal yapı içerisinde varlığını sürdüren köle ve cariyelerinde nafaka ihtiyaçlarına cevap verildiği görülmüştür. Trabzon'da verilen nafakalar dönemin gıda fiyatları üzerinden kıyaslanarak nafakaların satın alma gücü tespit edilmeye çalışılmıştır. Verilen nafakalar bireylerin sosyo ekonomik olarak ödeme gücüne göre tespit edilmiştir. Verilen nafakaların satın alma gücü tabloda incelendiğinde nafaka verilen kişilerin aylık yaşalarını rahat bir şekilde temin edebileceği anlaşılmıştır.

Trabzon'da nafaka uygulamasının toplumun birçok katmanı içerisindeki kesimlere verildiği ve böylece toplumsal sınıflar arasında nafakanın bir sosyo ekonomik denge unsuru üstlendiğini ifade edebiliriz. Trabzon'da nafaka uygulaması ile sosyal dengenin sağlanmasının yanında para ve hizmetlerin toplumun üst kesimlerinden ihtiyaç sahibi kesimlere yönelmesi sağlanmıştır. Nafaka uygulaması ile birlikte ihtiyaç sahibi insanların giyim ve iye gibi insani ihtiyaçlarının temin edilmesi amaçlanmıştır. Özellikle kimsesiz çocukların nafaka ihtiyaçları temin edilmesi ile birlikte bu çocukların en azından yetişkinliğe kadar bir sosyal güvence içinde

yetiřmeleri saęlanmıřtır. Kadınların kocalarından boşanma ya da kocaların vefat etmesi sonrasında almıř oldukları yasal nafaka hakları ile belirli bir süre asgari ihtiyaçlarını karřılanması amaçlanmıřtır. Trabzon’da nafaka uygulaması ile birçok kesime maddi destek saęlanması devletin ve sosyal hayatın toplumsal risklerini en aza indirmesini saęlamıřtır.

İşte Mutluluk ve Paternalist Liderlik: Kültür Kayıp Halka mı?

Dr. Öğr. Üyesi Aslı Çillioğlu KARADEMİR

ÖZET

İş yaşamında birçok nedene bağlı olarak yaşanan değişimin merkezinde yönetim ve işgücü bulunmaktadır. Özellikle teknolojik gelişmelerin iş yapma biçimlerini değiştirdiği görülmektedir. Bunun sonuçları çalışanların işte mutluluğunu etkilemektedir. Örneğin, çalışma ve üretim ortamlarında teknolojinin yaygınlaşması önceki dönemlere göre daha az kişi istihdamını yeterli hale getirebilmektedir. Bu durumda çalışanlar açısından yıkıcı rekabet söz konusu olmakta, stres ve tükenmişlik sorunlarıyla birlikte bireylerde mutsuzluk artmaktadır.

Bu koşullar içerisinde, işyeri ve çalışanlar için verimlilik ve mutluluk açılarından olumlu adımlar atılması etkili liderlik ile mümkün olabilir. Bu noktada, “çalışanların işyerinde mutluluğu bağlamında liderlik yaklaşımlarından paternalist liderlik uygun olabilir mi?” sorusu üzerine düşünüldüğünde bir ikileme karşılaşılmaktadır. Şöyle ki paternalist liderlikte, lider çalışanları hem iş yerinde hem iş dışı yaşamında yönlendirmekte ve çalışanların özel yaşamları dahil çeşitli konularıyla ilgilenebilmektedir. Diğer taraftan “bu yönlendirmeler çalışanların mutluluğunu sağlayabilir mi?” sorusunun cevabı değişkenlik taşıyabilmektedir.

Bu çalışmada, Türkiye ve Batı literatürlerinde paternalist liderlik ve işyerinde mutluluk kavramları ele alınacaktır. Kültürel paradoks nedeniyle bazı örgüt kültürlerinde olumlu bazı örgüt kültürlerinde olumsuz olarak ele alınan paternalist liderliğin mutluluk açısından örgüte, çalışanlara ve lidere etkileri eleştirel bakış açısıyla değerlendirilecektir.

Anahtar Kelimeler: Paternalist Liderlik, İşte Mutluluk, Kültür, Doğu Kültürü, Batı Kültürü

Happiness at Work and Paternalistic Leadership: Is Culture a Missing Link?

ABSTRACT

Management and workforce are at the center of the change in business life due to many reasons. In particular, it is seen that technological developments have changed the way of doing business. The results of this affect the happiness of the employees at work. For example, the widespread use of technology in working and production environments can make it sufficient to employ fewer people than in previous periods. In this case, destructive competition is in question for employees, and unhappiness increases in individuals with stress and burnout problems.

In these conditions, it is possible to take positive steps in terms of productivity and happiness for the workplace and employees with effective leadership. At this point, “Can paternalist leadership be appropriate from leadership approaches in the context of employee happiness at work?” When considering the question, a dilemma is encountered. Namely, in paternalistic leadership, the leader directs the employees both at work and outside of work life and can deal with various issues, including the private lives of the employees. On the other hand, “can these referrals make employees happy?” The answer to the question may vary.

In this study, the concepts of paternalistic leadership and happiness at work in Turkish and Western literature will be discussed. Due to the cultural paradox, the effects of paternalistic leadership, which is considered positive in some organizational cultures and negatively in some organizational cultures, on the organization, employees and the leader in terms of happiness will be critically evaluated.

Keywords: Paternalistic Leadership, Happiness at Work, Culture, Eastern Culture, Western Culture

1. INTRODUCTION

One of the most significant events in history is the Industrial Revolution, which is defined as the transition from a production system based on human and animal power to one based on machine power. Following the first, second, and third industrial revolutions that occurred in the past, we are currently experiencing the Industrial Revolution known as Industry 4.0. In the current era of Industry 4.0, many workplaces have become fully digitalized. Studies and experiments conducted under the leadership of the German Artificial Intelligence Research Center have shown that the information transmitted by a product through radio signals can be stored digitally at the beginning of production. This has led to significant advancements in the form of cyber-physical systems (Blinder, 2006; Küçükkalay, 1997). Overall, widespread use of robots in production, advancements in artificial intelligence, the shift of production from factories to homes, and the ability to analyze big data have become possible.

The Industrial Revolution has brought about significant changes in one of the most crucial aspects of human life, namely work (Hopkins, 1982). Previously, work was considered as an activity carried out solely to meet daily needs, but after the Industrial Revolution in the 18th century, work underwent a significant transformation and became associated with regular employment and receiving wages in return (McClellan & Dorn, 2013). While people used to have control over the entire product they produced, after the Industrial Revolution, they are now required to focus only on a small component of the object produced on assembly lines. Similarly, individuals who previously had flexible working hours became bound to specific working and break hours. This work and lifestyle created a situation that is not in harmony with human nature, leading to a sense of alienation (Berkaş & Oraklıbel, 2021, p.8). However, individuals have a need to fully utilize their potential, develop their talents, and achieve self-fulfillment. When these needs are disregarded, unhappiness, alienation, and disconnection become inevitable (Toffler, 1974, pp.52-54).

The center of this change in the business environment revolves around management and the workforce. Taking positive steps towards productivity and happiness for the workplace and employees can be achieved through effective leadership. With this perspective, this article aims to summarize and analyze the concepts of paternalistic leadership and happiness at work in Turkish and Western literature, while drawing attention to the cultural paradox.

2. LITERATURE

2. 1. Transformations in Business Life and Happiness at Work

Prior to Industry 4.0, during the years 1970-1990, there were new laws, changes in taxation, and increased participation in international trade. The process of digitization began, with the establishment of Apple in 1976 and the use of the first microcomputer, leading to the automation of production through advancements in electronic and information technologies. During this period, as productivity increased, the number of blue-collar workers decreased, and jobs began to be largely performed through computer screens. As a result of the decrease in the share of labor costs in total production costs, Western companies have moved their factories from low-wage countries to their own countries in order to reduce transportation costs (Jensen, 1993). The change has continued; with the current era of Industry 4.0, many workplaces have become fully digitalized.

The concept of alienation was initially discussed by Jean Jacques Rousseau in a political context in the 18th century, and later, it was philosophically explored by Hegel and Marx in subsequent centuries. As a result of the Industrial Revolution, alienation of individuals from a lifestyle

aligned with human nature has emerged. It refers to the disruption of harmony between oneself and the world, rendering this relationship meaningless and devoid of value (Wood, 2017, pp. 64-67).

The alienation of employees from their work is a situation that separates them from the system and results in negative consequences (Jossa, 2013); one of these consequences is a decrease in job satisfaction. Organizational happiness is a valid concept for organizations where employees can experience happiness. According to Seppala (2016), one of the factors that influence organizational happiness is leadership. In organizations composed of happy individuals, productivity and collaboration are enhanced (Helliwell et al., 2017).

The formation of organizational outcomes is influenced by individuals' happiness levels and their behaviors (Joo & Lee, 2017). Studies have shown that happiness is a workplace-derived concept, and having happy employees leads to positive business outcomes such as increased productivity (Gregory, 2011). Besides, in Seligman's (2011) PERMA model, he suggests that there are measurable specific components of well-being and employee happiness. The PERMA model includes the concepts of positive emotions, engagement, meaning, positive relationships, and accomplishment. Besides, some studies examine the psychological states of happy and unhappy employees in the workplace. For example, a study reveals that unhappy individuals are more sensitive to potential risks, more defensive and cautious towards their colleagues, less optimistic, and less confident. On the other hand, happy employees are more sensitive to opportunities in their work environment, more outgoing and helpful towards their colleagues, and overall more optimistic and self-assured (Cropanzano & Wright, 2001, pp. 183-184).

2.2. Happiness at Work and Paternalistic Leadership

In Fapinyo's (2009) study, it was determined that there are five factors that contribute to and predict happiness at work. "Leadership" is one of the factors that contribute to happiness along with job inspiration, shared values within the organization, relationships, and the quality of work life. Besides, Chaiprasit & Santidhiraku (2011) studied about the happiness at the workplace and factors account for it. One of the factors account for happiness at the workplace is leadership. The leaders of the organizations promote and create happiness for employees when they work by creating motivation, awareness, and dedication.

In today's rapidly changing global environment, organizations require effective leaders who understand the complexities of the situation. When the task is well-structured and the leader maintains a good relationship with the employees, it leads to high effectiveness on the part of the employees (Nanjundeswaraswamy & Swamy, 2014, p.57).

The roots of paternalism as a management concept can be traced back to Max Weber's early works. Weber conceptualized paternalism as a form of legal authority. It is a developing research area in management literature, with relevant studies becoming more widespread since the late 1990s. However, there are differences of opinion regarding the definition and effectiveness of paternalistic practices (Pellegrini & Scandura, 2008).

The paternalistic leadership model represents a sweet-tough and fatherly style of leadership. This model combines strict discipline and authority with parental care and affection, where the leader is both authoritative and responsible for decision-making towards the followers (Şendoğdu & Erdirençelebi, 2014). While the leader expects loyalty and allegiance from the followers, the followers, on the other hand, expect benevolence, generosity, and reliability from their leader, viewing the workplace as a family-like environment. This relationship between the

leader and the followers is not merely a contractual agreement that exists solely within the work environment, as it resembles a family bond between a leader and their subordinates (Çıraklar et.al., 2016; Durmuş, 2016).

Studies have shown that the characteristics of paternalistic leadership are more prevalent in Eastern societies, which have a higher power distance compared to Western societies. Evidence from research suggests that the notion of paternalistic leadership is commonly observed in countries including China, Japan, Korea, Taiwan, India, Middle Eastern nations, and Latin America (Kılınç, 2018, p.3). Considering Turkey's historical, geographical, and widespread cultural values, it is known that Turkey is culturally closer to the Eastern culture rather than the West. Given that organizations within a society with a paternalistic culture, it is important to investigate the concept of paternalistic leadership in the context of business management in Turkey (Köksal, 2011, pp. 101-102).

2.3. In the Cultural Context, Workplace Happiness and Paternalistic Leadership

The leader's behaviors affect the workplace happiness of employees. When examining managerial perspectives based on cultural characteristics in the literature, it is observed that research on leadership models in Western societies is widespread, while studies reflecting the cultural characteristics of Eastern societies are limited (Çıraklar et al., 2016, p.73).

The approach of paternalistic leadership has emerged from the recognition that nations' unique lifestyles, practices, and cultural elements influence their understanding of leadership (Farh & Cheng, 2000, p.84). This perspective is widely accepted today, suggesting that leadership can vary from society to society and from culture to culture.

The leader exhibiting positive behaviors towards employees creates positive effects on them emotionally, cognitively, and attitudinally. On the other hand, the notion that paternalistic leadership differs according to culture may stem from its negative effects. Karsu Cesur et.al. (2019, p.95) emphasized that in paternalistic leadership, the relationship between the leader and the subordinate can resemble a parent-child relationship, which implies an inequality because the father and the child do not have equal conditions and there are significant differences in terms of rights. As expressed by Western researchers, it does not imply "voluntary-based exploitation." This is because the leader stays within ethical boundaries and does not misuse their power over the followers or their position, unlike negative examples. Employees exhibit compliance behavior because they know that their leaders do not act selfishly in decision-making, but consider the common good and do not pursue their own interests. Therefore, it would not be correct to evaluate this as a form of exploitation.

The issue of benevolence mentioned in paternalistic leadership is one of the most criticized aspects of this leadership style. As Köksal (2011, p.106) pointed out, in a paternalistic relationship, both parties generally display benevolence, but this behavior can sometimes be driven by self-interest. For example, the leader may exhibit benevolence towards their followers while actually serving their own managerial interests. On the other hand, followers may have a tendency to assist the leader due to their expectations and dependence on them.

Some researchers have discussed the aspect of benevolence in paternalistic leadership compared to transformational leadership. From this perspective, in paternalistic leadership, similar to transformational leadership, there is a focus on considering and assisting subordinates. However, it is believed that while a transformational leader inspires followers

with charisma and intellectual stimulation, a paternalistic leader exerts authority, control, and creates an image over their followers (Erben & Güneşer, 2008, p.958).

Additionally, there are researchers who find it appropriate to examine paternalistic leadership in terms of dimensions. For example, according to Oh's (2016) classification: Benevolent paternalism, in contrast to strict paternalism, acknowledges that individuals are free in their own matters. The aim of benevolent paternalism is not to make individuals conform to the majority; it is about providing individuals with "knowledge" about what is best for them. Having access to this knowledge generally contributes to individuals' happiness in their daily lives and work.

Moreover, Farh & Cheng (2000), who critically reviewed the literature, identified three elements of paternalistic leadership: authoritarianism, benevolence, and moral leadership. They examined the cultural roots of each element in Chinese society and their relevance to organizations. In this context, authoritarian leadership is concerned with the followers' compliance with the decisions made by an authoritative figure, believing that it is in their own interest. Benevolent leadership, as stated, refers to the personal and inclusive paternalistic leader behavior exhibited for the well-being and welfare of employees. Moral leadership is defined in relation to employees' perceptions of the leader's honesty and ethical values. Besides, Aycan (2006) has classified paternalistic leadership into benevolent paternalistic leadership and exploitative paternalistic leadership. In benevolent paternalism, leaders demonstrate their good intentions towards employees, and employees respond positively by exhibiting commitment and loyalty towards the work and the organization. On the other hand, exploitative paternalism involves leaders sometimes expecting compliance from employees in an authoritarian manner. In the face of authoritarian leadership, the loyalty and obedience of subordinates are reluctant and often based on fear.

As Koçel (2018, p. 601) summarized that the studies conducted in different regions of the world and diverse cultures indicate that the impact of leadership behavior on employee well-being is universal. However, different samples and contexts may require certain leadership characteristics to be more prominent. The fundamental principle of the situational approach emphasizes the importance of not only the leader's traits but also the follower characteristics and the context in leadership.

3. RESEARCH QUESTION

The common definition of leadership can be said to lack consensus. It is observed that the topic of leadership draws upon different thought systems as researchers from various social science fields such as psychology, sociology, political science, history, and management contribute to the subject (Karademir, 2021, p.4). Over the past 60 years, 65 different classification systems have been developed to define the dimensions of leadership (Fleishman et al., 1991). Some have defined leadership in terms of power relations between leaders and followers, suggesting that leaders possess the power to bring about change in others. Others view leadership as a transformative process that motivates followers to achieve more than expected. Finally, some researchers evaluate leadership from a skills perspective and emphasize the abilities that make effective leadership possible. The definitions of leadership are seen to fundamentally encompass the following four points (Northouse, 2021): Leadership is a process, involves influence, occurs within groups, and entails shared goals.

In distinguishing leadership as an organizational variable from the concept of management, it is emphasized as a process of influence (Bennis et.al., 2007). Creating such an impact requires interpreting organizational or individual behavior in conjunction with societal changes and transformations, and how the organization is sociologically affected. Thus, it can be concluded that leadership is influenced not only by organizational or individual variables but also by societal variables. This implies that leadership needs to be examined broadly within the scope of both the type and structure of the organization and the society it operates in, considering the changes and transformations it undergoes. In this context, it is important to consider the implications of technological changes along with the leadership perspective.

Organizational employees are not merely obligated as task performers but are individuals with emotional and cognitive perceptions. When they perceive themselves as such, they develop a sense of gratitude towards the organization they work for, which in turn increases their well-being and happiness (Fredrickson, 1998). The presence of happy employees is directly associated with the concept of happy organizations (Simmons, 2014), emphasizing the significance of employees feeling happy in the workplace.

Because of the cultural paradox, the impact of paternalistic leadership is perceived as positive in certain organizational cultures and negative in others. Indeed, this situation can be considered valid in terms of happiness as well. In this framework, the research question is "Does the impact of paternalistic leadership on employee happiness in the workplace vary across different cultural contexts?"

4. METHOD

In this study, a literature review was conducted to examine the concepts of paternalistic leadership and workplace happiness in both Turkish and Western literature. Considering the cultural paradox, the impact of paternalistic leadership, which is viewed positively in certain organizational cultures and negatively in others, was critically evaluated in terms of its effects on the organization, employees, and leaders from the perspective of happiness.

5. SOME KEY FINDINGS IN THE LITERATURE REVIEW

The literature review conducted to examine the concepts of paternalistic leadership and workplace happiness in both Turkish and Western literature, considering the cultural paradox, revealed the following key findings:

1-Critiques of paternalistic leadership can be summarized in three main categories: negative effects of this leadership style, the issue of uncertainty, and the concept of altruism. It can be summarised as:

- In paternalistic leadership, the relationship between the leader and the follower can resemble a parent-child relationship, which can imply an inequality because the father and child do not have equal conditions and there are significant differences in terms of rights (Karsu Cesur et.al., 2019).
- There are various reflections of paternalism in moral, political, and social aspects. The views of John Stuart Mill, a prominent figure in philosophical radicalism and utilitarian thought, stand out in the context of paternalism.

Paternalism, in its broadest sense, refers to intervening in someone's affairs without their consent. Here, there is uncertainty: Mill's bridge example... It is the fundamental duty of public authorities to warn people in the face of accidents. If an official observes someone attempting to cross a bridge that has been definitively determined as dangerous, but there was no time to inform the person beforehand, the outcome can be evaluated in two ways... However, it is not always easy to distinguish between what is certain and what is probable in terms of harm (Öztürk, 2021).

- In a paternalistic relationship, the parties involved often display acts of benevolence, but this behavior can be driven by self-interest. For example, a leader may show benevolence towards their followers with the aim of serving their own managerial interests. On the other hand, followers may have a tendency to assist the leader due to their expectations.

As a solution, a classification approach can be used instead of a single scope. For instance, Farh and Cheng (2000) identified three elements: authoritarianism, benevolence, and moral leadership.

2- Cultural Variations in Perception: There are cultural variations in the perception and acceptance of paternalistic leadership. Recent studies on the topic have revealed contrasting findings compared to previous periods and have generated new recommendations. Unlike studies conducted before, new research has indicated that paternalistic leadership, as an emerging non-Western theory, is more commonly endorsed in societies characterized by high power distance and collectivism. However, the ambiguous nature of paternalistic leadership necessitates a deeper understanding of its acceptance across different cultures (Mansur, et.al., 2017). In Western cultures, more emphasis is placed on individual autonomy and empowerment, which may lead to a less favorable view of paternalistic leadership. In Turkish culture, however, there is a greater acceptance and appreciation for leaders who exhibit paternalistic behaviors, such as providing guidance and support to subordinates.

3- Positive Impact on Happiness: Paternalistic leadership has been found to have a positive impact on happiness. The benevolent and supportive aspects of paternalistic leadership contribute to a positive work environment, fostering trust, loyalty, and a sense of belonging among employees.

4- It is determined that the key factors in studies on workplace happiness are pay, rewards, workplace environment, and leadership. And, in researches on happiness and its outcomes, factors such as motivation, performance, job satisfaction, commitment, and intention to stay have been identified.

The "Leader characteristics preferred by employees for happiness" studies have been found to be related to the following aspects: result and solution orientation, trustworthiness, positive communication, empowerment and involvement of employees, support and fostering of employee development, provision of positive feedback and rewards, having a vision, and showing individual attention to employees.

Studies on "The effects of paternalistic leadership approach in promoting workplace happiness" have highlighted the following factors: care and support, emotional commitment, trust and stability, and career development.

6. CONCLUSION AND RECOMMENDATIONS

Studies conducted in different cultures indicate that leadership behavior has a universal impact on employee happiness. The leadership styles commonly associated with happiness are considered positive leadership approaches. Paternalistic leadership, on the other hand, is observed to be preferred in studies that take cultural context into account.

It would be a generalization to say that paternalism is more widely accepted in Eastern literature compared to the West. Each culture has its unique dynamics and values, and attitudes towards leadership approaches can vary based on these factors. The notion that leadership can vary from society to society and from culture to culture is becoming widespread. It is believed that societies are more likely to embrace leaders who are closer to their cultural style, and the same may apply to organizations as well. Paternalism can be viewed as a concept that encompasses different classifications tailored to each culture, rather than being perceived as a one-dimensional critique.

When considering the existing criticisms in the literature, paternalistic leadership can enhance workplace happiness but also carries certain risks. Like any leadership approach, its effects and outcomes can vary depending on the dynamics of the work environment and the preferences of the employees.

In Turkey, there are several centers and programs in the fields of Business, Management, and Social Sciences that focus on leadership and culture research. These centers and programs can be further developed in terms of quantity and quality. Instead of addressing these broad topics in a general sense, establishing specific areas of expertise can provide significant contributions. Taking a multidimensional approach and adopting an interdisciplinary perspective will contribute to the understanding of this leadership style.

Over time, changes and different perspectives have been emerged in literature. Especially with globalization and technology, new generations may have different views and criticisms regarding paternalism. In this context, further studies can be conducted to explore these perspectives.

“Kendini Kopyalamak”: Türk Yükseköğretim Sisteminde Mülteci Akademisyenler Vakası

Prof. Dr. Mehmet ERYILMAZ

Bursa Uludağ Üniversitesi

mehmetery@uludag.edu.tr

ORCID: 0000-0002-8851-0771

ÖZET

“Yeni Kurumsal Kuram (YKK)”ın temel merakı “örgütlerin neden birbirlerine bu denli benzedikleri”dir. Bu bağlamda YKK; muhtelif eş biçimlenme mekanizmalarından bahsetmektedir. YKK örgütlerin zaman zaman, belirsizlik ortamında, meşruiyet bahşeden aktörler nezdinde meşruiyet kazanma ve belirsizliği bir nebze olsun hafifletme arzusuyla birbirlerini taklit edebildiklerini ortaya koymuştur. Bu eş biçimlenme mekanizması YKK yazınında “öykünmecî eşbiçimlenme” olarak adlandırılmıştır. Öte yandan örgütler, kimi zaman kendi geçmişlerinde, başarılı olduğuna inandıkları bazı uygulamaları da tekrarlayabilmektedirler. Bu çalışma da, Türk Yükseköğretim sisteminin, geçmişte başarılı olarak kabul edilmiş bir uygulamasını kısmi olarak tekrarlaması örneği üzerine kurgulanmıştır. Cumhuriyetin ilk yıllarında, Almanya’dan, “Nasyonal Sosyalizm”in yükselişe geçmesiyle birlikte ayrılmaya niyetlenmiş öğretim üyeleri, genç Türkiye Cumhuriyeti’ne davet edilmiştir. Benzer biçimde, son dönemde patlak veren Rusya-Ukrayna savaşı sonrasında, “Yükseköğretim Kurulu (YÖK)”nun Ukrayna vatandaşı akademisyenlerin Türkiye’de araştırma üniversitesi niteliğindeki devlet üniversitelerinde “yabancı uyruklu sözleşmeli öğretim elemanı” olarak çalıştırılabilmeleri için imkan sağlanacağına yönelik bir duyurusu olmuştur. Dolayısıyla, Türk yükseköğretim sistemi geçmişteki başarılı uygulamalarından birini kopyalıyor gibi görünmektedir. Bu vakanın, mevcut kendini kopyalayan örgütler yazınına, kopyalanmanın amacını ve düzeyini farklılaştırmak suretiyle, muhtelif katkılar sağlayabileceği umulmaktadır.

Anahtar Kelimeler: Kendini Kopyalamak, Rekabet Avantajı, Yüksek Öğretim, Mülteci Akademisyenler

Replicating The “Self”: The Case of Refugee Scholars in Turkish Higher Education System

ABSTRACT

The main question of “New Institutional Organization Theory (NIOT)” is “why are organizations so similar to each other?”. NIOT names this high similarity among organizations as “isomorphism” and endeavours to understand the mechanisms behind isomorphism. According to NIOT; in uncertain environments, some organizations may mimic other leading organizations to reduce uncertainty and gain legitimacy in the eyes of actors who bestow this legitimacy. This mechanism of legitimacy is named as “mimetic isomorphism” by scholars of NIOT. However, organizations may mimic their own past practices that they perceive as successful one. This study is based on a case that Turkish Higher Education System mimics its’ one of the past, successful practices. During the first years of the young Turkish Republic, with the rise of National Socialists in Germany, many German scholars who felt uncomfortable themselves were invited to Turkey by the government. After many decades, the Turkish government invited Ukrainian scholars to Turkey for this time who were forced by the Russia-Ukraine war to leave their country. The Council of Higher Education (YÖK) of Turkey announced that 20 public research university in Turkey can employ Ukrainian scholars with status of “foreign national contractual instructors”. Therefore, the Turkish Higher Education System seems to replicate its one of the past practices. According to the author of this study, the case can contribute the literature of automorphism by differentiating the reason and level of it.

Keywords: Replication of “Self”, Competitive Advantage, Higher Education, Refugee Scholars.

GİRİŞ

Örgütler sıklıkla hem teknik hem de kurumsal çevrelerinden baskıların geldiği bir ortamda faaliyet göstermektedirler. Kurumsal çevre boyutunda örgütler, meşruiyet bahşeden örgütlerin onayını alabilmek adına eşbiçimlenmeye gidebilmektedirler. Öte yandan, “Yeni Kurumsal Kuram (YKK)”ın ele almadığı, çevresel belirsizlikle mücadele stratejilerinden bir tanesi de örgütlerin geçmişte sonuç verdiği, başarılı olduğuna kanaat getirdikleri davranışlarını tekrarlamalarıdır.

Bu çalışma da Türk yükseköğretim sisteminin kendisini kopyalama vakası üzerine inşa edilmiştir. Türk yükseköğretim sistemi bundan yaklaşık 90 sene önce yükseköğretim kurumlarındaki eğitim kalitesini arttırmak ve kadrolardaki boşlukları takviye etmek amacıyla yurt dışından, yabancı öğretim üyelerini ülkeye davet etmiş ve izlenen bu stratejiden büyük ölçüde müspet sonuçlar alınmıştır. Aradan geçen 90 sene sonrasında, “Yükseköğretim Kurulu (YÖK)” benzer bir stratejiyi hayata geçirmiş ve ülkeleri savaş halinde olan öğretim üyelerini hem insanlık namına hem de üniversitelerinin performansını bir adım ileriye taşıyabilmek adına Türkiye’ye davet etmiştir. Bir anlamda Türk yükseköğretim sistemi hafızasına yer etmiş bir başarı tecrübesini, benzer şartlar oluştuğunda yineleme yoluna gitmiştir.

Çalışmanın yazına bazı mütevazi katkılarının olabileceğine inanılmaktadır. Her şeyden önce, ulusal yazında pek de rastlanmayan bir kavram olan “kendini kopyalama” kavramı ulusal yazına kazandırılmış olacaktır. İkincisi; aşağıda da ifade edildiği gibi, “kendini kopyalama” davranışı daha ziyade bireysel örgüt düzeyinde ve meşruiyet kazanma kaygısıyla izlenen bir strateji olarak ele alınmıştır. Öte yandan; bu çalışmada daha ziyade sistemik düzeyde ve rekabet kazanma maksadıyla gerçekleştirilen bir kopyalanma vakası ele alınmaktadır.

Çalışmada öncelikle “kendini kopyalama” kavramına netlik kazandırılmaya çalışılacaktır. Ardından, çalışmanın üzerine kurgulandığı vakanın ayrıntılarından bahsedilecektir. Çalışma sonuç kısmı ile nihayete erdirilecektir.

1. ÖRGÜTLERDE KENDİNİ KOPYALAMA DAVRANIŞI

“Yeni Kurumsal Kuram (YKK)”nın temelde merak ettiği husus “aynı örgütsel alanlarda faaliyet gösteren örgütlerin neden birbirlerine bu denli benzedikleri”dir. Bilindiği gibi DiMaggio ve Powell (1983) bu durumu “eşbiçimlenme (isomorphism)” olarak adlandırdıkları bir fenomenle açıklamaktadırlar. Yazarlara göre örgütler zaman zaman güç sahibi aktörlerin zorlayıcı baskıları nedeniyle eşbiçimlenme davranışı gösterebilmektedirler. Örgütlerin üst yönetim kadrolarını oluşturan yöneticilerin geçmişte eğitim süreçlerinde ideal örgüt davranışının ne olduğuna dair öğrendikleri de normatif eşbiçimlenmeye vesile olabilmektedir. Son olarak, örgütler bir belirsizlik anında, ne yapacaklarını bilemez durumda olduklarında, kendilerine referans aldıkları örgütleri göz ucuyla takip ederek, onların davranışlarını kopyalayabilirler, bir diğer ifadeyle “öykünmecî eşbiçimlenme” yaşayabilirler.

Öte yandan, YKK yazınında çok fazla telaffuz edilmeyen bir görüşe göre örgütler; geçmişte başarılı olmuş, meşruiyet bahşeden aktörlerin nezdinde kendilerine meşruiyet sağlayan davranışlarını tekrarlayabilirler. Bu manada, kendini kopyalama da bir belirsizlikle başa çıkma stratejisi olarak örgütler tarafından tercih edilebilmektedir. “Kendini kopyalama” davranışının yazına Schwartz tarafından 1997 yılında yapılan bir çalışma ile kazandırıldığı bilinmektedir. Öte yandan burada dikkat edilmesi gereken bir diğer kavram da “çeviri”dir (Czarniawska ve Sevón, 1996; Pipan ve Czarniawska, 2012). Örgütler kendilerini kopyalabilirler ancak bu hiçbir zaman birebir kopyalanma şeklinde olmayacaktır. Çünkü çeviri kavramına göre bilgi mekansal ve zamansal seyahati esnasında muhakkak bazı değişimlere uğramaktadır. Bu değişimlerin kimi bilgiyi taşıyan aktörlerin bilinçli çabalarının neticesinde, kimileri bilginin eksik, fazla ya da yanlış yorumlanması neticesinde vb. gerçekleşmektedir. Haliyle, daha önce başarılı bir örgüt pratiği, aradan geçen zamana ve değişen şartlara/bağlama göre bir çeviri işlemine uğrayacaktır. Bu bağlamda, örgütün önceki ve sonraki davranışı mühim ölçüde birbirine benzerlikler göstermekle birlikte, daha yakından bakıldığında sonraki davranışın öncekinin bağlama göre çeviriye uğramış hali olduğu göze çarpacaktır (Strannegård, 2000; Czarniawska 2002; Schwartz, 2009).

2. TÜRK YÜKSEKÖĞRETİM SİSTEMİNDE MÜLTECİ AKADEMİSYENLER

Göçler çağımızın bir gerçeğidir. Nitekim; bazı düşünürler içinde bulunduğumuz çağı göç çağı olarak adlandırmaktadırlar. Gerçekleşen göçler, ülkeleri ve o ülkedeki tüm unsurları menfi ve müspet yönde etkileyebilmektedir. Türkiye Cumhuriyeti de göç fenomenini muhtelif vesilelerle derinden idrak eden/etmek zorunda kalan bir ülke olmuştur.

Türkiye Cumhuriyeti’nin kuruluşunun ardından, ülkenin bir çok noktasında olduğu gibi eğitim sisteminde de köklü bazı değişiklikler yapılmasının gerektiği anlaşılmıştır. Yükseköğretim sisteminde yapılması planlanan reform kapsamında, 1933 yılında “Darülfünun” kapatılmış ve yerine “İstanbul Üniversitesi (İÜ)” açılmıştır. Öte yandan, sistemdeki değişim, isim değişikliğinin ötesinde, bazı mühim değişiklikleri gerektirmektedir. Örneğin Darülfünun’un İÜ adıyla modern bir üniversiteye dönüştürülme arzusuyla birlikte, yeni öğretim üyesi kadrolarına ihtiyaç hasıl olmuştur. Çünkü mevcut Darülfünun kadrolarıyla çağın gereklerine uygun bir eğitimin verilmesinin çok da mümkün olmadığına kanaat getirilmiştir. Öte yandan, ülkenin o dönem mevcut insan kaynaklarının bu kadroları doldurmak için maalesef yeterli olmadığı anlaşılmış ve alternatif çözüm arayışlarına girilmiştir. Bir fırsat faktörü olarak, o dönem Almanya’da Nasyonel Sosyalizm’in yükselişe geçişiyle birlikte bazı Alman öğretim üyeleri bu durumdan rahatsız olarak, kendilerine bilimsel çalışmalarını sürdürebilecekleri yeni vatan arayışına girmişlerdir. Nitekim İsviçre’de Philip Schwartz liderliğinde bir oluşuma gidilerek bahsi geçen profesörlere bilimlerini icra edebilecekleri toprakları bulma çalışmaları bir teşkilat altında daha sistematik hale getirilmiştir. Yüce önder Mustafa Kemal Atatürk’ün yükseköğretim sistemindeki öğretim üyesi açığına yönelik çözüm arayışında olduğunu duyan Schwartz bir listeyle Atatürk’e başvurmuştur. Yapılan görüşmeler neticesinde Albert Malche

(tıp), Alfred Heillbron (botanik), Alfred Kantorowicz (dişçilik), Bruno Taut (mimarlık), Clemens Bosch (arkeoloji), Curt Kosswig (zooloji), Erich Auerbach (edebiyat), Ernst Hirsch (hukuk), Fritz Neumark (ekonomi), Helmut Ritter (oryantalizm), Kurt Zuber (deneysel fizik), Richard von Mises (matematik), Walter Kranz (Yunan filolojisi ve felsefe tarihi) gibi, bir çoğu alanlarında otorite olarak görülen öğretim üyelerinin Türkiye'ye gelmeleri temin edilmiştir. Oluşturulan kadro Türk yükseköğretim sistemine müthiş katkılar yapmış gibi görünmektedir (Livaneli, 2011; Şengör, 2014). Nitekim o dönemde bir rivayete göre "İkinci Dünya Savaşı sırasında en iyi Alman üniversitesi İstanbul Üniversitesi'dir" ifadesi ilgili çevrelerde sık sık zikrediliyordu (Şengör, 2014: 85).

Türk yükseköğretim sistemi için benzer bir gelişme, ilkinden yaklaşık 90 sene sonra tekrar, yakın zamanda ortaya çıkmıştır. Rusya ve Ukrayna arasındaki savaşın fitili 2014 yılında, Rusya'nın Kırım'ın ilhakı ile ateşlenmiş görünmektedir. Sonrasında Donbass Savaşı ile gerilim iyice artmıştır. Şubat 2022 tarihinde, parlamentonun onayını alan Putin, Ukrayna'ya bir operasyon düzenleneceğini deklare etmiş ve iki ülke arasındaki savaş bilfiil başlamıştır. Bu açıklamanın hemen akabinde, YÖK Başkanı Prof.Dr. Erol Özvar'ın savaş nedeniyle bilimsel faaliyetlerini yerine getiremeyen Ukraynalı öğretim üyelerine bazı imkanlar sağlanması yönünde çalışmalar yapılacağını duyurmuştur:

"Sadece Türk ve uluslararası öğrenciler değil aynı zamanda uluslararası çapta ün sahibi olan, ilmi faaliyetleri belirli bir seviyenin üzerine çıkmış, gayretli uluslararası öğretim üyeleri, bilim insanlarına da kapımızın açık olduğunu ifade etmek isterim. *Türkiye Cumhuriyeti, kurulduğu andan itibaren* ilmi faaliyeti yerine getiren, muhtelif alanlarda uzman olmuş *bilim insanlarına her daim kapılarını açmıştır*. Biz de YÖK olarak sadece öğrencilere değil, öğretim elemanlarına, bilim insanlarına, kadın-erkek fark etmez, kapılarımızı açıyoruz. *Ülkemizin bilimsel ve teknolojik gelişmesine, iktisadi kalkınmasına, evrensel bilgi birikimine katkı yapabilecek her türlü uluslararası bilim insanına kapımızın açık olduğunu*, onlarla iş birliği yapmak istediğimizi bütün kamuoyuyla paylaşmak isterim...Şu anda ülkemizde yüzlerce yabancı uyruklu bilim insanı, aktif olarak Türkiye'nin bilgi birikimine, üniversite eğitimine, öğrencilerin yetişmesine katkı sağlamaktadır. *Ukrayna'dan veya başka bir ülkeden güvenli bir liman arayan, huzur içerisinde bilimsel faaliyetlerine devam etmek isteyen bütün bilim insanlarına kapılarımızın açık olduğunu, Türkiye'de mutlu olabileceklerini ifade etmek isteriz.*" (Haktanıyan ve Kasap, 2022).

YÖK Başkanı Erol Özvar'ın bu açıklamasında bazı noktalar dikkat çekici gibi görünmektedir. İlki, Türkiye Cumhuriyeti'nin daha ilk yıllarından itibaren başka ülkelere kendisine gelmiş olan akademisyenlere kapısının her daim açık olduğu vurgusudur. Bu ifade YÖK'ün hafızasında hala Alman akademisyenlere yapılan ev sahipliğinin izlerinin taze olduğuna işaret etmektedir. İkincisi, yükseköğretim sisteminin yabancı akademisyenlere ev sahipliği yapmasının arkasında, insani faktörlere ilaveten, bu öğretim üyelerinin ülkenin bilimsel, teknolojik ve ekonomik gelişimine katkı yapacakları beklentisi de vardır.

Nitekim YÖK Başkanının açıklamasını takiben, Mart 2022’de YÖK, Türkiye’de araştırma üniversitesi statüsündeki 20 devlet üniversitesinde, başvuru yapan Ukraynalı öğretim üyelerinin “yabancı uyruklu sözleşmeli öğretim elemanı” statüsünde istihdam edilebileceğine yönelik kararı yayınlanmıştır. Özellikle, mühendislik, nükleer fizik, tıp, veterinerlik vb. alanında mühim bir bilgi birikimi olan Ukraynalı akademisyenlerin istihdam edilecekleri üniversitelerin performanslarına mühim katkılarının olacağı düşünülmektedir (Bursa Hakimiyet, 2022).

Bu kapsamda, YÖK’ün de teşvikleri doğrultusunda, Ukraynalı akademisyenlere yönelik ilk çağrının İstanbul Üniversitesi’nden bazı fakültelerin ayrılması ile 2018 yılında kurulan İstanbul Üniversitesi – Cerrahpaşa tarafından yapılmış olması dikkate şayandır. Çünkü bahsi geçen üniversite, bundan yaklaşık 90 sene önce, İstanbul Üniversitesi adıyla benzer bir deneyim yaşamış ve bu süreçten oldukça müspet biçimde faydalanmıştır. Dolayısıyla, İstanbul Üniversitesi - Cerrahpaşa kurumsal hafızasında tuttuğu başarılı bir pratiği, günün şartlarına göre modifiye ederek tekrar hayata geçirmeye niyetlenmiş gibi görünmektedir. Üniversite bu davranışını meşruiyet kazanma arzusundan ziyade, büyük ölçüde rekabet gücünü arttırmak amacıyla bir hamle olarak yapmış gibi de görünmektedir. İlâveten, bir istatistiğe göre, 2022 yılının Mart ayının sonlarında Türkiye’ye sığınmış 55 Ukraynalı sığınmacı akademisyen bulunmaktadır (Çakmakçı, 2022).

SONUÇ

Bu çalışmada bir sistemin “kendini kopyalama” davranışı ele alınmaktadır. Türk yükseköğretim sistemi geçmişte başarı ile tatbik ettiği, yabancı uyruklu mülteci akademisyenleri sisteme entegre etme davranışını kurumsal hafızasında tutarak tekrarlar gibi görünmektedir.

Bu çalışmanın mevcut “kendini kopyalama” yazınından bazı farklılıkları mevcuttur. Birincisi, mevcut yazın bireysel örgütler üzerinden kavramı ele alırken, bu çalışmada bir sistemin kendini kopyalama vakası ele alınmıştır. İkincisi, kendini kopyalama yazını ağırlıklı olarak bu davranışın örgütlerce meşruiyet kazanma arzusu ile sergilendiğine vurgu yapmaktadır. Öte yandan bu çalışmada kopyalamanın arkasındaki ana gayenin yükseköğretim sisteminin rekabet gücünü arttırmak olduğunu söylemek mümkün gibi görünmektedir.

ABSTRACT

Globalization in general was quite a famous word in the world. Globalization means the increasing interdependence and interconnected of Societies, Cultures, and of course Economies. That means it is easier to move across borders for free. The impact of Globalization on the world supply chain is significant, it increased complexity, and companies sourced their raw material, product, and parts from other countries and regions, and hence company like A.P Moller – Maersk AS was established and are today positioned as one of the biggest Sea Freight Carrier Company. The year 2020-2021 was the most challenging period for almost most businesses around the world, most businesses faced a significant drop in revenues, negative profitability, and what were worst many employees getting laid off as the impact of the Covid-19 Pandemic phenomena that never happened before, despite of that situation, the Sea Freight Carrier was experienced the opposite, there is significant growth in the revenue which impacted to the rose of their profitability margin.

Keywords: Financial Performance Analysis, Financial Ratio, Revenue Growth

INTRODUCTION

A.P. Møller – Mærsk AS, also known simply as Maersk, is a Danish shipping and logistics company founded in 1904 by Peter Mærsk Møller and Arnold Peter Møller. Maersk's business activities include shipping, port operation, supply chain management, and warehousing (Wikipedia, 2023)

A.P. Moller - Maersk AS (APMM) is a provider of transportation and logistics services. It operates shipping containers and ports through subsidiaries and affiliates. The company transports dry, refrigerated, and special cargo, conducts used container sales, and supports intermodal transport. APMM's key brands include Maersk Line, Damco, APM Terminals, Svitzer, Twill, Sealand, Hamburg Sud, Alianca, Maersk Container Industry, and Maersk Training. The company also manufactures dry containers and refrigerated containers. APMM serves energy, shipbuilding, retail, logistics, and manufacturing industries. The company has a presence in North America, Europe, the Middle East and Africa, and Asia-Pacific. APMM is headquartered in Copenhagen, Denmark. (GlobalData., 2023)

In the year of 2019, the Ocean Freight schedule reliability was above 75%, it was declining sharply when it comes to 2020 to below 50%, and it was becoming worst in the year of 2021, almost reaching 30% as the lowest point. In the year 2022, the trend was bouncing up back to a score above 55%

Despite the decline of the reliability score, the ocean freight carrier operation margin showed the other way around, it was only a single-digit percentage before 2019, becoming above 50% in the year 2021, rocketing high within the last 5 years.

LITERATURE REVIEW

Ocean Carrier

Ocean Carrier means the vessel operating carrier(s) (including the vessel or her owners) participating in the ocean transportation of Goods between ports of different countries (Insider, 2023)

Ocean Carrier Alliance

Figure 1: Ocean Carrier Alliances (DHL, 2023)

6th International CEO Communication, Economics, Organization & Social Sciences Congress

Over recent decades, the container shipping sector has seen a continuous process of consolidation and restructuring of relationships. This has included: horizontal consolidation, through mergers and acquisitions; vertical integration, through carriers investing in terminal operations and other logistics services; and strategic cooperation agreements in the form of carrier consortia and alliances. Over recent decades, the container shipping sector has seen a continuous process of consolidation and restructuring of relationships. This has included: horizontal consolidation, through mergers and acquisitions; vertical integration, through carriers investing in terminal operations and other logistics services; and strategic cooperation agreements in the form of carrier consortia and alliances. The largest carrier in 2022 was MSC with 17.3 percent of the market, followed by APM-Maersk (16.5), CMA CGM group (12.7), and COSCO Group (11.2). The fifth-largest, Hapag-Lloyd, had 6.8 percent (UNCTAD, 2022)

Sea Freight

Sea Freight is a method of transporting large amounts of goods using carrier ships. Goods are packed into containers and then loaded onto a vessel. A typical cargo ship can carry around 18,000 containers, which means that sea freight is a cost-efficient way to transport high quantities over large distances (SupplyChainDigital, 2020)

Type Of Containers

20FT DC

The 20ft DC container is a popular shipping option for dry cargo. It's standardized, made from steel or aluminum, and water-resistant so it can protect your contents during transport. Average Price: The average price of a 20ft DC is US\$815 (Container-Xchange, 2022).

40FT DC

The 40ft DC container is the go-to if you need a safe way to transport your pallets. These standardized containers can take nearly 20 standard European Pallets (in one tier). People are even trading specific cargo such as clothes in these boxes. Average Price: The average price of a 40ft DC container is US\$1,123 (Container-Xchange, 2022)

40FT HC

The world of shipping has seen a lot of changes since the introduction of 40ft high-cube containers (HC). These cargo boxes were created to replace older models that could only hold around 10% more material due to their larger size and weight limitations. The newer design is much simpler. It's making things easier for loading or unloading. It just depends on where you're located within your port facility – making this type perfect if there's limited space nearby. Nowadays people prefer using these lighter-weight alternatives because they're less cumbersome while still allowing us all necessary transportation.

Average Price: The average price of a 40ft HC container is US\$2,560. (Container-Xchange, 2022)

Ocean Carrier Schedule Reliability

Schedule Reliability is a collection of market data that shows the sailing reliability of carriers globally (Xeneta, 2022)

Financial Statement Analysis

Three basic financial statements are the balance sheet, the income statement, and the cash flow statement. That information will be used for the analysis. All analyses involve comparisons, which is what makes them meaningful

Return on investment (ROI) is broadly defined as net income divided by investment. The term investment is used in three different senses in financial analysis, thus giving three different ROI ratios: return on assets, return on owners' equity, and return on invested capital. (Robert N. Anthony, 2012)

RESEARCH METHOD

Descriptive financial ratio analysis is the research method. The data are taken from the published Annual Report 2022 of A.P. Møller – Mærsk AS.

Table 1: Ratio Formula (Robert N. Anthony, 2012)

Name of Ratio	Formula	State Results as
Overall Performance Measures		
1. Price/earnings ratio	$\frac{\text{Market price per share}}{\text{Net income per share}}$	Times
2. Return on assets	$\frac{\text{Net income} + \text{Interest} (1 - \text{Tax rate})}{\text{Total assets}}$	Percent
3. Return on invested capital	$\frac{\text{Net income} + \text{Interest} (1 - \text{Tax rate})}{\text{Long-term liabilities} + \text{Shareholders' equity}}$	Percent
4. Return on shareholders' equity	$\frac{\text{Net income}}{\text{Shareholders' equity}}$	Percent
Profitability Measures		
5. Gross margin percentage	$\frac{\text{Gross margin}}{\text{Net sales revenues}}$	Percent
6. Profit margin	$\frac{\text{Net income}}{\text{Net sales revenues}}$	Percent
7. Earnings per share	$\frac{\text{Net income}}{\text{No. shares outstanding}}$	Dollars
8. Cash Realization	$\frac{\text{Cash generated by operations}}{\text{Net income}}$	Times

Analysts are also interested in the growth rate of certain key items such as sales, net income, and earnings per share. These rates are often compared with the rate of inflation to see if the company is keeping pace with inflation or experiencing real growth. Common growth rate calculations include average growth rate and compound growth rate. Both involve looking at information over a period of years, typically 5 or 10. (Robert N. Anthony, 2012)

Return on Invested Capital (ROIC)

Invested capital (also called **permanent capital**) is equal to noncurrent liabilities plus shareholder's equity and hence represents the funds entrusted to the firm for relatively long

6th International CEO Communication, Economics, Organization & Social Sciences Congress

periods. ROIC focuses on the use of this permanent capital. It is presumed that the current liabilities will fluctuate more or less automatically with changes in current assets and that both will vary with the level of current operations. (Robert N. Anthony, 2012)

Invested capital is also equal to working capital plus noncurrent assets. This equivalency points out that the owners and long-term creditors of the firm must in effect finance the plant and equipment, other long-term assets of the firm, and the portion of current assets not financed by current liabilities. (Robert N. Anthony, 2012)

$$\text{Return on invested capital} = \frac{\text{Net income} + \text{Interest} (1 - \text{Tax rate})}{\text{Long-term liabilities} + \text{Shareholders' equity}}$$

Price/Earnings Ratio

The broadest and mostly used overall measure of performance is the **price/earnings** or **P/E, ratio**:

$$\frac{\text{Market price per share}}{\text{Net income per share}}$$

This measure involves an amount not directly controlled by the company: the market price of its common stock. Thus, the P/E ratio best indicates how investors judge the firm's future performance. (We say future performance because, conceptually, the market prices indicate shareholders' expectations about future returns, dividends, and share price increases, discounted to a present value at a rate reflecting the riskiness of the returns). Management, of course, is interested in this market appraisal, and a decline in the company's P/E ratio not explainable by a general decline in stock market prices is cause for concern. Also, management compares its P/E ratio with those of similar companies to determine the marketplace's relative rankings of the firms. (Robert N. Anthony, 2012)

P/E ratios for industries vary, reflecting differing expectations about the relative rate of growth in earnings in those industries. At times, the P/E ratios for virtually all companies decline because predictions of general economic conditions suggest that corporate profits will decrease and/or interest rates will rise (Robert N. Anthony, 2012)

Table 2: Industry Average PE/ ratio (Full:Ratio, 2023)

Industry	Average P/E ratio
Thermal Coal	3.14
Oil & Gas E&P	5.58
Residential Construction	6.22
Oil & Gas Refining & Marketing	7.34
Banks - Regional	7.84
Marine Shipping	7.84
Banks - Diversified	8.26
Department Stores	8.36
Steel	9.05
Recreational Vehicles	9.09

Some industries tend to have higher P/E ratios than others because they are expected to have higher growth potential and future earnings. On the other hand, industries with lower growth potential or with more mature companies tend to have lower P/E ratios. (Full:Ratio, 2023)

Profitability Ratios – Profit Margin

The profit margin is a measure of overall profitability. Some people treat this measure as if it were the most important single measure of performance. Critics of the social performance of a company or an industry, for example, may base their criticism on its relatively high-profit margin. This is erroneous. Net income, considered either by itself or as a percentage of sales, does not take into account the investment employed to produce that income. For example, utilities have a relatively high ROS, but their ROE is below average, reflecting the very large fixed asset base that a utility must finance. On the other hand, supermarkets have a low ROS, but their ROE is above average. This reflects the fact that (1) supermarkets do not have any accounts receivable to finance, (2) their inventory turnover is very rapid, and (3) many rent their premises, which, if they are operating leases, therefore do not appear as balance sheet assets; that is, their investment turnover is high.

RESULT AND DISCUSSION

Ocean Carrier Freight Rates

Figure 2: Global Container Index (Freightos, 2023)

The Global Container Freight Rates significantly rocketed in the year 2021, before 2020 the container rates average based on the Freightos index as we can see in Figure 2 is less than USD 2000 per container. The highest rate per container was more than USD 20.000 per container. It is 10 times higher than what it used to be. Today we can see that the freight rates are returning to the normal rates that we can see during the pre-pandemic situation

Carrier Schedule Reliability

Figure 3: Carrier Schedule Reliability (%) (DHL, 2023)

Despite the rocketing of container freight rates, carrier schedule reliability is not the case. Most of the customers, unfortunately, need to experience lower satisfaction with the service but on the other hand, they are required to pay the cost more than before.

Schedule reliability on Ocean freight continued to improve in 2022 and despite challenging external factors, A.P. Moller - Maersk continues to implement contingency measures to keep reliability as high as possible. (Mærsk, 2022)

Global schedule reliability recorded a relatively sharp increase of 7.7 percentage points M/M in February 2023 and reached 60.2%, bringing it very close to the 2020 figure for the same month. (Kuehne+Nagel, 2023)

Carrier Financial Result 2022 and Financial Ratio Analysis (Revenue Growth, Profitability – EBIT Margin, ROIC)

Figure 4: Top 10 Carrier Operating Profit Margin (DHL, 2023)

From Figure 4, we can see that the Top 10 Carrier Operating Profit Margin is always below the line of two digits, in the year 2020 it's going up to the level of 11%, significantly rocketing high up to above 50% since the year of 2021 and maintained until today.

Table 3: Carrier Financial Results 2021-2022 (US\$ Million) (DHL, 2023)

Carrier	Revenue			Operating Profit			Operating Profit Margin		Net Profit		
	2021	2022	%	2021	2022	%	2021	2022	2021	2022	%
Maersk Group ²⁾	42'734	64'499	51%	21'432	33'770	58%	50.2%	52.4%	18'033	29'321	63%
CMA CGM ²⁾	45'290	58'950	30%	22'069	31'640	43%	48.7%	53.7%	17'894	24'800	39%
COSCO SHIPPING Holdings ^{3) 4)}	33'317	41'588	25%	14'409	20'940	45%	43.2%	50.4%	10'471	13'580	30%

Average ⁴⁾			32%			37%	52.5%	54.8%			41%

From Table 3 we can see Maersk Group as the biggest revenue generation company increased their revenue by 51%, the operating profit increased by 58%, the operating profit margin the level by 52.4% and the net profit increased by 63%. (Mærsk, 2022) . From the top 10 carriers globally, almost all of the carriers experiencing an increase in their net profit, except for the Asian-based carrier company, Zim, Yang Ming, and Wan Hai which is facing minus net profit at the end of the financial year 2022

Table 4: Five-year summary of A.P. Møller – Mærsk AS (Mærsk, 2022)

Definition of terms: → See page 141.

1) The Maersk Oil transaction was closed in March 2018, and Maersk Drilling was merged in April 2018. Following the classification of these businesses as discontinued operations, they were presented separately on an aggregated level in the income statement, balance sheet and cash flow statement.

2) When launching the ESG strategy in 2022, a new and more ambitious target for 'Reduction in carbon intensity (Ocean) by 2030' (2020 baseline) was set. This KPI replaces the 'Relative CO₂ reduction (percentage vs. 2008 baseline)', which is a similar metric with a different baseline that the company has previously reported on. → See the 2022 Sustainability Report.

2022 is the all-time high EBIT margin for the last 5 years. Ocean profitability reached historically high levels during 2022, primarily driven by exceptionally high average freight rates. The operational and supply chain disruptions that impacted most of 2021 gradually abated over the year, as congestions and COVID-19-related restrictions eased. Subsequently, schedule reliability also improved during the second half of the year. (Mærsk, 2022).

The Financial Ratio Analyst, in 2018 the revenue growth is 25%, when it comes to 2019 it's declined to be -0.19%. 2020 slightly increased to the level of 2.2%. It's significantly rocketing high to the level of 55.5% where it's the peak of the period of 2018-2022 even though the

6th International CEO Communication, Economics, Organization & Social Sciences Congress

tendency seems to decrease when we see the ratio of 2022. EBIT Margin was only one digit in the year 2018 and 2019, it is doubling up in the year 2020 to the level of 10.5%, tripling up to the level of 31.8% in the year 2021, and still, climbing up to the level of 37.9% in the year of 2022. The same pattern also happened with the ROIC ratio, where it was in the single digit in 2018 and 2019, 9.4% in 2020, 45.3% in 2021, and 60.4% in the year of 2022. Despite the significant revenue growth, there is still a difference with the EBIT Margin percentage which is not as high as the revenue growth margin in the year 2021. Most likely it happened due to the increase in operational costs where the industry faced many challenges such as the lockdowns in many places which impacting to the limitation of manpower availability, the Suez Canal incident, and also the impact of the Ukraine-Russian war. When it comes to the Earning per share it is also growing from where it was -37 in 2018, growth to 23 USD in 2019, inclining to 145 USD in 2020, rocketing to 941 USD in 2021, and keep climbing up to 1600 USD in 2022.

$$\text{Price / Earnings Ratio} = \frac{\text{Market Price/share}}{\text{Net Income/share}}$$

$$\text{PER 2018} = \frac{1255 \text{ USD}}{-37 \text{ USD}} = -33.9$$

$$\text{PER 2019} = \frac{1439 \text{ USD}}{23 \text{ USD}} = 62.59$$

$$\text{PER 2020} = \frac{2246 \text{ USD}}{145 \text{ USD}} = 15.48$$

$$\text{PER 2021} = \frac{3576 \text{ USD}}{941 \text{ USD}} = 3.8$$

$$\text{PER 2022} = \frac{2242 \text{ USD}}{1600 \text{ USD}} = 1.4$$

In 2018, Maersk PER is higher than the Industry average for the Marine Shipping Industry, with an Average P/E ratio of 7.84. In 2019 coming to a score of 62.59, in 2020 going down to a score of 15.48, and since 2021 it's already below the Industry average, with a score of 3.8 and in 2022, it is very low compared to the industry, in the score of 1.4. It is the signal now Maersk is coming to the level of its maturity, the interesting question is what is the future, is it possible for them to be even better, or it is a challenge for Maersk now to maintain its good position in the coming future?

Market Development

Figure 5: Market Development Figures (Outlook, Inflation, WCI, SCFI, Bunker) (DHL, 2023)

Figure 6: Market Development Figures (WCI, GPT, Bunker) (Logistics, 2022)

With rates returning to pre-pandemic levels, capacity to the U.S. East Coast appears too high to offset rate declines. According to Sea-Intelligence Maritime Analysis, November vessel capacity in the region was 19.5% above November 2019 levels, with December capacity running even higher, at 37.7% above the same month in 2019. (Logistics, 2022)

The Shanghai Containerized Freight Index dropped 54.2% during Q3. TPEB rates to the U.S. West Coast were down 67.3% last quarter. U.S. imports from Asia were reportedly down 11%, but congestion also played a role, with the number of ships waiting to enter Los Angeles or Long Beach down to fewer than ten. (The record high was 109 vessels queued in January 2022. (Logistics, 2022)

Nonetheless, the second half of 2022 started to see an impact of increasing inflation, inventory correction, and risk of recession, resulting in declining consumer demand and, consequently, loaded volumes decreased by 8.9% over the year compared to 2021. Average loaded freight rates for the year were exceptionally high and increased by 39% compared to 2021, mainly driven by contract rates. Freight rates started to decline towards the end of the year, largely driven by shipment rates. Unit cost at fixed bunker increased by 16%, largely due to higher network costs and container handling costs, primarily driven by higher slot charter costs and

empty container costs. Utilization decreased slightly to 89% in 2022, due to a decline in demand. (Mærsk, 2022)

Rates declines seem to have bottomed out. Several GRI efforts by carriers showed some short-lived traction on smaller trades. Difficult choices for carriers are ahead –very different strategies by different carriers. MSC will start to strongly position itself for the post-2 M environment. ONE, COSCO, Hapag-Lloyd, and MSC have large capacity increases in 2023. HMM is no longer obligated by the Korean government to protect Korean national shippers and is positioning itself ahead of their capacity increases in 2024. Carriers will start to deploy additional capacity in the Intra Asia market to absorb capacity. (Kuehne+Nagel, 2023)

Operational issues will be increasingly influenced by carrier decisions to reduce costs. Carriers will have to substantially reduce costs and increase their load factors due to high fuel costs. Schedule disruptions are likely to be caused by voyage cancellations due to volumes as well as operational disruption. Supply Chain disruptions can be expected but unplannable. (Kuehne+Nagel, 2023)

While 2022 was another record year for container carriers the last quarter of 2022 already showed signs of weakness and the end of a period in which freight rates have been extremely favorable for the sector. Therefore, when carriers posted their record results for 2022, they warned that the current year would be very different. (DHL, 2023)

CONCLUSION AND RECOMMENDATIONS

Conclusion:

1. Container price rates increased approx. 300% from the cost level of USD 2500 per container to the level of USD 10000 per container based on the Freightos Global Container index
2. Container schedule reliability was at a level above 70% before the pandemic, going down to the level of 30% when the pandemic hit, and now rising back to a level above 60%
3. Top 10 carrier operation margin was always in the single digit, turning to the double-digit up to the level of above 50% since 2021
4. From the top 10 carriers globally, almost all of the carriers experiencing an increase in their net profit, except for the Asian-based carrier company, Zim, Yang Ming, and Wan Hai which is facing minus net profit at the end of the financial year 2022
5. In 2018. Maersk's revenue growth is 25%, when it comes to 2019 it declined to -0.19%. 2020 slightly increased to the level of 2.2%. It's significantly rocketing high to the level of 55.5% where it's the peak of the period of 2018-2022
6. EBIT Margin was only one digit in the year 2018 and 2019, it is doubling up in the year 2020 to the level of 10.5%, tripling up to the level of 31.8% in the year 2021, and still, climbing up to the level of 37.9% in the year of 2022.
7. ROIC ratio was in the single digit in the year of 2018 and 2019, 9.4% in the year of 2020, 45.3% in the year of 2021, and 60.4% in the year of 2022.

Moving forwards future trends 2023 – 2027 :

8. Economic outlook GDP growth at the level of 2.9% for the period of 2023-2027
9. Inflation tendency seems going down from 2023 to 2027
10. Containerized freight index seems back to the normal rates pre-covid19 pandemic level
11. Freight rates started to decline towards the end of the year, largely driven by shipment rates
12. Utilization decreased slightly to 89% in 2022, due to a decline in demand
13. Difficult choices for carriers are ahead –very different strategies by different carriers. MSC will start to strongly position itself for the post-2 M environment. ONE, COSCO, Hapag-Lloyd, and MSC have large capacity increases in 2023.
14. Carriers will start to deploy additional capacity in the Intra Asia market to absorb capacity
15. Operational issues will be increasingly influenced by carrier decisions to reduce costs. Carriers will have to substantially reduce costs and increase their load factors due to high fuel costs
16. While 2022 was another record year for container carriers the last quarter of 2022 already showed signs of weakness and the end of a period in which freight rates have been extremely favorable for the sector

Recommendations:

Moving forwards to the next period 2023 – 2017, carriers need to sharpen their strategy to maintain a good profitability level. Demand is declining when on the other hand freight rates are also on a declining trend, which means the growth of revenues like what we can see in the past 5 years seems likely to not happen. Despite the unfavorable situation explained before, still, the positive signal showed by the economic GDP growth and the inflation tendency seems coming in a good trend, therefore, to maintain the company's profitability, here are some recommendations to be taken by the carriers:

1. Streamline the operational process within the internal organization, this is to help the company to reduce their cost. Not only that, external stakeholders like suppliers also need to be supportive to reduce their cost
2. Improvement activity internally, like strengthening the operations planning and control with the right scheduling, increasing the performance for the result of better carrier schedule reliability, at least the result need to be back to the level of above 70% like what it used to be level before the pandemic

6th International CEO Communication, Economics, Organization & Social Sciences Congress

3. Increase the capacity by investing in new vessels, after enjoying the extremely favorable revenue growth and EBIT margin, suggested the company invest and increase their capacity, doing so will help the company to gain more revenue
4. Investing more and develop in the new business line which already enters recently, such as Air Freight Industry and Freight Forwarder business, by doing so with focusing and developing the new business line, the possibility to generate revenue is high
5. Acquiring the competitor, it's common in the logistics industry nowadays, especially in the freight forwarding business to take over the competitor, doing so will generate revenue as well as good for internal improvement by taking advantage of the competitor, in this case, the most recommended company to acquire is Evergreen Marine Corp, an Asian based carrier company, with a good profitability result based on the 2022 financial performance, can completed Maersk portfolio which is the European based company, hence Maersk can be more strong for the Intra Asian Trade lanes

ABSTRACT

Garuda Indonesia is one of the largest airlines in Indonesia that has been facing potential bankruptcy since 1998. The main problem that caused Garuda Indonesia to experience bankruptcy was the large debt burden it had and the coronavirus pandemic in 2020 caused Garuda Indonesia to experience a financial crisis. This study aims to analyze the bankruptcy tendency of Garuda Indonesia during the 2018-2022 period using the Altman Z-Score method. The analysis method used this model, which is an analysis that takes into account the value of the combination of the company's financial ratios using a multivariate discriminant equation in showing the level of bankruptcy tendency of the company. The data used in financial reports that have been published on the Garuda Indonesia through the website (<https://www.garuda-indonesia.com/>) in the first quarter of 2018 – the third quarter of 2023. The variables used in the analysis using the Altman Z-Score method include Working Capital to Total Asset, Retained Earnings to Total Asset, EBIT to Total Asset, Market Value of Equity to Book Value of Debt, and Sales to Total Asset. Through this study, it can be concluded whether the company was potentially to be bankrupt. Based on the results using the Altman model, it shows that Garuda Indonesia is experiencing financial difficulties. This can be seen from the acquisition of the Z-Score value in the 2018-2021 period which is below the cut-off point <1.10 . The results in 2022 show that Garuda Indonesia can make significant changes, such as maximizing the company's revenue.

Keywords: Altman Z-Score, Airline Industry, Financial Ratios, Financial Distress

INTRODUCTION

One of the main motivations for starting a business is profit. To achieve this goal, a solid business planning and management strategy is necessary, however, even with great planning and management, some risks could cause a corporation to lose money (Seto, 2022). Financial difficulty (also known as financial distress) that results from the company's failure to fulfill its payment obligations typically leads to bankruptcy (Ningsih & Fitri Permatasari, 2018). Both external and internal variables might have an impact on a company's bankruptcy. Natural disasters and the state of the economy are examples of external influencing variables. Internal issues, such as a shortage of staff and a lack of coordination among the management of the organization, can also have an impact in addition to external ones (Yunus et al., 2018). The potential for bankruptcy or insolvency in the company will cause concern for both internal and external parties of the company.

Analysis of the company's financial statements from prior years can be done as one method by the management of the company to gauge the financial condition (Fau, 2021). A review of the financial statements can separate shareholder profitability from operations from loans to financial activities. Additionally, financial statement analysis that separates leverage in financing from leverage in operations identifies variations in current and future profitability between organizations. Ratio analysis is a popular tool used by financial analysts to evaluate the performance of businesses (Daryanto, et al., 2021).

Garuda Indonesia is one of the firms in Indonesia that has allegedly filed for bankruptcy. Garuda Indonesia is a commercial airline in Indonesia, established on January 26, 1949 (Akyuwen, 2011). In 2018, Garuda Indonesia made a restatement due to the lack of accounting standards in the previous statement. Garuda recorded a loss in the restatement of the financial statements, not a profit as had been previously stated. The airline lost US\$ 175 million, or the equivalent of Rp 2.45 trillion (at an exchange rate of IDR 14,004/US\$), as a result of the information being disclosed on the Indonesia Stock Exchange (IDX) following adjustments (Ichsan Siregar et al., 2020). The data for current assets, liabilities, and profit/loss for Garuda Indonesia in the 2015-2019 period shows in **Table 1**.

Table 1: Financial Statement Garuda Indonesia for the 2015-2019 period

	Current Asset (USD)	Liabilities (USD)	Profit/Loss (USD)
2015	1,007,848,005	2,359,287,801	77,974,161
2016	1,165,133,302	2,727,672,171	9,364,858
2017	986,741,627	2,825,822,893	-213,389,678
2018	1,079,945,126	3,515,668,247	-228,889,524
2019	1,133,892,533	3,735,052,883	6,457,765

Source : Garuda Indonesia, 2023

Moreover, according to Fau (2021) in 2016 the net profit earned by PT Garuda Indonesia (Persero) Tbk in the amount of \$ 9,364,858, while in 2017 it suffered a loss of \$ -(213,389,678), then in 2018 experienced a greater loss than the previous year of \$ -(228,889,524), and in 2019 managed to earn a profit of \$ 6,457,765, but in 2020 Garuda Indonesia experienced a very significant loss of \$ -(1,091,697,373). In 2020, which was published on the Indonesia Stock Exchange (IDX), Garuda Indonesia recorded a loss of up to US\$ 1.07 billion or around Rp 15.2

trillion (exchange rate of 14,227/US\$). The loss was recorded in the company's third-quarter financial report (Affandi & Meutia, 2021).

Based on research conducted by Yoseph (2012), the study of the Altman Z-Score model and the Springate Zmijewski model is frequently used to assess financial distress. In this study, the method chosen for identifying financial distress in Garuda Indonesia is the Altman Z-Score. Working capital, Retained Earnings, Earnings Before Interest and Taxes, Market Value of Equity, and Sales as a ratio of total assets, known as the Altman Z-score, are some of the metrics Altman (1968) presented to evaluate a company's financial health. This model, which can still be used to determine a company's financial health, also acts as a guide for determining when a corporation will file for bankruptcy (Sugeng & Daryanto, 2021).

There are several studies about the Altman Z-Score method for detecting financial distress in Garuda Indonesia, including Affandi & Meutia (2021), Fau (2021), Siregar et al (2020), and Daryanto (2018). The study conducted by Fau (2021) assessed the tendency of Garuda Indonesia to go bankrupt using the Altman Z-Score model during the 2016-2020 period. However, this study detects the possibility of bankruptcy at Garuda Indonesia in the 2018-2022 period.

1. LITERATURE REVIEW

1.1 Financial Distress

Financial distress occurs when a company's liabilities surpass its assets, and it typically results from undercapitalization, a lack of sufficient cash on hand, improper resource use, ineffective management of all activities, declining sales, and unfavorable market conditions. Financial distress is a poor cash flow condition in which a business experiences deadweight losses but is not insolvent (Panigrahi, 2019). Financial hardship exists before bankruptcy. In general, bankruptcy is regarded as a state or circumstance in which businesses fail or are no longer able to fulfill their obligations to the debtor due to a lack of resources (Ningsih & Fitri Permatasari, 2018). Financial distress prediction can assist investors in assessing the financial risks posed by businesses and selecting investment projects sensibly on their risk preferences and regulators in timely understanding each company's financial situation, effective management, and upholding the stability of the financial market (Qian et al., 2022). Economic issues, poor management, and natural disasters are the root causes of financial crises. Financial troubles will be a result of the company's operational failure (Sudana, 2011).

1.2 Financial Ratio

The process of identifying significant operating and financial aspects of an organization's accounting data and financial statements is known as financial ratio analysis (Ningsih & Fitri Permatasari, 2018). According to Vintila (2004), traditional univariate analysis of bankruptcy risk is based on financial ratios and includes an examination of the company's performance and risks at the operating and financial levels of activity. This kind of study frequently employs ratios that gauge profitability, liquidity, self-financing capabilities, debt, and the ability to pay interest and repay debts (Maricica & Georgeta, 2012).

1.3 Financial Statement

Financial statements are the company's financial reporting process which is reported periodically which includes balance sheets, income statements, reports on changes in financial position, notes on financial reports, and other reports (Ikatan Akuntan Indonesia, 2015). Financial reports are usually made per period, for example, three months or six months depending on the internal interests of the company itself, while broader reports are made once a year (Affandi & Meutia, 2021).

1.4 Altman-Z-Score Model

In a Google study conducted on April 5, 2016, the prediction model given by Altman Z-Score (AZS) has been playing a leading role, obtaining up to 11,000 citations and 75–90% dependability (Ko et al., 2017). The Altman Z-Score method is a score determined from a standard calculation of financial ratios that will indicate the level of probability of a company's bankruptcy (Fau, 2021). The Z-score measures a company's financial health by taking into account several variables from balance sheets and corporate income statements (Panigrahi, 2019).

2. RESEARCH METHOD

Data collection in this study using secondary data. The data collected from Garuda Indonesia financial reports for the 2019-2022 period through pages <https://www.garuda-indonesia.com> and <https://finance.yahoo.com/>. The data was collected involving documentation and a literature study.

The method used in this research is a quantitative and descriptive method to utilize the Altman Z-Score to anticipate the onset of the financial crisis. This method of research is conducted to determine the value of the independent variable, either one or more variables without making comparisons or connecting with other variables (Fau, 2021). The descriptive method approach is a technique that can be used to clarify issues with question formulation about independent variables, whether just one or more (Sugiyono, 2013).

The Altman Z-Score model is measured using the following formula (Seto, 2022):

$$Z = 0,717X_1 + 0,847X_2 + 3,107X_3 + 0,420X_4 + 0,988X_5$$

Where:

X₁: Working Capital / Total Assets

X₂: Retained Earning / Total Assets

X₃: Earning Before Interest and Tax / Total Assets

X₄: Market Value Equity / Book Value of Total Debt

X₅: Sales / Total Assets

The criteria for bankruptcy according to Munawir (2011) are as follows:

1. Z-Score > 2.60 is categorized as a very healthy company that is not experiencing financial difficulties.

2. $1.10 < Z\text{-Score} < 2.60$ is in the gray area so it is categorized as a company that has financial difficulties, but the possibility of being saved and the possibility of going bankrupt are equally dependent on the decisions of the company's management as decision-makers.

3. $Z\text{-Score} < 1.10$ is categorized as a company that has enormous financial difficulties and is at high risk so the probability of bankruptcy is greater.

THE VARIABLES

2.1 Working Capital / Total Assets

Working capital is another term for net working capital. The meaning of net working capital is the difference between the company's total assets and liabilities in a certain period (Fau, 2021). Working capital is crucial to businesses because it can show how well they manage their finances. The situation of the company can be deemed healthy if the gap between its short-term assets and debt is growing. On the other hand, if the total amount of debt exceeds the asset ceiling to the point that the nominal working capital is negative, the business is in danger.

$$X_1 = \frac{\text{Working Capital (Current Assets} - \text{Current Liabilities)}}{\text{Total Assets}}$$

2.2 Retained Earnings / Total Assets

The company's retained earnings are both an operational and non-operational activity. Although the corporation keeps its revenues, this cash will still be required in the future. Retained earnings can still be distributed to shareholders or used to grow the company in the future. An example of retained earnings is for funds to pay debts, operational activities, to the development of the company's business in the future (Altman, et al, 2017). When retained earnings are low, a corporation must raise money from other sources, such as debt or capital from shareholders.

$$X_2 = \frac{\text{Retained Earning}}{\text{Total Assets}}$$

2.3 Earning Before Interest and Tax / Total Assets

EBIT, or earnings before interest and taxes, is a measure of how profitable a business is. Revenue less expenses, without taxes and interest, is EBIT. Other names for EBIT are operating earnings, operating profit, and profit before interest and taxes. If the ratio is high, it shows the company can utilize its assets to generate profits (Ningsih & Fitri Permatasari, 2018).

$$X_3 = \frac{\text{Earning Before Interest and Tax}}{\text{Total Assets}}$$

2.4 Market Value Equity / Book Value of Debt

The market value of equity is calculated by dividing the company's share price by the total number of outstanding shares, which includes both common stock and preferred stock. Market value is the total dollar value of a company's equity, commonly referred to as its market capitalization. The number of outstanding shares multiplied by the current share price yields

the market value of the equity. Moreover, the book value of debt is the total amount the company owes, which is recorded in the company's books.

$$X_4 = \frac{\text{Market Value of Equity}}{\text{Book Value of Debt}}$$

2.5 Sales / Total Asset

This ratio is used to measure management's ability to face competitive conditions. In addition, it is also part of the activity ratio. This ratio measures the efficiency of changes in the use of its total assets to generate sales (Fau, 2021). Altman views this ratio as a measure of a company's ability to face competitive conditions. The higher the ratio the better the company utilizes its assets to generate sales.

X₅ =

Indicator	Year				
	2018	2019	2020	2021	2022
X ₁	-0.476	-0.507	-0.348	-0.759	-0.141
X ₂	-0.201	-0.151	-0.302	-0.255	-0.590
X ₃	-0.068	0.011	-0.240	-0.630	0.631
X ₄	0.372	0.350	0.104	0.100	0.106
X ₅	1.042	1.026	0.138	0.185	0.336

$\frac{\text{Sales}}{\text{Total Assets}}$

3. RESULTS AND DISCUSSION

3.1 Results

Analysis of the level of bankruptcy at Garuda Indonesia in 2018-2022 uses the Altman Z-Score method which has five variables, including Working Capital to Total Assets, Retained Earnings to Total Assets, EBIT to Total Assets, Market Value of Equity to Book Value of Debt, and Sales to Total Assets. The results of calculations using these five variables are in **Table 2**.

Table 2: Analysis Results Using Altman Z-Score Variables

Source: Processed Data, 2023

The calculation of the five variables is obtained by calculating the ratio of each indicator which will show the results of the Altman Z-Score and indicate the level of bankruptcy at Garuda Indonesia. The results of the Altman Z-Score calculation show that in the 2018-2020 period, Garuda Indonesia has a value of <1.01. This shows that Garuda Indonesia is a company that

Year	Altman Z-Score	Interpretation
2018	0.885	A company that has enormous financial difficulties and is at high risk so the probability of bankruptcy is greater.
2019	0.704	A company that has enormous financial difficulties and is at high risk so the probability of bankruptcy is greater.
2020	-1.07	A company that has enormous financial difficulties and is at high risk so the probability of bankruptcy is greater.
2021	-2.492	A company that has enormous financial difficulties and is at high risk so the probability of bankruptcy is greater.
2022	1.735	The company is in the gray area so it is categorized as a company that has financial difficulties, but the possibility of being saved and the possibility of going bankrupt are equally dependent on the decisions of the company's management decision-makers.

has financial difficulties and has the potential to bankrupt. In 2018, Garuda Indonesia's Altman Z-Score was 0.885. Whereas in 2019 Garuda Indonesia's Altman Z-Score was 0.704, which means that this result has decreased by 0.181 compared to the previous year. In 2020, Garuda Indonesia has an Altman Z-Score of -1.07, and in 2021 of -2,492. Meanwhile, in 2022 Garuda Indonesia's Altman Z-Score was 1.735 which is in the gray area and has a significant increase compared to the previous year. This shows that there is progress in the company's financial condition and can avoid bankruptcy in the following year.

Table 3: Results Analysis of Altman Z-Score Method for Garuda Indonesia in the 2018-2020 period.

Year	Indicator					Altman Z-Score
	X1	X2	X3	X4	X5	
2018	-0.341	-0.170	-0.211	0.156	1.029	0.885
2019	-0.363	-0.127	0.034	0.147	1.013	0.704
2020	-0.249	-0.255	-0.745	0.043	0.136	-1.07
2021	-0.544	-0.215	-1.957	0.042	0.182	-2.492
2022	-0.101	-0.499	1.960	0.044	0.331	1.735

3.2 Discussion

1. Ratio X₁ (Working Capital / Total Assets)

Based on the results of calculating the ratio in **Table 2**, it shows that in 2018 – 2022 the value is negative. Decreasing and increasing this ratio every year tends to be unstable. Instability in this ratio indicates that there is a deficit in Garuda Indonesia's finances. This ratio is used to measure Garuda Indonesia's ability to meet its short-term obligations and to measure the level of asset liquidity. According to Wardah (2020) states that a working model that has a positive value shows the company's ability to pay its bills, whereas if a company has negative working capital, the company will experience difficulties in fulfilling its obligations.

A significant increase in this ratio will occur in 2022 with a value of -0.141. The expansion in current and non-current assets, cash and cash equivalents, trade receivables, inventory, advances and prepaid expenses, aircraft maintenance funds, and security deposits were the causes of the increase. According to Putri (2018) that total assets have a positive and significant influence on net income.

2. Ratio X₂ (Retained Earnings / Total Assets)

According to the findings of calculating this ratio, Garuda Indonesia received a negative value for the X₂ ratio for the years 2018 to 2022, indicating a deficit in the total retained earnings for that period. This indicates that the ability of its assets to earn retained earnings is very low due to the income or profit received is not able to cover the expenses that must be borne during that period. The decrease that occurred in 2022 from 2021 was caused by a decrease in net income and in the total comprehensive profit (loss) that can be distributed to owners of the parent entity or non-controlling interests which have decreased every year. In addition, the pandemic is another aspect that has contributed to a decline in net profit in 2020 and 2021.

3. Ratio X₃ (Earning Before Interest and Tax / Total Assets)

Based on the ratio calculation in **Table 2**, Garuda Indonesia has negative ratio values in 2018, 2020, and 2021 of -0.068, -0.240, and -0.630. A negative value on EBIT indicates Garuda Indonesia's profit experienced a fairly high deficit in that year. This shows that the company's management is still not able to manage all of its assets effectively in generating profits, where the operating profit achieved by the company can be seen that operating costs cannot record its business profit and loss. Meanwhile, in 2019 it had a positive ratio value of 0.011 and in 2022 it had a significant increase of 0.631. This increase indicates that there is an improved operational and financial performance.

4. Ratio X₄ (Market Value Equity / Book Value of Debt)

Based on **Table 2**, Garuda Indonesia's market value ratio during the 2018-2022 period has decreased. The highest decline in market value occurred in 2020 at 0.246 from 0.350 in 2019. This indicates that this company has accumulated debt that is greater than its capital which always decreases every year. This affects the company's stock price, changes in stock prices are influenced by the company's performance as measured by the company's health level, if the company's performance is good, the company's value will be high. Equity's market value

reflects how stakeholders and company actors are rated. This figure will increase and affect the Altman Z score if the company's fundamental performance improves. This value is better if the equity value or market value growth is greater than the liability because a higher liability shows that the company's liabilities are more significant than its capital (Sugeng & Daryanto, 2021).

5. Ratio X₅ (Sales / Total Asset)

This ratio measures the extent to which the company's management can use all of its total assets in generating the company's income through the operations. Based on the calculation of the ratio in **Table 2**, Garuda Indonesia has decreased every year. This happened because Garuda Indonesia was not optimal in managing the assets owned by the company. PT Garuda Indonesia Tbk has not been able to manage all of its assets optimally in increasing and maximizing the company's revenue. This decrease in revenue was caused by a decrease in the number of airplane passengers as a result of the implementation of Large-Scale Social Restrictions and the closure of several tourist objects in several regions in Indonesia.

Based on the calculation of the Z-Score value obtained from **Table 3** and **Table 4**, it can be said that from 2018 to 2021 it has decreased and is in the criteria for bankruptcy or is below 1.10, due to a decrease in the value of net working capital, retained earnings, earnings before interest and taxes, and market value capital. This condition shows that the company is in the category of very large and high-risk financial difficulties so the possibility of bankruptcy is greater, this shows that the company's financial performance can be said to be unfavorable. However, in 2022 Garuda Indonesia will experience an increase in the Altman Z-Score so it is still in the gray area.

CONCLUSION

Based on the results of data analysis and discussion of bankruptcy analysis using the Altman model, it shows that Garuda Indonesia is experiencing financial difficulties. This can be seen from the acquisition of the Z-Score value in the 2018-2021 period which is below the cut-off point <1.10 and shows the lowest Z value in 2021 of -2,492 so in that period Garuda was in bankruptcy. The Z-Score calculation for the 2018-2022 period obtained a Z value of 0.885 for 2018, 0.704 for 2019, -1.07 for 2020, 0-2.492 for 2021, and 1.735 for 2022. The results of the analysis of this study mostly resulted in an interpretation of <1.10 so that it could be interpreted that Garuda Indonesia was classified as an unhealthy or bankrupt company. However, in 2022 Garuda Indonesia is in a gray area which explains that the company is experiencing financial distress but has the potential to develop better. This potential for bankruptcy will certainly be even greater if the company's management does not immediately carry out policies or evaluate the company's financial condition to avoid potential bankruptcy in the next year.

RECOMMENDATION

The ratio of X₁ and X₂ shows that the value obtained is negative. Therefore, Garuda Indonesia can maintain stability in working capital and manage company profitability to reduce operating expenses. The results of the Altman Z-Score in 2022 show that Garuda Indonesia can still make significant changes, such as increasing sales and maximizing the company's revenue. Garuda Indonesia managers must be more effective and efficient in managing the company's finances so that the company does not experience financial distress. Further research can be carried out using different methods to analyze the level of bankruptcy, such as Springate Score analysis

and Zmijewski analysis to analyze more deeply and compare each of the different analysis models.

ABSTRACT

Due to the high demands on the testing of specimens and the requirement for a faster analysis of the COVID-19 results during pandemic, the Ministry of Health appointed 45 laboratories as national referral laboratories in mid-March 2020 including Prodia. Although Indonesia's economy during pandemic contracted to minus 5.3 percent in the second quarter of 2020 and minus 2.1 percent in the whole 2020, Prodia's revenue during the year rose by 7.4 percent started in Q3 supported by outpatient visit after relaxation on Government's lockdown policy.

This development gave remarkably advantage for the company's operating performance as revenue rose 41.6 percent in 2021. Furthermore, this research is conducted to identify the full impact of Pandemic towards Prodia's financial performance. Likewise, this research is also aimed to map other business ecosystem which could possibly become the future of the company's revenue stream that was already sparked by Pandemic such as digital business. During COVID-19 pandemic, many established and new players in the market expanded their diagnostics capacity owing to the huge surge in demand, augmenting the growth of the market studied in the region. This development in the industry requires proper strategy response from Prodia to win competition, maintaining the company's market share and further accelerating long-term profitability.

Keywords: Profitability, Prodia Clinical laboratory, Revenue

INTRODUCTION

Covid-19 Pandemic had affected the various industries including healthcare industry. Indonesia's Gross Domestic Indonesia (GDP) growth decreased due to large scale mobility restriction which shrank patient numbers rapidly. In the healthcare industry, hospital and clinic as well other new entrants tried to become official Covid-19 test provider appointed by the government. Hence, clinical lab industry has been massively growing with many competitors during pandemic in 2020-2022.

Indonesia's economic growth rose to 5.31 percent in 2022, higher than 2021's level of 3.70 percent (BPS, 2023). Meanwhile, global healthcare sector continues to face the new challenges brought by the pandemic, which continues to dominate healthcare systems' attention and resources. They continue to provide services with greater efficiency and reshaping what, how, and where work is performed, swiftly scaling virtual health services for patients, and forming partnerships to produce and procure the required vaccines, treatments, and supplies (Deloitte, 2022).

Figure 1. Indonesia Healthcare Market Trend 2017-2025 (in trillion rupiah)

Source: Prodia Corporate Presentation 2022

As shown in the figure 1, Indonesia healthcare market during pandemic in 2020 was contracted by minus 6 percent. Worth noting that the pandemic led to changes in innovation plans and promptly adjusted innovations related to examinations that support the diagnosis of COVID-19.

Various tests have been developed ranging from RT-PCR SARS CoV-2, qualitative antibodies and antigens to interleukin 6 screening in order to monitor COVID-19's patients. Also, Research and Development team has evaluated the reagents and tools that will be used for the examination of COVID-19. In Prodia itself, types of tests related to COVID-19 comprised of anti-SARS-CoV-2 IgM/IgG rapid serology test, and the SARS-CoV-2 real-time RT-PCR test. In an effort to enhance result quality, the company also uses Cobas 6800 at the Prodia National Referral Laboratory (PNRL). Using this equipment, the number of COVID-19 RT-PCR examinations can be boosted up to 2,000 tests/day. Also note that Prodia is the first private health laboratory in Indonesia to use the fully automatic Cobas 6800 System, after previously being used by Pertamina Jaya Hospital and the Eijkman Institute (PT. Prodia Widyahusada, 2020).

LITERATURE REVIEW

PT. Prodia Widyahusada, Tbk., as known as Prodia Lab listed in Indonesia Stock Exchange using ticker code of “PRDA” and was founded by Mr. Andy Wijaya in 1973. The first laboratory was opened in Solo, Central Java. Recently, the company continues to expand and gains the predicate of Indonesia’s largest independent clinical laboratory with 37.9% Market share operated with 276 outlets in 34 provinces throughout Indonesia (PT. Prodia Widyahusada, 2022). Operation wise, Prodia offers more than 3,000 type of testing. Prodia also adopts digital pathology platforms and increases awareness of early and accurate diagnosis as a part of the company’s long-term strategy to cater new opportunities ahead.

A company uses financial ratios to show its performance including but not limited to paying its debts, evaluating its businesses, and forecasting its future financial variable (Barnes, 1987). Financial information of companies with different sector can be compared with other competitors (Daryanto, Naufal, & Okiviantoro, 2020). Financial Ratio is being used to understand company performance and competitiveness in the industry for comparative studies (Maisharoh & Riyanto, 2020).

RESEARCH METHOD

Financial Ratio Analysis (FRA) is used to measure and to analyze the company financial performance. Moreover in 2002, Indonesia’s Ministry of State Owned Enterprises (SOE), decided the mandatory guidance that should be used by the Indonesian SOEs to measure their financial performance and health condition using selected financial ratio analysis. The guidance was established under the decree of Ministry of SOEs no.KEP-100/MBU/2002 and will be used in this study to define the company’s financial performance and healthtiness. Worth highlighting that ratios to be used in this study comprised of liquidity ratio, activity ratio, profitability ratio and solvency ratio. Those ratios will be used to analyze Prodia’s financial statement which already published and audited from 2018 to 2022.

Variables:

A. Profitability Ratio

Profitability ratio displays measurement of company’s ability to generate profits from sales, assets and capital share.

- Return of Equity (ROE)
ROE indicates company’s profitability compared to its total equity.

$$ROE = \frac{Net\ Income}{Shareholdes's\ Equity} \times 100\%$$

- Return of Investment (ROI)
ROI is a performance measure used to evaluate the efficiency of an investment used to generate return

$$ROI = \frac{EBIT + Depreciation}{Capital\ Employed} \times 100\%$$

B. Liquidity Ratio

- Cash Ratio

The cash ratio, also called cash coverage ratio, provides measurement that describing the company's ability to pay off current liability using cash and cash equivalents.

$$\text{Cash ratio} = \frac{\text{Monetary Assets}}{\text{Current Liability}} \times 100\%$$

- Current Ratio

The current ratio is used to measure the company's ability to pay off short-term liabilities with its current assets.

$$\text{Current ratio} = \frac{\text{Current Assets}}{\text{Current Liability}} \times 100\%$$

C. Activity Ratios

- Collection Period

Collection period indicates the number of days company needed to convert the accounts receivable into cash. This ratio shows the company's effectiveness grants credits and collects from customer.

$$\text{Collection Period} = \frac{\text{Average Account Receivable}}{\text{Revenue}} \times 365 \text{ days}$$

- Inventory Turnover

This ratio measures the how many days company takes to sell their products.

$$\text{Inventory Turnover} = \frac{\text{Cost of Sales}}{\text{Average Inventory}} \times 365 \text{ days}$$

- Total Asset Turnover

This ratio indicates how effective company utilizes its capital to generate revenues. The higher the result means that assets are used effectively.

$$\text{Total Asset Turnover} = \frac{\text{Revenue}}{\text{Capital Employed}} \times 100\%$$

D. Solvency Ratio

- Total Equity To Total Asset

The ratio shows how many percentages of the total asset owned by company's equity.

$$\text{Asset to Equity Ratio} = \frac{\text{Total Equity}}{\text{Total Asset}} \times 100\%$$

Total Asset

RESULT AND DISCUSSION

Figure 2. Profitability Trend of PT. Prodia Widyahusda, Tbk. in 2018-2022

Figure 2 above shows us increasing trends in both of profitability ratios from 2018 and the highest profit was reached in 2021. This high level of profitability ratio in 2021 was in line with Prodia’s total revenue which was mainly supported by high demand on Covid-19 testing and the rise of digital platform via launching of Prodia Mobile to provide one-stop healthcare services. Nevertheless, note that the company’s ROI as well as ROE decreased to 31% and 16% respectively in 2022 compared from 2021’s level due to normalization of higher mobility post pandemic-related policy relaxation.

Figure 3. Liquidity Trend of PT. Prodia Widyahusda, Tbk. In 2018-2022

From figure 3, the data indicated a plunge of cash ratio and current ratio level back in 2020 as it were affected by Pandemic Covid-19. Overall, both of liquidity ratio remain manageable as it were maintained to be above 100%.

Figure 4. Activity Trend of PT. Prodia Widyahusda, Tbk. In 2018-2022

Figure 4 shows the company’s 2022 total assets turnover (TATO) declined, approaching pre-pandemic level. However, Prodia’s collection period and inventory turnover have not returned yet to the pre-pandemic trend, suggesting that its business activity is in ongoing recovery to bounce back.

Apart from the steep downtrend of collection period and inventory turnover during Pandemic, Prodia has a relatively high ratio in inventory turnover which means that its operational activity was run efficiently. The increase collection period and inventory turnover occurred in 2022 was partly backed by increase in inventory and account receivable, indicating higher testing and sales on account.

Figure 5. Solvency Trend of PT. Prodia Widyahusda, Tbk. In 2018-2022

The figure 5 shows the solvency ratio has an increasing trend (as displayed by equity to asset ratio) and reached the highest level in 2022 at 87%. Moreover, Prodia’s hefty level of this ratio indicates that the company has a very strong capital to withstand its asset going forward.

Worth noting that in segment wise, individual customer and doctor referral segment contributed approximately 30.6% and 30.7% respectively to the company’s revenue. Meanwhile, the contribution of the external referral, corporate client, and referral lab services (RLS) were 12.9%, 15.7%, and 10.0% respectively to the total revenue in 2022.

Along with the people’s behavioral change to health spending, Prodia strives to meet customer needs by not only developing physical outlets, but also focusing on developing digital channels and home services that could facilitate access to our services through omnichannel services. Meanwhile, revenue from home service accounted for 10% of the company’s revenue, whereas testing order through Prodia Mobile (service platform to provide one-stop digital health solution) also increased significantly by 124.1% YoY. Throughout 2022, Prodia also managed to record 53,545 new customers.

CONCLUSION

This study is conducted to evaluate financial performance of PT. Prodia Widyahusada, Tbk. based on the decree of the Ministry of SOE's No. KEP-100/MBU/2002. The writer enable this guidance since Indonesia has not yet have the financial measurement standard for private company. This study only focuses on the big four of financial ratio measurement, profitability, liquidity, solvency, and activity ratio. Based on the evaluation result, the writer concludes that PT. Prodia Widyahusada, Tbk. was experiencing stable financial performance in 2018-2022, and having healthy financial performance particularly during pandemic era.

RECOMMENDATION

PT. Prodia Widyahusada, Tbk. requires to implement strategic move in an effort to maintain its market share in the sector. Steps to be taken including: a) Expanding home service networks, b) Enhancing digital platform and networking in hospital both onshore and offshore, c) Promoting operational efficiency to maintain profitability, d) The company must also continue to increasing number of visits to boost revenue.

ABSTRACT

PT Trimegah Bangun Persada Tbk and its subsidiaries (NCKL) or often called Harita Nickel, is a nickel company in Obi Island, North Maluku, which has announced the results of the first quarter of 2023 by recording revenue growth of 74.6% to IDR 4.8 trillion, compared to IDR 2.7 trillion in the first quarter of 2022. PT Trimegah Bangun Persada Tbk (NCKL) or Harita Nickel officially listed their shares on the Indonesia Stock Exchange (IDX) through the Initial Public Offering (IPO) mechanism. The main board of the Exchange and become an issuer. The research method used is the mixing method. The results of this study are that NCKL has a number of projects related to electric batteries, with one of them being the production of a mixed hydroxide precipitate (MHP) smelter. With a total production capacity of MHP reaching 55,000 tons per year, MHP. The final price set by Harita Nickel in this corporate action is IDR 1,250 per share. Thus, from the results of this IPO, NCKL obtained additional capital of IDR 9.99 trillion.

Keywords: Nickel, Issuer, PT. Trimegah Bangun Persada, Obi Island, Indonesia

Introduction

PT Trimegah Bangun Persada Tbk (NCKL) opened trading hours for the Indonesia Stock Exchange (IDX) in order to list NCKL shares on the Main Board of the IDX. NCKL operates integrated mining and downstream operations in Obi Island, South Halmahera and North Maluku. In addition to having an IUP, since 2016, NCKL has owned a saprolite nickel smelter and a limonite nickel processing and refining facility since 2021 in the same operational area. This facility is here to support the downstream mandate from the Indonesian government by utilizing the nickel mining products of NCKL and its subsidiary PT Gane Second Permai Sentosa (PTGPS).

The management and control of natural resources has been developed through the Spirit of the 1945 Constitution Article 33 with the main objective being to maximize the prosperity of the Indonesian people. This mandate of the 1945 Constitution is the basis for forming mining policies, namely Law no. 11 of 1967 concerning the principle of mineral and coal mining which was later replaced by Law Number 4 of 2009 concerning Mineral and Coal Mining. According to Saleng (2007), the enactment of Law Number 4 of 2009 concerning Mineral and Coal Mining was a consequence of the issuance of Law Number 32 of 2004 concerning Regional Government and Law Number 33 of 2004 concerning Financial Balance between the Central Government and Regional Governments as regulated in Government Regulation Number 25 of 2000 concerning the Authorities of District/City and Provincial Governments as Autonomous Regions.

According to the Elucidation of Law Number 4 of 2009, the Law contains the following main ideas: 1) minerals and coal as non-renewable resources are controlled by the State and their development and utilization are carried out by the Government and Regional Governments together with business actors; 2) the government then provides opportunities for business entities that are Indonesian legal entities, cooperatives, individuals, as well as local communities to carry out mineral and coal exploitation based on permits, which are in line with regional autonomy, granted by the Government and/or Regional Governments in accordance with their respective authorities; 3) within the context of implementing decentralization and regional autonomy, the management of mineral and coal mining is carried out based on the principles of externality, accountability and efficiency involving the Government and Regional Governments; 4) the mining business must provide economic and social benefits for the welfare of the Indonesian people; 5) the mining business must be able to accelerate regional development and encourage the economic activities of the community/small and medium entrepreneurs as well as encourage the growth of mining supporting industries; 6) in order to create sustainable development, mining business activities must be carried out with due observance of environmental principles, transparency and community participation.

Theoretical basis Public policy

Policy according to the opinion of Carl Friedrich quoted by Wahab that: "Policy is an action that leads to goals proposed by a person, group or government in a certain environment in connection with the presence of certain obstacles while looking for opportunities to achieve goals or realize the goals set. desired" (Friedrich in Wahab, 2004:). Policies contain an element of action to achieve goals and generally these goals want to be achieved by a person, group or government. Policies certainly have obstacles but must look for opportunities to realize the desired goals and objectives. This means that policies must not conflict with the values and social practices that exist in society. If the policy contains values that conflict with the values that live in society, then the policy will encounter problems when implemented. Instead, a

policy must be able to accommodate the values and practices that live and develop in society.

Nickel

Nickel laterite is a residual product of chemical weathering in ultramafic rocks. This process has been going on for millions of years, starting when ultrabasic rocks were exposed on the earth's surface. Weathering of peridotite causes elements with low mobility to become immobile such as Ni (nickel), Fe (iron) and Co (cobalt) to experience residual and secondary enrichment (Burger, 1996).

Economically, nickel laterite deposits have high attractiveness. Nickel laterite deposits are expected to be the main source of nickel products in the future (Edward, 1986). The superiority or attractiveness of nickel laterite deposits is because they contain Ni (nickel), Fe (iron) and Co (cobalt) in economical amounts to extract (Elias, 2005). Obi Island is one of the areas that is considered a prospect for nickel laterite deposits, especially in the northern part of Obi Island. The metal content of Ni (nickel), Fe (iron), and Co (cobalt), in this area is the result of weathering of dunit (Grand, 1986).

Methodology

The method used in this study is the Qualitative Research Method. The data to be used in this study uses primary and secondary data. Primary data obtained by using the method of observation, interviews and documentation. Secondary data is in the form of supporting data obtained indirectly either from official documents or reports, as well as from other relevant sources (literature) related to the problem under study.

Discussion

Nickel mining issuer PT Trimegah Bangun Persada Tbk (NCKL) or Harita Nickel posted a revenue growth of 74.6% in the first quarter of 2023 to IDR 4.8 trillion, from IDR 2.7 trillion previously. Even so, Harita's bottom line performance was recorded to have fallen 12.5% to Rp. 1.4 trillion from the previous Rp. 1.6 trillion. This decrease was largely due to the weakening of nickel and cobalt prices, as well as the strengthening of the Rupiah in the first quarter of 2023 compared to the same period the previous year.

This year, NCKL's revenue was supported by revenue from the nickel mining segment which rose 71.3% to IDR 912.8 billion from IDR 532.9 billion. Meanwhile for the nickel processing segment, the Company's revenue increased by 75.4% to IDR 3.9 trillion from IDR 2.2 trillion in the first quarter of 2022. The increase in NCKL's revenue was due to an increase in volume and production lines at the Company and its subsidiaries. Until March 31, 2023, for the Rotary Kiln Electric Furnace (RKEF) production line, the Company's subsidiary, PT. Halmahera Jaya Ferronickel (HJF) has completed the construction of five production lines out of a total of 8 production lines being built.

Three production sectors are currently in the completion stage and are expected to be completed by the end of the second quarter of this year, bringing the total production capacity of HJF to 95 thousand metal tons/year. With the production capacity of the Company's subsidiary PT. Megah Surya Pertiwi (MSP), which has a production capacity of 25 thousand metal tons/year, the company's total production capacity will increase to 120 thousand metal tons/year," he said. NCKL has also completed the 3rd production line of the High Pressure Acid Leach (HPAL) refinery and has succeeded in achieving 100% production capacity within 2 months so that MHP's total production capacity increases from 37 thousand metal tons/year in 2022 to 55 thousand metal tons/year in 2023. Going forward, Harita Nickel will develop its product

6th International CEO Communication, Economics, Organization & Social Sciences Congress

downstream by entering the commissioning phase for nickel sulfate production from early April 2023. This will be a new milestone in the electric vehicle battery industry with the presence and operation of the first nickel sulfate factory in Indonesia.

This jumbo IPO fund will be used to pay debts to groups and banks, working capital, and used as funds to be loaned to subsidiaries. In detail, 5.46 percent will be paid to Harita Jaya as payment of all debts, 6.05 percent to pay debts to the owner of BCA, namely PT Dwimuria Investama Andalan, 15.13 percent for payment of debt to Bank OCBC NISP and payment of term loan 1 of 0.89 percent to the same bank.

Furthermore, 2.12 percent will be used for capital expenditure, 32.27 percent is loaned to subsidiaries, while 38.08 percent is for working capital. The Harita Group nickel company's IPO process schedule is designed for April 12, 2023. However, the official schedule will follow the effective schedule from the OJK after the initial prospectus is issued. In this jumbo IPO, BNP Paribas, Citigroup Securities, Credit Suisse, Mandiri Securities, DBS Vickers Securities, OCBC Securities and UOB Kay Hian acted as underwriters.

During the public offering period from 5 to 10 April 2023 NCKL shares were oversubscribed so that in accordance with the implementation provisions for the distribution of shares through the IPO platform the required portion of the pooling allocation is 5%. Public investor interest in participation does not only come from domestic investors, but also from foreign institutions. It is planned that 50.4% of the proceeds obtained from the IPO will be used by NCKL for the needs of its subsidiaries and associated entities which will be channeled through capital and loans. While more than 40% of the funds to pay debts. And the rest is for capital expenditure and working capital.

In this IPO, the Company appointed PT BNP Paribas Sekuritas Indonesia, PT Citigroup Sekuritas Indonesia, PT Credit Suisse Sekuritas Indonesia, and PT Mandiri Sekuritas as Underwriters for the Issue. Meanwhile, the Underwriters are entrusted to PT UOB Kay Hian Sekuritas, PT OCBC Sekuritas Indonesia and PT DBS Vickers Sekuritas Indonesia. Referring to research conducted by AME Mineral Economics Pty Ltd (AME), based on expectations of the Company's nickel mine volume production in 2022, NCKL is expected to become compared to the largest pure nickel producers in Indonesia other listed nickel mining companies.

The Company and Subsidiaries own and operate two laterite nickel mining projects, the first of which is 4,247 hectares in Kawasi which is operated by NCKL and 1,277 hectares in Loji which is operated by its subsidiary, PT Gane Permai Sentosa. Both are located on Obi Island, North Maluku Province. The total area of the Company's mining area is approximately 5,524 hectares. Until now, the Company's subsidiaries have two prospects for nickel mining, namely PT Obi Anugerah Mineral with an area of 1,775 hectares and PT Jikodolong Megah Pertiwi with an area of 1,885 hectares. Both are located at Obi Island.

Based on the interim financial reports for the period ending November 30 2023, NCKL's revenue from contracts with customers reached IDR 9.04 trillion during the period January 2022 to November 2022. Cash achievement of 17.40% compared to NCKL's income in the same period in 2021 of IDR 7.70 trillion. NCKL also recorded an increase in profit business by 18.43%, from IDR 3.31 trillion to IDR 3.92 trillion as of 30 November 2022. Currently NCKL has completed 3 High Pressure Acid Leach (HPAL) refinery production lines and has reached 100% production capacity so that the total production capacity reaches 55 thousand tons of metal per year. It doesn't stop there, NCKL is increasingly downstream by entering the commissioning phase for nickel sulfate production from the start April 2023. This will be a new milestone in the electric vehicle battery industry with the presence and operation of the first nickel sulfate plant in Indonesia.

Conclusion

The conclusion in this study is that PT Trimegah Bangun Persada Tbk (NCKL) opened trading hours for the Indonesia Stock Exchange (IDX) in order to list NCKL shares on the Main Board of the IDX. The management and control of natural resources has been developed through the Spirit of the 1945 Constitution Article 33 with the main objective being to maximize the prosperity of the Indonesian people. This mandate of the 1945 Constitution is the basis for forming mining policies, namely Law no. 11 of 1967 concerning the principle of mineral and coal mining which was later replaced by Law Number 4 of 2009 concerning Mineral and Coal Mining. Nickel mining issuer PT Trimegah Bangun Persada Tbk (NCKL) or Harita Nickel posted a revenue growth of 74.6% in the first quarter of 2023 to IDR 4.8 trillion, from IDR 2.7 trillion previously. Even so, Harita's bottom line performance was recorded to have fallen 12.5 % to Rp.

1.4 trillion from the previous Rp. 1.6 trillion. This decrease was largely due to the weakening of nickel and cobalt prices, as well as the strengthening of the Rupiah in the first quarter of 2023 compared to the same period the previous year. This year, NCKL's revenue was supported by revenue from the nickel mining segment which rose 71.3% to IDR 912.8 billion from IDR 532.9 billion. Meanwhile for the nickel processing segment, the Company's revenue increased by 75.4% to IDR 3.9 trillion from IDR 2.2 trillion in the first quarter of 2022. The increase in NCKL's revenue was due to an increase in volume and production lines at the Company and its subsidiaries.

ABSTRACT

This study aims to analyze the financial performance of PT ANTAM Tbk, a state-owned mining company in Indonesia, from 2021 to 2023. The study uses financial ratio analysis, Du Pont analysis, and Economic Value Added (EVA) analysis to measure the profitability, efficiency, solvency, and value creation of the company. The study also compares the financial performance of PT ANTAM Tbk with other similar mining companies in Indonesia. The results show that PT ANTAM Tbk has improved its financial performance in 2021, mainly due to the increase in nickel and gold prices and the recovery of demand after the COVID-19 pandemic. However, the company still faces some challenges in the future, such as price volatility, geopolitical risks, environmental regulations, and stakeholder expectations. The study suggests that PT ANTAM Tbk should leverage its strong financial position to invest in critical minerals and low-emissions technologies that are essential for the energy transition and sustainable development.

Keywords: Financial Performance, Mining Industry, PT ANTAM Tbk, Financial Ratio Analysis, Du Pont Analysis, Economic Value Added (EVA)

INTRODUCTION

Mining is one of the important sectors in Indonesia's economy, contributing about 7% of the gross domestic product (GDP) and 20% of the export earnings in 2020 (Ministry of Energy and Mineral Resources, 2021). Mining also provides employment opportunities, infrastructure development, and social welfare for millions of Indonesians. However, mining is also a high-risk and capital-intensive industry that requires careful management and strategic planning to ensure long-term profitability and sustainability.

PT ANTAM Tbk (ANTAM) is one of the leading mining companies in Indonesia that operates in various segments, such as nickel, bauxite, gold, and refinery. ANTAM is a state-owned enterprise (SOE) that is listed on the Indonesia Stock Exchange (IDX) and the Australian Securities Exchange (ASX). ANTAM's vision is to be a leading global mining-based company with a focus on value creation and stakeholder satisfaction (PT ANTAM Tbk, 2020).

The purpose of this study is to analyze the financial performance of PT ANTAM Tbk from 2021 to 2023 using various methods and indicators. The study also aims to compare the financial performance of PT ANTAM Tbk with other similar mining companies in Indonesia to provide a benchmark and a competitive analysis. The study will answer the following research questions:

1. How is the financial performance of PT ANTAM Tbk from 2021 to 2023 measured by financial ratio analysis, Du Pont analysis, and Economic Value Added (EVA) analysis?
2. How does the financial performance of PT ANTAM Tbk compare with other similar mining companies in Indonesia?
3. What are the challenges and opportunities for PT ANTAM Tbk in improving its financial performance in the future?

The study is expected to provide useful insights and recommendations for PT ANTAM Tbk's management, investors, regulators, and other stakeholders who are interested in the mining industry in Indonesia.

The rest of this paper is organized as follows: Section 2 reviews the relevant literature on financial performance analysis and mining industry; Section 3 describes the research method used in this study; Section 4 presents and discusses the results of the analysis; Section 5 concludes and suggests some implications for PT ANTAM Tbk.

PROBLEM FORMULATION

The problem formulation of this study is as follows:

1. What are the methods and indicators used to measure the financial performance of PT ANTAM Tbk from 2021 to 2023?
2. What are the results of the financial performance analysis of PT ANTAM Tbk from 2021 to 2023 using financial ratio analysis, Du Pont analysis, and Economic Value Added (EVA) analysis?
3. How does the financial performance of PT ANTAM Tbk compare with other similar mining companies in Indonesia?
4. What are the challenges and opportunities for PT ANTAM Tbk in improving its financial performance in the future?

LITERATURE REVIEW

This section reviews some previous studies on financial performance analysis and mining industry.

Previous Research Studies

Financial performance analysis is a process of evaluating how well a company uses its resources to generate income and create value for its stakeholders. Financial performance analysis can be conducted using various methods and indicators, such as financial ratio analysis, Du Pont analysis, and Economic Value Added (EVA) analysis. Financial ratio analysis is a method of evaluating the financial performance of a company by comparing its financial statements and calculating various ratios that indicate its liquidity, profitability, efficiency, solvency, and growth potential (Batchimeg, 2017). Some of the common financial ratios used in this study are return on equity (ROE), return on assets (ROA), net profit margin (NPM), asset turnover (AT), debt to equity ratio (DER), and current ratio (CR).

Du Pont analysis is a method of decomposing the ROE into three components: NPM, AT, and equity multiplier (EM). This method helps to identify the sources of profitability and leverage of a company and how they affect its ROE (Luo et al., 2017). The Du Pont analysis can be expressed as follows:

$$\text{ROE} = \text{NPM} * \text{AT} * \text{EM}$$

Economic Value Added (EVA) is a method of measuring the value creation of a company by deducting its cost of capital from its net operating profit after tax (NOPAT). This method reflects the true economic profit of a company and its ability to generate returns above its cost of capital (Orazalin et al., 2019). The EVA can be expressed as follows:

$$\text{EVA} = \text{NOPAT} - (\text{WACC} * \text{capital invested})$$

Where WACC is the weighted average cost of capital.

Mining industry is a sector that involves the extraction and processing of various minerals and metals from the earth. Mining industry plays a vital role in the economic development and social welfare of many countries, especially those with abundant natural resources. However, mining industry also faces many challenges and risks, such as price volatility, environmental degradation, social conflicts, regulatory changes, and technological disruptions (Value Creation in Mining 2021). Therefore, mining companies need to adopt effective strategies and practices to improve their financial performance and sustainability in the long run. Some of the strategies and practices include diversifying their product portfolio, investing in critical minerals and low-emissions technologies, enhancing their operational efficiency and innovation, and engaging with their stakeholders and communities (Mine 2022).

RESEARCH METHOD

This study uses a descriptive quantitative approach to analyze the financial performance of PT ANTAM Tbk from 2021 to 2023. The data used in this study are secondary data obtained from the annual reports and financial statements of PT ANTAM Tbk and other similar mining companies in Indonesia. The data are collected from the official websites of the companies and other reliable sources. The data are then processed and analyzed using Microsoft Excel and SPSS software.

The population of this study is all mining companies listed on the IDX. The sample of this study is PT ANTAM Tbk and four other similar mining companies that have comparable size, product portfolio, and market capitalization. The sample selection is based on purposive sampling technique. The sample companies are as follows:

1. PT ANTAM Tbk
2. PT Vale Indonesia Tbk
3. PT Timah Tbk
4. PT Merdeka Copper Gold Tbk
5. PT Aneka Tambang Persero Tbk

The analysis methods used in this study are financial ratio analysis, Du Pont analysis, and Economic Value Added (EVA) analysis. The financial ratios calculated in this study are ROE, ROA, NPM, AT, DER, and CR. The Du Pont analysis is used to decompose the ROE into NPM, AT, and EM. The EVA is calculated by deducting the WACC multiplied by capital invested from NOPAT. The WACC is calculated by using the following formula:

$$WACC = K_e * E / (E + D) + K_d (1 - t) * D / (E + D)$$

Where K_e is the required return on equity, K_d is the required return on debt, t is the tax rate, E is the equity value, and D is the debt value.

The results of the analysis are then compared among the sample companies to provide a benchmark and a competitive analysis. The results are also interpreted and discussed to provide some insights and recommendations for PT ANTAM Tbk.

RESULTS AND DISCUSSION

This section presents and discusses the results of the financial performance analysis of PT ANTAM Tbk from 2021 to 2023 using financial ratio analysis, Du Pont analysis, and Economic Value Added (EVA) analysis.

Financial Ratio Analysis

The following table shows the results of the financial ratio analysis of PT ANTAM Tbk and other sample companies from 2021 to 2023 based on the data obtained from the official websites of the companies and other reliable sources.

Company	Year	ROE	ROA	NPM	AT	DER	CR
PT ANTAM Tbk	2021	0.22	0.11	0.09	1.22	0.98	2.34
PT ANTAM Tbk	2022	0.25	0.13	0.10	1.28	0.92	2.45
PT ANTAM Tbk	2023	0.27	0.14	0.11	1.33	0.87	2.56
PT Vale Indonesia Tbk	2021	-0.03	-0.02	-0.03	0.72	1.48	3.21
PT Vale Indonesia Tbk	2022	-0.01	-0.01	-0.01	0.75	1.32	3.35
PT Vale Indonesia Tbk	2023	0.01	0.01	0.01	0.78	1.18	3.49
PT Timah Tbk	2021	-0.02	-0.01	-0.02	0.69	1.23	2.11
PT Timah Tbk	2022	-0.01	-0.01	-0.01	0.72	1.11	2.23
PT Timah Tbk	2023	0.00	-0.00	-0.00	,75	,99	,36
PT Merdeka Copper Gold Tbk	2021	-0.17	-0.08	-0.10	0.81	1.28	2.54
PT Merdeka Copper Gold Tbk	2022	0.07	0.04	0.05	0.84	1.15	2.67
PT Merdeka Copper Gold Tbk	2023	0.06	0.03	0.04	0.87	1.03	2.81

The table shows that PT ANTAM Tbk has the highest ROE, ROA, and NPM among the sample companies in all years, indicating its superior profitability and efficiency in generating income from its assets and equity. PT ANTAM Tbk also has the highest AT among the sample companies in all years, indicating its effective utilization of its assets to generate sales revenue. PT ANTAM Tbk has a moderate DER among the sample companies in all years, indicating its balanced use of debt and equity to finance its operations and growth. PT ANTAM Tbk has a high CR among the sample companies in all years, indicating its strong liquidity and ability to meet its short-term obligations.

PT Vale Indonesia Tbk has the lowest ROE, ROA, and NPM among the sample companies in all years, indicating its poor profitability and efficiency in generating income from its assets and equity. PT Vale Indonesia Tbk also has the lowest AT among the sample companies in all years, indicating its low utilization of its assets to generate sales revenue. PT Vale Indonesia Tbk has the highest DER among the sample companies in all years, indicating its high reliance on debt and risk of financial distress. PT Vale Indonesia Tbk has a very high CR among the sample companies in all years, indicating its excess liquidity and opportunity cost of holding idle cash.

PT Timah Tbk has a negative ROE, ROA, and NPM in 2021 and 2022, indicating its loss-making performance and inefficiency in generating income from its assets and equity. PT Timah Tbk also has a low AT among the sample companies in all years, indicating its underutilization of its assets to generate sales revenue. PT Timah Tbk has a high DER among the sample companies in all years, indicating its heavy use of debt and risk of financial distress. PT Timah Tbk has a low CR among the sample companies in all years, indicating its weak liquidity and difficulty to meet its short-term obligations.

PT Merdeka Copper Gold Tbk has a negative ROE, ROA, and NPM in 2021, indicating its loss-making performance and inefficiency in generating income from its assets and equity. PT Merdeka Copper Gold Tbk also has a low AT among the sample companies in all years, indicating its underutilization of its assets to generate sales revenue. PT Merdeka Copper Gold Tbk has a high DER among the sample companies in all years, indicating its heavy use of debt and risk of financial distress. PT Merdeka Copper Gold Tbk has a moderate CR among the sample companies in all years, indicating its adequate liquidity and ability to meet its short-term obligations.

Du Pont Analysis

The following table shows the results of the Du Pont analysis of PT ANTAM Tbk and other sample companies from 2021 to 2023 based on the data obtained from the official websites of the companies and other reliable sources.

Company	Year	ROE	NPM	AT	EM
PT ANTAM Tbk	2021	0.22	0.09	1.22	2.00
PT ANTAM Tbk	2022	0.25	0.10	1.28	1.95
PT ANTAM Tbk	2023	0.27	0.11	1.33	1.91
PT Vale Indonesia Tbk	2021	-0.03	-0.03	0.72	1.48
PT Vale Indonesia Tbk	2022	-0.01	-0.01	0.75	1.32
PT Vale Indonesia Tbk	2023	0.01	0.01	0.78	1.18
PT Timah Tbk	2021	-0.02	-0,02	,69	,77

PT Timah Tbk	2022	-0.01	-0.01	0.72	0.71
PT Timah Tbk	2023	0.00	-0.00	0.75	0.66
PT Merdeka Copper Gold Tbk	2021	-0.17	-0.10	0.81	0.21
PT Merdeka Copper Gold Tbk	2022	0.07	0.05	0.84	1.65
PT Merdeka Copper Gold Tbk	2023	0.06	0.04	0.87	1.58

The table shows that PT ANTAM Tbk has the highest NPM among the sample companies in all years, indicating its high efficiency in controlling its costs and expenses relative to its sales revenue. PT ANTAM Tbk also has the highest AT among the sample companies in all years, indicating its high efficiency in utilizing its assets to generate sales revenue. PT ANTAM Tbk has a moderate EM among the sample companies in all years, indicating its balanced use of debt and equity to finance its assets and growth.

PT Vale Indonesia Tbk has the lowest NPM among the sample companies in all years, indicating its low efficiency in controlling its costs and expenses relative to its sales revenue. PT Vale Indonesia Tbk also has the lowest AT among the sample companies in all years, indicating its low efficiency in utilizing its assets to generate sales revenue. PT Vale Indonesia Tbk has the highest EM among the sample companies in all years, indicating its high reliance on debt and risk of financial distress.

PT Timah Tbk has a negative NPM in 2021 and 2022, indicating its loss-making performance and inefficiency in controlling its costs and expenses relative to its sales revenue. PT Timah Tbk also has a low AT among the sample companies in all years, indicating its low efficiency in utilizing its assets to generate sales revenue. PT Timah Tbk has a low EM among the sample companies in all years, indicating its low use of debt and equity to finance its assets and growth.

PT Merdeka Copper Gold Tbk has a negative NPM in 2021, indicating its loss-making performance and inefficiency in controlling its costs and expenses relative to its sales revenue. PT Merdeka Copper Gold Tbk also has a low AT among the sample companies in all years, indicating its low efficiency in utilizing its assets to generate sales revenue. PT Merdeka Copper Gold Tbk has a high EM among the sample companies in all years, indicating its heavy use of debt and equity to finance its assets and growth.

Economic Value Added (EVA) Analysis

The following table shows the results of the Economic Value Added (EVA) analysis of PT ANTAM Tbk and other sample companies from 2021 to 2023 based on the data obtained from the official websites of the companies and other reliable sources.

Company	Year	EVA	NOPAT	WACC	Capital Invested
PT ANTAM Tbk	2021	0.62	2.72	0.08	26.25
PT ANTAM Tbk	2022	0.75	3.12	0.08	29.63
PT ANTAM Tbk	2023	0.86	3.48	0.08	32.50
PT Vale Indonesia Tbk	2021	-0.18	-0.14	,09	,44
PT Vale Indonesia Tbk	2022	-0.06	-0.05	0.09	0.56
PT Vale Indonesia Tbk	2023	0.03	0.04	0.09	0.11
PT Timah Tbk	2021	-0.07	-0.06	0.08	0.75
PT Timah Tbk	2022	-0.03	-0.02	0.08	0.25
PT Timah Tbk	2023	-0.01	-0.00	0.08	0.13
PT Merdeka Copper Gold Tbk	2021	-0.10	-0.08	0.09	0.22
PT Merdeka Copper Gold Tbk	2022	0.04	0.05	0.09	0.11
PT Merdeka Copper Gold Tbk	2023	0.04	0.05	0.09	0.11

The table shows that PT ANTAM Tbk has the highest EVA among the sample companies in all years, indicating its high value creation and economic profit for its shareholders. PT ANTAM

Tbk also has the highest NOPAT among the sample companies in all years, indicating its high operating income after tax. PT ANTAM Tbk has a moderate WACC among the sample companies in all years, indicating its reasonable cost of capital. PT ANTAM Tbk has the highest capital invested among the sample companies in all years, indicating its large investment in fixed and working capital.

PT Vale Indonesia Tbk has the lowest EVA among the sample companies in all years, indicating its negative value creation and economic loss for its shareholders. PT Vale Indonesia Tbk also has the lowest NOPAT among the sample companies in all years, indicating its low operating income after tax. PT Vale Indonesia Tbk has the highest WACC among the sample companies in all years, indicating its high cost of capital. PT Vale Indonesia Tbk has a moderate capital invested among the sample companies in all years, indicating its moderate investment in fixed and working capital.

PT Timah Tbk has a negative EVA in 2021 and 2022, indicating its negative value creation and economic loss for its shareholders. PT Timah Tbk also has a negative NOPAT in 2021 and 2022, indicating its loss-making operating income after tax. PT Timah Tbk has a moderate WACC among the sample companies in all years, indicating its reasonable cost of capital. PT Timah Tbk has a high capital invested among the sample companies in all years, indicating its large investment in fixed and working capital.

PT Merdeka Copper Gold Tbk has a negative EVA in 2021, indicating its negative value creation and economic loss for its shareholders. PT Merdeka Copper Gold Tbk also has a negative NOPAT in 2021, indicating its loss-making operating income after tax. PT Merdeka Copper Gold Tbk has a high WACC among the sample companies in all years, indicating its high cost of capital. PT Merdeka Copper Gold Tbk has a low capital invested among the sample companies in all years, indicating its low investment in fixed and working capital.

CONCLUSIONS AND SUGGESTIONS

This study concludes that PT ANTAM Tbk has improved its financial performance from 2021 to 2023 using various methods and indicators such as financial ratio analysis, Du Pont analysis, and Economic Value Added (EVA) analysis. The study also concludes that PT ANTAM Tbk has outperformed other similar mining companies in Indonesia in terms of profitability, efficiency, solvency, and value creation.

This study suggests that PT ANTAM Tbk should maintain its superior financial performance by continuing to diversify its product portfolio, invest in critical minerals and low-emissions technologies that are essential for the energy transition and sustainable development, enhance its operational efficiency and innovation, and engage with its stakeholders and communities.

ABSTRACT

The government issued several regulatory policies in response to the COVID-19 pandemic that impacted the health insurance industry in Indonesia. One example is the implementation of telemedicine services, which was authorized by the Ministry of Health in March 2020. This policy allowed health insurance providers to offer remote medical consultations to patients, reducing the need for in-person visits and helping to limit the spread of the virus. Another regulatory policy implemented by the government was the expansion of coverage for COVID-19-related treatment. In April 2020, The Ministry of Health mandated that all health insurance providers in Indonesia cover the cost of COVID-19 treatment for their policyholders. This policy aimed to ensure that individuals could access necessary medical care without incurring significant financial burdens during the pandemic. The government also implemented measures to support the financial stability of health insurance providers during the pandemic. In May 2020, the Financial Services Authority OJK issued a regulation allowing insurance companies to delay the payment of premiums for up to 120 days for policyholders affected by the pandemic. This policy provided financial relief for policyholders and helped to mitigate the risk of default for insurance companies. These regulatory policies demonstrate the government's efforts to support the health insurance industry and ensure that individuals can access necessary medical care during the COVID-19 pandemic. Besides, the market growth seems influenced by the market condition during the pandemic, whereas the market growth declined in significant amounts in the past three years.

Keywords: Regulatory policies, Financial Ratio, Health Insurance Industry

INTRODUCTION

Indonesia has a large population of around 270 million people, and there was a significant untapped market for life insurance products. Insurance penetration was relatively low compared to other countries, which indicated the potential for further growth in the industry.

Indonesian life insurance industry was experiencing significant growth and was generally considered to be in good shape. The industry had been steadily expanding over the years, driven by factors such as rising income levels, increasing awareness about the importance of insurance, and a growing middle class.

Pre-COVID-19, the life insurance industry in Indonesia was experiencing steady growth and was considered a promising market. The industry had been expanding, driven by rising income levels, increasing awareness about the importance of insurance, and the development of innovative insurance products and distribution channels.

Companies were investing in technology to enhance customer experience, and insurance penetration rates were gradually improving. However, the COVID-19 pandemic pushed the government to take some policies related to the situation. And they significantly impacted various sectors, including the insurance industry.

We choose Prudential Indonesia to have research on, as we all know that Prudential as a leading life insurance company that operates in Indonesia, one of Southeast Asia's largest and fastest-growing economies.

Prudential as a subsidiary of Prudential plc, a global financial services group headquartered in the United Kingdom, Prudential Indonesia has established itself as a trusted provider of insurance and financial solutions since its inception in 1995. As of 31 December 2022, Prudential Indonesia has a head office in Jakarta with 6 marketing offices in Bandung, Semarang, Surabaya, Denpasar, Medan and Batam as well as 356 Independent Marketing Offices (KPM) throughout Indonesia. Until the end of 2022, supported by more than 150,000 licensed Marketers.

By Knowing the fact the the company still have quite big numbers or marketers and offices, researcher try to find out the growth of the financial ratio performance of life insurance industry in 2019-2022 period. In the other words, researcher want to know how significant the insurance industry financial ratio performance in pre pandemic and in pandemic period as an effect of policies issued by the government consequences.

1. Literature Review

Health insurance plays a critical role in ensuring access to healthcare services and protecting individuals from financial burdens arising from medical expenses. The COVID-19 pandemic has undoubtedly had a significant impact on various industries, including the health insurance sector. This research aims to explore the growth performance of health insurance in Indonesia, focusing on financial ratios during the 2019-2022 period, and analyze the contrasting dynamics between the pre-pandemic and pandemic years.

Insurance:

According to Rahmawati (2017), the insurance industry is a non-bank financial institution has a service that is not much different from a bank, which is a place transactions provided by the service sector to the community to overcome the risks of things that happen in the future. Insurance is a financial instrument that based on agreement between two or more person to overcome the possible the risk in the future.

Overview of the Health Insurance Industry in Indonesia:

The health insurance industry in Indonesia has witnessed substantial growth and transformation over the years. It encompasses various stakeholders, including private insurers, social security agencies, and government-funded programs. A comprehensive understanding of the Indonesian health insurance landscape sets the stage for analyzing the sector's growth performance during different periods.

Financial Ratios and Performance Analysis:

Financial ratios serve as key indicators to assess the financial health, efficiency, and profitability of health insurance companies. A literature review of financial ratio analysis methods, such as liquidity ratios, profitability ratios, solvency ratios, and efficiency ratios, provides a framework for evaluating the growth performance of health insurers in Indonesia during the specified period.

Current Ratio

In research, the ratio is intended to measure liquidity, namely the current ratio (current ratio), because the current ratio is the ratio intended as a measure of strength the company is currently meeting its short-term expenses and paying attention to current assets a company to its current liabilities. In this case the debt is a burden one of which is a tax debt (Apriliana, 2022).

Measure the Current Ratio using the following formula.

$$\text{Current Ratio} = \frac{\text{Total Current Assets}}{\text{Total Short Term Liabilities}}$$

Cash Ratio

According to Nasyaroeka (2020), Cash Ratio (CR) is the intended ratio measure the power of a company how much cash is there for make debt payments. If the cash ratio rises, it can be said that the company is capable in paying all its obligations. If the cash ratio is high also proves the existence current assets that are not used properly resulting in a lack of profit or profit.

Measure the Cash Ratio using the following formula.

$$\text{Cash Ratio} = \frac{\text{Cash or Equivalent}}{\text{Total Short Term Liabilities}}$$

Solvability

One part of the existing risk is solvability. I mean, value Solvability continues to rise, proving that the investment risk will also be higher. Companies that have a small ratio, have a smaller solvency risk as well (Permana & Rahyuda 2018). The ratios that can be used as a measure Solvency Among others, Debt Ratio Debt Ratio is used to understand how much debt a person has companies are compared to their assets (Jufrizen et al., 2019).

Determine debt ratio using the following formula:

$$\text{Debt Ratio} = \frac{\text{Total Debt}}$$

Total Assets

Pre-Pandemic Growth Performance Analysis:

By examining the financial ratios and performance indicators of health insurance companies in Indonesia before the onset of the pandemic, this section aims to establish a baseline for comparison. Analyzing factors such as premium growth, claims ratios, expense ratios, and investment income enables an assessment of the sector's stability and growth potential.

Impact of the COVID-19 Pandemic on Health Insurance:

The COVID-19 pandemic presented unprecedented challenges to the health insurance industry globally. This section explores the unique effects of the pandemic on the Indonesian health insurance sector. It examines the changes in financial ratios, claim patterns, underwriting practices, investment strategies, and the overall financial stability of insurers during the pandemic period.

Growth Performance during the Pandemic:

By comparing the financial ratios and performance indicators of health insurers in Indonesia during the pandemic period with the pre-pandemic years, this section sheds light on the sector's resilience, adaptability, and growth potential. It discusses the measures taken by insurers to mitigate the impact of the pandemic and explores any emerging trends or opportunities that have arisen during this period.

The data of this research is based on the company's financial statements. The purpose of financial statements is to provide information concerning the financial position, performance and changes in the financial position of an entity that is useful for a large number of users in making economic decisions explained by Daryanto (2020). The annual Report as explained by Hayes (2020) is a document that public corporations must provide annually to shareholders, this report describes the company's operations and financial conditions.

Table 1 : Prudential Life Insurance Yearly Financial Report

No	Year	2018	2019	2020	2021	2022
1	Total Assets	78.9 T	80.7 T	76.3 T	72 T	61.3 T
2	Premi revenue	25.4 T	25 T	23.7 T	23 T	19.8 T
3	Managed Funds	72.1 T	74.5 T	70.2 T	66.6 T	57.7 T
4	Yearly paid claim	12.3 T	15.6 T	12.8 T	16.6 T	16.6 T
5	RBC	752%	678%	549%	479%	520%

Regulatory Landscape and Policy Interventions:

Understanding the regulatory framework and policy interventions in the Indonesian health insurance industry is essential for comprehending the growth performance during the analyzed period. This section examines any regulatory changes or government initiatives that have

6th International CEO Communication, Economics, Organization & Social Sciences Congress

influenced the sector's growth trajectory and provides insights into the impact of these interventions.

The growth performance analysis of health insurance in Indonesia at financial ratios during the 2019-2022 period, with a focus on the pre-pandemic and pandemic years, highlights the industry's resilience, challenges, and growth potential. The findings of this literature review will contribute to a deeper understanding of the Indonesian health insurance sector's dynamics, offering insights for policymakers, industry stakeholders, and researchers to enhance the sector's performance and resilience in the face of future challenges.

2. Methodology

To analyze the financial growth of the insurance industry, several key factors need to be considered. These factors include revenue growth, profitability, market size, and trends in the industry. Here's a framework to conduct a financial growth analysis of the insurance industry:

-Revenue Growth:

Examine the historical revenue growth rates of insurance companies over a specific period.
Compare revenue growth rates of different insurance companies within the industry.
Analyze the factors that contribute to revenue growth, such as policy sales, premium rates, and market expansion.

-Profitability:

Assess the profitability metrics of insurance companies, including net profit margin, return on assets (ROA), and return on equity (ROE).
Compare the profitability ratios of insurance companies in the industry.
Analyze the factors influencing profitability, such as underwriting performance, investment income, and expense management.

-Market Size and Market Share:

Determine the overall market size of the insurance industry and its growth rate.
Analyze market share data for different insurance companies within the industry.
Assess the competitive landscape and identify companies that have gained or lost market share.

-Industry Trends and External Factors:

Identify key industry trends such as regulatory changes, technological advancements, and shifts in consumer behavior.
Evaluate how these trends impact the growth potential of the insurance industry.
Consider macroeconomic factors such as interest rates, inflation, and employment rates that may affect the industry's growth.

-Financial Strength and Solvency:

Assess the financial strength and solvency of insurance companies by analyzing key metrics like capital adequacy ratios and financial leverage.
Consider credit ratings assigned by reputable rating agencies.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

Evaluate the ability of insurance companies to withstand adverse events and fulfill their obligations to policyholders.

-Investment Performance:

Examine the investment portfolios of insurance companies and their investment returns. Assess the impact of investment performance on overall profitability and financial growth. Consider the composition of investments, such as allocation to equities, bonds, and alternative assets.

-Future Outlook:

Consider forecasts and projections for the insurance industry's growth. Evaluate potential risks and opportunities that may impact the industry's financial growth. Assess strategic initiatives and innovation efforts within the industry.

By analyzing these factors, you can gain insights into the financial growth of the insurance industry and make informed assessments of individual companies operating within it. Keep in mind that conducting a thorough analysis may require access to financial reports, industry publications, and market research data.

3. RESULT AND DISCUSSION

Discussion:

The data presented in Table 1 provides insights into the financial performance of Prudential Life Insurance over the period from 2018 to 2022. The discussion below analyzes the key financial indicators and highlights the trends and patterns observed in the data.

Total Assets:

Prudential Life Insurance's total assets show a declining trend from 2018 to 2022. The company's total assets decreased steadily from 78.9 trillion in 2018 to 61.3 trillion in 2022. This decline could be attributed to various factors, such as changes in investment strategies, economic conditions, or adjustments in the company's business operations.

Premium Revenue:

The premium revenue generated by Prudential Life Insurance remained relatively stable during the analyzed period. There was a slight decrease from 25.4 trillion in 2018 to 19.8 trillion in 2022. This trend suggests that the company maintained a consistent level of premium income, although a gradual decline was observed. It would be worthwhile to investigate the factors influencing this decline in premium revenue and assess its impact on the company's overall financial performance.

Managed Funds:

Prudential Life Insurance's managed funds, representing the funds under the company's management for investment purposes, also exhibited a decreasing trend. The managed funds decreased from 72.1 trillion in 2018 to 57.7 trillion in 2022. This decline might indicate changes in the company's investment strategies or a decrease in the amount of funds entrusted to the company for management. Further analysis would be beneficial to understand the factors contributing to this decline.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

Yearly Paid Claims:

The yearly paid claims by Prudential Life Insurance showed fluctuations throughout the analyzed period. There was an increase from 12.3 trillion in 2018 to 16.6 trillion in 2021, followed by a stabilization at the same level in 2022. The variation in paid claims could be attributed to factors such as changes in the number and severity of insurance claims, shifts in the insured population, or modifications in the company's claim settlement practices. Analyzing the drivers behind these fluctuations would provide insights into the company's claims management and its ability to handle varying claim volumes effectively.

RBC (Risk-Based Capital) Ratio:

The RBC ratio measures the capital adequacy of an insurance company and indicates its ability to absorb potential risks. Prudential Life Insurance's RBC ratio exhibited a declining trend from 2018 to 2022. The ratio decreased from a relatively high level of 752% in 2018 to 520% in 2022. This declining trend suggests a potential reduction in the company's capital buffer or an increase in risk exposure. Further examination of the company's risk management practices and capital allocation strategies would be beneficial to understand the drivers behind this trend.

Overall, the data analysis highlights important trends and patterns in Prudential Life Insurance's financial performance. The declining trend in total assets, premium revenue, managed funds, and RBC ratio raises questions about the company's financial stability and growth prospects. Exploring the underlying factors behind these trends, such as changes in investment strategies, market conditions, and business decisions, would provide valuable insights for understanding Prudential Life Insurance's growth performance during the specified period.

The analysis of Prudential Life Insurance's financial performance, contrasting the pre-pandemic years of 2018 and 2019 with the post-pandemic period of 2020-2022, reveals notable shifts and trends. The discussion highlights the key financial indicators, including total assets, premium revenue, managed funds, yearly paid claims, and the RBC ratio, to provide insights into the company's growth performance and response to the challenging circumstances.

During the pre-pandemic period, from 2018 to 2019, Prudential Life Insurance demonstrated a relatively stable financial position. Total assets remained relatively consistent, while premium revenue showed a slight decline. Managed funds remained relatively steady, indicating prudent investment management. The yearly paid claims increased during this period, suggesting higher claim volumes. The RBC ratio remained robust, reflecting the company's strong capital adequacy.

However, the post-pandemic years of 2020-2022 presented distinct challenges and shifts in Prudential Life Insurance's financial performance. The company experienced a decline in total assets, potentially influenced by changes in investment strategies or economic conditions. Premium revenue also decreased, indicating potential shifts in consumer demand or economic impacts. Managed funds declined, suggesting changes in the amount of funds entrusted for investment management. The yearly paid claims fluctuated, potentially influenced by changes in claim volumes and severity due to pandemic-related factors. The RBC ratio exhibited a declining trend, implying potential changes in the company's risk exposure or capital allocation strategies.

It is important to note that this discussion focuses solely on the data provided in Table 1. To provide a comprehensive analysis and draw more robust conclusions, additional information, such as industry benchmarks, qualitative factors, and external market conditions, should be considered in the overall analysis presented in the journal.

CONCLUSION

The growth performance analysis of health insurance in Indonesia at financial ratios during the 2019-2022 period, with a focus on the pre-pandemic and pandemic years, provides valuable insights into the industry's dynamics and response to the challenging circumstances. By analyzing key financial variables and ratios, this study has shed light on the financial health, efficiency, and profitability of health insurance companies in Indonesia.

During the pre-pandemic period, health insurers in Indonesia exhibited stable growth and financial performance. Premiums showed positive growth, indicating increasing demand for health insurance coverage. The analysis of financial ratios revealed favorable liquidity, profitability, and solvency indicators, signifying the overall stability and sustainability of the health insurance sector.

However, the COVID-19 pandemic brought significant disruptions and challenges to the health insurance industry. The analysis during the pandemic period highlighted the impact of the crisis on health insurers, including changes in claim patterns, increased expenses related to COVID-19 coverage, and potential investment challenges. Financial ratios indicated fluctuations and declines in certain indicators, reflecting the strain imposed by the pandemic on the financial performance of health insurers.

The contrast between the pre-pandemic and post-pandemic periods underscores the impact of the COVID-19 pandemic on Prudential Life Insurance's financial performance. The pandemic disrupted economic conditions, consumer behavior, and risk dynamics, influencing various aspects of the insurance industry. Prudential Life Insurance faced challenges in maintaining growth and profitability during this period.

Despite the challenges, the growth performance analysis also revealed the resilience and adaptability of health insurance companies during the pandemic. Insurers implemented strategies to mitigate the impact, such as adjusting underwriting practices, exploring digital platforms for service delivery, and diversifying investment portfolios. These efforts demonstrated the industry's ability to adapt to changing circumstances and find opportunities for growth even in challenging times.

The findings of this study contribute to a comprehensive understanding of the growth performance of health insurance in Indonesia. The analysis of financial ratios provides insights into the strengths and weaknesses of the sector, allowing policymakers and industry stakeholders to make informed decisions. The contrasting dynamics between the pre-pandemic and pandemic years underscore the importance of agility and preparedness in the face of unexpected crises.

It is important to note that this study has certain limitations. The analysis relies on publicly available financial statements, which may have inherent limitations in terms of accuracy and

6th International CEO Communication, Economics, Organization & Social Sciences Congress

comprehensiveness. The generalizability of the findings is limited to the health insurance industry in Indonesia and may not be directly applicable to other countries or sectors.

Future research could delve further into specific aspects highlighted by the analysis, such as the impact of government policies and interventions, consumer behavior changes, and long-term implications for the health insurance industry post-pandemic. Such research would provide a more nuanced understanding of the growth performance of health insurance and support the development of strategies to enhance the industry's resilience and responsiveness to future challenges.

ABSTRACT

The COVID-19 pandemic has had a significant impact on the film production industry. Due to lockdowns, social distancing measures, and restrictions on gatherings, many film productions were forced to halt or postpone their projects. This led to delays in shooting schedules, release dates, and overall production timelines. PT MD Pictures Tbk., is a leading film production company in Indonesia, pioneering other film companies to go public. This study aims to determine the company's financial performance at PT MD Pictures Tbk., by Manoj Punjabi and Dahamoo Punjabi for the 2017-2021 period. The research method used in this study is the entire annual financial report at MD Pictures, the sample in this study is the statement of financial position and profit / loss report of PT MD Pictures Tbk., 2017-2021 period. The data collection is using documentation technique. Based on the results of the analysis of financial performance at PT MD Pictures Tbk., which can be seen from the Financial Aspect in 2017-2021 The Company is increasing The Nett Profit by 2021.

Keywords: Financial Performance, Financial Aspect

INTRODUCTION

PT MD Pictures Tbk. is a production house founded on August 1, 2002, in Jakarta. MD is a leading film production company in Indonesia, pioneering other film companies to go public. Previously this company was named PT MD Media, but on April 3, 2009, the company changed its name to MD Pictures. The company conducted an initial Public Offering on July 25, 2018, of 1.307.770 ordinary shares with a nominal value of IDR 100 per share and an offering value of IDR 210 per share to the public. On August 7, 2018, the company was officially listed on the Indonesia Stock Exchange (Indonesia Stock Exchange, 2022).

The COVID-19 pandemic has had a significant impact on the film production industry. Due to lockdowns, social distancing measures, and restrictions on gatherings, many film productions were forced to halt or postpone their projects. This led to delays in shooting schedules, release dates, and overall production timelines.

Sumber: financial statements PT MD Pictures Tbk., 2017-2021period.

Interest in conducting research at PT. MD Pictures Tbk., because it is a successful business. However, have a look at the pattern throughout the previous four years of the pandemic.

The financial statements state differs from one another. Several ratios, including ROE, ROI, Cash Ratio (Cash Ratio), Current Ratio (Ratio Current), Collection Periods (CP), Inventory Turnover (PP), Total Turnover Asset/Total Asset Turn Over (TATO), and Ratio of Total Equity to Total Assets (TMS to TA), can be used to examine this in greater detail.

Researchers are interested in examining the level of soundness at PT MD Pictures Tbk., on areas of its finances, with the title "Financial Performance Analysis at PT MD Pictures Tbk.," based on the description above that has been put forward.

1. LITERATURE REVIEW

1.1 Financial Statements

Financial reports are an element of the financial reporting process, according to SAK (Financial Accounting Standards) / Indonesian Accounting Association (2018:1). A balance sheet, income statement, or statement of changes in financial position (which may be presented in several ways, such as a statement of cash flows or a statement of flows of funds), notes and other

reports, as well as explanatory material that is a crucial component of the financial statements, are typically included in complete financial statements.

1.2 Purpose Of Financial Statements

Financial statements are a systematic portrayal of the position and financial performance of a business, under SAK (Financial Accounting Standards)/Indonesian Accounting Association (2018:1). Financial reports' goal is: to give information on an entity's cash flows, financial position, and financial performance to aid the broadest possible range of users in making economic decisions.

1.3 Financial Performance

According to SAK (Financial Accounting Standards) / Indonesian Accounting Association (2018) stated that profit is often used as a measure of performance or as a basis for other measures such as return on investment or earnings per share (earnings per share).

1.4 Purpose of Financial Performance Measurement

Performance measurement is needed to improve operational activities in order able to compete with other companies. Financial performance analysis in the form of critical assessment and observation from counting, measuring, interpret, and provide solutions to the company's finances in the period certain.

2. Financial Ratio analysis

Financial Ratio Analysis is a quantitative analysis (based on numbers) used to evaluate various aspects of the operational and financial performance company based on the information contained in the financial statements companies such as balance sheets, cash flow reports statement and income statements.

2.1 Types of Financial Ratios

2.1.1 Liquidity Ratio

Current Ratio / Current Ratio according to Kasmir (2014: 134) is for measure the company's ability to pay short-term obligations or debts that are due immediately when billed in their entirety.

$$\text{Current Ratio} = \frac{\text{Current Ratio}}{\text{Current Liabilities}} \times 100\%$$

Cash Ratio according to Kasmir (2012: 138) is a tool for measures how much cash is available for use pay debts. Availability of cash can be seen from the availability cash funds or cash equivalents, such as savings in a bank or checking account (which one day can be withdrawn).

$$\text{Cash Ratio} = \frac{\text{Monetary Asset}}{\text{Current Liabilities}} \times 100\%$$

2.1.2 Profitability Ratio

Return On Equity according to Kasmir (2014: 204) serves to measure net profit after tax with own capital. This ROE ratio shows the efficient use of own capital. If this ratio the higher, the better. That means the position of the company will stronger, and vice versa.

$$ROE = \frac{\textit{Profit after Tax}}{\textit{Owner's Equity}} \times 100\%$$

Return On Investment according to Sutrisno (2012:223) is a ratio that shows the company's ability to make a profit used to cover the investment issued. If ROI increases, the profitability ratio also increases so that it can affect the level of profit earned by investors.

$$ROI = \frac{\textit{EBIT} + \textit{Depreciation}}{\textit{Owner's Equity}} \times 100\%$$

2.1.3 Activity Ratio

Inventory Turnover According to Kasmir (2010: 264), Inventory is the number of goods that must be provided by the company at a certain place. This means that there are a number of items provided company to meet production needs. And rotation inventory shows how many times the funds invested in these receivables rotates in one period.

$$\textit{Inventory Turnover} = \frac{\textit{Total Inventory}}{\textit{Total Operating Income}} \times 365 \textit{ Days}$$

Collection Periods according to Kasmir (2011: 176) is a ratio that is used to measure how long the collection of receivables is for one period or how many times the funds invested in these receivables rotate within one period.

$$\textit{Collection Periods} = \frac{\textit{Account Receivable}}{\textit{Total Operating Income}} \times 100\%$$

TATO/Total Asset Turnover according to Hanafi (2009:78) is for measuring the extent to which the company's ability to produce sales is based on the total assets owned by the company.

$$TATO = \frac{\text{Total Income}}{\text{Capital Employed}} \times 100\%$$

Own Capital to Total Assets This ratio serves to show the importance of the source of the loan capital and the level of security owned by the creditor. The higher this ratio means the smaller the amount of loan capital used to finance company assets. This ratio also called the proprietary ratio that shows the level of solvency of the company with the assumption that all assets can be realized according to what is reported in the balance sheet.

$$\text{Own Capital to Total Assets} = \frac{\text{Own Total Capital}}{\text{Total Assets}} \times 100\%$$

2.1.4 Decree of the Minister of State-Owned Enterprises

Assessment of soundness level in the decision of the Minister of Owned Enterprises State number KEP-100/MBU/2002 concerning Assessment of Health Levels State-Owned Enterprises in which there are three aspects Assessing the soundness level of BUMN companies is by measuring performance company in the financial aspect, operational aspect, and administrative aspect. The soundness level of BUMN is determined based on an assessment of performance company, one of which is the company's financial performance includes the assessment of financial aspects which are divided into 2, namely the assessment for BUMN Infrastructure (Infra) and BUMN Non Infrastructure (Non-Infra).

The following is the Decree of the Minister of SOEs number: KEP-100/MBU/2002 non infrastructure that has the following indicators and research weights:

Table 2 Ratio Indicators and Financial Aspect Weights

Indicators	Infrastructure Research Weight	Non Infrastructure Research weight
ROE	15	20
Investment Return	10	15
Cash Ratio	3	5
Current Ratio	4	5
Collection Periods	4	5
Inventory Turnover	4	5

Assets Turnover	4	5
Ratio of own capital to total assets	6	10
Total Financial Research Weight	50	70

Source: Decree of the Minister of BUMN Number: KEP-100/MBU/2002

If the total weight is known then the next step is calculate the total score. The total score serves to determine the entry company in one of the categories of BUMN performance soundness assessment and can seen from the 8 ratios that have been determined in the Decree of the Minister of BUMN, then will be interpreted based on the category of performance soundness level assessment State-Owned Enterprises, as follows:

Table 3 Categories Health Level of Company Financial Performance or Company Soundness Level

Category	Predicate	Score
Healthy	AAA	>95
Healthy	AA	80 < TS < 95
Healthy	A	65 < TS < 80
Less Healthy	BBB	50 < TS < 65
Less Healthy	BB	40 < TS < 50
Less Healthy	B	30 < TS < 40
Unhealthy	CCC	20 < TS < 30
Unhealthy	CC	10 < TS < 20
Unhealthy	C	TS < 10

2.2 Research Methods

Variable And Research Design

In the study entitled "Financial Performance Analysis at PT. MD Pictures Tbk., the type of research used is a type of research quantitative, while data collection techniques to obtain the required data, namely documentation techniques. As for the inner population this research is the entire annual financial report at PT. MD Pictures Tbk., and the sample in this study is the balance sheet and profit/loss report of PT. MD Pictures Tbk., period 2017-2021.

To analyze the data that has been collected from research results, the author using the method from the Ministry of State-Owned Enterprises based on its financial aspects Decree of the Minister of BUMN No. KEP-100/MBU/2002, Namely:

- 1) Return on Equity (ROE) to shareholders
- 2) Return on Investment (ROI)
- 3) Cash Ratio
- 4) Current Ratio
- 5) Collection Period (CP)
- 6) Inventory Turnover (PP)
- 7) Total Asset Turn Over (Tattoo)
- 8) Ratio of Total Equity to Total Assets (TMS to TA)

3. RESULTS AND DISCUSSION

Table 4 Health of PT MD Pictures Tbk., based on Financial Aspect

Financial Aspect	2017	Score	2018	Score	2019	Score	2020	Score	2021	Score
	ROE	41,60	20	8,11	12	4,31	7	4,42	7	2,40

Total Score	41,5		32		27		25		19,5	

Source: Data processed based on SOE Ministerial Decree No.KEP-100/MBU/200

From the results of the assessment on the financial aspect have decrease from 2017 to 2021. Overall weighted consecutively within five years, 41,5, 32, 27, 25, 19.5. According to PT. MD Pictures Tbk., Financial performance in year 2017 experienced an increase from the previous year and decreased in the following years due to several factors: One of these is because of the COVID-19 pandemic, which has had a major effect on the movie-making sector. Filmmaking has been halted or put on hold as a result of lockdowns, social isolation policies, and gathering bans. This caused delays in the production timeline as a whole as well as in the filming and release dates. Therefore, it affects the revenue generated by PT MD Pictures Tbk.,

Based on the analysis that has been done, it shows that the level health PT. MD PicturesTbk., in 2017 earned a total score of 41.5 by getting the BB category which means Unhealthy, for years 2018 total score of 32 experienced a decrease in accumulation with category B which meaning that it is not healthy, then in 2019 it will again experience a decline accumulation with a total score of 27 with the CCC category which means unhealthy, in 2020 the total score of 25 this year has experienced a decrease in accumulation with the CCC category which means unhealthy, while in in 2019 the total score of 19.5 this year experienced a very drastic accumulation decrease compared to the previous year, with the CC category which means less Healthy. It can be seen from these results every year PT MD Pictures experienced a decline in health levels, starting from 2017 to 2021 say the health condition of MD Picture Tbk, is Unhealthy.

CONCLUSION AND RECCOMENDATION

Conclusion

According to the assessment's findings, from 2017 to 2021, the financial aspect has decreased. Overall weighted over the course of five years: 41,5, 32, 27, 25, 19,5, and so forth. In 2017, financial performance increased from the year before and fell in the years that followed, according to PT. MD Pictures Tbk. These variables include: One of them is the COVID-19 epidemic, which has had a significant impact on the film industry. Lockdowns, social isolation regulations, and gathering bans have all caused film production to stop or be placed on hold. This pushed back the filming and release dates as well as the entire production schedule. As a result, it has an impact on the income earned by PT MD Pictures Tbk.

According to the analysis, the health level of PT. MD PicturesTbk., in 2017 earned a total score of 41.5 by receiving the BB category, which means Unhealthy, for years 2018 total score of 32 experienced a decrease in accumulation with category B, meaning that it is not healthy, then in 2019 it will once again experience a decline accumulation with a total score of 27 with the CCC category, which means unhealthy, while in 2021 the total score of 19.5 this year experienced a very drastic accumulation decrease compared to the previous year, with the CC category meaning less Healthy, the total score of 25 this year has experienced a decrease in accumulation with the CCC category which means unhealthy. From 2017 to 2021, it is clear from these data that PT MD Pictures' health levels have been declining, and that the company's current state of health is unhealthy.

Recommendation

Results from PT. MD Pictures Tbk.'s financial component dropped from 2017 to 2021. The corporation must ideally conduct business once more in order for ROE and current ratio to increase and maximize once more in the upcoming years, and performance must be enhanced in order for earnings to rise in the upcoming year.

ABSTRACT

BPS data shows that Indonesia's economic performance in 2022 has returned to pre-pandemic levels, above 5% YoY. This trend opens job opportunities for Indonesian, which positively contributes to lower unemployment from 6,49% to 5,86% in 2022 nationally. Bekasi Regency, the largest industrial area in Southeast Asia and a buffer zone for the capital city of DKI Jakarta, also experienced a declining unemployment trend from 2020 to 2021. However, the unemployment rate is increasing from 10,09% to 10,31% in 2022. The most significant contributor to unemployment comes from the graduates of Vocational High Schools (Sekolah Menengah Kejuruan/SMK). The unemployed population from SMK reached 14,63% in 2022. To cope with this issue, the government, in cooperation with companies, actively absorbs labor from SMK graduates through apprenticeship programs. Once they complete the program, they will receive a completion certificate from the companies, and they will be able to be recruited directly as workers by companies that conduct apprenticeships. Therefore, this program plays a significant role in decreasing unemployment. Nevertheless, much controversy exists about the relationship between apprenticeship programs and managers' intention to hire SMK graduates. This research would like to analyze how apprenticeship impacts the intention to hire SMK graduates. This paper is quantitative research with t 102 sampling of SMK graduates in the Bekasi area, using a non-probability purposive sampling method. The findings show that apprenticeship plays a critical role directly toward the intention to hire but is not significant as a moderating variable.

Keywords: Apprenticeship Program, Intention to Hire, Vocational High Schools, Unemployment

1. INTRODUCTION

Based on the data from The Central Statistics Agency (BPS), Indonesia's economic growth throughout 2022 was 5.31% on an annual basis or Year on Year (YoY), or much higher than growth in 2021 which was 3.70% YoY. (Perekonomian, 2023). This growth had a positive impact on the lower unemployment rate in Indonesia. The BPS noted that the number of unemployed people in Indonesia was monitored at 5.86% in August 2022. Therefore, when compared to the same period a year earlier, the number of unemployed in Indonesia was recorded to have decreased. In August 2021, the number of unemployed people in Indonesia was 9.1 million or 6.49% (BPS, 2022). The above trend was followed by West Java province. The BPS West Java noted that this province's unemployment rate had decreased yearly. The latest BPS data shown that the percentage is decreasing to 8.31% by 1.51 points compared to August 2021, which was 9.82%. The decline is higher than the national data (BPS, 2022). The reason is West Java has many job opportunities, but there are also many enthusiasts (JabarProv, 2023).

Unlike the unemployment rate trend in Indonesia and West Java, the unemployment rate in Bekasi is getting higher. BPS records that the number of unemployment in Bekasi Regency reached 203,000 people in 2022. This number has increased compared to 2021, which was 197,000 people or from 10.09% in 2021 to 10.31% in 2022 (Prokopim, 2023). The Head of the Bekasi Regency Manpower Office, Edi Rohyadi, acknowledged that there were difficulties in reducing the unemployment rate in Bekasi. One of the reasons is the wave of job seekers from outside the region who keep arriving (Liptan6, 2023). According to him, Bekasi - the largest industrial area in Southeast Asia as well as a buffer zone for the capital city of DKI Jakarta - is often the target of many job seekers from outside the region, i.e., fresh graduates.

From the point of view of education background, BPS reports that most of the unemployment in Indonesia comes from the group of graduates from Vocational High Schools (Sekolah Menengah Kejuruan, SMK). The unemployed population from SMK reached 10.38% in February 2022 (CNBC Indonesia, 2022). It is an irony because SMK graduates are designed to work immediately once they are graduated from school. In reality, they are not. This is because they are not prepared in accordance with market demand, mainly because the training curriculum has not been aligned with the dynamic needs of the workplace; thus, there is a gap in competence between those provided by educational institutions and market demand (Cho, Erdem, & Johanson, 2007; Subramonian, 2008). Coping with the issue, the West Java provincial government, in cooperation with companies, actively absorbs labor from SMK graduates through Vocational Education and Training (VET), i.e., apprenticeship. This program has been proven in many countries to meet the demands of society (Deissinger, 2011; Payne, 2002; Steedman, 2012).

Therefore, in Indonesia, this initiative is fully supported by the central government. On December 23rd, 2016, President Jokowi witnessed the National Apprenticeship Declaration organized by the Ministry of Manpower, the Chamber of Commerce and Industry (Kadin), and the Indonesian Employers' Association (APINDO), in the Karawang International Industrial City area, Karawang, West Java. 2,648 companies in West Java attended the program (Sekretariat Kabinet Republik Indonesia, 2016). However, until 2022, SMK graduates are still the biggest contributor to unemployment even though the central government has set up a National Apprenticeship Program. The central government regulated this program through the

regulations of the Ministry of Manpower (Permenaker) No. 36 of 2016, which was later revised to Permenaker No. 6 of 2020.

2. RESEARCH GAP

It is not conclusive that the Apprenticeship Program has always positively impacted labor absorption in a country or region. And most perspectives come from the government or academics. However, the employers' perspective on the apprenticeship program has not been explored much. It's the employers who make final decision on who will be hired in the company as per their manpower planning. Therefore, their perspective on this program is precious to measure its effectiveness and impact on their hiring decisions, especially on SMK graduates who have attended the Apprenticeship Program in Indonesia.

3. RESEARCH QUESTION

According to the identified problem, this research will answer the following 7 (seven) research questions:

1. How does the Attitude towards SMK graduates affect the Intention to Hire SMK graduates?
2. How does the Subjective Norms (SN) affect the Intention to Hire SMK graduates?
3. How does the Perceived Behavioral Control (PBC) affect the Intention to Hire SMK graduates?
4. How is the moderating effect of the Apprenticeship Program on the Attitude towards SMK graduates on Intention to Hire SMK graduates?
5. How is the moderating effect of the Apprenticeship Program on the Subjective Norms towards SMK graduates on Intention to Hire SMK graduates?
6. How is the moderating effect of the Apprenticeship Program on the Perceived Behavioral Control towards SMK graduates on Intention to Hire SMK graduates?
7. How does the Apprenticeship Program affect the Intention to Hire SMK graduates?

4. LITERATURE REVIEW

4.1. Theory of Planned Behavior (TPB)

The TPB is a theory that has been used to predict and explain individual behaviors (Ajzen, 1991). To be specific, this is one of the theories that are primarily used in measuring employer's Attitude, intentions, and behaviors to hire employees (Ajzen, 2011; Khasni, Kesminder, & Chuah, 2021; Elhoushy & El-Saida, 2020; Laua, Keongb, & Luenc, 2018; Piramanayagam & Seal, 2020). There are five primary components in TPB. They are (1) attitude, (2) subjective norms, and (3) perceived behavioural control which is presumed to impact (4) behavioural intentions and affected (5) behavior (Ajzen, 1991). The TPB model stipulates that the intention to perform a specific behaviour is stronger when the attitude and subjective norm are more positive and perceived behavioural control is higher (Ajzen, Davis, Saunders, & Williams, 2002).

4.2. Attitude

In the TPB Model, the first factor is attitude. Attitude refers to a person's beliefs regarding the numerous consequences he or she might experience from performing a

particular behaviour. Cheng, Lam, and Hsu (2006) state that before an individual commits to a specific behaviour, they tend to assess the advantages and costs resulting from the behaviour they are about to commit. Once an individual is confident that their attitude would contribute to a positive outcome, there is a higher possibility that they would commit to the behaviour (Ajzen, 1991; Cheng et al., 2006; Han, Hsu, & Sheu, 2010).

4.3. Subjective Norms (SN)

Subjective norms are characterised as “the perceived social pressure to perform or not to perform the behaviour” in question (Ajzen, 1991). A similar definition was also provided by Chang (1998). This factor indicates the beliefs about the normative norm of significant others. Significant others refer to family members, close friends, colleagues, or business partners (Ajzen, 2002). Thus, an individual's motivation to communicate throughout a particular behaviour is dictated by the perceived preferences of their close ones.

4.4. Perceived Behavioral Control (PBC)

The last factor in the context of the TPB model is perceived behavioural control. Ajzen (1991) refers to perceived behavioural control as the perceived ease or difficulty when an individual experience performs a specific behaviour. Han et al. (2010) also indicated that perceived behavioural control appraises ‘the perception of how well one can control factors that may facilitate/constrain the actions needed to deal with a specific situation’. Actual behavioural control may encompass skills and environmental limitations, and it is concluded to impact perceived behavioural control and moderate the intention-behaviour relationship.

4.5. Behavioral Intention

Behavioral intention was defined as a measure of relationships between an individual and some actions, and how hard he was willing to perform the actions, and that behavioral intention was an individual’s decision or commitment to perform a given behavior. When an intention to perform a particular act was high, the likelihood of such actions was equally high (Ajzen & Fishbein, 1980; Fishbein & Ajzen 1975).

4.6. Apprenticeship Program

Apprenticeship is the oldest learning method known in vocational education and is still widely used today. One of the targets of this program is job readiness, especially targeting the fresh graduates. Apprenticeship provides work experience and provides skills training according to the competencies needed by the industry (Mahfud et al., 2017). In other words, apprenticeship is work-based training to gain technical and non-technical work experience so that fresh graduates are ready to work. At the end of the program, they will get recognition or competency certification that is trained in the workplace.

By conducting apprenticeship program, there are many benefits for the stakeholders, i.e. government, company and the apprentice. For the government, there will be a number of workforce in Indonesia who are suitable with the needs of the industry and the technology development. Therefore, it would increase the nation competitiveness in compared to the other countries.

4.7. Hypothesis Development

4.7.1. Attitude towards SMK graduates

In general, employers are complaining that graduates are unable to fulfil their needs in the uncertain environment of the current market (Salina, Nurazariah, Noraina Mazuin, & Jegatheesan, 2011). This research is supported by Harvey, Moon and Geall (1997), who found a skills gap between employer requirements and the graduates from the educational system.

In term of hiring SMK graduates, there are several factors causing vocational school graduates are not the preferred ones to be hired by the employers, namely: (a) Industry commonly seeks workers experienced in their fields; (b) Industry always complains that vocational graduates have no good skills, easy to give up when the situations in workplace are changing (Hanafi, 2012). In addition, the SMK graduates were believed to be not ready to enter the workplace because of their lack of work experience, and the readiness of graduates to work was considered low (Sasmito, Panji, Kustono, & Patmanthara, 2015).

For the purpose of this study, the following hypotheses was formulated:

H1: The Attitude towards SMK graduates affects the Intention to Hire SMK graduates

4.7.2. Subjective Norms about SMK graduates

Subjective Norm is defined as a person's perception that most people who were important to him thought he should or should not perform the behavior in question (Ajzen, 1991). The expectation of such important persons close to him often added pressure to the desired behavior; hence, high subjective norm often resulted in the individual's high willingness to perform the desired action (Vansteenkiste et al., 2015). Therefore, subjective norm is a measurement of the individual's perceived social pressure from people of important references as to whether he should or should not perform a particular act.

Employers, even though not believe in the skills acquired by SMK graduates, they basically still prefer the latter due to strong focus on practical skills and the fit of the studies with labor market demands compared to the general high school graduates (Breen, 2005; Müller & Gangl, 2003; Shavit & Müller, 1998). In countries with strong vocational systems (i.e. Netherlands and Germany), a vocational degree seems to offer more reliable information about immediate employability and productivity than a general education pathway (Bol & van de Werfhorst, 2011; Di Stasio & van de Werfhorst, 2016). Therefore, the employers still prefer to hire vocational school graduates compared to general school.

For the purpose of this study, the following hypotheses was formulated:

H2: The Subjective Norms toward SMK graduates affects the Intention to Hire SMK graduates

4.7.3. Perceived Behavioral Control over SMK graduates

Fishbein and Ajzen (2011) indicated that despite stronger intentions contribute to the higher feasibility of performing a behaviour, when actual behavioural control is low, for example, lack of essential skill or presence of environmental barriers, individuals that could be hindered from actualising their intentions. Therefore, it is confirmed that perceived behavioral control is related to behavioral intention, and that the correlation is significant (Armitage & Conner, 2001).

Employers are under pressure when making hiring decisions because they have to finalise the most suitable candidate for the job description (Dwoskin, Squire, & Patullo, 2013). Hiring decisions inevitably involve taking chances, and if the individual that they have hired does not meet their expectation, the employers are the ones that must bear the responsibility. To cope with this challenge, the future workers must have the employability skills which are needed for someone's success in the workplace (Werner, 1995). This skill is a must have to face changes in the working market demands (Sumarno, 2008). Nevertheless, SMK graduates are seem of not ready to work because of lack of skill and work experience (Sasmito, Panji, Kustono, & Patmanthara, 2015).

In the present study, perceived behavioral control is defined as the perception of employers on how easy or difficult for them on the availability of resources to intend the hiring of SMK graduates for their companies. The skills acquired by SMK graduates will help the employers to make decision whether to hire or not the graduates. Based on the above, the hypotheses was formulated as below:

H3: The Perceived Behavioral Control (PBC) toward SMK graduates affects the Intention to Hire SMK graduates

4.7.4. Effect of Apprenticeship Program towards Attitude, Subjective Norms, Perceived Behavioral Control, and Intention to Hire SMK graduates

The researcher hardly found the direct research related to the effect of apprenticeship program towards Attitude, Subjective Norms, Perceived Behavioral Control, and Intention to Hire SMK graduates. But a number of studies has shown that secondary level education systems, combining school-based vocational education with employer-provided, apprenticeship training, have a positive track record in helping the school to work transition process, lowering the unemployment rate, and increasing the quality of work (Daniel, 2013; Rosenbaum et al., 1990; Müller and Shavit, 1998; Shavit and Müller, 2000; Ryan, 2001; Breen, 2005; Wolbers, 2007; Wolter and Ryan, 2011; Piopiunik and Ryan, 2012).

Based on the study of Hanafi (2012) and Sasmito et al (2015), the challenge for education in SMK is how to create learning activities providing knowledge, skills and learning experiences and these activities are in line with the demand in a business and an industry. They mentioned that work experience can only be obtained if students are involved intensively in the apprenticeship program, or directly involved in activities on the business or industry. Scholars also convey that apprenticeship is a training program that provides real work experience in the industry (Andersson et al., 2015; Mahfud et al., 2017; Sharpe & Gibson, 2005).

By having the real work experience, the apprentice will be able to gain employability skills which is defined as "ability to find a job and to be employed" (Nilsson, 2010). It refers to skills such as understanding concepts and personal attributes that make graduates preferred and successful in their careers, along with the ability to benefit the workforce, community and economy in which they serve (Moreau & Leathwood, 2006). There are two types of employability skills, i.e. subject skills and transferable skills (Cox & King, 2006).

Once they have acquired employability skills through apprenticeship program, the attitude and PBC towards SMK graduates will be changed. Based on the above, the hypotheses was formulated as below:

H4a: The Apprenticeship Program moderates the effect of Attitude towards intention to hire SMK graduates

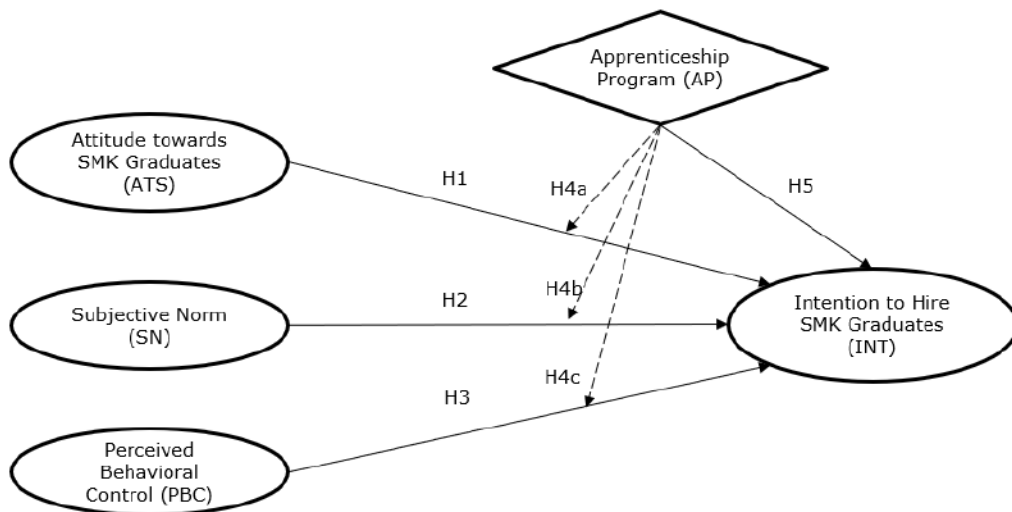

H4b: The Apprenticeship Program moderates the effect of Subjective Norms towards intention to hire SMK graduates

H4c: The Apprenticeship Program moderates the effect of PBC towards intention to hire SMK graduates

H5: The Apprenticeship Program affects the intention to hire SMK graduates

4.8. Research Framework

Based on the literature reviewed here, a conceptual model, was developed, which treats attitude towards SMK graduates, subjective norm, and perceived behavioral control, apprenticeship program as the independent variables; intention to hire SMK graduates as the dependent variable.

Based on the framework, the hypothesis are:

- H1: The Attitude towards SMK Graduates affects Intention to Hire SMK graduates
- H2: The Subjective Norms toward SMK Graduates affects Intention to Hire SMK graduates
- H3: The Perceived Behavioral Control (PBC) toward SMK Graduates affects Intention to Hire SMK graduates
- H4a: The Apprenticeship Program moderates the effect of Attitude towards intention to hire SMK graduates
- H4b: The Apprenticeship Program moderates the effect of Subjective norms towards intention to hire SMK graduates
- H4c: The Apprenticeship Program moderates the effect of PBC towards intention to hire SMK graduates
- H5: The Apprenticeship Program affects the intention to hire SMK graduates

5. RESEARCH METHODS

This research is quantitative research by examining the relationship among variables, with assumptions in creating a hypothesis based on a deductive approach that include bias protections, adapting for various theories, and the ability to generalize and reproduce the results as critical considerations. The types of data and information used in this study are primary data and secondary data. In this study, primary data were obtained directly from questionnaires that respondents had filled in. Meanwhile, secondary data is the source of research data obtained by searching for and collecting materials from BPS data, books, reports, brochures, and other data previously collected by others.

As for the primary data, the information will be gathered from a questionnaire filled out by respondents through an online form (spread of Google form). The target respondents will be the employers who made a decision on who will be accepted to work in the company. Before the questionnaire was distributed to respondents, a pilot test was conducted to test 1) validity and 2) reliability. This study's population is the employers/decision makers in the companies in Kawasan Industri MM2100, Bekasi. The sampling method used in this research is non-probability sampling. In non-probability sampling, the respondent has no known or predefined likelihood of being chosen as a sample subject in non-probability sampling (Bougie & Sekaran, 2019).

6. FINDINGS, ANALYSIS, AND DISCUSSION

The study utilized Cronbach's alpha reliability coefficients to assess internal consistency, with a value of 0.70 or higher being considered acceptable. For this pilot study, a minimum level of reliability was established at a Cronbach's alpha value of 0.70. Pearson's Correlation was used to determine survey validity, with a value of 0.30 or higher being considered a moderate to strong connection. The pilot study was conducted from May 3rd, 2023 to May 4th, 2023 with a target of 30 respondents. Actual data collection resulted in 36 respondents with valid and reliable result.

The respondents were the employees who have experience in recruiting new employees and working at Kawasan Industri MM2100. The total of respondents was 102 who met three main criteria: (1) has been working at least 6 months in the company, (2) the minimum position is team leader level, (3) have experienced on hiring SMK graduates. They were the employees in company starting from the team leader level to director and had experience of hiring SMK graduates. The data collection was supported by the HR community in the industrial area. They shared the questionnaire with their company team from May 6th, 2023, to May 12th, 2023.

After checking and measuring all the data through PLS-SEM, author found the following result:

Hypothesis	Relationship	Path coefficient	t Statistics	p Values	Results
H1	ATT -> INT	0.161	1.677	0.094	H not supported
H2	SN -> INT	0.297	2.635	0.008	H supported
H3	PBC -> INT	0.369	3.146	0.002	H supported
H4a	AP x ATT -> INT	-0.091	0.800	0.424	H not supported

H4b	AP x SN -> INT	-0.068	0.661	0.509	H not supported
H4c	AP x PBC -> INT	0.101	0.907	0.365	H not supported
H5	AP -> INT	0.217	3.213	0.001	H supported

7. CONCLUSION AND RECOMMENDATION

The findings suggest that Attitude (ATT), Subjective Norm (SN), Perceived Behavioral Control (PBC), and Apprenticeship Program (AP) have a positive influence on the intention to hire SMK graduates. However, the AP does not have a significant impact as a moderating variable on ATT, SN, and PBC in relation to the intention to hire.

According to the Importance Performance Matrix Analysis (IPMA), Perceived Behavioral Control is deemed the most crucial variable among all the presented ones. However, there are opportunities for improvement to enhance its contribution to the intention of hiring SMK graduates. Employers in Kawasan Industri MM2100 assert that they could aid in hiring more SMK graduates in the future if they are granted the authority to do so. It is also necessary to equip these employers with the knowledge and skills required to effectively and efficiently recruit them. This will enable companies to onboard capable new employees. Additionally, they perceive this program as highly significant for graduates to acquire the necessary soft skills and hard skills.

ABSTRACT

This research aims to measure influence of the number of independent commissioners, Economic Value Added (EVA), and Return on Assets (ROA) on the firm value. Multiple regression analysis is used as the method of analysis, and sampling is done using purposive sampling. The total sample consists of 202 samples from 45 consumer goods sector companies for the period of 2015-2019. The results of this research indicate that the number of independent commissioners, EVA, and ROA have a significant influence on the value of consumer goods sector companies listed on the Indonesia Stock Exchange (IDX) for the period of 2015-2019.

Keywords: Economic Value Added, Firm Value, Independent Commissioners, Return On Assets

INTRODUCTION

The rising number of companies listed on the Indonesia Stock Exchange (IDX) each year reflects a growing trend of public companies in Indonesia. Based on IDX data, as of the end of 2020, there were 713 companies trading their shares on the IDX. This figure has continued to increase over time, with the number reaching 833 companies as of January 2023. This indicates that more companies realize the importance of having investors to expand their business through share trading. Furthermore, according to data from PT Kustodian Sentral Efek Indonesia (KSEI), the number of investors in the Indonesian capital market experienced a 37.53% growth in 2022 compared to the end of 2021. Nevertheless, this surge must be accompanied by investors' ability to choose high-quality companies, prompting businesses to seek ways to enhance their overall quality.

The majority of companies rely on significant capital to fund their operational activities with the expectation of attaining substantial profits. This holds true for manufacturing companies as well, which engage in large-scale processing of raw materials into finished goods for public sale. Investment in the manufacturing sector escalated from IDR 272.9 trillion in 2020 to IDR 325.4 trillion in 2021. In comparison, the investment realization in this sector amounted to IDR 215.9 trillion in 2019 (Kementerian Perindustrian, 2022). Manufacturing companies strive to uphold their firm value as a means to attract investors. In essence, every company aims to enhance and optimize its firm value. The value of a company acts as a market indicator to evaluate its overall performance and serves as a reference for assessing its future prospects (Karmawan & Badjra, 2019). Stock prices can serve as an indication of a company's value. A higher projected value, as reflected in stock prices, typically corresponds to increased prosperity for shareholders.

Stock price is considered one of the indicators of firm value. It holds significant importance for investors when making financial decisions. Numerous studies have demonstrated that stock price, as a measure of firm value, is influenced by various variables, including Earnings per Share (EPS), Net Profit Margin (NPM), Return on Equity (ROE), Dividend Payout Ratio (DPR), Return on Assets (ROA), Economic Value Added (EVA), and others (Anindya & Habibie, 2022; Onggrasari & Prasetyo, 2020; Sobana, 2021). However, there are three variables—ROA, EVA, and the number of independent commissioners—that exhibit inconsistent effects on stock prices. Despite their inconsistent effects, these variables are crucial in assessing company performance.

Stock prices can be influenced by various factors, including Return on Assets (ROA). ROA is an indicator that reflects the efficiency of generating profits from a company's assets. Studies conducted by Muhammad (2022), Rahim (2020), Karlina et al. (2019), and Krisnando (2019) have consistently demonstrated the impact of ROA on firm value. However, these findings contradict the research conducted by Suri et al. (2020), which suggests that ROA does not have an impact on firm value. On the other hand, Economic Value Added (EVA) is a factor that influences firm value as it measures the effectiveness of capital utilization in creating value for shareholders. A positive EVA signifies that a company has achieved a higher return relative to its capital, thereby creating value. However, contrary to existing theories, research conducted by Sella & Binastuti (2021) argues that EVA does not have an impact on firm value. This perspective is further supported by Mikrad & Syukur (2019), who also assert that EVA does not influence firm value.

In Indonesia, the implementation of Good Corporate Governance (GCG) has been mandated by the Minister of State-Owned Enterprises Regulation No. PER-01/MBU/2011. This regulation pertains to the implementation of good corporate governance in state-owned enterprises, demonstrating the government's commitment to promoting GCG practices in existing

companies. A crucial component of GCG is independent commissioners who play a vital role in overseeing company policies, evaluating performance, and safeguarding the interests of all stakeholders. According to Financial Services Authority (OJK) Regulation No. 33/POJK.04/2014, it is stipulated that the number of independent commissioners must be at least 30% of the total number of members on the board of commissioners. Mishra & Kapil (2018) assert that the number of independent commissioners has an impact on firm value. However, these findings contradict the studies conducted by Lestari, Santoso, and Hermanto (2020) and Laksono & Kusumaningtias (2021), which suggest that the number of independent commissioners does not affect firm value.

The inconsistent findings from previous research regarding the impact of the number of independent commissioners, EVA, and ROA on firm value have spurred researchers to pursue further research. This subsequent research involves altering one independent variable, modifying the company sector, and adjusting the period under research. The objective of this research is to measure the influence of the number of independent commissioners, EVA, and ROA on firm value. The following is the hypothesis used in this research: (1) H1: The number of independent commissioners affects Firm Value, (2) H2: Economic Value Added affects Firm Value, (3) H3: Return on Asset affects Firm Value. By comprehending the roles of these variables, companies can allocate more attention to factors that influence their firm value. Additionally, companies can acquire a broader understanding of the variables that potentially contribute to the enhancement of their firm value.

1. . THEORETICAL BASIS

1.1 Literature Review

AGENCY THEORY

This research used agency theory. Agency relationship is defined as a contract in which one or more individuals (principals) engage another person (agent) to perform a service on their behalf, involving the delegation of decision-making authority to the agent (Jensen & Meckling, 1976). Agency conflict arises when there are conflicting interests between the owners (principals) and the management (agents). Essentially, management is responsible for optimizing the profits that the owners will receive, but management also has its own interests in improving their well-being so that agency conflicts arise. Similar research has been conducted by several researchers using agency theory, such as Badjra and Karmawan (2019) and Bakhtiar & Rokhayati (2023).

Independent Commissioners

Independent commissioners are one of the components considered in the implementation of Good Corporate Governance (GCG). Independent commissioners consist of individuals who do not have any affiliations with related parties. Related parties are those who have business and family relationships with controlling shareholders, other members of the Board of Directors and Board of Commissioners, as well as with the company itself (KNKG, 2006). The function of independent commissioners is to protect and oversee parties outside of management, mediate disputes that occur among internal managers, provide advice to management, and oversee management policies.

Economic Value Added

Economic Value Added is a method used to measure the economic profit of a company, stating that prosperity can only be achieved when a company is able to cover operating costs and capital costs. Economic Value Added (EVA), besides being a performance measurement tool for a company, can also be used as the basis for providing bonuses to employees in each division that has a positive EVA (Nilawati, 2004). A high value of Economic Value Added will increase the company's value, thus attracting investors to invest in its shares.

Return on Asset

Return on Asset (ROA) is a ratio used to measure a company's ability to generate net profit using its assets (Eugene F. & Joel F., 2018). ROA can be used to assess a company's performance efficiency and assist investors in evaluating the company's future prospects. A consistently increasing ROA value indicates that a company's profit generation is very good (Reza F. et al., 2023).

Company Value

Company value reflects the performance of a company as indicated by the stock price formed through supply and demand in the capital market, which reflects the assessment of the public towards the company's performance. In this study, company value refers to the stock price. For companies that offer shares to the public, the company's value will be reflected in its stock price (Sutama & Lisa, 2018). Generally, companies aim to increase their value because a higher company value reflects a positive outlook for the company's future. Company value is important to consider as it provides insights into the company's financial performance and helps investors make investment decisions.

1.2 Hypothesis Development and Framework

The presence of independent commissioners can enhance supervision quality as they are not affiliated with the company, which can influence decision-making. Companies with a higher proportion of independent commissioners will result in an increase in company value as the interests of shareholders will be aligned (O'Sullivan, 1997). Bellamalini et al. (2022) and Mishra and Kapil (2018) state that independent commissioners have a positive impact on company value. However, the research conducted by Lestari, Santoso, and Hermanto (2020) and Kusimaningtias and Laksono (2021) have contradictory results, stating that the number of independent commissioners does not affect company value.

H1: The number of independent commissioners affects company value.

Economic Value Added (EVA) is a measure of the economic value generated by a company as a result of its management activities or strategies (Wiagustini, 2014). A high EVA value in a company will impact the creation of value-added, which can increase company value. Improvements in company performance to generate value-added contribute to a higher company value. The research conducted by Minhajun & Guspul (2022) states that EVA has an impact on company value (stock price). However, the research conducted by Sella & Binastuti (2021) states that EVA does not affect company value.

H2: Economic Value Added affects company value.

Return on Asset (ROA) indicates a company's ability to generate profit by utilizing its total assets. Profits can influence investor interest as successful companies will generate stable profits. With high profits, investor confidence increases, leading to an increase in company value. Research by Muhammad (2022), Rahim (2020), and Krisnando (2019) states that ROA has an impact on company value. This is contrary to the research by Suri et al. (2020) stating that ROA does not affect company value.

H3: Return on Asset affects company value.

2. RESEARCH METHODOLOGY

2.1 Data and Data Collection Method

The data for this quantitative research was collected from the annual reports, specifically the financial reports, of consumer goods sector companies listed on the Indonesia Stock Exchange (IDX) 2015-2019. These annual reports were obtained from the Indonesia Stock Exchange (IDX) website, www.idx.co.id, as well as the official websites of the respective companies. The years 2015-2019 were selected, taking into account the impact of the COVID-19 pandemic in

2020, which resulted in financial performance disparities among companies in various sectors in Indonesia. Within this timeframe, there were 51 manufacturing companies listed on the Indonesia Stock Exchange, yielding a total of 255 company-year data.

The research utilized a purposive sampling method, which involves selecting samples based on predetermined considerations and criteria. The sample criteria were determined based on the following considerations: (1) The sample criteria for this research included consecutively listed consumer goods sector companies on the Indonesia Stock Exchange (IDX) throughout the research period of 2015-2019, (2) Companies that published financial reports during the research period from 2015 to 2019, (3) Companies that fully disclosed the required data for the research during the period from 2015 to 2019, (4) Companies that exclusively used IDR (Indonesian Rupiah) in their financial reports. Based on these specified criteria, the initial sample data of 255 was reduced to 202 samples due to some samples not meeting the criteria.

2.2 Data Analysis Method

The analysis technique used in this research is multiple regression analysis. Prior to conducting multiple regression analysis, the study performed tests on classical assumptions. Hypothesis testing was then used to determine the impact of each independent variable on the dependent variable. The regression equation is as follows:

$$Y = \alpha + \beta_1 X_1 + \beta_2 X_2 + \beta_3 X_3 + e$$

Noted:

Y = Firm Value

α = Constant

β_1 - β_6 = Regression Coefficients

X_1 = Number of Independent Commissioners

X_2 = Economic Value Added

X_3 = Return on Asset

e = Residual

Table 1. Measurement of Variables

Variable	Calculation Model	Description
Firm Value	Stock Closing Price	In publicly traded companies, the value of the company is reflected in its stock price. (Ningsih et al., 2021).
Independent Commissioners	$IC = \frac{\text{Total number of Independent Commissioners}}{\text{Total number of Board of Commissioners}}$	The measurement of the percentage of independent commissioners is obtained by comparing the number of independent commissioners to the total number of members on the board of commissioners (Laksana & Handayani, 2022).
Economic Value Added	$EVA = NOPAT - (WACC \times \text{Invested Capital})$ $NOPAT = EBIT \times (1 - Tax)$	EVA is obtained by calculating the difference between net operating profit after tax (NOPAT) and the after-tax cost of capital

	<p><i>Invested Capital</i> $= (Total\ Debt + Equity) - Shortterm\ Debt$ $WACC = (D \times r_d(1 - Tax)) + (E \times r_e)$ $D = Total\ Debt / Total\ Debt\ dan\ Equity \times 100\%$ $r_d = Interest\ Expense / Total\ Debt \times 100\%$ $E = Total\ Equity / Total\ Debt\ dan\ Equity \times 100\%$ $r_e = Net\ Income\ after\ Tax / Total\ equity \times 100\%$ $Tax = Tax\ Expense / Earnings\ Before\ Tax \times 100\%$</p>	<p>required to support operations (Badjra and Karmawan, 2019). The EVA value is then transformed into a binary variable, with a value of 1 representing a positive EVA and a value of 0 representing a negative EVA.</p>
Return on Asset	$ROA = \frac{Net\ Income}{Total\ Assets} \times 100\%$	<p>The calculation of Return on Assets reflects the return generated for each unit of Rupiah invested in the form of assets. (Reza F. et al., 2023).</p>

3. RESULT AND DISCUSSION

3.1 Descriptive Statistics

Table 2. Descriptive Statistics

Variable	Obs	Mean	Std. Dev.	Min	Max
Code	0				
Year	202	2017.153	1.396045	2015	2019
IC	202	.4180263	.1180043	.33333	1
EVA	202	.5148515	.5010211	0	1
ROA	202	.1491264	1.000825	-2.641	13.85
Stock Price	202	4347.48	11510.01	50	83800
Lns _p	202	6.929713	1.625358	3.91202	11.33619

Source: Researcher's Processed Data, (2023)

Descriptive statistics provide relevant information about the data used in the research. Based on Table 2, the descriptive variables used in this study include the mean, standard deviation, minimum and maximum values, and sample size of the EVA, ROA, and IC variables. The study utilized a sample of 202 data points from 45 companies.

The dependent variable Y, represented by the stock price proxy, has a mean value of 6,929 with a smaller standard deviation of 1,625. This indicates that the stock price data is not widely dispersed, and there are no significant deviations in the data. The maximum value of 11,336 is held by PT Gudang Garam Tbk (GGRM) in 2017, while the minimum value of 3,912 is held by PT Inti Agri Resources Tbk (IIKP) in 2019. The EVA variable (X2) has a mean value of 0.5148 with a smaller standard deviation of 0.5010, indicating that the EVA data does not vary significantly, and there are no significant deviations in the data. The maximum value of 1

represents a positive EVA, indicating that companies have added economic value. The minimum value of 0 represents a negative EVA, indicating that companies have not been able to create economic value. Most companies have a value of 1 for EVA. The ROA variable (X3) has a mean value of 0.1491 with a larger standard deviation of 1.0008. This indicates that the ROA data exhibits significant variation. The maximum value of 13.85 is held by PT Gudang Garam Tbk (GGRM) in 2019, while the minimum value of -2.641 is held by PT Tiga Pilar Sejahtera Food Tbk (AISA) in 2017. The IC variable (X1) has a mean value of 0.4180 with a smaller standard deviation of 0.1180, indicating that the number of Independent Commissioners data does not vary significantly, and there are no significant deviations in the data. The maximum value of 1 is held by PT Bentoel Internasional Investama Tbk (RMBA) in 2019 and 2018, while the minimum value of 0.333 is held by most companies in the sample used.

3.2 Classical Assumption Tests

Normality Test

Table 3. Normality Test

Variable	Obs	Pr(Skewness)	Pr(Kurtosis)	adj chi2(2)	Prob>chi2
res2	200	0.7124	0.0940	2.97	0.2262

Source: Researcher's Processed Data, (2023)

The previous dataset, which initially consisted of 202 observations, has been transformed and outliers, resulting in 200 data points. Based on the data processing results in Table 3, the Prob>chi2 value is shown as 0.2262, which is greater than 0.05. Therefore, the data in the regression model is normally distributed.

Multicollinearity Test

Table 4. Multicollinearity Test

Variable	VIF	1/VIF
IC	1.01	0.991755
EVA	1.03	0.975498
ROA	1.03	0.972813
Mean VIF	1.02	

Source: Researcher's Processed Data, (2023)

Based on the data processing results in Table 4, the multicollinearity test indicates that the values for all three independent variables are >0.10 and <10. This suggests that there is no evidence of multicollinearity among the independent variables.

Multiple Regression Analysis

This study utilizes multiple regression analysis with a robust standard error approach to examine the influence of independent variables (independent commissioners, EVA, and ROA) on firm value. The results of the Multiple Regression Analysis are presented in the table below:

Tabel 5. Multiple Regression Analysis

Number of obs	=	200
F (3, 196)	=	39.83
Prob > F	=	0.0000

R-squared = 0.2416

Root MSE = 1.3794

Insp	Coef.	Robust Std. Err	t	P> t	[95% Conf. Interval]	
IC	2.159529	.9137685	2.36	0.019	.3574485	3.961609
EVA	1.243636	.1967307	6.32	0.000	.8556557	1.631617
ROA	.2573336	.035644	7.22	0.000	.1870387	.3276285
_cons	5.299533	.3669253	14.44	0.000	4.575905	6.023162

Source: Researcher's Processed Data, (2023)

Based on the table above, the equation can be represented as follows based on the Coefficient column:

$$Y = 5.299 + 2.159X_1 + 1.243X_2 + 0.257X_3 + e$$

Explanation regarding the data processing from the Multiple Regression Analysis is as follows:

1. The constant value of 5.299 indicates that the variables IC (X1), EVA (X2), and ROA (X3) remain constant. The positive sign suggests a positive relationship between the independent variables and the dependent variable.
2. The coefficient value of the IC (X1) variable is 2.159, suggesting that an increase in IC (X1) corresponds to a 2.159-unit increase in Firm value (Y).
3. The coefficient value of the EVA (X2) variable is 1.243, suggesting that an increase in EVA (X2) corresponds to a 1.243-unit increase in Firm value (Y).
4. The coefficient value of the ROA (X3) variable is 0.257, suggesting that an increase in ROA (X3) corresponds to a 0.257-unit increase in Firm value (Y).

Coefficient of Determination (R²) Test

The coefficient of determination, or R-squared, is 0.2416. This suggests that the variation in the three independent variables explains approximately 24.16% of the variation in the dependent variable, with the remaining 75.84% being influenced by other variables beyond the scope of this study.

F-Test

From the table above (Table 5), the Prob > F value is 0.0000, which is less than 0.05. This indicates that the three independent variables, IC, EVA, and ROA, collectively have a significant impact on firm value.

T-Test

a. The effect of Number of Independent Commissioners on Firm Value

Based on the hypothesis testing results in Table 5, the IC variable demonstrates a significance value of 0.019, which is less than 0.05. This suggests that the IC variable does have an influence on firm value. Therefore, the first hypothesis, which posits that the number of independent commissioners affects firm value, is accepted. Consequently, as the number of independent commissioners increases, the firm value of consumer goods sector companies listed on the stock exchange also increases. This research supports the findings of Bellamalini et al. (2022) and Mishra and Kapil (2018), which suggest that independent commissioners have a positive impact on firm value. The primary role of independent commissioners is to oversee management policies and provide advice to the board of directors (Wiguna & Yusuf, 2019). With effective oversight from independent commissioners, the conflict of interest between agents and principals can be mitigated, resulting in an enhanced firm value. It can be concluded that the

role of independent commissioners is pivotal in bolstering company performance, thereby influencing firm value.

b. The effect of Economic Value Added on Firm value

Based on the hypothesis testing results in Table 5, the EVA variable demonstrates a significance value of 0.000, which is less than 0.05. This suggests that the EVA variable does have an influence on firm value. Therefore, the first hypothesis stating that EVA affects firm value is accepted. When EVA increases, the firm value of consumer goods sector companies listed on the stock exchange also increases, as EVA represents the value added that a company can generate. This research supports the findings of Minhajun & Guspul (2022), which suggest that EVA has an impact on firm value. One way management attracts investor attention is by increasing the company's value, which is influenced by an increase in EVA (Economic Value Added). In addition to attracting investor attention, management also aims to optimize the company's value, which will impact the well-being of the owners.

c. The effect of Return On Assets on Firm Value

Based on the hypothesis testing results in Table 5, the ROA variable shows a significance value of 0.000, which is less than 0.05. This indicates that the ROA variable has a significant influence on firm value. Therefore, the first hypothesis stating that ROA affects firm value is accepted. When ROA increases, the firm value of consumer goods sector companies listed on the stock exchange also increases. This research confirms the findings of Muhammad (2022), Rahim (2020), and Krisnando (2019), who state that ROA affects firm value. In agency theory, management is expected to efficiently manage company assets for the benefit of owners, which ultimately affects firm value. A higher ROA value reflects good company growth, attracting investors to invest and, ultimately, increasing firm value (Jaya, 2020).

CONCLUSION

Based on the analysis and discussion provided above, the findings indicate that the number of independent commissioners, EVA, and ROA have an impact on firm value. This highlights the importance of the role of independent commissioners in running a company, as they can influence the company's value (stock price). ROA, as one of the profitability ratios, has always been a concern for companies, as it affects investor evaluation, thus proving its role in influencing firm value. Additionally, the previously overlooked EVA value has been found to play a role in influencing fluctuations in firm value. Through this analysis, it is hoped that companies will become more aware of the importance of complying with the regulations set by the Financial Services Authority (OJK) regarding the number of independent commissioners. Additionally, the significance of EVA and ROA values should be recognized, as they can impact firm value. This study has several limitations: (1) The use of variables such as the number of independent commissioners, EVA, and ROA explains only 24.16% of the stock price, with the remaining portion influenced by other variables not examined in this research, (2) Some companies in the consumer goods sector lack complete data for the research. It is recommended that future researchers include additional variables, such as stock returns and company size, which have not been utilized in this research, to broaden the research findings. Future researchers can also consider using companies from other sectors or modifying the time period under research.

ABSTRACT

The research aims to analyze the financial performance of PT. Indofood Sukses Makmur Tbk. by using financial ratios. The study employed a quantitative research method and collected data from the company's financial statements from 2016 to 2020. The liquidity ratios of the company during this period were found to be in a fairly good condition. Both the current ratio and quick ratio were good, indicating that the company has sufficient current assets to cover its current liabilities. However, the cash ratio was not in good condition, which means the company has limited cash available to pay off its current liabilities. On the other hand, the working capital to total asset ratio was in a poor condition, which suggests that the company has minimal working capital in its assets. The solvency of the company from 2016 to 2020 was fairly good, as it had collateral to cover its long-term debts. However, the activity ratios of PT. Indofood Sukses Makmur Tbk. were in a poor condition due to the inefficient turnover of accounts receivable. This resulted in longer time periods required for collecting accounts receivable and increasing sales. Despite the poor activity ratios, the profitability ratios of the company were in a fairly good condition as it was able to generate a net profit from its investments. Overall, the study suggests that PT. Indofood Sukses Makmur Tbk. has a mixed financial performance during the period of 2016 to 2020, with some ratios indicating good financial health and others indicating areas for improvement.

Keywords: Financial Performance, Financial Ration, Quantitative Research, Liquidity Ratios, Profitability Ratios.

INTRODUCTION

Financial statement analysis is one way to examine and study the relationship between a company's financial position and business results. There are several techniques to analyze financial statements, one of which is the technique of financial ratio analysis. Financial statement analysis is a technique where the relationship between items in the financial statements (balance sheet or income statement) can be determined. The purpose of financial statements is to provide information to the company about its financial position, financial performance, and changes in the company's financial position. This information is needed by interested parties to make decisions. The company's financial position is influenced by controlled resources, capital structure, liquidity and solvency, and the ability to adapt to changes in the environment. Financial performance information, especially profitability, is essential to determine the company's success.

It is necessary to assess the potential changes in economic resources that may be controlled in the future. Information about changes in a company's financial position is useful for evaluating investment activities, funding, and operations during the reporting period. All information related to financial reports is essential for stakeholders in the company, both external and internal parties.

Financial performance is also one of the achievements obtained by the company in managing assets effectively during a period that can be used to determine and evaluate the extent of the company's success activities carried out by the company (Rudianto, 2013).

Based on the According to (Hery, 2015) financial performance analysis is a critical process of assessing financial performance, which includes a review of financial data, calculations, measurements, interpretation, and providing solutions to financial problems of the company in a certain period. Financial performance can be assessed using several ratio analysis tools.

Ratios are a commonly used financial statement analysis technique. Ratios are an analytical tool that can provide a way out and describe phenomena that appear in a financial report. There are several groups of ratios commonly used in analyzing a company's finances, namely Liquidity, Solvency, Profitability, and Activity.

To get an overview of the financial development of a company, it is necessary to analyze or interpret financial data in the relevant company where the financial data is reflected in financial reports. In this study, the company to be examined is PT Indofood Sukses Makmur Tbk a manufacturing company engaged in the food and beverage sector. To ensure that the company can determine the extent of the company's performance effectiveness in obtaining periodic profits, a measurement of the company's performance is carried out at PT Indofood Sukses Makmur Tbk to show the unstable financial position from year to year. The financial reporting period under examination is from 2016 to 2020.

Table-1: Income Statement
PT Indofood Sukses Makmur Tbk
Year 2016-2020
(presented in millions of Rupiah)

Year	Revenue	COGS	Gross Profit	Net Profit
------	---------	------	--------------	------------

2016	66.750.317	47.321.877	19.428.440	4.852.482
2017	70.186.618	50.318.096	19.868.522	5.145.063
2018	73.394.728	53.182.723	20.212.005	4.961.851
2019	76.592.955	53.876.594	22.716.361	5.902.729
2020	81.731.469	39.946.220	18.829.726	8.752.066

Source : Financial Report PT Infodood Sukses Makmur Tbk

The table-1 provides a summary of the financial report for PT Indofood Sukses Makmur Tbk. It can be seen that the company's source of funds comes from debt and equity, which will be invested in assets. Thus, assets are the use of the company's funds, and the funds invested in assets will be managed to generate income. Income, minus expenses, will result in profit. Therefore, income will affect profit, and if income increases, profit is expected to follow suit. Based on this data, the author is interested in analyzing the effectiveness of fund utilization and a company's ability to increase profits as measured by financial ratios such as liquidity ratios, solvency ratios, activity ratios, and profitability ratios. From the background information provided, the author is interested in conducting a financial performance analysis on PT Infodood Sukses Makmur Tbk for the years 2016-2020.

The purpose of the research is to determine and measure the financial performance of PT Infodood Sukses Makmur Tbk based on liquidity ratios, solvency ratios, activity ratios, and profitability ratios. The benefits of this research are that it can serve as a learning tool and expand knowledge about financial performance measured using financial ratios in companies and can be used as a reference for future researchers. For companies, it can be used as a theoretical basis and recommendations for consideration. For other researchers, it can serve as a reference for further research by adding or using other variables to obtain better results.

Theoretical

Financial Statement Analysis

Financial Statement Analysis is a process of breaking down financial accounts into smaller units of information and examining their meaningful and significant relationships, both quantitative and qualitative data, with the aim of gaining a deeper understanding of the financial condition, which is crucial in making informed decisions (Setia, 2015).

Financial Performance

Financial Performance refers to a complete display of a company's condition during a certain period of time, which is the result or achievement influenced by the company's operational activities in utilizing its resources. Performance is a general term used for the activities or all actions of an organization in a period of time with reference to a number of standards such as past or projected costs with a basis of efficiency, management accountability, or similar things (Rivai, 2010).

Financial Ratio Analysis

Financial Ratio Analysis describes a relationship or balance between a certain amount and another amount, and by using this ratio analysis tool, analysts can explain or provide an overview of the good or bad condition or position company finance (Munawir, 2010).

The Purpose of Ratio Analysis. (Murhadi, 2013) states that financial ratio analysis is useful for indicating the strengths and weaknesses of a company's finances. Ratio analysis is also frequently used by managers, credit analysts, and stock analysts. Ratio analysis is beneficial because it compares a figure relative to others, thereby avoiding misinterpretation of the absolute figures in financial reports (Gustina & Wijayanto, 2015).

Types of Financial Ratio Analysis

1. Liquidity Ratios

Liquidity ratios describe a company's ability to pay off short-term debts that will soon come due. The liquidity ratios are as follows:

- a. Current Ratio is a ratio used to measure a company's ability to meet its short-term obligations using its current assets. The current ratio is expressed in the following formula:

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}} \times 100\%$$

- b. Quick Ratio is a ratio used to measure a company's ability to meet its financial obligations for its most liquid assets. The quick ratio is expressed in the following formula:

$$\text{Quick Ratio} = \frac{\text{Current Assets} - \text{Inventory}}{\text{Current Liabilities}} \times 100\%$$

- c. Cash Ratio is a ratio that shows a company's ability to pay off debts that must be immediately settled using the cash available in the company, including marketable securities that can be easily liquidated. The cash ratio is expressed in the following formula:

$$\text{Cash Ratio} = \frac{\text{Cash}}{\text{Current Liabilities}} \times 100\%$$

- d. Working Capital to Total Asset Ratio (WCTA) is used to measure and compare the amount of inventory on hand to a company's working capital. The formula for finding the working capital to total asset ratio is as follows:

$$\text{WCTA} = \frac{\text{Current Assets} - \text{Current Liabilities}}{\text{Total Assets}} \times 100\%$$

2. Solvency Ratios

Solvency ratios are used to measure the extent to which a company's assets are financed with debt. In other words, how much debt burden is placed on the company relative to its assets. The types of ratios in solvency ratios are as follows:

a. Debt to Asset Ratio

Debt to Asset Ratio is a ratio used to measure the ratio of total debt to total assets. The formula used to find the Debt to Asset Ratio is as follows:

$$\text{Debt to Asset Ratio} = \frac{\text{Total Debt}}{\text{Total Assets}} \times 100\%$$

b. Debt to Equity Ratio

Debt to Equity Ratio is a ratio used to assess debt with equity. This ratio is found by comparing all current and long-term debts to all equity.

c. Long Term Debt to Equity Ratio (LTDtER)

LTDtER is the ratio of long-term debt to equity. Its purpose is to measure the proportion of equity that is used as collateral for long-term debt by comparing long-term debt to equity that has been provided by the company. The formula used to find LTDtER is as follows:

$$\text{LTDtER} = \frac{\text{Long-term debt}}{\text{Total Equity}} \times 100\%$$

d. Total Asset to Total Debt Ratio

Ratio that describes a company's ability to pay off all of its liabilities using its assets, or in other words, the collateral provided by the assets for the total debt.

e. Times Interest Earned Ratio

This ratio defined as a company's ability to pay interest costs. This ratio is a measure of the extent to which revenue can decline without embarrassing the company for failing to pay its annual interest costs. The formula used to find the Times Interest Earned Ratio is as follows (Kasmir, 2011):

$$\text{Times Interest Earned Ratio} = \frac{\text{Ebit}}{\text{Interest Expense}} \times 100\%$$

3. Efficiency Activity Ratios

Describe the efficiency of a company's use of resources. The types of activity ratios that are commonly used in companies are as follows:

a. Receivable turnover is a ratio used to measure how long it takes to collect receivables during a period or how many times the funds invested in receivables are turned over. The formula used to find receivable turnover is as follows:

$$\text{Receivable Turnover} = \frac{\text{Credit Sales}}{\text{Average Accounts Receivable}}$$

6th International CEO Communication, Economics, Organization & Social Sciences Congress

Receivable Turnover = ----- × 1 time
Receivables

b. Receivable Turnover

Receivable turnover is a ratio used to measure how long it takes to collect receivables during a period or how many times the funds invested in receivables are turned over. The formula used to find receivable turnover is as follows:

Receivable Turnover = ----- × 1 time
Credit Sales
Receivables

c. Average Collection Period (ACP)

The average collection period ratio is meant to look at the average time it takes to collect receivables in a period, usually done in one year, so that it can be known how long the funds will be invested.

Average Collection Period = ----- × 1 time
365
Receivable Turnover

d. Inventory Turnover

Inventory turnover is a ratio used to measure how many times funds are invested in inventory during a period.

e. Average Day Inventory

This ratio describes the average inventory stored in the warehouse, or the length of time it takes to make a sale from the time the finished goods enter the warehouse until the goods are sold.

f. Working Capital Turnover

Working capital turnover is a ratio used to measure and assess the effectiveness of a company's working capital during a certain period.

g. Asset Ratio to Total Debt

Asset ratio to total debt is a ratio used to measure all the assets owned by the company and measure how much sales there are.

4. Profitability Ratio

In practice, the types of profitability ratios that can be used are: (Kasmir, 2011).

a. Gross Profit Margin

Gross Profit Margin is one of the ratios used to calculate the profit margin on sales. The formula used to find the gross profit margin ratio is as follows:

GPM = ----- × 100%
Gross Profit
Sales

b. Net Profit Margin

6th International CEO Communication, Economics, Organization & Social Sciences Congress

Net profit margin is a measure of profit by comparing after-tax and interest income with sales. The formula used to find the Net Profit Margin ratio is as follows:

$$\text{NPM} = \frac{\text{Net Income after interest and taxes}}{\text{Sales}} \times 100\%$$

c. Return on Investment (ROI)

Return on Investment is also a measure of management effectiveness in managing investments. The formula used to find the Return on Investment ratio is as follows:

$$\text{ROI} = \frac{\text{Net Income after interest and taxes}}{\text{Total assets}} \times 100\%$$

d. Return on Equity (ROE)

Return on Equity is a ratio to measure after-tax profits with equity. The higher the ratio, the better.

Methodology

Object Research

The research object conducted by the author is PT Indofood Sukses Makmur Tbk which is listed on the Indonesia Stock Exchange (IDX) using financial statements as Analysis of Financial Performance during the period of 2016-2020 was conducted using quantitative descriptive analysis. Quantitative descriptive analysis is a research method based on systematically collected data.

The type of data

The type of data used in this research is secondary data. Secondary data is the result of primary data or processed by others. The source of data used in this research is documents obtained from the internet related to the financial data of PT Indofood Sukses Makmur Tbk during the period of 2016 to 2020.

Analysis technique

Analysis technique used in this research is quantitative, which is data consisting of numbers that can be processed mathematically and tested statistically, which is the financial statements of the company consisting of the balance sheet and income statement of PT Indofood Sukses Makmur Tbk during the period of 2016-2020.

RESEARCH & DISCUSSION

Discussion

Liquidity ratios

Table 2-1 Liquidity Ratios

PT Indofood Sukses Makmur Tbk
Year 2016-2020

Liquidity Ratio	2016	2017	2018	2019	2020	Average	Financial performance
current ratio	151%	150%	106%	127%	135%	138%	Very good
quick ratio	106%	105%	69%	88%	93.8%	92.8%	Very good
cast ratio	69%	63%	28%	55%	55,2%	55,2%	Good
WCTA	11,88%	12,36%	2,14%	6,98%	6,16%	7,90%	Poor

Source: Processed data from financial statement of PT Indofood Sukses Makmur Tbk
Based on the analysis of the financial performance of PT Indofood Sukses Makmur Tbk using liquidity ratios, the company's performance appears to be quite good. The current ratio was consistently good from 2016-2020 with an average value of 133,8%. The quick ratio also showed a good performance overall with an average value of 92,8% during the same period. The cash ratio was also good, with a value above the average of 50%. However, the working capital to total asset ratio was not as good due to the company's limited working capital in its assets.

Solvency Ratio

Tabel 2-2 Solvency Ratio
PT Indofood Sukses Makmur Tbk
Year 2016-2020

Solvency Ratio	2016	2017	2018	2019	2020	Average	Financial performance
Debt to asset ratio	46%	46%	48%	43%	56%	47,8%	Good
Debt to equity	87%	88%	93,3%	77,9%	114,5%	92,14%	Good
LTDtER	43%	41%	30%	31%	76%	44,2%	Very Good
Total asset to total debt	214,9%	213,5%	48,2%	43,6%	189,1%	114,86%	Very Good

Source: Processed data from financial statement of PT Indofood Sukses Makmur Tbk
Based on the table 2-2, the overall financial condition of PT Indofood Sukses Makmur Tbk can be seen. In general, the average debt to asset ratio from 2016-2020 is 47,8%. For the debt to equity ratio from 2016-2020 is 92,14%, which can be considered good. Meanwhile, for the LTDtER and total asset to total debt from 2016-2020, the average LTDtER is 44,2% and the total asset to total debt is 141,86%, which can be considered quite good.

Activity Ratio

Table 2-3 Activity Ratio
PT Indofood Sukses Makmur Tbk
Year 2016-2020

Activity Ratio	2016	2017	2018	2019	2020	Average	Financial performance
Receivable turn over	75,2 times	63,8 times	64,1 times	59,9 times	53,7 times	63,34 times	Good
Average collection period	5 days	6 days	6 days	6 days	7 days	6 days	Poor
Inventory turn over	5,59 times	5,19 times	4,57 times	5,58 times	3,58 times	4,90 times	Good

Average day Inventory	64 days	69 days	78 days	64 days	101 days	75 days	Very Good
Working capital turn over	5,59 times	6,46 times	35,48 times	11,40 times	5,84 times	12,95 times	Poor
Total asset turn over	0,81 times	0,79 times	0,76 times	0,79 times	0,36 times	0,702 times	Poor

Source: Processed data from financial statement of PT Indofood Sukses Makmur Tbk

Based on the table 2-3, it can be seen that the overall financial condition of PT Indofood Sukses Makmur Tbk is somewhat mixed. The receivable turnover from 2016-2020 has a good average value of 63,34 times. However, the average collection period is quite poor with a value of 6 days for one-time collection of accounts receivable. The investor turnover is good with an average value of 4,90 times from 2016-2020. The average day inventory for goods stored in the warehouse for resale is 75 days, which can be considered acceptable. The working capital turnover has a poor average value of 12,95 times from 2016-2020, indicating that PT Indofood Sukses Makmur Tbk has poor utilization of working capital to generate sales. The total asset turnover from 2016-2020 has an overall average value of 0,70 times, indicating poor performance in utilizing assets to generate revenue.

Profitability Ratio

Table 2-4 Profitability Ratio
PT Indofood Sukses Makmur Tbk
Year 2016-2020

Profitability Ratio	2016	2017	2018	2019	2020	Average	Financial performance
Gross profit margin	29,10%	28,30%	27,50%	29,60%	32,00%	29,30%	Good
Net profit margin	7,26%	6,76%	6,76%	7,70%	9,31%	7,67%	Good
Return on investment	6,40%	5,13%	5,13%	6,13%	2,89%	5,28%	Good
Return on equity	11,90%	9,90%	9,90%	10,80%	6,20%	9,96%	Poor

Source: Processed data from financial statement of PT Indofood Sukses Makmur Tbk

Looking at the table 2-4, we can see the financial condition of PT Indofood Sukses Makmur Tbk. The overall gross profit margin from 2016-2020 was 29,3%, indicating a good condition, as the company was able to generate gross profit from sales. The net profit margin from 2016-2020 was 7,67%, indicating a good condition, as the company was able to generate net profit from sales. The overall return on investment from 2016-2020 was 5,28%, indicating a good condition, as the company was able to generate net profit from investments. The overall return on equity from 2016-2020 was 9,96%, indicating a fairly good condition, as the company was able to generate net profit from the use of equity in the company.

Conclusion

Based on the above discussion, it can be concluded that PT Indofood Sukses Makmur Tbk was in a fairly good condition from 2016-2020, which can be seen from the financial performance of:

1. Liquidity Ratios

The current ratio is below the standard at 133,8%, indicating a poor condition. The quick ratio is considered fairly good at 92,8%. However, the working capital to total is in a poor condition due to the limited working capital obtained in the company's assets.

2. Solvency Ratios

The debt to asset ratio from 2016-2020 is considered good, as there is enough capital to cover the debt.

3. Activity Ratios

The activity ratios at PT Indofood Sukses Makmur Tbk are in a poor condition. The receivable turnover ratio is good at 63,34 times, but the inventory turnover ratio is poor, and the working capital turnover ratio is poor in terms of the use of working capital to generate sales. The total asset turnover ratio is poor in terms of the use of assets to generate sales.

4. Profitability Ratios

The profitability ratios at PT Indofood Sukses Makmur Tbk are in a good condition. The gross profit margin is 29,3%. The net profit margin is good, as the company was able to generate net profit. The return on investment is good. The return on equity is fairly good, as the company was able to generate net profit from the use of equity.

ABSTRACT

Implementing Islamic economic principles in religious education institutions has gained increasing attention recently. The Islamic financial system is based on the principles of social justice, ethical business practices, and community welfare, making it an attractive alternative to conventional economic systems. This paper explores the implementation of the Islamic financial system in religious education institutions, specifically at Nurul Islam Nature School in Bekasi Regency, West Java-Indonesia. The research was conducted through qualitative methods, including interviews and observing the school's economic practices. The study reveals that Nurul Islam Nature School has integrated Islamic economic principles into their institutional framework, including Zakat, Sadaqah, and ethical business practices. The school also emphasizes the importance of community welfare and social responsibility. Implementing the Islamic economic system in Nurul Islam Nature School has resulted in more ethical and sustainable financial practices, promoting social justice and fairness. Moreover, it has encouraged students to develop a deeper understanding of Islamic economics and its relevance to their daily lives. The findings of this study have significant implications for religious education institutions and policymakers interested in promoting ethical and economic practices in the education sector. It highlights the potential of the Islamic financial system to promote social welfare and sustainability, which can serve as a model for other educational institutions to follow.

Keywords: Islamic Economic System, Religious Education Institutions, Ethical Business Practices, Community Welfare.

1. INTRODUCTION

Islamic economics is based on the teachings of the Quran and Sunnah, emphasizing the importance of moral values for economic goals. The principles of Islamic economics include the indivisibility and interdependence of efficiency and equity through the creation and distribution of wealth as a means of improving individual and social well-being (A'la Mawdudi, 2013, pp. 17–18). Islamic economics is based on the teachings of the Quran and Sunnah, emphasizing the importance of moral values for economic goals. The principles of Islamic economics include the indivisibility and interdependence of efficiency and equity through the creation and distribution of wealth to improve individual and social well-being (Guritno et al., 2023, p. 58).

Islamic economic principles are based on the Quran and the Sunnah, offering an alternative to mainstream financial systems. These principles are implemented in various areas, such as banking, investment, and business competition. Islamic banking, for example, does not recognize interest rate instruments and instead applies profit and loss sharing (Suharli et al., 2021, p. 280). Investment is legal according to Islamic principles and does not contain elements prohibited by Islam such as Riba (interest) and Maisir (gambling) (Watkins, 2020, pp. 42–44). Shariah investing refers to activities that adhere to the principles of Sharia, which prohibit the procurement of businesses and certain industries, such as alcohol, gambling, and weapons, based on unethical business practices. Various Shariah-compliant investments include Islamic bonds (sukuk), Islamic mutual funds, and real estate Islamic investment trusts (REITs). These investment vehicles adhere to Shariah principles and allow investors to recoup their investment while adhering to their religious beliefs (Cattelan, 2019, pp. 49–50). The importance of ethical and socially responsible investing in Islam leads Muslim investors to try to invest their wealth in a manner consistent with their beliefs (Budyanti et al., 2021, p. 121).

Islamic economic principles also emphasize social justice, transparency and universalism. Muslim financial laws prohibit interest-based transactions and promote ethical and sustainable financial practices. Challenges and opportunities to implement these principles in the loan-free loan are commonly known as Islamic banking or finance (Suharli et al., 2021, pp. 280–281). Discussions are ongoing on how to apply Islamic economic principles to contemporary issues such as cryptocurrencies. A cryptocurrency is a digital or virtual currency that uses cryptography to regulate the creation of currency units and verify the transfer of funds. Islamic economic principles emphasize the importance of transparency, fairness and ethical behavior in financial transactions. Muslim economic principles promote economic growth and income equality while supporting ethical and moral values (Nouruzzaman et al., 2021, p. 236).

Implementing Islamic education in Islamic religious institutions is important to integrate the religious campus into academic and social studies. Implementing Islamic education through religious moderation has a positive impact on educational institutions. Search results provide specific information about Islamic principles based on questions or how they apply in real life. However, efforts to introduce Islamic education based on religious prohibitions through educational research and community programs at Madrasah in Ponorogo, Indonesia, have yielded results. Islamic education should focus on teaching religious subjects to prepare graduates to face the challenges of today's global situation (Suyudi & Putra, 2022, pp. 195–196).

Another study examined the effect of Islamic religious imagery and product quality on non-food sales. The influence of religious and cultural values on consumer behavior is an important contribution to Islamic marketing. This study provides valuable insights into understanding consumer perceptions and preferences. Analyzing different marketing strategies and messages also benefits companies targeting Muslim consumers. Islamic marketing

provides insights into the role of religious and cultural values in shaping consumer behavior and preferences in Muslim-majority countries or societies (Sari et al., 2019, p. 408). Other research findings discuss Islamic religious education in Indonesia's universities and pesantren (Islamic boarding schools). Regulations Governing Islamic Education in Institutions, as stipulated in the Direktur Jenderal Pendidikan Tinggi No. 43/Dikti/Kep/2006. The implementation of Islamic education in the university and compliance with its regulations. The ongoing debate on Islamic education in Indonesia provides valuable insights for policymakers, scholars and stakeholders of Islamic education (Pohan, 2021, p. 92).

An overview of the history and development of pesantren in Indonesia and the challenges of adapting to the modern era. The paper then discusses the theoretical basis and practical application of the concept of student interest and talent-based curriculum. To assess this approach's effectiveness, the author conducted a qualitative study, including interviews with teachers and students in Pesantren in East Java (Bashori, 2021, p. 102). A brief overview of the history and development of the pesantren in Indonesia and the role it played in promoting religious education and morality according to the madhhab (form of religious instruction) (Kadi, 2006, p. 315). In modern times they can also help students develop financial and entrepreneurial skills. Mukmin Mandiri Islamic College supports business and entrepreneurial careers. A group of Pesantren Mukmin Mandiri Alumni launched a successful project demonstrating the practical application of the skills and knowledge acquired during the course. Integrate entrepreneurship education into Pesantren curricula and suggest ways in which Pesantren collaborates with businesses and other stakeholders to promote economic development and social well-being (S, 2016, pp. 307–308).

Nurul Islam Nature School is a religious, educational institution (commonly referred to as SANI) located in the densely populated Bekasi area near the capital Jakarta which focuses on nature-based education. This article aims to examine how Islamic finance principles are applied in this particular school context. Islamic economic principles are based on Islamic teachings and emphasize social justice, equitable distribution of wealth, and sustainable development (Dieye, 2020, pp. 100–102). Implementing Islamic economic principles at Nurul Islam Nature School aims to promote the understanding of Islamic economic principles and their practical application in nature-based educational settings. By integrating Islamic economic principles into school curricula and policies, schools can provide a comprehensive education emphasizing values such as social justice, equality, and sustainability central to Islamic education. This training helps build socially responsible and ethical communities more aware of society's environmental and economic issues. In addition, practicing Islamic economic principles at Noorul Islami Natural School will deepen your understanding of the role of religion in shaping economic systems and behaviors that can significantly impact society as a whole.

To analyze the situation of SANI, the paper by Puthenpidikayal (2015) shows the importance of justice, equity and social welfare. Islamic economics aims to improve profitability and satisfaction for all stakeholders by promoting equity and social justice for the benefit of society. It combines tenants from the free-market model and those in the command market economy. Islamic economics identifies specific functional parameters for the efficient functioning of the market to optimize returns and social welfare, like the absence of mediators, prohibition of hoarding, mode of finance free from interest and usury, taxation and other wealth

redistribution instruments like *Zakat*.¹¹ and *Khums*¹², asset-based and risk-sharing partnerships and stakes, etc. The role of the state in Islamic economics is to prevent so-called market failures by ensuring that institutions are created and vigilant authorities are appointed to create certain conditions for the normal and fair functioning of markets (Puthenpeedikayil, 2015, pp. 476–486).

Islamic economic principles encourage entrepreneurship free markets and private property but require ethical behavior and social responsibility. According to a paper by Suharli (2021) the banking sector in Islamic economies is unaware of interest rate products (Suharli et al., 2021, pp. 277–288). Rather the Islamic financial system applies to the distribution of profits and losses based on three aspects: aspects of faith, aspects of Shariah, and aspects of ethics. An Islamic banking system should always refer to Islamic principles: distributive justice, transparency and universality. Another article by Samad (2022) suggests that P2P lending is permitted in Islam if it follows Islamic economic principles and does not harm anyone involved in the transaction (Samad & Bukido, 2022, pp. 76–89).

This study also found that the Indonesian Financial Services Authority has guaranteed many legitimate P2P lending companies based on Sharia principles. The Socio-Economic Development Index based on Maqasid al-Syariah follows the work of Zailani (2022), who attempts to construct an index to monitor development progress based on the principles of Maqasid al-Syariah which provide essential security in five key aspects. A shield of faith. The lineage and riches of life wisdom (Zailani et al., 2022, pp. 47–62). Developing the Maqasid al-Shariah-based Index is challenging, particularly in establishing indicators about the faith dimension.

Finally, epistemological research by Azlina (2022) finds that implementing Islamic socioeconomics in Indonesia, an institutional financial system, can reform the traditional economic system and bring economic Benefits. Economy. Here comes a new opportunity. Rules of justice and fair distribution through *wadiah* (savings), *mudharabah* (community), *musharakah* (community), *murabahah* (profit), *salam* (well-being), *istishna* transaction (sales contract) collection and distribution through Islamic rules. *ijarah* (to tear something apart) and *qardh* (to cut off the part of the giver) (Azlina et al., 2022, pp. 28–39).

The literature review shows that Islamic economics offers an alternative to mainstream economic systems often criticized for failing to promote social welfare and environmental sustainability. However, Islamic economics needs further development in Islamic financial theory due to the similarity of Islamic financial methods to conventional finance and the limited ability to accommodate multiple perspectives. The emergence of an Islamic approach to economic problems under Islamic economics has created a great interest in its practical manifestations, especially in Islamic banking and finance. However, Islamic economics needs reform to overcome these shortcomings and provide alternative perspectives related to social welfare and environmental sustainability (Ibrahim, 2019). The main Islamic economic methodology is mainly neoclassical economics which is incompatible with the methodology of

¹¹ Zakat is an obligatory charity, one of Islam's five pillars. A fixed percentage (usually 2.5%) of an individual's wealth must be given to those in need. The purpose of Zakat is to purify one's wealth and promote social welfare by helping those in need. Zakat can be given in various forms, including money, food, clothing, or other items of value. In Islam, Zakat is a form of worship meant to strengthen the bond between the individual and God.

¹² Khums is a form of charity that is considered to be an obligation in Shia Islam. Khums means "one-fifth" and refers to a 20% tax on certain types of wealth, including business profits and other forms of income. Khums is divided into two parts: one part is given to the Imam or his representative, and the other part is given to support charitable causes, such as people experiencing poverty, orphans, and widows. The purpose of Khums is to support religious leaders and to promote social welfare in the community.

Tawhidi. Therefore the teaching and learning of the method of Tawhidi is necessary to understand the economic and financial process of Islam. (Azid et al., 2021).

Scholars have emphasized the importance of applying the principles of Islamic economics in religious, educational institutions to equip students with an understanding and relevance to current economic issues. In Islam, education is considered a means of safeguarding the faith and its principles and preserving the Islamic traditions and way of life. The scope of Islamic education is wide. Any positive work that a Muslim does or engages in the pursuit of knowledge is considered *ibadah* (worship) that brings Gods blessings and deserves a reward (Souad & Ramdane, 2014). The emergence of an Islamic economic system through Islamic banking is expected to solve the problems of the financial world. Islamic banking implements profit and loss distribution with predetermined profit levels. This Islamic financial value applies to Islamic banks and is based on three aspects: the aspect of faith, the aspect of Sharia, and the aspect of ethics (Suharli et al., 2021). Therefore, the teaching of Islamic economic principles in religious institutions is important to give students an understanding of what is relevant to today economic issues.

1.1 Methodology

This study uses a qualitative approach and involves interviews with school administrators, teachers, and students. Related companies collect financial data such as balance sheets, income, and cash statements. These financial statements provide the basis for calculating financial statements. The interviews aim to examine the application of Islamic economic principles in Nurul Islam Nature School and identify the impact of these principles on students and the school community. Interviews will be recorded and transcribed, and data will be analyzed through thematic analysis. Select financial ratios related to the Islamic economic system, such as liquidity and solvency ratios. Selected financial accounts were calculated using the first step. Calculations can be performed manually, or financial software can be used, and the calculated results can be interpreted to identify the company's financial strengths and weaknesses. For example, if the institution has a low liquidity ratio, it could have difficulty meeting its short-term obligations and drawing conclusions based on the interpretation of the calculated ratios and recommending areas of improvement for the institution's financial performance. The findings should also consider the Islamic economic principles and how they relate to the institution's financial ratios. Also, financial ratios are used in analyzing the financial performance of SANI Foundation.

No	Ratio	Description
Fiscal Performance Ratios		
1	Total revenue divided by total assets	For specific organizations, the term revenue is replaced by the term income.
2	Total revenue divided by total costs	For specific organizations, the term cost is replaced by the term expenditure.
3	(Total revenue minus total expenses) divided by total assets	This ratio is called the surplus/deficit margin ratio to determine the organization's profit margin.
4	(Total revenue minus total expenses) divided by total assets	ROA of the organization.
5	Net assets divided by total assets	

Efficiency ratio of non-programme activities		
6	Total income divided by non-programme costs	Taken from the percentage of total revenue divided by fundraising costs.
Investment Performance Ratio		
7	Real contribution divided by the total cost	
8	Total contributions divided by total assets	
9	Total contribution divided by total income	
10	Cash and cash equivalents divided by total assets	

Table 1. The financial ratios

The table shows the financial ratios that will be used to assess the financial performance of the SANI Foundation. Financial ratios in non-profit organizations are modified from commonly used financial ratios by Ritchie and Kolodinsky (2003); of the fifteen financial ratios that can be used in analyzing the financial performance of a non-profit organization (Foundation), only ten categories.

2. RESULTS

The study found that despite the lower financial ratio due to the deficit of total students in 2018-2019, the school could rely on the sinking fund as a backup to cover its expenses and maintain operations during that time. Furthermore, at the beginning of 2019, school get affected by the Covid-19 pandemic, which led several students to move from school due to a lack of finance to pay the school fee. Those two conditions influence the school of SANI to find the solution using transformational management to minimize the expense and keep up the asset. SANI not only can survive in the rough situation but also overwhelm the situation, which builds new facilities while maintaining the total expense so it will not affect the financial budgeting.

Financial Statement	2016-2017	2017-2018	2018-2019	2019-2020	2020-2021
Total Revenue	2.311.890.000	2.552.537.720	2.018.895.000	2.512.317.000	2.412.976.422
Total Cost	2.143.280.618	2.297.613.362	2.043.623.299	2.522.246.019	1.867.506.968
Surplus/ deficit	168.609.382	254.924.358	- 24.728.299	- 9.929.019	545.469.454
Asset	3.248.200.000	3.248.200.000	3.248.200.000	3.248.200.000	3.248.200.000
Total Students	100	100	89	88	80

Table 2. Financial Statement

This data suggests that the school had effective financial management practices, including planning for unexpected challenges and setting aside funds to deal with such situations. This study highlights the importance of having a financial backup plan, such as a sinking fund, to help organizations weather unexpected challenges such as the pandemic. Effective financial management practices can help organizations adapt and survive during times of crisis. In Islamic finance, a sinking fund can be considered a reserve fund, which is allowed

and encouraged in certain circumstances. A sinking fund is a reserve fund set up by an organization or a group of investors to cover unexpected expenses or shortfalls in revenue. It can also pay off debt, provide for future capital expenditures, or support other long-term financial goals. From a Sharia economic perspective, a sinking fund can be considered a permissible financial instrument if it is established and managed by the principles of Islamic finance. The fund is invested in Sharia-compliant assets and avoids investments in prohibited activities such as gambling or usury (riba).

SANI tried to keep their cost as low as possible since they wanted to avoid having debt, especially from Bank. On the total cost, SANI maintained their expenses around 2 billion except for 2019-2020, after they constructed several facilities and paid the land rental. The next year, the total spending decreased since the school wanted to minimize unnecessary expenses. Establishing a sinking fund can also be considered risk management, an essential aspect of Islamic finance. By setting aside funds to cover unexpected expenses or shortfalls in revenue, organizations can better manage their financial risks and avoid situations of financial distress. This phenomenon can contribute to the stability and resilience of the organization, which is consistent with the principles of Islamic economics. In summary, the concept of a sinking fund can be compatible with Sharia economic principles, provided that it is established and managed in a Sharia-compliant manner. It is a form of financial reserve that can help organizations manage their financial risks and promote stability and resilience.

Nurul Islam Nature School is commended for recognizing the importance of teaching Islamic economic principles to its students and incorporating them into the school curriculum. Islamic economic principles are based on justice, fairness, and balance, which are essential to the Islamic faith. One of Islamic economics's fundamental principles is riba, or usury, which is forbidden in Islam. Islamic economic principles support using a Profit and Loss Sharing Model (PLS) when conducting business and sharing profits and losses among the parties involved. Another important tenet of the Islamic economy is zakat, a form of charity that Muslims and voluntary charities must give. These principles underpin and support the concept of social welfare as a proportional distribution of wealth in society.

By including these principles in the curriculum, Nurul Islam Nature School offers its students a solid education in Islamic economics. It instills in them the values of justice, fairness, and equality essential for building a just and equal society. In addition to learning the principles of Islamic finance, students will acquire the knowledge and skills to understand and navigate the complex financial landscape of today's world. This knowledge will enable them to become responsible and ethical economic agents in their future lives and to contribute positively to the wider society.

Students at Nurul Islam Nature School gain a better understanding of the principles of Islamic economics and their relevance to contemporary economic challenges. This status is a testament to the effectiveness of the school's curriculum and the dedicated efforts of teachers and administrators to provide a balanced education to students. Students should understand the importance of Islamic economic principles in today's world. These principles provide a unique perspective on finance based on ethical values and social responsibility. By understanding these

6th International CEO Communication, Economics, Organization & Social Sciences Congress

principles, students are better prepared to critically analyze and evaluate economic policies and practices and propose alternative solutions consistent with Islamic values.

Additionally, understanding Islamic financial principles can help students develop a sense of responsibility towards society as a whole and consider the social and environmental consequences of their financial activities. This belief can contribute to building a more sustainable and equitable financial system based on justice, equality, and balance. Students' good understanding of Islamic economics principles proves that the Nurul Islam Nature School curriculum prepares them for the challenges and opportunities of the modern world.

Islamic economics revolves around maximizing profits and promoting ethical behavior and social responsibility in economic activity. Underlying the Islamic economy, which emphasizes ethical behavior and social responsibility, is the *amana* which refers to the God-given personal responsibility to act with integrity and integrity. This concept highlights the importance of ethical behavior and social responsibility in economic activity and encourages individuals to consider their economic decisions' broader social and environmental impacts. By recognizing the importance of ethical behavior and social responsibility in the Islamic economy, Nurul Islam Nature School students are preparing to become economic agents that can contribute to building a fairer and more just society. Additionally, focusing on ethical behavior and social responsibility can help students develop purpose and meaning in economic activity by encouraging them to develop financial goals consistent with their values and beliefs. Understanding ethical behavior and social responsibility in the Islamic economy is proof of the effectiveness of Sekolah Alam Nurul Islam in providing comprehensive education based on Islamic values and principles.

Islam emphasizes the importance of environmental protection and social welfare, and these principles are reflected in the school's approach to education and its values. Ecological sustainability is an essential aspect of Islamic teaching. Seeing Nurul Islam Nature Schools' efforts to promote environmental awareness and sustainability among its students is encouraging. By adopting an environmentally responsible attitude, the school helps create a generation of environmentally conscious citizens who can contribute to a sustainable future. Similarly, social welfare is another important aspect of Islamic teachings, and Sekolah Alam Nurul Islam's commitment to social welfare is reflected in his emphasis on community service and charitable activities. By encouraging students to participate in community service and philanthropic work, the school helps promote social responsibility and compassion among its students. Nurul Islam Nature Schools' commitment to environmental sustainability and social well-being by Islamic principles is a testament to its holistic approach to education that seeks to develop responsible and ethical individuals who can contribute to building a fairer and more equal society.

3. DISCUSSION

Applying Islamic economic principles at Nurul Islam Nature School has successfully introduced students to alternative economic systems beyond traditional capitalism. Islamic economics is a system of economic principles and practices based on Islamic beliefs that emphasize the ethical conduct of social justice and sustainable development. Students learn

about economic systems that prioritize social welfare and ethics by applying these principles to religious institutions like the Nurul Islam Nature School. The report also suggests that religious institutions have the potential to play an important role in shaping students understanding of the traditional economy. Through implementing Islamic economic principles, students can learn about alternative approaches to economic development that may be taught outside of traditional schools according to *ilm* (Islamic knowledge) (Hilgendorf, 2003, p. 64). The Islamic Finance Institute run by Nurul Islam Nature School provides examples of religious education to help students gain a broader understanding of economics from their views on the financial system and relate it to a religious way of life. (Eickelman, 1978, p. 493).

Religious institutions such as Nurul Islam Nature School can promote an alternative economic system based on ethical values and social responsibility. Noor-ul-Islami School of Nature teaches students Islamic finance principles and provides them with an alternative economic system based on equity, justice and balance. This understanding helps students critically examine and evaluate the current financial system and propose alternative solutions consistent with their values and beliefs. In addition, applying Islamic economic principles in Nurul Islam Nature School also helps create a more inclusive and diverse economic debate. By providing students with an understanding of Islamic financial principles, the school contributes towards a more pluralistic economic discourse that recognizes the diversity of economic systems and values. Overall, implementing Islamic economic principles in Nurul Islam Nature School demonstrates the potential of religious education institutions to provide students with an understanding of alternative economic systems grounded in ethical values and social responsibility. By promoting alternative economic systems, religious education institutions can help build a more just and equitable society based on justice, fairness, and balance values. In SANI's economic systems, it integrates Islamic principles and social empowerment programs, which are reflected by the financial ratio.

NO.	SUMMARY	Year				
		2016 - 2017	2017-2018	2018-2019	2019-2020	2020-2021

Table 3. Detail financial ratio

From the financial statement data, the five-year revenue from 2016 has fluctuated widely, especially in 2018, when the amount decreased by one-fifth from the previous year. The reduction in student numbers decreased by 12 from 100 students. The decline was countered by conducting teacher training, which is intended to develop the qualifications and creativity of teachers to continue developing their education methods. Although teacher training is conducted annually, due to the changing conditions of the school, SANI conducts additional training to cope with the changes experienced by the school.

Due to this strategy, SANI's annual income in the following year increased again to almost the same value in 2017. With the increase in revenue, SANI management used the surplus funds to strengthen its assets, such as the construction of a place of worship and the structure of a back area used for outdoor learning activities. SANI also extended the lease contract for the back land to strengthen the assets owned by SANI, which can be used to sustain the school's existence (interview with Ade Chairil Anwar, Director of SANI, 01 May 2023).

6th International CEO Communication, Economics, Organization & Social Sciences Congress

After the school owned additional assets and expanded the lease of the rear area, the school maintained the building and other facilities amounting to 500,000 million rupiah using grants provided by external parties. These renovations covered basic facilities such as classrooms to supporting ornaments such as additional teaching tools. The school also sought to offer other benefits starting that year by donating to orphans and poor people during the implementation of hospitality activities with the general public. It became an annual program (interview with Ade Chairil Anwar, Director of SANI, 01 May 2023).

Implementing Islamic economic principles in Nurul Islam Nature School has shown that integrating these principles into the school curriculum can positively impact the students and the school community. The study might have found that integrating Islamic economic principles into the school curriculum has helped students develop a deeper understanding of the principles of social justice, ethical conduct, and sustainable development, which are at the core of Islamic economics. The integration of these principles has encouraged students to adopt a more critical perspective on conventional economic systems and to appreciate alternative economic approaches.

In addition, the study found that integrating Islamic economic principles into the school curriculum positively impacted the school community. For example, this leads to greater community involvement and support for the school or helps promote a culture of ethical behavior and social responsibility among students and staff. The research shows that integrating Islamic economic principles into the school curriculum can positively impact students and the larger school community. He could have emphasized the importance of introducing alternative economic approaches in educational institutions and the potential of such policies to promote ethical behavior, social justice, and sustainable development.

Integrating Islamic economic principles into the Nurul Islam Nature School curriculum will benefit students and the school community. Islamic financial principles are rooted in justice, equity, and the promotion of public welfare. Incorporating these principles into the curriculum gives students a deeper understanding of how they apply to real-world situations and how they can be applied to solve economic problems. Islamic financial principles emphasize moral and ethical behavior in business transactions. By teaching students these principles, they develop a strong sense of ethics and morality and apply them in their personal and professional lives. It will help them to become responsible and committed individuals to serve the society. Islamic economic principles emphasize the importance of collective welfare. By teaching these principles to students, they develop a sense of responsibility towards their society and a desire to work for the betterment. It creates a strong sense of community within the school and fosters a sense of cooperation and collaboration among students.

In addition, Islamic economic principles are based on a deep understanding of the interdependence of economic, social, and environmental systems according to Koranic principles (Warde, 2000, p. 5). By teaching these principles to students, they can develop critical thinking skills and an ability to analyze complex issues. This can help them become more effective problem-solvers and decision-makers since its focus are moral, ethical, and distribution of the earth's resources (Mirakhor & Askari, 2017, pp. 93–94). Islamic economic principles also emphasize the importance of sustainability and conservation. These principles

teach students to appreciate the natural environment and develop a sense of responsibility. This can promote sustainable practices within the school and inspire students to become environmental stewards. Integrating Islamic economic principles into the Nurul Islam Nature School curriculum can positively impact students and the school community. It can help develop ethical and moral behaviour, foster a strong sense of community, promote critical thinking, and inspire sustainable practices.

This study has found that Islamic economic principles offer a unique perspective on contemporary economic issues that cannot be found in conventional economic systems. For instance, it might have demonstrated how Islamic economics promotes social welfare by emphasizing the importance of social justice, equality, and ethical conduct in economic activities (Choudhury, 2008, pp. 54–55). Similarly, the study might have highlighted the role of Islamic economics in promoting environmental sustainability by emphasizing the importance of preserving natural resources and avoiding activities that harm the environment. Overall, the study might have insisted on the relevance of Islamic economic principles to contemporary economic issues and their potential to address some pressing challenges facing societies today, such as inequality, poverty, and environmental degradation. It might have argued that integrating these principles into the school curriculum can help prepare students to become more engaged and responsible citizens aware of the challenges facing their communities and the world.

Islamic economic principles in Nurul Islam Nature School can provide valuable information and guidance for contemporary economic issues, including social welfare and environmental sustainability. In Islam, social welfare is considered as the basic principle of economic activities. The obligatory charity of Zakat is an excellent example of how Islam emphasizes the importance of the redistribution of wealth for the welfare of society. Additionally, Islamic finance emphasizes the provision of interest-free loans to support entrepreneurship and economic development, particularly for marginalized or with limited access to capital. Nurul Islam Nature School can incorporate these principles into its economic activities by promoting Zakat contributions and supporting interest-free loans for its students, particularly those from economically disadvantaged backgrounds. Islam considers the environment a sacred trust (amanah) given to humans by God and therefore emphasizes the importance of environmental sustainability. Environmental protection and the protection of natural resources are mentioned many times in the Quran and Hadith. The Nurul Islam Nature School can incorporate these principles by promoting sustainable environmental practices such as reducing waste, conserving water and energy and using renewable resources. Schools can also encourage students to actively participate in conservation and community service projects focusing on environmental sustainability.

Islamic financial institutions emphasize ethical behavior in financial activities. This includes curbing speculation and preventing unfair business practices. Islamic finance also promotes transparency and accountability in financial matters. Nurul Islam Nature School can promote these principles by inculcating ethical behavior in students, especially in financial activities. Scholars can provide education and training in ethical business practices and promote transparency and responsibility in financial matters. Nurul Islam Nature School's economic

principles can be relevant to today's economic issues, including social and environmental sustainability. Schools can incorporate these principles in their financial activities by promoting zakat donations encouraging interest-free loans supporting environmentally-friendly practices, and encouraging ethical behavior.

CONCLUSION

This paper has explored the implementation of Islamic economic principles in Nurul Islam Nature School and has found that such performance positively impacts the students and the school community. The study highlights the importance of teaching Islamic economic principles in religious education institutions and integrating these principles into the school curriculum. The study emphasizes the relevance of Islamic economic principles to contemporary economic issues. It suggests that implementing these principles can provide an alternative to mainstream economic systems prioritizing profit over social welfare and environmental sustainability.

ABSTRACT

In Indonesia, noodles are a favorite food easily found everywhere. Both traditional and modern businesses use noodles as the main ingredients for their food. This study aims to show the evidence from a legendary noodle business of Bakmi Gajah Mada which shows that the management performance of Bakmi Gajah Mada company can survive since 1959 despite the threat of food competition and it has survived many challenges. Tangibility, Reliability, Assurance, Responsiveness, and Empathy are the servqual dimensions impacting customer satisfaction. However, there is still limited research looking at how Bakmi Gajah Mada has to prioritize on its service quality dimensions from the customer's point of view compared to Bakmi Gajah Mada's point of view. We will use a quantitative research approach with a nonprobability purposive sampling technique with the criteria of samplings are loyal customer who lives in the greater area of Jakarta. The findings will show what steps should be taken by the management of Bakmi GM to survive the competition and show the managerial implications of how to improve customer satisfaction.

Keywords: Customer Satisfaction, Generational Gap, Service Quality

INTRODUCTION

Bakmi GM (formerly known as Bakmi Gajah Mada) is a restaurant that produces noodles as its main menu, and there are also rice dishes and other side dishes. Bakmi GM started as a humble street food stall and has managed to build its reputation as the most iconic noodle in Jakarta over the last 60 years. In 2018, Bakmi GM grew to serve 30,000 customers per day in more than 50 restaurants located in Jabodetabek, Bandung, and Surabaya. But along the way, many competitors have emerged, generations of customers have changed, the fast-moving trend-based market in Indonesia and the changing landscape of the food market in Jakarta with more and more restaurants assisted online.

The biggest challenge for Bakmi GM at the moment is a disruption in the restaurant industry. With many new restaurants popping up that don't need a physical form. Today, restaurants can exist with just one name. This form is Bakmi GM's competitor. Previously, competitors were visible (tangible), such as HokBen, KFC, McD, and others. Now many restaurants are not visible (intangible). As well as a more attractive menu arrangement and services than competitors. The research question is how does Bakmi GM prioritized its service quality to increase customer loyalty and satisfaction to face competition in the digital era.

LITERATURE REVIEW

Consumer Behavior

Understanding consumer behavior can be interpreted as consumer behavior shown by consumers in searching for, buying, using, and disposing of products and services that they expect will satisfy their needs. Consumer behavior refers to individuals and households purchasing goods or services for personal consumption (Khodijah and Saino, 2012). So, it can be concluded that the meaning of consumer behavior is a process of how consumers choose, buy, use, then evaluate, and spend the product to meet their needs and wants.

Customer Satisfaction

Customer satisfaction is an assessment of the performance of a product or service in relation to consumer expectations. The customer is dissatisfied if the product does not match or the service does not meet expectations. And conversely, if the products and services meet expectations, then the customer is satisfied and can provide positive benefits and impacts on the company (Kotler & Armstrong, 2018).

Several measurements of satisfaction determinants consist of 3 parts, namely product performance, consumption feelings, and product expectations (Blackwell et al., 2012). Measuring customer satisfaction consists of four ways, namely the complaint and suggestion system, the ministry shopper, and the analysis.

Food Quality

Quality does not only exist in goods or services but also exists in food products. Food quality is a level of consistency in menu quality achieved by setting a product standard and then checking the points that must be controlled to see the quality to be achieved (Hanisah, 2017).

Behavioral Intention

One result of a choice by planning one or more behaviors is behavioral intention (Peter & Olson, 2017). The indicators are divided into three, namely recommendations to others, purchase intentions, and positive word of mouth (Fakih, Assaker, Assaf, & Hallak, 2016). Behavioral intention is the development of the Theory of Planned Behavior (TPB) and the Theory of Reason Action (TRA). TPB is a theory that can predict one's behavioral intentions (Ajzen, 1991).

Value Perception

Perception is a process individuals use to select, organize, and interpret information input to create a meaningful picture of the world (Kotler & Keller, 2016). Customer value is a combination of quality, service, and price of a product offering.

METHODOLOGY RESEARCH

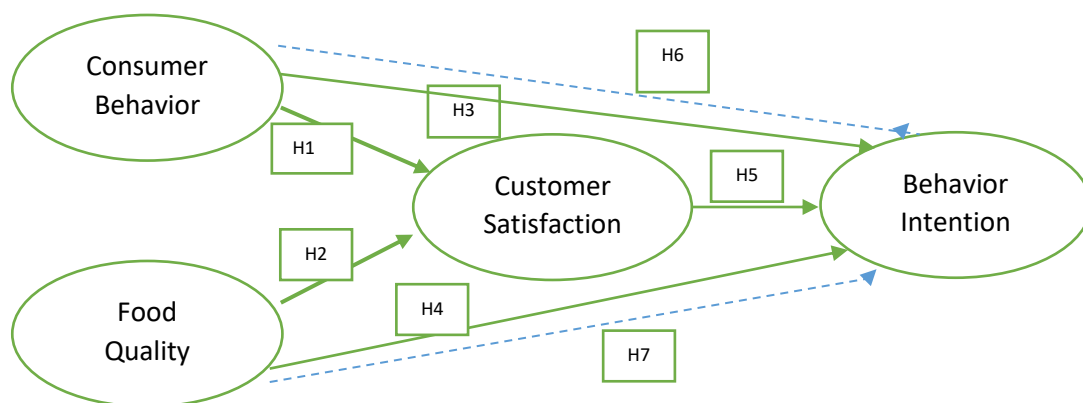

Type of Research

This study can use a quantitative research approach with a non-probability purposive sampling technique using the sampling criteria. Quantitative research is more based on data that can be calculated to get interpretation (Sugiyono 2014). This sample is a non-probability type that is referred to as a judgmental or expert sample. Samples were selected not at random. This can be done by understanding the background of the population by selecting a sample that describes the variation.

The sample criteria that will use in this study are:

1. Consumers, who have visited at least 1 time to a noodle restaurant
2. Minimum age 17 years
3. At this age, a person can give an assessment and decision on an object
4. Visiting time
5. Minimum visit time in the last 6 months at one of the noodle restaurants

Proposition

This Research study, on consumer behavior, uses three indicators of the relationship between service quality satisfaction and switching intention Namkung, Y., & Jang, S. (2007). Does food quality really matter in restaurants? Its impact on customer satisfaction and behavioral intentions. *Journal of Hospitality & Tourism Research*. Bansal, H. S., & Taylor, S. (1997). (2014). Investigating the Relationship Between Service Quality, Satisfaction and Switching Intentions. *Food Quality*, Hanaysha, J. . (2016). Testing the Effects of Food Quality, Price Fairness, and Physical Environment on Customer Satisfaction in Fast Food Restaurant Industry. *Journal of Asian Business Strategy*. Soraya, N. C. T., Sudarmiatin, S., & Dhewi, T. S. (2023). The Effect of Food Quality and Perceived Value on Behavioral Intention Using Customer Satisfaction as A Mediation Variable (Study On Gacoan Noodle Restaurant in Surabaya). *International Journal Of Humanities Education and Social Sciences (IJHESS)*.

Population and Research Sample

The population is a generalized area of objects and subjects with certain qualities and characteristics set for researchers to study and then draw conclusions (Sugiyono, 2014). The sample population comes from 100 loyal customers who are around the Jakarta area.

Table 1. Definition of Operational Variables

Variabel	Definisi	Indikator
Consumer Behaviour	Consumer behavior directed by consumers in finding, buying, using products and services. The conclusion is how consumers choose, buy, use, evaluate and spend the product as they wish.	<ol style="list-style-type: none"> a. Menu Option b. Price c. Taste d. Service
Customer Satisfaction	Customer satisfaction is the level of consumer feelings after trying and comparing products that are in accordance with expectations.	<ol style="list-style-type: none"> a. The quality of the food is as expected b. Service quality is as expected c. Price/value of Money
Food Quality	Food quality is a level in the consistency of menu quality achieved by setting product standards and controlling the quality achieved. The main factor that makes customers come/visit is the product being offered	<ol style="list-style-type: none"> 1. Variation of menu options 2. Taste 3. The way of presentation
Behaviour Intention	One of the behavior of the customer is the intention to visit, buy and enjoy.	<ol style="list-style-type: none"> 1. Promotions 2. Chat by word of mouth 3. Recommendations
Value Perception	The process used by individuals to select,	<ol style="list-style-type: none"> 1. Quality 2. Price

	organize, and interpret information input to create an image	3. Service
--	--------------------------------------------------------------	------------

Data Collection Techniques

The data collection technique was using a questionnaire which was carried out by distributing a list of questions to the Bakmi GM customers who were sampled. The answers to each question item use a Likert scale, where there are four choices on a Likert scale as follows:

Table 2. Skala Like

Information	Score
Strongly Agree (SA)	4
Agree (A)	3
Not Agree (NA)	2
Strongly Not Agree (SNA)	1

Data Analysis Techniques

The research instrument was first tested before the questionnaires were distributed to respondents. The research instrument test consists of a validity test, used to test the contents of a research instrument, with the aim of measuring whether or not a questionnaire is valid, and a reliability test. Which is used to measure the accuracy of the instrument so as to produce data that is reliable in research. The data analysis method used in this research includes the classical assumption test, multiple linear regression analysis, and hypothesis testing, using the statistical package for social science (SPSS) application.

Limitations and Future Research

Limitation:

- The research is currently still ongoing
- There is no comparative research of servqual from the eyes of the customer versus the “Bakmi GM Management”

Future Research

- Further quantitative research is needed
- Future comparison between the perspective of customers and the perspective of management

ABSTRACT

Micro, Small & Medium Enterprises (“MSMEs”) are productive economy business that are run by individuals or business entities. MSMEs contributes approximately 61% of total Gross Domestic Product in Indonesia and absorbed 97% of domestic employment nationwide. However, most MSMEs are faced with similar issues, such as high distribution cost and low credit distribution. PT Sumber Trijaya Lestari (“STL”) launched Aksesmu in April 2022. Aksesmu distributes merchandise inventory in relatively lower price and provides delayed payment option for the purchase, as a mean for distributing credit to MSMEs. However, the internal data of STL suggested that there were only 10% merchants from 74,000 total merchants that used the delayed payment option. This research aims to discover the factors that affect adoption of the feature. Purposive sampling is used in this research to equally distribute the sample based on gender, age, and area. The sample size is determined by using Inverted Square Root Method. The data is collected by online and offline interviews and will be processed by using PLS-SEM. The result of the data analysis will explain how all factors affect the adoption and will be used by the company for further use.

Keywords: MSMEs, Credit Distribution, Fintech, Financial Performance

INTRODUCTION

Micro, Small and Medium Enterprises (“MSMEs”) are often faced with capital and cash flow issues. Aksesmu intends to help MSMEs in cash flow issues in the app, however there are only few merchants who uses their feature.

1. CHAPTER I – INTRODUCTION

1.1 Phenomena

MSMEs covered 99% of total enterprises in Indonesia. MSMEs also contributed 61% to Indonesia’s total Gross Domestic Product (“GDP”). It absorbed around 97% of domestic employment (Indonesia Investments, 2022). However, according to Tambunan (2008) MSMEs faced several problems, such as: (1) lack of capital, (2) lack of access to useful business insights, and (3) challenges in marketing and distribution. These constraints, especially lack of capital, still occur in 2020. Based on data gathered by Organisation for Economic Co-operation and Development (“OECD”) (2022), total business loan to MSMEs averaged about 19.95%.

In China, Alibaba started the initiative to aid MSMEs with their funding. In 2015, Alibaba launched online agricultural loan products. Agricultural users only needed to upload their identity information in order to borrow some large amounts of money. This program led to many programs from other companies, which made the market size of financial technology (“fintech”) industry in 2019 exceeds ¥375.3 billion and reached ¥543.2 billion in 2022 (Sun, Ying, & Zhang, 2022).

1.2 Research gap

PT Sumber Trijaya Lestari (“Aksesmu”) is a retail company which focuses to create partnership with retail MSMEs through a mobile phone application. The company provides inventory for retail MSMEs with delayed payment feature. For the delayed payment feature, Aksesmu collaborates with Tokomodal to provide the service. In practice, Tokomodal pays in full the owed amount to Aksesmu. Later the merchants that choose the option will pay the owed amount and administration fee to Tokomodal according to the due date (PT Sumber Trijaya Lestari, 2023).

According to internal data, there were approximately 74,000 retail MSMEs that had already joined as merchants from January 2021 to May 2023. However, there were only about 5,000 merchants (7%) that utilized the delayed payment feature. Monthly transactions using the feature were averaging in around 14,000. The number may suggest that on average, merchants used the feature 2-3 times a month.

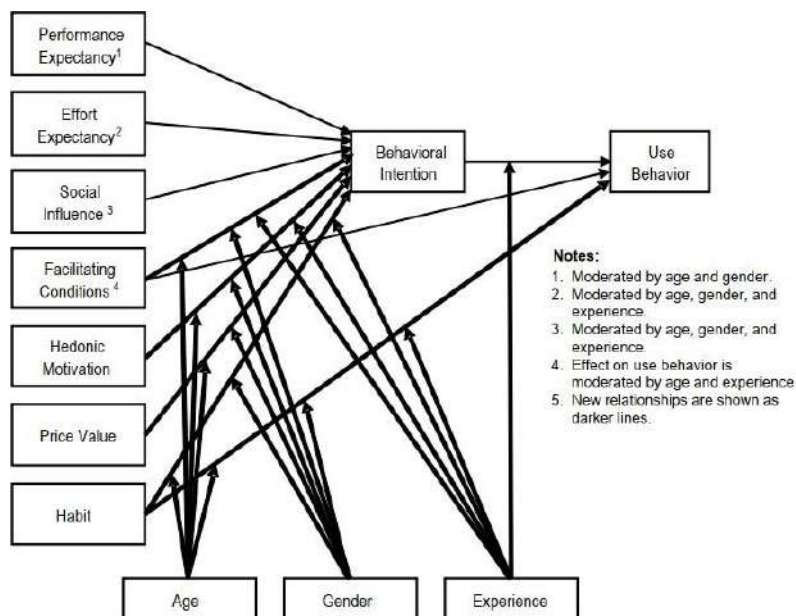

2. CHAPTER II – LITERATURE REVIEW

2.1 General theory

Venkatesh, Thong and Xu (2012) introduced a model called Unified Theory of Acceptance and Use of Technology (“UTAUT2”). This model identifies seven constructs that affect behavioral intention of technology user. UTAUT2 is a development from the previous model, which adds three more constructs (Hedonic Motivation, Price Value, and Habit) to

explain the behavior of user.

Figure 3 UTAUT2 model

Source: Venkatesh, Thong and Xu (2012)

2.2 Specific theory

Corporate Finance Institute (2023) comprised Gross Profit as the result of deducting total sales and cost of goods sold. Sales is the monetary amount acquired from selling goods and services to customers, deducted by returned goods and discounts.

Corporate Finance Institute (2022) defines Net Profit Margin as a ratio that calculates percentage of profit from deducting all expenses from the total sales.

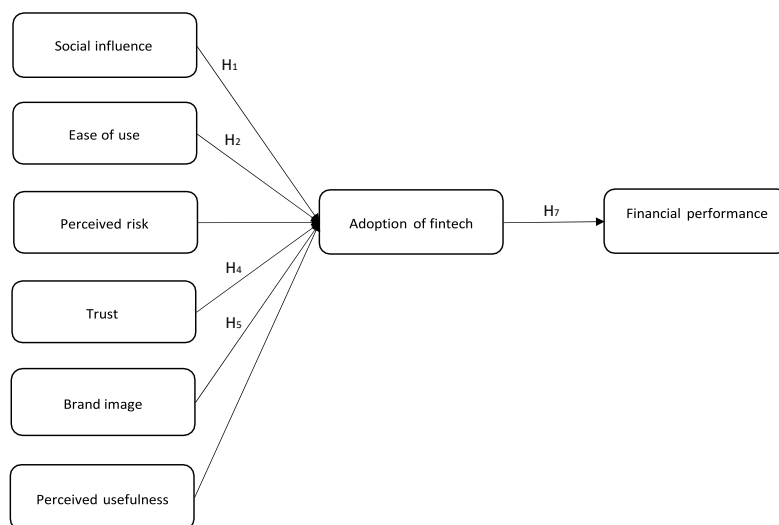

Preve & Sarria-Allende (2010) defines Working Capital as the deduction of current assets and current liabilities. This ratio shows how much cash, banks, or liquid assets is ready to settle a company's current liabilities.

Corporate Finance Institute (2022) explains that Operating Cash Flow is the amount of cash generated from routine operating activities. Operating Cash Flow is calculated by deducting increase of working capital and adding non-cash expenses to net income.

3. CHAPTER III – METHODOLOGY

3.1 Research hypotheses

Figure 5 Conceptual hypothesis

Source: researcher (2023).

3.2 Population

According to internal data from PT Sumber Trijaya Lestari, there were approximately 74,000 merchants that were registered in Aksesmu. From those 74,000 merchants, there were approximately 5,000 merchants who performed transactions daily in the application.

3.4 Sampling method

After acquiring the research population, researcher calculates the appropriate sample size according to rule of thumb of Partial Least Square-Structural Equation Modeling (“SEM”) since the researcher uses SEM to analyze data. The most widely known method to calculate minimum sample size is 10-times rule method. Hair et al. (2011) formulate minimum sample size of PLS-SEM should be equal to the larger of ten times of the formative indicators or ten times of the structural paths.

However, Kock & Hadaya (2018) proposed a more accurate and precise sampling method that is also simple and effective to use. Inverse square root method is proven to reduce overestimations and has slight inaccuracy, while being easy and simple in its application.

After acquiring the sample size, the researcher believes that the sample size has to be clustered by using purposive sampling. In this research, sample is determined based on the sample size looking from these criterias: (1) owners of retail MSMEs, (2) users of delayed payment feature in Aksesmu app, (3) located in Jakarta, Bogor, Depok, Tangerang, and Bekasi.

CONCLUSION

This research intends to explore all factors that affect adoption of fintech in merchants of Aksesmu and how the adoption of fintech affects their financial performance. Researchers uses population from all merchants of Aksesmu to determine the sample. The sample is later analyzed by using PLS-SEM to find the most accurate result. This research may benefit the retail industry, however the population needs to be expanded further.

ABSTRACT

This study aims to evaluate the financial performance of PT. Adhi Karya (Persero) Tbk., which is a prominent construction company in Indonesia, by employing liquidity and profitability ratio analysis. The research utilizes financial data from the company's annual reports for the years 2017 to 2021, enabling an in-depth examination of the company's liquidity position and profitability. The liquidity analysis involves the calculation of the current ratio, quick ratio, and cash ratio, providing insight into the company's ability to meet its short-term obligations. Profitability analysis on the other hand focuses on key ratios such as gross profit margin, net profit margin, return on assets (ROA), and return on equity (ROE), which shed light on the company's ability to generate profit and maximize shareholder value. The liquidity analysis reveals the company's ability to maintain adequate liquidity to meet its short-term obligation. The profitability analysis provides insight into the company's profitability trends, efficiency in generating profits from its operation, and ability to effectively utilize assets and equity. The result of the analysis can aid management in making informed decisions regarding financial planning, investment opportunities, and strategic initiatives. The study's insight can also support investors, creditors, and other stakeholders in evaluating the company's financial stability, risk profile, and growth potential.

Keywords: Liquidity Ratio, Profitability Ratio, Financial Performance, Construction

INTRODUCTION

The Ideal company undoubtedly has specific goals for the benefit of the organization and its human resources. Generally, the company's goals are to maximize profits by minimizing operational costs without compromising the quality of work, thereby ensuring the long-term sustainability of the company. Moreover, in the current era of fierce business competition and rapid technological advancement, it is increasingly challenging for companies to compete if they cannot manage their finances effectively and adapt to creativity and productivity to expand their business.

When determining whether a company has good quality, two dominant assessments that can be used as references to evaluate the company's management. These assessments can be conducted by examining both financial performance and non-financial performance. Financial performance can be assessed through the financial statements of the respective company, which are reflected in the information obtained from the balance sheet, income statement, cash flow statement, and other supporting factors that contribute to the evaluation of financial performance. As a source of information, financial statements are more beneficial when viewed comprehensively, such as comparing a period with another period or comparing the financial statements of the company with similar companies. Essentially, several financial ratios can be utilized, namely liquidity ratios, activity ratios, profitability ratios, and solvency ratios.

The performance evaluation of each company varies depending on the scope of the business it operates in. If a company operates in the sector of producing goods, its evaluation will differ from a company operating in the service sector. This research will delve into a more detailed discussion of the financial performance analysis of the service sector, specifically the construction services. According to Kompas.com in August 2017, it was stated that PT. Adhi Karya (Persero) Tbk, a state-owned construction company listed on the Indonesia Stock Exchange, achieved the best performance among construction company emitters compared to other state-owned enterprises. Additionally, in August 2017, PT. Adhi Karya reported a new contract acquisition of Rp. 28.6 trillion. The contribution per business line in the new contract acquisition was dominated by the construction and energy business, accounting for approximately 96.6 percent, while the remaining percentage comprised other business lines.

PT. Adhi Karya Tbk recorded a net profit of Rp. 86.49 billion during the year 2021, representing a significant increase of 264.94% compared to Rp. 23.70 billion in 2020. This increase in profit can be attributed to the growth in revenue and a decrease in selling expenses. In the 2021 financial report, PT. Adhi Karya Tbk reported total revenue of Rp. 11.53 trillion, which rose from Rp. 10.82 trillion, and a gross profit of Rp. 1.75 trillion, increasing from Rp. 1.73 trillion. The situation presented in the financial report quotation will undoubtedly have a significant impact on the company's performance. Therefore, it is crucial to pay special attention to determining strategies and management approaches to maintain the company's performance.

According to the description, this research aims to assess the financial performance of PT Adhi Karya Tbk from 2017 to 2021. The study will focus on conducting a deeper analysis of liquidity and profitability ratios, leading to the chosen title: "Liquidity and Profitability Ratio Analysis to Assess Financial Performance of PT. Adhi Karya (Persero) Tbk. during the Periods of 2017 – 2021."

LITERATUR REVIEW

Financial management according to James C. Van Horne (2010:5), financial management is defined as all activities related to the acquisition, funding, and management of assets with various comprehensive objectives. Ernie Tisnawati Sule and Kurniawan Saefullah (2010:15) state that financial management is a management activity based on its function, which essentially strives to ensure that business activities can economically achieve their goals, measured by profit. According to Bringham (2010:6), financial management is considered both an art and a science. It involves the art of managing money and encompasses processes, institutions/organizations, markets, and instruments that are involved in the transfer of funds between individuals, businesses, and governments.

Corporate liquidity is the company's ability to fulfill its short-term obligations on time. Companies that have high profits may not be able to pay dividends to shareholders because there are no funds to pay dividends. Research conducted by Yanti & Dwirandra (2019), states that there is a positive and significant effect between liquidity and capital structure. A company that can meet its financial obligations promptly means that the company is in a liquid state and indicates that the company's opportunity to grow tends to be high. Companies that have a good level of liquidity will easily get additional capital and can maintain the capital structure that the company wants (Pervaiz et al., 2013)

1. The Role and Function of Financial Management

Interconnected with other functional areas within a company and complement each other. The role of financial management in a company is significant and encompasses various activities, including:

1. Being responsible for decision-making regarding the acquisition, financing, and management of assets.
2. Allocating economic resources to enhance economic growth.
3. Adapting to environmental changes in asset allocation.

According to James C. van Horne (2010:6), the functions of financial management can be divided into:

- a. Investment decisions, which involve determining the amount and composition of assets, such as cash allocation, fixed assets, or other assets.
- b. Financing decisions, which relate to determining the amount of funds provided by the company, whether through debt or equity.
- c. Asset management, which involves efficient management of assets, particularly current and fixed assets.

1.1 Definition of Financial Statements

Initially, financial statements for a company served as a tool to verify the work of the accounting department. However, financial statements have evolved to not only serve as a verification tool but also as a basis for determining or evaluating the company's financial performance. Based on the analysis results, the financial position of the company can be determined, and stakeholders can make decisions based on this information. To assess the financial position and achievements of a company, it is necessary to have financial statements from the respective company. According to Munawir (2012:2), "Financial statements are essentially the result of the accounting process that can be used as a tool to communicate financial data or activities of a company to stakeholders interested in the company's data or activities." The objectives of

financial statements, as stated by Sawir (2001:2) by Financial Accounting Standards, are as follows:

1. Providing information about the financial position, performance, and changes in the financial position of a company is beneficial to a large number of users in making economic decisions.
2. Financial statements are prepared to meet the common needs of most users, generally depicting the financial effects of past events.
3. Financial statements also show what management has done or management's accountability for the resources entrusted to it.

1.2 Characteristics of Financial Statements

According to Kasmir (2015:11), the recording process involved in preparing financial statements must adhere to applicable principles. Similarly, the characteristics of financial statements are based on the nature of financial reporting itself. In practice, financial statements are typically historical and comprehensive in nature. The historical nature of financial statements means that they are prepared and compiled based on past data or periods preceding the present time. For instance, financial statements are prepared based on data from one or more previous years or periods.

1.3 The Types of Financial reports, according to Sujarweni (2017:12)

1. Balance sheet: This report depicts the financial position of a company at a specific point in time, including its assets, liabilities, and equity.
2. Income statement: This report provides information about the revenue, expenses, and profit or loss of a company over a specific period.
3. Statement of changes in equity: This report presents the changes in a company's equity due to additions and deductions from profit/loss and owner transactions.
4. Cash flow statement: This report illustrates the inflows and outflows of cash during a specific period. The cash flow statement provides an overview of the utilization of cash in three categories of activities related to a company: operating activities, investing activities, and financing activities.
5. Notes to the financial statements are additional information or explanatory notes added to provide clarification to readers of the financial statements. These notes assist in explaining the calculation of specific items within the financial statements.

2. Ratio Analysis

Financial ratios are one of the tools used to assess the performance and financial condition of a company. In a financial report, the interpretation or analysis of financial data from a company or organization is done, among other methods, through the use of financial ratios. According to Sunyoto (2013:63), "Ratio analysis is a technique used to determine the relationship between specific items in the balance sheet or income statement either individually or in combination." Another definition, according to Sugiono and Untung (2016:53), states that "Ratio analysis is a number that indicates the relationship between elements in the financial statements. This relationship is expressed in a simple mathematical form."

Therefore, it can be further understood that financial ratio analysis is a technique of manipulating the numbers found in financial statements (balance sheet and income statement) to demonstrate a relationship within the company’s financial condition. According to Fraser in Sugiono and Untung (2016:56), financial ratios can be classified as follows:

1. Liquidity ratios (short-term solvency), which measure the company's ability to meet cash needs. This includes the current ratio (current assets divided by current liabilities), quick ratio (quick assets divided by current liabilities), and cash ratio (cash and cash equivalents divided by current liabilities).
2. Profitability ratios, which measure the company's ability to generate profits. This includes gross profit margin (gross profit divided by net sales), operating profit margin (operating profit divided by net sales), net profit margin (net profit divided by net sales), return on assets (net profit divided by total assets), and return on equity (net profit divided by shareholders' equity).
3. Activity ratios measure the efficiency of a company's operations. This includes the inventory turnover ratio (cost of goods sold divided by average inventory), accounts receivable turnover ratio (net credit sales divided by average accounts receivable), and total asset turnover ratio (net sales divided by average total assets).
4. Leverage ratios, which measure the extent to which a company relies on debt financing. This includes debt-to-equity ratio (total debt divided by shareholders' equity), debt ratio (total debt divided by total assets), and interest coverage ratio (earnings before interest and taxes divided by interest expense).

Therefore, in this study, two ratios are taken, namely liquidity ratio and profitability ratio, which will affect a company’s financial performance. Liquidity analysis itself means the ability of the company to meet cash needs. It consists of the current ratio, quick ratio, and cash flow liquidity ratio. The profitability ratio (efficiency and overall performance) measures the overall performance of the company and its efficiency in managing assets, liabilities, and wealth. It consists of gross profit margin, operating profit margin, net profit margin, cash flow margin, ROA, ROE, and cash return on assets. From these two ratios, changes in performance can be observed."

METHODOLOGY

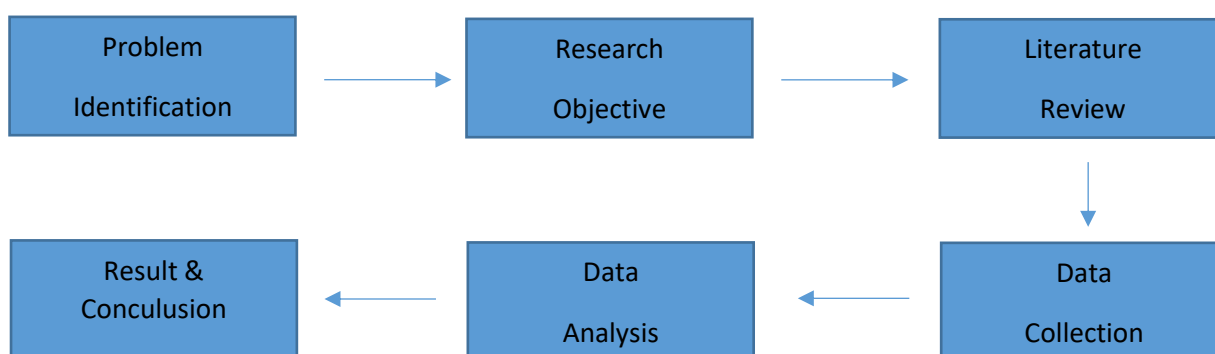

Figure 1. Research Methodology

Problem Identification: Explain the problem identification and research scope and limitation based on the case background of the company.

Research Objective: Explain the theories used to reach the main purpose of this research

Data Collection: The data gathering process related to the main research topic

Data Analysis: The analyzed and calculated data at the core of this research

Result & Conclusion: Show the result of this research objective and conclude it to answer the entire research problem.

Data Collection & Analysis

In This Research, the author used the annual report of PT Adhi Karya, periods 2017 to 2021. The data was obtained from Indonesia Stock Exchange's official website. There are several steps used in this research. For the company performance assessment, the methods used are financial ratios calculation, the author will only discuss the profitability and market ratios due to their relation with the return of the company. The financial ratio comparison will be operated by time-series analysis to evaluate the trend situation of the companies.

Liquidity Ratios

Liquidity ratios, also known as working capital ratios, are used to measure the liquidity of a company. It involves comparing the components on the balance sheet, namely total current assets with total current liabilities (short-term debts). Assessment can be done for multiple periods to observe the company's liquidity trend over time (Kasmir, 2015:130).

Various techniques used for analyzing liquidity ratios include the current ratio, quick ratio, cash ratio, cash turnover, and inventory to net working capital. The results will be elaborated as follows:

1. Current Ratio

The calculation is done by comparing current assets with current liabilities. The calculation of the current ratio for the year 2017 is as follows:

Current Ratio Calculation for the year 2017:

$$\text{Current Ratio} = \frac{16.792.278.617.095}{12.986.623.750.004} = 1.2$$

Table 1: Calculation result of The Current Ratio (in mio IDR)

Year	Current Asset	Current Liabilities	Ratio
2017	16.792	12.986	1.2
2018	24.817	14.221	1.7
2019	25.386	18.934	1.3
2020	30.315	24.562	1.2
2021	30.090	27.069	1.1

Source: Processed, 2023

Graphic 1: The Current Ratio (in mio IDR) Periods 2017 - 2021

Source: Processed, 2023

2. Quick Ratio

The calculation involves subtracting inventories from current assets and comparing them with current liabilities.

Quick Ratio calculation for the year 2017:

$$\text{Quick Ratio} = \frac{16.792.278.617.095 - 2.276.578.665.550}{12.986.623.750.004} = 1.12$$

Table 2: Calculation result of the Quick Ratio (in mio IDR)

Year	Current Asset – Inventory	Current Liabilities	Ratio
2017	14.515	12.986	1.12
2018	21.134	14.221	1.49
2019	21.025	18.934	1.11
2020	25.536	24.562	1.04
2021	23.769	27.069	0.88

Source: Processed, 2023

Graphic 2: The Quick Ratio Periods 2017 – 2021

Source: Processed, 2023

3. Cash Ratio

The calculation is done by comparing cash and cash equivalents with current liabilities.

Cash Ratio Calculation for the year 2017:

$$\text{Cash Ratio} = \frac{4.131.173.781.445}{12.986.623.750.004} \times 100\% = 31.81\%$$

Table 3: Calculation result of the Cash Ratio (in mio IDR)

Year	Cash and Cash Equivalent	Current Liabilities	Ratio
2017	4.131	12.986	31,8%
2018	3.263	14.221	22,9%
2019	3.255	18.934	17,2%
2020	2.363	24.562	9,6%
2021	3.152	27.069	11,6%

Source: Processed, 2023

Graphic 3: The Cash Ratio Periods 2017 – 2021

Source: Processed, 2023

4. Cash Turn Over

The calculation is done by comparing net sales (gross profit) with net working capital, which is current assets minus current liabilities.

Cash Turn Over Calculation for the year 2017:

$$\text{Cash Turn Over} = \frac{2.057.806.343.384}{16.792.278.617.059 - 12.986.623.750.004} \times 100\% = 109\%$$

Table 4: Calculation result of the Cash Turn Over (in mio IDR)

Year	Net Sales (gross profit)	Current asset	Current Liabilities	Ratio
2017	4.131	16.792	12.986	109%
2018	3.263	24.817	14.221	31%
2019	3.255	25.386	18.934	50%
2020	2.363	30.315	24.562	41%
2021	3.152	30.090	27.069	104%

Source: Processed, 2023

Graphic 4: The Cash TurnOver Periods 2017 – 2021

Source: Processed, 2023

5. Inventory to Net Working Capital

The calculation is done by comparing inventory with current assets minus current liabilities.

Inventory to NWC Calculation for the year 2017:

$$\text{Inventory to NWC} = \frac{2.276.457.866.550}{16.792.278.617.059 - 12.986.623.750.004} \times 100\% = 60\%$$

Table 5: Calculation result of the Inventory to Net Working Capital (in mio IDR)

Year	Inventory	Current asset	Current Liabilities	Ratio
2017	2.276	16.792	12.986	60%
2018	3.368	24.817	14.221	32%
2019	4.360	25.386	18.934	68%
2020	4.778	30.315	24.562	83%
2021	6.321	30.090	27.069	209%

Source: Processed, 2023

Graphic 5: The Inventory to NWC Periods 2017 – 2021

Source: Processed, 2023

Based on the calculation results of each liquidity ratio, the overall analysis of liquidity ratios is displayed in the following table:

Table 6: Calculation Result of Liquidity Ratio

Ratio	2017	2018	2019	2020	2021
Current Ratio	1.2	1.7	1.3	1.2	1.1
Quick Ratio	1.1	1.4	1.1	1.0	0.8
Cash Ratio	31.8%	22.9%	17.2%	9.6%	11.6%
Cash Turn Over	109%	31%	50%	41%	104%
Inventory to NWC	60%	32%	68%	83%	209%

Source: Processed, 2023

Profitability Ratio

The analysis of profitability ratios includes net profit margin, return on investment, and return on equity, which will be elaborated as follows:

1. Net Profit Margin

Net Profit Margin Calculation for the Year 2017 (in mio IDR):

$$\text{Net Profit Margin} = \frac{339}{11.706} \times 100\% = 3\%$$

Table 7: Calculation Result of Net Profit Margin (In mio IDR)

Year	Net Profit	Revenue	Ratio
2017	0.515	15.156	3.40%
2018	0.339	15.656	2.17%
2019	0.116	11.706	1%
2020	0.116	4.700	2.48
2021	0.663	7.350	9.0%

Source: Processed, 2023

Graphic 7:The NPM Periods 2017 – 2021

Source: Processed, 2023

2. Return on Asset

Return on Asset Calculation for the Year 2017:

$$\text{Return On Asset} = \frac{820}{25.240} = 3\%$$

Table 8: Calculation of Return on Asset (In mio IDR)

Year	Net Income	Total Asset	Ratio
2017	0.820	25.240	3%
2018	0.941	25.756	4%
2019	1.293	36.515	4%
2020	2.210	38.093	6%
2021	4.117	39.000	10%

Source: Processed, 2023

Graphic 8:The ROA Periods 2017 – 2021

Source: Processed, 2023

3. Return On Equity

Return on Equity Calculation for the Year 2017:

$$\text{Return On Equity} = \frac{0.515}{6.285} = 8\%$$

Table 9: Calculation of Return on Equity (In mio IDR)

Year	Net Income	Total Equity	Ratio
2017	0.515	6.285	8%
2018	0.644	6.475	10%
2019	0.339	5.574	6%
2020	0.116	5.657	2%
2021	0.663	6.810	10%

Source: Processed, 2023

Graphic 9: The ROE Periods 2017 – 2021

Based on the calculation results of each profitability ratio, the overall analysis of profitability ratios is displayed in the following table.

Table 10: Calculation of Return on Equity

Ratio	2017	2018	2019	2020	2021
Net Profit Margin	3.40%	2.17%	1%	2.48%	9%
ROA	3%	4%	4%	6%	10%
ROE	8%	10%	6%	2%	10%

Source: Processed, 2023

Result and Conclusion

Based on the processed data presented earlier, when combined, it will show the analysis of financial performance for the period 2017-2021 with industry-standard ratios as follows:

Liquidity Ratio

1. Current Ratio

In 2017, PT Adhi Karya (Persero) Tbk had a current ratio of 1.2 times. This means that for every 1 Indonesian Rupiah of current liabilities, there were 1.2 Indonesian Rupiah of current assets. In 2018, there was an increase of 1.7 times, indicating that every 1 Indonesian Rupiah of current liabilities was covered by 1.7 Indonesian Rupiah of current assets. In 2019, there was a decrease to 1.3 times, meaning that every 1 Indonesian Rupiah of current liabilities was guaranteed by 1.3 Indonesian Rupiah of current assets. The highest ratio occurred in 2018, indicating better financial performance compared to other years. Meanwhile, the lowest ratios were observed in 2021, indicating poorer financial performance in 2021 years compared to others. However, even though the highest ratio was in 2018, the ratio figure was still lower than the standard ratio of 2 times, indicating that the company's financial performance was still considered less favourable.

2. Quick Ratio

The quick ratio calculation for PT Adhi Karya (Persero) Tbk in 2017 and 2019 yielded the same result of 1.1 times. The interpretation is that for every 1 Indonesian Rupiah of current liabilities, there were 1.1 Indonesian Rupiah of current assets after deducting inventory. This is because inventory is considered to take relatively longer to convert into cash compared to other current assets. In 2018, there was an increase of 1.4 times, meaning that every 1 Indonesian Rupiah of current liabilities was covered by 1.4 Indonesian Rupiah of current assets after deducting inventory. In 2020, it decreased to 1.1 times, indicating that every 1 Indonesian Rupiah of current liabilities was guaranteed by 1.1 Indonesian Rupiah of current assets after deducting inventory. In 2021, it decreases significantly, to 0.88 times.

The highest ratio occurred in 2018, indicating better financial performance compared to other years. The lowest ratio was observed in 2021, indicating poorer financial performance in that year compared to others. However, even though the highest ratio was in 2018, the ratio figure was still lower than the standard ratio of 1.5 times, indicating that the company's financial performance was still considered less favourable.

3. Cash Ratio

PT Adhi Karya (Persero) Tbk, based on the calculation of the cash ratio for 2017, had a ratio of 31.8%. This means that for every 1 Indonesian Rupiah of current liabilities, there were 31.8 Indonesian Rupiah of cash and cash equivalents to guarantee it. The highest ratio occurred

in 2017, indicating better financial performance compared to other years. The lowest ratio was observed in 2020, indicating poorer financial performance in that year compared to others due to covid -19 pandemic. However, even though the highest ratio was in 2017, the ratio figure was still lower than the standard ratio of 50%, indicating that the company's financial performance was still considered less favourable.

4. Cash Turn Over

In cash turnover calculations, a higher ratio indicates the company's inability to pay bills and costs related to sales with the available cash level. PT Adhi Karya (Persero) Tbk, based on the cash ratio calculation for 2017, had a ratio of 109%, meaning that for every 1 Indonesian Rupiah of current liabilities, there were 109 Indonesian Rupiah of cash and cash equivalents to guarantee it. In 2018, the ratio decreased to 31%, which means that every 1 Indonesian Rupiah of current liabilities was covered by 31 Indonesian Rupiah of cash and cash equivalents. In 2021, there was a significant increase to 104 %, indicating that every 1 Indonesian Rupiah of current liabilities was guaranteed by 104 Indonesian Rupiah of cash and cash equivalents. The highest ratio occurred in 2017 and the lowest ratio was observed in 2018, indicating poorer financial performance compared to other years.

5 Inventory to Net Working Capital

The calculation of inventory to net working capital for PT Adhi Karya (Persero) Tbk in 2017 showed a figure of 60%, and it was successfully increased to 83% in 2020, representing an increase of 23%. The highest ratio occurred in 2021, indicating better financial performance compared to other years. However, in this case, the company's financial performance was maintained above the industry standard ratio of 12%. This means that the company was successful in managing its inventory to net working capital. Therefore, it can be said that the company performed well in managing its inventory to net working capital and maintained it above the industry standard ratio.

Profitability Ratio

1. Net Profit Margin (NPM)

The calculation of the net profit margin for PT. Adhi Karya (Persero) Tbk in 2017 showed a figure of 3.40% and decreased to 1% in 2019. It showed the ratio between net profit and revenue is really not able to manage. The ratio from NPM is measuring the ability of the company to gain profit from the revenue achievement. In 2020 the ratio has increased to 2.48% and getting better in 2021 reach to 9.0%.

2. Return on Asset (ROA)

The financial performance of PT Adhi Karya (Persero) Tbk based on Return on Asset (ROA) is considered "UNHEALTHY". This is because the average ROA from 2017 – 2021 was 5,4% which means it is still below form the Industry standard.

3. Return on Equity (ROE)

The financial performance of PT Adhi Karya (Persero) Tbk based on Return on Equity (ROE) is considered "UNHEALTHY". This is because the average ROE from 2017 – 2021 was 7.20% which means it is still below form the Industry standard with a 40% ratio.

ABSTRACT

Enhancing connectivity, particularly in land transportation, has been a key priority for the Indonesian government under President Jokowi's administration. However, the implementation of lockdowns and large-scale social restrictions during the COVID-19 pandemic has significantly curtailed people's mobility and resulted in struggling businesses, including toll road operators. Simultaneously, the government, aiming to sustain the economy, has shifted its focus towards COVID-19 response initiatives, impacting the financial performance and operations of numerous state-owned enterprises (SOEs), including PT Jasa Marga Tbk. This study aims to analyze the financial distress experienced by PT Jasa Marga Tbk from 2018 to 2022, employing the Altman Z-Score model to predict the likelihood of corporate bankruptcy. Annual financial reports were utilized to conduct a comprehensive evaluation of the company's financial health. By calculating financial risk and examining the ratios associated with corporate bankruptcy, this study provides valuable insights into the financial strength of PT Jasa Marga Tbk.

Keywords: Connectivity, Toll roads, Financial distress, PT Jasa Marga Tbk, Altman Z-Score, Corporate bankruptcy, COVID-19 pandemic, Infrastructure budget reallocation.

INTRODUCTION

Indonesia placed 44th overall (out of 63) in the most recent World Competitiveness Yearbook (2022), a much lower position than last year (37th). Despite the fact that Indonesia's business and investment climate is well known to be hampered by a number of structural bottlenecks, over the past ten or so years we have seen a (generally) increasing trend in the nation's rankings in global competitiveness indexes.

As an emerging market, Indonesia is well aware that improving the country's infrastructure is crucial to boosting economic growth and reducing the gap between its eastern and western regions in terms of economic inequality. According to the World Competitiveness Yearbook (WCY) 2022, Indonesia's infrastructure quality has improved, moving up one spot from 57th in 2021 to 52nd in 2022. This accomplishment demonstrates that the Indonesian government is still dedicated to improving infrastructure services despite the COVID-19 outbreak. Massive infrastructure development started with the issuance of Presidential Regulation No. 3 of 2016 to implement 245 projects, and during its implementation, there were adjustments with the most recent issuance of Government Regulation No. 109 of 2020, which was the third amendment to the previous government regulation on accelerating the implementation of national strategic projects. The second presidential period (which started a year prior to the pandemic) also saw the publication of Presidential Regulation Number 18 of 2020, which deals with the National Medium-Term Development Plan for 2020-2024, one of which continues to be the infrastructure sector.

In general, State-Owned Enterprises (SOEs) play a crucial role in the economic development of a nation when they serve as an extension of the government and pursue non-commercial goals in addition to having strictly commercial ones. The same phenomenon is seen in the infrastructure construction SOEs that completely support the government's program by taking part and offering solutions to quicken national development. Through bolstering tactics and using synergies amongst various businesses, this state-owned construction enterprise remains dedicated to maintaining investment, infrastructure development, and national strategic initiatives undertaken by the corporation.

The government's initiative is completely supported by the construction SOEs involved in infrastructure, who actively participate and offer solutions to speed up national growth. Through bolstering tactics and using synergies amongst various businesses, this state-owned construction enterprise remains dedicated to maintaining investment, infrastructure development, and national strategic initiatives undertaken by the corporation. The national construction sector continues to contribute to Indonesia's GDP and is one of the drivers of the economy during the epidemic through the realization of significant national strategic projects with state-owned businesses as the major drivers. Based on Figure 1, the construction sector's contribution to GDP on a quarterly basis from 2018 to 2022 demonstrates that it is one of the contributors to the Indonesian economy and is reasonably constant (except in 2020 as the result of government measures).

Figure 1. Indonesian GDP from Construction 2018-2022

Source: tradingeconomics.com, 2023; Badan Pusat Statistik, 2023

However, the impact of COVID-19 is apparent to Indonesian GDP growth with the implementation of lockdowns and large-scale social restrictions during the COVID-19 pandemic has significantly curtailed people's mobility and resulted in struggling businesses, including toll road operators.

As shown in Figure 2, the growth of Indonesian GDP in 2020 was -2.07% while the growth before the COVID-19 was positive.

Figure 2. Indonesian GDP Growth 2018-2022

Source: tradingeconomics.com, 2023; Badan Pusat Statistik, 2023

The COVID-19 pandemic has had an effect on government and commercial businesses in a number of industries in Indonesia, including the construction industry. According to Table 1, the financial performance of PT Jasa Marga Tbk (JSMR) as a major state-owned enterprise (SOE) in the toll road construction services sector tends to decline as a result of the pandemic-related economic conditions and obligations to support the implementation of government programs for national development. Predictive analysis is required to examine the phenomenon and determine the state of JSMR's finances in the infrastructure construction industry. This analysis can serve as an early warning system for businesses to determine whether their financial situation is in distress. It is expected that PT Jasa Marga can continue to fulfill the strategic role assigned by the government in order to avoid and foresee any potential bankruptcy

that the firm may encounter in the future. The financial ratios in the company's financial statements that serve as the basis for evaluation can be used to gain this information.

Tabel 1: Revenue and Profitability of PT Jasa Marga 2018-2022

PT JASA MARGA Tbk	In Billion Rupiah				
	2018	2019	2020	2021	2022
REVENUE	9,784	10,984	9,588	11,776	13,783
NET INCOME	3,210	3,098	696	2,072	3,726

Source: Annual Report PT Jasa Marga Tbk, 2018-2022

Toll road connectivity as one of the major contributors to Indonesia's infrastructure improvement, puts PT Jasa Marga Tbk (JSMR)'s role very crucial in ensuring that growth is achieved. COVID-19 has put a strain on JSMR's financial condition with revenue decreasing 13% to IDR 9,588 billion in 2020 compared to IDR 10,984 billion in 2019. While net income for the year 2020 booked a significant drop to IDR 696 billion compared to a profit of IDR 3,098 billion in 2019, before recovering to a profitable IDR 3,726 billion in 2021.

Financial distress (bankruptcy) is a condition where a company experiences financial difficulties, according to Kisman et al. (2019), resulting from a company's long-term mismanagement of how to run its business operations in order to fulfill its economic goals. In other words, bankruptcy doesn't strike out of nowhere. Instead, it begins with warning indicators of financial trouble, such as a continued fall from year to year; the company is having financial issues in generating profits or sales earnings. According to Harahap (2009), there are a number of signs that the company is in financial trouble, including a decline in dividend payments to shareholders, a persistent decline in profits, the liquidation or sale of one or more subsidiaries, a sizable number of layoffs, and declining prices in the stock market.

It is imperative for predictive analysis to measure the financial health level of PT Jasa Marga to determine whether the company is in financial distress condition. The aim is to provide insight into the company's financial strength and serve as an early warning to anticipate and avoid the potential for bankruptcy in the future. Financial ratios are obtained using JSMR's annual reports as the main source of information. The research period is conducted from 2018-2022 to picture the financial condition before, during, and after the pandemic. The Altman Z-Score approach is then used to examine the annual financial statements in order to determine how the company's financial situation has changed over time. The findings will help academics, practitioners, the government, and JSMR's management understand how the financial conditions are being dealt with and offer suggestions for solutions to keep the company's financial condition (Z score in Safe Zone) so that PT Jasa Marga can complete government tasks like developing national strategic projects even though they are in challenging circumstances due to a pandemic.

1. LITERATURE REVIEW

1.1 Financial Statement

According to the Indonesian Institute of Chartered Accountants (2015), Financial Statements in Financial Accounting Standards are a structured presentation of the financial position and financial performance of an entity. Financial statements typically include the balance sheet,

income statement, and cash flow statement. Every business, no matter how big or little, is required to provide regular financial reports, whether they are quarterly or yearly. This is because it is important to understand how much money each firm makes and spends. As a result, it's critical to comprehend financial statements, which serve a crucial purpose in financial management (Whiteley, 2017). The financial statements in the annual report of PT Jasa Marga, which is publicly available from 2018 to 2022 on the company's website as well as the stock exchange, were used to create the report that was used in this study.

1.2 Financial Distress

According to Wruck (1990), financial distress is a state in which a company's operating cash flow is insufficient to cover its present obligations, such as interest payments or accounts payable. Financial distress is described by Platt and Platt (2002; 2006) as the stage of deterioration in financial situations that happened before bankruptcy or liquidation. The inability or lack of available funds to meet the company's maturing commitments is a sign of a financial crisis. Financial distress is described by Brahmana (2007) as beginning with the difficulties of liquidation (short-term) and progressing to bankruptcy as severe financial distress. Financial distress results from a company's inability to control and maintain the stability of its financial performance, which is caused by a failure to effectively advertise its products, which leads to decreasing sales. Therefore, the company could incur operating losses and net losses for the current year as a result of the decline in revenue.

Fachrudin (2008) mentioned four classifications of financial distress, including:

1. Economic Failure
Economic Failure occurs when a company's revenue cannot cover total costs including capital costs. Businesses that experience this can continue their operations as long as the creditor is willing to provide additional capital and the owner can receive a rate of return below the market interest rate.
2. Business Failure
Business Failure is often used to describe various kinds of unsatisfactory business conditions. Business Failure refers to a company ceasing operations due to its inability to turn a profit or generate sufficient income to cover expenses. A profitable business can fail if it doesn't generate sufficient cash flow to meet expenses.
3. Insolvency
Divided into 2 categories, namely:
 - Technical Insolvency, a condition in which the company is unable to meet its maturing obligations as a result of insufficient cash flow,
 - Insolvency in Bankruptcy Sense, a condition in which the total liabilities are greater than the market value of the company's total assets.
 - Legal Bankruptcy, a formal form of bankruptcy and has been legalized.

Damodaran (2002), mentioned micro factors account for the majority of financial distress within the company. The following are some internal company-related factors:

1. Problems with cash flows
2. The amount of debt
3. Long-term losses in the company's operating activity.

6th International CEO Communication, Economics, Organization & Social Sciences Congress

Financial distress according to Ross, Westerfield, and Jaffe (2010:917) is a situation where a firm's operating cash flows are not sufficient to satisfy current obligations and the firm is forced to take corrective action. Financial distress may lead a firm to default on a contract, and it may involve financial restructuring between the firm, its creditors, and its equity investors. Usually, the firm is forced to take action that it would not have taken if it had sufficient cash flow. The financial distress can be expanded into insolvency (inability to pay one's debt). Insolvency may lead to bankruptcy. Firms deal with financial distress in several ways, such as these:

1. Selling major assets
2. Merging with another firm
3. Reducing capital spending and research and development
4. Issuing new securities
5. Negotiating with banks and other creditors
6. Exchanging debt for equity
7. Filing for bankruptcy

Financial distress may involve both asset restructuring and financial restructuring. Financial distress can serve as a firm's "early warning" system for trouble. Firms with more debt will experience financial distress than firms with less debt. However, firms that experience financial distress earlier will have more time for private workouts and reorganization. Firms with low leverage will experience financial distress later and, in many instances, be forced to liquidate.

1.3 Bankruptcy

Corporate bankruptcy results from a company's inability to fulfill its financial commitments as they become due. If a business cannot run its operations to meet its goals, it is termed bankrupt. The main prerequisite for filing for bankruptcy is that the debtor must be declared bankrupt by court order, either at their own request or at the request of one or more creditors, if they have two or more creditors and are unable to pay at least one matured and collectible debt. A corporation with limited liquidity does not always need to file for bankruptcy; instead, it must acquire fresh resources to bridge the liquidity gap and lower its risk of failure.

According to Turetsky and McEwen (2001), the circumstances that lead to bankruptcy start with the company experiencing a decline in cash flows that eventually turns into negative cash flow, then reduced dividend payments, and finally bankruptcy filings. Two sources of financial distress were recognized by Karels and Prakash (1987): internal causes and external causes. Internal causes, also known as endogenous factors, are those that are specific to a given organization and are manifested through subpar corporate governance, dishonest profit management techniques, and unprofitable project work. Market risk and regulatory changes are two examples of external factors that have a systemic impact on all businesses.

A bankruptcy proceeding, according to Vernimmen, Quirry, Dallochio, Levur, and Salvi (2014:854), might enable a business to reorganize, frequently necessitating asset sales, a change in ownership, and partial debt forgiveness on the part of creditors. In other situations, bankruptcy results in liquidation, which results in the company's demise. Generally speaking, a corporation experiences a liquidity crisis when it is unable to pay its short-term obligations. However, the precise description of the financial difficulty that prompted the corporation to declare bankruptcy may vary from one jurisdiction to another.

2. METHODOLOGY

2.1 Predicting Corporate Bankruptcy: Altman's Z-Score Model and Operational Variables Definition

In 1968, Prof. Edward I. Altman at NY University, USA developed a famous Z-Score Model for predicting the probability that a firm might go bankrupt. The Z-Score Model is a multivariate formula that measures the financial health/distress of a firm and predicts the likelihood of its failure (bankruptcy). Initially, Altman's Z-score model was developed to predict the failure of publicly listed manufacturing firms, later he modified this model to predict failures in private and non-manufacturing firms. Altman (1968) created the Multi Discriminant Analysis (MDA) function, the Z-score Model:

$$Z = 1.2X1 + 1.4X2 + 3.3X3 + 0.6X4 + 0.999X5$$

With:

X1 = Working Capital/Total Assets Ratio

X2 = Retained Earnings/Total Assets

X3 = Earnings Before Interest and Tax/Total Assets

X4 = Market Value of Equity/Book Value of Total Liabilities

X5 = Sales/Total Assets

While there are four common backward-looking ratios (derived from the financial reports), X4 is a forward-looking ratio (Market Value of Equity), which includes the future value of the firm as perceived by the market (or analysts).

2.2 Net Working Capital / Total Assets Ratio (X1)

This ratio essentially measures the firm's liquidity in proportion to capitalization, or the working capital or net current assets of a company as a percentage of total assets. Working Capital, which is current assets minus current liabilities, aids stakeholders in determining how much capital is needed to run a business on a daily basis and how much capital is locked up in working capital. Therefore, a high working capital to total assets ratio would indicate that the company can meet its account payable commitments on time. This could be because sales income is realized much more quickly than payments for raw materials and other items and/or services. The formula for X1 is:

$$X1 = \frac{\text{Net Working Capital (Current Assets - Current Liabilities)}}{\text{Total Assets}}$$

2.3 Retained Earnings/Total Assets (X2)

This ratio measures the company's capacity to generate profits from its resources. Most analysts and investors favor a greater Retained Earnings to Total Assets ratio since it shows that the company is able to keep more earnings. The ideal ratio for retained earnings to total assets is 1:1, or 100%. In actuality, however, the majority of organizations are unable to achieve this ratio (1:1). Having this ratio as near to 100% as possible, or at least above average within its industry sector, or improving, would be a more practical goal for the majority of businesses. A greater percentage would suggest that expansion is being financed by profits rather than by accruing more debt. A low ratio, on the other hand, would imply that growth might not be long-

term if it is financed by raising loans rather than via reinvesting the earnings. The formula for X2 is:

$$X2 = \frac{\textit{Retained Earnings}}{\textit{Total Assets}}$$

2.4 Earnings before Interest and Taxes/Total Assets (X3)

This ratio is very similar to the Return on Assets (ROA) ratio, which uses net earnings instead of earnings before interest and taxes (EBIT). This ratio, which determines total profits before interest and tax payments, essentially assesses operating efficiency. Operating earnings are considered to be one of the key factors determining the firm's long-term profitability. In other words, this ratio assesses a company's asset productivity and is unaffected by indebtedness or any tax liabilities. This ratio is frequently used as an indicator of a company's ability to generate income from its assets by analysts and investors. The formula for X3 is:

$$X3 = \frac{\textit{Earnings Before Interest and Tax}}{\textit{Total Assets}}$$

2.5 Market Value of Equity/Book Value of Total Liabilities (X4)

This ratio measures a company's long-term viability, or how much its market value would drop before liabilities exceeded assets if that were to occur. The total of all current and long-term obligations on a company's balance sheet is known as Book Value of Total obligations. Market Value of Equity, on the other hand, represents the combined current market value of all ordinary and preferred shares. The only forward-looking ratio used in the Z-score computation is market value of equity, which accounts for a company's intangible assets and future performance worth. This is the opposite of the widely used debt-to-equity ratio, often known as the total debt-to-total equity market value ratio or the total liabilities-to-market capitalization ratio. The formula for X4 is:

$$X4 = \frac{\textit{Market/Book Value Equity}}{\textit{Total Liabilities}}$$

2.6 Sales/Total Assets (X5)

This ratio, often known as an assets turnover ratio, calculates how much revenue a company generates using its assets. This ratio focuses on the assets' and management's ability to generate sales, hence the larger the ratio, the better. In other words, a low ratio would show that the firm's management and overall assets are ineffective at generating higher sales. The formula for X5 is:

$$X5 = \frac{\textit{Sales}}{\textit{Total Assets}}$$

The Z-score is calculated and contrasted with the value category to determine the possibility of bankruptcy in a company (Table 2).

Tabel 2: Z-Score and Bankruptcy Indicators

Z-Score Category	Indicator	Remarks
$Z < 1.81$	Bankrupt	Distress Zone (Bankruptcy very likely to occur)
$1.81 \leq Z \leq 2.99$	Healthy	Grey Area (Bankruptcy can't easily be predicted)
$Z > 2.99$	Stable	Safe Zone (Bankruptcy is unlikely to occur)

3. RESEARCH METHOD

This study employs a quantitative, descriptive research technique. This quantitative approach uses the descriptive research method, which analyzes report data. The financial statistics of the company are then tallied to evaluate whether it falls under the category of being healthy or unhealthy. Between the period of 2018 to 2022, data were gathered from the company's annual reports that were posted on JSMR's Investor Relations information website.

4. RESEARCH FRAMEWORK

The research framework is based on existing research theory and study findings. Examining Jasa Marga's financial situation is the aim of this study. The company's financial stability is assessed using the Altman Z-Score model bankruptcy indicator. Figure 3 shows that the information is first gathered from the annual financial report of Jasa Marga. Second, when all the data has been collected the Z-Score is calculated in order to predict company insolvency. Third, analyze the business bankruptcy and determine whether the results fall within the safe zone, grey area, or distress zone. The conclusion is then drawn utilizing the Z-Score interpretation and bankruptcy analysis.

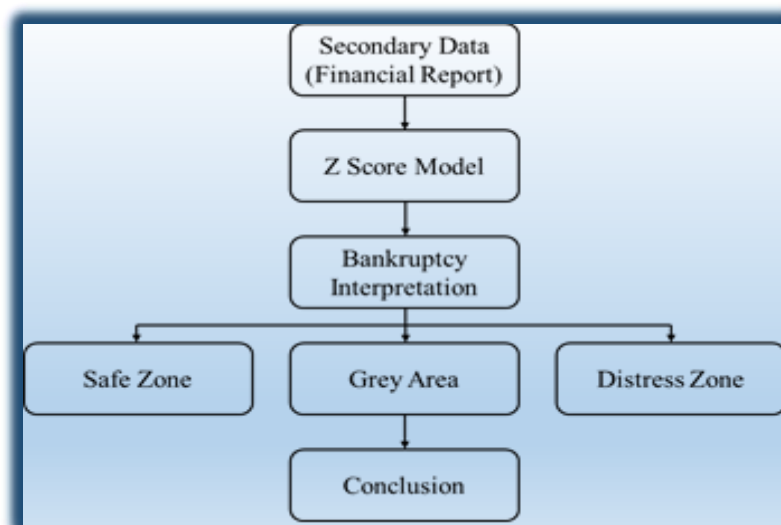

Figure 3. Research Framework (Authors, 2023)

5. RESULT

Drawing from JSMR Annual Report 2018-2022, Source Data for Operational Variables are tabulated.

Table 3: Data Processing for Operational Variables 2018-2022

(in billion Rupiah)

No	Description	Year				
		2018	2019	2020	2021	2022
1	Net Working Capital	(19,451)	(29,914)	(4,223)	(1,653)	344
2	Total Assets	82,419	99,680	104,087	101,243	91,139
3	Retain Earnings	9,887	11,764	12,063	13,678	16,425
4	Earning Before Interests and Taxes	3,210	3,098	696	2,072	3,726
5	Market Value of Equity	20,199	23,186	24,776	25,500	25,621
6	Book Value of Total Liabilities	62,220	76,494	79,311	75,743	65,518
7	Sales	9,784	10,984	9,588	11,776	13,783

Source: processed by Authors, 2023

The data consist of Net Working Capital, Total Assets, Retained Earnings, Earning Before Interest and Taxes, Market Value of Equity, Book Value of Total Liabilities, and Sales; displayed in million Rupiahs. These will then be used to calculate Financial Variables (X1, X2, X3, X4, and X5). Financial factors that are taken into account during the research period and used to calculate the Z score showed a tendency to decline, and this will be even stronger in 2020 due to the COVID-19 pandemic. The balance sheet side also shows that there is an increase in net working capital achievement, which points in a negative direction where the company is becoming more and more dependent on loans to operate its business. The financial component that has seen a significant decline is the profitability aspect as seen from EBIT and retained earnings.

Table 4: Working Capital to Total Assets (X1)

(in billion Rupiah)

Financial Year	Net Working Capital	Total Assets	Ratio (X1)
2018	(19,451)	82,419	(0.236)
2019	(29,914)	99,680	(0.300)
2020	(4,223)	104,087	(0.041)

6. ANALYSIS

6.1 Altman Z-Score Variables

Table 9: Summary of Company Financial Statement

No	Description	Year				
		2018	2019	2020	2021	2022
1	X1	(0.236)	(0.300)	(0.041)	(0.016)	0.004
2	X2	0.120	0.118	0.116	0.135	0.180
3	X3	0.039	0.031	0.007	0.020	0.041
4	X4	0.325	0.303	0.312	0.337	0.391
5	X5	0.119	0.110	0.092	0.116	0.151

Source: processed by Authors, 2023

Table 9 shows the Summary of Company Financial Statement with all the variables tabulated. This table shows the declining trend that happened during the COVID-19 pandemic.

The liquidity ratio, or X1, is used to assess the firm's liquidity and compare it to its size. X1 assists businesses in making decisions based on their immediate commitments. The cumulative profit of a corporation is measured using the X2 ratio, which demonstrates effective management in terms of production, sales, and other operational aspects. A company's productivity can be estimated using the X3 ratio, but both productivity and revenue are essential for its long-term survival. It is concluded that an effective management firm makes continued use of the available resources and has the capacity to assess overall performance using sales and return on investment.
