Comments;

1. What are the purposes of significant tests that is comprises of 3 difference tests on **partial significant test (t-test), simultaneous significant test (F-test) and coefficient determination test (adj R-squared)** in slide 31?
2. How are the tests **different from each other**
3. In the Research Summary (on p. 99),
 - a. Current Ratio said to have no significant effect to be 0.942 and TATO said is also to have negative effect to be 0.319. You are also saying that there are **no linear effects, what did you mean by that?**
 - b. Current Ratio (for the Stock Return) is said to be “a higher CR indicates better **ST liquidity** which is generally favorable for investors”, **what is the meaning of LT liquidity?**
 - c. TATO is said to be **not significant** that means that TATO did not have significant impact on stock return, **what is the meaning/importance of TATO in this case?**
 - d. Covid-19 pandemic is said to be **not significant** because the impact of pandemic is not statistically significant, **is this mean that dealing with coal mining the presence of Covid-19 was truly indifferent?**
 - e. Forex is also said to be **not significant** due to the fluctuations in the foreign exchanges do not affecting significantly on the stock return, **just simply because this is coal industry?**
 - f. Coal Price is said to be not significantly affecting stock return. **Why is that so?**
4. Theoretical Implementation (on p. 113),
 - a. In **Efficient Market Hypothesis** and there are actually 2 implications, what do you think it suggest?
